God Save the Queen! Ruling Women from Rome to the Renaissance (127654)

Sean Gilsdorf

2021 Spring (4 Credits)  
**Schedule:**  
MW 0130 PM - 0245 PM

**Instructor Permissions:**  Instructor  
**Enrollment Cap:**  10

This seminar will explore female rulership in Europe from the late Roman empire to the age of Elizabeth I. Discussion of varied texts and images (most of them primary sources in translation) will reveal the role of queens within their societies, their relationship to broader social and cultural institutions such as the Christian Church, and the ways in which queens were celebrated, criticized, and imagined by writers and artists of their time.

**Class Notes:**  
Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature's [application to enroll](#).

This seminar is designed for first-years and sophomores, who are especially encouraged to apply.

Museums in America (205588)

Reed Gochberg

2020 Fall (4 Credits)  
**Schedule:**  
M 1200 PM - 0245 PM

**Instructor Permissions:**  Instructor  
**Enrollment Cap:**  10

In this seminar, we will consider the literary and cultural history of American museums from the eighteenth century to the present. How have museums prompted broader discussions about taste, expertise, and authority? How can we understand the legacies of historical collecting practices for contemporary institutions? And how have recent debates about decolonization, repatriation, and accessibility informed new ideas about what role museums can play in American culture? Throughout the semester, we will examine a range of sources, from fiction, museum catalogues, and periodicals to paintings, artifacts, and installations; we will also research objects in Harvard's museum collections and develop a collaborative digital exhibit.

**Class Notes:**  
Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature's [application to enroll](#) by
August 21. Instructors will notify students of enrollment decisions on August 24.

This seminar is open to all undergraduates, but priority will be given to sophomores interested in concentrating in History & Literature.

**American Speeches (212821)**

*Drew Faust*

2020 Fall (4 Credits)  

**Schedule:**  
M 0300 PM - 0500 PM  

**Instructor Permissions:**  
Instructor  

**Enrollment Cap:**  
12  

This course will explore speeches across the sweep of American history, examining them both as windows into their own era and as texts created to inform and persuade. We will ask who speaks and how and the ways that has evolved over time, and we will seek to identify the enduring and changing elements of effective oratory from Jonathan Edwards to Frederick Douglass to contemporary commencement addresses and campaign speeches. Assignments include the composition and delivery of a speech.

**Class Notes:**  
Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature's [application to enroll](#) by August 21. Instructors will notify students of enrollment decisions on August 24.

If the number of applications exceed the capacity, preference will be given to History & Literature and History concentrators, and to seniors, juniors, then sophomores.

**Red Scares (212825)**

*Steven Biel  
Lauren Kaminsky*

2021 Spring (4 Credits)  

**Schedule:**  
T 1200 PM - 0245 PM  

**Instructor Permissions:**  
Instructor  

**Enrollment Cap:**  
10  

When, in his 2019 State of the Union address, President Trump said, "We are born free, and we will stay
free. Tonight, we renew our resolve that America will never be a socialist country,” he invoked American rhetoric that is at least one hundred years old. The first so-called Red Scare, precipitated by World War I and the Bolshevik Revolution in Russia, produced the Espionage Act, which was recently used to charge former CIA analyst Edward Snowden in the leak of classified documents related to the NSA’s surveillance program. In the second Red Scare that followed World War II, the House Un-American Activities Committee (HUAC), Senator Joseph McCarthy, the FBI, and others conducted widespread investigations of suspected communists and purged “subversives” from all levels of government, the entertainment industry, public and private schools, colleges and universities. Beginning with early 20th-century fears that revolutionary socialism could spread from Russia around the world, this course explores anxieties about subversion and perversion in American politics and culture at the dawn of the Cold War. Readings will include texts by Emma Goldman, Sacco and Vanzetti, John Dos Passos, Langston Hughes, Elia Kazan, Richard Wright, Lillian Hellman, E. L. Doctorow, and Tony Kushner, as well as films such as The Manchurian Candidate, Pickup on South Street, Invasion of the Body Snatchers, My Son John, and On the Waterfront. Assignments will include research involving Harvard archives and FBI files.

Class Notes: Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature's application to enroll.

This seminar is designed for first-years and sophomores, who are especially encouraged to apply.

Race and American Empire (213373)

Ernest Mitchell

2020 Fall (4 Credits)   Schedule: R 0300 PM - 0545 PM

Instructor Permissions: Instructor   Enrollment Cap: 10

This course examines the early 20th century expansion of U.S. military influence in the Atlantic and Pacific, and how this expansion shaped and was shaped by theories of race. Beginning with the Spanish-American War (1898), we will follow a series of U.S. interventions in the Atlantic (Cuba, Dominican Republic, Haiti, Honduras, Mexico, Nicaragua, Panama, Puerto Rico, Venezuela) and Pacific (Guam, Hawaii, Philippines). We will also explore the tensions between imperialism and white supremacy, as theorized by Madison Grant and Lothrop Stoddard. Special attention will be paid to black intellectuals (W.E.B. Du Bois, Anna Julia Cooper, Katherine Dunham, Jessie Fauset, Amy Jacques Garvey, Langston Hughes, Zora Neale Hurston, James Weldon Johnson, Eric Walrond, Ida B. Wells) who both aided and contested U.S. imperial designs. Through photographs, architecture, film, novels, ethnographies, memoirs, speeches, and cartoons, we will study debates about the international role of the U.S. through World War II.

Class Notes: Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature's application to enroll by August 21. Instructors will notify students of enrollment decisions on
August 24.
This seminar is open to all undergraduates, but priority will be given to sophomores interested in concentrating in History & Literature.

**Enrollment Cap:** 10

In the first half the twentieth century, Europe was the site of two wars that depleted the world’s population, dislocated millions, and stripped once diverse regions of the continent of their minority populations. Even as Europe started to rebuild itself in the 1950s, progress occurred under the shadow of two hegemonic superpowers in possession of weapons capable of incinerating not just both sides of the Iron Curtain but the entire planet. What cultural role has comedy played in coming to terms with all of this tragedy? In a 1966 profile of Bertolt Brecht for *The New Yorker*, Hannah Arendt wrote of “the terrible freshness of the post-war world”—in which all that poets could do in the rubble was laugh at the sky that remained. As Europe destroyed and reinvented itself through the twentieth century, how did humor serve as a tool for working through the past and its relation to the present? This course will draw on sources in various media to examine how comedy can be a means of not just coping with history but understanding it. We will consider humor as a tool of political critique, historical analysis, and mourning and pay particular attention to the boundaries and historicity of taste. Assigned readings and films include works by Terry Eagleton, Sigmund Freud, Hannah Arendt, Karel Čapek, Ernst Lubitsch, Jean-Luc Godard, Milos Forman, Leander Haußmann, and Yasemin Şamdereli.

**Class Notes:**  
Seminars meet for two hours of synchronous class discussion each week.

A Cultural History of the Internet (216225)

*Briana Smith*

2020 Fall (4 Credits)  

**Schedule:** R 0300 PM - 0545 PM

**Instructor Permissions:** Instructor  

**Enrollment Cap:** 10
This course introduces students to the hippies, hobbyists, hackers, cyberspace explorers, and Second Lifers who embraced digital networks as a means to transcend geographic limitations and connect humans in virtual communities online since the late 1960s. We will also examine how corporate and government entities responded to the digital utopian ethos of egalitarianism, communalism, and anarchy. We will explore this history against the backdrop of the late Cold War, the Reagan era, neoliberalism and globalization, 9/11, the 2008 global financial crisis, and 2020, and through the lens of race, gender, class, and subculture. Film, music, art, archived websites, memoirs, manifestos, fiction, and non-fiction will shed light on the ways popular culture shaped and was shaped by the rise of networked computing. While course materials are primarily rooted in the United States, we will consider both transnational connections as well as attempts to forge supranational networks in cyberspace.

Class Notes: Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature’s application to enroll by August 21. Instructors will notify students of enrollment decisions on August 24.

This seminar is open to all undergraduates, but priority will be given to sophomores interested in concentrating in History & Literature.

Music and Resistance in the Modern United States (216241)

Lucy Caplan

2020 Fall (4 Credits) Schedule: MW 1200 PM - 0115 PM

Instructor Permissions: Instructor Enrollment Cap: 10

While music is often touted as a "universal language" that generates social harmony, it also expresses dissent from and resistance to the status quo. This course asks how music works as a type of social and political resistance, and what aesthetic and formal qualities enable it to do so. We will explore the relationship between music and resistance in the twentieth- and twenty-first-century United States, in contexts that range from Ma Rainey’s defiant blues songs to Lin-Manuel Miranda’s blockbuster musical Hamilton. Focusing especially (but not exclusively) on African American music and musicians, we will consider how music informs modes of resistance tied to race, class, gender, and sexuality. In addition to asking how music can resist extant arrangements of power, we will also consider the types of futures that music can imagine. By examining an array of historical sources, theoretical texts, and sonic archives, students will develop the ability to analyze music from a critical and interdisciplinary perspective. There will also be opportunities for hands-on and creative projects.

Class Notes: Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature’s application to enroll by August 21. Instructors will notify students of enrollment decisions on August 24.

This seminar is open to all undergraduates, but priority will be given to sophomores interested in concentrating in History & Literature.

Fighting the Climate Crisis (216227)

*Patrick Whitmarsh*

2020 Fall (4 Credits)  

**Schedule:**  
MW 01:30 PM - 02:45 PM

**Instructor Permissions:**  
Enrollment Cap: 10

Humanity currently faces a rapidly worsening environmental situation in light of the global climate crisis: rising seas and ocean acidification, deforestation and ecosystem collapse, and species extinction at alarming rates. Behind these worrying developments, however, lies a human history of imperialism, industrialization, and globalization that remains inextricable from the so-called natural world. Recent efforts in climate justice, such as Extinction Rebellion and the Green New Deal, have sought to counter this history by imagining new visions for sustainable societies. In this course, students will explore the ways that storytelling and history intersect with the discourse on the global climate crisis, as well as the social responsibilities of artists, businesses, and citizens in effecting climate justice. The course is divided into three units: the first covers early environmental movements from 1945 to 1970, leading to the establishment of the first Earth Day; the second covers 1971 to 2001, from the 1970s oil crises to the terror attacks of September 11th, 2001; and the final unit looks at the period from 2002 to the present, tracing the increasing politicization of climate change and culminating with the United States' withdrawal from the Paris Climate Agreement. Throughout these units, we will study materials from environmental history, politics, and fiction by writers such as Ursula K. Le Guin, Octavia Butler, and Ted Chiang. While exploring these cultural and literary documents, students will reflect on historical outcomes and unrealized possibilities, as well as the delicate connections between past, present, and future—how what we do today affects what happens tomorrow.

**Class Notes:**  
Seminars meet for two hours of synchronous class discussion each week.

History & Literature  90EF

White Rage: Progress and Backlash in American History (216228)

*Andrew Pope*

2020 Fall (4 Credits)  

**Schedule:**  
W 12:00 PM - 02:45 PM
The course examines how people struggled to achieve the full-promise of freedom throughout American history. The organizing theme of the course is the cycle of progress and retrenchment, of revolutions and counter-revolutions, that has come to define American life. The course begins with enslaved people’s struggles for freedom and the white planters who created a form of representative government to maintain the institution. From there, we proceed chronologically through American history to the present, exploring changing notions of community, strategies used to gain freedom, and the range of violent responses that groups seeking liberation encountered. Our readings will include a play by Suzan Lori-Parks, manifestos by white power advocates, George Schulyer’s novel Black No More, literary criticism by Toni Morrison, political speeches, oral history interviews with formerly enslaved people and migrant workers, among many other historical and literary sources. While race has been an important element to every debate about political representation in American history, most debates represented overlapping interests of race, gender, class, and even sexuality. As such, we will take up each issue throughout the semester. In a presidential election cycle dominated by white rage, we will study how it has shaped American history in the past and its lasting consequences in the present.

Class Notes: Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature’s application to enroll by August 21. Instructors will notify students of enrollment decisions on August 24.

This seminar is open to all undergraduates, but priority will be given to sophomores interested in concentrating in History & Literature.

Human rights is often considered a bulwark against authoritarianism and fascism, our "last utopia," but others have critiqued human rights as either a new form of imperialism or as an imposition of western values on the rest of the world. These debates demonstrate that human rights is both a powerful way of calling attention to matters of injustice as well as an idea that is itself the subject of critique. How did this come to be? In this class, we will track the increased attention on human rights in the latter half of the 20th century. Together we will explore how organizers, writers, and intellectuals in the tradition of what we broadly call Ethnic Studies have engaged the dilemmas of human rights while trying to work towards a more just world. We will cover how human rights became an important diplomatic tool during the Cold War, exploring the rise of institutions such as the United Nations and Human Rights Watch. However, we will also engage alternative, grassroots histories of human rights. For example, we will discuss how queer writers and writers of color offered their own emancipatory visions of rights. We will look at social movements such as the Third World Liberation Front Strikes of the late 1960s as calls for more expansive notions of rights. Overall, this class will ask us to confront how even the notion of "rights" has a history. It will ask us to consider that the idea that some have "rights" is often accompanied by others’
"rightlessness." Ultimately, this class will provide a space for us to consider the question that activists have long asked: can rights save us?

Class Notes: Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature's application to enroll by August 21. Instructors will notify students of enrollment decisions on August 24.

History & Literature 90EH

Asian American Genre Fictions (216230)

Ellen Song

2020 Fall (4 Credits) Schedule: TR 1200 PM - 0115 PM

Instructor Permissions: Instructor Enrollment Cap: 10

There was an explosion of works by Asian American authors on the American publishing scene near the turn of the millennium, an unexpected consequence of the Immigration and Naturalization Act of 1965, which brought an influx of immigrants from Asia and dramatically altered the demographic composition of the U.S. The descendants of these post-1965 immigrants comprise a diverse group of Asian American authors, and in this course, we study the many different genres and forms of contemporary Asian American fiction. Asian American literature is often associated with certain themes (inter-generational conflict in families, fraught nature of immigrant identity, etc.), but this course instead emphasizes the formal qualities of contemporary Asian American writing alongside their domestic and global historical contexts. We will consider, for example, the spy narratives of Chang-rae Lee's Native Speaker and Viet Thanh Nguyen's The Sympathizer; the noir style of Suki Kim's The Interpreter, a murder mystery; "corporate novels" like Ling Ma's Severance; or works that question the expectations placed onto racialized authors, like Nam Le's short story "Love and Honor and Pity and Pride and Compassion and Sacrifice." What are the aesthetic characteristics of these works? What, if any, are their political investments? In asking these questions, this course seeks to understand, from our vantage point, just what about them is "Asian American" anyway?

Class Notes: Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature's application to enroll by August 21. Instructors will notify students of enrollment decisions on August 24.

This seminar is open to all undergraduates, but priority will be given to sophomores interested in concentrating in History & Literature.

Muslims first arrived on the shores of the Americas at the turn of the sixteenth century, yet their long history in the western hemisphere has been largely forgotten. For centuries Islam was the second-most widely practiced monotheistic religion in the Americas, after Catholicism; some Muslims came from Spain to escape persecution at the hands of the Inquisition for continuing to practice their religion, while others were taken captive and forcibly crammed into the hulls of ships on the West African coast and transported across the Atlantic, where, in 1522, they participated in the first uprising of enslaved men and women in the Americas on a sugar plantation on the island of Hispaniola (the site of present-day Haiti and the Dominican Republic). From the very beginning of European imperialism in the Atlantic World, Muslims were integral to the history of what scholars call "Vast Early America." Their stories are entwined with the larger threads of early American history including those of missionary work, European inter-imperial conflict, slavery, the genocide of Native peoples, and capitalism. This course unfolds in four units that will take us from the first early modern European encounters with Islam to the stories of Muslim agents of European conquest and Muslim resistance to enslavement in the Caribbean and US South, to how the Founding Fathers thought about Islam and the status of Muslims in the early Republic. We will work with sources ranging from Laila Lalami’s 2014 novel, The Moor’s Account, to Thomas Jefferson’s copy of the Qur'an, as well as the autobiography of Omar Ibn Said written in Arabic from a jail cell in South Carolina and Rhiannon Gidden’s new opera based on Said’s story.

Class Notes: Seminars meet for two hours of synchronous class discussion each week. To register, complete History & Literature’s application to enroll. This seminar is designed for first-years and sophomores, who are especially encouraged to apply.

Over the course of the twentieth century the spy thriller became a central part of our culture, changing the way people imagined how the state operates in secret. Why are we attracted to stories of paranoia and conspiracy? What is the history of this genre, and how is it intertwined with the history of espionage? This course will consider the historical origins of spying, exploring how the modern intelligence agencies had
their origins in the project of empire. The bulk of the course will be divided into three units. The first will consider the British spy panic of the early twentieth century, in which a wave of pseudo-realistic espionage fiction, including from Erskine Childers, Baroness Orczy and William le Queux, contributed to an atmosphere of panic and paranoia about Germany ahead of the First World War. The second unit focuses on the central role played by espionage in the Cold War, from the Cambridge Five to COINTELPRO. We will consider how espionage worked in the conflict, while thinking about the role that spies played in the popular imagination, from the glamor of James Bond to the “insider” realism of Helen MacInnes, Graham Greene, and John Le Carré, to revisionist thrillers like Viet Than Nguyen’s The Sympathizer and Lauren Wilkinson’s American Spy. In the final unit we will explore how espionage changed during the War on Terror, considering how spying was set up as a weapon against terrorism in the popular imagination, from Homeland to Zero Dark Thirty. In the final week we will consider the idea of surveillance capitalism and the idea that espionage is now inextricably part of our everyday lives.

Class Notes: Seminars meet for two hours of synchronous class discussion each week.

History & Literature 90EK

American Noir (216233)

Angela Allan

2021 Spring (4 Credits) Schedule: W 1200 PM - 0245 PM

Instructor Permissions: Instructor Enrollment Cap: 10

Midcentury America saw the explosion of a genre on the page and screen—the hardboiled crime novel and the film noir. Noir represented a foil to postwar optimism: its protagonists were cynics and loners. Filled with lurid crimes and deeds, noir suggested a dark underbelly to American society and its promises of domestic fulfillment, economic stability, and institutional support. Husbands and wives plotted each other’s murders; the city streets beckoned with sin; and the police were no match for the private detective. Yet even while these stories foregrounded alienation, they also had a mass cultural appeal to American audiences. We will examine noir not only as an aesthetic—filled with brutality stylishly dressed up in beauty—but also as a political commentary on disillusionment and conformity. How did representations of the tough guy and the femme fatale reflect or shape the gender and sexual politics of the era? How were race and ethnicity imagined as criminal categories for suspicion? And how did America’s anti-heroes reflect a changing conception of nationhood and citizenship in the atomic age? By looking at cultural works like film, novels, and true crime pieces next to works of sociology and psychology from the period, we will consider what audiences' fascination with violence, murder, and deceit revealed about the American identity.

Class Notes: Seminars meet for two hours of synchronous class discussion each week.

History & Literature  90EL

France and its "Others:" Race, Nation, and Identity in (Post)Imperial Society (216234)

John Boonstra

2020 Fall (4 Credits)  
Schedule: MW 1200 PM - 0115 PM
Instructor Permissions: Instructor Enrollment Cap: 10

In a controversial—and bestselling—recent novel, Michel de Houellebecq imagines France’s government and society taken over from within by Muslim extremists who impose Sharia law. Fears of internal "colonization"—by Muslims, immigrants, Jews, Americans, and various "Others"—are nothing new in French history. Yet, by tapping into the growing influence of the anti-immigrant extreme right in French politics over the past several decades, the popularity of Houellebecq’s novel raises a number of provocative questions for contemporary French—and global—society: how has a country premised on the "equality" and “fraternity” of all of its citizens continued to exclude religious, ethnic, and racial "Others?" And, perhaps more perplexingly, how did what was once a global empire—whose reach extended from the South Pacific to the Caribbean, from North and sub-Saharan Africa to Southeast Asia—become so anxious about being "colonized" within Europe itself? Most proximately, how did the violence of France’s colonial wars—in Algeria and Indochina especially—and the tumult of postcolonial migration shape the fears and fantasies of national and imperial identity?

This course will address these questions by taking a longer and wider view of the (post)colonial experiences of twentieth-century France. Surveying works of history, politics, literature, anthropology, and film—from Sartre and de Beauvoir to Houellebecq and Sarkozy, Ousmane Sembène and Frantz Fanon to Azouz Begag, Linda Lê, and Alain Mabanckou—we will seek to understand how the perceived dangers of invasion drew on and departed from the ambiguities and insecurities of imperial power.

Class Notes: Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature’s application to enroll by August 21. Instructors will notify students of enrollment decisions on August 24.

This seminar is open to all undergraduates, but priority will be given to sophomores interested in concentrating in History & Literature.

Empire and Archive in the Colonial Americas (216235)

Alan Niles

2020 Fall (4 Credits)                  Schedule: W 1200 PM - 0245 PM
Instructor Permissions: Instructor     Enrollment Cap: 10

How do we know the histories of colonialism and empire? In this course, we will study how European expansion in the Americas fueled and was fueled by the production of records and representations of colonial spaces and their peoples. We will study how violence and resistance shaped alternative systems of knowledge making among Indigenous and African communities, including oral histories, wampum, featherwork, graffiti, and vodou. We will work with sources by canonical authors including Columbus, Montaigne, Mary Rowlandson, and Juana Inés de la Cruz alongside the works of anonymous or unfamiliar writers, artists, and craftspeople including Afro-Brazilian healers, Tupinamba featherworkers, and the Massachusett and Nipmuc printers who worked in Harvard Yard. Throughout our course, we will ask: what interplay of power, resistance, and chance produces an artwork, document, or memory of the past—or ensures its survival and visibility in the present? What responsibility does a historian or critic have towards the silences of the archive and what strategies might recover marginalized perspectives from the past? How can attending to these histories of the archive shape the stories we tell today?

Class Notes: Seminars meet for two hours of synchronous class discussion each week.
To register, complete History & Literature's application to enroll by August 21. Instructors will notify students of enrollment decisions on August 24.
This seminar is open to all undergraduates, but priority will be given to sophomores interested in concentrating in History & Literature.
For the Fall 2020 semester all course readings are accessible through the Canvas site. Assignments are designed to take advantage of the many digital collections of sources relating to the colonial past available online. In class, we will make virtual visits to archives and collections available at Harvard.

Latin American Revolutions (216236)

James Mestaz

2020 Fall (4 Credits)                  Schedule: MW 0430 PM - 0545 PM
Instructor Permissions: Instructor     Enrollment Cap: 10

This course explores the origins, trajectory, and outcomes of three twentieth century Latin American revolutions: Mexican, Cuban, and Nicaraguan. Students will analyze what these three revolutions shared in common, such as the causes, which included discrimination, US imperialism, state violence, economic inequity, and political marginalization, but also consider the nuances of what made them different, and in
which ways the later revolutions were inspired by the previous ones. The class will rely on primary sources, such as novels, film, photographs, music, murals, and manifestos to explore how all sectors of society helped foment changes to the physical, economic, and social landscapes in these countries. Students will investigate community grassroots mobilization tactics and what the revolution meant for marginalized groups such as indigenous, women, or queer people. Learning the difficulties of implementing profound change will help students understand how resistance and democracy meant different things to different communities, and how the definition of what is meant by a revolution evolved over time. Studying Latin American Revolutions will help students grasp the complexities of our increasingly globalized society, and reconsider the efficacy of our own political systems, freedoms, and democracy.

Class Notes: Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature's application to enroll by August 21. Instructors will notify students of enrollment decisions on August 24.

This seminar is open to all undergraduates, but priority will be given to sophomores interested in concentrating in History & Literature.

### History & Literature 90EO

The Reinvention of New York City (216237)

*Michael King*

2020 Fall (4 Credits)  

**Schedule:** MW 0300 PM - 0415 PM  

**Instructor Permissions:** Instructor  

**Enrollment Cap:** 10

The recent history of New York City is one of crisis, resilience, and rebirth. From the terrorist attacks of 9/11 to the devastation of the pandemic, New Yorkers have experienced tragedy and reinvented their city in its aftermath. This is a cycle with a deeper history: in this course we will focus on how New York City reinvented itself in the Seventies and Eighties. On October 16, 1975, New York City was on the brink of bankruptcy. With nearly five hundred million dollars of debt due the next day and only thirty-four million in its bank, catastrophe seemed inevitable. Fortunately, the city was able to raise funds and avoid bankruptcy. Nevertheless, New York City was and had been a space on fire—both literally and figuratively speaking—for at least a decade prior. Landlords burned down buildings to collect insurance; Black, Latinx and LGBTQ communities fought for the right to claim space and protections. In the midst of these fires, however, many different communities seized upon cheap rent and abandoned spaces in order to use them as sites of profound community- and art-making. This course will explore the social and historical contexts under which the residents of New York City contended with precarity in order to create vibrant spaces of living. In order to understand how individuals and communities both understood and created the city around them, students will look at a wide variety of texts, including but not limited to songs, visual art, performance pieces, editorials, and oral histories. Students will be encouraged in how the New York City they know was shaped by this history and what lessons can be drawn from this period of unprecedented creativity as the city once again faces a precarious future.

Class Notes: Seminars meet for two hours of synchronous class discussion each week.
To register, complete History & Literature's application to enroll by August 21. Instructors will notify students of enrollment decisions on August 24.

This seminar is open to all undergraduates, but priority will be given to sophomores interested in concentrating in History & Literature.

The Global History of Pests (216238)

*Samuel Dolbee*

2020 Fall  (4 Credits)  

**Schedule:**  
W 0600 PM - 0845 PM

**Instructor Permissions:**  
Instructor

**Enrollment Cap:**  
10

Pests have had impacts large and small on human life, serving as sources of lethal pandemics and minor annoyance alike. But what constitutes a pest has varied greatly over time and space. This course examines these themes with a focus on the late nineteenth century and early twentieth century, an era of optimism for pest eradication and visions of environmental control more broadly. It subsequently turns to the consequences of these efforts--both life-saving and deleterious--to the present. Throughout, the course contextualizes pests as products of sedentary agriculture, empire, and capitalism. Topics include mosquitoes and revolution in Haiti, street dogs and health in Istanbul, and rats and race in Baltimore. The course also touches on the broader cultural resonance of pests, by attending to how the language of pests has come to apply to invasive species, germs, and certain humans. The sources for thinking through these questions are broad, ranging from Frantz Fanon’s The Wretched of the Earth to Disney public health reels featuring The Seven Dwarfs happily spraying insecticides to Rachel Carson’s Silent Spring. In sum, the course brings together environmental history, the history of medicine, and the history of science to consider how humans have created pests and pests have created humans.

**Class Notes:**  
Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature's application to enroll by August 21. Instructors will notify students of enrollment decisions on August 24.

This seminar is open to all undergraduates, but priority will be given to sophomores interested in concentrating in History & Literature.

**History & Literature  90EQ**

Nuclear Imperialisms (216239)
This course will examine nuclear narratives in global contexts as reminders and remainders of empire. Are nuclear futures only tied to whims of unpredictable world leaders, or are they already part of our daily realities? Whose stories of nuclear proliferation are told, and whose are suppressed? Drawing on government propaganda, activist writing, television, fiction, photography, poetry, and film from 1945 to the present, this course will explore the cultural and material legacies of radiation around the world. From American "atomic culture" of the 1940s and '50s to Cold War era peace movements in the Pacific Islands to nuclear disasters like Chernobyl and Fukushima, we will assess whether nuclear cultures have changed over time by using a place-based investigation of nuclear research, uranium mining, atomic bombs, "clean" energy, and anti-nuclear resistance. Course texts will include poetry by Kathy Jetnil-Kijiner and Craig Santos Perez, fiction by Ruth Ozeki and Robert Barclay, documentaries such as The Atomic Café and The Return of Navajo Boy, as well as popular film and television like Dr. Strangelove (1964), Star Trek (1967), and Godzilla (1954).

Class Notes: Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature's application to enroll by August 21. Instructors will notify students of enrollment decisions on August 24.

This seminar is open to all undergraduates, but priority will be given to sophomores interested in concentrating in History & Literature.

History & Literature 90ER

Industrialization and Inequality: from the Gilded Age to the Progressive Era (216240)

Morgan Day Frank

Industrialization after the Civil War transformed American life in dramatic and horrifying ways, and it transformed "literature" as a category of cultural consumption too. Some writers, like the muckrakers, believed that their work had the capacity to shape public life. Others like Henry James conceived of their writing as art that operated according to its own rules. Still others like Ambrose Bierce grew pessimistic about literature's capacity to accomplish anything whatsoever. This course will examine American literature at the turn of the twentieth century, when robber barons enriched themselves and many Americans were plunged into deep poverty. Through readings like Edith Wharton's Custom of the Country, Mark Twain's Mysterious Stranger, and Sutton Griffis's Imperium in Imperio, we will consider the literary response to a range of historical developments, including the rise of consumer capitalism, the industrial nation's fascination with pre-industrial life, and the creation of African American secret societies. By studying the shifting meanings of the literary as the country moved from the unfettered capitalism of the Gilded Age to the regulatory apparatuses of the Progressive Era, we will ultimately seek to better understand the meaning of literature in our own fraught historical moment. Whether we should turn to
literature to solve our problems, or whether literature is itself part of the problem, are questions we will pose over the course of the semester.

Class Notes: Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature's application to enroll by August 21. Instructors will notify students of enrollment decisions on August 24.

This seminar is open to all undergraduates, but priority will be given to sophomores interested in concentrating in History & Literature.

History & Literature  90ES

Prison Abolition (216326)

Thomas Dichter

2021 Spring (4 Credits) Schedule: MW 1200 PM - 0115 PM

Instructor Permissions: Instructor Enrollment Cap: 24

Is prison abolition a serious proposal, an aspirational ideal, a trendy slogan, or a blueprint for social transformation? This interdisciplinary and community-engaged course situates the prison abolition movement in deep historical context and explores its current relation to the politics of criminal justice reform. We will study the movement's connections to slavery abolitionism, anti-lynching activism, Indigenous struggles for sovereignty, and the Black Power movement. We will examine the emergence of the modern prison abolitionist movement in the 1970s, as well as more recent developments concerning immigration detention, Black Lives Matter, and COVID-19. Our readings will include interdisciplinary scholarship on the carceral state in addition to protest writings and activist materials. A major component of the course will be collaborative activities and service with community organizations focused on incarceration and the criminal legal system, through which we will consider what prison abolitionist ideas might look like in action. There will be opportunities for dialogue with scholars and activists as we investigate prison abolition not as a singular policy, but as a rich and challenging set of questions for rethinking matters of violence, inequality, and social change.

Class Notes: Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature's application to enroll.

This seminar is designed for first-years and sophomores, who are especially encouraged to apply.

"All wars are fought twice, the first time on the battlefield, the second time in memory," Viet Thanh Nguyen has argued. In this seminar, we will challenge how the Vietnam War is remembered in the United States by focusing on the work of Asian American and Southeast Asian diasporic authors, filmmakers, and artists. From the 1960s onward, American film and writing about the war have fixated on the experiences of often white American soldiers, from *Apocalypse Now* to Tim O’Brien’s *The Things They Carried*. As a result, the experiences of the Vietnamese, both North and South, and of Southeast Asia and Asian America more broadly, have been pushed to the periphery. In this seminar, we will bring them back front and center. Reading Asian American and Vietnamese and Southeast Asian diasporic texts, we will study the narratives of war as well as narratives of immigration, refugees, and diaspora during and after the war, moving backward and forward in time to consider the deeper history of the conflict and its various legacies. In the first unit, we consider the Asian American experience of the war: Asian American veterans, the Third World Liberation Front, and anti-war protests. In the second unit, we work through Vietnamese narratives of the war that include soldier and civilian perspectives as well as diasporic works. We conclude with a unit that examines the diversity of the Southeast Asian experience through Laotian, Cambodian, Hmong, and Cham cultural productions ranging from poetry to performance art. This seminar will give us the opportunity to think together about how the Vietnam War as a historical event as well as category of Asian American, Vietnamese, and Southeast Asian experiences can allow for analyses and critiques of war, empire, and diaspora that speak to contemporary discussions of U.S. immigration and deportation policies and citizenship and belonging.

History of Art & Architecture 11
Landmarks of World Architecture (113337)

David Roxburgh
Patricio del Real

2021 Spring (4 Credits) SCHEDULE: TR 1200 PM - 0115 PM
INSTRUCTOR PERMISSIONS: None ENROLLMENT CAP: n/a

Examines major works of world architecture and the unique aesthetic, cultural, and historical issues that frame them. Faculty members will each lecture on an outstanding example in their area of expertise, drawing from various historical periods and diverse cultures such as modern and contemporary Europe and America, early modern Japan, Mughal India, Renaissance Europe, and ancient Egypt. Weekly discussion sections will develop thematically, expanding on the given examples to focus on significant issues in the analysis and interpretation of architecture.

History of Art & Architecture 18K
Introduction to Japanese Art (118347)

Melissa M. McCormick

2020 Fall (4 Credits) SCHEDULE: TR 0430 PM - 0545 PM
INSTRUCTOR PERMISSIONS: Instructor ENROLLMENT CAP: 24

This course surveys artistic production in Japan from the prehistoric period to the twenty-first century. The goal is not to define the national or “Eastern” character of Japanese art, but to interrogate manifestations of human creativity produced in the archipelago on their own terms. Students learn to analyze key examples of painting, prints, sculpture, and architecture, while also exploring calligraphy, garden design, ceramics, performance art, and fashion. Essential themes include the relationship between art and sociopolitical development, the complexities of Sino-Japanese cultural exchange, and the integration of art into the practice and conceptualization of religion and philosophy, as well as the performance of gender, race, and class.

Class Notes: The two weekly synchronous meetings will consist of short lectures, interactive exercises focused on visual analysis, discussions of the readings and lecture content, and student-led short presentations. There are no prerequisites for this course; all are welcome.

Enrollment is limited to 24. To register please complete the questionnaire by August 21. Instructors will notify students of enrollment status on August 24.
History of Art & Architecture  45M

Medieval Media (215760)

Jeffrey Hamburger

2020 Fall (4 Credits)  Schedule:  TR 0130 PM - 0245 PM

Instructor Permissions:  None  Enrollment Cap:  n/a

From the invention of the icon and the book in late Antiquity to printing and panel painting in the 15th century, the Middle Ages harnessed new visual media to revolutionary effect. The course examines space (architecture), light (stained glass), body (sculpture/relic), figure (fresco, tempera, oil), word (roll/codex), abstraction (diagram), mass media (printing).

Course Notes:  This is an introductory seminar without prerequisites intended exclusively for undergraduates. Students will meet twice a week with one session acting as a lecture and the other as a discussion of that week's topic.

History of Art & Architecture  56G

Spanish Golden Age Painting: Truth and Deceit (205401)

Felipe Pereda

2020 Fall (4 Credits)  Schedule:  TR 1030 AM - 1145 AM

Instructor Permissions:  None  Enrollment Cap:  n/a

The art of the Spanish Golden Age is well known for its radical naturalism, on the one hand, and its intense religious imagery, on the other. This course will be an introduction to the major artists of this period—Murillo, Velázquez, Zurbarán and others—from the point of view of painting’s power to produce visual illusions and deceive their spectators. Consequently, the course will consider artistic tropes of illusion and disillusionment in relation to early modern debates on belief and skepticism.
Should the U.S. government or any government have an official style, and if so, what style should it be? The recent presidential executive order, called "Making Federal Buildings Beautiful Again," has brought the problem of beauty and the question of style centerstage to cultural debates on architecture and the built environment. But it's not a new debate. This undergraduate lecture course examines the ways architecture has serviced the nation-state, and advanced political, economic and social ideologies. It examines how architecture has been used as a tool of political and cultural power and a technique for social governance. We will focus on the 20th and 21st Century, examining case studies from across the globe. We will explore paradigmatic examples of aesthetic fundamentalism such as the embrace of classical architecture in Nazi Germany and Stalinist Russia, and the promotion of architectural modernism by the Vargas' Dictatorship in Brazil, and Mussolini's Fascist Italy. We will look at memorialization through architecture such as the recent National Museum of African American History and Culture in Washington DC and the Ningbo History Museum in China; engage current debates on monuments and collective memory; and explore the democratizing use of contemporary architecture and urbanism in Colombia. The course looks at "the good, the bad and the ugly" examining architectural aesthetics as a form of cultural power. It focuses on pressing issues affecting our shared built environment as we confront an uncertain future. In short, we will look at why, today, Architecture continues to have meaning, and answer whether buildings need to be "beautiful" or significant.

Money is everywhere. As both an abstract construct and a material entity, money makes the world go around. Since before the invention of writing, money has been a common facet of everyday life, informing how we think and how we act. The course explores how societies across human history have made, used, and valued money in divergent ways. We will consider money as an object of aesthetic appreciation, an ethical problem, an architect of social relations, and environmental disruptor, a tool of political resistance, and much more. How has coinage design been a function of money's role as a political, religious, and cultural symbol? Is money a measure of value, and how does it align with other potential values, such as religious, moral, and aesthetic ones? Is it ethically neutral or an instrument of moral vice or virtue? What were the debates surrounding the rise of paper money beginning in the eighteenth century? How was money used as a tool of political resistance during the suffragette movement? Does money get recycled,
and what is the environmental cost of different money forms today? What are the links between art, literature, theater, cinema, and money?

### History of Art & Architecture  88

**China in Twelve Artworks (161270)**

*Eugene Wang*

2021 Spring (4 Credits)  
**Schedule:**  
MW 1200 PM - 0115 PM

**Instructor Permissions:**  
Instructor

**Enrollment Cap:**  
n/a

China is grasped through twelve artworks, spanning three millennia from the Bronze Age to the twentieth century. These artworks form both a timeline and a jigsaw puzzle with recurrent themes, e.g., the correlation between cosmos, body, and mind. The course consists of case studies, revealing both larger intellectual trends and the nuanced way artworks engage established formal conventions. Students learn about China through art and acquire visual literacy that takes art on its own terms.

History of Art & Architecture  92R
Design Speculations: Senior Design Tutorial (207690)

Megan Panzano

2020 Fall (4 Credits)  
Schedule: R 0900 AM - 1145 AM
Instructor Permissions: Instructor  
Enrollment Cap: 14

This seminar will serve as a design platform for inquiry, documentation and analysis in relation either to the thesis topic or capstone project of interest to each student. Thesis students will be responsible for selecting a Thesis Advisor (or Advisors) with whom they will meet regularly to develop specific intention, substance and methodology of the thesis research and paper. This seminar is a support of independent thesis and/or independent project research, extending methodological inquiry of the project topic to design where students may convene to collectively discuss and experiment with design speculations – design tests that explore research through the visual and spatial language of architecture. The course will cover topics general to design research with discussions, assignments, and readings focused on three main themes in relation to architectural design: Discourse, the development of a proposition for the role and significance of architecture relative to the project topic of interest; Method, the design steps/process of working through a design application/inquiry of those ideas; and Context, the relationship of the project topic of study to broader surroundings which include but are not limited to the discipline of architecture, cultural contexts, technical developments and/or typologies. The seminar will emphasize and support the translation of ideas emerging from independent research into visual forms of representation including, but not limited to, drawings, diagrams, images, study models, and short animations. The techniques of representation reviewed will be catered to the project topics of individual students, but will also form a part of the general discussion of the course.

HAA 96A Transformations or HAA 96B Connections design studios is a pre-requisite to the Design Speculations course.

Architecture assembles multiple models, surfaces, and materials; it is not a single monolithic thing, rather it is comprised of disparate parts and organizational systems operating at different scales. Design, the bringing together of these elements, requires sensitivity, registers scale, and renders perceptual effect. This course is an introductory architectural design studio focused on building foundational architectural concepts and design methodologies studied through a process of making. A series of physical modeling/fabrication assignments explore spatial and organizational transformations as a consequence of the changing interactions among material, fabrication technique, and form. Resultant expressions of space, scale, and perceptual effects are discussed and evaluated in relation to a series of course readings that frame the intentions of each assignment within architectural theory and history discourse.

Both studios in the Architecture Studies Track (Transformations HAA 96A and Connections HAA 96B) explore architectural means and methods of design. Each begins from a different scale of inquiry, but converges at a similar end. This studio originates at the scale of material - focusing on specific capacities and effects thereof as well as the details of assembly - and expands from this to an investigation of an occupiable architectural scale in relation to a dynamic site.

The course emphasizes fluency in the visual and spatial communication of ideas through instruction in 2D drawing and 3D modeling techniques. Technical workshops are provided in choreography with serial assignments encompassing drafting and 3D modeling (AutoCAD + Rhino), techniques of fabrication (Rhino to various outputs), 3D printing, and representational processing (Adobe Creative Suite). The studio exposes students to critical architectural thinking and design methods for more broad disciplinary application following. No particular skill set, technical or otherwise, is a required prerequisite for this course; students from all backgrounds are welcome.

The practice of architecture fundamentally asks us to continuously engage with, and re-conceptualize, the world for which we are designing. As such, architecture as a discipline is not only about designing buildings, but also about challenging us to imagine new ways of seeing the world. This studio takes on the challenge through a series of design exercises focused on understanding, engaging with, and reimagining the urban condition. Throughout the course, we will approach architectural design as both a method of producing urban environments, and also as an avenue through which to understand our cities. We will be directly confronting the social, political, and environmental contexts that are necessarily implicated in any
design process. Both studios in the Architecture Studies Track (Transformations HAA 96A and Connections HAA 96B) explore architectural means and methods of design. Each begins from a different scale of inquiry, but converges towards a similar end. This studio originates at the scale of the urban site, and begins with a set of design research assignments that ask students to imagine the city from the perspective of a non-human agent. Extrapolating abstract principles from these agents, we will be mobilizing the possibilities of architectural representation to reimagine the city through mapping, diagraming, and collage. The studio culminates in a design proposal for a site in Harvard Square. Students will be given an architectural brief, and will produce projects that address existing site conditions, programmatic space requirements, and projected users of the site. Technical workshops will provide all the necessary skills required for the course, and will allow students to develop aptitude in architectural drawing, mapping, rendering, and simple animation. No existing expertise or technical proficiency is necessary for this course. Students from all backgrounds are welcome; we will be encouraging interdisciplinary thinking throughout the design research process.

From Byzantium to the British Isles: The Materiality of Late Antiquity (205052)

Evridiki Georganteli

2021 Spring (4 Credits)  

Schedule: M 0900 AM - 1145 AM

Instructor Permissions: Instructor  

Enrollment Cap: 12

This course explores the extraordinary cultural transformation of Europe, the Mediterranean, and the Middle East underwent from Diocletian’s reorganization of the Roman Empire in the late third century to the Islamic conquest of the Iberian Peninsula in the eighth century. Monuments and sites, sculpture, mosaics, frescoes and ceramics, icons and relics, textiles, coins, and seals chart the movement of people, commodities, and ideas along routes of warfare, pilgrimage, trade, and diplomacy. Was the world of late antiquity still bearing the hallmarks of Roman connectivity, administration, and culture? Were Ireland and Anglo-Saxon England really the edge of the known world? What was the extent of the Eastern Roman Empire’s cultural power in late antique Europe, Africa, and the Middle East? How did religious changes influence urban topographies, geographies of power, and artistic choices?

Research stunning works of art from collections across the globe. Go behind the scenes in the Metropolitan Museum. Handle metalwork, textiles, coins, and seals in the Harvard Art Museums and the Dumbarton Oaks Collections. Visit a city in late antique Macedonia. Be an archaeologist for a day and explore Harvard’s flagship dig at the archaeological Exploration of Sardis. Map your findings on the Digital Atlas of Roman and Medieval Civilizations, and create podcasts about your favorite objects.

Hagia Sophia: Architecture, Space and Ceremony (109959)

Ioli Kalavrezou
2021 Spring (4 Credits)
Instructor Permissions: Instructor
Enrollment Cap: 15

Schedule: W 0300 PM - 0545 PM

The seminar will investigate an architectural masterpiece, the famous 6th c. Church of Hagia Sophia of Constantinople, now Istanbul. The monument stands at the forefront of the supreme architectural achievements not only of the emperor Justinian but of all Medieval and Byzantine domed architecture. It is best known for its unique design, its dome of unprecedented scale, and its splendid mosaics, now very much in the lime light. The seminar will analyse issues of design and materials, structure, symbolism and ritual performances.

The Age of Albrecht Dürer (159977)

Joseph Koerner
2020 Fall (4 Credits)
Instructor Permissions: Instructor
Enrollment Cap: 15

Schedule: W 0300 PM - 0545 PM

Albrecht Dürer became the world's first world-famous artist largely because he invested his talent in the
new medium of print. Multiplying his work a thousand fold and disseminating it (on sheets of paper) to innumerable viewers in multiple locations, print made Dürer the first beneficiary of "distance viewing" and, thus, a perfect topic for "distance learning" forced on us by the current pandemic. Looking together, creatively, at this artist's fascinating and enduring oeuvre — all available online — we will explore the wider cultural dynamics of Renaissance and Reformation that underlay the making, and the breaking, of art.

Drawing Lessons (216058)

Margaret Grasselli

2021 Spring (4 Credits)                              Schedule:            F 1200 PM - 0245 PM

Instructor Permissions: Instructor Enrollment Cap: 12

This course, taught from original drawings in the collection of the Harvard Art Museums, explores a broad range of topics associated with the materials, functions, preservation, collecting, exhibiting, and cataloguing of European and American drawings from the fifteenth century through the nineteenth century. Emphasis will be placed on close examination of the drawings, and discussions will include identification of media, characteristics of the execution, inscriptions, and other details that contribute to an understanding of the creation, purpose, and history of each sheet. Class members will collaborate on creating a virtual exhibition of drawings from the Harvard collections, to be presented online. Assignments involve reading, writing, and working directly from the objects. Broad knowledge of the history of European and American art is desirable but not required.

Francisco de Goya (203078)

Felipe Pereda

2021 Spring (4 Credits)                              Schedule:            M 1200 PM - 0245 PM

Instructor Permissions: Instructor Enrollment Cap: 15

This course is about two things. First it's an introductory course to the art of Francisco de Goya (1746-1828) at the time of the Enlightenment and early Romanticism. It will look into his formation in the institutions of the Old Regime (Travel to Rome, member of the Royal Academy, Court Artist) and explore how Goya challenged this artistic culture, exploring new ideas for the meaning of art, of its public and of the role of the artist in society. Second, the course will discuss Goya's work (from his early "caricatures," the Caprichos, to the Disasters of the War) in relation to modern debates about testimony, witnessing and trauma. The class will take place, half in the seminar-room, half at the museum's study-room looking at
prints and drawings from his own work and other contemporary masters.

Harvard Square (212807)

Suzanne Blier

2020 Fall (4 Credits)   

Schedule: M 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap: 15

Harvard Square has a rich history; under its earlier name of Newtowne (founded in 1630), it was once the site of the Massachusetts capital. Much has changed. This class looks back on the many changes Harvard Square has undergone, recent challenges it has faced, and asks class members to think forward about how it might be re-envisioned. This class will combine work in local archives on issues related to history and policy, meetings with local Cambridge officials, and an array of local design and drawing assignments. Learn how Harvard fits in; Be part of the change.

Stranger than Fiction (108657)

Carrie Lambert-Beatty

2020 Fall (4 Credits)   

Schedule: T 1200 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap: 18

Is there an art history of post-truth? False personas, invented figures, museums of unnatural history and other fictive phenomena fill the annals of contemporary art. How do decades of factually-presented fictions, and thousands of temporarily deceived viewers, relate to the cultural changes that generated "truthiness," "fake news" and "The Death of Truth"? In this course you'll learn about installation art, conceptual art, photography, performance and video, while mapping out varieties of fact-based, fictional, and parafictional art, and debating their implications for art history— and for everyday life. (Note: class can be taken for credit in either HAA or AFVS; total enrollment limited to 18.)

</table>
An extraordinary number of women trained to become photographers in Weimar Germany (1919-1933). Their presence and practices dramatically altered the conditions of visual culture in a country that had never achieved the levels of French modernism, for example, neither in terms of its aesthetic complexity nor in terms of its contributions to nation state identity. Female photographers not only changed the almost purely patriarchal structures of official German culture, but they also contributed to a fundamentally different model of artistic identity, one that was not only subversive in terms of its gender politics, but also dismantled hierarchical orders at large, thus dramatically expanding the spectrum of collective interest and participation in processes of representation, be they reflections on the everyday lives of the urban masses, on sexual politics and the New Woman, or trans-national travel, fashion and consumption as presented in the rapidly expanding industries of the illustrated magazines. The majority of these photographers had to emigrate after 1933, either because they were Jewish or because their left wing politics were prosecuted, or because their progressive aesthetic principles and projects were no longer tolerated by the Nazi Regime.

Thus the second part of the seminar will not only trace the dis- and relocations of these figures, but also explore the impact of exile on cultural identities and practices in the second half of the twentieth century.

---

Recent events have reminded us of the phenomenal power of the real-time convergence of people in public space. What is the role and responsibility of the artist in such moments of far-reaching political, social, and cultural upheaval and transformation? Should artists uphold the the (modernist) principle of the autonomy of the work of art? Or should they commit to the social turn that has characterized much artistic production of the last decade or so?

To help us debate this fundamental question, this course brings to the table one of the most extraordinary historical examples we have of artists radicalizing their aesthetic practices, tactics, and strategies to meet revolutionary objectives—that of the avant-gardes that emerged in Russia in the wake of the 1917 revolutions.

Remarkable for the number of women in their ranks, the Soviet avant-gardes of the 1920s and 1930s reconceptualized what it meant to be an artist. They advanced collective practices, counter-monuments, the politicization of abstraction, and innovative modes of exhibition design. Inventing new typologies of
small-form architecture, such as agitational kiosks and vehicles, they transcended their traditional domain (studio, gallery, and museum) to operate directly in the public realm of the street. They designed demonstrations, outdoor theatrical spectacles, and workers’ clubs for the enlightenment, relaxation, and entertainment of ordinary people. To expand their outreach, they moved away from the production of unique objects (paintings, sculpture) to engage instead the mass-distribution forms of industrial production, photography, film, print media, and poster, book, clothing, and textile design.

What lessons, whether positive or negative, might we learn from their example?

Artists include: Vladimir Tatlin, Liubov Popova, Varvara Stepanova, Elena Semenova, Kazimir Malevich, Aleksandra Ekster, Aleksandr Rodchenko, Valentina Kulagina, Gustavs Klucis, Sophie Küppers, Mariia Bri-Bein, Aleksandr Deineka, Dziga Vertov, Elizaveta Svilova, and El Lissitzky.

Course readings comprise short polemical essays by artists and their contemporary apologists and critics, and key texts by art historians and theorists. All readings in English.

Open to all graduate and undergraduate students. (To facilitate their preparation, undergrads will have, in addition to the regular course meeting, a dedicated one-hour section with a TF.)

Requirements: --Weekly preparation of readings (all available on Canvas); --Attendance and participation (via Zoom) at a two-hour meeting per week (and, for undergrads, also the one-hour prep section)--One or two 10-minute class presentations on the reading;--Paper of 10-12 pages (undergrads), 15-25 pages (grad students).

Class Notes: There will be an open house event on Wednesday, August 19th, from 4-5 pm ET. Please stop by. For more information, visit our Canvas page.

History of Art & Architecture  177K

Art After State Violence: The Paris Commune & its Repression (216466)

Maria Gough

2021 Spring (4 Credits) Schedule: T 1200 PM - 0245 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

What does art look like after the state has slaughtered its own citizens? This course examines the extraordinary story of the Paris Commune, a popular uprising in 1871 that was brutally suppressed by the French national government, resulting in the death of at least 10,000 civilians, if not many thousands more.

We begin with the situation on the ground during the Commune, dedicating sessions to such topics as: the barricade as architectural typology; the use and manipulation of photography for partisan purposes; and the activism of the painter Courbet, including his putative role in the destruction of the Vendôme Column.
(an imperial-era monument commemorating Napoleon's military conquests abroad). We then turn to examine the different ways in which modern painters responded to the Commune's repression with sessions on: Manet's representation of state violence; the fact that Impressionist painting, seemingly so oblivious to this violence, flowered in the 1870s, almost immediately in its wake; and the complex relationship between post-Impressionist art and anarchist thought in the 1880s and 1890s.

Open to all graduate and undergraduate students. (To facilitate their preparation, undergrads will have, in addition to the regular course meeting, a dedicated one-hour section with a TF.)

How might our mainstream histories of modern art change if we more fully acknowledged the Paris Commune and its repression as a key source of inspiration and/or trauma for modern artists in the decades that followed? What might this example of art after state violence tell us about comparable episodes in other places and historical moments?

Open to graduate students and undergraduates.

Requirements:
--preparation of weekly readings, attendance at class meetings (via Zoom), and participation in discussion (40%);
--one or two brief introductory class presentations (10%);
--one research paper (undergrads 10-12 pages; graduate students 15-25 pages), topic to be chosen in consultation with the instructor (50%).

Open to all graduate and undergraduate students. (To facilitate their preparation, undergrads will have, in addition to the regular course meeting, a dedicated one-hour section with a TF.)

History of Art & Architecture 178N

Architecture and the "Museum" (215902)

Patricio del Real

2021 Spring (4 Credits) Schedule: W 0300 PM - 0545 PM

Instructor Permissions: Instructor Enrollment Cap: 15

Why has architecture entered the museum? Today, art museums continue to expand their offering on "buildings," some even opening departments dedicated to architecture and design. In these privileged exhibition spaces, architecture abandons its place in the world – its practical and everyday interactions in the built environment – to enter the realm of representation. At the same time, exhibitions are part of the production of architecture, conditioning its practice and stimulating its culture. This proseminar examines architecture as a cultural object in display. It looks for the historical conditions that normalized its presentation in the museum. Our focus: architecture exhibitions in the expanded field of exhibitionary practices, from professional associations to ministries of public works, that led architecture to enter the museum. We will look at: key exhibitions; their materials; what and how is put on display (models, drawings and objects); archives; collecting and acquisitions policies; curatorial strategies. Our aim is to go beyond well-known exhibitions and explore why architecture has become a tool for cultural authority, elite aesthetics, market consolidation, and political soft power. The course will run with parallel
seminars held at UNAM, Mexico, and PUC, Chile, led by local faculty members. Each seminar will focus on their national architectural contexts and work together to survey and construct an Americanist geography of curatorial practices in architecture during the 20th century. Students from Harvard, UNAM, and PUC will collaborate, exchange ideas, and present their research in scheduled sessions.

Nihonga: Modern Japanese Painting (215903)

Yukio Lippit

2021 Spring (4 Credits) **Schedule:** M 0300 PM - 0545 PM

**Instructor Permissions:** Instructor **Enrollment Cap:** 10

This seminar studies the history of modern Japanese painting through an examination of Nihonga, a neotraditional form of painting that emerged in the late nineteenth century. Conceptualized in part by Ernest Fenollosa and Okakura Kakuzo, Nihonga selectively combined traditional Japanese formats, materials, and subject matter with European pictorialism, and would go on to become the defining pictorial mode of academic painting in Japan, exerting a strong influence across the Asian world. A major premise of the seminar is that Nihonga is as essential to a study of global artistic modernism as any other genre or movement.

Chinese Sonic Painting: How to Picture Voice (215883)

Eugene Wang

2020 Fall (4 Credits) **Schedule:** M 0900 AM - 1145 AM

**Instructor Permissions:** Instructor **Enrollment Cap:** 15

Can paintings project voice? Can soundscape be pictured? The seminar explores the long-standing Chinese tradition of "sonic painting" that captures lyric voice. It seeks to go beyond the text/image paradigm by shifting the focus on the voice effect in painting. In doing so, the course develops a methodology of characterizing the art of senses and pictorial means of performing voices, such as "singing" and lamentation.

Global Art: Comparative Approaches in Art History & Ethnography (215884)

Suzanne Blier

2020 Fall (4 Credits)  Schedule:  M 0300 PM - 0545 PM
Instructor Permissions:  Instructor  Enrollment Cap:  15

The course explores art in global context, among those traditions in Africa, Oceania, and Native America, fields shared by both art history and anthropology. How does each discipline address local perspectives on art? Readings will be drawn from historical and more recent study. Issues addressed will be: approaches to field analysis, comparative perspectives, the role of history, artists, art markets, museums. Students will gain an understanding of the global art forms under consideration, and different disciplinary approaches, as well as questions important to the understanding of visual engagement.

Art in a State of Siege (215904)

Joseph Koerner

2021 Spring (4 Credits)  
**Schedule:** W 0300 PM - 0545 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 15

What challenges and opportunities arise for artists and writers working under dire conditions—martial, political, medical, and natural states of emergency? To what extent are such exceptional conditions the rule (as Walter Benjamin proposed)? Co-taught by Stephen Greenblatt (English) and Joseph Leo Koerner (History of Art), this course considers art and literature in states of siege against the backdrop of juridical theories of such states.

Course Notes: This class is co-taught by Stephen Greenblatt and is also offered as English 227s.

History of Art & Architecture 266

Art Writing in Persianate Culture (216264)
David Roxburgh

2020 Fall (4 Credits)  Schedule:  
T 1200 PM - 0245 PM

Instructor Permissions:  Instructor  Enrollment Cap:  12

This seminar is focused on the reading and critical study of primary written sources about art in Persian and English translation from the 15th through 17th centuries focused on Persianate culture. Secondary sources in Persian and European languages are also considered for their approaches and methods to the examination of written sources.

The written sources are arranged chronologically and span several genres including the petition (Arzadasht), the calligrapher’s treatise (Simi Nishapuri, Sultan Ali Mashhadi, and Baba Shah Isfahani), the artist's treatise (Sadiqi Beg), the travel narrative (Ghiyath al-Din Naqqash and Abd al-Razzaq Samarqandi), the album preface (Dust Muhammad), biographies of poets (Dawlatshah Samarqandi and Sam Mirza), biographies of artists and calligraphers (Qazi Ahmad and Mustafa Ali), and the memoir (Jahangir). Study of these sources will attend as much to their form, language, genre, literary history, and authorship as to their content and value for art history.

American Racial Ground  (216085)

Sarah Lewis

2020 Fall (4 Credits)  Schedule:  
M 0900 AM - 1145 AM

Instructor Permissions:  Instructor  Enrollment Cap:  12

How are artists, and how are disciplines in the arts and humanities, responding to the hyper-visuality of racial injustices on American ground? This course explores how visual artists including Mark Bradford, Theaster Gates, Amy Sherald, Xaviera Simmons, Hank Willis Thomas, and Kehinde Wiley, and new landmarks—such as the Equal Justice Initiative's National Memorial to Peace and Justice and the creation of Black Lives Matter Plaza—have initiated a new set of "groundwork" tactics in the Stand Your Ground Era in the United States. Stand Your Ground laws, first established in 2005 and now in over thirty-three states, define the right to self-defense, to claim the ground on which one stands if there is a perception of "reasonable threat." The law disproportionately affects black and brown lives today. These artworks prompt the question, What does it mean to not be able to "Stand Your Ground"? What are the representational tools available to show the frequent challenge to this upright position as a statement of sovereignty over one's own life? How has the manifold meaning of the term "ground"—as both reason, fact, but also soil itself, opened up a mode of critical inquiry to address the injustices wrought at our feet? Just as the field of environment studies has begun to consider its nexus with racial inequity; this course will approach these representations of the "ground" with a critical race art history perspective. It will give students the chance to consider the "groundwork" that artists have created as both practical labor for civic society, and as a prompt for new, critical methodological inquiry in the arts and humanities at large. Enrollment is limited to graduate students and a few undergraduates by application.

Class Notes:  This class will meet for a 2-hour session on Mondays between 9:45 AM and 11:45 AM.

American Racial Ground Application
I wish I could accept every student who wanted to enroll in this course, but it is limited to 12 students.

Please read carefully:
1. Please fill out this application and email it to TF Jessica Williams at jessicawilliams@g.harvard.edu if you have interest in taking this course by 5pm on August 21st.
2. Request Instructor Permission to enroll on my.harvard.edu by 5pm on August 23rd.
3. Accept or decline your spot.

You will receive an email from Jessica Williams about whether you've been accepted or placed on the wait list by 5pm, August 22nd. You have 24 hours to accept your spot. To accept, go to my.harvard.edu, navigate to your Crimson Cart, and click "enroll" (you may need to "validate" your Cart before doing so). To decline, send an email to jessicawilliams@g.harvard.edu. There will be a short waitlist. We will contact waitlisted students about openings on August 23rd. Students from the waitlist who are offered a spot will have 24 hours to accept.

The Graphic Method: Recording the Body in Line, Film, and Flame (215885)

*Jennifer L. Roberts*

2020 Fall (4 Credits)  

**Schedule:** R 0300 PM - 0545 PM  

**Instructor Permissions:** Instructor  

**Enrollment Cap:** 10

Beginning in the mid-nineteenth century and coalescing in the work of French polymath Étienne-Jules Marey, scientists worked systematically to develop methods of detecting and recording the elusive, invisible motions of living bodies. Hoping to penetrate the ephemeral secrets of vitality itself, they devised instruments that allowed the body to "write" its own signatures directly, usually as waveforms or photographic traces in time. The "Graphic Method" (the term was coined by Marey) is best known within art history for its central role in the development of chronophotography and cinema in the work of Marey and Eadweard Muybridge. But it had a much wider range of applications and implications: for example, it was synonymous with the development of dynamic medical imaging (the cardiograph was Marey’s invention) and sound recording (the phonograph is a graphic trace of a sound wave). By the early twentieth century, the graphic method seemed to have disturbed every existing model of time, form, and expression in the humanities and sciences. And it had a long and continuing impact on modern and contemporary art. This course is designed for graduate students and advanced undergraduates. It will begin with a close look at Marey’s work, then move to a thematic format. The course readings and discussions will focus primarily on the period from 1870-1920, but student research projects may address more recent works of art and visual culture.

Deception (110252)

*Carrie Lambert-Beatty*

2021 Spring (4 Credits)  
**Schedule:** R 0300 PM - 0545 PM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** 15

This course will treat questions of trickery, deceit, and duplicity as characteristics of art, and attempt to theorize the aesthetics of deception. The approach will be through contemporary art, where artists have reinvented the old association between art and illusion, but students of any period or culture will be able to pursue their interests as the class treats the long history, and complicated theory, of art’s association with trickery.

**Course Notes:** Primarily for graduate students.

Buddhist Visualization: Dunhuang Caves (215886)

*Eugene Wang*

2020 Fall (4 Credits)  
**Schedule:** R 0300 PM - 0545 PM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** 12

The cluster of embellished caves at Dunhuang, China, is among the largest decorated Buddhist cave complexes in the world, spanning the fourth to the fourteenth century. With 492 caves decorated with murals and sculptures, Dunhuang is the largest art gallery in situ in the world. The course explores the visual programs of Dunhuang caves. The disparate textual sources on which the murals are based do not explain their convergence in the same cave. A deep logic of world-making binds them together. Using available digital reconstructions that proffer spatial experience of the Dunhuang caves, we address some key questions: how do disparate murals in each cave add up to form a program and imply a process? What process? How do these cave visualize and stage the Buddhist spacetime and mental theater of meditation?

Tutorial - Sophomore Year (115419)
Anne Harrington
2021 Spring (4 Credits) Schedule: M 0945 AM - 1145 AM
Instructor Permissions: Instructor Enrollment Cap: 55

Sophomore tutorial is a hands-on course that introduces students to some of the most exciting and productive questions in the history of science, technology and medicine, while developing critical reading, presentation and discussion skills. Small groups of students will tackle different aspects of a larger theme...
each week and share discoveries in sessions led by the faculty instructor. The course will be further enhanced by a series of supervised individual projects.

Course Notes: Required for undergraduate concentration in History and Science. Students must register for the plenary class session that meets on Mondays from 9:00-11:45am OR 12:00-2:45pm, as well as a weekly section to be arranged. The 9:00 am class will begin at 9:45 am. The 12:00pm class will begin at 12:45 pm.

History of Science 100

Knowing the World: An Introduction to the History of Science (123398)

Hannah Marcus
Benjamin Wilson

2020 Fall (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a

What are the origins of modern science and of the scientific method? Have the ways of knowing the world of different cultures and societies changed over time? How has scientific knowledge been related to other enterprises such as art, religion, literature, and commerce? We will ask these questions and more through a broad survey of many of the crucial moments in the development of science from the Scientific Revolution of the 17th century to the present day. Topics and figures will include Galileo, evolution, eugenics, the atomic bomb, and the human genome project.
History of Science 123CS
Starstruck! The History, Culture, and Politics of American Astronomy (213529)
Sara Schechner
2021 Spring (4 Credits)
Instructor Permissions: Instructor
Enrollment Cap: 12
Schedule: T 0300 PM - 0545 PM
This hands-on course will introduce key episodes and issues in the history of American astronomy by close looking at rare early scientific instruments and tangible objects in Harvard collections. Starting with the story of Captain John Smith, Pocahontas, and a sundial, the course will move from colonial relations with Native Americans to the controversial placement of observatories on sacred mountaintops today. In between, we will discuss the roles of religion, politics, science, and culture in the promotion of astronomy in American society. Topics will include comets and extraterrestrials, observatories, westward expansion, time selling, and the role of women. Each unit will begin with anchoring objects, and students will work behind the scenes in the Collection of Historical Scientific Instruments. There will also be opportunities to make and use your own instruments to engage with early methods of production and observation.

History of Science 130
Heredity and Reproduction (156318)
Sarah Richardson
2020 Fall (4 Credits)
Instructor Permissions: Instructor
Enrollment Cap: 10
Schedule: TR 0900 AM - 1015 AM
The sciences of human heredity and reproduction from Aristotle to Margaret Atwood. Readings include classic philosophical, scientific, and literary sources. The course takes up themes of technology and control; gender, race, class, and sexuality; scientific ethics; and interactions between biology and society.

History of Science 141
Foreign Bodies: On Health and Migration (212935)
During the twentieth century, unprecedented human mobility has raised significant questions regarding migration and health. Whether coerced or voluntary, these migratory flows reverberate through individuals, communities, populations, environments, and the body politic in unexpected ways. This course will focus on the relationship between health and migration and ask the following questions: How are moving bodies named and managed? What are the political, economic, juridical, and medical implications of movement? How is risk defined and constructed in relation to migration? Readings will include case studies from around the world, supplemented with theoretical and literary texts.

Course Notes: Enrollment limited to 20.

Graphic! Visualizing Medicine from Textbooks to Comics (205361)

Soha Bayoumi

Visuals play an important role in the history and practice of medicine, from medical textbooks to medical imaging, and from hospital signage and public health posters to comics and graphic novels. This course will examine the use of visuals in medicine, and will place particular emphasis on the new academic and creative field known as "Graphic Medicine"—examining the interface between the medium of comics and the discourse of medicine and healthcare. Over the course of the semester, we will ask questions about how attending to the visual allows us to think in new ways about diagnostic practices, therapeutics, medical consumerism, doctor-patient communication, and ways in which patients and caregivers narrate their personal experiences of disease. We will pay careful attention to questions of class, race and gender, and to larger ethical and political issues raised by our materials. This semester, the course will also examine the visual culture of the COVID-19 pandemic from public signage to comics.

Sick and Tired of Being Sick and Tired: A History of Health Disparities in America (216802)

Evelynn Hammonds

This course will explore the historical imperative to narrate and understand the experiences and perspectives of marginalized communities as a way of countering common health disparities, and the political and ethical questions that arise in the struggle to heal. We will examine the ways in which health disparities have been constructed and represented in medical and public health contexts, with particular attention to the impact of racism, sexism, and classism. We will consider the history of medical research on disease, disability, and health disparities, as well as the history of activist and community efforts to shape health policy and improve public health conditions in the United States. The readings will include seminal texts by and about the communities that bear the brunt of health disparities.
Since the arrival of Africans from Africa to America, their health and health care has been a critical issue for the nation. From the era of slavery to the present, African Americans have been disproportionately burdened by disease and ill health. Health disparities are the "inequalities that occur in the provision of healthcare and access to healthcare across different racial, ethnic and socioeconomic groups." This course examines this issue over the long time frame from the 17th century to the present. Currently, compared to the white population, African Americans are at an overall greater risk for many serious and life threatening diseases. This course will examine how these disparities emerged over time. It will explore the strategies and practices that African Americans and other ethnic groups employed to improve their health care. It will also examine the ways that cities, states and the federal government supported or ignored the health of African Americans and other marginalized communities. We will give special attention to the impact of the COVID-19 pandemic on these communities.

History of Science  172

Mental Health Matters: Recurring Themes and Unfinished Business (216373)

Anne Harrington

2020 Fall (4 Credits)  

Schedule: M 1200 PM - 0245 PM

Instructor Permissions: Instructor  

Enrollment Cap: 30

This new course offers an opportunity to explore some of the unfinished business of modern-day mental health care through an historical lens, from incarceration to health inequities to trauma to the role of drugs and biological thinking. Mental health matters! But history matters too, because understanding the forces that have brought us to our current moment arms us with insights that allow us to do better. This course has also been built from the ground up, to take advantage of the potential of online learning. The course may be online, but it is far from "virtual" -- on the contrary, the heart of this course will be the active real-time engagement it will offer all students who enroll.

Course Notes: Students must register for the plenary class session that meets on Mondays from 12:00-2:45am OR 3:00-5:45pm, as well as a weekly section to be arranged.

History of Science 178

Psychotherapy: Freud to AI (156325)

Elizabeth Lunbeck

Examines the history of the current psychotherapeutic landscape, looking at the development, methods, aims, efficacy, and limitations of a range of psychotherapeutic modalities from Freud’s time to our own, among them psychoanalytic, psychodynamic, cognitive, behavioral, manualized, and evidence-based treatments; individual, play, family, and group therapies. Explores tensions between therapy as a quest for self-improvement and a means of relieving symptoms, between focusing on cognition and on behavior, and between mind and brain. Looks at providers and patients, at the testimonies of writers and poets, and at office-based, hospital, computer based therapies, and, most recently, the widespread adoption of teletherapy. The question of the relationship between professional practices and the rise of a popular therapeutic sensibility is central to the course.

This seminar will offer an intensive, engaging investigation into human spaceflight's origins and future, beginning with ancient anticipations and ending with space travel in the 21st century and beyond. Conducted remotely but drawing upon a range of provocative sources, this seminar's readings, audiovisual media, hands-on activities, and discussions will trace the development of the technologies humans have used to leave their home planet and place these technologies within the context of cultural and social change, in the United States and around the world.

Communicating Science (107619)

Alex Csiszar

2021 Spring (4 Credits) Schedule: W 0300 PM - 0500 PM

Instructor Permissions: Instructor Enrollment Cap: 12

Are new digital and social media revolutionizing how we know the world? Is a networked science a more open, and public, science, and is this a good or a bad thing? How do scientists and the public decide what is a legitimate scientific fact? These questions, hotly debated these days, go back a surprisingly long way. In this seminar, we will interrogate current upheavals in scientific communication (especially, but not exclusively, in connection with the COVID-19 pandemic) by taking a critical eye toward the long history of making science into public knowledge, from the rise of scientific news to the growing role of social media in scientific life.

Information: History, Politics, and Ethics (208317)

Alex Csiszar

2021 Spring (4 Credits) Schedule: T 0945 AM - 1145 AM

Instructor Permissions: Instructor Enrollment Cap: 12

Does information have a history? The control and manipulation of data has become central to politics, economics, and daily life. But what came before this age of bits and big data? How did we get to this point? This course will examine the changing meaning and significance of information from diverse perspectives including technology, gender, ethics, and materiality over the last several centuries. Topics will include information technologies from printing to digital computing, news and disinformation in social media, information labor, state secrecy, and the self as data. The course will include several optional field trips including a printing workshop and a visit to a bioinformatics production facility.
History of Science 189
The World We Made: Technology and Society (203610)

Matthew Hersch

2021 Spring (4 Credits)  Schedule:  W 1200 PM - 0245 PM
Instructor Permissions:  Instructor  Enrollment Cap:  24

For as long as people have lived on Earth, they have shaped their world and have, in turn, been shaped by it. This lecture course surveys humans’ relationships with the built world, beginning with the origins of civilization and extending through the present day. During the semester, we will track the development of transformative technologies—from fire-making to the Internet—throughout human history and across the globe, and place them in their social contexts. In so doing, we will learn how humanity chooses which technologies to exploit, and how human society is transformed by those choices.

History of Science 190
Science @ Work (217788)

Victor Seow

2021 Spring (4 Credits)  Schedule:  W 0300 PM - 0545 PM
Instructor Permissions:  Instructor  Enrollment Cap:  15

Butcher. Baker. Candlestick maker. Despite our best efforts, many of us are or will be defined by our work. In this seminar, we will explore how this most fundamental of human activities intersected with developments in science and technology in modern history. Three interrelated questions inform our inquiry: First, how does work serve as an object of scientific and technological inquiry (e.g. scientific management)? Second, how do changes in science and technology affect the nature of work (e.g. mechanization and automation)? And third, who is considered a scientific or technological worker? Taking these questions into the past and across multiple cultural contexts, we seek to develop critical ways of thinking about such key issues as the value of labor and the future of work.
History of Science 193CU

Significant Stories: Podcasting the History of Science (216453)

David Unger

2020 Fall (4 Credits)  Schedule:  R 0300 PM - 0545 PM
Instructor Permissions:  Instructor  Enrollment Cap:  10

In this project-based class, students will create an audio-rich podcast series that uses objects from Harvard's Collection of Historical Scientific Instruments (CHSI) to explore the history of science teaching at Harvard and to put the online transformation of classes this semester in historical context.

Students will learn the skills needed to research, plan, record, and produce broadly accessible non-fiction audio stories. Students will also learn how to transform scholarly observations into stories that are meaningful to a broad audience using techniques from museum interpretation, public history, and journalism.

Factory to Gig: The Technology of Work (217640)

David Unger

2021 Spring (4 Credits)  Schedule:  R 0300 PM - 0545 PM
Instructor Permissions:  Instructor  Enrollment Cap:  24

This class will help you understand the structure of working life and to imagine possibilities for the future. We will look at the development the key social technologies of wage labor, bureaucracy and management, and the global division of labor. Each of these technologies was created as the result of power struggles and the pursuit of wealth, each was shaped by race and gender, and each has been an important site of resistance and critique. We will also look at alternative social technologies such as cooperative enterprise, the commons, and solidarity economies.

Why Trust Science? (216010)

Naomi Oreskes

2020 Fall (4 Credits)  Schedule:  MW 1200 PM - 0115 PM
Instructor Permissions: None  Enrollment Cap: n/a

The covid-19 pandemic has poignantly illustrated what can happen when scientific advice is ignored. Yet, at the same time, opinion surveys show that many Americans are distrustful of science and scientists, particularly when scientific findings seem to contradict their worldview. This class examines the basis for trust in science. We will explore the question of whether there is a scientific method, the role of consensus in science, the reasons why scientists sometimes come to faulty conclusions, and how we, as citizens, can judge scientific information and make informed choices in our lives. Topics may include the scientific basis for understanding climate change, the ozone hole, the sources of pandemics, the benefits (or lack thereof) of vitamins, and why you should wear sunscreen and floss your teeth.

Death and the Body in the Age of Plague (207909)

Hannah Marcus

2021 Spring (4 Credits)  Schedule: M 0300 PM - 0545 PM

Instructor Permissions: Instructor  Enrollment Cap: 20

Though we all will die, ideas and practices surrounding death have differed across time and space. This course will examine death and dead bodies in an era defined by epidemic and the ravages of disease. Our graduate seminar has three interrelated goals. First, we will engage with a range of fascinating primary sources about death and dead bodies in the late medieval and early modern world. Second, we will read the most important historical literature on the topics of death, dying, and the many scientific, political, and religious uses of dead bodies. The final goal of the course is for students to produce an original research paper. Most (but not all) of the sources on the syllabus will deal with Christian death, though I very much welcome students interested in considering these themes and pursuing research about different religious and geographical contexts.

Critical History: Time, Cause, and Agency (216374)

Peter Galison

2020 Fall (4 Credits)  Schedule: W 1200 PM - 0245 PM

Instructor Permissions: Instructor  Enrollment Cap: 12

This will be a small, intense seminar aimed at exploring the underlying metaphysics of historical writing. Using Foucault (especially his meta-historical works) as our guiding thread, we will examine
critically the assumptions that lie behind the idea of causal plenitude (that events all have causal explanations); time, continuity, dislocation. Positivism, historical-structuralism, objectivity will be topics, along with the tension between structural and agential historical argument. Reading will be heavy, writing light. Meetings will include not only full-group but also smaller breakout sessions every week. The goal, in the midst of the pandemic, is to put aside (for this moment) a primary focus on professionalization and instead to see how deeply we can go into the foundational premises of historical reason. Because this is an all-in intensive venture, it will not be possible to have auditors.

Course Notes: This is a full credit, half term course. Enrollment by permission of the instructor.

The Nuclear Age: Critical Historical Perspectives (217646)

*Benjamin Wilson*

2021 Spring (4 Credits)  
**Schedule:** R 0300 PM - 0500 PM

**Instructor Permissions:**  
Instructor  
Enrollment Cap: 15

This seminar uses the history of the nuclear age to explore the relationship between science, society, and the state. It also uses critical perspectives from the history of science and the field of science studies to examine classic questions about the nuclear age. Did the use of atomic bombs by the United States against Japan end the Second World War? Did nuclear arsenals stabilize the Cold War, and can they be deployed or even used rationally? How and why was nuclear technology conceived as a path to national autonomy and postcolonial development? Can the risks associated with complex nuclear technologies be managed? How has the nuclear age impacted global environments and human health? One of the seminar’s goals will be to consider how historians and science studies scholars might intervene in debates over policy and public memory.

Epidemics and Other Crises (216011)

David Shumway Jones

2020 Fall (4 Credits)  

Schedule:  R 0945 AM - 1145 AM

Instructor Permissions:  Instructor  

Enrollment Cap:  25

Epidemics continue to challenge human populations, causing substantial mortality and provoking dramatic societal responses. At the same time, there are many other health significant threats (e.g., cigarettes, air pollution, the climate crisis) that generate little concern or attention. This graduate seminar will examine the historical literature on epidemics and other health threats to explore the nature of the threats, how societies have responded, and how these histories can inform our understanding of medicine and public health. We will also explore the roles that historians can play when these crises strike: can we distill useful lessons from history?

Histories of Science from the Peripheries to the Center (216452)

Gabriela Soto Laveaga

2020 Fall (4 Credits)  

Schedule:  R 0300 PM - 0545 PM

Instructor Permissions:  Instructor  

Enrollment Cap:  25

In this graduate seminar we examine how knowledge produced in frontiers, along borders, and so-called peripheral regions shaped scientific and technological innovation across the globe. By de-centering the sites of knowledge production students will learn to critically examine and expand our known histories of science, medicine, and technology. Special focus will be given to the role that the pursuit of racial difference played in shaping technologies that measure said “difference” among ethnic groups and colonized people.

History of Science 282
Genre and Knowledge (156487)
Alex Csizsar
2020 Fall (4 Credits) Schedule: T 0945 AM - 1145 AM
Instructor Permissions: Instructor Enrollment Cap: 20

This semester, Genre and Knowledge will focus on genres, formats, and technologies that have been associated with claims to universal knowledge. Shifting away from an exclusive focus on the category of genre, we seek to interrogate and understand historically how claims to totality have been undergirded by infrastructures, writing and publishing projects, and aesthetic commitments. By what means are boundaries drawn in order to legitimize a claim to totality? What is left out, or transformed into insignificance, by those claims? Have science and the study of nature been privileged domains for such claims, and why? How have claims about universality been resisted or shown to be partial, local, or otherwise inaccurate?

Course Notes: This course will satisfy the pre-1800 requirement for doctoral students in History of Science.

Class Notes: The precise timing of our meeting may shift depending on the constraints of participants.

Sources and Methods in the History of Technology (160503)

Matthew Hersch

2021 Spring (4 Credits) Schedule: M 1200 PM - 0245 PM
Instructor Permissions: Instructor Enrollment Cap: 12

Intended for graduate students, this seminar provides a comprehensive introduction to the field of history of technology and surveys its canonical works. Readings by authors like Thomas Hughes, Jennifer Light, and Fred Turner will explore the evolving histories of industrialization, computing, military and aerospace technologies, gender and technology, and other areas of student interest. Students will also gain experience working with primary sources, including archival documents, oral histories, popular media, memoirs, and material culture. At the conclusion of the term, each student will prepare a research prospectus suitable for a grant application or future work in the field.

History of Science  285
Science, Power and Politics (122718)

Sheila Jasanoff

2020 Fall (4 Credits) Schedule: W 0200 PM - 0400 PM
Instructor Permissions: Instructor Enrollment Cap: 10

This seminar introduces students to the major contributions of the field of science and technology studies (STS) to the analysis of politics and policymaking in democratic societies. The objective is to expand students' understanding of the ways in which science and technology participate in the creation of social and political order. The seminar is devoted to reading and analyzing works by scholars in STS and related fields who have addressed such topics as the relationship between scientific and political authority, science's relations with the state, science and democracy, scientific and technical controversies, and citizenship in technological societies.

Course Notes: Undergraduates may enroll only by permission of the instructor. Offered jointly with the Kennedy School as IGA-513.

Class Notes: Please note that the first class meeting will be held on Wednesday, September 2, 2020.

History of Science  293
Agnotology: The History of Knowledge and Ignorance (203706)
Historians of science have traditionally been concerned with the production of scientific knowledge, but in recent years have turned their attention to the production of ignorance. This course focuses on the production of ignorance as a social, political, cultural, economic and epistemic question, with attention both to techniques of deliberate ignorance production, and to the inadvertent and often uncontested production of ignorance that arises from accepted research practices and from the conditions that shape the direction and forms of scientific inquiry.

Course Notes: Open to graduate students and advanced undergraduates in history of science, and to others with instructor’s permission.

History Beyond the Classroom: Foundational Discussions about Research (216467)

Peter Galison

Elizabeth Lunbeck

2020 Fall (2 Credits) Schedule: T -

Instructor Permissions: Instructor Enrollment Cap: 25

The pandemic has shut down travel, but History Beyond the Classroom carries on. This course brings colleagues from around the world into conversation with first and second year graduate students. We meet four times each semester to discuss the work of invited guests—leading scholars in the field-- on the methods and topics that they see as central to contemporary and developing work in the History of Science. Intended as an adjunct to preparation for the general examination.

Course Notes: Limited to first and second-year doctoral students in History of Science. This is the first part of a two-semester course. Ordinarily, both semesters are required.

Human Evolutionary Biology 1210

Research in Human Biomechanics and Physiology (127206)

Andrew Yegian

Sarah Kessler

2021 Spring (4 Credits)  Schedule: TBD

Instructor Permissions: Instructor  Enrollment Cap: 8

Introduces students to experimental techniques used to investigate the musculoskeletal structure and physiology of humans. Students undertake a supervised research project in the Skeletal Biology and Biomechanics Laboratory. Students meet to introduce their project, discuss their work and progress, and to present their final results, as well as for several lectures on writing and presenting research findings. An extensive commitment of time in the laboratory is required. Grades are based on the work completed, the oral presentation, and a short research paper.

Course Notes: This course fulfills the research seminar concentration requirement for Human Evolutionary Biology

Class Notes: The first meeting will occur as scheduled in the course catalog, but subsequent meetings will take place approximately every two weeks at a time and day that fits the students' schedules.

Recommended Prep: Recommended: Life Sciences 2 or Human Evolutionary Biology 1420

Human Evolutionary Biology 1212
Climate Change and Human Evolution (205546)

Daniel Green
2020 Fall (4 Credits) Schedule: R 0300 PM - 0500 PM
Instructor Permissions: None Enrollment Cap: n/a

This course will explore the relationship between climate, environment and human evolution. How did hominins and other mammals adapt to global cooling and grassland expansion? Is there any correlation between climate and the adaptive radiation that produced multiple Australopithecine lineages and the genus Homo? How might the environments of Eurasia have influenced the dispersal of Homo sapiens out of Africa? And how are anthropogenic climate change and environmental degradation affecting human health, subsistence and conflict today? What is the future of our species?

Course Notes: This course counts as an HEB elective for HEB concentrators.

Human Evolutionary Biology 1290
Genes, Mind, and Culture (159565)

Joseph Henrich
2020 Fall (4 Credits) Schedule: MW 1030 AM - 1145 AM
Instructor Permissions: Instructor Enrollment Cap: n/a

Unlike other species, humans are heavily reliant on learning from others to acquire many important aspects of their behavior, and this cultural transmission has created a second system of inheritance that has driven much of our species' genetic evolution. In addition to having shaped our species' anatomy and physiology, cultural evolution has important implications for understanding human nature, and for how to tackle basic problems in psychology, economics and anthropology. The first third of this course will develop the basic principles and lines of inquiry while the remainder will apply, hone and refine them by exploring economic development, the history of modern institutions, and global inequality.

Human Evolutionary Biology 1310
Hormones and Behavior (112219)

Carole Hooven
2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a
An introduction to the interaction between hormones and behavior, emphasizing research in humans. General principles of endocrine physiology are presented. The course then focuses on how hormones affect the brain and body in early development and later in adulthood, and the relationship of hormones to sex and gender. We will explore human reproduction, energy metabolism, mating and sexuality, parental behavior, stress, and dominance interactions.

Human Evolutionary Biology 1311

Evolution of Human Locomotion (213579)

Andrew Yegian

2020 Fall (4 Credits) Schedule: TR 1030 AM - 1145 AM

Instructor Permissions: Instructor Enrollment Cap: 12

In this course we will examine how the human body evolved to allow our extraordinary form bipedal locomotion. We will survey the hominin fossil record to understand the major transitions in human evolution from climbing to walking to running, and you will learn basic techniques in experimental biomechanics and physiology through laboratory exercises and seminar-style discussions.

Recommended Prep: Life Sciences 2 and/or HEB 1420 recommended but not required.

Human Evolutionary Biology 1326

Ancient DNA as a Window Into the Human Past (216425)

David Reich

2020 Fall (4 Credits) Schedule: MW 1200 PM - 0115 PM

Instructor Permissions: Instructor Enrollment Cap: 15

Over the last decade, ancient DNA technology has made it possible to ask and answer questions that were impossible to address before, and the findings that have emerged are profoundly challenging and enriching previous understandings of the past gleaned from fields outside genetics. This course is aimed at providing students with the tools needed to critically evaluate and perform original research. The centerpiece of the course will involve students learning how to analyze ancient DNA data—including unpublished data produced by the instructor's lab—leading to a final project in which students will write an original research paper based on their analysis of data, mentored by the instructor and/or members of the instructor's laboratory. The course format will include lectures aimed at providing students with an understanding of major issues in this field (starting from an assumption that students have no background), and seminar-style discussions critically assessing papers and student research projects.
Course Notes: This course is offered by the Human Evolutionary Biology Department—whose students will be guaranteed a minimum of 1/3 of the spots in the course—but would also be of interest for students in Computer Science, Statistics, Organismic and Evolutionary Biology, Anthropology, Molecular and Cellular Biology, and History. This course is aimed at providing deep disciplinary knowledge in Ancient DNA research and as such could be a jumping-off point for students who wish to do an Honors Senior Thesis in this area or carry out Ph.D. thesis research in Ancient DNA.

Recommended Prep: Computer programming background (AP Computer Science or equivalent). Statistics background (AP Statistics or equivalent). Students who do not have computer or statistics background but are highly motivated to take the course should write to the instructor to have a discussion about whether they might have the background needed to take the course.

Human Evolutionary Biology 1328

Evolutionary Medicine: Comparative Perspectives on Medical, Surgical and Psychiatric Illness (205490)

Barbara Natterson-Horowitz

2020 Fall (4 Credits) Schedule: TR 0600 PM - 0715 PM

Heart attacks, breast cancer, anxiety and eating disorders occur across the animal kingdom. Taught by a physician, the course explores the species-spanning and evolutionary origins of medical, surgical, and psychiatric illnesses. A 'mini-medical school' format will be used to introduce students to ten forms of human pathology emphasizing the typical mechanistic explanations of disease causation offered by physicians followed by in depth evolutionary analyses. Both physical and mental illnesses will be explored across the animal kingdom with a special focus on how emerging awareness of psychopathology in animals can alter the perception (stigma) and treatment of mental illness in human beings.

Human Evolutionary Biology 1330

Primate Social Behavior (113837)

Martin Surbeck

Isaac Schamberg

2020 Fall (4 Credits) Schedule: TR 1030 AM - 1145 AM
A review of the behavioral interactions in natural primate populations, drawing on experimental, observational, and theoretical studies. Discussion of ecological, physiological, and developmental bases of primate social behavior, with special attention to the evolution of patterns of behavioral interactions among individuals of different age, sex, relatedness, and status. Topics include sexual conflict, sexual selection, and mating systems; care of offspring and other aid-giving; manipulative and cooperative aspects of communication; competition, dominance, and territoriality; and the evolution of social relationships.

Course Notes: This course fulfills the behavior concentration requirement for Human Evolutionary Biology.

Human Evolutionary Biology 1339
The Human Brain in the Animal Kingdom (214351)
Erin Hecht
2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: Instructor Enrollment Cap: 30

Our brains make us what we are. How did they get that way? How are they different from other animals’, and how are they similar? This course will explore the structure and function of the modern human brain and examine the selective pressures that have impacted the evolution of human neuroanatomy and cognition. Frequent comparisons will be made with other primate and non-primate species in order to situate an understanding of Homo sapiens within the context of the broader animal kingdom. Additionally, the course will delve into the types of methodological approaches used to study these topics and consider the frontiers of new knowledge in this area. The course will integrate research and theory from biological anthropology, archaeology, psychology, ethology, and neuroscience. Topics covered include the evolution of large brains in humans and other species; the emergence of human-unique phenomena like language, complex tool use, music, and mathematics; social cognition and theory of mind; individual variation and brain plasticity during learning; and domestication and self-domestication.

Recommended Prep: Recommended prep/prerequisite: HEB 1280 Human Nature

Human Evolutionary Biology 1361
Hormones and Life History Physiology (203615)
Susan Lipson
A survey of human (especially female) life history physiology and the role of hormones in orchestrating key life course transitions, in allocating energy to optimize fitness, and in determining health and disease. This framework will be used as a basis for discussion of real-world issues, including racial disparities in reproductive outcomes and in the tempo of growth and development and questions concerning fertility and infertility.

Course Notes: The course is a hybrid of lectures and seminar discussions.

Recommended Prep: Prerequisite for enrollment: Human Evolutionary Biology 1418, Life Sciences 2, another relevant (e.g., OEB, SCRB) course, or with permission of instructor.

Requirements: Anti-req: Cannot be taken for credit if HEB 1351 already complete

Christine Webb

2020 Fall (4 Credits) Schedule: R 0900 AM - 1115 AM

Instructor Permissions: Instructor Enrollment Cap: 20

Darwin's theory of evolution offered a powerful counternarrative to the scala naturæ, thus redefining the place of Homo sapiens in the natural world. But a great irony presents itself when a species so-named for its wisdom is currently causing the sixth mass extinction of life on earth. In this seminar, we will explore this apparent contradiction, assess why it has come to be part of our evolutionary legacy, and discuss theory and research that counteracts its profound negative potential.

Human Evolutionary Biology 1389

Coming of Age on Planet Earth (205493)

Barbara Natterson-Horowitz

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: n/a

The challenges of adult maturation are not unique to our species. Some young adult animals take risks and
lose their lives, others respond to stress with eating problems or to traumatic first sexual encounters with subsequent dysfunction. The course will use a comparative approach to explore how young adult animals learn to be safe, how they acquire or lose status and rank, how they come of age sexually, and how they learn to survive and thrive on their own. The course will combine analysis of literature from scientific fields (behavioral ecology, endocrinology and evolutionary biology) and the humanities (coming of age short stories and novels) for a comparative analysis of the common challenges of maturation across the animal kingdom and in human life.

The course covers current concepts of human aging including the challenge that human aging presents to evolutionary theory. We will explore cellular and molecular aging research in model systems; focus on the underlying mechanisms involve in the wear and tear of life, and discuss the impacts of race and climate change on human aging.

**Course Notes:** The course will involve recorded lectures, weekly responses, individual meetings, class discussion

**Recommended Prep:** Prerequisite of LS1b

Microorganisms residing in the human gastrointestinal tract outnumber our own cells and together encode at least 100 times as many unique genes. In this research seminar, we explore gut microbial contributions to human physiology in states of health and disease. We consider the pivotal roles of the gut microbiota in digestion, detoxification, energy regulation, and immunity, and discuss emerging evidence for the microbial modulation of risks and/or treatment of metabolic syndrome, cardiovascular disease, cancer, and
behavioral disorders. Students will be introduced to bench and bioinformatics techniques used to investigate gut microbial communities, allowing students to pilot projects that dovetail with topics discussed in seminar.

Course Notes: This course fulfills the research seminar requirement for Human Evolutionary Biology.

Preference will be given to Human Evolutionary Biology concentrators fulfilling a research seminar requirement and Human Evolutionary Biology graduate students.

Recommended Prep: Life Sciences 2 or permission of instructor.

Human Evolutionary Biology 1420

Human Evolutionary Anatomy (116069)

Neil Roach
Joanne Clark Matott

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

How does the human body function? How do our organs develop and grow? Why did we evolve this strange bipedal form? This course explores human anatomy, with an emphasis on the function, structure and evolution of the muscular, skeletal, nervous, circulatory, digestive and reproductive systems. Lectures are combined with small laboratory learning experiences and visits to the Harvard Medical School to study human cadavers.

Course Notes: This course fulfills the anatomy/physiology concentration requirement for Human Evolutionary Biology

Recommended Prep: Life Sciences 2 recommended, but not required

Human Evolutionary Biology 1451

Primate Functional Genetics and Genomics (109815)

Terence Capellini

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: n/a
Recent advances in genetics, genomics, and developmental biology are improving our understanding of human and non-human primate biological traits. These disciplines, when incorporated into a multi-faceted context, can reveal the mechanistic basis of evolutionary adaptations. This seminar is designed to investigate and critically evaluate foundational and novel research in primates (and other organisms) that employs the tools of these trades. In doing so, students are exposed to an integrative perspective upon which to explore classic and modern questions in functional biology.

Course Notes: This course fulfills the research seminar concentration requirement for Human Evolutionary Biology

Recommended Prep: Life Sciences 1b or equivalent genetics/genomics course.

Additional Course Attributes:

Human Evolutionary Biology 1480

Building the Human Body (156174)

Terence Capellini
Neil Roach

2020 Fall (4 Credits) Schedule: TR 1030 AM - 1145 AM

Instructor Permissions: Instructor Enrollment Cap: 20

Humans and our primate relatives are incredibly variable. This variation results from natural selection operating on the developmental mechanisms that control anatomy and physiology. While these mechanisms remain mostly undiscovered, we are beginning to understand these complex processes due to major advances in technology that have pushed the fields of genetics, genomics and developmental biology rapidly forward. This research-centered course explores these relationships in the context of the human paleontological record. We focus on the evolution and development of the musculoskeletal system, which includes the cranium, axial skeleton and limbs, and present studies that cast light on the developmental genetic mechanisms that underlie major transitions in human evolution.

Course Notes: This course fulfills the research seminar requirement for Human Evolutionary Biology and includes a mandatory laboratory section.

Class Notes: This course fulfills the following Human Evolutionary Biology concentration requirements: 1. Junior Research Seminar, 2. Anatomy/Physiology, 3. Upper level.

This course will use a flipped format with lectures viewed independently and live laboratories, discussions and demonstrations.

Recommended Prep: LS1b (Genetics, Genomics, and Evolution). Introductory courses in paleoanthropology, anatomy helpful but not required.

Additional Course Attributes:

We need to move beyond the "one gene – one trait" framework of Mendelian genetics in order to understand many human traits that are of compelling evolutionary and biomedical significance. "Complex traits" are those determined by multiple genes, environmental factors, and their interactions. Some diseases that kill us (e.g., heart disease) are complex traits, as are a wide range of physical and behavioral features, such as height, metabolism, language, depression, and countless more. Complex traits are far easier to study in model organisms than in humans, where we are dependent on naturally-occurring variants. Arguably the best characterized human complex traits are those for which the most NIH dollars and researchers' efforts have been spent, and these include schizophrenia, autism spectrum disorder, and other neurodevelopmental and neuropsychiatric disorders. By paying close attention to the genetic bases of these disorders and their contributing environmental components, we will develop a useful framework for analyses of other human complex traits. Increasingly, researchers are realizing that epigenetic modifications (chemical "tags" added onto DNA that can change gene expression) and microbes living in the human gut (the microbiome) also influence the final forms of these disorders. In this advanced small-group seminar, we will evaluate their multiple genomic and environmental causes, what animal models and stem cell "organoids" can tell us, whether natural selection acts to maintain these disorders in the population, and the importance of studying world-wide population diversity for uncovering the full range of genetic factors. Our discussions will span topics from the gene and neurobiological levels to the societal.

Course Notes: This course is appropriate for upper-level undergraduate students, as well as first and second year HEB graduate students. Auditing is not available for this course. Class sessions are simultaneous for "live" seminar discussions; optional Friday sessions are for small-group meetings with instructor, office hours, and/or occasional full class sessions in weeks with Monday holidays. Students are expected to be available to attend optional Friday sessions as required. Directions for applying to register for this course will appear on the Canvas course website.

Recommended Prep: Prerequisites are an A or B grade in Life Sciences 1b or demonstrated knowledge of basic quantitative genetics (please consult with instructor).

Human Evolutionary Biology 1610

Genes and Human Adaptations (203909)

Maryellen Ruvolo

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: n/a
Natural selection produces genetic changes that make a population better able to reproduce and survive in an ever-changing environment, a process known as adaptation. We will examine the genetic bases of adaptations common to all humans (since divergence from our closest primate relatives) and those that have occurred in particular populations and individuals as humans dispersed around the globe and responded to the challenges of novel environments, diets, parasites, and infectious diseases, including those with potential biomedical relevance. We will focus on the genetic evidence for adaptations as detected from the signals left by natural selection on the genome, including polygenic traits. To place human adaptations in broader evolutionary perspective, we will investigate adaptations in diverse non-human species (e.g., mice, *Drosophila*, stickleback fish) where the genetic and genomic bases of adaptation are often known more completely. Lastly, we will consider how artificial selection compares with adaptation, using dog domestication as an example, and how climate change impacts the genetic basis of phenotypic traits.

**Recommended Prep:** REQUIRED prerequisites: An A or B grade in Life Sciences 1b

**Requirements:** Prerequisite: Life Sciences 1b with an A or B grade

**Human Evolutionary Biology 2390**

Genes, Mind, and Culture (213600)

*Joseph Henrich*

2020 Fall (4 Credits)  
**Schedule:**  MWF 1030 AM - 1145 AM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Unlike other species, humans are heavily reliant on learning from others to acquire many important aspects of their behavior, and this cultural transmission has created a second system of inheritance that has driven much of our species' genetic evolution. In addition to having shaped our species' anatomy and physiology, cultural evolution has important implications for understanding human nature, and for how to tackle basic problems in psychology, economics and anthropology. The first third of this course will develop the basic principles and lines of inquiry while the remainder will apply, hone and refine them by exploring economic development, the history of modern institutions, and global inequality.

**Human Evolutionary Biology 2490**

Major Issues in Human Evolution (206978)

*Daniel Green*

2021 Spring (4 Credits)  
**Schedule:** TBD

**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a
This course focuses on what happened in human evolution, why, when, and where, integrating paleontology, archaeology, behavioral ecology of apes and humans, developmental biology, and genetics and genomics.

Course Notes: This is an upper-level course for graduate students in Human Evolutionary Biology, taken while normally auditing Gen Ed 1027. Permission of the instructor is required.

Recommended Prep: Requirement: A previous course in human evolution and/or auditing GenEd 1027.

Subject: Humanities

Humanities 10A
A Humanities Colloquium: From Homer to Valeria Luiselli (110440)

Stephen Greenblatt
David Atherton
Glenda Carpio
Jay Harris
Deidre Lynch
Mark Schiefsky

2020 Fall (4 Credits) Schedule: T 1030 AM - 1145 AM
Instructor Permissions: Instructor Enrollment Cap: 90

2,500 years of essential works, taught by six professors. Humanities 10a includes works by Homer, Plato, Sappho, Sophocles, Augustine, Murasaki, Shakespeare, Saikaku, Equiano, Mary Shelley, Dickinson, Walcott, Morrison and Luiselli. One 75-minute lecture plus a 75-minute discussion seminar led by the professors every week. Students will receive instruction in critical writing one hour a week, in writing labs and individual conferences. Students also have opportunities to participate online in a range of cultural experiences, ranging from plays and musical events to museum and library collections.

Course Notes: The course is open only to freshmen. Students who complete Humanities 10a meet the Harvard College Curriculum divisional distribution requirement for Arts & Humanities. Students who take both Humanities 10a and Humanities 10b fulfill the College Writing requirement. This is the only course outside of Expository Writing that satisfies the College Writing requirement. No auditors. The course may not be taken Pass/Fail.

2021 Spring (4 Credits) Schedule: T 1030 AM - 1145 AM
2,500 years of essential works, taught by six professors. Humanities 10b is open only to students who completed Humanities 10a in Fall 2020. Humanities 10b includes works by Joyce, Du Bois, Nietzsche, Douglass, Austen, Wollstonecraft, Marguerite de Navarre, Dante, Plato, Sophocles and Homer, as well as the Federalist Papers. One 75-minute lecture plus a 75-minute discussion seminar led by the professors every week. Students continue to receive instruction in critical writing one hour a week, in writing labs and individual conferences. Students also have opportunities to participate online in a range of cultural experiences, ranging from plays and musical events to museum and library collections.

Course Notes: The course is open only to freshmen. Students who complete Humanities 10a meet the General Education distribution requirement for Arts & Humanities. Humanities 20

A Colloquium in the Visual Arts (122550)

Yukio Lippit
Ewa Lajer-Burcharh
Joseph Koerner
Jennifer L. Roberts
David Roxburgh
Sarah Lewis

2020 Fall (4 Credits) Schedule: M 1200 PM - 0115 PM

Instructor Permissions: Instructor Enrollment Cap: 72

An introduction to major works of art and architecture from around the world, co-taught by a team of six professors. Subjects include Frederick Douglass and Photography, Hokusai, the Parthenon and Persepolis, Dürer, women artists, Zen Buddhist Art, Muybridge, Beckmann, the EJI Memorial to Peace and Justice, Mughal Painting, Manet, and Hooke. Consists of one 75-minute lecture plus a 75-minute discussion seminar led by the professors every week. Students will also participate in weekly looking labs and special lectures, workshops and screenings outside the class.

Note: The course is now open to all undergraduate students. Students who complete Humanities 20 meet the General Education distribution requirement for Arts & Humanities. No auditors are allowed, and the course may not be taken Pass/Fail. Enrollment is limited to 72.

Class Notes: The course is now open to all undergraduates. An application is no longer necessary to enroll in this course. Students who complete Humanities 20 meet the Harvard College Curriculum distribution...
Making It: A Sophomore Seminar in the Humanities (216637)

Robin Kelsey
Suzannah Clark

2020 Fall (4 Credits)

Schedule: M 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap: 12

The Sophomore Seminar in the Humanities is a new course for sophomores, regardless of intended Concentration, who wish to deepen their engagement in the humanities. Each week in the seminar, guided by a distinguished guest, we will focus on a particular creative form – the novel, for example – with the aim of refining our powers of observation, interpretation, and articulation. In this way, we will learn new ways to approach the meaning of poems, documents, paintings, photographs, films, arguments, and songs. If successful, the course will not only give us insight into these creative forms, it will also enhance our relationship to the world.

Course Notes: The course is designed for sophomores, who will receive preference through an application process. However, students from all class years are welcome to apply. Applications are due the end of Shopping Week. For more information, visit the course website. Students who complete Humanities 90 meet the Harvard College Curriculum divisional distribution for Arts & Humanities. No auditors are allowed, and the course may not be taken Pass/Fail. Enrollment is limited to 12.

One two-hour guest lecture, one 75-minute seminar led by the professors, and one one-hour section every week.

2020 Fall (4 Credits)  Schedule: TBD
Instructor Permissions: Instructor  Enrollment Cap: 15

This course is an introduction to the language and linguistic structure of American Sign Language and to Deaf culture for students with no prior experience. Focus will be on gaining a foundation for later fluency and understanding the role of ASL in Deaf history, current culture, education, bilingualism, and research.

Course Notes: This course is limited to 15 students.

Linguistics 73C

Beginning ASL III (205111)

Andrew Bottoms

2020 Fall (4 Credits) Schedule: TR 1200 PM - 0115 PM

Instructor Permissions: Instructor Enrollment Cap: n/a
ASL III is designed for students who have completed ASL levels I and II. Students come to ASL III with an understanding of the fundamentals of ASL comprehension and production. These foundational courses (ASL I and II) introduce students to the language using a natural acquisition approach without explicit focus on grammatical rules. ASL III has an increased focus on the appropriate ways to converse with members of the Deaf community. In this class, students will learn how to tell stories that adhere to the pragmatic and linguistic standards of the Deaf community with a focus on stylistically appropriate production. In this class, students will learn how to engage with members of the Deaf community in respectful and culturally appropriate ways. In addition to fostering language development, we will discuss the history and culture of the Deaf community.

Course Notes: This course is limited to 15 students.

Linguistics 73D

Beginning ASL IV (205124)

Andrew Bottoms

2021 Spring (4 Credits) Schedule: TR 1200 PM - 0115 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

ASL IV course will build on the foundation set in the first three levels of ASL and will focus on expressive language at a more advanced level. Students will have an opportunity to play with the language and explore different literary genres including: classifier stories, narratives of personal experience, visual vernacular and ASL poetry. Given that language learning doesn’t happen in isolation, we will continue our exploration of Deaf culture and norms in order to develop a deeper understanding of the Deaf community. Growing out of this discussion, students will learn what it means to work as an ally to the Deaf community and avoid oppressive behavior. Other issues to be discussed include recognizing audism in oneself and others and how to appropriately respond.

Course Notes: This course is limited to 15 students.

Language, Structure, and Cognition (122514)

Kathryn Davidson

2020 Fall (4 Credits) Schedule: M 0130 PM - 0245 PM

Instructor Permissions: None Enrollment Cap: n/a
What do the world’s almost 7,000 languages have in common? Why do they show recurrent commonalities and principled differences? What do they reveal about the human ability for speaking and thinking? How do languages develop? How do they die? This course addresses these and related questions while introducing the languages of the world; their distribution, recurrent structural properties, and genetic classification; processes of language contact; and the relationship between language and the brain.

Linguistics 101

The Science of Language: An Introduction (110785)

Kevin Ryan

2021 Spring (4 Credits) Schedule: TR 0130 PM - 0245 PM
This course is an introduction to the study of linguistics as a science. It introduces several components of grammar (morphology, syntax, phonology, phonetics, and semantics) and surveys methods, findings and theories of linguistic research on the sound system and the structures of human language.

Additional Course Attributes:

**Linguistics 102**

Sentence Structure (121089)

C.-T. James Huang

2020 Fall (4 Credits)  

Schedule: TR 0130 PM - 0245 PM

Instructor Permissions: None  
Enrollment Cap: n/a

What determines how the words in a sentence are put together in a given language? This course introduces the field of syntax, and the study of order and structure among words. Students will learn to construct and evaluate syntactic analyses and argumentation and will be exposed to variation and universals in the syntactic patterns found in natural languages. The course will also provide an introductory survey of syntactic phenomena, including question formation, the passive, anaphora, and agreement.

Word Structure (125790)

Jonathan Bobaljik

2020 Fall (4 Credits)  

Schedule: MW 1200 PM - 0115 PM

Instructor Permissions: None  
Enrollment Cap: n/a

This course investigates the nature and structure of words through the lens of contemporary morphological theory. What’s in a word? Topics include the place of word formation in relation to phonological and syntactic phenomena, morphological processes, and the nature of the lexicon. Emphasis on the analysis of morphological phenomena in a range of typologically diverse languages.

course requirement: LING 83 or LING 101

Linguistics 105
Sounds of Language (111954)
Kevin Ryan
2020 Fall (4 Credits) Schedule: TR 1200 PM - 0115 PM
Instructor Permissions: None Enrollment Cap: n/a

What are the sounds of the world languages, and how are they organized to make words and sentences? Why are some sounds hard to hear or make? Is there a 'universal inventory' of sounds? This class introduces students to the sounds of the world's languages, and provides tools for studying them systematically. We will study the setup to transfer thoughts from one brain to another.

Linguistics 112
Syntactic Theory I (114153)
C.-T. James Huang
2020 Fall (4 Credits) Schedule: W 0945 AM - 1145 AM
Instructor Permissions: None Enrollment Cap: n/a

This course provides an intensive introduction to generative syntactic theory. Emphasis on syntactic argumentation. Topics center on foundational problems in the theory of syntax, including phrase structure of nominals and clauses, varieties of movement, locality, argument structure, ellipsis case agreement, and the syntax-semantics interface.
Linguistics 114

Morphological Theory (111957)

Jonathan Bobaljik

2020 Fall (4 Credits)  Schedule: M 0900 AM - 1100 AM

Instructor Permissions: None  Enrollment Cap: n/a

This course provides an intensive introduction to morphological theory. Students will be introduced to current research and areas of debate in morphology proper, in morpho-syntax, and in morpho-phonology.

Recommended Prep: course requirement: Ling 102, 104, and 105, equivalent, or permission of the instructor.

Phonological Theory I (123439)

Kevin Ryan

2020 Fall (4 Credits)  Schedule: R 0900 AM - 1100 AM

Instructor Permissions: None  Enrollment Cap: n/a

This course is an intensive introduction to phonological theory and experimental work in phonology. This includes rule-based and constraint-based approaches, the typology of phonological processes (vowel and consonant harmony, assimilation and dissimilation, lenition and fortition, etc.), and phonological acquisition. Experimental approaches will deal with gradience, exceptionality, and productivity with an introduction to the quantitative methodologies that these phenomena require.

Recommended Prep: Linguistics 105, equivalent, or permission of the instructor

Practicum in Linguistics (138303)

2020 Fall (4 Credits)                      Schedule: TBD
Instructor Permissions: None                Enrollment Cap: n/a
Presentation of reports on current research or assigned topics.

Course Notes: Required of second- and fourth-year Linguistics graduate students.

### Linguistics 241B
Practicum in Linguistics (207701)

Kathryn Davidson

2021 Spring (2 Credits)                    Schedule: W 1200 PM - 0200 PM
Instructor Permissions: None                Enrollment Cap: n/a

Course Notes: Required of second and third year Linguistics graduate students

### Linguistics 250
Old Church Slavonic (123710)

Michael Flier

2020 Fall (4 Credits)                      Schedule: TR 0130 PM - 0245 PM
Instructor Permissions: None                Enrollment Cap: n/a

History of the first Slavic literary language, its role in Slavic civilization; phonology, morphology, syntax, and vocabulary of Old Church Slavonic; reading from canonical texts.
Linguistics 252 Section: 1
Comparative Slavic Linguistics (113214)
Michael Flier
2021 Spring (4 Credits)
Schedule: W 0300 PM - 0500 PM
Instructor Permissions: None
Enrollment Cap: n/a
Introduction to the historical phonology and morphology of the Slavic languages with special attention to relative chronology and linguistic geography.
Recommended Prep: Linguistics 250

In his seminal work from 1945, How to Solve It, George Polya introduced principles of mathematical problem solving that are widely applicable to problems in science and engineering. This year-long class focuses on building a powerful and portable problem-solving and modeling tool kit while bridging the divide between mathematics and science courses. The second semester will be organized around projects in areas of student interest. Both Math ESPA and Math ESPB must be taken in the same academic year to receive credit.

---

The study of functions and their rates of change. Fundamental ideas of calculus are introduced early and used to provide a framework for the study of mathematical modeling involving algebraic, exponential, and logarithmic functions. Thorough understanding of differential calculus promoted by year long reinforcement. Applications to biology and economics emphasized according to the interests of our students.

**Course Notes:** This is a lecture course taught in small sections. This course, when taken together with Mathematics Mb, can be followed by Mathematics 1b. Mathamatics Ma and Mb together cover all the material in Mathematics 1a (and more).

**Class Notes:** Fall Section Times: MWF 9:00, MWF 10:30, MWF 12, MWF 1:30, and MWF 4:30 with sufficient enrollment.

Reshma Menon, Hakim Walker, Harini Chandramouli

Students must enroll in a section by August 26th. Instructions will be found under Announcements on the Course Website.
If none of the above class times fall between 7:30 am and 10:15 pm in your time zone we will try to accommodate if we have the resources.

Introduction to Functions and Calculus II (113464)

*Emily Braley*

2021 Spring (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Continued investigation of functions and differential calculus through modeling; an introduction to integration with applications; an introduction to differential equations. Solid preparation for Mathematics 1b.

**Course Notes:** This is a lecture course taught in small sections. In addition, participation in two one-hour workshops is required each week. This course, when taken together with Mathematics Ma, can be followed by Mathematics 1b. Mathematics Ma and Mathematics Mb together cover all the material in Mathematics 1a (and more).

**Class Notes:** Spring Section Times: MWF 9:00, MWF 10:30, MWF 12, MWF 1:30, and MWF 3:00 with sufficient enrollment.

Eriko Hironaka, Hakim Walker, Harini Chandramouli

**Requirements:** Prerequisite: Mathematics MA

**Mathematics 1A**

Introduction to Calculus (123680)

*Oliver Knill*

2021 Spring (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

The development of calculus by Newton and Leibniz ranks among the greatest achievements of the past
millennium. This course will help you see why by introducing: how differential calculus treats rates of change; how integral calculus treats accumulation; and how the fundamental theorem of calculus links the two. These ideas will be applied to problems from many other disciplines.

Course Notes: In the fall, Math 1a is taught in small sections. In the spring, Math 1a is taught in a larger lecture format. Mathematics Ma and Mb together cover all of the material in Mathematics 1a (and more).

Class Notes: Spring Section Time: MWF 10:30 and a weekly lab section to be arranged.

Recommended Prep: A solid background in precalculus.

Requirements: Anti-requisite: cannot be taken for credit if MATH S-1AB already completeREQ: MATH S-1AB

Mathematics 1B

Calculus, Series, and Differential Equations (111010)

Voula Collins

2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a

Speaking the language of modern mathematics requires fluency with the topics of this course: infinite series, integration, and differential equations. Model practical situations using integrals and differential equations. Learn how to represent interesting functions using series and find qualitative, numerical, and analytic ways of studying differential equations. Develop both conceptual understanding and the ability to apply it.

Course Notes: This course is taught in small sections.

Class Notes: Spring Section Times: MWF 9:00, MWF 10:30, MWF 12:00, and MWF 1:30 with sufficient enrollment.
Reshima Menon, Assaf Shani

Recommended Prep: Mathematics 1a or Ma and Mb; or 5 on the AB advanced placement test; or an equivalent background in mathematics.

Requirements: Anti-requisite: cannot be taken for credit if MATH S-1AB already completeREQ: MATH S-1AB

Mathematics 18A

Multivariable Calculus for Social Sciences (125396)

Drew Zemke

2020 Fall (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

Focus on concepts and techniques of multivariable calculus most useful to those studying the social sciences, particularly economics: functions of several variables; partial derivatives; linear approximation; multiple integrals; directional derivatives and the gradient; constrained and unconstrained optimization, including the method of Lagrange multipliers. Covers topics from Mathematics 21a most useful to social sciences.

Course Notes: Mathematics 21b can be taken before or after Mathematics 18. Examples draw primarily from economics and the social sciences, though Mathematics 18 may be useful to students in certain natural sciences. Students whose main interests lie in the physical sciences, mathematics, or engineering should consider Math 21a or Applied Math 22a.

Class Notes: Fall Section times: MWF 10:30 (with sufficient enrollment) and MWF 1:30.

Students must enroll in a section by August 26th. Instructions will be found under Announcements on the Course Website.

Recommended Prep: Mathematics 1b or equivalent, or a 5 on the BC Advanced Placement Examination in Mathematics.

Requirements: Anti-Requisite: Not to be taken in addition to Mathematics 21a or Applied Mathematics 22a

Mathematics  18B/19B

Linear Algebra, Probability, and Statistics (213535)

Brendan Kelly

2021 Spring (4 Credits)  Schedule:  MWF 0130 PM - 0245 PM
Instructor Permissions:  None  Enrollment Cap:  n/a

Probability, statistics and linear algebra with applications to life sciences, chemistry, environmental sciences, economics and social sciences. Students will learn to use computing software to perform relevant calculations on data sets coming from these areas of study. Linear algebra includes matrices, eigenvalues, eigenvectors, determinants, and applications to probability, statistics, dynamical systems. Basic probability and statistics are introduced, as are standard models, techniques, and their uses including the central limit theorem, Markov chains, curve fitting, regression, and pattern analysis.

Mathematics  19A

Modeling and Differential Equations for the Life Sciences (110596)

John Cain

2020 Fall (4 Credits)  Schedule:  MWF 1030 AM - 1145 AM
Instructor Permissions:  None  Enrollment Cap:  n/a

Considers the construction and analysis of mathematical models that arise in the life sciences, ecology and environmental life science. Introduces mathematics that include multivariable calculus, differential equations in one or more variables, vectors, matrices, and linear and non-linear dynamical systems. Taught via examples from current literature (both good and bad).

Course Notes:  This course is recommended over Math 21a for those planning to concentrate in the life sciences and ESPP. Can be taken with or without Mathematics 21a,b. Students with interests in the social sciences and economics might consider Mathematics 18. This course can be taken before or after Mathematics 18.

Recommended Prep:  A course in one variable calculus preferably at the level of Mathematics 1b.

Additional Course Attributes:

Mathematics 21A

Multivariable Calculus (119196)

Matthew Demers

2021 Spring (4 Credits)  Schedule:  TBD
Instructor Permissions:  None  Enrollment Cap:  n/a

To see how calculus applies in practical situations described by more than one variable, we study: Vectors, lines, planes, parameterization of curves and surfaces, partial derivatives, directional derivatives and the gradient, optimization and critical point analysis, including constrained optimization and the Method of Lagrange Multipliers, integration over curves, surfaces and solid regions using Cartesian, polar, cylindrical, and spherical coordinates, divergence and curl of vector fields, and the Green's, Stokes's, and Divergence Theorems.

Course Notes:  This course is taught in small sections. May not be taken for credit by students who have passed Applied Mathematics 22a.

Class Notes:  Spring Section Times: MWF 9:00, MWF 10:30, MWF 12, MWF 1:30, and MWF 3:00 with sufficient enrollment

David Freund, Benjamin Gammage

Recommended Prep:  Mathematics 1b or an equivalent background in mathematics.

Requirements:  Anti-requisite: Not to be taken in addition to AM 22b

Additional Course Attributes:

Mathematics 21B

Linear Algebra and Differential Equations (110989)

David Freund

2020 Fall (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

Matrices provide the algebraic structure for solving myriad problems across the sciences. We study matrices and related topics such as linear transformations and linear spaces, determinants, eigenvalues, and eigenvectors. Applications include dynamical systems, ordinary and partial differential equations, and an introduction to Fourier series.

Course Notes: This is a lecture taught in small sections. May not be taken by students who have passed Applied Mathematics 21b.

Class Notes: Fall Section Times: MWF 9:00, MWF 10:30, MWF 12:00, MWF 1:30.

Jill Guerra

Students must enroll in a section by August 26th. Instructions will be found under Announcements on the Course Website.

If none of the above class times fall between 7:30 am and 10:15 pm in your time zone we will try to accommodate if we have the resources.

Recommended Prep: Mathematics 1b or an equivalent background in mathematics.

Mathematics 21a is commonly taken before Mathematics 21b, but is not a prerequisite, although familiarity with partial derivatives is useful.

Requirements: Anti-requisite: Not to be taken in addition to AM 22a

Mathematics 22A
Vector Calculus and Linear Algebra I (207485)

Dusty Grundmeier

2020 Fall (4 Credits) Schedule: MWF 1200 PM - 0115 PM
Instructor Permissions: None Enrollment Cap: n/a

This course covers multivariable calculus and linear algebra for students interested in mathematical sciences. It covers the same topics as Mathematics 21, but does so with more rigor. Students are taught techniques of proof and mathematical reasoning. The workload and content is comparable with the Mathematics 21 sequence. But unlike the latter, the linear algebra and calculus are more interlinked.

Mathematics 23A

Linear Algebra and Real Analysis I (111695)

Paul Bamberg

2020 Fall (4 Credits)  

Instructor Permissions: Instructor  

Enrollment Cap: 60  

Linear algebra: vectors, linear transformations and matrices, scalar and vector products, basis and dimension, eigenvectors and eigenvalues, including an introduction to the R scripting language. Single-variable real analysis: sequences and series, limits and continuity, derivatives, inverse functions, power series and Taylor series. Multivariable real analysis and calculus: topology of Euclidean space, limits, continuity, and differentiation in n dimensions, inverse and implicit functions, manifolds, Lagrange multipliers, path integrals, div, grad, and curl. Emphasis on topics that are applicable to fields such as physics, economics, and computer science, but students are also expected to learn how to prove key results.

Course Notes: Students are expected to watch videos of the lectures from Fall 2015 before attending class. Weekly two-hour classes will consist of a one-hour seminar in which students present key definitions and proofs and a one-hour activity-based session in which students work in small groups to solve problems. Students are expected to continue in either Mathematics 23b (recommended for students who are thinking of concentrating in mathematics, the physical sciences, or engineering) or Mathematics 23c (recommended for students who are not sure of their concentration, or who are thinking about a concentration in the social sciences, economics, computer science, life sciences or data science). Either alternative will provide a solid foundation for a concentration in mathematics or any field that uses mathematics.
Class Notes: This section assumes a background in sequences and series, covers applications of linear algebra and calculus to data analysis, teaches the R scripting language, has required programming assignments in R, and meets the QRD.

Recommended Prep: Mathematics 1b or a grade of 4 or 5 on the Calculus BC Advanced Placement Examination, plus an interest both in proving mathematical results and in using them. No background in linear algebra, real analysis, or multivariable calculus is assumed.

Weekly two-hour classes will consist of a one-hour seminar in which students present key definitions and proofs and a one-hour activity-based session in which students work in small groups to solve problems. Students are expected to continue in either Mathematics 23b (recommended for students who are thinking of concentrating in mathematics, the physical sciences, or engineering) or Mathematics 23c (recommended for students who are not sure of their concentration, or who are thinking about a concentration in the social sciences, economics, computer science, life sciences or data science). Either alternative will provide a solid foundation for a concentration in mathematics or any field that uses mathematics.

Class Notes: This section assumes no background in sequences and series, covers single-variable real analysis in detail, has no programming assignments, and does not meet the QRD.

Recommended Prep: Mathematics 1b or a grade of 4 or 5 on the Calculus BC Advanced Placement Examination, plus an interest both in proving mathematical results and in using them. No background in linear algebra, real analysis, or multivariable calculus is assumed.
Mathematics 23B
Linear Algebra and Real Analysis II (145010)

Paul Bamberg
2021 Spring (4 Credits)

Schedule: F 1200 PM - 0245 PM
Instructor Permissions: None
Enrollment Cap: n/a

A rigorous, integrated treatment of linear algebra and multivariable calculus. Topics: Riemann and Lebesgue integration, determinants, change of variables, volume of manifolds, differential forms, and exterior derivative. Stokes’s theorem is presented both in the language of vector analysis (div, grad, and curl) and in the language of differential forms.

Course Notes: Mathematics 23b is a sequel to Mathematics 23a, recommended for students who are thinking of concentrating in mathematics, the physical sciences, or engineering. Students are expected to watch videos of the lectures from spring 2016 before attending class. Weekly two-hour classes will consist of a one-hour seminar in which students present key definitions and proofs and a one-hour activity-based session in which students work in small groups to solve problems.

Recommended Prep: Mathematics 23a.
Requirements: Prerequisite: MATH 23A OR (MATH 21A AND MATH 21B) AND (Not to be taken in addition to MATH 23C)

Additional Course Attributes:

Mathematics 23C
Mathematics for Computation, Statistics, and Data Science (205386)

Paul Bamberg
2021 Spring (4 Credits)

Schedule: TR 0130 PM - 0245 PM
Instructor Permissions: None
Enrollment Cap: n/a

Proof strategies and logic. Sets, countability, sigma fields, and axiomatic foundations of probability. Summation of series and evaluation of multiple integrals, with emphasis on calculation of expectation and variance. Abstract vector spaces and inner product spaces, with applications to analysis of large datasets. Key functions and theorems of mathematical statistics. A brief introduction to classical vector calculus as used in electromagnetic theory. Students will learn to use some of the statistical and graphical display tools in the R scription language.
Course Notes: This course is a sequel to Mathematics 23a, recommended for students who are not sure of their concentration or who are thinking about a concentration in the social sciences, economics, computer science, life sciences or data science. Graduate students wishing to take this course for credit should speak with Dr. Bamberg to arrange enrollment in Mathematics 370 instead.

Recommended Prep: Mathematics 23a or Mathematics 21a and 21b. The latter option is for seniors who are preparing for graduate programs in statistics, computer science, or data science.

Requirements: Prerequisite: MATH 23A OR (MATH 21A AND MATH 21B) AND (Not to be taken in addition to MATH 23B)

Mathematics 25A
Theoretical Linear Algebra and Real Analysis I (110808)

Arnav Tripathy

2020 Fall (4 Credits)  Schedule: MWF 1030 AM - 1145 AM
Instructor Permissions: None  Enrollment Cap: n/a

A rigorous treatment of linear algebra. Topics include: Construction of number systems; fields, vector spaces and linear transformations; eigenvalues and eigenvectors, determinants and inner products. Metric spaces, compactness and connectedness.

Course Notes: Expect to spend a lot of time doing mathematics.

Recommended Prep: 5 on the Calculus BC Advanced Placement Examination and some familiarity with writing proofs, or the equivalent as determined by the instructor.

Mathematics 25B
Theoretical Linear Algebra and Real Analysis II (110855)

Arnav Tripathy

2021 Spring (4 Credits)  Schedule: MWF 1030 AM - 1145 AM
Instructor Permissions: None  Enrollment Cap: n/a
A rigorous treatment of basic analysis. Topics include: convergence, continuity, differentiation, the Riemann integral, uniform convergence, the Stone-Weierstrass theorem, Fourier series, differentiation in several variables. Additional topics, including the classical results of vector calculus in two and three dimensions, as time allows.

Course Notes: Expect to spend a lot time doing mathematics.

Requirements: Prerequisite: Mathematics 25A OR Mathematics 55A

Additional Course Attributes:

Mathematics 55A

Studies in Algebra and Group Theory (113627)

Denis Auroux

2020 Fall (4 Credits) Schedule: MWF 1030 AM - 1145 AM

Instructor Permissions: Instructor Enrollment Cap: n/a

A rigorous introduction to abstract algebra, including group theory and linear algebra. This course covers the equivalent of Mathematics 25a and Mathematics 122, and prepares students for Mathematics 123 and other advanced courses in number theory and algebra. (A course in analysis such as Mathematics 25b or 55b is recommended for Spring semester.)

Course Notes: Mathematics 55a is an intensive course for students who are comfortable with abstract mathematics. (Students without this background will gain it and learn the material from Math 55a,b in other courses by continuing into the Mathematics Concentration as sophomores.) Students can switch between Mathematics 55a and either Mathematics 25a, 23a, 22a, 21a during the first three weeks without penalty.

Live lectures will take place Mondays, Wednesdays, and Fridays, 10:30-11:45am, US Eastern time. Attendance is recommended, but not mandatory. The instructor will offer other opportunities for interaction with students who cannot attend the live lecture.

Recommended Prep: Familiarity with proofs and abstract reasoning; and commitment to a fast moving course.

Mathematics 55B

Studies in Real and Complex analysis (112871)

Denis Auroux
A rigorous introduction to real and complex analysis. This course covers the equivalent of Mathematics 25b and Mathematics 113, and prepares students for Mathematics 114 and other advanced courses in analysis.

Course Notes: Mathematics 55b is an intensive course for students having significant experience with abstract mathematics.

Requirements: Prerequisite: Mathematics 55A

**Mathematics 60R**

Reading Course for Senior Honors Candidates (216307)

*Cliff Taubes*

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

Mathematics concentrators in their final two undergraduate semesters can take this course to work individually on their senior thesis.

Course Notes: Limited to candidates in Mathematics who obtain the permission of both the faculty member under whom they want to work and the Director of Undergraduate Studies. May not count for concentration in Mathematics without special permission from the Director of Undergraduate Studies. Graded sat/ unsat only.

Mathematics 101
Sets, Groups and Topology (122943)

Ana Balibanu

2020 Fall (4 Credits)  Schedule:  MW 1200 PM - 0115 PM
Instructor Permissions:  None  Enrollment Cap:  n/a

An introduction to rigorous mathematics, axioms, and proofs, via topics including set theory, symmetry groups, and low-dimensional topology.
Course Notes: Familiarity with algebra, geometry and/or calculus is desirable. Students who have already taken Mathematics 22a,b, 23a,b, 25a,b or 55a,b should not take this course for credit. This course given fall term and repeated spring term.

Recommended Prep: An interest in mathematical reasoning. Acquaintance with algebra, geometry and/or calculus is desirable. Students who have already taken Math 25a,b or 55a,b should not take this course for credit.

Requirements: Anti-Req: Not to be taken in addition to Mathematics 23a,b or 25a,b or 55a,b.

Sets, Groups and Topology (122943)

Janet Chen

2021 Spring (4 Credits)  
**Schedule:** MW 0300 PM - 0415 PM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

An introduction to abstract mathematical thought and proof techniques, via topics including set theory, group theory, analysis, and topology.

Course Notes: Students who have already taken Mathematics 25a,b or 55a,b should not take this course for credit. Ordinarily, students who have already taken Mathematics 22a,b or 23a,b should not take this course for credit, but they may do so with the instructor’s permission. This course is given fall term and repeated spring term.

Recommended Prep: An interest in mathematical reasoning. Acquaintance with algebra, geometry and/or calculus is desirable.

Requirements: Anti-Req: Not to be taken in addition to Mathematics 23a,b or 25a,b or 55a,b.

**Mathematics 112**
Introductory Real Analysis (109817)

Christian Brennecke

2021 Spring (4 Credits)  
**Schedule:** MW 0900 AM - 1015 AM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a
An introduction to mathematical analysis and the theory behind calculus. An emphasis on learning to understand and construct proofs. Covers limits and continuity in metric spaces, uniform convergence and spaces of functions, the Riemann integral.

Recommended Prep: Mathematics 19a,b or 21a,b and either an ability to write proofs or concurrent enrollment in Mathematics 101 or 102; or an equivalent background in mathematics.

Requirements: Anti-Req: Not to be taken in addition to Mathematics 23a,b or 25a,b or 55a,b.

**Mathematics 113**

Complex Analysis (113608)

*Horng-Tzer Yau*

2021 Spring (4 Credits) Schedule: TR 0900 AM - 1015 AM

Instructor Permissions: None Enrollment Cap: n/a

Analytic functions of one complex variable: power series expansions, contour integrals, Cauchy's theorem, Laurent series and the residue theorem. Some applications to real analysis, including the evaluation of indefinite integrals. An introduction to some special functions.

Recommended Prep: Not recommended for most students who took Mathematics 55a and/or Mathematics 55b. Talk to the Director of Undergraduate Studies in Mathematics if you took Mathematics 55a and/or 55b and wish to take this course.

**Mathematics 114**

Analysis of Function Spaces, Measure and Integration (123227)

*Christian Brennecke*

2020 Fall (4 Credits) Schedule: MW 1030 AM - 1145 AM

Instructor Permissions: None Enrollment Cap: n/a

Lebesgue measure and integration; general topology; introduction to $L^p$ spaces, Banach and Hilbert spaces, and duality.

Recommended Prep: Mathematics 22a,b, 23a,b or 25a,b or 55a,b or 112; or an equivalent background in mathematics.
Mathematics 116
Real Analysis, Convexity, and Optimization (118302)

Paul Bamberg
2020 Fall (4 Credits) Schedule: TR 1030 AM - 1145 AM

Instructor Permissions: None Enrollment Cap: n/a

Develops the theory of convex sets, normed infinite-dimensional vector spaces, and convex functionals and applies it as a unifying principle to a variety of optimization problems such as resource allocation, production planning, and optimal control. Topics include Hilbert space, dual spaces, the Hahn-Banach theorem, the Riesz representation theorem, calculus of variations, and Fenchel duality. Students will be expected to understand and come up with proofs of theorems in real and functional analysis.

Recommended Prep: Mathematics 22a,b, 23a,b or 25a,b or 55a,b; or Mathematics 21a,b plus at least one other more advanced course in mathematics; or an equivalent background in mathematics.

Mathematics 117
Probability and Random Processes with Economic Applications (127947)

Paul Bamberg
2021 Spring (4 Credits) Schedule: TR 1030 AM - 1145 AM

Instructor Permissions: None Enrollment Cap: n/a

A self-contained treatment of the theory of probability and random processes with specific application to the theory of option pricing. Topics: axioms for probability, calculation of expectation by means of Lebesgue integration, conditional probability and conditional expectation, martingales, random walks and Wiener processes, and the Black-Scholes formula for option pricing. Students will work in small groups to investigate applications of the theory and to prove key results.
Mathematics 118R
Dynamical Systems (118429)
Laura DeMarco
2020 Fall (4 Credits) Schedule: MW 0130 PM - 0245 PM
Instructor Permissions: None Enrollment Cap: n/a

Introduction to dynamical systems theory with a view toward applications. Topics include existence and uniqueness theorems for flows, qualitative study of equilibria and attractors, iterated maps, and bifurcation theory.

Recommended Prep: Mathematics 19a,b or 21a,b or Math 22a,b, or Math 23a,b or Math 25a,b or Math 55a,b; or an equivalent background in mathematics.

Additional Course Attributes:

Mathematics 121
Linear Algebra and Applications (120228)
Dylan Wilson
2020 Fall (4 Credits) Schedule: MW 1200 PM - 0115 PM
Instructor Permissions: None Enrollment Cap: n/a

Real and complex vector spaces, linear transformations, determinants, inner products, dual spaces, and eigenvalue problems. Applications to some or all of the following: geometry, systems of linear differential equations, optimization, and Markov processes. This course emphasizes learning to understand and write rigorous mathematics.

Recommended Prep: Mathematics 19b or 21b or an equivalent background in mathematics.

Requirements: Anti-req: Not to be taken in addition to Mathematics 22b, 23a or 25a or 55a.

**Mathematics 124**

Number Theory (111533)

Melanie Wood

2021 Spring (4 Credits) Schedule: MW 1200 PM - 0115 PM

Instructor Permissions: None Enrollment Cap: n/a

Factorization and the primes; congruences; quadratic residues and reciprocity; continued fractions and approximations; Pell's equation; selected Diophantine equations; theory of integral quadratic forms. Also, selected applications to coding, introduction to elliptic curves and introduction to zeta functions if time permits.

Recommended Prep: Mathematics 101 or 122 or 25a or 23a; or 55a which can be taken concurrently; or an equivalent experience and comfort level with abstract mathematics.
Mathematics 129

Number Fields (115734)

Dennis Gaitsgory

2021 Spring (4 Credits)

Schedule: TR 1200 PM - 0115 PM

Instructor Permissions: None

Enrollment Cap: n/a

Algebraic number theory: number fields, unique factorization of ideals, finiteness of class group, structure of unit group, Frobenius elements, local fields, ramification, weak approximation, adeles, and ideles.

Recommended Prep: Knowledge of the material in Mathematics 123.

Requirements: Prerequisite: Mathematics 123

Mathematics 130

Classical Geometry (123211)

Man-Wai Cheung

2021 Spring (4 Credits)

Schedule: TR 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap: n/a

Presents several classical geometries, these being the affine, projective, Euclidean, spherical and hyperbolic geometries. They are viewed from many different perspectives, some historical and some very topical. Emphasis on reading and writing proofs.

Recommended Prep: Mathematics 19a,b or 21a,b or 22a,b or 23a or 25a or 55a which may be taken concurrently; or an equivalent background in mathematics.

Mathematics 131

Topological Spaces and Fundamental Group (111458)
First, an introduction to abstract topological spaces, their properties (compactness, connectedness, metrizability) and their corresponding continuous functions and mappings. Then, an introduction to algebraic topology including homotopy theory, fundamental groups and covering spaces. (See the course website for plans to accommodate diverse time zones of students in this course.)

Recommended Prep: Some acquaintance with metric space topology as taught in Mathematics 22a,b, 23a,b, 25a,b, 55a,b, 101, 102, or 112; and with groups as taught in Mathematics 101, 122 or 55a.

Set Theory II (156120)

*Assaf Shani*

2020 Fall (4 Credits)  
**Schedule:**  
TR 0300 PM - 0415 PM  
**Instructor Permissions:**  
None  
**Enrollment Cap:**  
n/a

An introduction to large cardinals and their inner models, with special emphasis on Woodin's recent advances toward finding an ultimate version of Godel's L. Topics include: Weak extender models, the HOD Dichotomy Theorem, and the HOD Conjecture. (After the first lecture, the course will arrange meeting times to accommodate all students.)

**Requirements:** Prerequisite: Mathematics 145A

**Mathematics 152** Section: SEM

Discrete Mathematics (116191)
An introduction to finite groups, finite fields, finite geometry, finite topology, combinatorics, graph theory, and (for section 2 only) elementary algebraic topology. A recurring theme of the course is the symmetry group of the regular icosahedron. Elementary category theory will be introduced as a unifying principle. Taught in a seminar format: students will gain experience in presenting proofs at the blackboard.

Course Notes: Covers material used in Computer Science 121 and Computer Science 124. Enrollment limited to 16.

Recommended Prep: For section 1: Mathematics 19b or 21b. Previous experience with proofs is not required. For section 2: Mathematics 23a or 25a or an equivalent background in mathematics that includes experience with proofs.

Requirements: Not to be taken in addition to Computer Science 20, Mathematics 55a/b or Mathematics 122.

Additional Course Attributes:

Mathematics 154

Probability Theory (113811)

Cesar Cuenca

An introduction to probability theory. Discrete and continuous random variables; distribution and density functions for one and two random variables; conditional probability. Generating functions, weak and strong laws of large numbers, and the central limit theorem. Geometrical probability, random walks, and Markov processes.

Recommended Prep: A previous mathematics course at the level of Mathematics 19ab, 21ab, or a higher number. For students from 19ab or 21ab, previous or concurrent enrollment in Math 101 or 102 or 112 may be helpful. Freshmen who did well in Math 22a, 23a, 25a or 55a fall term are also welcome to take the course.

Mathematics 155R Section: 01
Combinatorics (116196)

Piotr Pstragowski

2020 Fall (4 Credits) Schedule: WF 0300 PM - 0415 PM
Instructor Permissions: None Enrollment Cap: n/a

An introduction to counting techniques and other methods in finite mathematics. Possible topics include: the inclusion-exclusion principle and Mobius inversion, graph theory, generating functions, Ramsey’s theorem and its variants, probabilistic methods.

Recommended Prep: Prerequisites: familiarity with proofs. A previous mathematics course at the level of Mathematics 23ab, 25ab, 55ab, 101, 102, or 112 would be enough.

Mathematics in the World (159763)

Joseph D. Harris

2021 Spring (4 Credits) Schedule: TR 0130 PM - 0245 PM
Instructor Permissions: None Enrollment Cap: n/a

An interactive introduction to problem solving with an emphasis on subjects with comprehensive applications. Each class will be focused around a group of questions with a common topic: logic, information, number theory, probability, and algorithms.

Recommended Prep: Mathematics 19b or 21b or 22a,b or 23a; or an equivalent background in mathematics. More importantly, students should have a broad mathematical curiosity and be eager to brainstorm during in-class problem solving sessions.

Mathematics 163
Derived Categories in Geometry and Algebra (215941)

Elden Elmanto

2021 Spring (4 Credits) Schedule: TR 0900 AM - 1015 AM
Instructor Permissions: None Enrollment Cap: n/a
Derived categories is the right framework to view derived functors. (Ext, Tor, higher direct images, cohomology, etc.) in geometry and algebra. We will read “modern classics” in this theory, from Mukai’s construction of non-isomorphic varieties with equivalent derived categories, the work of the Moscow school on semiorthogonal decompositions and exception collections, Kontsevich’s formation of "homological mirror symmetry" and the more recent notion of derived algebraic geometry. Participants will give talks with prior consultation with the instructor on top of an additional practice talk with the group.

Recommended Prep: A first course in algebraic geometry and algebraic topology.

Advanced Complex Analysis (110880)

*Yum-Tong Siu*

2020 Fall (4 Credits)  
Schedule: TR 0300 PM - 0415 PM  
Instructor Permissions: None  
Enrollment Cap: n/a  

Fundamentals of complex analysis, and further topics such as elliptic functions, canonical products, conformal mappings, the zeta function and prime number theorem, and Nevanlinna theory.

Prerequisites: Basic complex analysis, topology of covering spaces, differential forms.

Recommended Prep: Basic complex analysis, topology of covering spaces, differential forms.
**Mathematics 213BR Section: LEC**

Riemann Surfaces (111824)

*Yum-Tong Siu*

2021 Spring (4 Credits)  
**Schedule:** TR 0300 PM - 0415 PM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Fundamentals of algebraic curves as complex manifolds of dimension one. Topics may include branched coverings, sheaves and cohomology, potential theory, uniformization and moduli.

**Recommended Prep:** Knowledge of the material in Mathematics 213a.

---

**Mathematics 221**

Commutative Algebra (123232)

*Mihnea Popa*

2020 Fall (4 Credits)  
**Schedule:** WF 1030 AM - 1145 AM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

A graduate level course in commutative algebra. Topics may include, but are not limited to, Hilbert's Basis Theorem and Nullstellensatz, ideals, spectra, localization, primary decomposition, Artin-Rees Lemma, flat families and Tor, completions of rings, Noether Normalization, systems of parameters, DVRs, dimension theory, Hilbert-Samuel polynomials, depth, Cohen-Macaulay and regular rings, homological methods.

**Recommended Prep:** Mathematics 123.

---

**Mathematics 222**

Lie Groups and Lie Algebras (123238)

*Mark Shusterman*
Lie theory, including the classification of semi-simple Lie algebras and/or compact Lie groups and their representations.

Recommended Prep: Knowledge of the material in Mathematics 114, 123 and 132.

Mathematics 252Y

Finite Height Chromatic Homotopy Theory (215943)

Piotr Pstragowski

In chromatic homotopy theory, one explores the link between the arithmetic of formal groups and the stable homotopy theory; we will focus on those aspects of this relationship which are visible at finite height. We will begin with the local structure of the moduli of formal groups and discuss how it is reflected and the topological side through the Lubin-Tate spectrum, then describe the current state of knowledge on several open questions on the subject, such as the vanishing and the splitting conjectures. Further topics will depend on the interests of the participants.

Mathematics 263Y

Analytic Methods in Geometry (215992)

Shing-Tung Yau

A discussion of ideas of nonlinear partial differential equations and geometric analysis, including their applications to algebraic geometry and general relativity. Construction of metrics and gauge field on complex manifolds will be discussed.
Mathematics 271

Free Probability, Random Matrices and Random Partitions (216005)

Cesar Cuenca

2021 Spring (4 Credits) Schedule: TR 0130 PM - 0245 PM
Instructor Permissions: None Enrollment Cap: n/a

Free Probability theory was introduced by Voiculescu almost forty years ago in the context of operator algebras. Since then, the theory has found connections to a wide range of areas of mathematics. We will study the general theory and its links to random matrices and representation theory. Specifically, we first discuss general aspects of the probability theory, including combinatorial (free cumulants, non-crossing partitions) and analytical (R-transform, subordination, central limit theorem). Then we apply it to the study of large random matrices. Finally, we discuss application to the representation theory of large groups (symmetric and unitary groups of growing rank).

Mathematics 273X

Distributions of Class Groups of Global Fields (216281)

Melanie Wood

2020 Fall (4 Credits) Schedule: WF 0130 PM - 0245 PM
Instructor Permissions: None Enrollment Cap: n/a

As we vary over number fields, what distribution of class groups do we see? More generally, as we vary over number fields, how many (and how large) unramified extensions do the number fields have? Starting with the case of quadratic fields, we will learn about what was classically known about class groups of quadratic fields, and the conjectures of Cohen and Lenstra on their distribution, including many different motivations for the conjectures. We will learn about the relationship between class group distributions and counting number fields, and learn about the heuristics on counting number fields. We will learn about probability distributions on abelian groups that arise in these conjectures, and how they are determined by their moments. We will then learn what is known about how this picture generalizes to arbitrary number fields. We will then learn about two major recent research directions in this area: (1) Bounding class groups of number fields, and (2) Applications of topological component counting to class groups of function fields.

The lectures will reference many recent papers and also include a significant amount of material that is considered "known by experts" but is not in the literature. There will be weekly problem sets to give students a chance to work with the concepts introduced. Project ideas relating to the course topics will be suggested, and a final project will be required of undergraduates, which can include any blend of exposition, original computations, and computer programming. Some project topics could lead to original
research by graduate students beyond the course.

Students in this class should have a strong, general undergraduate level math background plus familiarity with algebraic number theory and aspects of class field theory and algebraic geometry. People with questions about whether their math background prepares them for this class should contact Professor Wood.

Mathematics 282X
Topics in Invariant Descriptive Set Theory (215950)
Assaf Shani
2021 Spring (4 Credits)       Schedule:       WF 0300 PM - 0415 PM
Instructor Permissions:   None       Enrollment Cap:   n/a
A problem in mathematics is classifying objects up to some notion of isomorphism. Famous examples include: the classification of compact orientable surfaces up to homeomorphism by their genus and classification of Bemoulli shifts up to isomorphism by their entropy. Descriptive set theory allows for a precise study of the complexity of various classification problems and the possible invariants which they admit. Topics: Polish groups and their actions on Polish spaces, definable equivalence relations, classifications problems and invariants, and interactions between these topics and forcing. For example, we will develop Hjorth’s theory of turbulence, which provides a method for showing that certain isomophism problems cannot be classified by any "reasonable invatiants", and give an equivalent condition in terms of forcing, recently introduced by Larson-Zapletal. The topics will be flexible depending on students' interests.

Mathematics 285X
Seiberg-Witten Theory and Generalizations (215949)
Christopher Gerig
2021 Spring (4 Credits)       Schedule:       WF 0900 AM - 1015 AM
The construction in gauge theory of the Seiberg-Witten invariants, and generalized equations (examples: Vafa-Witten, SL(2,C) connections, multiple spinors, PU(n) monopoles). Along the way some possible applications to the geometry of 3-and 4-manifolds will be mentioned.

### Mathematics 288Y

Analytic Number Theory Over Function Fields (216269)

*Mark Shusterman*

2021 Spring (4 Credits)  
**Schedule:** TR 0130 PM - 0245 PM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a  

A blend of arithmetic, geometric, and topological techniques will be used to gain insight into positive characteristic versions of classical problems in analytic number such as moments of L-functions, correlations of arithmetic functions, distribution of class groups.

### Mathematics 290

Birational Geometry of Algebraic Varieties (215980)

*Dori Bejleri*

2020 Fall (4 Credits)  
**Schedule:** MW 1200 PM - 0115 PM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a  

The classification of algebraic varieties up to birational equivalence is one of the major questions of higher dimensional algebraic geometry. This course will serve as an introduction to the subject, focusing on the minimal model program (MMP). The MMP is the part of the classification program which attempts to describe the "simplest" representatives within a given birational equivalence class. If time permits, we will discuss applications of the MMP to moduli of higher dimensional varieties.
Mathematics 295Y

Arithmetic Dynamics (215937)

Laura DeMarco

2021 Spring (4 Credits) Schedule: MW 0130 PM - 0245 PM

Instructor Permissions: None Enrollment Cap: n/a

We will discuss various connections between complex-algebraic dynamical systems and arithmetic geometry.

Medical Sciences
Subject: Virology

Virology 200

Introduction to Virology (116413)

Jonathan Abraham
Philip Kranzusch

2020 Fall (4 Credits) Schedule: MW 0130 PM - 0345 PM
Instructor Permissions: Instructor Enrollment Cap: 20

Introduction to virology. The lecture component reviews the basic principles of virology and introduces the major groups of human viruses. Weekly discussion groups critically analyze selected papers from the literature.

Course Notes: There will be mid-term and final projects consisting of proposals based on laboratory rotations. Offered jointly with the Medical School as MG 705.0. http://www.courses.fas.harvard.edu/6075

Class Notes: Meeting dates: Sept 9 - Dec 14, 2020

Recommended Prep: Pre-Requisite: Current Virology PhD student, or upon special consent

Additional Course Attributes:

Virology 201

Virology (110546)

Benjamin Gewurz
Joseph G. Sodroski
Sun Hur
Aaron Schmidt
Todd Allen
Galit Alter

2021 Spring (4 Credits) Schedule: MF 1030 AM - 1200 PM
Instructor Permissions: Instructor Enrollment Cap: 20

The course focuses on the following areas of virology: (i) epigenetic regulation, (ii) RNA virus replication mechanisms, (iii) innate responses to viral infection, (iv) inhibition of viral infection. The course will comprise lectures as well as reviewing literature that describes fundamental breakthroughs relevant to these areas. Within those areas, the class will read and discuss papers dealing with virus structure, replication, pathogenesis, evolution, emerging viruses, chronic infection, innate and adaptive immunity, anti-viral drugs/vaccines. Special emphasis will be placed on preparing students to critically evaluate the
literature, formulate hypotheses and design experiments.

Course Notes: Course format will be lectures, literature-based critical reading and discussion. Prepare and defend a written research proposal. Offered jointly with the Medical School as MG 723.0.

Class Notes: Classes will run from Jan 25 - May 5. They will be held on Mondays and Fridays from 10:30am - 12:00pm. Meeting Location: Online information to be provided on course page or by instructor.

Recommended Prep: Graduate standing and permission required.

Virology 202

Proposal Writing (117649)

Kate Jeffrey
Daniel Lingwood
Alejandro Balazs
Todd Allen

2020 Fall (4 Credits) Schedule: W 0145 PM - 0359 PM

Instructor Permissions: Instructor Enrollment Cap: 12

Students will write, present, and evaluate research proposals in the areas of virus replication, viral pathogenesis and treatment and prevention of viral infections.

Course Notes: Offered jointly with the Medical School as MG 724.0.

Class Notes: Meeting Dates Sept 4 - Oct 30, 2020. First class meets Sept 4, 2020 4:00pm - 6:00pm

Recommended Prep: General background in biochemistry and virology.

Biomedical Informatics 201

Concepts in genome analysis (208016)

Shamil Sunyaev
Michael Baym
Cheng-Zhong Zhang
Heng Li

2020 Fall (4 Credits)

Schedule: MW 0230 PM - 0359 PM

Instructor Permissions: None

Enrollment Cap: n/a

This course focuses on quantitative aspects of genetics and genomics, including computational and statistical methods of genomic analysis. We will introduce basic concepts and discuss recent progress in population and evolutionary genetics and cover principles of statistical genetics of Mendelian and complex traits. We will then introduce current genomic technologies and key algorithms in computational biology and bioinformatics. We will discuss applications of these algorithms to genome annotation and analysis of epigenomics, cancer genomics and metagenomics data. Proficiency in programming and basic knowledge of genetics and statistics will be assumed.
This course will prepare students for advanced graduate level classes that require practical programming and data analysis skills through active learning methods. The main focus of this course is to familiarize students with the R programming language. Additionally, students will learn about the command line on Linux-based systems, high-performance computing environments, and fundamental data analysis approaches. The skills taught in this course will enable students to design and implement programs for reproducible data analysis, manage file-based datasets, apply basic statistical, algorithmic, and visual approaches for data interpretation, and execute analyses on a compute cluster.

Course Notes: Cross listed with HMS as BMI 713. BMIF 313qc is graded SAT/UNSAT. If a letter grade is preferred, students can cross-register through my.harvard for BMI 713.

Class Notes: Classes will run from September 3 - October 17, 2020
Section 1, Tu/Th, 8:00 AM - 8:30 AM
Section 2, Tu/Th, 2:00 PM - 2:30 PM
All classes will be held via Zoom and in addition to the synchronous instruction during the above times, the course will be using various asynchronous learning approaches for a total of 3 hours per week.

This course will prepare students for advanced graduate level classes that require practical programming and data analysis skills through active learning methods. The main focus of this course is to familiarize students with the R programming language. Additionally, students will learn about the command line on Linux-based systems, high-performance computing environments, and fundamental data analysis approaches. The skills taught in this course will enable students to design and implement programs for reproducible data analysis, manage file-based datasets, apply basic statistical, algorithmic, and visual approaches for data interpretation, and execute analyses on a compute cluster.

Course Notes: Cross listed with HMS as BMI 713. BMIF 313qc is graded SAT/UNSAT.
If a letter grade is preferred, students can cross-register through my.harvard for BMI 713.

Biomedical Informatics  315QC

Computational Statistics for Biomedical Sciences (208256)

2020 Fall (2 Credits) Schedule: TR 0800 AM - 0829 AM

Instructor Permissions: Instructor Enrollment Cap: 4

This course will provide a practical introduction to statistical analysis of biological and biomedical data. Basic techniques will be covered, including descriptive statistics, elements of probability, hypothesis testing, nonparametric methods, correlation analysis, and linear regression. Emphasis will be on how to choose appropriate statistical tests, how to assess statistical significance, and how to avoid common mistakes in analysis of large datasets. This course is geared toward graduate students in the biological sciences, but others are welcomed as auditors if space permits. No previous knowledge in statistics is required, but some proficiency in R will be assumed.

Course Notes: This course is geared toward graduate students in the biological sciences, but others are welcomed as auditors if space permits. No previous knowledge in statistics is required, but some proficiency in R will be assumed. Cross listed with HMS as BMI 715.

Class Notes: Classes will run from October 22 through December 12.
Section 1, Tu/Th, 8:00 AM - 8:30 AM,
Section 2, Tu/Th, 2:00 PM - 2:30 PM

Neurobiology - Graduate  209

The Neurobiology of Disease (116455)

Edward Kravitz
Patricia Musolino
Beth Stevens

2021 Spring (4 Credits)       Schedule:       TBD

Instructor Permissions:       Enrollment Cap:  25

TBD

This highly rated course covers a major disease or disorder of the nervous system each week, including Alzheimer's, Huntington's and Parkinson's Diseases, Mood and Autism Spectrum disorder and others. The course is taught at the Harvard Medical School on Monday (6-8:30 PM) and Wednesday (7-9:30 PM) evenings. The Monday sessions involve patient presentations and "core" lectures describing clinical progression, pathology, and basic science underlying a major disease or disorder. On Wednesdays, students present material from original literature sources, and there is general discussion.

Course Notes:  Given in alternate years. Offered jointly with the Medical School as NB 713.0. For advanced undergraduate, graduate students, MD and MD/PhD students.

Class Notes:   First class meeting will be held on Mon, Jan 27, in TMEC 250. Enrollment limit has been increased to 40.

Recommended Prep:  Introductory neurobiology, biochemistry, and genetics/molecular biology recommended.
Neurobiology - Graduate 212

Mathematical Tools for Neuroscience (216813)

Eleanor Batty
John Assad
Lucy Lai
Alex Chen

2020 Fall (4 Credits)  Schedule: TR 0300 PM - 0429 PM
Instructor Permissions: Instructor  Enrollment Cap: 30

This course aims to equip graduate students with the fundamental skills in quantitative modeling necessary for neuroscience research and to serve as a solid foundation for further computational neuroscience classes. The course is aimed at second- or third-year students in the Neuroscience PhD program, and is open to other graduate students in the biosciences. This course will cover the basics of linear algebra, differential equations, probability/statistics, and machine learning (focusing on areas applicable to neuroscience). You will not need any math experience beyond high school calculus. Some amount of coding in Python is necessary for this class. This course will be a flipped classroom course with prerecorded lectures and students working together on problem sets & programming exercises during class time.

Class Notes: Meeting Dates Sept 8, 2020- Dec 10, 2020
Recommended Prep: There will be some programming exercises in Python so some coding experience will be necessary (email instructor for advice on how to prepare).

Neurobiology - Graduate 215A

The Discipline of Neuroscience (205295)

Lisa Goodrich
Wade Regehr
Michael Do
David Corey
Joshua Kaplan
Bernardo Sabatini
Pascal Kaeser
This course will endow students with the broad conceptual fluency in the discipline of neuroscience required to relate genes to circuit function, metabolism to neurological disease, and cell biology to neural computations. Through a combination of lectures and in-class activities, students will learn to design, quantitatively analyze, and interpret experiments that address a variety of questions spanning molecular to systems neuroscience. During the first semester, students will think critically about the fundamental units of the nervous system within the context of cellular function, electrical conduction, and chemical signaling. The second half of the course builds upon this foundation to focus on broadly defined "networks of neural function" as related to coordinated neural activity, the concerted execution of genetic programs, and anatomically defined structural networks. The course culminates with students writing a grant proposal in the style of the NIH NRSA.

Part one of a two part series. The curriculum for this course builds throughout the academic year. Students are strongly encouraged to enroll in both the fall and spring course within the same academic year.

Course Notes: Please note that Program in Neuroscience (PiN) students must take both semesters to fulfill the requirement. Non-PiN students may enroll in just the fall semester with the instructor's approval.

Class Notes: Meeting Dates: September 8 through December 15, 2020.

Beth Stevens
Daniel Polley
Rosalind Segal
Lauren Orefice
Taralyn Tan
Rachel Wilson
John Assad
Sandeep Datta
This course will endow students with the broad conceptual fluency in the discipline of neuroscience required to relate genes to circuit function, metabolism to neurological disease, and cell biology to neural computations. Through a combination of asynchronous lectures and synchronous class discussions, students will learn to design, quantitatively analyze, and interpret experiments that address a variety of questions spanning molecular to systems neuroscience. During the first semester (NB215A), students will think critically about the fundamental units of the nervous system within the context of cellular function, electrical conduction, and chemical signaling. The second half of the course (NB215B) builds upon this foundation to focus on broadly defined "networks of neural function" as related to coordinated neural activity, the concerted execution of genetic programs, and anatomically defined structural networks. The course culminates with students writing a grant proposal in the style of the NIH NRSA.

Course Notes: Full year course. Students may not enroll for the second semester unless they have completed the first semester; however, students may elect to take just the first semester. Please note that Program in Neuroscience (PiN) students must take both semesters to fulfill the requirement.

Class Notes: Classes will run from Jan 26 to April 29, on Tuesdays and Thursdays from 10:30am - 12:00pm EST. Meeting Location: Online information to be provided on course page or by instructor.

Recommended Prep: Students must successfully complete first semester of course (NEUROBIO 215A).

Neurobiology - Graduate 230

Visual Recognition: Computational and biophysical perspective (107755)

Gabriel Kreiman

How does cerebral cortex store information, compute and learn? How can we build prosthetic devices to fix or augment brain function? How can we build biologically inspired artificial intelligence? This course will examine these questions in the context of visual cognition. Topics: architecture of visual cortex, neurophysiology, visual consciousness, computational neuroscience, models of pattern recognition and computer vision, artificial intelligence, brain-machine interfaces.
Course Notes: Course website: http://klab.tch.harvard.edu/academia/classes/hms_neuro300_vision/hms_neuro300_vision.html
Neurobiology 230, Visual Recognition, brain-machine interfaces and artificial intelligence

Neuro 230 cannot be taken if Neuro 130 has been taken. Neuro 230 cannot be taken concurrently with Neuro 130.

Class Notes: Meeting Dates Sept 9 - Nov. 30, 2020

Recommended Prep: Life Sciences 1a (or Life and Physical Sciences A) and Life Sciences 1b (or equivalent). Recommended: Math (Maa/Mab, Math 1A,1B, Math 19 a or equivalent). Physical Sciences 1. MCB 80.

This course will be held in Biolabs 2062.

Requirements: Anti-Req: Cannot be taken for credit if NEURO 130 already complete.

Neurobiology - Graduate 240

Biological and Artificial Intelligence (213361)

Gabriel Kreiman

2021 Spring (4 Credits)  

Schedule: T 0300 PM - 0459 PM

Instructor Permissions: None  

Enrollment Cap: n/a

This course provides a foundational overview of the fundamental ideas in computational neuroscience and the study of Biological Intelligence. At the same time, the course will connect the study of brains to the blossoming and rapid development of ideas in Artificial Intelligence. Topics covered include the biophysics of computation, neural networks, machine learning, Bayesian models, theory of learning, deep convolutional networks, generative adversarial networks, neural coding, control and dynamics of neural activity, applications to brain-machine interfaces, connectomics, among others. Lectures will be taught by leading Harvard experts in the field.

Course Notes: Jointly offered with the Faculty of Arts & Sciences as NEURO 140. Please visit the sites below for additional information: http://klab.tch.harvard.edu/academia/classes/BAI/bai.html or https://canvas.harvard.edu/courses/84784

Class Notes: Classes will run from Jan 26 - Apr 27. They will be held on Tuesdays from 3:00pm - 5:00pm. Meeting location: Zoom information to be provided on the course website.

Recommended Prep: Basic knowledge of multivariate calculus, differential equations, linear algebra, elementary probability theory, basic computer programming skills
Neurobiology - Graduate 300
Advanced Topics in Neurobiology (117896)
Rosalind Segal
2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a
Topics cover areas at the molecular, cellular, and systems levels in both basic and clinical neuroscience. A series of reading and discussion seminars, each running for a half term (seven weeks).

Course Notes: Two seminars, which can be taken in different terms, are required for credit. Non-DMS students must get permission from the Division of Medical Sciences before registering for this course. Please contact us at 617-432-0162 or visit the DMS Office at T-MEC 435, 260 Longwood Avenue, Boston.

Neurobiology - Graduate 306QC
Quantitative Methods for Biologists (107877)

Michael Springer
Richard Born

2020 Fall (2 Credits)  Schedule: TBD
Instructor Permissions: Instructor  Enrollment Cap: n/a

The goal of this virtual camp is to introduce you to programming in the MATLAB environment and to show you the power this provides for analyzing data and for gaining intuition about the behavior of complex systems through the use of numerical simulations. Some of you, upon encountering in the previous sentence words like "programming" and "numerical simulations," will feel the cold hand of fear grip your stomach, because you have never done any programming and, in fact, have tried to avoid math as much as possible. If so, YOU ARE PRECISELY THE PERSON WE HAD IN MIND as we were planning the course. We are aiming to help you break through this barrier of darkness and fear into the radiant sunshine of quantitative enlightenment. The true beauty of MATLAB, as we will personally demonstrate, is that it allows people who are not mathematically adept (e.g. some of the instructors of this course) to use powerful numerical methods and visualization tools to gain an understanding of concepts that are very difficult to grasp analytically.

Class Notes: This course has two components: 1) an asynchronous component during which students will work at their own pace, viewing prerecorded mini-lectures and answering questions through an edX
course and 2) a synchronous component that will consist of Zoom meetings with live mini-reviews and coding exercises that will be done in small break-out groups of 3-4 students.

Meeting Dates: Aug 10-21. MWF, 12:00pm-5:00pm (one hour break from 2pm-3pm), T/Th, TBD (drop-in/homework) all course times are Eastern Standard

Sign up here: https://hms.az1.qualtrics.com/jfe/form/SV_6W18Qau6zVDm3Hf

Please put this course on your fall term study card if you wish to receive credit for it. Email jennie_epp@hms.harvard.edu, with enquiries.

Neurobiology - Graduate 308QC
Thinking about data: probability and statistics for the life sciences (205051)

Richard Born
Brian Healy

2020 Fall (2 Credits)  Schedule: W 0500 PM - 0659 PM
Instructor Permissions: Instructor  Enrollment Cap: 100

Probability & statistics taught with an emphasis on using simulations and re-sampling methods to both analyze data and understand core statistical concepts. Prior to class, students will view online lectures from Dr. Brian Healy's biostatistics course. In class, we will focus on MATLAB coding exercises to practice different approaches to analyzing real data sets, with an emphasis on resampling methods.

Course Notes: This course will use a flipped design in which students will view video lectures from Dr. Brian Healy's Biostatistics Certificate Course (offered through Catalyst) prior to in-class programming exercises.

Class Notes: Course will start on September 2, 2020 and run through October 21, 2020.

Recommended Prep: Students are required to take Neurobiology 306QC as a pre-requisite
for this course.

Cortical Neurodevelopment and Disease (214583)

Corey Harwell
Gord Fishell

2021 Spring (2 Credits)  
Schedule: TBD
Instructor Permissions: None  Enrollment Cap: n/a

This course considers the production and assembly of the diverse circuits of the cerebral cortex. Topics include: neurogenesis, cell lineage and fate determination, neuronal migration, axon guidance, synapse formation and stabilization, and the human neurodevelopmental disorders that arise when these processes are disrupted.

Class Notes: Classes will be held Feb 5 - Mar 27, in Armenise 330. (No classes weeks of Feb 17 and Mar 16.)

Neurobiology - Graduate 315QC

Human Neuroanatomy and Neuropathology (205296)

Matthew Frosch
Jean Augustinack

2020 Fall (2 Credits)

Schedule: MWF 1000 AM - 1159 AM

Instructor Permissions: Instructor

Enrollment Cap: 20

This course will cover human neuroanatomy in depth, with an emphasis on the functional implications of structure and medical implications of lesions. Teaching occurs through lectures, small group sessions, brain dissection and homework assignments.

Course Notes: Restricted to Graduate Students only. This course is offered as part of NB200/HT130. Students may not co-register for both courses.

Class Notes: For the fall semester 2020, this course will be taught on-line with both asynchronous content and synchronous sessions held via Zoom. Course material as well as Zoom access will be through the HMS Canvas site. Course will begin on September 28 - October 30, 2020.
Neurobiology - Graduate 316
The Development, Organization, and Functions of Sensory Neurons that Mediate Touch (110230)

Neurobiology - Graduate 316QC
Probabilistic models for neural data: from single neurons to population dynamics (214540)

Jan Drugowitsch

2021 Spring (2 Credits)  Schedule:  TBD
Instructor Permissions:  None  Enrollment Cap:  n/a

Probabilistic models are a powerful approach for gaining an understanding of what drives the activity of individual neurons and neural populations. This course will dissect their modular, plug-and-play structure, from single-neuron models over generalized linear models to state space models for population dynamics. Students will learn their basic building blocks, and how to flexibly assemble them to suit their own data
analysis needs.
Upon completion of the course, students should be able to (i) identify the model structure and associated assumptions of common models in the literature; (ii) apply existing probabilistic models to neural datasets; and (iii) flexibly design new models by re-using existing model components.

Class Notes: Classes will be held Jan 29 - Mar 25, in Goldenson 318.

Recommended Prep: The course has no hard prerequisites, but students are expected to have some understanding of linear algebra, calculus, and (Bayesian) probability theory. Furthermore, they should be comfortable with Python, which will be used for exercises.

Neurobiology - Graduate 317QC
Comparative Neuroanatomy (207086)

Wei-Chung Lee
Taralyn Tan

2021 Spring (2 Credits)
Instructor Permissions: Instructor
Enrollment Cap: 25

Neuroscientists employ diverse model systems and experimental approaches to study nervous system structure and function. Through a combination of lectures, hands-on activities and paper discussions, this quarter course will introduce students to principles of nervous system organization and will provide a conceptual understanding of the spatial and functional relationships among components of the nervous system. Modern experimental methods and online resources to study neural circuit structure and function across model organisms will also be highlighted.

Class Notes: Classes will be held in TMEC 332, Feb 18 - Apr 9.

Neurobiology - Graduate 320QC
Neuroendocrine pathways: Brain, Hormones and Behavior (217654)
Victor Navarro
2021 Spring (2 Credits) Schedule: R 0130 PM - 0259 PM
Instructor Permissions: None Enrollment Cap: n/a

This course focuses on the study of the neuro-endocrine interactions that determine the organizational and functional effects of hormones in the brain throughout development. The course will address a) the role of hormones in the differentiation of the brain; b) the role of the brain in the maintenance of the body homeostasis through the regulation of the different endocrine axes; c) central control of sexual maturation
(puberty); d) regulation of the hypothalamic neuronal networks by peripheral factors (e.g. metabolism, stress, environment, endocrine disruptors); e) effect of hormonal cues on behavior (interaction between amygdala and the hypothalamus); f) senescence of the neuroendocrine systems (e.g. the hypothalamus after menopause). At the end of the course, the students will gain basic knowledge of the interactions between the brain and the endocrine system, which is essential for the full understanding of neurobiological processes.

Class Notes: Classes run from Feb 1 - Apr 1, on Thursdays from XXX to XXX. Meeting Location: Online information to be provided on course page or by instructor

Recommended Prep: Familiar with basic neurobiological concepts.

Neurobiology - Graduate 321QC Section: 0001
Introduction to Python (217822)
Eleanor Batty
2021 Spring (2 Credits) Schedule: MWF 0300 PM - 0459 PM
Instructor Permissions: Instructor Enrollment Cap: 25

This course provides an introduction to Python focused on tools used in biology and neuroscience research. We will cover basic Python, fundamental concepts such as object-oriented programming, scientific programming libraries such as NumPy and SciPy, and plotting/visualization libraries. This class will consist of a combination of lectures and hands-on exercises designed around biology and neuroscience applications.

Class Notes: This course will run from Jan 4 - Jan 22, on M/W/F from 3:00pm - 5:00pm. Meeting Location: Online information to be provided on course page or by instructor.

**Neurobiology - Graduate 333QC**

Careers in Neuroscience (207084)

*David Ginty*

2021 Spring (2 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** 25

This course is intended to provide PiN PhD candidates with a structured introduction to career skills that enable success after the completion of the PhD, and is directed to those considering both academic and non-academic paths. There will be ten sessions in total, and each session will feature one or more invited discussion leaders who can relate the merits and challenges of particular career paths and the skills required to be successful.

**Course Notes:** Course is offered every 2 years.

**Class Notes:** The course meets in WAB 236 from 5:30 to 7:00pm, beginning January 30, and continues every other Thursday, though meeting dates may change subject to speaker availability. Dinner is provided.

**Additional Course Attributes:**

*David Pellman*
This is a graduate level course in which students examine both fundamental and novel concepts and methodologies in cell biology with expert faculty from the field. Through a combination of weekly asynchronous lectures on content and methodology, and weekly synchronous problem-solving and paper discussion sections, students will explore a broad range of topics including: the molecular basis of cellular organization, subcellular compartmentalization, protein trafficking, chromosome organization and epigenetics, regulated ubiquitin-proteasome pathways, cell cycle regulation, signal transduction, and more.

By the end of this course, students should be able to:

- Evaluate primary scientific literature from a broad range of topics in cell biology;
- Identify current questions in cell biology and the co-evolving methodologies used to address those questions;
- Design appropriate experimental approaches to address hypotheses related to cell biology.

Course Notes: Methodological focus on current approaches in cell biology including quantitative tools. Emphasis on experimental design. Offered jointly with the Medical School as CB 713.0.

Class Notes: Meeting Dates: Sept 2, Dec 10, 2020
Curriculum Fellow, Saoirse McSharry saoirse_mcsharry@hms.harvard.edu

Recommended Prep: Basic knowledge in biochemistry, genetics, and cell biology.

Additional Course Attributes:

Development, Stem Cells and Regeneration (111215)

Andrew Lassar
John Flanagan
Guillermo Garcia-Cardena
Jordan Kreidberg
Jessica Lehoczky
Sean Megason
Olivier Pourquie
Vandana Gupta
This course is evenly divided between lectures and conference sessions which cover the principles that guide vertebrate development and stem cell maintenance in various renewing tissues; in addition, we discuss how these principals can be leveraged to generate cells/tissues for regenerative biology or disease modeling in vitro. Specific topics include a molecular dissection of the signaling pathways, gene regulatory networks, and epigenetic mechanisms that control primary axis formation and regional specification, establishment of cell fate, homeotic genes and patterning, cell migration and cell-cell signalling, organoid models of nervous system development and their application, axon development and regeneration, neuromuscular development and mechanistic insights for human birth defects, skeletal muscle stem cells in aging and disease, morphogenesis of branched tubular systems, vasculogenesis, biomechanical regulation of developmental processes, limb development and regeneration, stem cell maintenance in various renewing tissues, germ cells and pluripotency, and directed differentiation of ES and iPS cells for regeneration and disease modeling. We will discuss how state of the art technologies in iPS organoids, cell lineage labeling, genetic manipulation, and genome wide epigenomic/transcriptomic analyses can be employed to study organ development, stem cells and regeneration.

Students employ the knowledge gained by lectures and conference sessions to identify two interesting new research goals in either vertebrate development, stem cell, or regenerative biology and present research proposals to achieve these goals. Thus, a goal of this course is for students to learn how to synthesize the literature to come up with their own novel research ideas, and develop a strategy to investigate their hypotheses.

Course Notes: This course is offered as CELLBIO207 and also as DRB207. Offered jointly with the Medical School as CB 710.0. Includes lectures and conference sessions in which original literature is discussed in depth. Short research proposals are required in lieu of exams.

Class Notes: This course will run from Jan 25 - May 12, on Mondays and Wednesdays from 2:00pm - 4:00pm. Meeting Location: Online information to be provided by Andrew.Lassar@hms.harvard.edu.

Recommended Prep: Introductory courses in both Cell and Molecular Biology.

Cell Biology 212

Biology of the Cancer Cell: From Molecular Mechanisms to Therapeutic Implications (125825)

Alex Toker
Cathy Wu
William Kaelin
Huma Rana
Matthew Freedman
Alan D'Andrea
Matthew Vander Heiden
This semester long course takes a molecular approach to examine the basis of human cancer. The main concepts that we will cover include: cancer genetics and epigenetics, tumor suppressor genes and oncogenes, signal transduction, DNA damage and repair, angiogenesis, metastasis and invasion, apoptosis, cancer stem cells, and tumor immunology and immunotherapy. Lectures will be delivered by experts in the various fields to provide an integrated perspective on past, current and future approaches in cancer biology research. Many of the lecturers are also clinical oncologists and hematologists, who will provide insight into how molecular advances are impacting patient care now, and are likely to do so in the future. In addition, students will participate in workshops in which they will delve more deeply into the primary literature of several of these topics.

Course Notes: Given alternate years with Cell Biology 211.

Class Notes: Classes run from Jan 25 - April 28. Meeting Location: Online information to be provided on course page or by instructor

Recommended Prep: Advanced biochemistry, molecular genetics, and cell biology.

Cell Biology  235

History and Philosophy of Experimentation in Biology (156733)

David Glass
Janet Browne
Ned Hall

2020 Fall (4 Credits) Schedule: M 0630 PM - 0829 PM
Instructor Permissions: Instructor Enrollment Cap: 30

How did developments in philosophy of science, technology, and statistics relate to practices in biology
over time? We will trace the influence of particular philosophical arguments concerning science that have
developed over the last 500 years, following the development of distinct types of "Scientific Method" in
biology. The course will offer a foundation for exploring how today's dominant scientific method relates to
scientific research, medicine, and society's popular understanding of science, and may help give
perspective as to how modern practices of scientific method have come to be. Learning of alternate
approaches to science and scientific epistemology might be of particular importance now, given current
controversies relating to the reproducibility of many published findings.

### Cell Biology 302QC

Advanced Experimental Design for Biologists (127479)
David Glass
Randall King

2021 Spring (2 Credits)

Instructor Permissions: Instructor
Enrollment Cap: 24

This course will focus on both the theory and practice of experimental design. The emphasis is on project planning and vetting, individual experimental design, and trouble-shooting. Special focus will be placed on methods to avoid experimental bias, and potential sources of inappropriate interpretation. Also the importance of system validation is especially emphasized.

Course Notes: Special consent required - preference given to Therapeutics Certificate Program students.

Class Notes: These classes will run from Jan 25 - Mar 8. They will be held on Mondays from 6:30pm - 8:30pm. Meeting location: Online information to be provided on course page or by instructor.

Cell Biology  304QC

Introduction to Human Gross Anatomy for Graduate Students and other Researchers (127989)

Gerald Greenhouse
Everett Anderson
Mohini Lutchman

2021 Spring (2 Credits)

Instructor Permissions: Instructor
Enrollment Cap: 24

Lectures, laboratory dissections, and prosections will provide students an opportunity to explore the gross structure and function of the human body. The course will provide a foundation for the student to acquire practical skills in recognizing, dissecting, and differentiating key anatomical structures. Structure/function relationships will be emphasized and some foundation will be provided for understanding the anatomic basis of diseases. Histological considerations will be discussed where appropriate. Each of the 15 sessions will include a lecture, 3 hours of dissection, and an evening guest lecturer on clinical or research aspects related to the dissections (supper provided).

Course Notes: Open to graduate and undergraduate students, postdoctoral fellows, and research assistants. Students must sign up during the Spring semester sign up period.

Class Notes: Classes will be held Jun 15 - Jul 22, in TMEC 447.

For many graduate students and medical educators, teaching will be part of their career, whether as mentoring, formal classroom teaching, or teaching in the hospital. In addition, the theory and research evidence accumulating in the disciplines of cognitive psychology, neuroscience, and from STEM classrooms, has turned the question of “How do we best teach science?” into its own scientific discipline. The Theory and Science of Teaching focuses on understanding why certain teaching methods are effective by examining the scientific research and theoretical frameworks that support these methods. We will read and discuss foundational educational and cognitive psychology texts and primary literature, and then develop course materials that allow us to put these ideas into practice.
Teaching 101, but neither course is a prerequisite of the other.

Class Notes:

Each week class will meet from 8:00-9:30AM for a synchronous Zoom session. This will be complemented with substantial required asynchronous learning. These two components will combine to meet the course objectives are equally important to students' learning.

Class begins September 14th with a series of asynchronous introductory activities. The first synchronous class meeting is September 24th and these run through November 19th. There is no class on October 15th.

Recommended Prep: Make It Stick, by Brown, Roediger and McDaniel is required pre-reading and should be completed before the first day of class. A required asynchronous 'module 0' will be released on Canvas September 14th.

Cell Biology 312QC Section: 0001
Deep Learning for Biomedical Image Analysis (217645)

Faisal Mahmood

2021 Spring (2 Credits)  Schedule: W 0200 PM - 0359 PM
Instructor Permissions: Instructor  Enrollment Cap: 40

Biomedical image analysis is undergoing a paradigm shift due to artificial intelligence and deep learning. This course will cover basic concepts of deep learning and convolutional neural networks for biomedical image analysis as well as current challenges and opportunities. The lectures will include fundamentals of classification, characterization, detection, segmentation and enhancement in biomedical images. Using a variety of different microscopy and pathology datasets the course will follow a 'learning-by-doing' model where each lecture will be accompanied by hands-on training in using these methods in practice. The course assumes no prior knowledge of deep learning or image analysis. Basic knowledge of python is recommended but not required.

Course Notes: Basic knowledge of python is recommended but not required.

Class Notes: This class will run from Feb 10 - Mar 31. The classes will be held on Wed., from 2:00pm - 4:00pm. Meeting location: Online information to be provided on course page or by instructor.
### Cell Biology 313

**Systems Biology of Mammalian Signal Transduction (126366)**

*Peter Sorger*

Subject: Medical Sciences
Medical Sciences 250AB
Human Functional Anatomy (120066)

Lee Gehrke
Trudy Van Houten
Mohini Lutchman
Sabine Hildebrandt

2020 Fall (4 Credits) Schedule: MWF 0200 PM - 0459 PM
Instructor Permissions: Instructor Enrollment Cap: 48

Lectures, small group cases, and live-streamed prosections provide a thorough exploration of the gross structure and function of the human body. Fundamental principles of embryology and bioengineering promote analytical approaches to understanding the body's design.

Course Notes: Open to qualified graduate students with permission of the course director. The course has a minimum enrollment of 30. This course requires rental of a locker for a fee. Offered jointly with the Medical School as HT010.

Class Notes: Meeting Dates Sept 9- Dec 11, 2020

Medical Sciences 300QC
Conduct of Science (127507)

Kristin White

2020 Fall (2 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a

This course is a required course for all DMS students and all who receive support from NIH training grants. The goal of this course is to inform students about the appropriate conduct of research and the many ethical and social problems that they may encounter during their research career in graduate school. The course consists of three lectures for the entire class and five highly interactive sessions with a small group of fellow students moderated by a faculty member. Some of the issues that will be discussed in this course include appropriate methods of collecting laboratory data, interactions with members of the laboratory and the mentor and issues dealing with research misconduct.

Course Notes: All current G2 students must register for this course on their Fall Semester study cards. Specific enrollment instructions will be sent to current G2s and other eligible students in the upcoming weeks. Please contact dms_courses@hms.harvard.edu for enrollment inquiries.

Class Notes: The dates and topics for the three lectures are

Lecture One: Research Integrity: It's a Matter of Public Trust, Gretchen Brodnicki, J.D., HMS Dean for Faculty and Research Integrity
Date/Time: Tuesday, September 29, 2020, at 3:00-4:30 p.m. EDT
Lecture Two: Conflict Resolution Skills for the Researcher, Melissa Brodrick, Ombudsperson, Harvard Medical School  
Date/Time: Tuesday, October 20, 2020, at 3:00-4:30 p.m. EDT

Lecture Three: Inclusive Excellence in Research: Creation of a Vibrant, Scientific Global Community, Kathy Takayama, Ph.D., Visiting Fellow, Amherst CTL  
Date/Time: Tuesday, November 17, 2020, at 3:00-4:30 p.m. EDT

The goal of this course is to inform students about the appropriate conduct of research and the many ethical and social problems that they may encounter during their research career in graduate school. The course consists of three lectures for the entire class and five highly interactive sessions with a small group of fellow students moderated by a faculty member. Some of the issues that will be discussed in this course include appropriate methods of collecting laboratory data, interactions with members of the laboratory and the mentor and issues dealing with research misconduct. All current G6 students must register for this course on their Fall Semester study cards. G6 students are required to attend at least two out of the three didactic sessions. Specific enrollment instructions will be sent to current G6s and other eligible students in the upcoming weeks. Please contact dms_courses@hms.harvard.edu for enrollment inquiries. Restricted to GSAS graduate students on the Longwood campus.

Class Notes:  
The dates and topics for the three lectures are

Lecture One: Research Integrity: It’s a Matter of Public Trust, Gretchen Brodnicki, J.D., HMS Dean for Faculty and Research Integrity  
Date/Time: Tuesday, September 29, 2020, at 3:00-4:30 p.m. EDT

Lecture Two: Conflict Resolution Skills for the Researcher, Melissa Brodrick, Ombudsperson, Harvard Medical School  
Date/Time: Tuesday, October 20, 2020, at 3:00-4:30 p.m. EDT

Lecture Three: Inclusive Excellence in Research: Creation of a Vibrant, Scientific Global Community, Kathy Takayama, Ph.D., Visiting Fellow, Amherst CTL  
Date/Time: Tuesday, November 17, 2020, at 3:00-4:30 p.m. EDT

Medical Sciences 310
Advanced Topics in Medical Sciences (125411)

Rosalind Segal

2021 Spring (4 Credits)  Schedule: TBD
Instructor Permissions: None  Enrollment Cap: n/a

A series of reading and discussion seminars, each running for a half term (seven weeks). Different topics are covered each term.

Course Notes: Two seminars, which can be taken in different terms, are required for credit. Non-DMS students must get permission from the Division of Medical Sciences before registering for this course. Please contact us at 432-0162 or visit the DMS Office at T-MEC 435, 260 Longwood Avenue, Boston.

Medical Sciences 312QC

Graduate TA Training in the Biomedical Sciences (207116)

Bradley Coleman
Taralyn Tan
Mara Laslo

2021 Spring (2 Credits) Schedule: TBD
Instructor Permissions: Instructor Enrollment Cap: 50

MED-SCI 312QC is designed to be an 'on the ground' training for Longwood-based teaching assistants. The course instructs graduate student teaching assistants in the pedagogy and course management skills required to be an effective TA. The course begins with three two-hour class sessions that focus on the basics of evidence-based teaching practice and practical strategies for working with students. As the semester progresses, students use their work as TAs as the basis for continued instruction and reflection on teaching best practices and the challenges of their application in real-world settings.

Course Notes: Open to any HILS graduate student serving as a Teaching Assistant, pending approval of the Curriculum Fellow working in their course (or by special arrangement approved by the Director of the Curriculum Fellows Program). All students interested in registering for MED-SCI 312QC should also register for the Graduate TA Training in the Biomedical Sciences nanocourse. Any interested student may attend the first three sessions of MED-SCI 312QC and receive nanocourse credit, regardless of whether they are a current TA.

PhD Pathfinder (161280)

Joseph Arboleda-Velasquez

2020 Fall (2 Credits)  Schedule: MTWRF 0500 PM - 0659 PM  Enrollment Cap: 50

Instructor Permissions: Instructor

In this course, Ph.D. Pathfinder, students will learn about the many career paths available to people with advanced degrees in biomedical research including academia, biotech, patent law, science writing/publishing, consulting/business, education, and science policy/regulation. Students will also learn how to find opportunities on and off campus to take the next step in their career plans.

A Ph.D. education provides students with fundamental knowledge about the principles and practice of the scientific method and promotes development of problem-solving skills in ways that are quite useful for many different professions. Students will have the opportunity to learn from experienced professionals representing each of these paths, to learn about strategies for career development, curriculum enrichment, and networking opportunities that will make them competitive for their career of choice.

The course is open to all Ph.D. students interested in learning about the range of career options available to biomedical Ph.D.s. The course includes talks, didactic sessions, workshops and networking events to promote interactions between students and invited speakers. There will be a special emphasis on helping students with their own skill self-assessment to assist in career and professional development. After each session there will be a small networking reception for both the students and lecturers.

Course Notes: Students are required to attend all five sessions for course credit.

Class Notes: Meeting Dates October 19-23, 2020.M-F 5:00pm - 7:00pm

Internships (203031)

David Golan
Catherine Dubreuil
Rosalind Segal
2020 Fall (4 Credits)  Schedule: TBD
Instructor Permissions: Instructor  Enrollment Cap: 30

Internships are considered an integral part of a student’s educational experience and should be viewed as a path toward a student’s career development. As such, approved internships can receive academic credit via this course number.

Course Notes:  Ordinarily, each student will be limited to one internship during his/her PhD career. The internship must be discussed with the PI and DAC committee (or, program advisor, where applicable) prior to approval. Not all students may be eligible for internships, due to program requirements, academic standing or advisor input.

Immunology 201

Advanced Topics in Immunology (148547)

Thorsten Mempel

Shiv Pillai

2020 Fall (4 Credits)  
Schedule: TR 1230 PM - 0245 PM  
Instructor Permissions: Instructor  
Enrollment Cap: 50

This course provides an intensive and in-depth examination of a selection of fundamental concepts in immunology. It takes advantage of the unique expertise of members of our Immunology faculty to illustrate how these concepts have been established and continue to be developed based on seminal work in the field including contributions from their own laboratories.

Course Notes: Intended for students who have had prior exposure to immunology on the undergraduate level. In the absence of such exposure, students must obtain the permission of the Course Director. Offered jointly with the Medical School as IM 702.0.

Class Notes: Meeting Dates Sept 3 - Dec 3

Recommended Prep: A background in genetics and biochemistry strongly recommended.

Subject: Immunology
Immunology 202

Imune and Inflammatory Diseases (148503)

Wendy Garrett

2021 Spring (4 Credits)  Schedule:  TR 0900 AM - 0959 AM

Instructor Permissions:  None  Enrollment Cap:  n/a

IMM202 builds on IMM201 and explores fundamental principles of immunology in the context of immune and inflammatory diseases. Through a series of lectures and discussion, students will survey a broad range of diseases in which the immune system is essential. Topics will include not only diseases that mobilize classical immunity but also conditions to which we now know the immune systems contributes. Students will use oral and written exercises to learn how to evaluate and synthesize major concepts and tools germane to immunology's relationship to bioscience.

Course Notes:  Offered jointly with the Medical School as IM 712.0.

Class Notes:  This class runs from Jan 26 - May 6 on Tuesdays and Thursdays, from 9:00am - 10:00am. Meeting Location: Online information to be provided on course page or by instructor

Recommended Prep:  Immunology 201 or its equivalent.

Immunology 301QC
Autoimmunity (146257)

Francisco Quintana
Michael Wheeler

2021 Spring (2 Credits)  Schedule:  M 0400 PM - 0559 PM
Instructor Permissions:  None  Enrollment Cap:  n/a

This course will focus on basic immunological mechanisms of autoimmune diseases, with an emphasis on recent advances in the field. At each session, we will focus on a particular topic and discuss three important publications.

Class Notes:  This class will run from Mar 1 - Apr 12 and will be held on Mondays from 4:00pm - 6:00pm. Meeting location: Online information to be provided on course page or by instructor.

Clinical Sessions (146352)

*Rachael Clark*

2021 Spring (2 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

Lectures by physician scientists and clinical exposure to patients with immunologically mediated diseases. The goal is to foster translational research into human immunologic disease.

**Course Notes:** Limited to Immunology students.

**Class Notes:** Classes will be held Mar 10 - Apr 28 (no meeting on Mar 17, spring break) in Modell 258.

Neuro-Immunology in Development, Regeneration and Disease (130342)  
Isaac Chiu  
Beth Stevens  
Michael Carroll  
Jun Huh  
2021 Spring (2 Credits)  
Schedule: TBD
It is increasingly clear that the nervous system and immune system share parallel molecular pathways, and communication between neurons and immune cells play significant roles in homeostasis and disease. This course will investigate current topics in neuro-immunology: CNS development, chronic pain, neuro-degeneration, aging, axon regeneration, auto-immunity and infection. We will focus our discussions on molecular mechanisms shared by the immune and nervous systems and the molecular cross-talk between these two systems.

Course Notes: Each class will cover a specific topic in neuro-immunology. Students should be prepared to lead discussions on pre-selected papers for each session.

Class Notes: Class will be held from Mar 17 - May 5, on Wednesdays from 1:00pm - 3:00pm. Meeting location: Online information to be provided on course page or by instructor

### Immunology 307QC

Cancer Immunology (130614)

*Kai Wucherpfennig*
*Cathy Wu*
*Stephanie Dougan*
*Philip Kranzusch*
*Judith Agudo*

2020 Fall (2 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: 20

There have been many exciting recent developments in the cancer immunology field, and multiple therapeutic approaches have shown efficacy against diverse types of cancer. This course will emphasize new mechanistic insights, specifically on the following topics: Mechanisms of spontaneous protective anti-tumor immunity; Key effector cell populations of anti-tumor immunity; Innate immune pathways in tumor immunity; Inflammation and tumor microenvironment; Immunosuppressive mechanisms in tumor immunity; Targeting of inhibitory receptors; Cancer vaccines.

Course Notes: Must be PhD student at Harvard or postdoctoral fellow.

Class Notes: Meeting Dates: M, 4:00pm - 6:00pm. Nov 2 – Dec 14, 2020

Applied Statistics and High Throughput Data Analysis for Immunologists (215744)
Meromit Singer
Alos Diallo
2021 Spring (2 Credits) Schedule: TBD
Instructor Permissions: Instructor Enrollment Cap: 50

This course will provide a friendly, fun, and exciting entry point for students who wish to build confidence in data analysis and the application of statistical tools and packages. Lecture topics will include fundamentals of statistical analysis (e.g., hypothesis testing, inferring the mean, experiment design), modeling, and classification.

Course Notes: There is an additional workshop component being offered as IMMUN 313QC primarily for first-year Immunology PhD students. Workshops may be open to other graduate students with prior instructor consent.

Class Notes: Course dates: Jan 31 - Mar 13. Lectures will be held on Fridays in Modell 100A. IMMUN 313QC workshops will be held on Mondays in Modell 259.

Achieving long term immunity in humans to emerging viral pathogens is an important component of global health for which there are broad socioeconomic and geopolitical implications. Yet this effort has been thwarted because of genetic variability of circulating strains and ease of undergoing antibody neutralization escape. In addition, zoonotic transfer of viruses to humans can lead to emergence of new viruses into the human population that can lead to pandemics in the absence of anti-viral herd immunity. This course will primarily focus on broadly neutralizing and protective anti-viral antibody responses and how critical epitope selection on viral glycoproteins that can help to achieve long-term immunity. We will examine through classical and contemporary readings several principles that can be used to design vaccines and anti-viral antibodies to target the virus's Achilles heel. Critical teachings in this class will include studying how immunoediting of viruses can drive neutralization escape and zoonotic transfer across species. We will discuss the molecular characteristics of bone marrow derived long-lived plasma cells. We will also discuss how to interrogate the broadly neutralizing antibody response to natural infection and vaccines using modern molecular techniques such as NGS and Ab RepSeq. There is also much effort in the field to engineer broadly neutralizing antibodies for passive immunotherapy as prophylactic, preemptive and therapeutic agents. These treatments include therapeutic antibody gene transfer and bi-and trispecific antiviral monoclonal antibodies. Numerous viruses will be discussed including HIV and emerging influenza, coronaviruses, flaviviruses, alpha viruses, Ebola and others. We will touch on intracellular microbial pathogens. The course will be structured with 20-30 min didactic lectures by Dr. Marasco and other lecturers followed by discussion of 3-5 published papers on the assigned topic of the day.

Course Notes: There has been explosive growth of our understanding of host defense against microbial infections. However, our immune responses are not always protective and in fact, can promote microbial evolution. The most dramatic examples of this comes from the study of RNA viruses where immune editing by the viruses results in neutralization escape which is commonly seen. Is this different from what cancer cells do? This course will be primarily immunology based but will provide a strong understanding of how to select the viral proteins that can be targeted to block virus attachment, uncoating and egress. We will focus on how we can establish durable antiviral immunity through active and passive immunization. We will get the pulse of the class and see what directions and topics we want to cover and some of the course readings can be tailored to this interest.

Class Notes: Classes will be held Jan 28 - Mar 31, in Modell 100A.

Recommended Prep: Background in immunology and virology is strongly recommended. Must be a PhD student at Harvard or postdoctoral fellow; otherwise, course director permission is required prior to enrollment.

Human Bio & Translational Med 200

Pathology of Human Disease (107843)

Scott Lovitch

2021 Spring (4 Credits)  
Schedule: R 0900 AM - 1259 PM  
T 0900 AM - 1059 AM  
Instructor Permissions: None  
Enrollment Cap: n/a

This course provides a comprehensive overview of human pathology with emphasis on mechanisms of
disease and modern diagnostic technologies. Topics include (1) general mechanisms of disease (inflammation, infection, immune injury, host response to foreign materials, transplantation, genetic disorders and neoplasia), (2) pathology of major organ systems, and (3) review of diagnostic tools from invasive surgical pathology to non-invasive techniques such as diagnostic imaging and molecular pathology. The objectives of this course are achieved through a set of integrated lectures and laboratories, as well as a student-driven term project leading to a formal presentation on a medical, socioeconomic, or technological issue in human pathology.

Course Notes: Enrollment may be limited. Jointly offered with HMS as HT035.0

Class Notes: Classes will run from Feb 2 - May 13. On Tuesdays, classes will be held from 9:00am - 11:00am. On Thursdays, classes will be held from 9:00am - 1:00pm. Meeting Location: Online information to be provided on course page or by instructor.

Recommended Prep: General biology.

**Human Bio & Translational Med 235**

Principles of Human Disease: Physiology and Pathology (109394)

*Connie Cepko*

2020 Fall (4 Credits) Schedule: MWF 0900 AM - 1029 AM

Instructor Permissions: None Enrollment Cap: n/a

This course covers the normal physiology and pathophysiology of selected organs, through lectures, readings, tutorials based on clinical cases, and patient presentations. Human biology is emphasized, with some examples also drawn from model organisms. Recent therapeutic approaches, including RNAi, gene therapy, and genome editing will be covered.

Course Notes: Course enrollment is open to graduate students from any program as well as undergraduates.

Class Notes: The first class will be held on September 2

Recommended Prep: Knowledge of introductory biochemistry, molecular biology, and cell biology required (MCB52 and MCB54 or equivalent and one year of organic chemistry for undergraduates is recommended).

*Lev Perelman*

2020 Fall (2 Credits) **Schedule:** T 0300 PM - 0459 PM

**Instructor Permissions:** Instructor    **Enrollment Cap:** 15

Introduce modern imaging modalities used in biology and medicine with emphasis on modalities frequently employed in cellular and molecular biology. Overview of basic principles of light and electron microscopy and modern advanced light microscopy techniques such as confocal, light sheet, STED, multi-photon, super-resolution, and chromatin-sensitive CLASS. Discuss modality-specific molecular probes and genetic targeting in microscopy which includes optogenetics and CRISPR-based photoactivatable transcription systems.

**Class Notes:** Classes will begin on September 29, 2020, and run through December 1, 2020.

Human Bio & Translational Med  305QC

Molecular Bases of Eye Disease (127483)

Darlene Dartt
Magali Saint-Geniez

2021 Spring (2 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a

This course provides an overview of the pathogenic process of prevalent ocular diseases. The goals of the course are: (i) to explore the structural and functional aspects of the eye relevant to understanding the pathology, (ii) to review the manifestations of the disease and its effects on vision, (iii) to discuss current views and research in the pathophysiology, and strategies for therapeutic intervention. For most sessions, the basic science and clinical topics will be presented by two faculty lecturers.

Class Notes: Classes will be held Jan 27 - May 18, in the Schepens Eye Research Institute 2nd Floor Conference Room.

Corinna Bauer
Alexandra Bowers
Tobias Elze

2021 Spring (2 Credits) Schedule: TBD
Instructor Permissions: Instructor Enrollment Cap: 16

This course will be a series of workshops in which the design and analysis of experiments conducted within vision and eye research will be considered. At each session, a faculty member will provide and introduce data from a real study that they have conducted as an example. Issues around experimental design will be discussed. Then, using the participant’s own software on their computer, we will work through analyses of that data, guided by two faculty members. Thus, participants will handle real data and address real experimental design and data issues.

Course Notes: Participants must bring a laptop computer with a statistical analysis package with which they are familiar. Data will be available for download in advance of each session.

Class Notes: Classes meet every two weeks Feb 5 - Apr 28. 2W Common Room, Schepens Eye Research Institute, 20 Staniford Street, Boston.

Principles of Genetics (113752)
Fred Winston
Maxwell Heiman
Tom Bernhardt
Steven McCarroll
Jenna Galloway
Stephanie Mohr
2020 Fall (4 Credits)  Schedule: TBD
Instructor Permissions: None  Enrollment Cap: n/a

An in-depth survey of genetics, beginning with basic principles and extending to modern approaches and special topics. We will draw on examples from various systems, including bacteria, yeast, Drosophila, C. elegans, zebrafish, mouse, and human.

Course Notes: Intended for first-year graduate students. Offered jointly with the Medical School as GN 701.0.

Class Notes: This course will be taught online in 2020. Lectures, problems sets, and exams will be posted at the course website during the semester, between Sept 2 - Dec 10. The first lecture with an introduction to the course will be posted at the course web site on Wed., Sept 2.
Genetics 216

Advanced Topics in Gene Expression (111358)

Fred Winston
Robert Kingston
Stephen Buratowski

2021 Spring (4 Credits) Schedule: T 0230 PM - 0529 PM
Instructor Permissions: Instructor Enrollment Cap: 16

This course covers different topics in gene regulation, covering genetic, genomic, biochemical, and molecular approaches. A small number of topics are discussed in depth, using the primary literature. Topics range from prokaryotic transcription to eukaryotic development.

Course Notes: BCMP 310QC has merged with Genetics 216. Offered jointly with the Medical School as GN 703.0.

Class Notes: Classes will be held Jan 26 - May 4, from 2:30pm-5:30pm. Meeting Location: Online information to be provided on course page or by instructor

Recommended Prep: BCMP 200 and Genetics 201. All students taking Genetics 216 should read and be prepared to discuss the papers for the first meeting. The readings can be downloaded from the course website.

Genetics 228

Genetics in Medicine - From Bench to Bedside (121745)

David Sweetser

2021 Spring (4 Credits) Schedule: F 0200 PM - 0459 PM
Instructor Permissions: None Enrollment Cap: n/a

Focus on translational medicine: the application of basic genetic discoveries to human disease. Each three-hour class will focus on a specific genetic disorder and the approaches currently used to speed the transfer of knowledge from the laboratory to the clinic. Each class will include a clinical discussion, a patient presentation if appropriate, followed by lectures, a detailed discussion of recent laboratory findings and a student led journal club. Lecturers will highlight current molecular, technological, bioinformatic and statistical approaches that are being used to advance the study of human disease. There is no exam. Students will present one paper per session in a journal club style. Attendance and active participation for
the duration of all class meetings is required. If you are unable to attend class, or cannot be present for the entire session you are expected to contact the course instructor. Two incomplete or missed sessions will result in a failing grade.

Please do not sign up if you know you will have to miss 2 or more sessions. For more information visit https://ecor.mgh.harvard.edu/Default.aspx?node_id=375

Course Notes: Undergraduates wishing to enroll should contact the instructor at dsweetser@mgh.harvard.edu to request permission and give a description of their previous genetics training.

Class Notes: This course will run from Jan 29 to April 23, on Fridays from 2:00pm - 5:00pm. Meeting location: Online information to be provided on course page or by instructor.

Recommended Prep: Genetics 201 or equivalent.

Advanced Topics in Genetics (108152)

Rosalind Segal

2020 Fall (4 Credits)  Schedule: TBD
Instructor Permissions: None  Enrollment Cap: n/a

A series of reading and discussion seminars, each running for a half term (seven weeks). Different topics are covered each term.

Course Notes: Two seminars, which can be taken in different terms, are required for credit. Non-DMS students must get permission from the Division of Medical Sciences before registering for this course. Please contact us at 432-0162 or visit the DMS Office at T-MEC 435, 260 Longwood Avenue, Boston.

Genetics 302QC

Teaching 101: Bringing Effective Teaching Practices to your Classroom (127555)

Saoirse McSharry
Bradley Coleman

2021 Spring (2 Credits)  Schedule:  R 0830 AM - 1029 AM

Instructor Permissions:  Instructor  Enrollment Cap:  16

A course for development of practical skills for effective teaching. Primary focus is hands-on experience with objective-oriented lesson planning and execution, with emphasis on active learning techniques and how they can be applied in both large and small enrollment classes.

Course learning objectives:
By the end of this course, participants will be able to:
* Describe strategies for cultivating course climates that are student-centered and inclusive
* Create assessments, in-class activities, and instructional methods that align with course objectives
* Facilitate discussions and other learning activities in small- and large-group contexts
* Collect and apply constructive feedback from students and colleagues to improve teaching effectiveness

Class Notes:  This class runs from Feb 4 - Mar 25 and will be held on Thursdays from 8:30am - 10:30am (Synchronous Live Sessions). Meeting location: Online information to be provided on course page or by instructor. In addition to the live sessions, each week will require 1-2 hours of asynchronous classwork which may include written or recorded work to be submitted on Canvas prior to the live session.

Recommended Prep:  This course is complementary to CELLBIO 306qc: Teaching 100, but neither course is a prerequisite for the other. Postdocs and other Harvard affiliates who are not current students may be allowed to audit as space allows. Please contact the instructors to request permission to audit.

Genetics 349

Current Tools for Gene Analysis (156915)

Neena Haider

2021 Spring (4 Credits)  Schedule: TR 1000 AM - 1159 AM
Instructor Permissions: Instructor  Enrollment Cap: 15

The goal of this course is to apply a number of genomic tools over the course of a semester-long guided research project, learn how to utilize the complimentary statistical tools for analysis, and to discuss the strategies and final data presentation from published papers. Using example sequence datasets, students will analyze differential gene expression and changes. The class will explore the featured tool, related statistical methods together in an interactive manner followed by a discussion of the tools/stats as seen in
published work. After taking this class students will be able to apply each online tool to their own research and will be able to identify and use new genomic resources to address future research directions.

Course Notes: Students will need to bring a laptop to class each day.

Class Notes: Classes meet Feb 2 - Apr 6, from 10:00am-12:00pm. Meeting location: Online information for this course will be provided by instructor

Recommended Prep: Genetics 201 or with permission from the instructor.

Principles of Molecular Biology (116477)

Joseph John Loparo
Karen Adelman
Stirling Churchman
Frank Slack
Alan Brown
Johannes Walter

2020 Fall (4 Credits)  Schedule:  MWF 1230 PM - 0129 PM
Instructor Permissions:  None  Enrollment Cap:  n/a

Principles of Molecular Biology is a course organized around the Central Dogma of Biology with presentations covering fundamental aspects of DNA and RNA structure, their function and their interactions with proteins. The course opens with a discussion of the physical and chemical properties that drive the interactions of proteins with nucleic acids. This is used as a basis for understanding the material presented in the subsequent five modules, which cover DNA replication, DNA repair, gene regulation, transcription, RNA processing and translation. Throughout this course an emphasis will be placed on how the structure of small molecular machines (proteins) define their function in the processes and pathways that are introduced.

Course Notes:  Offered jointly with the Medical School as BP 723.0.

Class Notes:  Meeting Dates: September 2 through December 7, 2020.
Curriculum Fellow: Madhvi Venkatesh, madhvi_venkatesh@hms.harvard.edu

Recommended Prep:  Intended primarily for graduate students familiar with basic molecular biology or with strong biology/chemistry background.

Behavioral Pharmacology (141859)

Jack Bergman
Introduction to behavioral pharmacology of CNS drugs (e.g., psychomotor stimulants, antischizophrenics, opioid analgesics, antianxiety agents); seminar format with emphasis on behavioral methodology (i.e., model and assay development) and pharmacological analysis (i.e., receptor selectivity and efficacy); attention to tolerance, drug dependence/addiction/treatment, and basic behavioral processes.

Course Notes: Offered jointly with the Medical School as BP 719.0.

Class Notes: Classes will be held in Cambridge Jan 28 - May 12.

Recommended Prep: 1 year biology or chemistry or 1 year psychology

2021 Spring (4 Credits)  Schedule: MWF 0900 AM - 1029 AM

Instructor Permissions: None  Enrollment Cap: n/a

Cellular and organismal metabolism, with focus on interrelationships between key metabolic pathways and human disease states. Genetic and acquired metabolic diseases and functional consequences. Interactive lectures and critical reading conferences are integrated with clinical encounters.

Course Notes: Enrollment is limited to all HILS graduate students with adequate preparation in cell biology and biochemistry.

Class Notes: This course will run from Jan 25 - May 7, on M/W/F from 9:00am - 10:30am. Meeting Location: Remote - via Zoom/Canvas

Recommended Prep: Prerequisites for undergraduate students only. For undergraduates interested in this course, a knowledge of introductory biochemistry, genetics, and cell biology is required (MCB 63 or MCB 60 or LIFESCI50, and MCB 64 or equivalent); plus one year of organic chemistry (Chem 17/27 or 20/30). Please petition the course instructor for an exemption.

Principles of Drug Action in People (156104)

Philip Cole
Sara Buhrlage
Catherine Dubreuil

2021 Spring (4 Credits)  Schedule:  TR 0330 PM - 0459 PM

Instructor Permissions:  None  Enrollment Cap:  n/a

This course will discuss principles of drug discovery drug modalities and drug pharmacology. In the first part of the course, fundamental aspects of receptor and enzyme targeting agents, drug mechanism, drug metabolism, pharmacokinetics and pharmacodynamics, small molecules, proteins, and nucleic acid drugs will be described. In the second part of the course, pharmacology of therapeutics that act on the cardiovascular, immunologic, and central nervous systems will be covered. The course will include frontier lectures on antiviral agents, cardiac drugs, and treatments for brain diseases and a journal club on specialized topics in drug discovery. A range of knowledgeable instructors enlisted from the Harvard Medical School faculty and pharmaceutical scientists will participate in teaching this course.

Class Notes: This course will run from January 26 until May 4, Tuesdays and Thursdays from 3:30pm - 5:00pm. The meeting location will be virtual via Zoom.

Biolog Chem & Molecular Pharm  250

Biophysical and Biochemical Mechanisms of Protein Function (204396)

Andrew Kruse
Stephen Blacklow
Eric Fischer
Philip Cole

2021 Spring (4 Credits)  Schedule:  TR 1100 AM - 1159 AM

Instructor Permissions:  Instructor  Enrollment Cap:  30

Biophysical and Biochemical Mechanisms of Protein Function focuses on the molecular mechanisms that underlie essential biochemical processes such as signal transduction. Major topics include biochemical thermodynamics and conformational equilibria, protein structure and folding, receptor pharmacology, allostery, and enzymatic mechanisms of signaling. The course includes both content lectures and research
frontiers seminars focused on current research in biochemistry with an emphasis on signal transduction in therapeutically relevant pathways.

Class Notes: Classes will run from Jan 26- Apr 29. Meeting Location: Zoom link will be available on course website

Recommended Prep: A foundational biochemistry course is recommended as a prerequisite (we expect students to have a solid understanding of the core concepts in biochemistry and molecular biology, including knowledge of the amino acids and their properties as well as the central dogma).

Translational Pharmacology: The Science of Therapeutic Development (127474)

David Golan
Catherine Dubreuil
Mark Namchuk

2021 Spring (2 Credits)  
Schedule: MTWRF 1000 AM - 1159 AM  
Instructor Permissions: Instructor  
Enrollment Cap: 56

This intensive course, held during three weeks in January (14 class days), covers principles of pharmacology and their translation into new drug development. Students participate in project groups, composed primarily of graduate students, to propose a drug development strategy from target choice through clinical trials. Most sessions include lectures, panel discussions, and/or case studies presented by Harvard faculty and faculty experts from the pharmaceutical and biotechnology industries; most afternoons are either unscheduled or provide scheduled time to work on the group project. Evaluation is based on written and oral presentations of the group project and on class participation. Enrollment may be limited.

Class Notes: Please Note: Schedule runs outside the J-Term semester dates. Class sessions will begin on January 4 and will run until January 22, from 10:00am - 12:00pm. There will be live synchronous content via Zoom, contact Catherine Dubreuil for more information.

Biolog Chem & Molecular Pharm 305QC

Seminars in Molecular Mechanistic Biology (207006)

Madhvi Venkatesh

2021 Spring (2 Credits)  
Schedule: MW 0500 PM - 0559 PM  
Instructor Permissions: Instructor  
Enrollment Cap: 30

Seminars in Molecular Mechanistic Biology is a series of student work-in-progress talks that meets once a month during the academic year. Students who are presenting will receive feedback from both the faculty and the other students in the Molecular Mechanistic Biology (MMB) program. The peer-to-peer structure of this course (which is only open to students in MMB) should build community and a sense of belonging to the program. It will also help students develop a deeper understanding of the study of molecular mechanisms outside of their own labs and build relationships with faculty.

Course Notes: Registration for this class is limited to students who are a part of the
Molecular Mechanistic Biology program. Students should contact Madhvi Venkatesh (madhvi_venkatesh@hms.harvard.edu) regarding enrollment.

Class Notes: This class will run from Feb 8 - May 5. The classes will be held on M/W from 5:00pm - 6:00pm. Meeting location: Students will be contacted directly with Zoom details.

Microbiology 201

Molecular Biology of the Bacterial Cell (126271)

David Rudner  
Tom Bernhardt  
Simon Dove  
Deepali Ravel
Sophie Helaine

2021 Spring (4 Credits) Schedule: TR 1000 AM - 1159 AM
Instructor Permissions: None Enrollment Cap: n/a

This course is devoted to bacterial structure, physiology, genetics, and regulatory mechanisms. The class consists of lectures and group discussions emphasizing methods, results, and interpretations of classic and contemporary literature.

Course Notes: The Spring 2021 version of this course will include synchronous, online lectures and paper discussions as well as asynchronous paper reading and problem set assignments. Interested students with questions about accessibility and/or time zone conflicts should contact the course directors as soon as possible.

Class Notes: This class will run from Jan 26 - April 27. They'll be held on Tuesdays and Thursdays from 10:00am - 12:00pm, EST. Meeting Location: Online information to be provided on course page or by instructor.

Microbiology 202

Mechanisms of Bacterial Pathogenesis and Host Immune Response (126269)

Marcia Goldberg
Jonathan Kagan
Deepali Ravel
Michael Stambach
Darren Higgins
Sophie Helaine

2020 Fall (4 Credits) Schedule: TR 1000 AM - 1159 AM
Instructor Permissions: Instructor Enrollment Cap: 20

This course focuses on molecular mechanisms of bacterial pathogenesis and the host response to infection. The class consists of lectures and group discussions emphasizing themes of pathogenesis, methods, results, and interpretations of classic and contemporary literature. Subjects including bacterial secretion systems, mechanisms of entry into host cells, biofilm formation, and motility are viewed primarily from the pathogen's perspective, whereas topics including inflammasome activation, TLR signaling, and adaptive immune responses provide a host-centric view. Additional sessions are spent examining current methods of antibiotic discovery and vaccine development. The course also introduces students to the wide diversity of pathogenic bacteria. Organisms discussed include pathogenic E. coli, Shigella species, Vibrio cholerae, Listeria monocytogenes, Chlamydia trachomatis, Pseudomonas aeruginosa and Staphylococcus aureus, as well as a discussion of the challenges presented by currently unculturable species. Where relevant, connections will also be made with pathogenesis and immune responses to viruses, parasites, and fungi.

Course Notes: Designed to complement Microbiology 201; however, students who have not taken Microbiology 201 previously are welcome. Designed for
Microbiology 205

Mechanisms of Microbial Pathogenesis (146757)

Clyde Crumpacker
Harvey Simon

2020 Fall (4 Credits) Schedule: TR 0830 AM - 1229 PM

Instructor Permissions: Instructor Enrollment Cap: 40

The mechanisms of bacterial, mycoplasmal, fungal, and viral pathogenesis are covered. Topics are selected for intrinsic interest and cover the spectrum of pathophysiologic mechanisms of the infectious process. Emphasis on pathogenesis at the molecular level.

Course Notes: Offered jointly with the Medical School as HT 040.

Class Notes: Meeting Dates: Sept 8 - Dec 12, 2020.

Recommended Prep: A background course in molecular biology is strongly encouraged.

Microbiology 210

Microbial Sciences: Chemistry, Ecology, and Evolution (125823)

Michael Gilmore

2021 Spring (4 Credits) Schedule: F 0945 AM - 1145 AM

Instructor Permissions: Instructor Enrollment Cap: 20
This is an interdisciplinary graduate-level and advanced undergraduate-level course in which students explore topics in molecular microbiology, microbial diversity, and microbially-mediated geochemistry in depth. This course will be taught by faculty from the Microbial Sciences Initiative. Topics include the origins of life, biogeochemical cycles, microbial diversity, and ecology.

Course Notes: Also offered as Organismic and Evolutionary Biology 290.

Class Notes: Class run from Jan 29 - Apr 23, on Fridays from 9:4am - 11:45am. Meeting Location: Online information to be provided on course page or by instructor.

Recommended Prep: For graduate and advanced undergraduate students, Life Sciences 1a and 1b or their equivalent are required, or permission of instructor. MCB 52 or equivalent is recommended.

Microbiology 213

Social Issues in Biology (122708)

Richard Born
David Glass

2021 Spring (4 Credits) Schedule: R 0200 PM - 0359 PM

Instructor Permissions: Instructor Enrollment Cap: 20

This discussion course covers historical and contemporary readings about controversial issues related to biology and the social responsibility of scientists. This year we’ve made a virtue of the necessity to teach online, which has freed us up to enlist input from colleagues from a variety of disciplines in far-flung geographical locations: Jill Fisher on racial inequalities in testing new pharmaceuticals; Emily Hamilton on the public perception of vaccinations; Michael Pollan on the history and current use of psychedelic drugs; Sarah Lewis on the legacy of Louis Agassiz and the Zealy Daguerreotypes; and Christine Korsgaard on the ethics of animal experimentation. Our goal is to provide future scientists with a background for considering the ethical and social implications of biology.

Course Notes: Offered jointly with the Medical School as MG 722.0.

Class Notes: This class will run from Jan 28 - Apr 22, with no class on Apr 17. The class is held on Thursdays from 2:00pm - 4:00pm. Meeting location: Online information to be provided on course page or by instructor.

Recommended Prep: Some background in genetics.

Microbiology 302QC
Introduction to Infectious Disease Research: Infectious Diseases Consortium Boot Camp (109380)
Dyann Wirth
Deepali Ravel

2021 Spring (2 Credits) Schedule: TRF 0200 PM - 0459 PM
Instructor Permissions: Instructor Enrollment Cap: 15

This January boot camp course provides a fun, informative introduction to the breadth of infectious disease research carried out at Harvard and beyond. Students will have the chance to meet faculty, students, and fellows in infectious disease roles across the university. The course will focus on several aspects of infectious diseases:

1. Underlying biology of infectious diseases and the diverse pathogens that cause them
2. Modern approaches to studying infectious diseases, including experimental biology, epidemiology, bioinformatics, and clinical microbiology
3. Modern approaches to developing new interventions, including drugs, vaccines, diagnostics, and public health measures

Class Notes: This course will run from Jan 12 - Jan 22, from 2:00pm - 5:00pm EST (with breaks). It is designed for life sciences graduate students but is open for cross-registration from other students. The Winter 2021 version of this course will be taught primarily through synchronous online lectures, discussions, and workshops. Interested students with questions about accessibility and/or time zone conflicts should contact the course directors as soon as possible. Online information to be provided on course page or by instructor.

Microbiology 360QC
The Human Microbiome: Comprehensive experimental design and methodologies (207117)

Aleksandar Kostic
Abigail Devlin

2021 Spring (2 Credits)  Schedule:  MW 0100 PM - 0230 PM
Instructor Permissions:  Instructor  Enrollment Cap:  15

This is a comprehensive introduction to the study of human microbial communities and their functions relevant to human physiology. Topics covered include metagenomics, mechanistic interactions of the microbiome with metabolism, the immune system, and the gut-brain axis. Rather than lectures, this course is primarily a critical discussion of the literature.

Class Notes:  Classes will run from Jan 27 - Mar 15 on M/W from 1:00pm - 2:30pm. Meeting Location: Online information to be provided on course page or by instructor.

2020 Fall (4 Credits)

Schedule:  
M 0900 AM - 0959 AM  
WF 0900 AM - 1029 AM

Instructor Permissions: None  
Enrollment Cap: n/a

Speech and hearing are fundamental to our ability to communicate, yet in the US alone millions of people suffer from some form of speech or hearing impairment. As engineers and scientists, it is important to understand the underlying principles of speech and hearing. The goals of this course are to introduce students to the acoustics, anatomy, physiology, and mechanics related to speech and hearing and to build a foundational understanding of one of the most complex, interdisciplinary, and fascinating areas of bioengineering. Particular attention will be paid to how humans generate and perceive speech. Topics include acoustic theory of speech production, basic digital speech processing, control mechanisms of speech production and basic elements of speech and voice perception. These fundamental topics will be explored through applications and challenges involving acoustics, speech recognition, and speech disorders, which are especially relevant given the ubiquity of recording and playback devices such as smartphones and home assistants. On the hearing side, topics include acoustics and mechanics of the outer ear, middle ear, and cochlea, how pathologies affect their function, and methods for clinical diagnosis. Surgical treatments and medical devices such as hearing aids, bone conduction devices, and implants will also be covered.

Course Notes: This course is taught as course in consort with HST.714J at the Massachusetts Institute of Technology.

Class Notes: First Meeting Date Sept 2, 2020

Course Website  https://goo.gl/rhNqY4

Recommended Prep: Mathematical methods in science (Applied Mathematics 21a or Mathematics 21a) or equivalent. Calculus and introductory physics. Rigid body mechanics (Physics 11A), or Electrical circuits (Engineering Science 154) or permission of the instructor.

Speech & Hearing Sciences 201

Biology of the Inner Ear (108213)

M. Liberman

2020 Fall (4 Credits)

Schedule:  
TR 0900 AM - 1015 AM  
M 0100 PM - 0229 PM

Instructor Permissions: Instructor  
Enrollment Cap: 12
Normal biology, biophysics, physiology and morphology of the inner ear, its sensory innervation and efferent control systems, and the mechanisms underlying sensorineural hearing loss and balance disorders. Material is presented through lectures, laboratory exercises and discussions of the primary literature.

Class Notes: First Meeting Date Sept 3, 2020

Recommended Prep: Introductory neurobiology recommended. Lecture notes will be available online.

Speech & Hearing Sciences 202

Clinical Aspects of Speech and Hearing (108217)

Ramon Franco

2021 Spring (4 Credits) Schedule: MW 0500 PM - 0659 PM

Instructor Permissions: Instructor Enrollment Cap: 15

Clinical approach to speech and hearing disorders as practiced by physicians, audiologists, speech clinicians, and rehabilitation specialists. Includes virtual observation of patient care in clinic and operating rooms, as well as lectures, discussion groups, and laboratory experience in audiological and vestibular testing.

Course Notes: Classes to be held remotely. Class meeting times may change according to physician OR and clinic schedules.

Class Notes: Classes run from Feb 1 - Apr 28, on Mondays and Wednesdays, from 5:00pm - 7:00pm. Meeting location: Online information to be provided on course page or by instructor.

Recommended Prep: Anatomy of Speech and Hearing, Acoustics of Speech and Hearing, or permission of the course director

Speech & Hearing Sciences 203

Anatomy of Speech and Hearing (108218)

Barbara Fullerton
James Heaton

2021 Spring (4 Credits) Schedule: MTWF 0930 AM - 1129 AM
This course covers anatomy of the head and neck with videos of some of the detailed anatomy. We will stress structures important in speech and hearing. Lecture topics include basic neuroanatomy, imaging, surgery and cancer of the head and neck. We are unable to offer the usual cadaver lab for the course this year.

Course Notes: This an intensive January course, offered jointly with MIT as HST 718. Students should be comfortable with basic biology.

Class Notes: Please Note: Schedule runs outside the J-Term semester dates. Class sessions will begin on January 4th and will run until January 29th, from 9:30am - 11:30am, Monday - Friday. This class will be remote via zoom, until further notice from HMS.

Speech & Hearing Sciences 205

Audition: Neural Mechanisms, Perception and Cognition (108224)

Daniel Polley
Bertrand Delgutte
M. Brown
Joshua McDermott
Anne Takesian
Julie Arenberg

2021 Spring (4 Credits)  Schedule: MWF 0930 AM - 1129 AM
Instructor Permissions: Instructor  Enrollment Cap: 20

Neural structures and mechanisms mediating the detection, localization and recognition of sounds. General principles are conveyed by theme discussions of auditory masking, sound localization, musical pitch, cochlear implants, cortical plasticity and auditory scene analysis.

Course Notes: Offered jointly with MIT HST.723.

Class Notes: Classes will run from Jan 27 - Apr 26. They will be held on M/W/F from 9:30am - 11:30am. Meeting Location: Online information to be provided on course page or by instructor.

Recommended Prep: Neurobiology 200 or permission of the instructor.

Developmental & Regen Biology 207  Section: 0001
Development, Stem Cells and Regeneration (111215)
Andrew Lassar
John Flanagan
Guillermo Garcia-Cardena
Vandana Gupta
Karl Koehler
Jordan Kreidberg
Jessica Lehoczky
This course is evenly divided between lectures and conference sessions which cover the principles that guide vertebrate development and stem cell maintenance in various renewing tissues; in addition, we discuss how these principals can be leveraged to generate cells/tissues for regenerative biology or disease modeling in vitro. Specific topics include a molecular dissection of the signaling pathways, gene regulatory networks, and epigenetic mechanisms that control primary axis formation and regional specification, establishment of cell fate, homeotic genes and patterning, cell migration and cell-cell signalling, organoid models of nervous system development and their application, axon development and regeneration, neuromuscular development and mechanistic insights for human birth defects, skeletal muscle stem cells in aging and disease, morphogenesis of branched tubular systems, vasculogenesis, biomechanical regulation of developmental processes, limb development and regeneration, stem cell maintenance in various renewing tissues, germ cells and pluripotency, and directed differentiation of ES and iPS cells for regeneration and disease modeling. We will discuss how state of the art technologies in iPS organoids, cell lineage labeling, genetic manipulation, and genome wide epigenomic/transcriptomic analyses can be employed to study organ development, stem cells and regeneration.

Students employ the knowledge gained by lectures and conference sessions to identify two interesting new research goals in either vertebrate development, stem cell, or regenerative biology and present research proposals to achieve these goals. Thus, a goal of this course is for students to learn how to synthesize the literature to come up with their own novel research ideas, and develop a strategy to investigate their hypotheses.

Course Notes: This course is offered as CELLBIO207 and also as DRB207. Offered jointly with the Medical School as CB 710.0. Includes lectures and conference sessions in which original literature is discussed in depth. Short research proposals are required in lieu of exams.

Class Notes: This course will run from Jan 25 - May 12, on Mondays and Wednesdays from 2:00pm - 4:00pm. Meeting Location: Online information to be provided by Andrew_Lassar@hms.harvard.edu.

Recommended Prep: Introductory courses in both Cell and Molecular Biology.

2021 Spring (2 Credits)

Schedule: MTWF 1100 AM - 0259 PM

Instructor Permissions: Instructor
Enrollment Cap: 16

This virtual laboratory and lecture-based course is designed to provide a survey of model systems and technical approaches utilized in developmental, stem cell, and regenerative biology. Students will complete a series of virtual mini-rotations with laboratories of DRB faculty across the Harvard campuses and affiliated hospitals. Students engage with faculty and trainees to gain experience with a variety of models, experimental techniques, and research areas. Each day of the course will consist of an overview lecture followed by virtual lab tours, protocol observations or activities, and interactive discussions and/or case study sessions. Activities are designed to facilitate student, lab member, and PI interactions. The course will culminate in a social event with the larger DRB community and short, informal student-led (five minutes, five slides) brainstorming sessions inspired by a lab session of their choosing.

Course Notes: This is an intensive January course. Open to first-year and second-year BBS students [HDRB undergraduates with approval of the course director]. Not repeatable for credit.

Class Notes: This course runs from Jan 11 - Jan 22, Mon - Fri, from 11:00am-3:00pm. Please reach out to mara_laslo@hms.harvard.edu with any questions. Course meeting only on Jan 11; presentations only on Jan 22; optional DRB welcome party on Jan 21. Online information to be provided on course page or by instructor.

Qualitative and Quantitative Analysis of the Biological Literature (108994)

Eric Greer
Joseph Italiano
Naama Kanarek
Scott Kennedy
Benjamin Kleinstiver
BBS 230 is an integrated literature analysis course comprised of two related components: (1) intensive faculty-led paper discussion on Mondays and (2) workshops with TFs to assess individual student skills in critically evaluating and reviewing the scientific literature on Wednesdays.

Course Notes: This course is required for first year BBS and second year BIG students, and is open only to BBS and second year BIG students.

Class Notes: This class runs from Jan 25 - April 14. It will be held Mondays and Wednesdays from 10:30am-12:30pm. Meeting Locations: Online information to be provided on course page or by instructor.

Embedded Teaching Practicum (for Graduate Teaching Assistants) (127207)

Ronald Heustis
Madhvi Venkatesh

2020 Fall (4 Credits) Schedule: TBD
Instructor Permissions: Instructor Enrollment Cap: 60

The Embedded Teaching Practicum serves to enhance the teaching experience for TAs and the learning experience for enrollees in the core BBS courses. While TAs serve different functions and experience teaching from different perspectives in each of our core courses, they collectively serve a vital role in helping with the delivery of a contemporary, high-quality and accessible education to HMS graduate students. The embedded teaching practicum provides practice-based training in curriculum design, developing learning objectives, assessment development and DBER; facilitating a group discussion; professionalism in the classroom; and preparation for teaching throughout and beyond time in graduate school. Teaching assistants are provided training and experience in the development of an early-career teaching philosophy.

Class Notes: This course runs from August 18 2020 - December 10, 2020. Time varies by date; details of date and time to be shared by instructors.

TAs should contact Jason Heustis, ronald_heustis@hms.harvard.edu. Required Course for TAs working in BCMP 200. Open to TAs serving in other BBS core classes. Registration for this class is limited to students serving as Teaching Assistants for BBS core. Class meetings will be scheduled during daytime and evening hours, and will be communicated by the instructor. TAs are required to participate in all synchronous and asynchronous components of the course in which they are serving as a TA.

Meromit Singer lab (215771)

*Meromit Singer*

2021 Spring (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

The Singer group focuses on elucidating gene networks that regulate T cell function in cancer and autoimmunity, as well as the mechanisms by which bi-directional interactions take place between the T cells and their environment.

We use statistics, machine learning and algorithmic design to analyze high-throughput data generated in our lab (e.g. single-cell RNA-Seq) and model T cell regulation and function in tissue. We follow up on our predictions with in vivo perturbations (e.g. with CRISPR-Cas9) to validate and improve our models.

Critical Thinking and Research Proposal Writing (156089)
A group tutorial systematically guiding students in the writing of original, hypothesis-driven research proposals from initial topic selection through completion of a final draft.

Course Notes: This course is open to second year BBS students. Others need permission of the instructor. Dates, times, and locations for Sessions 3 and 4 will be determined by the faculty running the tutorial sessions. Students will be able to sign up for their specific group on a first-come, first-served basis until the group limit (5 students) is reached. The BBS office will coordinate this process. Group assignments will be posted on the course website.

Class Notes: Session 1 (Lecture) will be on September 10, 2020, from 2:00 - 4:00pm. Session 2 (Lecture) will be on October 1, 2020, from 2:00 - 4:00pm.

Students who have joined a lab will be offered a section which run from October - December
Students who have not yet joined a lab will be offered a section which run from November - January

Recommended Prep: Check course website for downloadable material at https://canvas.harvard.edu/courses/61871.

Medieval Studies 109
Poverty, Wealth, and Religion in the Middle Ages (203670)

Brian FitzGerald

2020 Fall (4 Credits) Schedule: MW 0130 PM - 0245 PM
Instructor Permissions: None Enrollment Cap: n/a

This seminar considers the ethical, political, and spiritual questions arising from the existence of wealth and poverty, the rich and the poor, in medieval European culture. What was the relationship between Christian charity and economic activity in the Middle Ages? How did the religious values of a simple, austere life inform or conflict with changes in both Church and society? Drawing on saints' lives, theological treatises, art and architecture, and the work of authors such as Augustine, Aquinas, Thomas More, and Martin Luther, the course will examine how the interaction of spiritual ideals and material realities shaped cultural developments and affected beliefs and practices from late antiquity to the Protestant Reformation.

Sex, Love, and Marriage in the Middle Ages (205890)

Sean Gilsdorf

2020 Fall (4 Credits) Schedule: TR 0130 PM - 0245 PM
Instructor Permissions: None Enrollment Cap: n/a

This class explores the relationships of passion, love, and obligation that bound men and women over the course of nearly two millennia, from Rome in the first century B.C.E. to sixteenth-century Italy. In particular, it focuses on how those relationships were organized legally and institutionally, on the social roles created by such relationships, and on the connection (or lack thereof) between marriage, love, and sexual passion. Although marriage in the West long was viewed as an exclusively heterosexual estate, the course also considers how homosocial and homosexual desires have affected it throughout history.

English Legal History, 600-1600 (142694)

Elizabeth Kamali

2021 Spring (4 Credits)  Schedule:  MT 1030 AM - 1150 AM
Instructor Permissions:  None  Enrollment Cap:  n/a

An introduction to the legal and constitutional history of England from the Anglo Saxons to the end of the Tudor period, essentially 600 – 1600, including the development of private (e.g., contract, torts, property) and public law (e.g., criminal and constitutional law). No previous background in English legal history is assumed.

Course Notes:  Meets together with HLS 2165.

At Cross Purposes: The Crusades in Material Culture (109230)

Evridiki Georganteli

2020 Fall (4 Credits)  Schedule:  W 0900 AM - 1145 AM
Instructor Permissions:  Instructor  Enrollment Cap:  15

Crusading expeditions in the Holy Land, Spain and Eastern Europe from 1096 until the end of the Middle Ages shaped the political, socio-economic and cultural map of Europe and the Middle East. This course explores the multifaceted encounters between crusaders, Byzantines, Jews, Armenians and Muslims through the material traces they left behind: architecture, Byzantine objects dispersed across Western Europe, coins, sculptures, frescoes, and manuscripts from the East and the West.

Mind, Brain & Behavior 980F Section: 1

Creativity Research: Eccentrics, Geniuses, and Harvard Students (128215)

Shelley Carson

2020 Fall (4 Credits) Schedule: T 0300 PM - 0500 PM
Instructor Permissions: Instructor Enrollment Cap: 15

Examines human creativity from three perspectives: a) empirical research sources, b) case studies of eminent creative achievers, and c) ourselves as creative subjects. Topics include the definition and measurement of creativity, the creative process, the neuroscience of creativity, the creative personality, the role of family life and culture in creativity, the relationship of creativity to IQ, gender differences, and the relationship of creativity to psychopathology. The course format will consist of a combination of lectures, student presentations, and discussion. Students will write a final paper on the topic of their choice related to creativity.

Class Notes: Course inquiries to Dr. Carson at shcarson@live.com. Preference to juniors in MBB tracks or MBB secondary field. Admission to this course is via lottery. Link to lottery form will be available at https://mbb.harvard.edu/seminars by 9 a.m. (Eastern U.S. Daylight Time/EDT) on Friday 21 August. Lottery deadline is 11:59 p.m. (Eastern U.S. Daylight Time/EDT) the same day.
Mind, Brain & Behavior 980H

What Disease Teaches about Cognition (109866)

Michael Alexander
William Milberg

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: 14

Seeks to reconcile the complicated and messy problems of patients with brain disease with the concise analysis of precisely defined cognitive functions in normal subjects. Students will learn to overlap cognitive functions on to the brain in disease - at the gross dissection and imaging levels - and to understand some of the complex interactions of individual cognitive operations in disease. Includes dissection of a human brain, mapping on to imaging, dissection of multi-dimensional clinical disorders into their component functional parts.

Class Notes: To be admitted to this course, attend first class meeting and complete MBB Seminar Lottery (instructions at https://mbb.harvard.edu/seminars). Enrollment priority to MBB track juniors and MBB secondary field juniors.

Mind, Brain & Behavior 980M

Functional Neuroimaging of Psychiatric Disorders: Insights into the Human Brain-Mind (160759)

David Silbersweig

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: 15

Functional brain imaging has revolutionized the study of systems-level behavioral neuroscience and psychiatric disorders, through the ability to localize and characterize distributed brain activity directly associated with perception, cognition, emotion and behavior in disorders where there are not gross brain lesions. This seminar will introduce students to translational neuroimaging methods at the interface of neuroscience, psychology and medicine. It will cover recent and ongoing advances in our understanding of fronto-limbic-subcortical brain circuitry across the range of psychiatric disorders (e.g. mood disorders, anxiety disorders, psychotic disorders, personality disorders, addictions). It will discuss new, emerging biological (as opposed to descriptive) taxonomies and conceptualizations of mental illness and its treatment. It will explore the implications of such knowledge for issues such as consciousness, meaning, free will, emotion, resilience, and religiosity. It will incorporate clinical observations, scientific data and
readings, and examine future directions in brain-mind medicine.

Class Notes: To be admitted to this course, attend first class meeting and complete MBB Seminar Lottery (instructions at https://mbb.harvard.edu/seminars). Enrollment priority to MBB track juniors and MBB secondary field juniors.

**Mind, Brain & Behavior 980N Section: 1**

Neuroaesthetics (161267)

*Nancy Etcoff*

2020 Fall (4 Credits) Schedule: R 1200 PM - 0200 PM

Instructor Permissions: Instructor Enrollment Cap: 15

Focuses on neuroaesthetics, an emerging field offering a scientific perspective on the nature of art and the ways that art reveals human nature. Integrates findings from neuroscience, psychology, evolutionary biology, philosophy, and scholarship in the arts and humanities. Begins with a brief history of ideas on aesthetics, art, beauty, and pleasure. Considers the neural underpinnings of response to art in the brain’s reward system and default network. Among the questions considered: Why are people drawn to art that is neither conventionally beautiful nor entirely pleasurable? Is art a vehicle for simulating experiences and understanding other minds? What does it mean to “enjoy” sad music or chills and thrills in response to fiction or film? Can art promote well-being? The course will focus on visual art, fiction, film, and to a lesser extent, music, and on our response to art rather than its creation. The course will include a semester long gallery classroom at the Harvard Art Museum with original works of art from the museum’s collections that will serve as primary source materials for study and as subjects of assignments.

Class Notes: Preference to juniors in MBB tracks or MBB secondary field. Admission to this course is via lottery. Link to lottery form will be available at https://mbb.harvard.edu/seminars by 9 a.m. (Eastern U.S. Daylight Time/EDT) on Friday 21 August. Lottery deadline is 11:59 p.m. (Eastern U.S. Daylight Time/EDT) the same day.

The Role of Music in Health and Education (205158)

*Lisa Wong*

2020 Fall (4 Credits) Schedule: R 0300 PM - 0500 PM

Instructor Permissions: Instructor Enrollment Cap: 18
Music shapes the course of human history at both a micro and macro scale; The “universal language” has the power to connect people who share no other common ground. Its power to bind people together is intuitively understood, but only through recent neuroimaging advances over the past few decades have scientists been able to move past intuition to reveal its impact on the brain. In this course, we will examine the exciting progress of the fields of music, science, and social science, through a variety of lenses, and meet some of the experts in the field. Who are the key investigators and practitioners in today’s emerging music/brain landscape? What are the latest discoveries about how music affects the brain? How does how we hear and listen impact our perception of music? Who are some of the key influencers in music and social change? This course invites students to deepen their relationship with music, exploring different aspects of the art form through the lens of neuroscience, education, medicine, music therapy, public health and social justice. By the end of this course, the learner will (1) understand the effect of music on the developing brain; (2) understand the mechanism of hearing music; (3) consider the pathophysiology of disordered movement and hearing and how music can be used therapeutically; and (4) understand how other disciplines can add to their knowledge of the therapeutic uses of music. Given the transdisciplinary nature of the work, students will be introduced to literature from different disciplines and use these resources to explore their own individual interests in music.

Course Notes: Preference to juniors in MBB tracks or MBB secondary field.

Mind, Brain & Behavior 980R Section: 1

Psychopaths and Psychopathy: Psychological, Neuroscientific, Legal, and Policy Issues (207090)

Ellsworth Fersch

2020 Fall (4 Credits) Schedule: W 0300 PM - 0500 PM
Instructor Permissions: Instructor Enrollment Cap: 18

Psychopathy is often used to describe individuals who act in criminal even non-criminal predatory or conscience-less fashion. It is not, however, an official term in the Diagnostic and Statistical Manual of Mental Disorders, though antisocial personality disorder has in the past been described as encompassing psychopathy and sociopathy. Psychopathy was explored by Cleckley in his 1944 book The Mask of Sanity: and by Robert Hare in his 1999 book Without Conscience, and in his 2003 revision of his Psychopathy Check-list. My psychology department seminar on Psychopaths and Psychopathy a decade ago focused on behavioral research and case studies up to that time. By that time the American Psychiatric Association had issued a statement that psychopaths and those with antisocial personality disorder were not, for heuristic reasons, eligible for the insanity defense. Also, at that time, the determination that a convicted killer was a psychopath was often a strong indicator that the death penalty was warranted. Since then neuroscience research has increasingly explored brain structure and brain function in relation to the disorder causing some professionals to reevaluate the applicability of former positions on insanity and other defenses. Related research has further examined social and philosophical factors, and further
operationalized behavioral considerations. In this interdisciplinary discussion-based seminar, students from any of a number of concentrations will examine and discuss that newer research in the context of previous research, and will write and present a briefer case study as well as a longer paper about a topic of their choosing.

Class Notes: Course inquiries to Dr. Fersch at fersch@fas.harvard.edu. Preference to juniors in MBB tracks or MBB secondary field. Admission to this course is via lottery. Link to lottery form will be available at https://mbb.harvard.edu/seminars by 9 a.m. (Eastern U.S. Daylight Time/EDT) on Friday 21 August. Lottery deadline is 11:59 p.m. (Eastern U.S. Daylight Time/EDT) the same day.

### Mind, Brain & Behavior 980S

Cognitive Neuroscience of Meditation (207091)

*Sara Lazar*

2021 Spring (4 Credits)  
Instructor Permissions: Instructor  
Enrollment Cap: 15

Buddhist philosophy describes a model of how the mind works, as well as a method, mindfulness meditation, that can be used as a tool to transform consciousness and reduce mental distress. Neuroscientists have begun to study the impact of meditation on brain structure and function, often using Buddhist philosophy to guide their hypotheses. We will review and discuss how the science relates to Buddhist philosophy, using the four foundations of mindfulness as the primary framework. We will also compare and contrast the Buddhist model with modern scientific models of how conscious experience is created in the brain, in order to gain a more nuanced understanding of consciousness that integrates philosophy, neuroscience, and personal experience. No prior knowledge of Buddhism is required. The course will be a mixture of lecture, discussion of two primary scientific articles that are assigned each week, and formal powerpoint presentations by students. Students will write a final paper on a topic of their choice that is relevant to the themes of the course.

Class Notes: To be admitted to this course, attend first class meeting and complete MBB Seminar Lottery (instructions at https://mbb.harvard.edu/seminars). Enrollment priority to MBB track juniors and MBB secondary field juniors.

### Mind, Brain & Behavior 980V Section: 1

The Functional and Structural Human Brain Connectome (215757)
Studies of functional connectivity (FC) of the human brain using functional magnetic resonance imaging (FMRI) data collected during wakeful rest have revolutionized our understanding of the brain’s organization at the network level. Consistent with networks observed at rest, in vivo FMRI studies of brain activity during performance of tasks also reveal that large-scale brain networks that are engaged during task performance are the same as those that are "active" at rest. More recently, structural MRI has revealed gray matter structural covariance networks and advances in diffusion MRI have made it possible to study the white matter structural connectome via in vivo fiber tracking. In this course, we will learn the basics of MRI methods used for connectomics research, including structural, diffusion, and functional MRI, and how each of these techniques are used to study the structural and functional connectome of the human brain. Key methodological and interpretational issues for each technique will be discussed, including comparative neuroanatomy research that aims to integrate MRI connectomic measures with findings from translational studies using tracer injections to gain an understanding of the mechanisms underpinning MRI measures of connectivity. We will then discuss some of the brain networks that have been reported in the literature using these methods, and the links between structural and functional connectomes, with a focus on networks implicated in psychopathology and addiction. Last, we will discuss open access resources for connectomics research, including CoCoMac, the Healthy Adult Connectome Project, Lifespan and Disease Connectome Projects, and the CONNECT Project.

Course Notes: To be admitted to this course, attend first class meeting and complete MBB Seminar Lottery (instructions at https://mbb.harvard.edu/seminars). Enrollment priority to MBB track juniors and MBB secondary field juniors.

Molecular and Cellular Biology
Subject: Molecular & Cellular Biology

Molecular & Cellular Biology  60
Cellular Biology and Molecular Medicine (110424)

Dominic Mao
Vladimir Denic
Michel Becuwe

2020 Fall (4 Credits)  Schedule:  W 0900 AM - 1030 AM
Instructor Permissions:  None  Enrollment Cap:  n/a

MCB 60 provides an introduction to the principles of molecular and cellular biology and their connections to biomedicine. The course explores how medical syndromes provide insights into biological processes and how biological mechanisms underlie human disease and physiology. Topics range from DNA repair, protein folding and vesicle transport to metabolism, cell migration, and cancer. Content for lecture topics comprising of reading and viewing material will be released weekly followed by mandatory, interactive live sessions with the instructors. Weekly sections will combine a laboratory that focuses on experimental design and data analysis, primary literature reading, and review of lecture materials.

Class Notes:
- About three 15-min lecture videos and reading material will be posted every week ahead of live discussion sessions with the instructors. Multiple watch parties of the lecture videos with peers and course staff will be available.
- Two, duplicate 90-minute live discussion sessions with instructors per week. Students are required to attend one of the two sessions.
- One 90-min live section that combines lab, lecture review, and paper discussion is required.
- Schedules of all live sessions TBA, after students are polled for availability.

Recommended Prep:  LS 1b recommended.
Requirements:  Prerequisite: LPS A OR LS 1a OR LS 50A AND LS 50B

Biochemistry and Molecular Medicine (110450)

Alain Viel
Jessica Liu

2020 Fall (4 Credits)  Schedule:  R 0130 PM - 0245 PM
Instructor Permissions: None
Enrollment Cap: n/a

The course integrates an introduction to the structure of macromolecules and a biochemical approach to cellular function. Topics addressing protein function will include enzyme kinetics, the characterization of major metabolic pathways and their interconnection into tightly regulated networks, and the manipulation of enzymes and pathways with mutations or drugs. An exploration of simple cells (red blood cells) to more complex tissues (muscle and liver) is used as a framework to discuss the progression in metabolic complexity. Students will also develop problem solving and analytical skills that are more generally applicable to the life sciences.

Class Notes:
Live Lecture will be each Thursday from 1:30 - 2:45. Live Discussion Sections are planned for Tuesday throughout the day.

Requirements:
Prerequisite: LS 1a OR LPS A OR LIFESCI 50A/B

Cell Biology in the World (110451)

Jessica Liu

2021 Spring (4 Credits) Schedule: MW 0300 PM - 0415 PM

Instructor Permissions: None
Enrollment Cap: n/a

This course teaches fundamental concepts in cell biology in the context of individual life histories drawn from different parts of the world. Each life case focuses on key aspects of human development, growth, aging and disease while providing a nuanced view of the interplay between the life sciences, geography and culture. For example, a comparative discussion of aging in the United States and Japan is used to explore diet, cellular metabolism and its relationship to protein damage and turnover, while the Human Immunodeficiency Virus and AIDS in South Asia is used to explore mucosal immunity and the basis for estimating relative infection risk. Each case delves into the cell biology of major biological events across the life history of the human

Physical Biochemistry: Understanding Macromolecular Machines (114796)

Monique Brewster
Maxim Prigozhin

2021 Spring (4 Credits) Schedule: MWF 1030 AM - 1145 AM

Instructor Permissions: None
Enrollment Cap: n/a
The course aims to develop fundamental concepts of biochemistry as they apply to macromolecules, including protein and nucleic acid structure, thermodynamics and kinetics, ligand interactions and chemical equilibria. The course will also emphasize how these concepts are used in studies of the structure and function of biological molecules, including examples from metabolism. In the weekly section, students will undertake a discovery-based laboratory research project in which they will apply these concepts toward understanding the structure and function of the ATPase domain from the ABC transporter associated with antigen processing (TAP).

Requirements: 
Prerequisite: (LPS A OR LS 1a) AND (CHEM 20 OR CHEM 17)

Molecular & Cellular Biology  68

Cell Biology Through the Microscope (109851)

Ethan Garner
Jeff W. Lichtman
Michel Becuwe

2021 Spring (4 Credits)  
Schedule: TR 0130 PM - 0245 PM

Instructor Permissions: Instructor Enrollment Cap: 24

MCB 68 explores three fundamental fields of eukaryotic cell biology: chromosome segregation, cell motility, and neuroscience. Each topic is approached from a historic and technical perspective. Students will discover these systems as the scientific field did, learning how each successive advance in microscopy revealed new biological details. Students will come away with a theoretical and hands-on understanding of microscopy as well as a grasp of the biological findings each technology revealed.

Recommended Prep: An additional introductory course in biology (e.g., MCB 60, MCB 80 or SCRB10) is recommended but not required. The course design, level, and content is best suited for students in their sophomore year

Requirements: Prerequisite: LS 1a OR LPS A

Molecular & Cellular Biology  80

Neurobiology of Behavior (117711)

Jeff W. Lichtman
Kathleen Quast

2020 Fall (4 Credits)  
Schedule: F 1030 AM - 1145 AM

Instructor Permissions: None Enrollment Cap: n/a
An introduction to the ways in which the brain controls mental activities. The course covers the cells and signals that process and transmit information, and the ways in which neurons form circuits that change with experience. Topics include the neurobiology of perception, learning, memory, emotion, and neurologic disorders. This year we are combining interactive, didactic videos with "live" Friday sessions, group projects, and small discussion sections.

Course Notes: The course is open to students with little formal training in biology.

Requirements: Anti-Requisite: Cannot be taken for credit if MCB 81 or NEURO 80 already complete.

Molecular & Cellular Biology  91
Research for Credit in Molecular and Cellular Biology (122529)

Dominic Mao

2020 Fall (4 Credits)  Schedule: TBD
Instructor Permissions: Instructor  Enrollment Cap: n/a

91 is research for credit. It cannot be taken as a fifth course. To be eligible to enroll, you must have a Harvard-affiliated principal investigator agree to mentor you for the semester. For this reason, students must reach out to labs and interview with labs ahead of the start of the semester. Students are expected to work an average of 15 hours/week during term time. For Fall 2020, owing to the COVID-19 pandemic, all 91 research projects must be work that can be done remotely (in other words, you will not have access to and cannot perform experiments in lab).

Molecular & Cellular Biology 100

Experimental Research in Molecular and Cellular Biology (160364)

Alain Viel

2020 Fall (4 Credits)  Schedule:  R 0300 PM - 0545 PM
Instructor Permissions:  Instructor  Enrollment Cap:  n/a
A laboratory course that immerses students in a dynamic project-based research environment. Participate in experimental projects directly linked with ongoing faculty research. Students select a project from the following research tracks: neurobiology, microbial sciences, cell biology, and synthetic biology. New projects, including some in other research fields, are offered every term. In a highly collaborative atmosphere, students form a fully-functional and diverse research group based on the sharing of ideas and progress reports between projects. The spring microbiology project is part of the "genomes to Biomes" series. This course cannot be taken concurrently with LifeSci 100

Recommended Prep: LPS A or LS 1a or permission of the instructor. Students interested in a neurobiology project will need MCB 80 or permission of the instructor.

Molecular & Cellular Biology 111

Mathematics in Biology (117342)

Elena Rivas

2020 Fall (4 Credits) Schedule: MWF 1030 AM - 1145 AM

Instructor Permissions: Instructor Enrollment Cap: n/a

MCB111 is meant for biologists who want to learn mathematical principles relevant to current biological
research, as well as for mathematically oriented students who want to explore applications in biology. The course theme is mathematical modeling of biological processes, with a special emphasis on probabilistic models and inference. More than half of the course covers topics on information theory, Bayesian inference, statistics, probabilistic modeling, and neural networks. The last section of the course covers dynamical systems in biology, including random walks, feedback control, and molecular population dynamics. Each week-long unit is devoted to one specific topic, and is based in one or more scientific papers selected from the recent literature. The best way to learn in this course is through the homework. They are very hands-on, and usually require coding to implement some mathematical concept through a particular biological example. For instance, one unit is devoted to maximum likelihood methods in the context of Quantitative Trait Loci analysis; another unit explores probabilistic models in the context of inferring ancestry and recombination breakpoints from genomic reads in fly populations. More information about the course can be found at mcb111.org.

Recommended Prep: Mathematics 19 or higher.

2021 Spring (4 Credits)  
**Schedule:**  
TR 1030 AM - 1145 AM

**Instructor Permissions:**  
Instructor  
**Enrollment Cap:**  
20
The essential function of a neuron is to processes complex signals derived from the external world. In doing so, neurons employ diverse mechanisms that respond to chemical and electrical signals with incredible sensitivity and plasticity. In this course, we will study these electrical, molecular, and cellular processes using biophysical and biological approaches. Specifically, we will explore topics on excitable membranes, neurotransmission, ion channels, dendritic integration, intracellular signaling, and synaptic plasticity in the context of real cells and brain circuits. Additionally, there will be a hands-on laboratory section for students to learn to collect and analyze data from common electrophysiological methods (patch clamping and extracellular recording in cultured cells and brain slices).

Laboratory section (2 hours) will be scheduled ad hoc after enrollment on either Thursdays, Fridays, or Mondays.

Class Notes: MCB 115 is also offered as NEURO 115. Students may not enroll in both.

Requirements: Pre-requisite: MCB/NEURO 80 or Instructor Approval. Anti-requisite: Cannot be taken for credit if NEURO 115 is already complete.

Molecular Basis of Behavior (159655)

_Catherine Dulac_

2021 Spring (4 Credits) Schedule: TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

Modern molecular genetic approaches are teaching us a great deal on how the brain controls behaviors. This course will cover newly developed experimental strategies of molecular neuroscience, and how they have helped uncover the nature and identity of behavior circuit components. How genes and molecules affect behaviors will be investigated through key examples of mammalian behaviors with an emphasis on instinctive and social behaviors, their expression, development, and associated mental disorders.

Class Notes: MCB 125 is also offered as NEURO 125. Students may not enroll in both.

Requirements: Anti-Req: Students who have taken NEURO 125 cannot take this course for credit.

*Haim Sompolinsky*

2021 Spring (4 Credits)  
**Schedule:** MW 0300 PM - 0415 PM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Follows trends in modern brain theory, focusing on local neuronal circuits as basic computational modules. Explores the relation between network architecture, dynamics, and function. Introduces tools from information theory, statistical inference, and the learning theory for the study of experience-dependent neural codes. Specific topics: computational principles of early sensory systems; adaptation and gain control in vision, dynamics of recurrent networks; feature selectivity in cortical circuits; memory; learning and synaptic plasticity; noise and chaos in neuronal systems.

Recommended Prep: Basic knowledge of multivariate calculus, differential equations, linear algebra, and elementary probability theory.

Requirements:  
Anti-Requisite: Cannot be taken for credit if NEURO 131 already complete.

Unique Cells and Organisms (212828)

Nicholas Bellono

2020 Fall (4 Credits)  Schedule:  TR 1200 PM - 0115 PM
Instructor Permissions: Instructor  Enrollment Cap:  15

This course focuses on how specialized molecular physiology gives rise to unique features across interesting organelles, cells and creatures. Guest lecturers and instructors will emphasize primary literature and scientific writing to strengthen students’ skills in critical thinking, interpretation of data, and experimental design. Students will design a research project based on their selection of a model organism, carry out and analyze an initial experiment, and plan future directions. Students will end their semester by developing a research proposal and presentation based on their own curiosity in an interesting biological question emerging from their initial experiments.

Class Notes: Students are required to attend each lecture (virtually). At the first class meeting, students and instructors will agree on a mutually desired time for the remaining lectures based on time-zones and availability.

Recommended Prep: MCB/NEURO 80, or equivalent introductory Neuro course is most optimal for preparation.

Requirements: Prerequisite: MCB 60 OR MCB 80 OR NEURO 80 OR SCRB 10

Molecular & Cellular Biology 143

Neurobiology of Vision and Blindness (207772)

Joshua Sanes

2021 Spring (4 Credits)  Schedule:  TR 0130 PM - 0245 PM
Instructor Permissions: Instructor  Enrollment Cap:  20

The visual system fascinates biologists, in part because humans are such visual animals. This also makes loss of vision a pressing concern: many Americans regard blindness as the worst ailment they could get, fearing it more than Alzheimer's or AIDS. For these reasons, as well as because of its relative accessibility, the visual system is a favored model for studying fundamental aspects of neurobiology, as well as for testing novel therapeutic approaches, such as gene therapy. This course will cover key topics in the structure, function and development of the mammalian visual system, and then use them as a basis for considering causes of blindness and potential cures.

Class Notes: MCB 143 is also offered as NEURO 143. Students may not enroll in both.

Recommended Prep: MCB 80 or NEURO 80 is recommended.
Molecular & Cellular Biology 145

Neurobiology of Perception and Decision Making (123271)

Naoshige Uchida

2020 Fall (4 Credits)

Schedule: TR 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap: 30

One of the current goals of neuroscience is to understand neuronal circuits underlying perception and behavior. Recent advances in neuroscience have allowed us to glimpse neuronal processes that link perception and decision making. How is sensory information processed in the brain? How does an animal choose its action? How does an animal learn from ever-changing environments and adjust their behavior? The course will examine neurophysiological studies in perception and decision-making.

Requirements: Prerequisite: MCB 80 and cannot be taken for credit if NEURO 145 already complete.

Molecular & Cellular Biology 146

Experience-Based Brain Development: Causes and Consequences (123272)

Takao Hensch

2021 Spring (4 Credits)

Schedule: TR 0300 PM - 0415 PM

Instructor Permissions: Instructor

Enrollment Cap: n/a

At no time in life does the surrounding environment so potently shape brain function as in infancy and early childhood. This course integrates molecular/cellular biology with systems neuroscience to explore biological mechanisms underlying critical periods in brain development. Understanding how neuronal circuits are sculpted by experience will motivate further consideration of the social impact on therapy, education, policy, and ethics.

Requirements: Prerequisite: (LPS A OR LS 1a) AND MCB 80, and cannot be taken for credit if NEURO 146 already complete.

Molecular & Cellular Biology 148

The Neurobiology of Pain (159880)

Ryan W. Draft

2020 Fall (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: 24

This course will explore the neurobiological systems and mechanisms underlying both acute and chronic pain. Topics will include nociceptive/sensory systems, molecular basis and modulation of pain, neuroanatomy of peripheral and central pain circuits, pain pathologies, pharmacological and nonpharmacological treatments. The emphasis will be on understanding basic neurobiological concepts underlying pain systems and reading/discussing the primary scientific research in the field.

Class Notes: Course time will be agreed upon by the enrolled students and instructor during shopping period.

Requirements: Pre-requisite: MCB/NEURO 80 or Instructor Approval. Anti-requisite: Cannot be taken for credit if NEURO 148 is already complete

Additional Course Attributes:

Molecular & Cellular Biology 165

Interplay between Viruses and their Hosts (156010)

Victoria D'Souza

2021 Spring (4 Credits) Schedule: TR 0900 AM - 1015 AM

Instructor Permissions: None Enrollment Cap: n/a

This course provides a foray into virology, advanced cell biology, biochemistry and structural biology topics through the lens of viruses as they invade their hosts. To demonstrate concepts, a particular emphasis is placed on the human immunodeficiency virus (HIV), which provides well-studied examples of intricate virus-host interactions that occur throughout its complex life cycle.

Requirements: Prerequisite: MCB 60 OR (MCB 52 AND MCB 54)

Additional Course Attributes:

Molecular & Cellular Biology  169
Molecular and Cellular Immunology (111720)
Shiv Pillai
2020 Fall (4 Credits)  
Schedule:  
TR 1030 AM - 1145 AM
Instructor Permissions:  
None
Enrollment Cap:  
n/a

The immune system is the frontier at which molecular biology, cell biology, and genetics intersect with the pathogenesis of disease. This year the entire course will be taught through the lens of COVID19, examining the underlying scientific bases of pathogenesis, protection, treatment and prevention. The course examines in depth the cellular and molecular mechanisms involved in the development and function of the immune system and also analyzes the immunological basis of human diseases in general. Apart from COVID19, we will discuss AIDS, autoimmunity, allergic disorders, primary immunodeficiency syndromes, transplantation, and cancer

Recommended Prep:  
Genetics and cell biology strongly recommended.
Requirements:  
Prerequisite: LPS A OR LS 1a

Molecular & Cellular Biology  170
Brain Invaders: Building and Breaking Barriers in the Nervous System (109636)
Laura Magnotti
2021 Spring (4 Credits)  
Schedule:  
MW 0130 PM - 0245 PM
Instructor Permissions:  
Instructor
Enrollment Cap:  
16

The brain has evolved a unique but very effective system to protect itself from invaders. In this course, we will explore the specific defenses that the nervous system uses to protect itself. We will also examine how some pathogens evade or breach those defenses and the impact of those invasions. Finally, we will explore how scientists have been able to translate their understanding of these pathogenic mechanisms into technologies for research and therapeutic applications.

Class Notes:  
MCB 170 is also offered as NEURO 170. Students may not enroll in both.
Requirements:  
Pre-requisite: (LPS A OR LS1a) AND MCB/NEURO 80 or Instructor Approval.  
Anti-requisite: Cannot be taken for credit if NEURO 170 is already complete

Molecular & Cellular Biology 176
Biochemistry of Membranes (112742)

Guido Guidotti

2020 Fall (4 Credits) Schedule: MW 0300 PM - 0545 PM
Instructor Permissions: Instructor Enrollment Cap: 25

A course on the properties of biological membranes, essential elements for cell individuality, communication between cells, and energy transduction. Topics include: membrane structure; membrane protein synthesis, insertion in the bilayer and targeting; transporters, pumps and channels; electron transport, H+ gradients and ATP synthesis; membrane receptors, G proteins and signal transduction; membrane fusion.

Recommended Prep: MCB 60 or MCB 52 and MCB 54 are recommended but not required.

Chromosomes (114864)

Nancy Kleckner

2021 Spring (4 Credits) Schedule: TR 1200 PM - 0245 PM
Instructor Permissions: None Enrollment Cap: n/a

Chromosome morphogenesis in prokaryotic and eukaryotic organisms. Topics will include chromosome structure, interactions between chromosomes (sisters and homologs), DNA recombination and repair, topoisomerases, transposable elements and site-specific recombination, epigenetic inheritance. Genetic, cytological, and biochemical approaches will be integrated. Lecture, reading, and discussion of classical and current literature and consideration of future experimental directions.

Class Notes: Course Time: Class Meetings will be from 1:00 pm - 2:30 pm each Tuesday and Thursday.

Requirements: Prerequisite: LS 1b AND MCB 60

Molecular & Cellular Biology 198
Advanced Mathematical Techniques for Modern Biology (127011)

Sharad Ramanathan

2020 Fall (4 Credits) Schedule: TR 0130 PM - 0245 PM
How do we find biologically meaningful patterns in a large amount of data? How do animals learn to use patterns in the environment to infer information despite the ignorance of the underlying laws? The course will introduce Bayesian analysis, maximum entropy principles, hidden markov models and pattern theory in order to study DNA sequence, gene expression and neural spike train data. The relevant biological background will be covered in depth.

Recommended Prep: A strong background in calculus, linear algebra, fourier analysis, complex analysis at the advanced undergraduate level and an introductory knowledge of probability theory is required. Knowledge of statistical mechanics and comfort with programming will be useful.

Molecular & Cellular Biology 208

Talking about Science (121320)

Michael Greenberg
Jeff W. Lichtman
Richard Losick

2021 Spring (4 Credits) Schedule: M 0430 PM - 0545 PM
Instructor Permissions: Instructor Enrollment Cap: 30

Teaches advanced students how to give a good research talk while exposing them to seminal scientific discoveries. Emphasis will be on speaking style, lecture organization, and use of video projection tools.

Course Notes: In addition to lecture material from the instructor, students will present experiments from Nobel Prize-winning work. The presentations will be critiqued in class by the participants. Open to second year graduate students or with permission of the instructor.

Class Notes: Course time is officially 4:30 - 7:15 pm, and will be held on the Longwood Campus, Warren Alpert Building Rm 236.

Molecular & Cellular Biology 290B

Current Topics in Molecular, Cellular and Organismal Biology (159566)

Vladimir Denic

2021 Spring (2 Credits) Schedule: F 1200 PM - 0115 PM
This class teaches students how to publicly present scientific papers to a diverse audience with emphasis on contextualizing the scientific problem under discussion, critically presenting the essential data, and using an engaging presentation style. Required for all first year graduate students in the Molecules, Cells and Organisms (MCO) Training Program.

Additional Course Attributes:

Cellular Biology, Neurobiology and Developmental Biology (124900)

_Amanda Whipple_

_Joshua Sanes_

_Bence Olveczky_

2020 Fall (4 Credits)  

**Schedule:** TR 0130 PM - 0330 PM

Instructor Permissions: Instructor  

Enrollment Cap: 15

The biology of the individual cell lies at the heart of multi-cellular phenomena such as development and neural function. This course will emphasize critical evaluation of the primary literature, experimental design and scientific writing.

Course Notes: Required for first year graduate students in the Molecules, Cells and Organisms (MCO) Program, but open to graduates of all programs.
### Molecular & Cellular Biology 293

Biochemistry, Chemical and Structural Biology (124901)

**Doeke Hekstra**

**Daniel Needleman**

2020 Fall (4 Credits)  
**Schedule:** MWF 0130 PM - 0245 PM

**Instructor Permissions:**  
**Enrollment Cap:** 15

This course will introduce basic principles in general, organic and physical chemistry, including kinetics and thermodynamics, as well as macromolecular structure. Concepts will be illustrated with examples taken from the visual system.

**Course Notes:** Required for first year graduate students in the Molecules, Cells and Organisms (MCO) Training Program.

Interesting Questions in Physical Biology (122422)

**Nancy Kleckner**

2020 Fall (4 Credits)  
**Schedule:** TR 1200 PM - 0245 PM

**Instructor Permissions:**  
**Enrollment Cap:** n/a

Physical biology can be defined as a discipline that seeks to understand biological processes through the lens of physics and engineering. Faculty and students will unite to review current research with the aim of identifying and pondering interesting emerging questions in this area. Combination of lecture and discussion format. Comprises a series of two-week modules, most of which are given by a one or a pair of faculty drawn from MCB, Physics and SEAS.

**Course Notes:** Intended primarily for first year graduate students in the EPB PhD track of the MCO program but available to other graduate students and advanced undergraduates as space permits.

Molecular & Cellular Biology 350

Scientific Integrity (156950)

Naoshige Uchida
Polina Kehayova

2020 Fall (2 Credits)  
Schedule: TBD
Instructor Permissions: Instructor  
Enrollment Cap: n/a

MCB 350 is a discussion forum on scientific integrity using case studies to examine basic ethical and regulatory requirements for conducting research, and fulfills the National Institutes of Health (NIH) and National Science Foundation (NSF) requirements for formal Responsible Conduct of Research (RCR) instruction. Students are required to complete a pre-course assignment, attend all lectures including the final lecture in February, participate in class discussions, and complete a final course evaluation. A certificate will be issued upon successful completion of the course.

Course Notes: According to NIH Guidelines, students are required to take a Scientific Integrity Refresher Course every four years (*MCB 351).

Additional Course Attributes:

Molecular & Cellular Biology 351

Scientific Integrity Refresher (156951)

Sam Kunes
Polina Kehayova

2021 Spring (2 Credits)  
Schedule: TBD
Instructor Permissions: Instructor  
Enrollment Cap: n/a

MCB 351 is a refresher course in the Responsible Conduct of Research which must be completed by graduate students in the MCO PhD program every 4 years, and fulfills the National Institutes of Health (NIH) and National Science Foundation (NSF) requirements for formal Responsible Conduct of Research (RCR) instruction.

Molecular & Cellular Biology 352

Microscopy (156952)

Jeff W. Lichtman
Douglas Richardson

2021 Spring (2 Credits)  
Schedule: TBD
This course presents the fundamental concepts that underlie modern light microscopy in a rigorous but non-mathematical way for biological applications. The students will learn about the four major frameworks for light (ray optics, wave optics, electromagnetism, and quantum optics). The ways lenses work, the theory of resolution, and the optical design of the compound microscope will be described. The course will also describe the photo-physical principles that underlie fluorescence and genetically encoded fluorescent proteins, and light detector and imaging strategies. Scanning (confocal and 2P), light sheet and super-resolution microcopies will also be described. We will end with a tour of the Harvard Center of Biological Imaging.

**Molecular & Cellular Biology 353**

**Building Your Own Microscope (160485)**

*Venkatesh Murthy*

2021 Spring (2 Credits)  

Instructor Permissions: Instructor  

Enrollment Cap: n/a  

Microscopes of various sorts are used by most biologists, who typically buy these off the shelf. With a little knowledge, however, most biologists can build their own microscopes to do many of the things that the commercial ones do. In this quarter course, you will learn to build an epifluorescence microscope and to acquire images using a computer.

**Molecular & Cellular Biology 355**

**Visualizing, Analyzing and Presenting Macromolecular Structures with PyMOL (160523)**

*Rachelle Gaudet*

2021 Spring (2 Credits)  

Instructor Permissions: Instructor  

Enrollment Cap: n/a  

PyMOL is one of the most popular software programs to display and explore high-resolution structures of macromolecules. It is readily used to create publication-quality figures, and movies and animations of structural information. In this course, you will learn the basics of PyMOL and be able to display, explore and present three-dimensional structures of macromolecules. With this basic training, you will be able to generate high-quality images and simple movies, and have the resources to learn more on your own to generate more complex displays.
Molecular & Cellular Biology  356
Practical Introduction to Robotics (160558)

*Benjamin de Bivort*

2021 Spring (2 Credits)                Schedule:    TBD

**Instructor Permissions:**       Instructor    Enrollment Cap:  20

Automation and robotics have revolutionized molecular biology. Liquid handling robots are already facilitating the "omics" revolution in genome sequencing, proteomics and high throughput screening. Now, neuroscience and microscopy are adopting robotics for throughput and experiments requiring precision and repeatability, like targeted microelectrode placement. In this nano course, students will learn 1) basic principles of practical robotics including the interaction of software and hardware, 2) the roles of drivers, control cards, microcontrollers and sensor electronics, and 3) practical engineering skills including basic soldering, measurement of voltage, conductivity, polarity and resistance. Students will explore the challenges of translating conceptual operational algorithms into physical implementations.

**Course Notes:** To enroll, students must be apart of a Life Science Graduate Program, or permission of the instructor.

---

Molecular & Cellular Biology  358
Mass Spectrometry (212804)

*Christina Woo*

2021 Spring (2 Credits)                Schedule:    TBD

**Instructor Permissions:**       Instructor    Enrollment Cap:  30

This course will provide an introduction to shotgun proteomics: from sample preparation, the processes within mass spectrometer, and how to analyze the data obtained from this technique.

Identity and Empowerment in Science is a four-part workshop that equips graduate students with the tools to make science more diverse and inclusive. Adapted from SSQBIO’s curriculum, the course discusses how our identities shape our experience in science, different levels at which privilege operates (Ideological, Interpersonal, Internalized, and Institutional), and strategies for self and mutual empowerment and institutional change. The overarching framework for the curriculum is the “four I’s” framework (adopted from social science literature) for understanding privilege and oppression. The "I"s are: Ideology (the idea that certain people/trait traits are superior), Interpersonal (how people interact), Internalized (how people view themselves), and Institutional (the “system” and how it operates).

Subject: Life Sciences

Life Sciences  1A

An Integrated Introduction to the Life Sciences: Chemistry, Molecular Biology, and Cell Biology (121189)

Daniel Kahne
Rachelle Gaudet
Monique Brewster
Sien Verschave

2020 Fall (4 Credits)  Schedule:  T 0130 PM - 0245 PM
Instructor Permissions:  None  Enrollment Cap:  n/a

What are the fundamental features of living systems? What are the molecules imparting them and how do their chemical properties explain their biological roles? The answers form a basis for understanding the molecules of life, the cell, diseases, and medicines. In contrast with traditional presentations of relevant
scientific disciplines in separate courses, we take an integrated approach, presenting chemistry, molecular biology, biochemistry, and cell biology framed within central problems such as the biology of HIV and cancer.

Course Notes: For more information about the assignment process, please see the course website in the fall. This course, in combination with Life Sciences 1b, constitutes an integrated introduction to the Life Sciences.

Class Notes: Please sign up for ONE of the two lecture components.

The first lecture for all students will be held live on Thursday, September 3rd at either 1:30 pm, or 7:30 pm. All other Thursdays will be for optional instructor office hours.

An Integrated Introduction to the Life Sciences: Genetics, Genomics, and Evolution (121191)

Hopi Hoekstra
Andrew Berry
Pardis Sabeti
Annie Park
Nava Gharaei

2021 Spring (4 Credits)  Schedule: TR 0130 PM - 0245 PM
Instructor Permissions: None  Enrollment Cap: n/a

How are observable characteristics of organisms influenced by genetics? How do genomes change over time to produce the differences we see among species? This course takes an integrated approach, showing how genetics and evolution are intimately related, together explaining the patterns of genetic variation we see in nature, and how genomics can be used to analyze variation. In covering Mendelian genetics, quantitative genetics, and population genetics, this course will emphasize developments involving our own species.

Course Notes: This course, in combination with Life Sciences 1a, constitutes an integrated introduction to the Life Sciences.

Integrated Science (159706)

Andrew Murray
Michael Desai
Aravinthan Samuel
Emma Nagy
Cara Weisman

2020 Fall (8 Credits)  Schedule: MTWRF 1030 AM - 1145 AM
Instructor Permissions: Instructor  Enrollment Cap: 30

This is an intensive two-semester, double course that introduces the natural sciences as an integrated whole to students who have a very strong interest in science. Our goal is to teach students how to solve scientific problems by drawing methods and concepts from biology, chemistry, physics, and mathematics. The course uses examples from biology as an integrating theme, principles from physics and mathematics to reduce complex problems to simpler forms, and computer simulation to allow students to develop their intuition about the behavior of the dynamical systems that control the physical and biological universe. The course includes bootcamps to introduce students to biological experiments and the computer language, Python. Each semester will include a project lab, in which students will work in small teams to do original research on unsolved biological problems.

Life Sciences  100
Experimental Research in the Life Sciences (119061)

Alain Viel

2020 Fall (4 Credits)

Schedule: R 0300 PM - 0545 PM
Instructor Permissions: Instructor
Enrollment Cap: n/a
A laboratory course that immerses students in a dynamic project-based research environment. Participate in experimental projects directly linked with ongoing faculty research. Students select a project from the following research tracks: neurobiology, microbial sciences, cell biology, and synthetic biology. New projects, including some in other research fields, are offered every term. In a highly collaborative atmosphere, students form a fully-functional and diverse research group based on the sharing of ideas and progress reports between projects. The spring microbiology project is part of the "genomes to Biomes" series.

Course Notes: Location of the first meeting will be announced on the course website. Open to freshmen, sophomores, juniors, and seniors, regardless of concentration, and suitable for students either with or without extensive laboratory experience. The course may only be repeated once and the second enrollment must be approved by the instructor.

Recommended Prep: Students interested in a neurobiology project will need MCB 80 or permission of the instructor. Please also note that students cannot take MCB 100 and LS 100 at the same time.

Requirements: Prerequisite: LPS A OR LS 1a

Music  1
Introduction to Western Music, from Bach to Beyoncé (114594)
Michael Uy
2021 Spring (4 Credits)  Schedule:  MW 1200 PM - 0100 PM
This course introduces you to a variety of Western art music repertories, and a range of ways to think, talk, and write about them. While we explore some of the great "classics" of the Western musical canon, including works by male composers such as Bach, Beethoven, and Stravinsky, we also discover the critical roles played by renowned female performers, patrons, and writers, as well as the significant impacts made by artists of color, such as Pulitzer-prize winner Kendrick Lamar, and Beyoncé. Ending in the present day, we investigate what music means in a global context, and a world increasingly shaped by new technologies and digital networks. During the semester, you will build a robust vocabulary to analyze music and talk about it. You will gain an understanding of social, political, and cultural histories of art music, and deepen your awareness of the role of music in your life. Finally, by the end, you'll possess a strong command over a substantial repertory. No prior knowledge of music history or musical notation is necessary. Students are graded on the improvements they make in engaging with the material. By the end of class, you’ll be more prepared for a lifetime of informed and hopefully enjoyable music listening.

Foundations of Tonal Music I (118594)

Joseph Jakubowski

2021 Spring (4 Credits)  
Schedule: MWF 1030 AM - 1130 AM  
Instructor Permissions: Instructor  
Enrollment Cap: 108

Seeks to develop a greater understanding of music, musical analysis, and critical listening. We will study some of the organizing principles of musical works (from a range of styles) by means of composition projects, score analysis, and aural skills. While reading knowledge of simple musical notation is helpful, there will be at least one section for students with no previous experience. Additional sections required on Mondays and Fridays, 10:30 - 11:45 am

Course Notes: Open to all students.

Music  4

Introduction to Composition (111353)

Yvette Jackson

2020 Fall (4 Credits)  
Schedule: M 1245 PM - 0245 PM  
Instructor Permissions: Instructor  
Enrollment Cap: 14
Open to students with little or no prior experience in composition. Explores ways of thinking about and organizing basic compositional elements such as melody, harmony, rhythm and instrumental color, as well as developing skills of score preparation and analytical listening. The primary focus of the course is a series of short compositional exercises, culminating in a somewhat longer final project. Workshop performances of students’ music take place throughout the term.

Recommended Prep: Some prior experience in music theory or permission of the instructor.

Music 14A

Harvard-Radcliffe Collegium Musicum (110114)

Andrew Clark

2020 Fall (2 Credits) Schedule: T 0645 PM - 0845 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

Choral music finds itself in a state of upheaval as current health risks render communal singing impossible. This semester, the Harvard-Radcliffe Collegium Musicum will creatively adapt its work to sustain our values of joy, care and well-being, empowerment, and musical excellence during our physically-distant time. The confluence of the COVID-19 pandemic and social unrest inspires us to invoke the best of the mixed-choir tradition and compels our community to reimagine choral practice in a COVID and post-COVID era.

Our rehearsals will balance a familiar choral experience with music-making rooted in authentic, student-driven artistic expression. This year, we will uphold the Collegium tradition of performing large-scale works such as Handel's Messiah with the Harvard Baroque Chamber Orchestra. We will also draw upon the creativity of our members to develop small- and large-group projects that promote individual agency and make use of new technologies. Students may optionally explore enrichment in the areas of individualized vocal study, choral composition, advanced ear-training and sight singing, and choral repertoire. In partnership with Harvard’s Mindich Program for Engaged Scholarship, Collegium will also design and implement projects that engage with public schools, nursing homes, and hospitals severely impacted by the COVID-19 crisis.

Our collective work will culminate in a multimedia performance, an act and artifact of this pivotal moment in time.

Course Notes: Audition required. For audition and further information, visit www.singatharvard.com The course is graded SAT/UNSAT based on attendance and participation. This course may be taken repeatedly, but to receive credit the course must be taken in the Fall and Spring semesters consecutively. A maximum of four semesters (two years) may be counted as credit towards the degree.

Harvard-Radcliffe Collegium Musicum (160655)

Andrew Clark

2021 Spring (2 Credits)          Schedule:    TR 0430 PM - 0630 PM
Instructor Permissions:          Enrollment Cap: 60
Harvard-Radcliffe Collegium Musicum (SATB choir). Harvard's nationally acclaimed mixed choir, Collegium, performs a dynamic and innovative repertoire from classical masterpieces to new compositions by renowned, emerging, and student composers. Through collaborative projects, tours, and community engagement, the ensemble fosters a passionate community of student musicians. Collegium frequently partners with the other Harvard Choruses--the Glee Club, and the Radcliffe Choral Society--to perform large-scale works. Students must complete both parts of this course (parts A and B) within the same academic year in order to receive credit.

Course Notes: Audition required. For audition and further information, visit www.singatharvard.com

Music 15A

Harvard Glee Club (110115)

Andrew Clark

2020 Fall (2 Credits)            Schedule:    MW 0430 PM - 0530 PM
Instructor Permissions: Instructor Enrollment Cap: n/a
How did choral communities navigate moments of societal crisis and calamity in the past? How might we
invoke the lessons and wisdom of history to find inspiration to fortify us during this challenging moment? Since its founding in 1858, the Harvard Glee Club has endured through world wars, pandemics, and social turmoil. Rooted in its core virtues of glee, good humor, unity, and joy, the 2020-2021 Harvard Glee Club will aspire to build its own legacy of resilience and ingenuity.

The Glee Club is a tenor and bass ensemble performing music written in the male chorus tradition. Through excellence in performance, student-management, education, community, tradition, and philanthropy, the Glee Club offers a unique musical experience for all members. This year, we will study and sing timeless and timely choral works from a variety of eras and cultures, including revered pieces that the group performed often during similar moments of crisis in the past. We will learn from composers and poets who created works in response to isolation and catastrophe and reflect on their relevance today in both full-ensemble and small-group projects. Enrichment in the areas of individualized vocal study, choral composition, advanced ear-training and sight singing, and choral repertoire may be explored optionally as students desire. Glee Club members will also design and implement community engagement projects guided by Harvard's Mindich Program for Engaged Scholarship, including collaborations with the Ashmont Boy Choir in Dorchester.

The semester will culminate in a multimedia presentation of our collective work as both an act and artifact of this pivotal moment in time.

Course Notes: Audition required. The group is open to tenor and bass singers; we welcome, value, and support students of all gender identities. For audition and further information, visit www.singatharvard.com The course is graded SAT/UNSAT based on attendance and participation. This course may be taken repeatedly, but to receive credit the course must be taken in the Fall and Spring semesters consecutively. A maximum of four semesters (two years) may be counted as credit towards the degree.

Music 16A

Radcliffe Choral Society (110128)

Andrew Clark

2020 Fall (2 Credits)  
Schedule: M 0645 PM - 0845 PM

Instructor Permissions: Instructor  
Enrollment Cap: n/a

Founded in 1899, the Radcliffe Choral Society is Harvard’s oldest women’s organization and one of the country’s preeminent collegiate treble choruses. As we confront the limitations and opportunities of a virtual semester, how might we continue to honor our rich history and further the group’s legacy? How do we synthesize and relate knowledge and personal experiences to make meaningful art during this time?

The Radcliffe Choral Society promotes excellence in women’s choral music and celebrates the extraordinary community formed through its music-making. During this time of virtual learning, we will continue to foster the appreciation and enjoyment of women’s choral music through the commissioning of new works for women’s voices and exploring music from Medieval chant and Renaissance polyphony to Romantic partsongs and folk music from around the globe. Students are given a unique opportunity to develop experience in arts administration, concert production, marketing, tour planning, and other facets of non-profit leadership. The course offers voluntary opportunities for singers to cultivate their musicianship in the areas of individualized vocal study, choral composition, advanced ear-training and sight singing, and choral repertoire.

RCS members, in partnership with Harvard’s Mindich Program for Engaged Scholarship, will design and implement its annual Rising Voices Treble Choral Festival, as an online conference in the Spring of 2021, collaborating with peer treble choruses and distinguished guests. The festival will investigate the intersections between social justice, feminism, and art-making in response to the pandemics of COVID-19 and racial violence in America. The fall 2020 semester will culminate in a multimedia presentation of our collective work as both an act and artifact of this pivotal moment in time.
**Course Notes:** Audition required. The group is open to soprano and alto singers; we welcome, value, and support students of all gender identities. For audition and further information, visit www.singatharvard.com. The course is graded SAT/UNSAT based on attendance and participation. This course may be taken repeatedly, but to receive credit the course must be taken in the Fall and Spring semesters consecutively. A maximum of four semesters (two years) may be counted as credit towards the degree.

Radcliffe Choral Society (160661)

Andrew Clark

2021 Spring (2 Credits)

Schedule: TBD

TBD

Instructor Permissions: None

Enrollment Cap: 60

The Radcliffe Choral Society, founded in 1899, is a treble (soprano-alto) choral ensemble of about 40-50 members, open to any student at Harvard University. The ensemble performs a distinctive repertoire spanning nine centuries of choral literature: sacred and secular, a cappella and accompanied, and choral-orchestral works. Featuring a student led a cappella group, 'Cliffe Notes, RCS aims to foster the appreciation and celebration of women's choral music through the commission of new works for soprano and alto voices, high-caliber performances, music festivals as well as annual domestic and international travel. The choir strives to honor its history and further its legacy of excellence in treble choral music and an extraordinary community formed through music-making. RCS frequently collaborates with the Harvard-Radcliffe Collegium Musicum and the Glee Club, as well as the Harvard-Radcliffe Orchestra, to perform large-scale works. Students must complete both parts of this course (parts A and B) within the same academic year in order to receive credit.

Music 26

The Music of Women Creators (216083)

Anne Shreffler

2020 Fall (4 Credits)  
**Schedule:** TR 1200 PM - 0115 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 25
In spite of significant gains in gender equality over the last half century, women creators remain dramatically underrepresented in the music world, in all genres of music and in all categories of musical production: as composers, improvisors, producers, conductors, and even as performers.

The course is intended to celebrate and acknowledge the contributions of women creators to the history of music. We will focus on a selection of contributions of female and non-binary musicians who have composed, improvised, or collaboratively created music in the 20th and 21st centuries. We will listen closely to their music, asking questions such as: what were the historical, institutional, cultural and educational factors that supported or hindered their work? How do they define their gender identities, gender roles, and sexual orientation, and to what extent do these relate to their work? How does these identities function intersectionally with others, such as racial, class, national, and transnational identities? How has their work been received? What structures have historically enabled inclusion into the musical canon and exclusion from it?

We will also talk about activism: how to "move the needle" and work towards great representation of women's music in different genres today. A class visit to the Schlesinger Library will help us to unlock the potential in women's archives.

We will consider a wide range of women creators from the early 20th century to the present, with examples from classical, jazz, and popular music. The syllabus will focus on five to seven case studies, examining women creators within a particular cultural and political network. A sample list could include: Florence Price, Ruth Crawford Seeger, Elisabeth Lutyens, Nina Simone, Pauline Oliveros, Meredith Monk, Younghi Pagh-Paan, Carla Bley, Irène Schweizer, Mary Lou Williams, Laurie Anderson, Tanya Leon, Chaya Czernowin, Björk, Nkeiru Okoye, Okkyung Lee, Reena Esmail, Nicole Mitchell, Maria Schneider, Caroline Shaw, Du Yun, and Alex Temple.

Goals:

- To recognize women's experiences and contributions in music of the 20th and 21st centuries
- To listen to a lot of good music
- To gain a basic understanding of gender theory and feminism
- To learn about how using a gender lens changes how we think of music and music history

Course Notes: This course is open to anyone interested in questions of music and gender - music concentrators, joint concentrators, those studying music as a secondary field, students in dual degree programs with Berklee and NEC. Students from other departments who have some background in music (any style or genre) are welcome. Basic musical literacy will be helpful, but knowledge of music theory is not required (there are no pre-requisites).

Music 51A

Theory Ia (125212)
Harmony is just one of many powerful tools that can be enacted in order to understand, hear, perform, and create music. Alongside this parameter of music is rhythm, meter, phrase, voicing, orchestration, ensemble, text, counterpoint, and many other modes of engagement. The 51 sequence in the Music Department explores, through elements and parameters of music theory and musicianship, what makes music compelling to us as listeners, performers, and composers. Students will explore concepts of music theory through direct engagement with existing repertoire, unfolding the foundations of tonal music from melody and harmony to rhythm and meter and from expectation and implication to style and genre. The course returns to a few core questions throughout: How is tonal music constructed? How do its systems generate expectations, associations, and styles? What is the relationship of structure and meaning to theories and associations? How do aspects of pitch, rhythm, meter, timbre, etc., combine in a complete musical work, and how does music theory present a composite analysis of such a work? Why would we want to examine music in this way and what can it teach us about writing, performing, listening, and talking about music?

Course Notes: For this course a placement exam is required, which is offered the Friday (August 30) before classes begin. Please see the Canvas course website for M51a for more information. Music 51a is highly encouraged for concentrators, especially those who wish to take additional and more advanced theory courses in the department. Students interested in theory are encouraged to take the placement exam in their freshman year. Dual degree students are likewise encouraged to take Music 51a and Music 51b.

Class Notes: Placement tests will be offered on a dedicated Canvas site. Please email the course head to be added to this Canvas site. The test must be completed by Friday, August 21st, to give us time to grade them and make a recommendation by the registration deadline. The results of this test will help us recommend whether you should take this course, the preparatory Music 2 (offered in Spring), or jump to the more advanced second semester (51B; this option is rare).

If a rising freshman or sophomore has taken the AP Theory test (and scored a 5), they can automatically register for 51A without sitting for the placement exam in August/September. AP scores and Placement Test scores hold for two years; if you are a junior or senior, or would like to try and place out of 51A and/or 51B, you must take the test.

There are a total of two section meetings for this course. Section I will likely meet on Mondays at 3:00 - 4:00 pm or 4:00 - 5:00 pm. The second section will be scheduled when the course roster is confirmed.

Recommended Prep: Basic theory and ear-training skills, ability to read music, Music 2, or equivalent experience.

Harmony is just one of many powerful tools that can be enacted in order to understand, hear, perform, and create music. Alongside this parameter of music is rhythm, meter, phrase, voicing, orchestration, ensemble, text, counterpoint, and many other modes of engagement. The 51 sequence in the Music Department explores, through elements and parameters of music theory and musicianship, what makes music compelling to us as listeners, performers, and composers. Specifically, in Music 51b, students will continue building on what they learned in the fall semester, gaining familiarity with more advanced theoretical and analytical approaches to tonal music, including fugal counterpoint, chromatic harmony, and classical form. Students will also explore the relevance of tonal techniques to a wide array of popular and non-Western music styles, and they will consider how theoretical knowledge and performance practice inform one another. Coursework includes a combination of concrete skills test, ear-training, short compositional exercises, and written responses to more open-ended questions aimed at developing the student's ability to speak confidently about the inner workings of tonal music.

Course Notes: You must either place directly into Music 51b via the August placement test or pass 51a in order to register for this course. If more than two semesters have passed since completing 51a, you will need permission from the Instructor to register for the course; this may include a quick refresher test. This course, when taken for a letter grade, meets the Distribution Requirement for Arts and Humanities.

Class Notes: Sections will likely be on Mondays at 3:00 or 5:00 pm.

Recommended Prep: Music 51a or equivalent.

Music 91R

Supervised Reading and Research (110629)

Richard Wolf
Michael Uy

2020 Fall (4 Credits) Schedule: TBD
Instructor Permissions: Instructor Enrollment Cap: n/a

Open to students wishing to pursue supervised study in an area not covered by the courses currently offered. Students must submit a study proposal to the faculty member with whom they wish to study and a signed proposal to the Director of Undergraduate Studies. May be counted for concentration only with the prior approval of the Director of Undergraduate Studies.
Course Notes: Students must have taken, or currently taking, at least one Music course in order to enroll in Music 91r.

Music 97L

Critical Listening (204967)

Kay Shelemay

2020 Fall (4 Credits) Schedule: M 1030 AM - 1145 AM

Instructor Permissions: Instructor Enrollment Cap: 25

This course will explore musical perception as shaped by physiological, social, and cultural processes of everyday life. We will address the complex relationship between speech and music and the challenge of using one to communicate about the other. Through listening to a wide range of musical styles elucidated by written and audio-visual resources, we will contrast and compare music’s meanings through rapidly changing times and in different locales.

Course Notes: Music 97L and Music 97T are required for the Music concentration. Students from other departments are welcome to attend with permission of instructor.
Music 97T

Critical Thinking (204975)

Carolyn Abbate

2021 Spring (4 Credits)  
**Schedule:** TBD

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 25

Performing music, listening to music, composing music, playing music—these are all familiar activities. By comparison, thinking about music is far less mainstream, sounds stuffy, and does not really seem to offer as much pleasure, as pastimes go. Music 97T is here to prove those assumptions wrong. We will explore music philosophy (which has grappled with sounds ranging from Ancient Greek modes to hip-hop), and which asks basic questions like, does music have an ethics, can experiencing music change how we see the world? Or, can music even be grasped in words? We will take an objective look at the way academic disciplines box music of every and all kinds in, but can also expand our horizons about music's workings and its social roles and realities. And we'll explore "vernacular thinking," which is the conviction that thinking about music may not take place in words, or take forms conventionally understood as philosophy or analysis, and may come from people outside our intellectual boxes.

Music 98R

Tutorial - Junior Year (116489)

Michael Uy

2021 Spring (4 Credits)  
**Schedule:** TBD

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 30

Open to junior candidates for honors in Music who have written permission to enroll from the instructor with whom they wish to work, and also from the Head Tutor in Music.

**Course Notes:** With permission, may be taken for a second term.

Music 135
How Music Speaks (216219)

Federico Cortese
Yosvany Terry

2020 Fall (4 Credits) Schedule: T 0300 PM - 0500 PM
Instructor Permissions: None Enrollment Cap: n/a

This course explores some aspects that have made music uniquely relevant for centuries in a variety of cultures and societies, with a particular focus on Western, Latin American, African and African Diaspora music. The way we experience music may vary in different places or cultures according to its traditional
functions, its meaning and our own personal relationship with it. There are, however, continuous exchanges, mutual enrichments and common traits. Students will become familiar with a selected repertoire from Europe, the Americas North and South and the Caribbean gaining insight and practical experience with music form, and rhythmic and melodic patterns by studying the recordings and looking at the score of key compositions.

The repertoire will range from George Bizet to Alberto Ginastera, from Mozart to Ligeti, Bartok to De Falla, from Manuel Saumell to Alejandro G. Caturla, from Jelly Roll Morton to Egberto Gismonti, just to name a few. This course is a non-exhaustive survey of classical, popular and indigenous musical traditions from around the world. Our goal is to expand the horizons and the awareness of listeners and performers alike, while redefining what we think of music. In this process, we aim to stimulate a fresh approach to our own diverse musical traditions.

Recommended Prep: There are no pre-requisites for this course but some knowledge of music and or instruments is helpful.

Music 150

Music Theory & Interpretation (114188)

Suzannah Clark

2020 Fall (4 Credits) Schedule: R 0945 AM - 1145 AM

Instructor Permissions: None  Enrollment Cap: n/a

This course focuses on how analyzing music through the lens of different music-theoretical models brings out different—and sometimes contradictory—interpretations. Students will be introduced to a range of advanced modern-day theoretical models. Armed with these theoretical perspectives, the emphasis of the course will be on exploring how our musical analyses influence the way we listen to performances and recordings, and how we might imagine the music ought to go if we were to perform it ourselves. Our repertoire will include songs by Schubert, Schumann, and Liszt and instrumental music by Haydn, Mozart, Schubert, Schumann, and Brahms. Some of these composers also read theory treatises written by their contemporaries, and thus we shall also consider how a historical appreciation of music theory can foster new ways of understanding, hearing, and performing some of the most famous musical works of the eighteenth and nineteenth centuries.

For students interested in performing, there will be opportunities to apply these concepts to pieces you already know, are learning in other music courses, or wish to get to know. Writing assignments will develop techniques in music journalism, concert and recording reviews, program notes, and academic writing.

Class Notes: Prerequisite: Music 51 or permission of the instructor.

Recommended Prep: Music 51 or equivalent.

Post-Tonal Analysis (113890)

*Christopher Hasty*

2021 Spring (4 Credits)  
**Schedule:** W 0300 PM - 0500 PM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a  

Intensive survey of compositional styles and techniques from Bela Bartok to Toshio Hosokawa. Five pieces will be selected for repeated listening and close analysis. Here the focus will be on the interaction of musical domains – pitch, rhythm, timbre, gesture. We will also discuss historical and aesthetic issues surrounding these and other pieces. Among these issues is the emergence of various "pre-compositional" procedures. An introduction to compositional systems and to set-class theory will be provided.

**Recommended Prep:** Music 51 or permission of instructor.

**Music 160R**

Composition Proseminar: Composing Theatre (119811)

*Yvette Jackson*

2020 Fall (4 Credits)  
**Schedule:** R 0300 PM - 0500 PM
Radio Opera. This semester the course focuses on a form of composed theatre known as radio opera. We begin with an historical survey examining Clément Ader's 1881 Théâtrophone invention, which transmitted live performances into the homes of subscribers, and the 1939 broadcast of Gian Carlo Menotti's The Old Maid and the Thief, the "first" opera to be commissioned specifically for radio. We build upon this foundation by analyzing contemporary practices of radio opera which stray from its historical predecessors, influenced by radio drama, Fluxus, and other experimental movements; they often bear no resemblance to traditional opera nor are they limited to radio as a means of performance. An introduction to digital audio workstations (DAW) and audiovisual streaming systems will help students develop skills essential for engaging technologies that assist in the creation and distribution of fixed media and live performance. Throughout the semester, students will compose short original radio operas that will result in a final composition project and public class concert. Students with experience in different genres of music and performance are encouraged to enroll.

Recommended Prep: One course in music theory, composition, or consent of the instructor.

Music 161R
Advanced Composition (119812)
Chaya Czernowin
2021 Spring (4 Credits) Schedule: T 0945 AM - 1145 AM
Instructor Permissions: Instructor Enrollment Cap: 15
In this course, students will challenge modes of composition and methods of creation through a series of projects, listening, and score study. Creative projects will encourage students to zero in on harmonic language, rhythm, pitch, text, texture, and orchestration through exploration and experimentation. The class offers space for students to create within their own aesthetic preferences, while also challenging them to grow by trying out new approaches and techniques. The majority of meetings will be set for regularly scheduled lectures and sections, except for approximately four weeks where each student will have an individual session of 30 minutes each. The final project will be a TBD trio; these musicians will come to our class once during the semester to workshop works-in-progress, and return at the end of the course for a final concert.

Recommended Prep: One course in theory/composition or permission of the instructor.

Music 167
Introduction to Electroacoustic Music (118185)
Composing non-beat-based sound stories with self-recorded sounds, using portable recorders and Reaper; study of relevant aspects of acoustic and electronic theory; repertoire since 1948 of musique concrète, acousmatic music, sampling, and digital recording. Projects will culminate in a final online concert.

Course Notes: No prerequisites. Section time: Wednesday 3-5 p.m.

Music 170R
Songwriting Workshop (206929)
Esperanza Spalding
2021 Spring (4 Credits)  Schedule: R 1200 PM - 0245 PM
Instructor Permissions: Instructor  Enrollment Cap: 12

Songwrighter’s Apothecary Lab.
'If one of my friends is ill, I'd like to play a certain song and he will be cured' -John Coltrane

Half songwriting workshop, and half guided-research practice, the Songwrighters' Apothecary Lab (SAL), offers a structure for the collaborative development of new compositions designed to offer enhanced therapeutic benefit to listeners. The course is rooted in a transdisciplinary station, orienting itself towards archives and literature that study healing strategies drawn from a diverse range of music-based creative and therapeutic practices.

SAL asks that students come prepared to (a) identify particular ailments that they seek to understand and address (b) delve into literature that studies music-based healing methodologies that would be applicable to the particular ailment, and (c) participate each week in the creation of songs and sonic structures that incorporate the research reviewed.

As members of the lab, students will alternate each week between the roles of researcher (surveying fields related to psychology, music, neuroscience, and health; identifying repeatable musical phenomena associated with specific therapeutic benefits), and songwrighter (where the aforementioned findings will be synthesized into new musical works, compositional/performance practice). Guest lecturers and senior scholars from the fields of neuroscience, music therapy and music, will regularly review our process and work, to offer feedback and guidance.

Class Notes: Applicants are invited to apply: here. Please include a digital recording or link(s) for a video of yourself performing up to two (2) of your original compositions. Audio and video examples should be at least two minutes, and no more than 5 minutes in length. Applicants are welcome to include an optional writing sample.

* wright (noun) : a maker or builder // i use this spelling intentionally to emphasize our creative work through song, as the practice of constructing effective compositional structures, able to support and carry each creator's poetry, story and melody.

Music 171R

Creative Music: Composer-Pianists (121897)

Vijay Iyer

2020 Fall (4 Credits) Schedule: W 0630 PM - 0900 PM

Instructor Permissions: Instructor Enrollment Cap: 12

This new course focuses on the work of innovative composer-pianists. The six artists surveyed in fall 2020 will include Lil Hardin Armstrong, Hazel Scott, Mary Lou Williams, Nina Simone, Alice Coltrane-Turiyasangitananda, and Geri Allen. Through listening, reading, transcription, analysis, and performance, we will cultivate a detailed appreciation for this legacy of Black women's musical inventions of the twentieth century.

Course Notes: This course is ideally suited for pianists with some background in improvisation or composition, but others may apply. Permission of the instructor is required.
Music 175R
Special Topics (108982)
Federico Cortese
Katharina Piechocki
2021 Spring (4 Credits) Schedule: MW 0130 PM - 0229 PM
Instructor Permissions: Instructor Enrollment Cap: 20

Singing Love and Horror Stories: Opera and Greek Mythology. This course explores the centrality of Greek and Roman mythology in Western opera. We will engage with a broad range of myths to see how they not only informed and transformed opera, from its beginnings in ca. 1600 to the 20th century, but truly shaped opera as a new musical language. Our central interest will be the complex, and yet fascinating, tension between feelings of love and hate—toward a partner or a family member. Myths we will focus on include: Orpheus, Apollo and Daphne, Psyche, Hercules, Oedipus, Electra, Iphigenia in Aulis, and Dido and Aeneas. Composers include Monteverdi, Cavalli, Lully, Purcell, Handel, Gluck, Vivaldi, Rameau, Berlioz, Strauss, Stravinsky, and Enesco.

Topic: Singing Love & Horror Stories

Music 179R
Advanced Electronic Music (203252)
Hans Tutschku
2020 Fall (4 Credits) Schedule: T 1200 PM - 0230 PM
Instructor Permissions: Instructor Enrollment Cap: 10

Improvisation with Live-Electronics. This course is aimed towards improvising musicians and composers working with electronics. We will explore different existing improvisation strategies from the 20th century and develop new pieces. Composers and interpreters alike will contribute to the concepts from solo to small ensemble works. Section time will be used to further our tools for live sound processing in Max/MSP.

Class Notes: Section scheduled for Thursday 3:00 - 5:30 pm

Recommended Prep: Prerequisites for interpreters: Interest or experience in improvisation.
For composers: previous course at HUSEAC or permission by instructor.
Music 183R

Gospel Music (131078)

Gospel Imagination

Music 186R

Music & Mockumentary Lab (125864)

Esperanza Spalding

2021 Spring (4 Credits) Schedule: R 0500 PM - 0700 PM
Instructor Permissions: Instructor Enrollment Cap: 12

Music and Mockumentary Lab (visibilising and vibrational-experiencing the yet to be).

"For the mind must know it first in order to compose it."
-Hazrat Inayat Khan

"all organizing is science fiction', by which we mean that social justice work is about creating systems of justice and equity in the future, creating conditions that we have never experienced"
-Adrienne Maree Brown, quoting Walidah Imarisha

"It's as much an image, as it is reality"
-Mark Oswald (on developing operatic technique)

This lab-style course explores mockumentary film, coupled with live score, as a method for creating works of socially engaged fiction. Our engaged-learning approach will be rooted at the intersection of film, speculative-fiction, music, performance, and activism. Students enrolled in this course will be invited to learn and create alongside a professional creative team, lead by artists esperanza spalding and brontë velez, in collaboration with engineers Anukool Lakhina and Viet Tran, and the San Francisco Symphony. Over the course of the semester, this creative team will be developing and producing a music-driven mockumentary. The film, titled "SOMATONGLEN", will be accompanied by a live-score of improvised music, as well as pre-existing classical works. "SOMATONGLEN" was originally conceived in response to the prompt offered at Theaster Gates' Black Artists Retreat: "what human-made sound could render firearms inoperable?". The mockumentary follows a speculative journey from the discovery, development, and application of a sung vibration which disrupts the trajectory of a fired bullet.
Students will be invited to shadow and engage with the creative team’s week-by-week process, from story-devising, to treatment, to production. In addition to real-time learning alongside the creative team, students will research, develop, and produce their own original mockumentary (with accompanying live-score concept). Each student will co-create these short mockumentaries over the course of the semester, guided by feedback from the creative team. Each student-produced mockumentary (along with “SOMATONGLEN”) will be developed in conversation with individuals, community leaders, and organizations working toward dismantling systemic oppression. The student-produced mockumentaries will be released via publicly-accessible platforms, as a tool for embodied-imagining of a mutually sought yet to be.

Some of the questions guiding this course, and the creation of the mockumentary "SOMATONGLEN" are:
- How do speculative visual/sonic narratives serve, and inspire radical re-imaginings of our relationships to social-systems, and the diverse humans who comprise them?
- How may existing musical works be utilized as narrative driving force, within the speculative visual story?
- How do artists working at the intersection of activism and organizing

Course Notes: Students from other departments welcome.

Music 188R
Composer-Performers of the African Diaspora (000188)
Vijay Iyer
Yosvany Terry

2021 Spring (4 Credits) Schedule: T 1245 PM - 0245 PM
Instructor Permissions: Instructor Enrollment Cap: 25

Composer-Performers of the African Diaspora.
This course surveys the work of six living music-makers of the African diaspora. In two-week-long units devoted to each artist, we will study examples of their music in depth, and we will spend time in conversation with each of them. The composer-performers studied will include Henry Threadgill, Nicole Mitchell, Gonzalo Rubalcaba, Esperanza Spalding, Tyshawn Sorey, and Cécile McLorin Salvant. (Participating artists subject to change.) Students will be responsible for short weekly responses, engaged participation, and a final project (analytical, comparative, historical/cultural, or creative) drawing on the work of one or more of our surveyed artists.

Course Notes: Open to students from other departments.
Class Notes: Open to graduate students with faculty permission.

Music 189R
Chamber Music Performance (153042)

Jessica Bodner
Daniel Chong
Kee-Hyun Kim
Ken Hamao

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: n/a

Through auditions, students will be divided into chamber music ensembles by the Parker Quartet, and have weekly group meetings with members of the Parker Quartet and pianist Katherine Chi, as well as a number of individual lessons. Instrumentalists and vocalists are welcome to audition; however, no duos or vocal ensembles are allowed. The course will cover various aspects of chamber music -- such as score study, rehearsal techniques, historical context, interpretation, intonation, and balance -- while students work towards group recording projects throughout the semester. The course will culminate in final public performances, to be held sometime during Reading Period; all students are required to be available. Students who do not meet the requirements in the Course Notes below may take the course for Pass/Fail credit. Please check audition dates and other mandatory meetings/classes on the Canvas Music 189R home page. Link here.

Course Notes: ALL students must fill out the questionnaire and submit this through Canvas. Students who are currently in the NEC/Harvard dual program or have been a past winner of the Parker Quartet Guest Award do not need to audition, but need to submit a questionnaire to be considered. Any other students who have enrolled in the course in past school years are required to re-audition. Students intending to enroll in both Harvard-Radcliffe Orchestra and Music 189R must audition for each course separately. While students may request to be placed with certain peers, final group assignments will ultimately be at the discretion of the instructors. This course is offered for letter-grade credit only when students are involved in one or more of the following: a Concentrator in Music; enrollment in a Department of Music course concurrently or in a previous semester (other than 189R); a member of a faculty-led music ensemble in the same semester; a student of the NEC/Harvard dual program. Students who do not meet one of these requirements may take the course for Pass/Fail credit, which must be done by petition after the first week of class. Limited capacity, at the discretion of the instructors.

Class Notes: Course Notes: Students who are currently in the NEC/Harvard dual program, were enrolled in Music 189R in Fall 2019, or have been a past winner of the Parker Quartet Guest Award do not need to re-audition for the Spring 2020 semester. However, ALL students must fill out the questionnaire and submit this through Canvas: https://canvas.harvard.edu/courses/67376/assignments/329053. Any other students who have enrolled in the course in past school years are required to re-audition. Students intending to enroll in both Harvard-Radcliffe Orchestra and Music 189R must audition for each course separately. While students may request to be placed with certain peers, final group assignments will ultimately be at the discretion of the instructors. This course is offered for letter-grade credit only when students are involved in one or more of the following: a Concentrator in Music, enrollment in a Department of Music course concurrently or in a
previous semester (other than 189R), a member of a faculty-led music ensemble in the same semester, a student of the NEC/Harvard dual program. Students who do not meet one of these requirements may take the course for Pass/Fail credit, which must be done by petition after the first week of class.

Music 193R

Topics in Music from 1800 to the Present: Proseminar (113383)

Loren Kajikawa

2020 Fall (4 Credits) Schedule: F 1200 PM - 0200 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

This year marks the twenty-sixth anniversary of Tricia Rose's groundbreaking book Black Noise: Rap Music and Black Culture in Contemporary America. Although Rose's monograph is widely regarded as the "Big Bang" that set hip hop studies in motion, it is also somewhat of an outlier. Written before rap was an accepted topic of academic study, Black Noise shouldered the burden of contextualizing rap historically, musically, and culturally, while simultaneously addressing its powerful expressions of Blackness in the midst of the Culture Wars. Black Noise’s level of interdisciplinary engagement and political awareness make it one of the best book's written about rap and one that continues to serve a generative role for scholars. In fact, Rose's book, which 1) sought to explore the relationship between hip hop and the urban environment from which it came, 2) theorize rap’s musical and technological interventions, 3) examine rap’s racial politics, institutional critiques, and media responses, and 4) highlight rap's sexual politics, particularly female rappers' critiques of male hegemony, remains entirely relevant to our current moment.

This seminar returns to Rose's original text in order to trace the relationship between Black Noise and subsequent writing about hip hop, especially work engaging current issues and ongoing debates in the field. Reading the original text of Black Noise and using each of its chapters as an organizing framework, this course introduces students to a wide variety of work on hip hop and rap, focusing primarily on written scholarship but also on podcasts, videos, and music as ways of knowing. The goals of this seminar are threefold: first, to familiarize students with key topics and debates through readings that span the last three decades and represent a wide variety of methodologies; second, to critically assess the relationship between hip hop culture and the academy in order to understand how the institutionalization of hip hop has shaped writing and research; and third, to give students the opportunity to develop their own relationship to the field by conducting their own research on a topic of interest.

Topic: Hip-Hop Studies

Course Notes: Note: open to graduate students with permission of instructor.

Class Notes: Open to graduate students with instructor's permission.

Adorno and Music. The philosopher, composer, and sociologist Theodor W. Adorno counts as one of the most important musical thinkers of the twentieth century. While the range of musical figures he approved of was extraordinarily focused (going barely beyond Beethoven, Mahler, Wagner, and Schoenberg), he created a central role for music in his philosophy. The very abstraction and remoteness of absolute music, he argued, allowed it to offer critical insights on the state of modern society. In this seminar we will discuss key texts by Adorno and his circle, and work through a number of key musical works in his orbit. No discussion of Adorno would be complete without consideration of his controversial views on jazz and sound media. A background in music may be advantageous but is not a requirement.

Course Notes: Note: open to graduate students with permission of instructor.

Current Methods in Historical Musicology (118075)

Anne Shreffler

2020 Fall (4 Credits) Schedule: W 1245 PM - 0245 PM

Instructor Permissions: Instructor Enrollment Cap: 20
This course is an introduction to the discipline of musicology, its academic discourse, recent and historical debates, and its place in the academy. Our questions will include: How did this field with Germanic roots become an international discipline, and how do the different national traditions interact today? What are the assumptions (and biases) upon which it is built? How has it drawn upon research strategies in related disciplines? What is its relevance in today’s world, whether in the academy, in the diverse worlds of musical performance, or to a broad public?

We will focus on the relationship between musicology and history, emphasizing “hands-on” researching, reading, and writing. Our main goal is to do actual history with primary source material from the rich archival resources at Harvard, or from digital collections of primary material. We will use these to ask questions about the relationship between material culture and the history of ideas. Each of you will choose a collection for your final project, which can be about any musical tradition or period of music history, before yesterday (believe me, whatever your interests, Harvard probably has relevant primary material!) I encourage you to use this course to explore topics new to you.

There will be three simultaneous threads to the course:

- Readings on historiography and canon building.
- History of the discipline: every week, we will read and discuss one "classic" article in musicology.
- Your final project, which you will develop on your own and in collaboration over the whole semester.

Course Notes: Graduate students only. May be taken independently by students from other departments with permission of instructor.

Music 201B

Current Methods in Ethnomusicology (118078)

Richard Wolf

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

Focuses on introduction to scholarly study of music with emphasis on the history and methodologies of ethnomusicology. Theories of music in culture, field methods, analytical and notational strategies, and critical tools for scholarship.

Course Notes: May be taken by students from other departments with permission of instructor.

Ethnomusicology: Seminar (115680)

*Ingrid Monson*

2020 Fall (4 Credits)  

**Schedule:** W 0945 AM - 1145 AM

**Instructor Permissions:** Instructor  

**Enrollment Cap:** 15

*Music, Emotion and Social Justice.* The course explores connections between Black American Musics (BAM) and themes of social justice and liberation historically, theoretically, and in our current historical moment. The power of music to inspire activism, assuage grief, manage fear, create spiritual connection, celebrate victory, and find joy has been an especially strong theme of African American music and history. We begin with reading what African American writers (DuBois, J.W. Johnson, Ellison, Baraka and more) have had to say about music and its connections to African American life and the struggle for racial justice. We then examine how sounds, rhythms, timbral inflections, voice, acquire affective, associational, and symbolic meanings over time. Recent theories of emotion, affect, and embodiment when placed in dialogue with Michael Silverstein's metapragmatic conception of anthropological semiotics offer rich possibilities for developing a theory of relational listening that bridges sensory and meaning-based approaches to the relationship between music and politics. To this must be added a sociological understanding of systemic racism. The final segment asks students to look closely at how music has been deployed in the movement arising from the murder of George Floyd and the reality of COVID-19's disparate impact on African Americans and other Non-Black People of Color. What new meanings, associations, and anthems have arisen? What has remained the same? How are new connections between music and social being formed?

**Class Notes:** Open to undergraduates with permission of instructor.

19th Century Music (111385)

*Carolyn Abbate*

2020 Fall (4 Credits)  

**Schedule:** R 0945 AM - 1145 AM

**Instructor Permissions:** Instructor  

**Enrollment Cap:** 8

This graduate seminar is centered on Richard Wagner's Der Ring des Nibelungen, written between 1848 and 1874, a tetralogy that aspired to world-building in operatic form. It took Wagner six years to write four libretti, then twenty years to write the music for four operas, whose runtime is sixteen to seventeen hours over four nights. Performances involve a dozen alpha opera singers, an orchestra of over a hundred (with quadruple brass scoring and several newly-invented instruments). The Ring has been demolished by philosophers and deconstructed by directors, amplified by crazed devotees. So why the Ring in fall 2020? Given the anticipated long-term closure of opera houses worldwide, as well as ongoing prohibitions against singing in public, given the immense financial resources necessary to perform a behemoth like the Ring, it will not return soon. Yet although the Ring is one hundred forty-five years old, originating in a long-distant European past whose culture now appears estranging or incommensurable, it is far from being a relic or artifact. The work brings exquisite pressure to bear on the idea that music bears moral or ethical burdens,
that music acquires social meanings, and that its sensory force is not unambiguous. Is the cumulative effect of the musical sound to drown out thought and skepticism? What part do staging and production play in sculpting your interpretation of these issues?

The Ring offers a narrative and an acoustic flight into lost time, which is not insignificant. Yet it also offers an elaborate and rich multimedia experience through which existence in the here-and-now can be read. Race and racism, power, gender, capitalism, cultural pessimism, eschatology: only a sample of the territory that is traversed. Thus, while the Ring is the center for the seminar, we will also be considering myth and folklore, media theory, ecocriticism, and semiotics. What we will be doing is exploring how to navigate, as thinkers, between escape and encounter, consolation and resistance.

Course Notes: Permission of instructor required.

Music 218R

20th-Century Music: Seminar (117766)

Anne Shreffler

2021 Spring (4 Credits)

Schedule: M 0945 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap: n/a

Music of the Last Ten Years. The seminar will focus on how musicians and performing organizations dedicated to contemporary music have been coping with the pandemic, which has ended live concerts and brought economic devastation to most arts organizations. At the same time, musicians have developed imaginative new ways to reach audiences online, and it seems safe to say that many of these new approaches will continue to change the concert experience even after live concerts resume. We will have visits (on Zoom) from a diverse and international group of composers, performers, and arts leaders to talk about their strategies for reaching audiences, fostering new work, and supporting musicians during this time.

Students will research the organizations and interview the visitors. We will record the sessions and post the videos (edited, with the permission of all participants) on the Music Department's YouTube site. Students may choose to "follow" a new music group and write about how they're coping with the pandemic for their final projects.

We will focus on the newest music from an international and diverse range of styles and genres, with particular attention to music composed (or improvised or designed) by people of color as well as by women or non-binary creators. We will also think about how new music circulates within and across cultural and media "ecosystems." Finally, we'll consider the methodological and practical challenges of writing about very recent music in a rapidly changing world. This course is not intended to be a survey or overview, and the selection of music will be necessarily limited.

Concerts and visitors: We will go to concerts if it is safe to do so, including the Fromm concerts at Harvard planned for April 2021. Otherwise we will take advantage of the plentiful streaming resources available. I will invite 8-9 expert visitors to share their experiences with the class, including composers, performers, conductors, improvisers, and arts administrators. An up-to-date list of confirmed visitors will be posted on the course website. (I am grateful for the support from the Harvard Provostial Fund for the Arts and Humanities and the Department of Music.)

Assignments and final project: Students will prepare for the weekly visits by listening to the relevant music, researching the organizations, and preparing interview questions. Other listening and reading...
assignments with provide context and illustrate current issues and controversies. Students will also collaborate in preparing the interview videos for upload and do occasional informal presentations on the music to be discussed. We will also collaboratively provide program notes or brief audio segments for the streamed Fromm 2021 concert. The final project can be a paper (7-10 pp.) on a specific work or genre, a new music ensemble, composers collective, venue, or other related topic. Students may choose to “follow” a new music group and write about how they’re coping with the pandemic. You may also do a video, website, WordPress blog, podcast, or some other non-print medium (with permission of the instructor).

Meeting times and technology. We will meet for 2 hours every week on Zoom (synchronously). The course website on Canvas will be our central hub of information. Students will be encouraged to participate in discussions and form project groups on Slack.

Course Notes: The seminar is open to graduate students in Music (all programs), as well as to undergraduates (with permission of instructor) and graduate students from other departments.

**Music 219R**

19th and 20th Century Music: Seminar (118450)

Nancy Shafman

2021 Spring (4 Credits)  

Instructor Permissions: None  

Schedule: R 0945 AM - 1145 AM  

Enrollment Cap: n/a

*Music and Politics.* We live in turbulent times. In the current political environment, it seems newly urgent to rethink one’s own work and the political implications of academic music studies.

In the seminar, we will examine some basic questions, such as: What are the means by which aesthetic products can be seen to relate to events, institutions, and ideological programs, and vice versa? How broadly can and should the “political” be construed? What are some of the different ways in which music been employed for political purposes during the twentieth century, and into the twenty-first? How do the political associations given to music change over time? What are the “flash points” – nodes of controversy and emotion – in discourse on music’s association with social and political contexts?

These are some of the questions that have prompted a burgeoning and still-growing musicological subfield of music’s relation to politics. Whereas political topics (and indeed most social context issues) were seldom addressed in musicology until around 1990, the study of music and politics has flourished since then.

We will also explore the politics of classical music itself: the historically marginal roles of women and people of color, the policing of what “counts” as classical, and the politics of canon formation (who “writes symphonies”?). We’ll look at musical works from a variety of traditions as well as text sources (theoretical texts, journalism, letters, manifestos, etc.). Media theory and aesthetic theory, especially those from Marxist and post-marxist approaches, will give us a vocabulary for talking about the fundamental issues that
underlie historical and current controversies. We will see some common themes across time, as well as real shifts and ruptures.

Students will play an active role in the seminar; leading discussions, preparing brief reports on texts or pieces of music, and designing one class meeting. Student projects may focus on any kind of music from anywhere in the world today or on historical music.

Course Notes: Open to undergraduates with permission of instructor.

Approaches to Analysis (134274)

Alexander Rehding

2021 Spring (4 Credits)    Schedule: TBD

Instructor Permissions: None    Enrollment Cap: n/a

**Dialectics of the Sonata Form.** Sonata form has long been a central element of musical thought. Specifically, it has been held up as a kind of dialectical thinking in music. Why? How? We will delve into the vast literature and the Classical repertoire to understand what this is all about. The first part of the semester will take a whistle stop tour of sonata form, from historical models from the early nineteenth century to contemporary American theories. The second part explores particularly the connections between sonata form and dialectics, a style of thought that is particularly associated with the philosopher G. W. F. Hegel. The philosopher-musician Th. W. Adorno was particularly interested in the nexus between the two, and we will explore some of the recent critical literature than engages with the philosophical implications of this musical form.

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 20

Timbre at the Crossroads. This seminar explores how the idea of timbre is constructed across diverse disciplinary frames, investigating its associated materialities, sonic effects, and cultural techniques. We will look at the big picture, considering 18th-century organological treatises alongside 21st-century software for computer-assisted orchestration, while we also attend to the micro-temporal aspects of timbre as a multi-dimensional psychoacoustic phenomenon and expressive musical element. Throughout, we will couch specific approaches to timbre in terms of larger historical debates over the nature of sound and auditory perception, examining how this knowledge is entangled with a wide range of epistemic instruments and sonic practices. There will be a special emphasis on acquiring practical skills and hands-on experience with spectrograms and other digital tools, which we will use to analytically and creatively engage timbre in all of its microsonic details. Graduate students from all departments are welcome to join as we approach the question of timbre with an interdisciplinary mindset.

Course Notes: Open to undergraduates with permission of instructor.

Music 230RS

Christopher Hasty

2021 Spring (4 Credits)

Schedule: R 1245 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

Repetition and Novelty. Together, these two terms pose a question or problem – how can something can be the same and also change? If we wish to address the question of Repetition from a fully temporal perspective, the question of Novelty (newness, nowness) can't be denied.

We begin with a set of readings (among which, Repetition and Difference by Deleuze) to lay groundwork for asking how repetition is used in music and music-like activities.
There are many ways, and these ways can bring up interesting questions of style, fashion, craft and work. Portions of Bach’s *Goldberg Variations* and Lachenmann’s *Serynade* for piano will provide illuminating instances as we explore these works, their craft, their style and fashion.

How are contemporary expressive cultures shaped by the virtual venues in which they circulate—Twitter, Instagram, TikTok, YouTube, WhatsApp, and Facebook, among many others? What force sustains the constant flurry of images and videos, hashtags and challenges? In pursuit of these questions, this seminar grapples with the musicality of internet culture, attending to the ever-expanding virtual archive of memes, GIFS, and other digital media. Our examination of the production, modification, and distribution of these contagious, and frequently-humorous, items will advance two queries: 1) What modes of creativity do these digital artifacts reveal? 2) What ways of listening do these potentially-viral objects solicit? Drawing together resources from musicology, ethnomusicology, music theory, media studies, visual culture, and philosophy, we will evaluate antiphony as a rubric for digital culture. Can the phrase “digital antiphony” elucidate the emphatically intertextual and intermusical product and process of meme culture, the rich, emergent conversation that simultaneously materializes and refigures social categories of race and gender, concepts of belief and authorship? If antiphony is the logic of contemporary internet culture, then the meme is its animating force. With its generative interpenetration of call and response, the meme evidences a distinctly digital preoccupation with form, offering one sense of what it means to be musical in the 21st century.

Instructor Permissions: None Enrollment Cap: n/a

*Colloquium on Teaching Pedagogy.* This course serves as an introduction to teaching at Harvard and beyond. It constitutes a forum for studying learning, designing instruction, practicing teaching, and communicating about successes and challenges in your classroom. Although a requirement for third-year graduate students and others new to teaching, the course is open to all who are interested in pedagogy regardless of their level of experience.

Course Notes: Required of all third year music department graduate students. This course must be taken Sat/Unsat. Students must complete both parts of this course (parts A and B) within the same academic year in order to receive credit.

Requirements: Pre-requisite: MUSIC 250HFA

Composition: Seminar (113931)

*Evan Johnson*

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

For first year, second year and advanced graduate students prepared for work in original composition.
Music 262R

Composition: Seminar (113931)

Chaya Czernowin

2020 Fall (4 Credits)  
Schedule: TBD

Instructor Permissions: None  
Enrollment Cap: n/a

For first year, second year and advanced graduate students prepared for work in original composition.

Music 266R

Creative Practice & Critical Inquiry Seminar (156122)

Vijay Iyer

2020 Fall (4 Credits)  
Schedule: TBD

Instructor Permissions: Instructor  
Enrollment Cap: 12

This is a forum primarily intended for graduate students in Creative Practice and Critical Inquiry, but others may join with permission of the instructor. CPCI students and some faculty will present and discuss their creative projects throughout the semester. We will also host a handful of virtual visits from guest artists.

Music 270R

Special Topics (113372)

Chaya Czernowin

2020 Fall (4 Credits)  
Schedule: TBD

Instructor Permissions: None  
Enrollment Cap: n/a

The 270 Analysis course is an important and essential component of the graduate curriculum for composers. It is essential for composers to be able to figure out how various contemporary pieces work,
what is at stake and what is at the base of their specific approaches, languages, and aspirations. Analysis helps a composer to do the reverse of what we usually do: while analysing we go from the finished piece to figuring out a concept or a part of a concept whereby the composer's work is usually to make a concept or an idea or a feeling/sensation into a piece. Analysis is also the most substantial component of the department generals. By the time the generals come, at the end of the second year, composers should be able to approach any kind of work articulating something about the work which speaks not only about the said work but moreover testifies to the special and individual approach of the composer as they decipher the work in question. The students will hear lectures about various pieces from guests and from Prof. Czernowin and will each have to analyze one piece at the end of the course.

Soundscape Composition and Social Justice (000284)

Yvette Jackson

2021 Spring (4 Credits)

Schedule: R 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap: 12

Soundscape composition emerged in the late 1960s as a practice rooted in acoustic ecology. Through independent and collaborative sound-making, critical listening and inquiry, we will explore the potential to bring about change in issues related to social justice, food and water rights, and climate change. We will push the boundaries of soundscape composition, radio opera, and other sonic arts in order to educate, instigate, and motivate transformation in our communities.

Course Notes: Undergraduates may enroll with permission of instructor.

Music and Migration (000291)

Kay Shelemay

Kate van Orden

2021 Spring (4 Credits)

Schedule: W 1245 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap: n/a

*Mediterranean Mobilities, Past and Present.* This course will provide insight into music's powerful role in human mobility, seeking to break down barriers between historical and ethnographic methods in a study of musical border crossing. The course will focus on migration in and from the eastern and central Mediterranean with particular attention to regions part of and/or influenced by the Ottoman Empire, which
incorporated a confluence of Jewish, Christian, and Muslim worlds. Today modern Turkey and surrounding areas are sites of a massive refugee crisis. There are no prerequisites for the course and we hope to have an interdisciplinary enrollment. Undergraduates can take the course by permission; it fulfills the secondary concentration in Ethnicity, Migration, Rights [EMR]. A final research project/paper is required on a topic related to music and migration approved by the instructors; the topic is not restricted to the Mediterranean region.

Course Notes: Undergraduates can take the course by permission; it fulfills the secondary concentration in Ethnicity, Migration, Rights [EMR].

Recommended Prep: There are no prerequisites for the course and we hope to have an interdisciplinary enrollment.

Yiddish AA
Elementary Yiddish I (114058)
Sara Feldman
2020 Fall (4 Credits) Schedule: W 0900 AM - 1015 AM
TRF 1030 AM - 1145 AM
Instructor Permissions: Instructor Enrollment Cap: 12

Introduction to Yiddish language, literature, and culture. In the course of the year, students will acquire a thorough grounding in Yiddish grammar and will develop strong foundational reading, writing, speaking, and comprehension skills. The course will introduce students to the 1000-year history of Yiddish culture in Eastern Europe, the United States, and around the world. Students will learn about the past and present of this culture through exposure to Yiddish literature, music, theater, film, radio, oral history, and the Yiddish internet—an introduction to the dynamic world of Yiddish culture and scholarship that exists today. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Course Notes: For students with little or no knowledge of Yiddish. Additional sections at different times may be added as needed. Contact instructor if you have a scheduling conflict. Yiddish AA/AB is an indivisible year-long course. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Class Notes: Class time may be adjusted to take into account enrolled students’ availability.

Recommended Prep: No prerequisites; knowledge of Yiddish not assumed.

Intermediate Yiddish I (119874)

Sara Feldman

2020 Fall (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: 12

Building on the skills gained in Yiddish AA/AB, students will further develop their Yiddish reading, writing, speaking, and oral comprehension skills. Focus will be on working with a wide variety of textual and cultural materials spanning the Yiddish-speaking world in the modern era. Course materials include selections from Yiddish fiction, poetry, drama, film, music, the press, and historical documents. Students will become familiar with the language's dialects, writing conventions, and historical development. Course activities will introduce students to the latest developments in online Yiddish publishing and digital humanities scholarship.

Course Notes: Additional sections at different times may be added as needed. Contact instructor if you have a scheduling conflict.

Class Notes: Class time will be determined according to enrolled students' availability.

Recommended Prep: Yiddish AA/AB sequence, or equivalent.

Yiddish 107

The Politics of Yiddish (207574)

Saul Zaritt

2020 Fall (4 Credits)  Schedule: F 0130 PM - 0245 PM
M 1200 PM - 0115 PM

Instructor Permissions: None  Enrollment Cap: n/a

A bastardized German, a jargon, a woman's vernacular, an old world language, a dying and ghostly tongue, a Hasidic language, a queer language, a radical language—these are just a few of the ways that Yiddish has been labeled over its one-thousand-year history. This course will trace the shifting politics attached to Yiddish from its early modern beginnings as a language of translation between Jewish and non-Jewish...
cultures to its postwar vacillation between a language of mourning and nostalgia, Jewish American humor, Hasidic isolation, and contemporary Jewish radicalism. Through poetry, fiction, essays, and film, we will discuss what it might mean to discover "the secret" language of the Jews" at the origins of Jewish socialism and at the foundations of diaspora nationalism. All texts will be read in translation.

Class Notes: Course timing will be determined in consultation with those enrolled in the course.

Irit Aharony

2021 Spring (4 Credits)  Schedule: TBD

Instructor Permissions: None  Enrollment Cap: n/a

This course is a continuation of Hebrew 130a. Texts, films, and other materials expose students to the richness and complexity of the contemporary sociolinguistics of Israeli society.

Course Notes: Conducted in Hebrew. Not open to auditors. Offered jointly with the Divinity School as 4043.

Recommended Prep: Modern Hebrew 130a, or equivalent level of proficiency.

Modern Hebrew  241R

Advanced Seminar in Modern Hebrew: Israeli Culture: Cinema & Literature (127670)

Irit Aharony
This course constitutes the final level of Modern Hebrew language studies. The course offers representative readings and screenings from contemporary Israeli literature and cinema, and it forms bases of discussion on major cultural and linguistic themes through academic readings.

Course Notes: Offered jointly with the Divinity School as 4045. Not open to auditors. Discussions, papers, movies and texts presented only in Hebrew. Course sessions are 1 hour and 30 minutes long, with half an hour of conversation (personal and in group).

Class Notes: Class time will be determined according to enrolled students’ availability. Course meets 3 hours a week plus 1 hour of conversation section.

Recommended Prep: Modern Hebrew 130b or equivalent.

Tutorial - Junior Year (111799)

Gojko Barjamovic

2020 Fall (2 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: n/a

All NELC concentrators enroll in NEC 98A and B in the same academic year. Students should enroll in NEC 98A portion in the Fall and attend the class meetings during the fall semester. Should the need arise to finish the thesis in the spring, students will be enrolled automatically in NEC 98B. The tutorial can be completed by submitting the Junior Thesis either in the Fall or in the Spring. There are no class meetings during the spring.

Course Notes: Designed for juniors concentrating in Near Eastern Languages and Civilizations. Taught by members of the Department.

Near Eastern Civilizations 101

Historical Background to the Contemporary Middle East: Religion, Literature and Politics (110914)

Gojko Barjamovic

2021 Spring (4 Credits) Schedule: TR 1200 PM - 0115 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

What defines the Middle East? What long-term historical and cultural developments can we trace in the region? How do these affect contemporary global order and policy? This team-taught course in the NELC department will address these three fundamental questions of great present relevance by introducing students to the ancient and modern peoples, languages, cultures, and societies of Western Asia and North Africa. The study of this diverse region is uniquely aided by a deep-time perspective afforded by thousands of years of vibrant art, writing and cultural artefacts. Relying on the classic expertise integral to area studies, the course brings together faculty from a variety of disciplines – from history and archaeology to literature and philology, and from sociology and economy to the political sciences – in a common endeavour to explore the rich cultural complex of the region through four key topics: history, religion, literature and politics.

Course Notes: Formerly NEC 97r, this course satisfies the NELC Sophomore Tutorial requirements.

NELC Doctoral Colloquium: Research, Resources and Pedagogy (203473)

Justine Landau

2020 Fall (2 Credits) Schedule: T 0130 PM - 0245 PM

Instructor Permissions: Instructor Enrollment Cap: 30

This practical colloquium addresses major issues of research and teaching competence. Designed to introduce G-1 students to the Ph.D. requirements, to methodological issues and examples of ongoing scholarship in NELC, it further offers opportunity for reflection on the art of teaching (leading discussion sections, designing syllabi, giving lectures, etc.). Questions covered will include: How to choose coursework? How to prepare for qualifying and general exams? What are the challenges of language training? How does one prepare and write a prospectus? How to use the library resources most efficiently? What type of investment does recourse to digital and quantitative methodology require? How best to prepare for professional life after the Ph.D., both inside and outside of academia? In addition, NELC faculty will informally present their respective fields (main issues and methods), in broad strokes through their current research, and advanced Ph.D. students will present their prospectus for discussion and feedback before submitting it to the faculty.

Arabic AB Section: 003

Elementary Arabic II (159876)

Richard Cozzens

2021 Spring (4 Credits) Schedule: MTWRF 1200 PM - 0100 PM

Instructor Permissions: None Enrollment Cap: 18

Introduces students to the phonology and script of classical/ modern standard Arabic and covers the basic morphology and syntax of the written language. Emphasis on the development of the four skills (reading, speaking, listening, and writing). Samples of modern (contemporary) and classical styles of writing introduced into basic syllabus, and audio-visual material from the contemporary Arabic media. Required textbooks: (1) Alif Baa (with multimedia), 2nd edition. (2) Al-Kitaab fii Ta'allum al-'Arabiyya, Part I, 2nd edition. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Course Notes: Offered jointly with the Divinity School as 4345B. Each section is limited to 18 enrollment.

Not open to auditors. Cannot be taken pass/fail. Arabic AA/AB is an indivisible year-long course. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Requirements: Pre-requisite: ARABIC AA

Subject: Ancient Near East

Ancient Near East 102
Introduction to Mesopotamian Religion (114298)

Piotr Steinkeller

2020 Fall (4 Credits)  Schedule:  MW 1030 AM - 1145 AM
Instructor Permissions:  None  Enrollment Cap:  n/a

A survey of the history and major concerns of ancient Mesopotamian religion from prehistoric times down to the reign of Alexander the Great. Among the topics treated are the key figures of the Sumero-Babylonian pantheon, the major mythological compositions (read in translation), personal religion, cosmogonies and theogonies, magic and divination, Mesopotamian temples, and cult and ritual. The course makes rich use of ancient iconography.

Course Notes:  Offered jointly with the Divinity School as 3661.
Class Notes:  Class time will be determined according to enrolled students' availability.

Ancient Mesopotamian Literature: 2000 Years of Early Storytelling (211195)

Laura Hawkins

2020 Fall (4 Credits)  Schedule:  R 1245 PM - 0245 PM
Instructor Permissions:  Instructor  Enrollment Cap:  15

This course will present an overview of literature from ancient Mesopotamia, the world's earliest civilization and the birthplace of the first writing system. We will be exploring themes of creation and origins, myths and epics, death and the afterlife, religion, lamentation, humor, and more, as a way to understand some of the fundamental aspects of Mesopotamian society. Comparative texts from other regions or time periods will be brought in to add richness and depth to our discussions. Class sessions are structured heavily around weekly readings and discussions. All texts will be read in translation so no knowledge of Akkadian or Sumerian is required.

### Ancient Near East 227

**Critical Readings on Ancient History (205397)**

*Gojko Barjamovic*

2021 Spring (4 Credits)  

**Schedule:** R 0300 PM - 0545 PM  

**Instructor Permissions:** Instructor  

**Enrollment Cap:** n/a

A weekly seminar for graduate students (advanced undergraduates can apply) in which we read and discuss a selection of old and new key monographs (and a few key articles) relevant to the field of Ancient Studies. The seminar targets students in Assyriology, Classics, Divinity, Egyptology, Hebrew Bible and Religion, but others might also find it interesting and relevant. We rehearse skills in critical reading, writing scholarly reviews, debating, and (of course) engage with a massive amount of relevant literature that we would not otherwise find the time to read.

Halakhah and Aggadah (Law and Lore) in Classical Judaism (216075)

*David Stern*

2020 Fall (4 Credits)  
**Schedule:** T 0600 PM - 0845 PM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

*Halakhah and Aggadah are typically considered the two main categories of classical Jewish thought and*
literature. Usually, but inadequately, translated as “law” and “lore,” the two categories have been understood in the course of Jewish history in various ways: as the prescriptive vs. the descriptive; as law vs. narrative; as the letter of the law vs. its animating spirit; as the serious vs. the playful sides of Judaism, or the rigorous vs. the comforting and consoling. Sometimes the two have been seen as rivals (with Aggadah usually treated as the less important), at other times as complimentary. This course will explore the two categories, their complicated relationship, and their intertwined existence, by studying their presence in a variety of classical Jewish texts from the Rabbinic period: Mishnah, Midrash Halakhah (Sifra) and Midrash Aggadah (Vayikra Rabba), the Palestinian and Babylonian Talmudim, and (if time permits) the medieval Jewish works, the Midrash on the Ten Commandments and the Story of the Jerusalemite. Our study of these texts will be framed by readings from Rabbinic, medieval, modern, and contemporaneous conceptualizations of Halakhah and Aggadah. Readings of primary sources will be in the original language, and students should have at least two years of Hebrew language study. Provisions will be made for different levels of language skills. No previous experience studying Rabbinic literature is required, and for students who have not previously studied Rabbinic texts, this course will also serve as an introduction to their modern critical study.

Class Notes: Class time will be determined according to enrolled students' availability.

Recommended Prep: At least 2 years of Hebrew language study.

**Hebrew 137**

Child Sacrifice, Pros and Cons: The Binding of Isaac in Jewish, Christian, Islamic, and Modern Lit (211072)

*David Stern*

2021 Spring (4 Credits) Schedule: TBD

**Instructor Permissions:** None **Enrollment Cap:** n/a

Child Sacrifice-- specifically, the story of the parent's sacrifice of the first-born child-- lies at the heart of Western religion and culture. The Biblical narrative in Genesis 22, known as the Binding of Isaac, is one of the most famous and problematic tales in the Bible. The same narrative is foundational to Christianity. Later Jewish tradition has interpreted the Biblical text in countless ways from the ancient period down to the present day. The narrative figures prominently in Islam from the Qur'an on. And the Biblical story has been criticized and critiqued since the Middle Ages as a barbaric narrative. Recent works have blamed it for the ubiquity of child abuse in Western society, and it has become a ubiquitous motif of anti-war and protest poetry all over the world. This course will use the interpretive career and literary history of Genesis 22 as a lens through which to study the place of this foundational narrative in Western culture.

Readings will include Biblical texts, Euripides' Iphigeneia in Aulis, Philo of Alexandria, ancient Jewish sources, the New Testament, St. Augustine and other Christian exegetes, the Qur'an and later Islamic traditions, Kierkegaard's Fear and Trembling, Martin Buber, Kafka, Bob Dylan, Yehuda Amichai, and Leonard Cohen, among many other modern writers and poets.

**Course Notes:** Offered jointly with the Divinity School as HDS 1134.
Hebrew 235

The Binding of Isaac (Aqedah): Seminar (120896)

Jon Levenson

2021 Spring (4 Credits)  
Instructor Permissions: None  
Enrollment Cap: n/a

Schedule:  
R 0300 PM - 0459 PM

Course Notes: Offered jointly with the Divinity School as 1808.

Recommended Prep: Three years of Hebrew or the equivalent, and acquaintance with historical critical methods.

Hebrew 255

The Passover Haggadah (210972)

David Stern

2021 Spring (4 Credits)  
Instructor Permissions: None  
Enrollment Cap: n/a

Schedule: TBD

The Passover Haggadah is the Jewish book of redemption par excellence. As the script for the seder (the ritual banquet on the first night(s) of Passover), the Haggadah has changed and developed as the Jews have moved from one diasporic center to another from Late Antiquity until the present day. In this course we will study the history and development of both the seder and the Haggadah-- as a ritual, as a text, and as a physical book. Readings will be drawn from the Bible, Mishnah, the Jerusalem and Babylonian Talmuds, the New Testament and early Christian writers, medieval Haggadah manuscripts and early printed editions, as well as more recent versions of the Haggadah from both Israel and America (including non-traditional haggadot). We will deal extensively with the tradition of Haggadah illustration, and will utilize Harvard's extensive collection of Haggadot in both Widener and Houghton Library. The focus of the course will be on the reading and analysis of primary sources. No previous experience with Passover is required, but students should have at least two years of Hebrew (Biblical or modern) and be prepared to read texts in Hebrew. Any student with questions about their Hebrew competence should contact Professor Stern.
Course Notes: Offered jointly with the Divinity School as HDS 1641.

Recommended Prep: Two years of Hebrew.

The Book of Proverbs: Seminar (215969)

*Jon Levenson*

2020 Fall (4 Credits)  

**Schedule:** R 0300 PM - 0459 PM

**Instructor Permissions:** None  

**Enrollment Cap:** n/a

A critical discussion of the Book of Proverbs in its entirety and a close reading of (at least) major sections of it in Hebrew. Among the topics considered are questions of worldview, literary design, poetic technique, ancient Near Eastern antecedents and parallels, and the relationship of the theologies in Proverbs to those of other currents in ancient Israel. Prerequisites: an introductory course in the critical study of the Hebrew Bible and a very solid command of Hebrew grammar (any period).

Course Notes: Jointly offered in the Divinity School as HDS XXXX

Subject: Sumerian

Sumerian AA
Introductory Sumerian I (115449)
Piotr Steinkeller
2020 Fall (4 Credits) Schedule: MW 0300 PM - 0415 PM
Instructor Permissions: None Enrollment Cap: n/a

The course provides an introduction to the Sumerian language, a language isolate spoken in ancient Mesopotamia and probably the world's first written language. Although several aspects of Sumerian remain debatable, students learn the fundamentals of the grammar and writing system as well as the most common cuneiform signs in a variety of lapidary and cursive contexts. Many of the texts that are covered are a variety of dedicatory inscriptions from the time of Gudea (ca. mid-twenty-second century BCE) and the subsequent Ur III dynasty (ca. twenty-first century BCE), but other genres and time periods are sampled as well. This study of the Sumerian language also includes some background on the culture and history of the Sumerians.

Course Notes: Sumerian AA/AB is an indivisible year-long course. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.
### Sumerian AB

**Introductory Sumerian II (159864)**

*Piotr Steinkeller*

**2021 Spring (4 Credits)**

**Schedule:** MW 1030 AM - 1145 AM

**Instructor Permissions:** None

**Enrollment Cap:** n/a

The Spring semester focuses heavily on reading more difficult texts, including lengthy portions of the Gudea cylinders. Students are introduced to other genres as well, including economic texts, incantations, legal texts (such as a law code or a court case), letters, and literary works. This exposure to more difficult texts highlights many of the debatable and challenging features about Sumerian while also providing important insights into the history and culture of the Sumerians. Students also strengthen their familiarity with the cuneiform system, enabling further study in Sumerian as well as in Akkadian and other cuneiform-based languages.

**Course Notes:** Sumerian AA/AB is an indivisible year-long course. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

**Requirements:** Pre-requisite: SUMERIAN AA

Introduction to Modern Persian Literature (109546)

Sheida Dayani

2020 Fall (4 Credits)  Schedule:  MW 1200 PM - 0115 PM
Instructor Permissions:  Instructor  Enrollment Cap:  12

This course is a survey of Persian literature in Persian with a focus on the 19th and the 20th centuries. We begin with methods of reading literary Persian texts and continue to classical poetry, folk literature, travelogues, letters, political satire, drama, fiction, and modern poetry. There is occasional incorporation of film depending on interest. Knowledge of Persian is required. Students must have successfully completed Intermediate Persian BB at Harvard or passed the placement test for the equivalent. Instructor’s permission is required if former Persian studies are outside Harvard.

Course Notes:  Formerly Persian 131r and Persian 132r.

Recommended Prep:  Persian BA/BB sequence, or equivalent, or permission of the instructor.

Literary and Historical Texts in Persian (109547)

Sheida Dayani

2021 Spring (4 Credits)  Schedule:  MW 1030 AM - 1130 AM
Instructor Permissions:  None  Enrollment Cap:  n/a
This course explores classical and modern Persian literature for literary texts with historical significance and historical texts with literary value. Genres include travelogues, journals, classical and modern poetry, essays, satire, fiction, plays, letters, court documents, film, music, and other audio-visual material. Students are expected to reflect on the weekly readings with one-page response papers in Persian, plus a midterm paper and a final paper. Class is conducted in Persian.

Course Notes: Formerly Persian 131r and Persian 132r.

Recommended Prep: Persian 130AR or permission of the instructor.

Between Fiction and Science: The Form(s) of Knowledge in the Premodern Persianate World (215728)

Justine Landau

2021 Spring (4 Credits) Schedule: W 1200 PM - 0245 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

This seminar explores the porous boundaries between fiction and science in premodern Persian literature, with readings selected from major prose and poetic texts from the 10th to the 16th century. Students will engage in the close reading of chosen passages spanning across genres, from works on logic and ethics to histories and travelogues, and from treatises on rhyme and agriculture to narrative verse, and manuals of Sufism. Discussed in conversation with relevant secondary literature, these texts invite us to interrogate the diversity of forms and strategies involved in the transmission of knowledge, at the intersection of belles-lettres and discourses of truth. Authors will include: Avicenna, Ferdowsi, Hojviri, Beyhaqi, Nâser Khosrow, Nezâmi Ganjavi, Nasir al-Din Tusi, Qâsem b. Yusof Abunasri and others, to be agreed upon depending on student interest.

Recommended Prep: Preerequisites: Three years of Persian or equivalent.

Jewish Studies  106

Mainstream Jews (215966)

Saul Zaritt

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

Why is it that Jews and discussions of Jewishness appear with such frequency and with such prominence in American culture of the twentieth and the twenty-first century? One can often hear the claim that Hollywood is “owned by Jews.” Many call attention to the number of Jews involved in comics and graphic novels. The State of Israel, and its definition of Judaism, has become an important touchstone in American politics, while antisemitic dog whistles have become commonplace in contemporary political discourse. Contemporary left-wing activists often refer to the legacies—contested or otherwise—of Jewish American labor politics of the nineteenth and early twentieth century. What can we make of these intersecting and surprising references to Jews/Judaism/Jewishness in the current American moment? This seminar discusses the ways that images of the Jew—philosemitic, antisemitic, and everything in between—recur in the American mainstream. Through analysis of film, television, music, comics, and other mass media, we will track the multiple and contradictory portrayals of Jewishness in the popular American imagination.

**Jewish Studies 186**

**Comparative Love: The Song of Songs in Western Tradition (216646)**

*David Stern*

2020 Fall (4 Credits)  

**Schedule:** W 0300 PM - 0500 PM  

**Instructor Permissions:** None  

**Enrollment Cap:** n/a  

The Song of Songs is, arguably, the greatest love poem in Western literature, but the nature of the love depicted in its verses has been disputed since the time the poem was committed to writing until today. Virtually every type of interpretation has been applied to the poem, from literalist to Jewish and Christian allegorical readings, philosophical and mystical exegeses, and nationalist and political interpretations, not to mention the innumerable implicit meanings underlying the many poems and prose works that have imaginatively recreated the Song through allusion and intertextuality. This course will trace the interpretive career of this unique poem, and in the process explore such basic literary questions as the relation between literalism and allegoresis, the exploitation of literature by religion and other ideologies and its consequences, eros and gender as principles of desire, and the role of influence and appropriation in the history of the poem's interpretation. Readings will include, in addition to the Song itself and select modern scholarship about it, selections from the Old Greek translation, classical Jewish interpretation (midrash and Targum), Origen, medieval Jewish commentaries and secular love poetry, Bernard of Clairveaux and other medieval Christian exegetes, the Zohar and Christian mystics, S.Y. Agnon, and Toni Morrison. All readings
will be in translation. No previous knowledge of love required.

Jewish Studies 224

Jew Theory (215968)

Saul Zaritt

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

This seminar will discuss the possibility of "Jew theory" as a method for theorizing the modern. Beginning with a survey of the history of Jewish studies and its place in the academy, the course will then examine how the figure of the Jew, as symbol and stereotype, enters the work of important thinkers of the nineteenth, twentieth, and twenty-first century—from Marx to Slezkine, from Rosezweig to Blanchot, Derrida, and Agamben. In parallel we explore the potential of new modes of "Jewish cultural studies" emerging over the last decades in Jewish studies.

Subject: Islamic Civilizations

Islamic Civilizations 163
Introduction to Islamic Mystical Traditions (216321)

Ali Asani
2020 Fall (4 Credits) Schedule: T 1200 PM - 0200 PM
Instructor Permissions: None Enrollment Cap: n/a

This course offers an introductory survey of mystical traditions of Islam, popularly labelled as "Sufism." It explores the fundamental concepts, practices, and institutions associated with these traditions, their historical development and their influence on the devotional, cultural and social lives of Muslim communities through the centuries. Through case studies drawn from the Middle East, South Asia, West Africa and North America, the course examines ways in which these traditions have developed and promoted alternative perspectives on what it means to be Muslim, challenging in recent times sectarian, legalistic and politicized understandings of Islam such as Wahhabi, Islamism and jihadism. The course assumes no prior knowledge of Islam.

Course Notes: Offered jointly with the Divinity School as 3620.

Sufi Masters of Persian Poetry: 'Attâr, Rumi, Hâfez (203470)

Justine Landau
2020 Fall (4 Credits) Schedule: W 0300 PM - 0500 PM
Instructor Permissions: None Enrollment Cap: n/a

This course offers an overview of the development of classical Persian Sufi poetry through the works of three major Persian poets from the 12th (Farid al-Din 'Attâr of Nishapur), 13th (Mowlânâ Jalâl al-Din Rumi) and 14th century (Hâfez of Shiraz). Students will become acquainted with the key notions and beliefs at work in pre-modern Persian Sufism, and with the variety of forms, images and rhythms designed to convey their subtleties to the heart, as much as to the mind of the listener.

Course Notes: Offered jointly with the Divinity School as 3026. Knowledge of Persian
not required. Lectures and readings will be in English, and a separate section will be arranged for students with adequate reading knowledge of Persian.

Class Notes: Class time will be determined according to enrolled students' availability.

Islamic Civilizations 170

Islam, Modernity and Politics (109243)

Ousmane Oumar Kane

2020 Fall (4 Credits)          Schedule: R 0300 PM - 0500 PM

Instructor Permissions: Instructor Enrollment Cap: 18

The aim of this seminar is to study the evolution of Islamic thought and political practices in Muslim societies from the 19th to the early 21st centuries. Attention will be devoted to the patterns of interaction between the Muslim World and the West because it is our assumption that these patterns contribute to influence ideological formations and modes of religious/political mobilizations in the Muslim World. By the end of the eighteenth century, much of the Muslim World was in “decline” whereas European imperial powers, mainly France and Great Britain, were on the rise. The course will explore the response of Muslim societies and intellectuals to the rise of European prominence. The major 19th century reformist movements that appeared in the Muslim World will be discussed, ranging from movements advocating mild reform to those rejecting all influence of “Western civilization” and advocating a return to the Tradition of Muhammad. In the twentieth century, virtually all the Muslim World came under European colonial domination. During colonial rule and after, the Muslim world experienced major transformations which affected the nature and administration of law, politics and society. It is in this context, that the new Islamic revival that some have called “Islamism” was articulated as an alternative to Westernization. The course will address the rise of contemporary “Islamism,” as an alternative to Western domination and modernization/Westernization. The major theorists of political Islam as well as the different trajectories of “Islamism” in diverse Muslim societies will be covered. The impact of political Islam in the West will also be addressed. The final part of the course will assess the trajectories of political Islam and address the ongoing debates on post-Islamism, secularism and modernity.

Course Notes: Offered jointly with the Divinity School as 3368.

Islamic Civilizations 178

Being Muslim in South Asia: Religion, Culture and Identity (111918)

Ali Asani
South Asia is home to the largest population of Muslims in the world. And yet, within South Asia, Muslims are a minority. What is Islam and what does it mean to be Muslim in South Asia? After briefly examining the historical development of Islamic institutions in the subcontinent, this course will focus on how ideas about Islam are shaped by evolving literary, linguistic, social and political landscapes. Special attention will be given to the effects of colonial and nationalist ideologies on Muslim experiences in India, Pakistan, and Bangladesh, as well as the disputed territory of Kashmir. We will also explore the impact of reform and revivalist movements and state-enforced policies of "Islamization" and "Hinduization" on women and minorities. The course is appropriate for those who want a bird’s eye view of the Islamic tradition in South Asia, as well as those interested in exploring issues facing contemporary Muslim societies beyond the Middle East. Jointly offered as Religion 1820 and HDS 3625.

Course Notes: Offered jointly with Divinity School as 3625.

Modern Arabic Literature Seminar: Lebanese Civil War: Histories and Fictions (121372)
William Granara
2021 Spring (4 Credits)  Schedule:  W 1245 PM - 0245 PM
Instructor Permissions:  None  Enrollment Cap:  n/a

Examines the roots and issues of the Lebanese Civil War (1975-90) and its continuing impact on modern Arabic fiction. The syllabus pairs realistic and romanticized representations of family, sectarianism, and gender binaries against the destruction and fantasy of the urban landscape. Themes include nostalgia and memory, exile and return. Films and documentaries will also be viewed.

Course Notes:  Arabic helpful but not required. Open to both undergraduates and graduates.

Modern Middle East 310
Reading and Research in the Modern Middle East (159948)

Malika Zeghal

2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: Instructor Enrollment Cap: n/a
Modern Middle East  315

Reading al-Manar in the Interwar Period (160403)

Malika Zeghal

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: 12

Meeting approximately every other week, students will establish digital maps and databases based on al-Manar and other periodicals in Morocco, Tunisia, and Egypt in the Inter War Period. Enrollment only by instructor’s permission.

Modern Middle East  315

Reading al-Manar in the Interwar Period (160403)

Malika Zeghal

2020 Fall (4 Credits) Schedule: M 0600 PM - 0715 PM

Instructor Permissions: Instructor Enrollment Cap: 12

Meeting approximately every other week, students will establish digital maps and databases based on al-Manar and other periodicals in Morocco, Tunisia, and Egypt in the Inter War Period. Enrollment only by instructor’s permission.

Subject: Egyptian

Egyptian  150

Voices from the Nile: Ancient Egyptian Literature in Translation (127917)

Peter Manuelian
Examines several literary genres, from the Pyramid Age through at least the New Kingdom (ca. 2500-1000 BCE), including royal decrees, autobiographies, the Pyramid Texts, legal documents, letters to the living (and dead), love stories and poetry, military texts, religious rituals, and tomb robber court trial transcripts. Special emphasis on classical tales of the Middle Kingdom (“The Shipwrecked Sailor,” “The Story of Sinuhe,” etc.). Lectures, class discussion; no prerequisites.

Course Notes: Enrollment limited to 20. Offered jointly with the Divinity School as 2131.

Class Notes: Class time will be determined according to enrolled students' availability.

Gender and Ritual in Ancient Egyptian Funerary Practices (217403)

Mariam Ayad

2020 Fall (4 Credits) Schedule: M 1200 PM - 0159 PM

Instructor Permissions: Instructor Enrollment Cap: 12

Ancient Egyptian men and women constructed enduring mortuary monuments, compiled funerary texts, and created elaborate myths & intricate rituals to deal with death. This course explores how women feature in ancient Egyptian conceptions of death, salvation, and the afterlife and whether the Egyptians conceived of gendered pathways to the afterlife.

Egyptian Text-Reading (205970)

*Peter Manuelian*

2020 Fall (4 Credits)  
**Schedule:** TBD

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 30

This focuses on diverse topics in Egyptology, from text-reading to individual research projects. The topics may change from year to year, and students may take several iterations of the same course. Students meet with the instructor on a regular basis, and either read texts throughout the semester, or produce a final project or paper at the end of the course.

**Course Notes:** Reading course

**Subject: Akkadian**

**Akkadian AA**

Introductory Akkadian I (114320)

*Gojko Barjamovic*

2020 Fall (4 Credits)  
**Schedule:** MW 1200 PM - 0115 PM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

An introduction to the Semitic language of Akkadian, primarily through the Old Babylonian dialect and cuneiform writing system as used during the time of Hammurabi (c. 1750 BCE). Students learn the fundamentals of grammar and the writing system, as well as the most common cuneiform signs in official and cursive script. Readings span a variety of genres, including private letters, judicial documents, literary and religious texts, divinatory compendia, legal code, and royal inscriptions. The course also briefly introduces students to examples of texts from other periods and dialects of the Akkadian language for cultural and comparative purposes. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

**Course Notes:** Akkadian AA/AB is an indivisible year-long course. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Akkadian  144

Akkadian Divination Texts (107741)

Piotr Steinkeller

2020 Fall (4 Credits)  

Schedule:  

W 1245 PM - 0245 PM

Instructor Permissions:  

None

Enrollment Cap:  
n/a

The course offers a survey of Babylonian divination literature and the manifold divinatory techniques used in ancient Mesopotamia. While its focus will be the Old Babylonian and selected later sources dealing with extispicy
(prediction from the entrails of animals), we will also read a number of sources concerned with other forms of divination, such as augury (the observed behavior of birds), celestial omens, and dream interpretation. The course will also consider the "scientific" dimension of divination and its relationship to other Babylonian "sciences."

Class Notes: Class time will be determined according to enrolled students' availability.

### Subject: Syriac

#### Syriac AA

**Elementary Syriac I (216669)**

*Ute Possekel*

2020 Fall (4 Credits)  
**Schedule:** MWF 1030 AM - 1129 AM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** 9

Syriac is the Aramaic dialect that became the principal language of Near Eastern Christians in antiquity. It was widely spoken and written in Mesopotamia, Persia, and beyond, and a vast corpus of Syriac Christian literature survives. This full-year course offers a thorough introduction to Classical Syriac. Readings will include passages from the New Testament and early Christian literature. The course will also introduce important themes and figures from the Syriac tradition. Syllabus and instructional techniques have been updated to optimize the online learning experience.

This is an indivisible year-long course. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit. Limited enrollment course.

*Ute Possekel*

2021 Spring (4 Credits)  
**Schedule:** MWF 1030 AM - 1129 AM  
**Instructor Permissions:** None  
**Enrollment Cap:** 9

A thorough introduction to classical Syriac, a Christian dialectic of Aramaic. The first semester will cover the basics of grammar, and the second will introduce students to texts from the Syriac tradition. Daily preparation and active class participation mandatory. This is an indivisible year-long course. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit. Limited enrollment course. Enrollment priority given to HDS students and other Harvard faculty cross-registrants.

**Requirements:** Pre-requisite: SYRIAC AA

Subject: Neuroscience - Undergraduate

Neuroscience - Undergraduate  57
Animal Behavior (207534)
Bence Olveczky
Naomi Pierce
2021 Spring (4 Credits) Schedule: TR 1030 AM - 1145 AM
Instructor Permissions: None Enrollment Cap: n/a
A review of the behavior of animals under natural conditions, with emphasis on both mechanistic and evolutionary approaches. Topics include classical ethology; behavioral endocrinology; behavioral genetics; learning and memory; communication; orientation, migration and biological rhythms; optimal foraging; evolutionary stable strategies; sexual selection; parental investment and mating systems; selfishness, altruism, and reciprocity; and sociality in vertebrates and invertebrates.
Class Notes: Neuro 57 is also offered as OEB 57. Students may not enroll in both.
Requirements: Anti-Requisite: Cannot be taken for credit if OEB 57 already complete.

Neuroscience - Undergraduate  80
Neurobiology of Behavior (207476)
Jeff W. Lichtman
Kathleen Quast
2020 Fall (4 Credits) Schedule: F 1030 AM - 1145 AM
Instructor Permissions: None Enrollment Cap: n/a
An introduction to the ways in which the brain controls mental activities. The course covers the cells and signals that process and transmit information, and the ways in which neurons form circuits that change with experience. Topics include the neurobiology of perception, learning, memory, emotion, and neurologic disorders. This year we are combining interactive, didactic videos with "live" Friday sessions, group projects, and small discussion sections.
Requirements: Anti-Requisite: Cannot be taken for credit if MCB 80 already complete.

Synaptic and Non-Synaptic Plasticity: How the Brain Learns (203851)

2020 Fall (2 Credits)  Schedule: T 0730 PM - 0845 PM

Instructor Permissions: Instructor  Enrollment Cap: 15

The course will start with a brief introduction aimed at reviewing general neurophysiological concepts on neurons, synapses, plasticity, as well as experimental techniques. We will then spend the major part of the year studying three main aspects of learning and its underlying plastic mechanisms: developmental, non-synaptic and sensory plasticity. The final weeks of the course will be devoted to developing a research proposal building upon knowledge acquired throughout the year.

Requirements: Prerequisite: (LPS A OR LS 1A ) AND (MCB 80 OR MCB 81)

Neuroscience - Undergraduate  101JA
Maps of the Brain - How the Brain Organizes the World (207610)

Neurons close to each other in the brain often get activated by parts of the world that are also close to each other: connected body parts, similar sounds, words with related meaning. This organized pattern of activity gives rise to brain maps of our surroundings. In this course, we will explore how the brain creates, uses, and updates such maps to make sense of the world around us.

Each week, we will take a look at neuronal circuits in different parts of the brain (eg, somatosensory cortex, olfactory system, hippocampus) to see how scientists discover new neuronal maps, how these maps function and develop, and how they evolve with experience.

Requirements:  Prerequisite: (LIFESCI 1A OR LPS A) AND (MCB 80 OR NEURO 80)

**Neuroscience - Undergraduate 101LA**

The Neurobiology of Sleep and its Role in Mental Health (207615)

2020 Fall (2 Credits) Schedule: M 0430 PM - 0545 PM

Instructor Permissions: Instructor Enrollment Cap: 12

The scientific study of sleep is both highly interdisciplinary and among the most unifying of topics in psychology and the neurosciences. In the past several decades, exciting new discoveries on the neurobiology of sleep have been facilitated by technologies such as functional neuroimaging and molecular genetics. Sleep science exemplifies the translational approach in biomedical science whereby investigators in human and animal research work together to continually advance the field of sleep medicine. Scientific findings increasingly point to the importance of sleep for mental health and optimum performance, as well as to sleep disruption as both a result and potential cause of mental illness. In psychiatric neuroscience, sleep is an area in which many fundamental questions remain unanswered due to the unique challenges of studying human sleep.

Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Pleasure, Pain and Everything Between: How Touch Encodes the World Around Us (216045)

2020 Fall (2 Credits) Schedule: T 0600 PM - 0715 PM

Instructor Permissions: Instructor Enrollment Cap: 15

We rely on our sense of touch for essential tasks and behaviors, including feeding, object recognition, avoiding physical harm, mating behaviors, and child rearing. This course covers the neural components and circuitry that underlie our sense of touch. From skin to the cortex, we will explore touch and its role in development, diseases, and most importantly, in our everyday life.

**Requirements:**
Prerequisite: (LPS A OR LS 1A ) AND (MCB 80 OR MCB 81)

Neuroscience - Undergraduate 105

Systems Neuroscience (207528)

Florian Engert

2021 Spring (4 Credits) Schedule: MW 0300 PM - 0415 PM

Instructor Permissions: Instructor Enrollment Cap: 99

The neuronal basis of sensory processing and animal behavior will be explored in many different model systems as diverse as honeybees, weakly electric fish, and humans. Special emphasis is placed on the role of activity dependent modulation of neuronal connections in the context of learning, memory, and development of the nervous system.

Class Notes: Neuro 105 is also offered as MCB 105. Students may not enroll in both.

Requirements: Pre-requisite: MCB/NEURO 80 or Instructor Approval.

Anti-requisite: Cannot be taken for credit if MCB 105 is already complete

Additional Course Attributes:

Neuroscience - Undergraduate 115

Cellular Basis of Neuronal Function (207530)

Ryan W. Draft

Kathleen Quast

2021 Spring (4 Credits) Schedule: TR 1030 AM - 1145 AM

Instructor Permissions: Instructor Enrollment Cap: 20

The essential function of a neuron is to processes complex signals derived from the external world. In doing so, neurons employ diverse mechanisms that respond to chemical and electrical signals with incredible sensitivity and plasticity. In this course, we will study these electrical, molecular, and cellular processes using biophysical and biological approaches. Specifically, we will explore topics on excitable membranes, neurotransmission, ion channels, dendritic integration, intracellular signaling, and synaptic
plasticity in the context of real cells and brain circuits. Additionally, there will be a hands-on laboratory section for students to learn to collect and analyze data from common electrophysiological methods (patch clamping and extracellular recording in cultured cells and brain slices).

Laboratory section (2 hours) will be scheduled ad hoc after enrollment on either Thursdays, Fridays, or Mondays.

Class Notes: Neuro 115 is also offered as MCB 115. Students may not enroll in both.

Requirements: Pre-requisite: MCB/NEURO 80 or Instructor Approval. Anti-requisite: Cannot be taken for credit if MCB 115 is already complete

### Neuroscience - Undergraduate 125

Molecular Basis of Behavior (207533)

Catherine Dulac

2021 Spring (4 Credits) Schedule: TR 0130 PM - 0245 PM

Instructor Permissions: None Enrollment Cap: n/a

Modern molecular genetic approaches are teaching us a great deal on how the brain controls behaviors. This course will cover newly developed experimental strategies of molecular neuroscience, and how they have helped uncover the nature and identity of behavior circuit components. How genes and molecules affect behaviors will be investigated through key examples of mammalian behaviors with an emphasis on instinctive and social behaviors, their expression, development, and associated mental disorders.

Class Notes: Neuro 125 is also offered as MCB 125. Students may not enroll in both.

Requirements: Anti-Req: Students who have taken MCB 125 cannot take this course for credit.

### Neuroscience - Undergraduate 129

The Brain: Development, Plasticity and Decline (212829)

Sam Kunes

2020 Fall (4 Credits) Schedule: MWF 1030 AM - 1145 AM

Instructor Permissions: Instructor Enrollment Cap: 12
A lecture and discussion course on how the brain develops, employs plasticity to adapt to its environment
and undergoes functional decline with aging. Topics include the birth, death and identity of neurons, axon
guidance and synaptic specificity, adult neurogenesis, developmental disorders of synaptic function and
memory, including autism and Alzheimer’s Disease. We explore how the brain loses function with aging.
Course assignments emphasize critical evaluation of the primary literature, experimental design and
scientific writing.

Requirements: Anti-Requisite: Cannot be taken for credit if MCB 129 already complete.

Neuroscience - Undergraduate 130

Visual Recognition: Computational and Biophysical Perspective (160750)

Gabriel Kreiman

2020 Fall (4 Credits)

Instructor Permissions: Instructor

Enrollment Cap: 50

Schedule: M 0300 PM - 0545 PM

Examines how neuronal circuits represent information and how those circuits are implemented in artificial
intelligence algorithms. Topics: architecture of visual cortex, neurophysiology, visual consciousness,
computational neuroscience, models of pattern recognition and computer vision.

Course Notes: Course website: <a href="http://klab.tch.harvard.edu/academia/classes/hms_neuro300_vision/hms_neuro300_vision.html">Neurobiology 230, Visual Recognition</a>

Neuro 130 cannot be taken if Neuro 230 has been taken. Neuro 130 cannot be taken concurrently with Neuro 230.

Recommended Prep: Math (Maa/Mab, Math 1A,1B, Math 19 a or equivalent). Physical Sciences 1. MCB 80.

Requirements: Prerequisite: ((LifeSci 1A OR LPS A) AND (LifeSci 1B)) AND may not be taken at the same time with NEURO 230

Neuroscience - Undergraduate 131

Computational Neuroscience (207731)

Haim Sompolinsky

2021 Spring (4 Credits)

Instructor Permissions: None

Enrollment Cap: n/a

Schedule: MW 0300 PM - 0415 PM

Additional Course Attributes:
Follows trends in modern brain theory, focusing on local neuronal circuits as basic computational modules. Explores the relation between network architecture, dynamics, and function. Introduces tools from information theory, statistical inference, and the learning theory for the study of experience-dependent neural codes. Specific topics: computational principles of early sensory systems; adaptation and gain control in vision, dynamics of recurrent networks; feature selectivity in cortical circuits; memory; learning and synaptic plasticity; noise and chaos in neuronal systems.

Recommended Prep: Basic knowledge of multivariate calculus, differential equations, linear algebra, and elementary probability theory.

Requirements: Anti-Requisite: Cannot be taken for credit if MCB 131 already complete.

Neuroscience - Undergraduate 140

Biological and Artificial Intelligence (207645)

Gabriel Kreiman

2021 Spring (4 Credits)

Schedule: T 0300 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap: n/a

This course provides a foundational overview of the fundamental ideas in computational neuroscience and the study of Biological Intelligence. At the same time, the course will connect the study of brains to the blossoming and rapid development of ideas in Artificial Intelligence. Topics covered include the biophysics of computation, neural networks, machine learning, Bayesian models, theory of learning, deep convolutional networks, generative adversarial networks, neural coding, control and dynamics of neural activity, applications to brain-machine interfaces, connectomics, among others.

Recommended Prep: Basic knowledge of multivariate calculus, differential equations, linear algebra, and elementary probability theory

Neuroscience - Undergraduate 141

The Physics of Sensory Systems in Biology (207730)

Aravinthan Samuel

2020 Fall (4 Credits)

Schedule: TR 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap: 30

Living organisms use sensory systems to inform themselves of the sights, sounds, and smells of their...
surrounding environments. Sensory systems are physical measuring devices, and are therefore subject to certain limits imposed by physics. Here we will consider the physics of sensory measurement and perception, and study ways that biological systems have solved their underlying physical problems. We will discuss specific cases in vision, olfaction, and hearing from a physicist's point of view.

Class Notes: The scheduled class meetings (Tu, Th 9-10:15 EST) will be discussions of the material presented in the pre-recorded lectures and reading assignments. If any students are unable to attend at 9 AM (e.g., because of time zone), Prof. Samuel will hold a second class meeting later on Tuesdays and Thursdays (which will be regularly scheduled based on a student poll at the start of class). Attendance at either the 9 AM or later meeting is mandatory. Students are free to join both. All zoom meetings will be recorded and made available on the website. Class participation is expected either live during these class meetings or through online discussions on Slack.

Requirements: Prerequisite: MATH 21A and MATH 21B and cannot be taken for credit if PHYSICS 141 already complete.

Neuroscience - Undergraduate 143

Neurobiology of Vision and Blindness (207773)

Joshua Sanes

2021 Spring (4 Credits) Schedule: TR 0130 PM - 0245 PM

Instructor Permissions: Instructor Enrollment Cap: 20

Vision system fascinates biologists, in part because we are such visual animals. In fact, Americans regard blindness as the worst ailment they could get, fearing it more than Alzheimer's or AIDS. For these reasons, as well as because of its relative accessibility, the visual system is a favored model for studying neural circuitry, as well as for testing novel therapeutic approaches, such as gene therapy. This course will cover key topics in visual development, structure and function, and then use them as a basis for considering causes of blindness and potential cures.

Class Notes: Neuro 143 is also offered as MCB 143. Students may not enroll in both.

Recommended Prep: MCB 80 or NEURO 80 is recommended.

Requirements: Pre-requisite: MCB/NEURO 80 or Instructor Approval. Anti-requisite: Cannot be taken for credit if MCB 143 is already complete.

Neuroscience - Undergraduate 145

Neurobiology of Perception and Decision Making (212830)

Naoshige Uchida

2020 Fall (4 Credits)  Schedule: TR 1030 AM - 1145 AM

Instructor Permissions: Instructor  Enrollment Cap: 30

One of the current goals of neuroscience is to understand neuronal circuits underlying perception and behavior. Recent advances in neuroscience have allowed us to glimpse neuronal processes that link perception and decision making. How is sensory information processed in the brain? How does an animal choose its action? How does an animal learn from ever-changing environments and adjust their behavior? The course will examine neurophysiological studies in perception and decision-making.

Requirements: Anti-Requisite: Cannot be taken for credit if MCB 145 already complete.

Neuroscience - Undergraduate 146

Experience-Based Brain Development: Causes and Consequences (212831)

Takao Hensch

2021 Spring (4 Credits)  Schedule: TR 0300 PM - 0415 PM

Instructor Permissions: Instructor  Enrollment Cap: n/a

At no time in life does the surrounding environment so potently shape brain function as in infancy and early childhood. This course integrates molecular/cellular biology with systems neuroscience to explore biological mechanisms underlying critical periods in brain development. Understanding how neuronal circuits are sculpted by experience will motivate further consideration of the social impact on therapy, education, policy, and ethics.

Requirements: Anti-Requisite: Cannot be taken for credit if MCB 146 already complete.

The Neurobiology of Pain (207607)

Ryan W. Draft

2020 Fall (4 Credits)  Schedule: TBD

Instructor Permissions: Instructor  Enrollment Cap: 24
This course will explore the neurobiological systems and mechanisms underlying both acute and chronic pain. Topics will include nociceptive/sensory systems, molecular basis and modulation of pain, neuroanatomy of peripheral and central pain circuits, pain pathologies, pharmacological and non pharmacological treatments. The emphasis will be on understanding basic neurobiological concepts underlying pain systems and reading/discussing the primary scientific research in the field.

Class Notes: Course time will be agreed upon by the enrolled students and instructor during shopping period.

Requirements: Pre-requisite: MCB/NEURO 80 or Instructor Approval. Anti-requisite: Cannot be taken for credit if MCB 148 is already complete

Neuroscience - Undergraduate 170

Brain Invaders: Building and Breaking Barriers in the Nervous System (207770)

Laura Magnotti

2021 Spring (4 Credits) Schedule: MW 0130 PM - 0245 PM

Instructor Permissions: Instructor Enrollment Cap: 16

The brain has evolved a unique but very effective system to protect itself from invaders. In this course, we will explore the specific defenses that the nervous system uses to protect itself. We will also examine how some pathogens evade or breach those defenses and the impact of those invasions. Finally, we will explore how scientists have been able to translate their understanding of these pathogenic mechanisms into technologies for research and therapeutic applications.

Class Notes: Neuro 170 is also offered as MCB 170. Students may not enroll in both.

Requirements: Prerequisite: (LPS A OR LS 1a) AND MCB/NEURO 80 or Instructor Approval. Anti-requisite: Cannot be taken for credit if MCB 170 is already complete

Neuroscience - Undergraduate 1202

Modern Neuroanatomy (212832)

Randy Buckner

2021 Spring (4 Credits) Schedule: TBD
How does the global architecture and local organization of brain systems support behavioral and cognitive functions? In this class, classical and newer neuroanatomical discoveries will be discussed that cover what defines brain areas; how areas are organized into parallel, distributed circuits; how distinct areas and systems are organized; and how anatomical form relates to function. Anatomy in the human brain and from model systems (worm, mouse, barn owl, and monkey) will be used to illustrate principles. Newer techniques and analytical approaches will be discussed including micro-scale and macro-scale connectomics. The goal of this class is to survey examples of how emerging understanding of neuroanatomy provides insight into function. Each class will consist of lecture and discussion.

Class Notes: Neuro 1202 is also offered as PSY 1202. Students may not enroll in both.

Requirements: Anti-Requisite: Cannot be taken for credit if PSY 1202 already complete.

Neuroscience - Undergraduate 1401

Computational Cognitive Neuroscience: Building Models of the Brain (207732)

Samuel Gershman

2021 Spring (4 Credits) Schedule: WF 0130 PM - 0245 PM

Instructor Permissions: Instructor Enrollment Cap: 48

"What I cannot create, I do not understand." This course applies Richard Feynman's dictum to the brain, by teaching students how to simulate brain function with computer programs. Special emphasis will be placed on how neurobiological mechanisms give rise to cognitive processes like learning, memory, attention, decision-making, and object perception. Students will learn how to understand experimental data through the lens of computational models, and ultimately how to build their own models.

Class Notes: Neuro 1401 is also offered as PSY 1401. Students may not enroll in both.

Recommended Prep: Students be comfortable with a numerical programming language (e.g., Python, Matlab, R). Psychology concentrators should have taken Science of Living Systems 20 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 14, PSY 15, PSY 16, PSY 18, Science of Living Systems 15, MCB 80 or MCB 81 before enrolling in this course; or permission of instructor.

Requirements: Anti-Requisite: Cannot be taken for credit if PSY 1401 already complete.

Independent Study

Independent Study (150200)

Soha Bayoumi

2020 Fall (4 Credits)
Schedule: TBD
Instructor Permissions: Instructor
Enrollment Cap: n/a

Independent Study is designed to provide credit for field research, academic study not available in regular course work, or practice or performance in the arts. What distinguishes a suitable project is the application of analytical skills to the object of Independent Study. Any sophomore, junior, or senior whose previous record is satisfactory may petition to undertake Independent Study for non-letter-graded credit. Students may access the petition for Independent Study on the Office of Undergraduate Education website.

Course Notes: A student may petition to take up to a total of four, four-credit courses of Independent Study. Independent Study courses are subject to the same rules for dropping and withdrawing as any other course. The petition requires the signatures of a qualified adviser and the student's resident dean, as well as an outline of the student's proposed project. It must be submitted to the Allston Burr Resident Dean for approval, ordinarily in the first week of the term.

Independent Study is designed to provide credit for field research, academic study not available in regular course work, or practice or performance in the arts. What distinguishes a suitable project is the application of analytical skills to the object of Independent Study. Any sophomore, junior, or senior whose previous record is satisfactory may petition to undertake Independent Study for non-letter-graded credit. Students may access the petition for Independent Study on the Office of Undergraduate Education website.

Course Notes: A student may petition to take up to a total of four, four-credit courses of Independent Study. Independent Study courses are subject to the same rules for dropping and withdrawing as any other course. The petition requires the signatures of a qualified adviser and the student’s resident dean, as well as an outline of the student’s proposed project. It must be submitted to the Allston Burr Resident Dean for approval, ordinarily in the first week of the term.

Collin Johnson
Elena Kramer
Ann Pearson
Mansi Srivastava

2020 Fall (4 Credits)                  Schedule:       TR 0900 AM - 1000 AM
Instructor Permissions:   None          Enrollment Cap:  n/a

An integrated approach to the diversity of life, emphasizing how chemical, physical, genetic, ecological and
geologic processes contribute to the origin and maintenance of biological diversity. Topics to be covered
include the evolution of metabolic pathways, multicellularity and structural complexity; causes and
consequences of differences in diversity over space and time; the role of species interactions (including
symbioses) as an evolutionary force; and the evolution of humans and their impact on the environment.

Class Notes:
• Two 60-minute synchronous meetings per week, 001 and 002. Students should register for the one they foresee attending most regularly.
• Two 45-minute asynchronous lectures (pre-recorded videos) per week are required to be watched before the synchronous meetings.
• One 90-minute lab/section per week is required.

Recommended Prep: Knowledge of introductory molecular, cellular biology, and genetics is recommended.

Mansi Srivastava
Collin Johnson

2020 Fall (4 Credits)                  Schedule:       TR 0430 PM - 0530 PM
An integrated approach to the diversity of life, emphasizing how chemical, physical, genetic, ecological and geologic processes contribute to the origin and maintenance of biological diversity. Topics to be covered include the evolution of metabolic pathways, multicellularity and structural complexity; causes and consequences of differences in diversity over space and time; the role of species interactions (including symbioses) as an evolutionary force; and the evolution of humans and their impact on the environment.

Class Notes:

- Two 60-minute synchronous meetings per week, 001 and 002. Students should register for the one they foresee attending most regularly.
- Two 45-minute asynchronous lectures (pre-recorded videos) per week are required to be watched before the synchronous meetings.
- One 90-minute lab/section per week is required.

Recommended Prep: Knowledge of introductory molecular, cellular biology, and genetics is recommended.

Genetics and Genomics (130236)

Daniel Hartl
Robin Hopkins

2020 Fall (4 Credits) Schedule: TR 1030 AM - 1145 AM

Instructor Permissions: Instructor Enrollment Cap: n/a

Fundamental concepts in genetics and genomics forming a critical foundation for biology approached from two perspectives: (1) as a body of knowledge pertaining to genetic transmission, function, mutation, and evolution in eukaryotes and prokaryotes; and (2) as an experimental approach providing a toolkit for the study of biological processes such as development and behavior. Topics include structure, function, transmission, linkage, mutation, and manipulation of genes; genetic approaches in experimental studies of biological processes; and analysis of genomes in individuals and populations. Related ethical issues also discussed include genetically modified organisms, gene therapy, genetic testing, personalized medicine, and genetic privacy.

Biology of Plants (131579)

Elena Kramer
Noel Holbrook

2021 Spring (4 Credits) Schedule: TR 0900 AM - 1015 AM
Instructor Permissions: None Enrollment Cap: n/a

Introduction to the structure, diversity, and physiology of plants with an emphasis on evolutionary relationships and adaptations to life on land. Topics include growth, resource acquisition, interactions with other organisms (i.e., fungi, bacteria, insects), reproduction, and survival in extreme environments. Laboratory sessions provide an overview of plant and diversity and an introduction to basic physiological processes.

Organismic & Evolutionary Biol  53
Evolutionary Biology (142224)

Andrew Berry

2021 Spring (4 Credits) Schedule: MWF 1030 AM - 1145 AM
Instructor Permissions: None Enrollment Cap: n/a

The course covers micro- and macro-evolution, ranging in its focus from population genetics through molecular evolution to the grand patterns of the fossil record. Topics emphasized include both natural and sexual selection, the ecological context of adaptation, genomic and developmental mechanisms of evolutionary innovation, speciation, phylogenetics, and evolutionary approaches to human problems.

Recommended Prep: Life Sciences 1B or permission of the instructor.

Organismic & Evolutionary Biol  54
Biology of the Fungi (148250)

Donald Pfister

2020 Fall (4 Credits) Schedule: TR 0130 PM - 0245 PM
Instructor Permissions: None Enrollment Cap: n/a

This course explores the fascinating diversity of the kingdom fungi, including evolution, ecology and
morphology. All of the major groups of fungi, from smuts to molds, will be included. Students use a variety of techniques to learn about these organisms and their activities.

Class Notes:

- Tuesday lectures will be followed by a lab/discussion session.
- Because we are working away from the lab the course has been modified to allow for the study of fungi wherever you may be. We will provide a laboratory kit for you to use at home. This will not be the same as working in the lab at Harvard but it is intended to offer you the chance to experiment and observe what is around you. You will attempt to grow some fungi. You will learn about identification and most of all you will realize that the organisms in the kingdom Fungi are all around us and perform many functions in the ecosystem and in our lives. They cause diseases of plants and animals but they also are critical to plant growth, they cycle nutrients to support ecosystem health, they are critical to industrial processes and to the activities in our kitchens. Fungi are highly complex in their morphology and this contributes to their beauty and fascination. I hope you will join us in studying fungi at home. Throughout the course we will have special guest presentations to bring these topics into focus, for example, the biology of sourdough and of making ginger beer. We will support you in this endeavor by by having weekly sessions to discuss and observe together.

Recommended Prep: Life Sciences 1a and 1b or permission of instructor. Lab section will be held on Tuesdays from 2:30pm-4:00pm during Fall 2016.

Organismic & Evolutionary Biol  55

Ecology: Populations, Communities, and Ecosystems (132206)

Andrew Davies
Paul Moorcroft
Benton Taylor
Collin Johnson

2021 Spring (4 Credits) Schedule: MWF 0130 PM - 0245 PM
Instructor Permissions: None Enrollment Cap: n/a

This course examines the relationships of organisms to their environment at the individual, population, and community level. The course covers topics in both pure and applied ecology including: adaptations to the physical environment, population dynamics, competition, predator-prey interactions, community ecology, ecosystem structure, stability, and function, the ecology of infectious diseases, and natural resource management.

Recommended Prep: Mathematics 1a or 1b.
Organismic & Evolutionary Biol  56
Geobiology and the History of Life (130331)
