The Garden (216803)

Claire Chase
Jill Johnson
Karthik Pandian

2020 Fall (4 Credits)

Instructor Permissions: Instructor
Enrollment Cap: 15

Schedule: T 1200 PM - 0245 PM

The Garden is a transdisciplinary arts collective, co-taught by faculty mentors in music, visual art, and dance, along with resident artists, scholars, and curators. Our contemporary world offers distinct challenges and opportunities for artists as makers, scholars, and local and global citizens. We believe transdisciplinary learning equips students with the critical tools, awareness, and perspectives needed for thinking and action. This course is for students who seek to imagine new alternatives, to push the critical and scholarly boundaries of their creative practice, and to expand their artistic inquiry in a collegial, rigorous, and lively environment. Each faculty mentor works with a cohort of five students, providing regular, sustained one-on-one mentorship to develop their practice. All three faculty, their student cohorts, residents, and guests hold frequent convivial gatherings to share and receive feedback on work, collaborate, improvise and dialogue in the spirit of dynamic exchange.

Subject: African & African Amer Studies

African & African Amer Studies  11
Introduction to African Studies (123591)
Daniel Agbiboa
2020 Fall (4 Credits) Schedule: T 1200 PM - 0245 PM
Instructor Permissions: None Enrollment Cap: n/a

This course introduces students to the rich diversity and complexity of Africa, including its historical dynamics, economic developments, social and political practices, and popular cultures. Throughout, we assume that Africa is not a unique isolate but a continent bubbling with internal diversity, historical change, entrepreneurial spirit, and cultural links beyond its shores. Our goal is to train students to think rigorously about Africa from interdisciplinary and transnational perspectives. We also aim to equip students with the analytical tools necessary for recognizing and deconstructing reductionist and stereotyped narratives of Africa. The course is open to all students who are interested in exploring various dimensions of African life, politics, peoples and cultures from the past to the postcolony.

Course Notes: Required of concentrators in African Studies track.

African & African Amer Studies  20 Section: 1
Introduction to African Languages and Cultures (118883)
John Mugane
2020 Fall (4 Credits) Schedule: MW 1200 PM - 0115 PM
Instructor Permissions: None Enrollment Cap: n/a
This introduction to African languages and cultures explores how sub-Saharan Africans use language to understand, organize, and transmit (culture, history, etc.) indigenous knowledge to successive generations. Language serves as a road map to comprehending how social, political, and economic institutions and processes develop: from kinship structures and the evolution of political offices to trade relations and the transfer of environmental knowledge. As a Social Engagement course, AAAS 20 will wed scholarly inquiry and academic study to practical experience and personal involvement in the community. Students will be given the opportunity to study Africans, their languages, and their cultures from the ground up, not only through textbooks and data sets but through personal relationships, cultural participation, and inquisitive explorations of local African heritage communities. Throughout the semester you will be asked to employ video production, ethnographic research, creative writing, "social-portraiture," GIS mapping, and linguistic study as you engage with Africans, their languages, and their cultures. By examining linguistic debates and cultural traditions and interrogating their import in the daily lives of Boston-area Africans, we hope to bridge the divide between grand theories and everyday practices, between intellectual debates and the lived experiences of individuals, between the American academy and the African world. Ultimately, this course aims to place Africans themselves in the center of the academic study of Africa.

African & African Amer Studies  97

Ingrid Monson

Schedule:  W 1200 PM - 0245 PM

Instructor Permissions:  None  Enrollment Cap:  n/a

This course explores the long history of creating pan-African solidarity among peoples of African descent in the Caribbean, North America, Latin America and on the African continent. Beginning with the Haitian Revolution and its lessons for understanding making history of diasporic past we examine the transformation of African identities under slavery, the economics of racial capitalism and then explore the origins of Pan-African thought. We examine the differences between Marcus Garvey's and W.E.B. Du Bois's pan-African visions and the influence of these ideas on anti-colonial struggles in Africa and the Civil Rights and Black Power movements. In the second half of the course we examine artistic expressions in music, theater, and film, first in the 60s and 70s in North American, and then more in more recent works of Afro-futurism and hip hop in the U.S. Brazil, and Nigeria.

Course Notes:  Required for concentrators in African and African American Studies. Open to all undergraduates.

The History of African Americans From the Slave Trade to the Civil War (144199)

Vincent Brown

2020 Fall (4 Credits)                  Schedule:             TR 1030 AM - 1145 AM
Instructor Permissions: None          Enrollment Cap:      n/a

This course surveys African American History from the first migrations of Africans to the Americas during the Transatlantic Slave Trade to the eve of the U.S. Civil War. Atlantic in scope, our studies will consider black US history in the context of broader regional variations, highlighting both the distinctive and the unexceptional features of black society, culture, and politics. Lectures, readings, discussions, and assignments will emphasize several key themes: the indispensability of slavery to the colonial development of the Americas, the entrenchment of race as a mode of categorical belonging and discrimination, the continuity of multivalent struggles for dignity, freedom, and equality, and the shaping force of gender, geography, and imperial warfare in the transformations of the period. Special attention will be paid to the interpretive possibilities of representing this history in the form of data, argumentative prose, storytelling, and works of visual art.

Chocolate, Culture, and the Politics of Food (108879)

Carla Martin

2021 Spring (4 Credits)        Schedule:       W 0300 PM - 0500 PM
Instructor Permissions: None   Enrollment Cap:  n/a

This course will examine the sociohistorical legacy of chocolate, with a delicious emphasis on the eating and appreciation of the so-called "food of the gods." Interdisciplinary course readings will introduce the history of cacao cultivation, the present day state of the global chocolate industry, the diverse cultural constructions surrounding chocolate, and the implications for chocolate's future of scientific study, international politics, alternative trade models, and the food movement. Assignments will address pressing real world questions related to chocolate consumption, social justice, responsible development, honesty and the politics of representation in production and marketing, hierarchies of quality, and myths of purity.

People as Infrastructure: The Politics of Urban Infrastructure in Africa (215997)

Daniel Agbiboa

2020 Fall (4 Credits)  Schedule:  R 1200 PM - 0245 PM
Instructor Permissions: None  Enrollment Cap: n/a

Infrastructures are commonly defined in physical terms or material forms (e.g. roads, buildings, power supplies) and are said to impose productivity on the city and positionality on its inhabitants. In this course, however, we will extend the notion of infrastructure directly to social networks and the evolving process of negotiation between state and nonstate urban actors with power differentials and competing interests. Taking inspiration from AbdouMaliq Simone's notion of "people as infrastructure," this course will examine collective agency, alliances and transnational organizing among urban residents and groups who are economically marginalized and socially excluded from modernizing processes of urban planning and reform in Africa. We will interrogate African cities as networked spaces characterized by fluid and precarious interdependence between formal and informal actors in particular sectors. The course will bring together two central dimensions of infrastructure in urban Africa. First, infrastructural power: how infrastructure constitutes a privileged institutional channel for governance, regulation, and contestation in urban Africa. Second, infrastructural lives: the everyday experience and politics of urban infrastructures in Africa.

Philosophy, Social Thought, and Criticism in African American Studies: Graduate Workshop Seminar (216014)

Brandon Terry

2020 Fall (4 Credits)  Schedule:  R 1200 PM - 0245 PM
Instructor Permissions: None  Enrollment Cap: n/a

A year-long graduate research and reading course exploring classic and contemporary efforts to develop interdisciplinary approaches drawn from philosophy, intellectual history, social and political theory, and socio-cultural criticism to explore central questions and thinkers in the field of African American Studies. With visiting scholars, students will engage recent work in the discipline, including the ethics of the oppressed, the dynamics of white supremacy, the relationship between racism and capitalism, intersectionality, the interpretation of African American intellectuals, and more. The course is for students who have an interest in pursuing independent research in African American Studies informed by these disciplinary approaches and their field-defining debates. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Mobility, Power and Politics (214576)

*Daniel Agbiboa*

2021 Spring (4 Credits)  
**Schedule:** T 1200 PM - 0245 PM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** 30

This course incorporates insights from the new mobilities paradigm in studying the linkages between movement, power and politics in the contemporary era. The course will discuss how issues of mobility are central to many lives and many organizations, and how movement intersects with the spatialization and materialization of power, difference and inequality within societies. Students will come to an understanding of how mobility, and control over mobility, both reflects and reinforces power; why mobile subjects are increasingly a risk and at risk; and the impact of the regulation and governance of mobility on conflict, security and development. Students will also benefit from the new light that this course sheds on how issues of mobility and immobility intersect with security and development in at least five core areas: (1) questions of power and government (2) spaces of regulation and intervention (3) the quandary of freedom and control in a globalized world; (4) infrastructures that enable and constrain movement; and (5) issues of justice and ethics. Confirming the analytical appeal of the mobilities paradigm, this course will serve as a melting pot for a variety of disciplines, including sociology, anthropology, geography, gender studies, social work and social policy, disability and health studies, conflict analysis and resolution, urban studies, political science and international relations. Topics will include mobility and terrorism after 9/11; mobility and mobilization of the urban poor; youth, mobility and being 'stuck'; social mobility; roads, corruption and policing; mobility and il/legality; gender and mobility; and mobility as fieldwork.

When accepting the Oscar for Best Actress in 2015 Patricia Arquette said the following: "The truth is, right under the surface, there are huge issues that are at play that do affect women, and it’s time for all the women in America and all the men that love women and all the gay people and all the people of color that we all fought for to fight for us now."

This course examines why such statements are part of a larger and longer tradition of disappearing black women and why they are popular in the cultural zeitgeist. Through extensive reading and tough discussion this class examines the current discourse around sexual harassment and assault from the #MeToo movement through the informed lens of Harriet Jacobs’s slave narrative Incidents in the Life of a Slave Girl. Both “texts” involve navigating spaces of subjugation and supremacy and yet one voice has remained steadily ignored in mainstream audiences. We will also look at the intersection of race and gender that Incidents reveals and trace how these remain intact or not through today.
How Sweet is it to be Loved By You: Black Love and the Emotional Politics of Respect (110293)

Marcyliena Morgan
Jamaica Kincaid

2020 Fall (4 Credits) 

Schedule: T 1200 PM - 0245 PM

Instructor Permissions: None
Enrollment Cap: n/a

The word 'love' is almost never used in any portrayal or description of the African American community's daily life in contemporary media and in the social sciences. But love, as a human experience, is central to our understanding of what it means to be a vital member of a culture and society and thus respected, nurtured, etc. This seminar examines the love that difference makes. It is a comprehensive study of the representation of gender, love and sexuality in African American and African Diasporan culture. It introduces students to some of the principal questions of feminist theory, as viewed from the social sciences and humanities including anthropology, psychology, media studies and literature. Love, in all its many forms: familial, erotic, romantic, fraternal, is abundant, sometimes dominant, in black culture in the form of song, film, poetry and rhyme, and literature. This course will review and analyze the 'look of Black love' in the humanities and social sciences and writings on intersubjectivity, family, language, culture and ritual. It will also look at the absence of love within and toward the African American community as well as love's role in movements like Black Lives Matter. We will closely read, watch and listen to some of the many Black artists who have looked deeply at this thing called Love. How Sweet it Is explores and analyzes Black Love from disciplinary, social and cultural perspectives including: family, romance, gender, sexuality, racism, and physical and emotional health, institutions and space, place and home.

Hiphop and Don't Stop. I Am Hiphop: Build, Respect, Represent (126710)

Marcyliena Morgan

2021 Spring (4 Credits)

Schedule: T 1200 PM - 0245 PM

Instructor Permissions: None
Enrollment Cap: n/a

This reading seminar takes up the question of how and why Hiphop art, culture and politics has taken over and dominated American public, youth, popular culture and African American discourse in general. I AM HIPHOP is a vivid exploration into the origins, culture, style, art and enduring influence of hiphop as a uniquely American black cultural art form adapted around the globe. It explores how hiphop language ideology has penetrated the 'arts' and American culture by identifying and reframing life in the 21st century. Readings will be on theoretical, ideological and philosophical arguments embedded in hiphop artistic practices in the U.S. and throughout the world. We will examine hiphop's influence in all genres including the arts, social sciences, business, etc. The course will examine how people throughout the world incorporate hiphop edicts to disseminate public and popular ideologies to represent individuals, neighborhoods, cities and nations.
African & African Amer Studies 145X Section: LEC

The Hiphop Cipher: "These are the Breaks" (108837)

Marcyliena Morgan

Patrick Douthit

2020 Fall (4 Credits)  Schedule: M 0300 PM - 0500 PM

Instructor Permissions: None  Enrollment Cap: n/a

The Hiphop Cipher is an in-depth look at hiphop culture and production. It is for students who are familiar with hiphop as a cultural and artistic movement and enterprise and/or have taken courses on hiphop and popular music and culture. The focus of the course will be the year 1995. The course will closely examine a particular issue and topic and includes guest lecturers and master classes on areas or issues in hiphop culture, art, scholarship and performance. Fall Winter 2020 will feature Artist in Residence and Grammy Winning producer 9th Wonder (Patrick Douthit).

These are the Breaks: The connection between vinyl from the 60's, 70's and 80's and birth of what we now know as hip-hop music, is a connection that is known by producers, DJ's and collectors of music, but not to academia. Various political, cultural, and social movements of the 1960's created an environment for the stories of soul, jazz, and funk produced in the 1970's, which in turn created the platform for our most treasured hip-hop albums (Illmatic, The BluePrint, The Chronic, College Dropout, The Minstrel Show). "Diggers" from around the world travel from country to country, from record shop to basement, in search of the original "breaks" used for these albums, in some cases for 10+ years. This course examines the important break beats in hiphop and the cultural, political and social movements and contexts that the beats, songs and production represented.

Learning Languages: Communication, Acquisition, Translation and Authorship from Africa and Beyond (207977)

John Mugane

2021 Spring (4 Credits)  Schedule:  M 1200 PM - 0245 PM

Instructor Permissions:  Instructor  Enrollment Cap:  n/a

This interdisciplinary, experimental, social engagement course explores the foundations of language learning and communicative competence from an African perspective. What do language learners at Harvard have to learn from the polyglots of rural Cameroon, the transnational traders of the Sahara Desert, the code-switching "beach boys" of the Swahili Coast, and the code-mixing/code-scrambling urban dwellers? How might studying language acquisition, communicative commerce, and the pragmatics of association and affiliation from Africa help to make us better language learners, translators, and global citizens in an increasingly connected world? What does it mean to "know" a language? How is "fluency" best achieved? Is language best understood as a "skill" as an "opportunity" as a "space" -what? What happens when we start to think of language not just as an avenue but as a locus of knowledge production, wealth generation and cultural participation. How does fluency (competence and performance) through social engagement learning compare to fluency attained through scholarly study? Calling into question dominant Western modes of language teaching and learning, this course explores new theoretical, methodological, and practical approaches to language learning, translation, and intellectual engagement. This course will allow students to bring their own linguistic questions and projects into the classroom, while at the same time studying the Harvard African Language Program’s ongoing experiment in language teaching and learning. Encouraging hands-on, practical language learning, the course will offer students the opportunity to attain new linguistic capacities and strategies through "shock language lessons," to practice collaborative translations with language speakers and tradition bearers, and to undertake their own communicative adventures in local communities. Readings will include a wide range of interdisciplinary texts, including Nigerian novels, Anthropological theory, Swahili rap lyrics, historical Linguistics, Zulu praise poetry, Colonial-era grammars, and STS (science and technology studies) ethnographies. Coursework will include translations of foreign language texts, reading responses, social engagement work, and a final analytic or creative project.

African & African Amer Studies  160  Section: LEC

Christianity, Identity, and Civil Society in Africa (125927)

Jacob Olupona

2021 Spring (4 Credits)  Schedule:  T 1200 PM - 0245 PM

Instructor Permissions:  None  Enrollment Cap:  n/a

This course is a historical survey of the centuries-old Christian traditions in Africa. It begins with an outline
of the trajectory of Christianity's origins and presence in Africa from its beginning in ancient Mediterranean lands through the early period of European missionaries to the contemporary period. The course provides the ethnography of the old mission churches, indigenous independent African churches, and contemporary evangelical and Pentecostal Charismatic movements. The course explores the role of Christianity in relation to historical, cultural, social, and material realities of the African continent. It examines a broad range of topical issues related to conversion, missionization, and the development and growth of Christian agencies in Africa in relation to the construction of social, theological, and religious identities, as well as Christianity’s response to cultural pluralism, nationhood, citizenship, and civil society.

Course Notes: Offered jointly with the Divinity School as 2337.

African Religion in the Diaspora (216732)

*Jacob Olupona*

2020 Fall (4 Credits)

Schedule: R 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap: n/a

This course focuses on the history and phenomenology of African peoples’ religious experiences in the Americas. The historical and social processes that led to the emergence of African diasporic religions in Latin America and the Caribbean will form the core of our reading materials. We will examine the role of myth, ritual, arts, and symbols as well as the social and political processes that explain the evolution of Black Atlantic religious traditions as formed by African indigenous traditions, African Christianity, and African Islam. Using historical, ethnographic, and textual sources, the course will illuminate the lived religious experiences of enslaved Africans as well as new immigrant diaspora communities in South America, the Caribbean, and the USA. We will examine Africana religious parallels and divergences in religious practice and social identity. Guest lecturers will offer their expertise on the various religious processes and expressions of African peoples in the Americas, while contributing to broader conversations about the future of African religions in the diaspora and the sociopolitical challenges we face in today’s world, particularly how the devotees of these traditions face forms of racial, ethnic and religious
discrimination in their various countries.

Course Notes: Offered jointly with the Divinity School as HDS 3689.

Childhood in African America (108168)

Robin Bernstein

2021 Spring (4 Credits) Schedule: W 0300 PM - 0500 PM

Instructor Permissions: None Enrollment Cap: n/a

Black children’s lives matter. Our goal is to understand how black children's lives have mattered over the past two centuries. Toward this end, we ask, what have the diverse lives of African American children been like since the nineteenth century? How have African American children experienced family, education, play, work, and activism? How have they been affected by social structures such as schools and carceral systems? How have they enacted agency and resistance? How have images of and ideas about African American children, as well as individual African American children, been important to political movements including abolition, New Negro politics, the Civil Rights Movement, and #blacklivesmatter? Our study of African American children proceeds chronologically and uses the methodologies of historical and literary analysis.

Writing Africa Today (216020)

Bojana Coulibaly

2020 Fall (4 Credits) Schedule: W 1200 PM - 0245 PM

Instructor Permissions: None Enrollment Cap: n/a

Writing Africa Today examines literature of the extreme contemporary published across Africa and explores various forms and styles of literary representation engaging political, social and cultural concern, faith and spirituality, oral history and collective memory, modernity, technology, social and environmental justice, gender equality, poetics and identity. We will focus primarily on the novel genre with narrative styles ranging from historical fiction, speculative fiction to retrospective narrative. Key theoretical concepts in literary and cultural studies as well as current debates on African literature will supplement our creative writing corpus which includes novels by Namwali Serpell, Ben Okri, Maaza Mengiste, Yvonne Adhiambo Owuor, Masande Ntshanga, Zakes Mda, Aminata Forna, Tsitsi Dangarembga, and others.

African Voices for Freedom, Citizenship and Social Justice (216021)

Bojana Coulibaly

2020 Fall (4 Credits) Schedule: F 1200 PM - 0245 PM
Instructor Permissions: None Enrollment Cap: n/a

Freedom, citizenship and social justice in Africa will be the primary focus of this course as we explore activism and artivism through music, hip-hop, verbal and visual performance, slam poetry, street art, urban culture, and the media. We will build social and political portraits of activists and artivists, using digital tools of collaborative annotation and authoring/publishing multimedia-rich content that explore expressions of community engagement, student protest, counter-discourse, counterculture, political dissent, civil disobedience and political solidarity in Africa. We will look at contemporary activists such as Stella Nyanzi, Octopizzo, Sona Jabartheh, Keyti, Colonel Karbone 14, Bobi Wine, Docta, Elom 20ce, and others to understand some of the concerns faced by the youth and citizens in contemporary Africa.

Sources of Interracial Economic Inequality in the United States (215998)

Jacqueline Rivers

2020 Fall (4 Credits) Schedule: M 0300 PM - 0500 PM
Instructor Permissions: None Enrollment Cap: n/a

This course examines current and historical developments that have created, multiplied and maintained economic inequality between African Americans and whites in the United States. The oppression of slavery left a legacy of profound social and economic disadvantage among black. Though that has been ameliorated over time, a variety of subsequent government policies such as red lining in housing have perpetuated the inequities that plague the black community. In addition, other policies such as the New Deal that have been beneficial have had less impact for blacks because of explicit aspects of how they were designed. The continued vulnerability of black people has also made them less able to withstand economic shocks such as the Great Recession. While middle class blacks have made substantial economic progress, the entrenched nature of the economic interracial gap and its compounding effects pose a challenge for remediating the situation, especially for the black poor.

The Anthropology of Law: Perspectives from Africa and Elsewhere (108678)

John Comaroff

2021 Spring (4 Credits) Schedule: W 1200 PM - 0245 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

The course will cover (i) classical readings in the field, (ii) "big" theoretical questions concerning the relationships between law and violence, sovereignty, and religion, focusing on the often counter-intuitive insights to be gained from non-Western legal systems; (iii) law and colonialism; (iv) liberalism, difference, and the law in the postcolonial world, and (v) the judicialization of politics around the globe. Throughout, attention will be given to the lessons to be learned from legal anthropology for interrogating the present moment in the global north. Grades will be based on class participation, course presentations, and a term paper.

African Literature and the Poetics of Memory (000196)

*Bojana Coulibaly*

2021 Spring (4 Credits)  

**Schedule:**  
R 1200 PM - 0245 PM

**Instructor Permissions:**  
Instructor

**Enrollment Cap:**  
30

Literary representations of memory and trauma in African postcolonial and contemporary literature will be the main focus of this course. In order to understand how trauma impacts individuals in their relationship with their physical world, and how in a very unique way, characters cope with their traumatic reality, we will be analyzing "structural disorder" and "historical event" narratives, including novels and short fiction by Aminata Forna, Boubacar Boris Diop, Tayeb Salih, Yaa Gyasi, Ben Okri, Chris Abani, Jennifer Makumbi, and others. Our examination of these texts will be supplemented by trauma theory and its various subcategories that include the study of memory and forgiveness, retrospective narrative, testimony and bearing witness, PTSD, mourning, war and violence, transgenerational trauma as well as healing and working through trauma.

This course critically examines the health status of the poor, and of African Americans and other socially disadvantaged racial and ethnic groups in the US. Attention will be focused on the patterned ways in which the health of these groups is embedded in the social, cultural, political, and economic contexts, and arrangements of US society. Topics covered include the meaning and measurement of race, the ways in which racism affects health, the historic uses of minorities in medical research, how acculturation and migration affects health, and an examination of the specific health problems that disproportionately affect
nondominant racial groups.

Social Revolutions in Latin America (110501)

Alejandro de la Fuente

2021 Spring (4 Credits) Schedule: T 1200 PM - 0245 PM

Instructor Permissions: Instructor Enrollment Cap: 15

This course seeks to explain why social revolutions have taken place in Latin America and analyzes their impact on the region. The objective is for students to gain a critical understanding of the origins, development, and impact of revolutionary movements in Latin America during the twentieth century. We will try to identify: (1) the historical factors that led to revolutions in the region (the so-called revolutionary situations); (2) the strategies followed by different movements and how successful they were; (3) the programs and policies instituted by the different revolutionary governments; (4) the social and political forces opposed to those policies, including international forces; and (5) the ability of these revolutionary movements to hold on to power for extended periods of time. The course examines several case studies, which may include Mexico, Cuba, Chile, Nicaragua, the Zapatista uprising in Chiapas, and the so-called "Bolivarian revolution" of Venezuela. Our goal is to identify similarities and differences among these cases.

Social Theory, In and Out of Africa (216012)

Jean Comaroff

2021 Spring (4 Credits) Schedule: W 1200 PM - 0245 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

Social Theory, In and Out of Africa examines, in critical depth, some of the major conceptual and methodological approaches that have shaped the history of Euro-American social sciences, and social thought more broadly, from the vantage of theory-making in, from, and about Africa. In so doing, it will address (i) the historical roots, political investments, and philosophical foundations of these approaches and (ii) their significance for contemporary concerns in the social sciences and humanities at large. The course aims to explore the interplay of scholarly practice and its wider context in the unfolding development of social thought from colonial to postcolonial times. As such, it strives to open up a critical, open-ended discussion about the genealogy of disciplinary knowledge in the social sciences, especially as revealed by the ambivalent place of Africa, in theory. Beginning with the structural functionalist tradition that dates back to the writings of Emile Durkheim, the
course will move through early British anthropology, structuralism and its various transformations, interpretivist approaches, and Marxism/s in Africa – their take on kinship, politics, religion, economy, and culture. It will go on to explore colonialism and postcoloniality, focusing on, among other things, gender and sexuality, media and aesthetics, and end with a consideration of contemporary debates surrounding Africa, in theory.

Africa Rising? New African Economies/Cultures and Their Global Implications (108680)

Jean Comaroff

John Comaroff

2020 Fall (4 Credits) Schedule: M 0945 AM - 1145 PM

Instructor Permissions: Instructor Enrollment Cap: 20

This course, which is offered every semester, is taught in conjunction with, and as part of, the African Studies Workshop at Harvard (ASW). It consists of two components: (i) a public session, held every Monday afternoon at 2.00-4.00, at which a speaker invited from outside the university, a member of the Harvard faculty, or an advanced graduate student will present a pre-circulated paper to an audience similarly composed of faculty, visiting scholars, students, and Africanists from other institutions in the greater Boston area. (The pre-circulated papers are usually sent out, latest, by the Wednesday before it is to be presented.) *You can view videos of previous African Studies Workshops on this link: https://vimeo.com/247907896. Each session includes a brief introduction to the paper by its author, a commentary by a discussant, and an open conversation, in which students are given the floor first, followed by anyone else present; (ii) an under/graduate student seminar component, to be held every Monday at 9.45-11.30am, at which the instructors will introduce and contextualize the topic of the paper to be presented later in the day at the public session, after which members of the class will have an opportunity to discuss it in depth. (In some instances, texts relevant to the topic, drawn from the contemporary Africanist canon, will be suggested as supplementary reading.)

The theme of the course derives from a story in The Economist in 2011 under the title, "Africa Rising." It argued that the continent has come to epitomize both the "transformative promise of [capitalist] growth and its bleakest dimensions." During the spring semester, we shall explore Africa's changing place in the world – and the new economies, legalities, socialities, and cultural forms that have arisen there; this in relation to the papers presented in the public sessions of the ASW. We shall also interrogate the claim that the African present is a foreshadowing of processes beginning to occur elsewhere; that, therefore, it is a productive source of theory about current conditions world-wide.

Themes in the History of African American Political Thought: Seminar (216013)

*Brandon Terry*

2021 Spring (4 Credits)  
**Schedule:** R 0300 PM - 0500 PM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

This seminar will closely examine influential figures and texts in the history of African-American political thought from slavery to the contemporary era. We will critically evaluate, assess, and critique a range of African American authors and their interlocutors across genres (e.g., philosophy, literature, music, etc.) to better understand and build upon the development of key traditions, themes, and concepts. This year's theme will be the idea of "crime" in black politics and political thought, with special eye toward illuminating contemporary debates around hyperincarceration, public safety, and the political ethics of social movements. Open to graduates and undergraduates.

Schedule: TBD

Continuation of Twi A. Twi is one of the regional languages of the Akan speaking peoples of Ghana constituting the largest ethnic group in Ghana. Twi is fast becoming the *lingua franca* of the country. The Akan people are well known for their art and culture, especially the traditional colorful Kente cloth. Students are strongly encouraged to complete both terms of this course (parts AA and AB) within the same academic year.

Course Notes: Languages in the tutorial program are offered when there is demonstrated curricular or academic need on the part of the student, and when suitable instruction can be arranged. Please contact the department to learn more.

Recommended Prep: Twi A or the equivalent of one year's study of Twi.

Anthropology 97X
Sophomore Tutorial in Archaeology (113567)
Amy Clark
2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: Instructor Enrollment Cap: 10
This course will focus on archaeological thinking, the cognitive skeleton of the discipline of archaeology, the principles and the logic that are the foundation of all archaeological conclusions and research. Central to this is an understanding of research design, archaeological theory and interpretation, culture and material culture; as well as an understanding of how to examine and construct an archaeological argument.

Class Notes: Meeting time will be determined based on the availability of enrollees.
Anthropology 97Z
Sophomore Tutorial in Social Anthropology (143028)
Malavika Reddy
2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a

The course is designed as a foundational course with the specific purpose of introducing the principal social theorists whose work has been crucial to the discipline of social anthropology, that is: Marx, Durkheim, Weber, and Foucault. The first objective is to delineate the broad outlines of their thought and the central questions that informed their intellectual and political interventions. The second objective is to provide a solid grounding in the key concepts as well as the theoretical and methodological contributions of these social theorists. Finally, we will seek to demonstrate how contemporary anthropological theory continues to engage with their work.

Course Notes: Required of all concentrators. Weekly 2-hour sections to be arranged.
Class Notes: Meeting time will be determined based on the availability of enrollees.

Anthropology 98A
Junior Tutorial in Anthropology (205494)
Zoe Eddy
2020 Fall (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a

This course is focused on preparing students to do anthropological fieldwork and develop their own research projects. Through concrete case studies and practical exercises students will be introduced to different approaches to developing research problems, conducting research, and ethnographic writing. Topics covered will include defining research questions and objects of study, situating projects within scholarly literature, and bringing together research data and analysis in different forms of anthropological writing.

The aim of the course is not an exhaustive overview of research design but to familiarize students with some of the key practices and concerns of anthropological research and writing. The course seeks to guide students in reading anthropological texts, understanding the range of data and its representations, unpacking the analytical moves being made in the text, and thinking through the implications of such presentation.

The course is divided into two main components. The first focuses on a case study of a developing anthropological work by the instructor. Through select readings related to their topic of interest and original research documents (proposals, fieldnotes, media, news reports, photographs, analytical essays, among others) students will learn the process of turning a research question into an anthropological project. The case study is also meant to prepare students for the experience of conducting their own research and serve as an example of how to transform research findings into anthropological writing.
Simultaneously, this course is also a research practicum in which students will apply what they have learned to design their own anthropological projects and share with each other research goals, experiences, and components of their emerging work. Through structured assignments, seminar workshops, and regular individual meetings with their instructor students will produce an original research essay based on their research over the course of the semester.

Course Notes: Required of all concentrators in Anthropology.

Class Notes: Meeting time will be determined based on the availability of enrollees.

Anthropology 98B

Junior Tutorial for Thesis Writers in Anthropology (205522)

Zoe Eddy

2021 Spring (4 Credits)  
Schedule: TBD

Instructor Permissions: Instructor  
Enrollment Cap: n/a

This individual tutorial is for anthropology students intending to write a senior thesis, and is normally undertaken with an advanced graduate student during the second term of junior year. Students will have weekly meetings with the project advisor for the purposes of developing the appropriate background research on theoretical, thematic, regional, and methodological literature relevant to their thesis topic, and fully refining their summer research proposal. The tutorial's final paper will be comprised of a research proposal representing the research undertaken during the semester.

Class Notes: Meeting time will be determined based on the availability of enrollees.

Anthropology 99A

Thesis Tutorial in Anthropology - Senior Year (205184)

Zoe Eddy

2020 Fall (4 Credits)  
Schedule: TBD

Instructor Permissions: Instructor  
Enrollment Cap: 30

This is a full year research and writing seminar limited to senior honors candidates. The course is intended to provide students with practical guidance and advice during the thesis writing process through structured assignments and peer feedback on work-in-progress. It is intended to supplement not replace faculty thesis advising (with the requirement of consulting regularly with the advisor built into the assignments) and, most importantly, allow students to share their work and experiences with other thesis
writers in a collegial and supportive environment. The seminar will be run jointly by the Department of Anthropology Assistant Director of Undergraduate Studies and the Writing Tutor. Part one of a two part series.

Class Notes: Meeting time will be determined based on the availability of enrollees.

**Anthropology 1080**

American History Before Columbus (125588)

Matt Liebmann

2020 Fall (4 Credits)  
**Schedule:** TR -  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** 12

What happened in America before 1492? What were the major turning points in Native American history? Why don’t we know more about the ancient history of North America? Anthropology 1080 answers these questions by introducing you to the discipline of North American archaeology. This lecture course will help
you to understand how Native American societies developed in the millennia before the European invasion, why American Indian peoples live where they do today, and how their dynamic populations have changed over the course of the past 15,000 years. In the process you'll have the opportunity to examine a truly world-class collection of artifacts from the Peabody Museum, allowing you to hold the remains of American history in your own hands and investigate the past with your own eyes.

Class Notes: This course will meet on Tuesdays and Thursdays, preferably 6:00 pm Eastern. The final meeting time will be determined based on the availability of enrollees.

Anthropology 1178

Amazonian Archaeology (216422)

Sadie Weber

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Amazonia is seen as a pristine wilderness that has remained untouched since the arrival of Europeans. Much of the current narrative on the Amazon focuses on the preservation of natural resources and yet-to-be-discovered species of flora and fauna. While the ecological conservation of this space is undoubtedly crucial, much of this work has excluded the cultural aspects of this region. Recent archaeological research has demonstrated that this landscape was heavily modified by Indigenous peoples prior to the arrival of Europeans. This course aims to upend preconceived notions of the Amazon and to problematize modern conservation and land-use strategies by teaching the deep Indigenous history of the region. We will
examine Amazonia as a cultural space with complex societies whose human history stretches back millennia and whose vibrant culture continues to exist today. This course will draw on material ranging from Europeans' accounts of the region, to academic articles, to modern film and literature produced by Indigenous/traditional peoples living in Amazonia today.

Class Notes: The final meeting time will be determined based on the availability of enrollees.

Options considered:

Tuesdays/Thursdays:
- 9:00 AM 10:15 AM
- 10:30 AM 11:45 AM
- 12:00 PM 1:15 PM
- 1:30 PM 2:45 PM

Monday/Wednesday:

Anthropology 1181

Tacos, Tamales, and Tequila: Eating and Drinking in Ancient Mexico (205154)

Jennifer Carballo

2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a

Is there such a thing as "authentic" Mexican cuisine? Where do menu items like tacos, burritos, guacamole, and margaritas have their origins? When the Spanish arrived in Mexico just over 500 years ago, they were amazed by the variety of food and drinks they had never seen before--tomatoes of all kinds and colors, chili peppers, spices like chocolate and vanilla, tortillas, tamales, alcoholic drinks made from fermented agave sap, and more. While historical accounts provide an important starting point to understanding what Aztec cuisine was like in the 1500s, archaeology is revealing the diversity of ancient Mexican food, drink, and cultures, across time and space.

This course introduces students to Mexican cuisine from an archaeological perspective, and examines how foodways intersect with social phenomena such as status, ethnicity, gender, and religion. Topics include the "Paleo-diet" of early hunter-gatherers; farming and feasting in early villages; how tortillas and other inventions were important to the rise of towns, temples, and urbanism; food and drink in sacrifice and ritual; courtly behavior and regional cuisines; food production, marketplaces, and political economy; the Columbian exchange and the beginnings of
modern cuisine. Hands-on activities, food tastings, and Peabody Museum collections will be incorporated into class discussions and assignments, as students gain a deeper understanding of the archaeology of ancient Mexico. Students will be encouraged to contribute their own interests and background to class discussions. Students from any level, from freshmen to graduate students, are welcome.

Class Notes: Meeting time will be determined based on the availability of enrollees.

**Anthropology 1270**

Sick: 10,000 Years of Health and Disease (215940)

*Christina Warinner*

2020 Fall (4 Credits)  

**Schedule:**  
MW 1030 AM - 1145 AM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

This course surveys the concept of health and the major nutritional and infectious diseases that have impacted human populations over the past ten thousand years. Special attention is paid to the methods used to detect and identify disease in the past, including skeletal paleopathology, paleodemography, and pathogenomics, as well as human social factors that have influenced human disease exposure and susceptibility, including long-distance migration, agriculture and pastoralism, urbanization, and industrialization.

Class Notes: Course Meets: M and W, 10:30-11:45am EDT (meeting time tentative)

Quests for Wisdom: Religious, Moral and Aesthetic Experiences in the Art of Living in Perilous Times (108865)

*Arthur Kleinman*  
*David L. Carrasco*  
*Michael J. Puett*  
*Stephanie Paulsell*

2020 Fall (4 Credits)  

**Schedule:**  
W 0300 PM - 0545 PM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a
This is an experimental course taught from the perspectives of anthropology and religious studies intended to be transformative for students and teachers alike. Our goal is to develop, in collaboration with enrolled students, a pedagogy for fostering students’ personal quests for wisdom, through lectures and readings, through extensive conversation, and also through other experiences inside and outside of class, including dramaturgical experiences with film or theater, caregiving, and meditation.

As teachers we are inspired by William James's conception of knowledge in the University as intended for strategies needed to live a life of purpose and significance that also contributes to improving the world. In the words of Albert Camus, "Real generosity toward the future lies in giving all to the present." Together, we will engage with the problems of danger, uncertainty, failure, and suffering that led the founders of the social sciences and humanities to ask fundamental questions about meaning, imagination, aesthetics, social life and subjective experience. These are the same existential questions that bring ordinary people all over the world, and throughout history, to question commonsense reality in the face of catastrophes and the violence of everyday life. The many answers to these questions – wisdom that is found in religious, ethical and aesthetic quests, expressions and traditions - are intended to furnish individuals’ art of living with strategies to respond to potential and hope, pain and suffering, to promote healing, and to address concerns about salvation, redemption, or other kinds of moral-emotional transformation.

Together - through discussions, lectures, films, virtual museum visits, readings, and action - we will explore different paths to wisdom, including (1) the youthful quest for truth, beauty and goodness; (2) the affirmation of caregiving for others as the means of applying wisdom to repair and improve the world; 3) suffering and the ordeal of journeying through labyrinths and tests of courage; (4) the discovery of wisdom in teachers and mentors near and far; (5) the process of creative mourning for past losses and shaping new beginnings.

Water, Infrastructure, and Meaning (204965)

*Steven C. Caton*

2020 Fall (4 Credits)  

**Schedule:** TBD  

**Instructor Permissions:** None  

**Enrollment Cap:** n/a

This course will show the usefulness of anthropology, conceptually and methodologically, for understanding water consumption and management in past and contemporary societies, especially those undergoing water stress. Topics include cultural notions and values of water, the hydrology and technologies of water purification and conservation, irrigation and the state, big dams controversies, water as a "right" and water as a "commodity," and local, national and international water management schemes. Case studies are drawn from around the world. Though social anthropology and archaeology are the main disciplines upon which the course draws, it will also engage developmental economics, geography, political ecology, history, and water sciences such as conservation and engineering.

**Class Notes:** The course will meet in small groups. Meeting times will be determined based on the availability of enrollees.

Anthropology 1653

Language and Politics (204435)

Nicholas Harkness
Steven C. Caton

2021 Spring (4 Credits)       Schedule:       TBD
Instructor Permissions:       None           Enrollment Cap:  n/a

This seminar draws on the anthropological study of language and culture to look at the role of language and communication in political formations. The first part of the course develops a general approach to language and politics by focusing on the concept of ideology, more particularly, the relationship between linguistic ideologies and political ideologies. Subsequently, we will use this work to study the political dimensions of three broader semiotic processes: (1) the semiotics of standardization in language and other cultural forms; (2) the semiotics of translation and more broadly the circulation of texts across social and linguistic boundaries; and (3) the semiotics of publicity and the linguistic construction of public authority. Throughout the course, we will see how linguistic and communicative practices and ideologies come to mediate the making of polities, publics, and peoples, and indeed the very forms that politics take, including the very meaning of the political within those forms.

Class Notes:        Meeting time will be determined based on the availability of enrollees.

### Anthropology 1824

**Race and Genetics: American Biopolitics (213467)**

*Anna Jabloner*

2020 Fall (4 Credits)  
**Schedule:** W -
This seminar examines the increasingly convoluted relationship between genetics/genomics and race in the United States. In this contemporary moment, geneticists are debating definitions or "locations" of race on the human genome. Some draw on older racial classifications, others claim that the complexities of human ancestry cannot be captured by race. In this course, we will read social scientific studies of race categories in genetics and genomics, as well as scholarship on the meanings of race as identity category in American society. Rather than define what race really is or pass judgments on biology, our goal will be to understand a) the historically and culturally specific relationship between race and genetics, and b) the political stakes and charged conditions and implications of the current entanglements of genomic science and race categories in American society.

Course Notes: Advanced undergraduate students
Class Notes: Possible time options considered:
WEDNESDAY
12:00 PM 2:45 PM
12:45 PM 2:45 PM
3:00 PM 5:45 PM
The final meeting time will be determined based on the availability of enrollees.

Anthropology 1883
Where Science Meets Society: Introduction to STS (213469)
Anna Jabloner
2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: 30

The German word for science literally means "knowledge made." In line with this meaning, STS approaches science as practice. The interdisciplinary field asks empirically and methodologically how knowledge is made, how truths become truths, and how matters come to matter and to be matters of fact. This course serves as basic introduction to STS, highlighting key political interventions, theoretical contributions, and the field’s recent ascent into a burgeoning academic inter-discipline.
Class Notes: Meeting time will be determined based on the availability of enrollees.

Anthropology 1906

Care in Critical Times (216164)

Andrea Wright

2020 Fall (4 Credits)  
Schedule: TBD  
Instructor Permissions:  
Enrollment Cap: 15

What is care? How can and do communities mobilize care as a social intervention, political act, and tool for building intimacy, healing, and hope? Now, more than ever, it is imperative that we care for ourselves and our communities, but caring is not an apolitical or individual act and we must analyze the inherent inequalities and social dimensions of what it means to give and receive care. Employing a feminist mode of inquiry and an engaged anthropology approach, this course requires students to not only ask how they might engage in caring acts with their own communities, but to complete a locally based community project that brings care, in all its multifariousness, to the fore. Readings will focus on ethnographic, scholarly, and public-facing works that illustrate how culture, social relations, and systems of power shape the experiences, roles, practices, and interactions of individuals and their communities in the exchange of care.

Class Notes: The final meeting time will be determined based on the availability of enrollees.

Options considered:

Wednesday
9:45 AM 11:45 AM
12:45 PM 2:45 PM

Anthropology 2077
Ethics in Archaeology (216423)
Sadie Weber

2020 Fall (4 Credits) Schedule: TBD
Instructor Permissions: Instructor Enrollment Cap: 15

Archaeology raises profound ethical issues due to its elitist and colonialist roots. As the field reckons with its past, new standards for practice are brought forth through trial and error. Through case studies and interviews with guest speakers, this course will explore ethical issues within archaeology and the accountability of its practitioners to descendant communities, students, and the general public. We will engage with literature surrounding museums, heritage ownership, NAGPRA, new technologies, and ancient DNA. The final portion of the course will focus on archaeology in 2020. Where can and does archaeology fit in a world fighting a pandemic? How can archaeology meaningfully contribute to discourses of increasing equity for all as the #BlackLivesMatter and #LandBack movements gain further traction in the United States today?

Class Notes: The final meeting time will be determined based on the availability of enrollees.
Options considered:

Proseminar in Archaeology (125614)

*Amy Clark*

2020 Fall (4 Credits)  

**Schedule:** TBD

**Instructor Permissions:** None  

**Enrollment Cap:** n/a

This graduate seminar reviews critical issues in archaeological approaches to small-scale societies, including methods and interpretations relating to the study of mobility, sedentism, seasonality, plant and animal exploitation, and migration.

Class Notes: The final meeting time will be determined based on the availability of enrollees.

Options considered (in order of instructor preference):
Anthropology 2650A

History and Theory of Social Anthropology: Proseminar (110977)

Nicholas Harkness

2020 Fall (4 Credits)  

Schedule: TR 0900 AM - 1015 AM  

Instructor Permissions: Instructor  

Enrollment Cap: n/a  

A critical review of the major theoretical approaches in social anthropology.

Course Notes: Required of candidates for the PhD in Social Anthropology. Not open to undergraduates.

Class Notes: Enrollment in this course is restricted to G1 members of the Anthropology Department.

Anthropology 2650B

History and Theory of Social Anthropology: Proseminar (144623)

George Paul Meiu

2021 Spring (4 Credits)  

Schedule: TBD  

Instructor Permissions: Instructor  

Enrollment Cap: 15  

This class is a critical exploration of theory and method in Anthropology. To what extent have claims for the unique potential of the discipline for critical estrangement stood up to the challenges of the long history of modernity on a world-wide scale? What might its distinctive modes of investigation offer other decentering projects in the human sciences as they grapple with the changing nature of society, state, and empire in the face of radical shifts in the form of economy and politics; or the morphing shape of capitalism, value production, and social inequality? The course will explore how the interplay of scholarly practice and context have shifted in Anthropology from colonial to postcolonial times, and will encourage
discussion of the genealogy of the discipline, broadly understood, within the human sciences writ large.

Course Notes: Required of candidates for the PhD in Social Anthropology. Not open to undergraduates.

Class Notes: Meeting time will be determined based on the availability of enrollees.

Anthropology 2653

Feminism and Anthropology (213468)

Anna Jabloner

2021 Spring (4 Credits)

Instructor Permissions: Instructor

Enrollment Cap: 30

Schedule: TBD

This course considers the relationship between feminism (as activist realm, as theoretical field, in its institutionalized form as gender studies) and anthropology. We will begin with early ethnographic writing by women and about women, and analyze some of the interventions feminists hope to make in anthropology. We will then examine the relationship between feminism and anthropology through two topics: kinship and politics. Our course will consider how feminist anthropologists have connected the study of kinship, culture and nature, and carved out a place for the anthropological study of gender relations. In our study of kinship, the politics of reproduction and of labor will be important issues, such as the question of who gets to be related to whom, and whose work counts as what. In our study of politics, we will look at specific feminist statements and consider their impact on, and relationship with, the field of anthropology. Finally, our course will investigate more recent work on nature and biology, as well as (queer) gender and sexuality, in order to speculate on the futures and potentials of feminist anthropologies.

Class Notes: Meeting time will be determined based on the availability of enrollees.

Anthropology 2679

Kings and Criminals: Figurations of Sovereignty (215947)

Malavika Reddy

2020 Fall (4 Credits)

Instructor Permissions: Instructor

Enrollment Cap: 10

Schedule: TBD

This course considers how anthropology has understood sovereignty, as theoretical object and political process. What is at stake in asking about how authority is founded and sustained? How have anthropologists
posed these questions and, in so doing, related their findings both a) to philosophical inquiries into the ontology of politics and b) to colonial and imperial projects? A central concern of the course is how sovereignty is embodied, hence a focus on figuration. Close attention will be paid to the ways in which anthropologists have grappled with the material worlds of sovereignty – crowns, ritual, flesh and so on – in part to enable students to construct a methodological toolkit to apprehend and analyze sovereign forms.

Class Notes: The final meeting time will be determined based on the availability of enrollees.

Options considered (in order of preference):
W: 9:45-11:45
W: 12:00-2:45

Anthropology 2702
Political Economy (126266)
Ajantha Subramanian
2020 Fall (4 Credits)  Schedule:  TBD
Instructor Permissions:  Instructor  Enrollment Cap:  n/a
This course probes organizing concepts in political economy through close readings of foundational thinkers like Locke, Marx, and Gramsci and their contemporary interlocutors. It tracks how the social life of economic phenomena and the economic contours of political life have been understood over time and according to context. It attends in particular to the development of political economic thought and practice in the context of European colonialism, and to ongoing exchanges between Marxism, postcolonial, and anthropological critique.
Final time being considered: Wednesdays 9am-11:45am EDT.
The final meeting time will be determined based on the availability of enrollees.

**Anthropology 2738**

Remaking Life and Death (211109)

*Anya Bernstein*

2021 Spring (4 Credits)  
Schedule: TBD  
Instructor Permissions: None  
Enrollment Cap: n/a

This course is a critical reading graduate seminar focusing on how defining the boundaries between life and death became a matter of profound political, cultural, and scientific debate. Guided by the concepts of bio- and necropolitics, we will explore the shifting relations between body and person, human and time, and technology and biology while attending to the changing political, biomedical and religious contexts. The course includes readings from a number of anthropological subfields, including medical anthropology, anthropology of science and technology, religion, politics, and the Anthropocene. We will discuss the range of issues, from the classic studies of mortuary rituals to political lives of dead bodies to technoscientific reconfigurations of the human and of life itself.

Class Notes: Meeting time will be determined based on the availability of enrollees.

**Anthropology 2831**

Audio in Multimodal Practice (215955)

2021 Spring (4 Credits)  
Schedule: TBD  
Instructor Permissions: Instructor  
Enrollment Cap: 10
This course presents an opportunity for students engaged in media anthropology, critical media practice, art, or other audiovisual enterprises to focus primarily on the sonic aspects of their engagements, and to gain experience and expertise in working with audio in conjunction with other media. We will examine the rubric of "multimodality" which has increasingly been taken up in the context of anthropology to discuss particular approaches to audiovisual work, and through readings and listening sessions we will also listen beyond the academy to the history of "sound art" and the ways audio has been used in various artistic and politically-engaged practices. From these we will move on to problematize, perhaps even undermine, and reformulate ideas and practices which combine audio with moving image or other media.

Aesthetics and ethics, theory and technique, concept and practice are intricately interwoven at every level in multimodal work, and so this course will focus heavily on technical workshops even as we delve into the conceptual and theoretical motivations and implications of the work. Practical and theoretical work will be interwoven throughout the semester. Rather than taking up conventions or formulae, the course will provide a space for experimentation, to reconsider possibilities in an expanded sense of nonfiction for relationships between audio and image, text, or other media.

Class Notes: Meeting time will be determined based on the availability of enrollees.

Anthropology 2859

Colonial Encounters, Postcolonial Disorders (215946)

Joseph Gone
Byron Good
Mary Jo Good
Michael Fischer

2020 Fall (4 Credits) Schedule: T -
Instructor Permissions: Instructor Enrollment Cap: 20

This course will engage three major themes. First, it will review issues related to the complex relationships between anthropology and colonialism(s) and their after lives in the postcolonial settings in which anthropologists work. While it is not a course focused narrowly on anthropology and colonialism, it takes up issues of anthropology's relations with colonialism, colonial legacies in places anthropologists work, decolonizing and newer decolonial methodologies. Second, the course will take up issues of 'postcolonial disorders' and roles of engaged anthropologists in such settings. These will include a special focus on mental health problems and the development of mental health responses in American Indian and other settler colonial communities, as well as in post-conflict settings. Special attention will be given to debates about the nature of (or approaches to) cultural variation in ideas of personhood, expression of emotion, mental health problems ('trauma,' historical trauma, PTSD), and the relation of cultural distinctive interventions to psychological and medical components of mental health services. Third, the course will explore issues of haunting and hauntology, along with related issues of silencing and memory in postcolonial and post-trauma settings. We will engage discussions of the haunting qualities of historical violence, including colonial violence, and anthropologists' use of theories of hauntology. Featured throughout will be perspectives and voices on decolonization from Indigenous peoples themselves (including both activists and scholars), and discussion of how these can be engaged in research, writing, and collaborations in developing mental health programs. Special attention will be given to work in American Indian communities, Southeast Asia, and the Middle East, where the seminar leaders have
worked, but these will be linked to studies in other regions where students may work and where there are robust literatures.

Class Notes: The final meeting time will be determined based on the availability of enrollees.

This course will meet on Tuesdays. The time options considered are:
9am-11:45am EDT
12pm-2:45pm EDT
6pm-8:45pm EDT

Anthropology 3070
Professionalization in Archaeology (120488)

Christina Warinner

2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a

All good research begins with a strong foundation. This course is aimed at providing you with the foundational knowledge and basic tools you need to succeed as a professional archaeologist. Aided in part by guest speakers from within and beyond Harvard, this course emphasizes collaborative research,
presentation, publication, grant proposal writing, conflict resolution, and other skills to help you complete your PhD and to be competitive on the job market afterwards, and to navigate the complex intellectual, social, and personal demands of academia.

Course Notes: Anthropology 2070 is commonly taken before Anthropology 3070, but is not a prerequisite. Required of students in the Archaeology Program of Anthropology; open to other graduate students and advanced undergraduates with permission of instructor.

Requirements: Course open to Graduate Students Only

Additional Course Attributes:

Anthropology 3628

Anthropological Research Methods (108949)
This course offers a conceptual overview of research methods used by anthropologists. We will hear from faculty members their experience of doing fieldwork—from formulating a research question, choosing a site, entering the field to ethical issues they face in the field. Students will not only learn about but also practice these various methods and reflect on their projects in lights of the discussion about methods. To that end, students will complete several exercises and craft a method paper for their own project.

Course Notes: This course is limited to graduate students in anthropology.
Class Notes: Meeting time will be determined based on the availability of enrollees.
Requirements: Course open to Graduate Students Only

Schedule: TBD  

Instructor Permissions: Instructor  
Enrollment Cap: n/a

This course has two aims: 1) to provide graduate students with the necessary training to be effective Teaching Fellows at Harvard, and 2) to give you the tools to develop your own approach to critical pedagogy in the field of Anthropology. Required for graduate students in the Spring of their second year. Classes will also be advertised to all Anthropology graduate students as optional Pedagogy Workshops for professional development. While discussions will be tailored to the unique challenges of teaching in Anthropology (across Archaeology and Social Anthropology), students will also be prepared to TF outside of Anthropology. Workshop-style classes are interspersed with formal office hours throughout the semester. Office hours are designed for one-on-one or small-group consultation with the Pedagogy Fellow in conjunction with course requirements.

Class Notes: Meeting time will be determined based on the availability of enrollees.

Requirements: Course open to Graduate Students Only

Applied Computation 207
Systems Development for Computational Science (128105)

David Sondak
2020 Fall (4 Credits) Schedule: TR 1200 PM - 0115 PM
Instructor Permissions: None Enrollment Cap: n/a

This is a project-based course emphasizing designing, building, testing, maintaining and modifying software for scientific computing. Students will work in groups on a number of projects, ranging from small data-transformation utilities to large-scale systems. Students will learn to use a variety of tools and languages, as well as various techniques for organizing teams. Most important, students will learn to fit tools and approaches to the problem being solved.

Class Notes: Students who previously took CS207 are not eligible to enroll in CS107 or AC207.

Recommended Prep: Students are expected to have basic programming experience (Computer Science 50).

Applied Computation 209A
Data Science 1: Introduction to Data Science (109898)

Pavlos Protopapas
Kevin A. Rader
Christopher Tanner
2020 Fall (4 Credits) Schedule: MWF 0900 AM - 1015 AM
Instructor Permissions: None Enrollment Cap: n/a

Data Science 1 is the first half of a one-year introduction to data science. The course will focus on the analysis of messy, real life data to perform predictions using statistical and machine learning methods. Material covered will integrate the five key facets of an investigation using data: (1) data collection - data wrangling, cleaning, and sampling to get a suitable data set; (2) data management - accessing data quickly and reliably; (3) exploratory data analysis – generating hypotheses and building intuition; (4) prediction or statistical learning; and (5) communication – summarizing results through visualization, stories, and interpretable summaries. Part one of a two part series. The curriculum for this course builds throughout the academic year. Students are strongly encouraged to enroll in both the fall and spring course within the same academic year. Part one of a two part series.

Course Notes: Only one of CS 109a, AC 209a, or Stat 121a can be taken for credit.
Students who have previously taken CS 109, AC 209, or Stat 121 cannot take CS 109a, AC 209a, or Stat 121a for credit.

Recommended Prep: Programming knowledge at the level of CS 50 or above, and statistics knowledge at the level of Stat 100 or above (Stat 110 recommended).

Requirements: Not to be taken in addition to Computer Science 109, or Computer Science 109A, or Statistics 121, or Statistics 121A.

Applied Computation 209B

Data Science 2: Advanced Topics in Data Science (203547)

Pavlos Protopapas
Mark Glickman
Christopher Tanner

2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a

Data Science 2 is the second half of a one-year introduction to data science. Building upon the material in Data Science 1, the course introduces advanced methods for data wrangling, data visualization, and statistical modeling and prediction. Topics include big data and database management, interactive visualizations, nonlinear statistical models, and deep learning. Part two of a two part series. The curriculum for this course builds throughout the academic year. Students are strongly encouraged to enroll in both the fall and spring course within the same academic year. Part two of a two part series.

Course Notes: Can only be taken after successful completion of CS 109a, AC 209a, Stat 121a, or equivalent. Students who have previously taken CS 109, AC 209, or Stat 121 cannot take CS 109b, AC 209b, or Stat 121b for credit.

Recommended Prep: CS 109a, AC 209a, or Stat 121a required.

Requirements: Requisite: (Must take CS 109A OR APCOMP 209A OR STAT 121A before taking APCOMP 209B) AND (Cannot take APCOMP 209B, if already taken APCOMP 209 OR CS 109 OR CS 109B OR STAT 121 OR STAT 121B)

Applied Computation 221

Critical Thinking in Data Science (207093)

Michael Smith

2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: Instructor Enrollment Cap: 75

This course examines the wide-ranging impact data science has on the world and how to think critically about issues of fairness, privacy, ethics, and bias while building algorithms and predictive models that get deployed in the form of products, policy and scientific research. Topics will include algorithmic accountability and discriminatory algorithms, black box algorithms, data privacy and security, ethical frameworks; and experimental and product design. We will work through case studies in a variety of contexts including media, tech and sharing economy platforms; medicine and public health; data science for social good, and politics. We will look at the underlying machine learning algorithms, statistical models,
code and data. Threads of history, philosophy, business models and strategy; and regulatory and policy
issues will be woven throughout the course.

Course Notes: This does not count as a technical or disciplinary course for SEAS PhD
students, nor for SEAS masters-degree students outside of CSE and
Data Science.

Recommended Prep: CS 109A, Introduction to Data Science or equivalent by instructor
approval.

Applied Computation 275

Computational Design of Materials (128103)

Boris Kozinsky

2021 Spring (4 Credits)  Schedule: TBD

Instructor Permissions: None  Enrollment Cap: n/a

This course will teach theoretical background and practical applications of modern computational methods
used to understand and design properties of advanced functional materials. Topics will include classical
potentials and quantum first-principles energy models, density functional theory methods, Monte Carlo
sampling and molecular dynamics simulations of phase transitions and free energies, fluctuations and
transport properties, and machine learning approaches. Examples will be based on rational design of
industrially relevant materials for energy conversion and storage, electronic and magnetic devices, and
nanotechnology.

Course Notes: Applied Computation 275 is also offered as Applied Physics 275.
Students may not take both for credit.

Recommended Prep: Undergraduate coursework in quantum mechanics and solid-state
physics, physical chemistry, linear algebra, thermodynamics and
statistical mechanics.

Applied Computation 295

Topics in Applied Computation: Advanced Practical Data Science (215121)

Pavlos Protopapas

2020 Fall (4 Credits)  Schedule: TR 1030 AM - 1145 AM

Instructor Permissions: None  Enrollment Cap: n/a
In this course we explore advanced practical data science practices. The course will be divided into three major topics:
1) How to scale a model from a prototype (often in jupyter notebooks) to the cloud. In this module, we cover virtual environments, containers, and virtual machines before learning about microservices and Kupernetes. Along the way, students will be exposed to Dask.
2) How to use existing models for transfer learning. Transfer learning is a machine learning method where a model developed for a task is reused as the starting point for a model on a second task. It is a popular approach in deep learning where pre-trained models are used as the starting point on computer vision and natural language processing tasks. This can be very important, given the vast compute and time resources required to develop neural network models on these problems and given the huge jumps in skill that these models can provide to related problems. In this part of the course we will examine various pre-existing models and techniques in transfer learning.
3) In the third part we will be introducing a number of intuitive visualization tools for investigating properties and diagnosing issues of models. We will be demonstrating a number of visualization tools ranging from the well established (like saliency maps) to recent ones that have appeared in https://distill.pub.

Recommended Prep: AC209A, AC209B

Computational Science and Engineering Capstone Project (156202)

Christopher Tanner

2020 Fall (4 Credits)  Schedule: W 1200 PM - 0245 PM
Instructor Permissions: Instructor  Enrollment Cap: 40

The CSE capstone course is intended to provide students with an opportunity to work in groups of 3-4 on a real-world project. Students will develop novel ideas while applying and enhancing skills they have acquired from their core courses and electives. By requiring students to complete a substantial and challenging collaborative project, the capstone course will prepare students for the professional world and ensure that they are trained to conduct research. There will be no additional homework. There will be several mini-lectures, focusing on supplemental skills such as technical writing, public speaking, reading research papers, using version control software, identifying biases, etc. Since the projects concern real-world projects, datasets will likely be messy, and there is a focus on effectively communicating your progress to both the staff and partner organization.

Applied Mathematics 10
Computing for Science and Engineering (213407)
Efthimios Kaxiras
2020 Fall (4 Credits) Schedule: TR 1200 PM - 0115 PM
Instructor Permissions: None Enrollment Cap: n/a

This course is a systematic introduction to a computing environment (python with jupyter notebooks) suited for applications to science and engineering. It consists of three Modules: 1. Basics: essential elements of computing: types of variables (integer, floating, logical), lists, arrays, basic operations (for, while loops, if statement), definition of functions, file handling and plotting. 2. Elementary: numerical differentiation, root finding, series expansions, numerical integration, fitting of curves and error analysis, plotting and simulating in higher dimensions (contours). 3. Advanced: solving simple first and second-order ordinary differential equations, solving partial differential equations, use of random numbers for sampling and simulations, such as Monte Carlo integration and modeling realistic problems, like the spread of the COVID-19 pandemic. The course work consists of attending lectures and labs, weekly homework assignments, a mid-term project and a final project; all work is developed in small groups, but assignments must be written by students individually.

Class Notes: One lab section/week, Fri. (three options, 75 min. / times to be determined)

Recommended Prep: AP Calculus BC in high school and/or co-enrollment in Math 1b or higher; students who do not meet these requirements in their first-year are welcome to take the course as sophomores. No programming background is required. CS50 is independent of this course; students could take CS50 before or after this course – there is no preference.

Applied Mathematics 22A
Solving and Optimizing (211334)
Steven Gortler
2020 Fall (4 Credits) Schedule: MWF 1200 PM - 0115 PM
Instructor Permissions: None Enrollment Cap: n/a

This course covers a combination of linear algebra and multivariate calculus with an eye towards solving systems of equations and optimization problems. Students will learn how to prove some key results, and will also implement these ideas with code. Linear algebra: matrices, vector spaces, bases and dimension,
inner products, least squares problems, eigenvalues, eigenvectors, singular values, singular vectors. Multivariate calculus: partial differentiation, gradient and Hessian, critical points, Lagrange Multipliers.

Course Notes: Not to be taken in addition to AM21b or Math21b. Some overlap with AM21a and Math21a. Can be used in conjunction with Stat110 to fulfill the mathematics requirements for computer science.

Recommended Prep: Mathematics 1b or an equivalent background in mathematics.

Applied Mathematics 50

Introduction to Applied Mathematics (122564)

Cengiz Pehlevan

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: 35

This course provides an introduction to the problems and issues of applied mathematics, focusing on areas where mathematical ideas have had a major impact on diverse fields of human inquiry. The course is organized around two-week topics drawn from a variety of fields, and involves reading classic mathematical papers in each topic. The course also provides an introduction to mathematical modeling and programming.
Course Notes: Course limited to 35 students. Sections Friday, 3:00pm-4:15pm.

Recommended Prep: Mathematics 1b is a prerequisite, although it can be taken concurrently. Some limited concepts from Mathematics 21a / Applied Mathematics 21a will be used, but they can be learned during the course. The course provides an introduction to programming with a mathematical focus, and starts from the level of a complete beginner.

Applied Mathematics 91R

Supervised Reading and Research (121692)

Margo Levine
Sarah Iams

2021 Spring (4 Credits)  Schedule: TBD
Instructor Permissions: Instructor  Enrollment Cap: n/a

Supervised reading or research on topics not covered by regular courses. For AM concentrators, work may be supervised by faculty in other departments. For non-concentrators, work must be supervised by an AM faculty member. Students must receive the approval of an (Associate) Director of Undergraduate Studies and obtain their signature before submitting AM91r forms.

Course Notes: Students cannot take AM 91r and 99r simultaneously with the same supervisors. Normally may not be taken more than twice. May be counted once for concentration credit in Applied Mathematics (as a breadth course). May be taken in either term. When project work from APMTH 91R is used to satisfy the honors modeling requirement, a paper describing the project must be submitted to the concentration for evaluation by the end of the final exam period in the semester in which the 91R is undertaken. For further information, write am-advising@seas.harvard.edu.

Students must receive the approval of an (Associate) Director of Undergraduate Studies and obtain their signature before submitting AM91r forms.

Course Notes: Students cannot take AM 91r and 99r simultaneously with the same supervisors. Normally may not be taken more than twice. May be counted once for concentration credit in Applied Mathematics (as a breadth course). May be taken in either term. When project work from APMTH 91R is used to satisfy the honors modeling requirement, a paper describing the project must be submitted to the concentration for evaluation by the end of the final exam period in the semester in which the 91R is undertaken. For further information, write am-advising@seas.harvard.edu.

Thesis Research (115654)

*Margo Levine*

*Sarah Iams*

2021 Spring (4 Credits)  

**Schedule:** TBD  

**Instructor Permissions:** Instructor  

**Enrollment Cap:** n/a  

Provides an opportunity for students to engage in preparatory research and the writing of a senior thesis. Graded on a SAT/UNS basis as recommended by the thesis supervisor. The thesis is evaluated by the supervisor and by one additional reader.

Statistical Inference for Scientists and Engineers (132127)

*Robert D. Howe*

*Jeffrey Paten*

2020 Fall (4 Credits)  Schedule: MW 1030 AM - 1145 AM

Instructor Permissions: Instructor  Enrollment Cap: 55

Introductory statistical methods for students in the applied sciences and engineering. Random variables and probability distributions; the concept of random sampling, including random samples, statistics, and sampling distributions; the Central Limit Theorem; parameter estimation; confidence intervals; hypothesis testing; simple linear regression; and multiple linear regression. Introduction to more advanced techniques as time permits.

Recommended Prep: Math 21a or Applied Math 21a or equivalent.

Applied Mathematics 104

Complex and Fourier Analysis with Applications to Art, Science and Engineering (122094)

L Mahadevan

2020 Fall (4 Credits) Schedule: TR 1200 PM - 0115 PM

Instructor Permissions: None Enrollment Cap: n/a

Complex analysis: complex numbers, functions, mappings, Laurent series, differentiation, integration, contour integration and residue theory, conformal mappings and circle packings. Applications to visualization, art (especially M.C. Escher) and photography. Fourier Analysis: orthogonality, Fourier Series, Fourier transforms. Signal processing: sampling theorems (Nyquist, Shannon), fast Fourier and other discrete transforms, wavelets and filtering. Applications to image, video, audio and morphological analysis: filtering and cleaning images, musical analysis, fraud and authentication, filter banks for engineering.

Course Notes: Will be available along with video links and codes.

Recommended Prep: Applied Mathematics 22a and 22b or Mathematics 21a and 21b. MATLAB or PYTHON experience recommended.

Applied Mathematics 107

Graph Theory and Combinatorics (118482)

Leslie Valiant

2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a

Topics in combinatorial mathematics that find frequent application in computer science, engineering, and general applied mathematics. Course focuses on graph theory on one hand, and enumeration on the other. Specific topics include graph matching and graph coloring, generating functions and recurrence relations, combinatorial algorithms, and discrete probability. Emphasis on problem solving and proofs.
Applied Mathematics 108

Nonlinear Dynamical Systems (121989)

Sarah Iams

2020 Fall (4 Credits) Schedule: MWF 0130 PM - 0245 PM

Instructor Permissions: None Enrollment Cap: n/a

An introduction to nonlinear dynamical phenomena, focused on identifying the long term behavior of systems described by ordinary differential equations. The emphasis is on stability and parameter dependence (bifurcations). Other topics include: chaos; routes to chaos and universality; maps; strange attractors; fractals. Techniques for analyzing nonlinear systems are introduced with applications to physical, chemical, and biological systems such as forced oscillators, chaotic reactions, and population dynamics.

Recommended Prep: Mathematics 21a and 21b, or Applied Mathematics 21a and 21b.

Applied Mathematics 108 Section: 002

Nonlinear Dynamical Systems (121989)

Applied Mathematics 115
Mathematical Modeling (118021)
Zhiming Kuang
2021 Spring (4 Credits)  Schedule: TBD
Instructor Permissions: Instructor  Enrollment Cap: 40

Abstracting the essential components and mechanisms from a natural system to produce a mathematical model, which can be analyzed with a variety of formal mathematical methods, is perhaps the most important, but least understood, task in applied mathematics. This course approaches a number of problems without the prejudice of trying to apply a particular method of solution. Topics drawn from biology, economics, engineering, physical and social sciences.

Course Notes: Applied Mathematics 115 is also offered as Engineering Sciences 115. Students may not take both for credit. Undergraduate Engineering Students should enroll in Engineering Sciences 115.

Class Notes: Enrollment limited to 40 students for APMTH/ENG-SCI 115.

Requirements: Prerequisite: Must take APMTH 105 OR APMTH 108 OR APMTH 104 OR MATH 112 OR STAT 110 before taking APMTH 115.

Applied Mathematics 120
Applied Linear Algebra and Big Data (113876)
Eli Tziperman
2021 Spring (4 Credits)  Schedule: TR 0130 PM - 0245 PM
Instructor Permissions: None  Enrollment Cap: n/a

Topics in linear algebra which arise frequently in applications, especially in the analysis of large data sets: linear equations, eigenvalue problems, linear differential equations, principal component analysis, singular value decomposition, data mining methods including frequent pattern analysis, clustering, outlier detection, classification, and machine learning, including neural networks and random forests. Examples will be given from physical sciences, biology, climate, commerce, internet, image processing and more.

Course Notes: Enrollment in this course is limited to 205 students and will be determined by a lottery if interest exceeds the limit.

Recommended Prep: Applied Mathematics 21a,b or equivalent, Computer Science 50 or Applied Mathematics 10 or equivalent programming experience.

Applied Mathematics 201

Physical Mathematics I (112798)

Michael P. Brenner

2020 Fall (4 Credits)  
Schedule: TBD

Instructor Permissions: None  
Enrollment Cap: n/a

Introduction to methods for developing accurate approximate solutions for problems in the sciences that cannot be solved exactly, and integration with numerical methods and solutions. Topics include: dimensional analysis, algebraic equations, complex analysis, perturbation theory, matched asymptotic expansions, approximate solution of integrals.

Class Notes: Meeting time will be determined according to enrolled students' availability.

Recommended Prep: Applied Mathematics 104 and 105, or equivalent; basic programming knowledge at the Computer Science 50 level.

Applied Mathematics 205

Advanced Scientific Computing: Numerical Methods (110684)

Christopher Rycroft

Zhiming Kuang

2020 Fall (4 Credits)  
Schedule: TR 1030 AM - 1145 AM

Instructor Permissions: None  
Enrollment Cap: n/a

An examination of the mathematical foundations of a range of well-established numerical algorithms, exploring their use through practical examples drawn from a range of scientific and engineering disciplines. Emphasizes theory and numerical analysis to elucidate the concepts that underpin each algorithm. There will be a significant programming component. Students will be expected to implement a range of numerical methods through individual and group-based project work to get hands-on experience with modern scientific computing.

Recommended Prep: Familiarity with linear algebra and calculus; basic programming knowledge at the Computer Science 50 level.

Applied Mathematics 207

Advanced Scientific Computing: Stochastic Methods for Data Analysis, Inference and Optimization (127561)

Weiwei Pan

2020 Fall (4 Credits)  

Schedule:  

TR 0900 AM - 1015 AM

Instructor Permissions:  

Instructor

Enrollment Cap:  

35

Develops skills for computational research with focus on stochastic approaches, emphasizing implementation and examples. Stochastic methods make it feasible to tackle very diverse problems when the solution space is too large to explore systematically, or when microscopic rules are known, but not the macroscopic behavior of a complex system. Methods will be illustrated with examples from a wide variety of fields, like biology, finance, and physics.

Recommended Prep:  

CS 50 or working proficiency in a computer programming language (python strongly recommended), as well as STAT 110 or a course in calculus based statistics and CS 109A, B.

Many problems in science and engineering are inverse problems. Any experiment that requires an explanation can be couched thus - given the data, what is the theory/model that provides it - this is an inverse problem. In engineering, a given function (in a product/software …) requires a design - again an inverse problem. This course will introduce a wide array of features of inverse problems from science and engineering - from oil prospecting and seismology to cognitive science, from particle physics to engineering design. We will then introduce deterministic and probabilistic algorithms for solving these problems. Much of the class will be spent studying how the recent revolution in deep neural networks can (and cannot) be used to solve such inverse problems. The class will have a substantial computational component -- part of every class session will contain instruction and computer implementation of the algorithms in question. Students will carry out final projects in their own area of interest. Programming will be taught and carried out in Python and Tensorflow.

Recommended Prep: Linear algebra, Differential equations, Basic probability, some MATLAB experience.

Attribute | Value(s)

Applied Mathematics  225

Christopher Rycroft

This course examines a variety of advanced numerical methods, with a focus on those relevant to solving partial differential equations that arise in physical problems. Topics include the finite volume method, finite element method, and interface tracking methods. Associated problems in numerical linear algebra and optimization will be discussed. The course will examine the mathematical underpinnings of each method, as well as look at their practical usage, paying particular attention to efficient implementations on modern multithreaded and parallel computer architectures.

Recommended Prep: Intermediate programming ability at the level of CS50/51, APMTH 111, or APMTH 205. Knowledge of multivariable calculus, linear algebra, and partial differential equations.

Applied Mathematics 226

Neural Computation (212912)

Cengiz Pehlevan

2020 Fall (4 Credits)  Schedule:  TBD
Instructor Permissions:  None  Enrollment Cap:  n/a

This course introduces advanced mathematical methods and models used in theoretical neuroscience and theory of neural networks. We will explore computations and functions performed by the brain, and how they are implemented by neurons and their networks. We will cover selected topics from deep learning theory; spiking neuron models; population codes; normative theories of sensory representations; models of synaptic plasticity; computing with dynamics in recurrent neural networks; attractor network models of memory and spatial maps; neural models of probabilistic inference in the brain and drift-diffusion models of decision making. Concrete examples of applications of these ideas to the brain will be discussed. Topics at the research frontier will be emphasized.

Class Notes:  Meeting time will be determined according to enrolled students' availability.

Recommended Prep:  APMTH 21A and APMTH 21B or equivalent.

APPLIED PHYSICS 50A
Physics as a Foundation for Science and Engineering, Part I (108880)

Eric Mazur

2020 Fall (4 Credits)  Schedule:  TR 0730 AM - 0845 AM
Instructor Permissions:  None  Enrollment Cap:  n/a

AP 50A is the first half of a one-year, calculus-based introduction to physics focusing on the application of physics to real-world problems to teach scientific reasoning and problem-solving skills. The course is designed specifically for engineering and physics majors and is equivalent in content and rigor to a standard calculus-based introductory physics course. You will work in teams on three, month-long projects, each culminating in a project fair. Projects will involve a combination of construction of simple devices from kits provided to you, measurements taken in and around the home, and simulations. Besides mastering course content, such as kinematics, Newton's Laws, conservation laws, rotations, oscillations and waves, the course goals include self-directed learning and collaborative skills. In the online version of this course, you will carry out many activities asynchronously at your own convenience. Most of the face-to-face time with the staff (Tu/Th 7:30 am or 4:30 pm) will be spent to address specific difficulties and individual needs of the various teams.

Course Notes:
AP50a is designed specifically for engineering and physics majors and is equivalent in content and rigor to a standard introductory physics course for scientists and engineers (Physical Sciences 12a, Physics 15a), but focuses on the application of physics to real-world problems.

Recommended Prep:
A solid knowledge of multivariable calculus at the level of Applied Math 21a or Math 21a is required. Mathematics 21a can be taken concurrently.

Additional Course Attributes:

Applied Physics  50B

Physics as a Foundation for Science and Engineering, Part II (108882)

Eric Mazur
Federico Capasso
Doeke Hekstra

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

AP 50b is the second half of a one-year, team-based and project-based introduction to physics. This course
teaches students to develop scientific reasoning and problem-solving skills. AP50b topics include:
electrostatics; electric currents; magnetostatics; electromagnetic induction; Maxwell's Equations;
electromagnetic radiation; geometric optics; and, wave optics. Multivariable and vector calculus is
introduced and used extensively in the course. Students work in teams on three, month-long projects, each
culminating in a project fair. The twice-weekly class periods are all inclusive: there are no separate labs or
discussion sections.

Course Notes: AP50b is designed specifically for engineering and physics majors and
is equivalent in content and rigor to a standard introductory physics
course for scientists and engineers (Physical Sciences 12a, Physics
15a), but focuses on the application of physics to real-world problems. Students must attend one 2-hour section on Friday. Section times will be assigned upon enrollment (9-11am, 11-1pm, 1-3pm, 3-5pm).

Recommended Prep: A solid knowledge of multivariable calculus at the level of Applied
Math 21a or Math 21a is required. Mathematics 21a can be taken concurrently.
Applied Physics 171

Introduction to Quantum Materials and Devices (215415)

Robert Westervelt

2021 Spring (4 Credits)  
Instructor Permissions: None  
Enrollment Cap: n/a

This course provides an introduction to quantum materials and devices, including two-dimensional electron layers, single and double quantum dots, 2D materials such as graphene, and Josephson junctions. Their behavior is explained using semiclassical and quantum transport, electron states in reduced dimensions, the Coulomb blockade, and superconductivity. Quantum devices offer new approaches to electronics and photonics.

Recommended Prep: ES 170 or Physics 143A, and ES 154 or Physics 153. AP 195 / Physics 195 provides a good introduction, but is not required.

Applied Physics 195

Introduction to Solid State Physics (131331)

Julia Mundy

2020 Fall (4 Credits)  
Instructor Permissions: None  
Enrollment Cap: n/a

The physics of crystalline solids and their electric, magnetic, optical, and thermal properties. Designed as a first course in solid-state physics. Topics: free electron model; Drude model; the physics of crystal binding; crystal structure and vibration (phonons); x-ray diffraction; electrons in solids (Bloch theorem) and electronic band structures; metals and insulators; semiconductors (and their applications in pn junctions and transistors); magnetism; superconductivity.

Course Notes: APPHY 195 is also offered as PHYSICS 195. Students may not take both for credit.

Class Notes: If 3-4:15 PM EST falls outside of 7 AM - 10:15 PM in a student's local time zone, we will provide an alternative viewing of the lecture with the TF. This will likely be held at 8 AM EST although exact time subject to enrollment. Please note, we not not anticipate being able to offer lecture time accommodations based on conflicts with other courses, commitments or preferences.
Recommended Prep: Physics 15a, 15b and 15c or the equivalent. Physics 143a. Physics 181 and Physics 143b (taken concurrently) helpful but not required.

Applied Physics 202

Mechanics in Earth and Environmental Science (213560)

James Rice

2020 Fall (4 Credits)  

Schedule: WF 1200 PM - 0115 PM

Instructor Permissions: None  

Enrollment Cap: n/a

Introduction to the mechanics of fluids and solids, organized around earth and environmental phenomena. Conservation laws, stress, deformation and flow. Inviscid fluids and ocean gravity waves; Coriolis dominated large scale flows. Viscosity and groundwater seepage; convective cells; boundary layers. Turbulent stream flows; flood surges; sediment transport. Elasticity and seismic waves. Pore fluid interactions with deformation and failure of earth materials, as in poro-mechanics of consolidation, cracking, faulting, and landslides. Ice sheets and glacial flow mechanics.

Course Notes: APPHY 202 is also offered as E-PSCI 202. Students may not take both for credit.

Recommended Prep: Calculus-based introductory physics.

Applied Physics 216

Quantum and Classical Electromagnetic Interaction with Matter (141253)

Donhee Ham

2021 Spring (4 Credits)  

Schedule: TBD

Instructor Permissions: None  

Enrollment Cap: n/a

The first half of the course will cover the interaction of quantized atoms with electromagnetic fields, introducing a number of basic concepts such as coherent Rabi transitions vs. rate-equation dynamics, stimulated & spontaneous transitions, and energy & phase relaxations. These will be then used to study a range of applications of atom-field interactions, such as nuclear magnetic resonance, molecular beam and paramagnetic masers, passive and active atomic clocks, dynamic nuclear polarization, pulse sequence techniques to coherently manipulate atomic quantum states, and laser oscillators with applications. We will also touch upon the interaction of quantized atoms with quantized fields, discussing the atom + photon (Jaynes-Cummings) Hamiltonian, dressed states, and cavity quantum electrodynamics. The second half will cover the classical interaction of electromagnetic fields with matter, with special attentions to collective electrodynamics in particular, magnetohydrodynamics and plasma physics with applications in
astrophysics, space physics, and Bloch electrons in crystalline solids.

**Recommended Prep:** Undergraduate-level electromagnetism and quantum mechanics are recommended.

Foundations of Modern Optics (121975)

*Lene Hau*

*Fawwaz Habbal*

2020 Fall (4 Credits) **Schedule:** TR 0130 PM - 0245 PM

**Instructor Permissions:** None  **Enrollment Cap:** n/a

Optical systems and lasers have revolutionized both technology and basic research. We cover the fundamental physics of light and of light-matter interactions, including optical wave-propagation, ray optics, optical imaging and Fourier optics, quantization of electromagnetic fields, and nano-optics. We will illustrate the material with its applications in atomic physics and biological imaging.

**Class Notes:** Primarily for graduate students and advanced undergraduate students.

**Recommended Prep:** Elements of electromagnetism, for example an undergraduate course in electromagnetism such as Physics 153 or similar.

Electrical, Optical, and Magnetic Properties of Materials (121594)

*Xin Li*

2021 Spring (4 Credits) **Schedule:** TBD

**Instructor Permissions:** None  **Enrollment Cap:** n/a

This course covers the electrical, optical and magnetic properties of technologically important materials systems. It provides a quantitative description of structure-property relations by introducing tensor properties, crystal symmetry, Neumann's principle and Curie principle. A variety of properties of materials are then introduced, including pyroelectricity, dielectricity, piezoelectricity, ferroelectricity; pyromagnetism, magnetoelectricity, piezomagnetism, ferromagnetism; defect chemistry, transport properties and applications in semiconducting, dielectric and energy storage materials; crystal optics including birefringence, Pockels effect, Kerr effect, photoelastic effect and optical activity. Ferroelectric, ferromagnetic and topological phase transitions are also covered as special topics.
Recommended Prep: Introductory solid-state physics or equivalent course.

Applied Physics 225

Introduction to Soft Matter (121403)

Jennifer Lewis

2020 Fall (4 Credits) Schedule: MW 1200 PM - 0115 PM

Instructor Permissions: None Enrollment Cap: n/a

Introduction to the physics of soft matter, also called complex fluids or squishy physics, includes the study of capillarity, thin films, polymers, polymer solutions, surfactants, and colloids. Emphasis is on physical principles which scale bulk behavior. Students will understand the concepts, experimental techniques, and, especially, the open questions. Lecture notes are supplied in place of a textbook.

Computational Design of Materials (110087)

*Boris Kozinsky*

2021 Spring (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

This course covers theoretical background and practical applications of modern computational atomistic methods used to understand and design properties of advanced functional materials. Topics include interatomic potentials and quantum first-principles energy models, wave function and density functional theory methods, Monte Carlo sampling and molecular dynamics simulations of phase transitions and free energies, fluctuations and transport properties, and machine learning approaches. Methods are applied to study microscopic and quantum-level effects in materials for energy conversion and storage, molecules, soft materials, electronic devices, and low-dimensional materials.

**Course Notes:** Applied Physics 275 is also offered as Applied Computation 275. Students may not take both for credit.

**Recommended Prep:** Undergraduate coursework in quantum mechanics and solid-state physics, physical chemistry, linear algebra, thermodynamics and statistical mechanics.

Statistical Mechanics (131392)

_Eugene Demler_

2020 Fall (4 Credits)  
Instructor Permissions: None  
Enrollment Cap: n/a  
Schedule: MWF 1200 PM - 0115 PM

Basic principles of statistical physics and thermodynamics, with applications including: the equilibrium properties of classical and quantum gases; phase diagrams, phase transitions and critical phenomena, as illustrated by the liquid-gas transition and simple magnetic models. Time permitting, introduction to nonequilibrium phenomena including Langevin dynamics and Boltzmann equation.

Course Notes: Also offered as Physics 262. Either course can be used to satisfy the statistical mechanics requirement in the Physics PhD program or the Applied Physics model PhD program.

Recommended Prep: Physics 143a and Physics 181 or Engineering Sciences 181.

**Applied Physics 286**

Inference, Information Theory, Learning and Statistical Mechanics (212685)

_Sharad Ramanathan_

2020 Fall (4 Credits)  
Instructor Permissions: Instructor  
Enrollment Cap: n/a  
Schedule: TR 0130 PM - 0245 PM

We will build introduce modern applications of Statistical Mechanics from information theory, to coding and compression, finding probabilistic answers to poorly posed inverse problems to unsupervised learning. Further we will study supervised learning and machine learning. All of these topics will be taught using examples in the primary literature with an emphasis on the applications of the tools and framework we develop in the course. Applications will be taught through problems in genomics, neuroscience, mechanics, geophysics and engineering.

Class Notes: The location for the Tuesday/Thursday 1:30pm-2:45pm EST lectures is [https://harvard.zoom.us/my/sharad.office](https://harvard.zoom.us/my/sharad.office). This time will be for synchronous material with other times for sections TBA. Office hours which will also be synchronous.

Recommended Prep: Comfort with Linear Algebra, Calculus is necessary, undergraduate Statistical Mechanics would be useful but not necessary.

Applied Physics 295A
Introduction to Quantum Theory of Solids (143855)

Priyanka Narang

David Bell

2020 Fall (4 Credits) Schedule: MW 0900 AM - 1015 AM
Instructor Permissions: None Enrollment Cap: n/a
This is an introductory graduate level course in solid-state physics. Lattices and symmetries. Phonons. Electronic Structure of Crystals. Metals, semiconductors, and insulators will be covered. Electrical, optical, and thermal properties of solids will be treated based on an atomic scale picture and using the independent electron approximation. Additional topics from the theory of interacting electrons, including introduction to magnetism and superconductivity, and an introduction to topological insulators.

Course Notes: PHYS/AP 295a is an introductory graduate-level course.

Class Notes: We will meet at the lecture times listed (MW 9-10:15am). Additional times for sections and seminal paper discussions will be based on student polls during the first week. Some (not all) lecture content will be recorded and made available to make class time more interactive and to better accommodate time zone differences. Recorded lecture content is not a replacement for in-class work. We will hold expanded office hours and Q&A sessions this Fall.

Recommended Prep: Physics 181 or equivalent, Applied Physics 195 or equivalent, and a graduate level quantum mechanics course similar to Physics 251a. (Physics 251b would be helpful and may be taken concurrently.)

Art, Film, and Visual Studies
Subject: Art, Film, and Visual Studies

Art, Film, and Visual Studies  12 Section: 1
Drawing 1: Drawing as a Visual Language (203312)

Katarina Burin

2021 Spring (4 Credits) Schedule: TR 1200 PM - 0245 PM
Instructor Permissions: Instructor Enrollment Cap: 15

A studio course to build the skills of drawing incrementally and expand students' visual vocabulary. Drawings will be made from life, photographs and invention. Emphasis will be placed on enhancing our observational sensibilities through life drawing and the figure, focusing on all aspects of technical development, particularly the importance of line. The aim of this course is to expand drawing skills with intention and purpose.

Course Notes: This class is for beginners or anyone furthering their skill level. Interested students must attend first meeting of class during shopping week to speak with teaching staff about course enrollment procedure.

Making Things: Form, Function, and Materials (203314)

Katarina Burin

2021 Spring (4 Credits) Schedule: W 0300 PM - 0700 PM
Instructor Permissions: Instructor Enrollment Cap: n/a

This studio art course will explore some of the conceptual and material fundamentals of design, beginning with executed plans or drawings from which to then craft usable functional objects. The course will be divided into five sections in which we will study, investigate and gain expertise in various materials. Paper construction, architectural model making, cast ceramics, basic woodwork and book arts will be explored from initial design through to end product.

Course Notes: No prerequisites or experience is necessary for this course. Interested students must attend first meeting of class during shopping week to speak with teaching staff about course enrollment procedure.

Additional Course Attributes:

Relief Printmaking is the most direct method of reproducing images through print. An inky hand or foot print, a rubber stamp, or a carved block of wood or linoleum printed with ink on paper or fabric are all considered forms of relief printing.

In this course, relief printing, monotype, and frottage along with the techniques, materials and tools used will be explored with a critical emphasis on developing meaningful imagery. Materials and tools will be provided.

Course Notes: No previous studio art courses required. First year students encouraged to apply.

Class Notes: Shopping Week Instructions

No previous studio experience necessary. First year students and students who have not taken any AFVS courses are encouraged to apply as well as non-concentrators. Students are asked to fill out a questionnaire to lottery into the class. There is a limited enrollment of 12 students.

If you have any questions or concerns about this class, please email lemieux@fas.harvard.edu.

Monday, August 17: Early Shopping Begins
Friday, August 21: Course Questionnaire Deadline (link to questionnaire below)
Monday, August 24: Accepted students notified. Accept/decline your spot in the class within 24 hours.
Tuesday, August 25: Waitlisted students notified if accepted. Accept/decline your spot in the class within 24 hours.
Wednesday, August 26: Course Registration Deadline
Wednesday, September 2: First Day of Classes

To apply for enrollment/enter lottery in Relief Printmaking (AFVS 16R), complete the following by FRIDAY, AUGUST 21, 2020:

1. Fill out the following questionnaire (found here).

   https://forms.office.com/Pages/ResponsePage.aspx?id=9CL6b2hFBUGtQy461HJpV_MA06_xEsVAnN_ANRZ0FwFUQ1JDQV BQUVlCRkJQ01UTiVPQ1dRNUpLSi4u

2. Submit your petition for enrollment on My.Harvard.edu

Art, Film, and Visual Studies  37 Section: 1

Lay of the Land: A Studio-based Seminar (119646)

Stephen Prina

2020 Fall (4 Credits) Schedule: R 1200 PM - 0415 PM
T 1200 PM - 0245 PM

Instructor Permissions: Instructor Enrollment Cap: 12

The pursuit of and response to the horizontal in art will be the focus of this studio class. To cite a few examples, abstract expressionist painting; cartography; earthworks; landscape photography; rayographs; as well as film, video, and performance examples will provide models of the horizontal that will be points of departure for studio projects, the forms of which will be determined by what the investigation provides. There are no prerequisites for this class.

Course Notes: No previous studio experience necessary.

Class Notes: Fall 2020: Enrollment Process

There is still space available in this course! Please contact the course's Teaching Assistant, Hadi Fallahpisheh at fallahpisheh@gmail.com for more information.

We adopt the interview process for this class to make an early, personal connection with each applicant and to clarify what is expected in the class. Because the class is "non-denominational," in that any way of working is acceptable, be it painting, sculpture, music, photography, video, design, writing, acts of civil disobedience, performance, etc., we are looking for a range of practices for the class, and students at a range of levels. The class depends upon its members to be self-motivated and self-determining, in that no specific assignments for studio are made. The members of the class must define projects, develop them, and execute them with the consultation with the professor, teaching assistant, and other members of the class. In other words, we want every applicant to know what they are in for opting to take this class.

Art, Film, and Visual Studies  40A

Introduction to Still Photography (111189)

Elle Perez

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: 10

Introduction to still photography through individual and group exercises, with an emphasis on the medium
as a vehicle for expression, documentation, and personal vision. Covers necessary technical, historical, and aesthetic aspects of the medium.

Course Notes: No previous studio experience necessary. Interested students must attend first meeting of class during shopping week to speak with teaching staff about course enrollment procedure.

Class Notes: No previous studio experience necessary. Interested students must attend first meeting of class during shopping week to fill out an application to lottery into the class. Limited enrollment of 10 students.

Art, Film, and Visual Studies  41A  Section: 1

Introduction to Photography (122184)

Sharon Harper

2020 Fall (4 Credits)  

Schedule:  
MW 1200 PM - 0245 PM  

Instructor Permissions: Instructor  
Enrollment Cap: 10  

This studio course will introduce you to the conceptual, artistic potential of photography. Your understanding and use of the medium will be contextualized within contemporary and historic photographic art practices. Your own art practice will be developed alongside technical skills. We will discuss topics such as the ethics of photographing people, how to make meaningful images amid the proliferation of digital images, and traits that are unique to photography. This class is organized around presentations on artists’ work, presentations on photographic concepts, studio making assignments, individual meetings with the instructor and breakout meetings with peers to develop your practice, technical skill workshops, readings, reading discussions, group critiques, and visiting artist presentations. Curiosity, a strong work ethic and a sense of adventure are required. Technical skill development is supported by the class Teaching Assistant.

Course Notes: No prior art experience necessary for enrollment in this class.

Class Notes: Class enrollment limited to 10 students is determined by blind lottery. The lottery ensures space for AFVS concentrators, students across the university, FVS graduate students and CMP graduate students. It generates a balance of first years, sophomores, juniors, seniors and graduate students.
Art, Film, and Visual Studies  50A

Introduction to Creating Nonfiction Still and Moving Images (114351)

Alfred Guzzetti

2020 Fall (4 Credits)  Schedule: TR 1200 PM - 0245 PM
Instructor Permissions: Instructor  Enrollment Cap: 10

Studies of light and space using black-and-white digital photography, followed by nonfiction projects created with moving images with sound. These projects, along with the study and written analysis of selected photographs and films, constitute preparation for the spring term, when the class members, using 16mm synchronous sound and working as a group, researches and creates a non-fiction, observational film on a subject of their own choosing.

Course Notes: There are no prerequisites for this course; it serves as a prerequisite for AFVS 50B.

Class Notes: Class meetings for this course will normally end at 2:00PM EST.

Art, Film, and Visual Studies  50B

Introduction to Non Fiction Filmmaking (159860)

Alfred Guzzetti

2021 Spring (4 Credits)  Schedule: TBD
Instructor Permissions: Instructor  Enrollment Cap: 10

Introductory exercises in live-action 16mm filmmaking culminating in the production of a nonfiction film as a group project in the spring term. Part two of a two-part series. Students are required to take both parts of the course within the same academic year.

Class Notes: This course meets from 1:30-4:15 on Mondays and 1:30-5:45 on Wednesdays.

Requirements: Pre-requisite: AFVS 50A
**Art, Film, and Visual Studies  51A**  Section: 1  

**Introduction to Video** (121542)  

*Ross McElwee*  

2021 Spring (4 Credits)  

**Schedule:** TBD  

**Instructor Permissions:** Instructor  

**Enrollment Cap:** 10  

A series of nonfiction projects, both individual and collaborative, designed to introduce and explore the range of expressive possibilities in digital video.  

**Course Notes:** Interested students must attend first meeting of class to learn class admission procedure.

**Art, Film, and Visual Studies  52R**  

**Choice and Chance: Mysteries of the Editing Room** (107932)  

*Robb Moss*  

2020 Fall (4 Credits)  

**Schedule:** TR 1200 PM - 0245 PM  

**Instructor Permissions:** Instructor  

**Enrollment Cap:** 10  

Documentary filmmakers often start with an idea, go into the world with cameras, return with this shot material and begin to look at what they have done. This is the point where filmmakers often confront a deep truth about filmmaking, that we all have to go through the footage to get to our ideas. Working with the footage is the process we call editing. This course is about documentary film editing, the sequencing, whittling and shaping of sounds and images that lead to a finished piece.

**Fundamentals of Animation** (110676)
An introduction to the possibilities of animation. Using a mixture of traditional and 2D digital tools, students will complete practical exercises which will familiarize them with basic skills and techniques. Screenings and discussions will help develop the specialized thinking needed to understand the discipline.

Course Notes: Drawing skills are optional, though helpful.

Fundamentals of Animation (110676)

Ruth Lingford

2020 Fall (4 Credits)  Schedule: M 1200 PM - 0400 PM

Instructor Permissions: Instructor  Enrollment Cap: 10

An introduction to the possibilities of animation. Using a mixture of traditional and 2D digital tools, students will complete practical exercises which will familiarize them with basic skills and techniques. Screenings and discussions will help develop the specialized thinking needed to understand the discipline.

Course Notes: Drawing skills are optional, though helpful.

Class Notes: SHOPPING WEEK DROP-IN SESSION: Go to the course Canvas site for the Zoom link to the shopping week drop-in session on Monday, Aug. 17.

Message from Professor Lingford (lingford@fas.harvard.edu) about class admission:

We are very unlikely to be oversubscribed this semester, but I would very much like to speak individually with all potential students, partly to get an idea of your level of experience and your interests, to help me plan the semester, but also so that you can get a chance to ask any questions about the class, and to make sure it is right for you.

This is a beginning level class. No previous knowledge or drawing ability is needed - this class is for everyone who is curious to try animation and willing to try new things!

If we do have more applicants than we have space for, I will give priority to AFVS concentrators, first-years and undeclared sophomores.

But please don’t be deterred from applying - if you are keen, we will do our best to fit you in!

Approaching Narrative: Introduction to Filmmaking (127469)

2021 Spring (4 Credits)  Schedule:  MW 1200 PM - 0245 PM

Instructor Permissions:  Instructor  Enrollment Cap:  10

In this production course, students will learn the basic principles of narrative filmmaking and film language. Different tools and filmmaking techniques, including lighting and cinematography, sound recording, and editing will be introduced to students by the lecturer and invited film professionals. Classes will also consist of screenings, discussion, and critiques of student work. By the end of the course, students will be equipped with the necessary tools to produce a short film with sync sound.

Emphasis is placed on sourcing personal stories and utilizing resources that are within students reach.

Course Notes:  No prior filmmaking experience necessary.

Frame, Spectacle, Spectator: Video as Medium (213583)

Carissa Rodriguez

2020 Fall (4 Credits) Schedule: M 0130 PM - 0545 PM

Instructor Permissions: Instructor Enrollment Cap: 10

In this intro-level production course, students will be introduced to video as a time-based art form. This course will explore different modes of spectatorship – from museum to mobile screen and examine the range of methods in which artists work critically with moving images, in relation to mass media. Through screenings and presentations by contemporary video artists, students will develop a moving image vocabulary and narrative techniques to be applied to individual video projects. Assignments may incorporate sound, text, found footage and multi-channel work. Video editing instruction will be offered on Adobe Premiere. Prior experience with editing tools is helpful but not required. All necessary devices will be provided.

Class Notes: The remote version of this course may also utilize compact cameras such as smartphones, GoPro and other 'action cams' to adapt to the current situation. Topics around surveillance, identity and racialization will be incorporated.

If you are interested in taking this course, please contact us to schedule a brief one-on-one 10 minute conversation anytime during shopping week.

Art, Film, and Visual Studies   70

The Art of Film (115688)

Laura Frahm

2021 Spring (4 Credits) Schedule: MW 1030 AM - 1145 AM

Instructor Permissions: None Enrollment Cap: n/a

This introductory course explores the history of film, its major cinematic movements, and the development of cinematic techniques across the 20th and 21st centuries. Building upon Rudolf Arnheim's concept of 'visual thinking', this class puts special emphasis on creative practices that sound out the interplay between film, media, and the visual arts. Weekly video blogs, a visual essay, and a collaborative 'film festival project' will further advance our creative study of film and visual media.

Course Notes: This course is required for all students concentrating in or pursuing a secondary field in the film and visual studies area of AFVS.
Images don’t merely *represent*; they perform. Their political importance has become urgently clear as cell phone recordings of police brutality have helped to energize movements against structural racism. This class ends with a discussion of those “material witnesses,” but places them in historical context beginning with the invention of photography in 1839, as well as film, television, and museums. Included will be discussion of visual perspectives of Frederick Douglass, W.E.B. DuBois and Frantz Fanon.

Course Notes: First year students are encouraged to take this course.

It fulfills one of two required introductory level courses for undergraduates pursuing the Film and Visual Studies track in AFVS.

Class Notes: Weekly discussion sections may be scheduled for this course.
Art, Film, and Visual Studies  91R
Special Projects (117193)

Ruth Lingford

2020 Fall (4 Credits)  Schedule:  TBD
Instructor Permissions:  Instructor  Enrollment Cap:  n/a

Open to a limited number of students who wish to carry out a special project under supervision. Students wishing to enroll in AFVS 91r must find a member of the faculty to advise the project and submit an application to the Director of Undergraduate Studies.

Course Notes:  Letter-graded only. Special Project tutorials are led by individual faculty members; however the Director of Undergraduate Studies approves AFVS 91R in the student's Crimson Cart.

Art, Film, and Visual Studies  97
Tutorial - Sophomore Year (113968)

Katarina Burin  Joana Pimenta

2021 Spring (4 Credits)  Schedule:  TBD
Instructor Permissions:  Instructor  Enrollment Cap:  25
A tutorial course on the foundations and subjects of Art, Film and Visual Studies, encompassing Film, Video and Animation; Studio Art and Photography; Film Studies; Environmental Studies; Design; and Curatorial Studies, including the work of both the Harvard Film Archive and the Carpenter Center for the Visual Arts. Supported by readings, projects and screenings, the tutorial is taught by a rotation of the regular and visiting faculty.

Course Notes: Required of all AFVS concentrators during their first full term in the concentration, ordinarily sophomore spring.

Class Notes: There will be additional sections scheduled for this course.

Tutorial - Junior Year (110715)

Matt Saunders

2021 Spring (4 Credits)  Schedule: TBD

Instructor Permissions: Instructor  Enrollment Cap: n/a

This research-based writing workshop is required for all AFVS undergraduate concentrators in the film and visual studies track.

For concentrators in the film/video or studio art tracks, this tutorial offers individual instruction in subjects of special interest that cannot be studied in regular courses. Concentrators wishing to take a tutorial in their junior year must find a member of the faculty to advise the project and submit an application to the Director of Undergraduate Studies.

Course Notes: Letter-graded only. The Director of Undergraduate Studies approves AFVS 98 in the student's Crimson Cart.

Art, Film, and Visual Studies 99A

Tutorial - Senior Year (Thesis/Senior Project) (117196)

Matt Saunders

2021 Spring (4 Credits)  

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

All students wishing to undertake an AFVS 99 project, either a senior thesis or senior project, must have permission of the project adviser, chosen by the student, before being considered. The Director of Undergraduate Studies and the AFVS Honors Board must approve all AFVS 99 projects and theses in advance. Part one of a two part series.

Course Notes: The first term of the AFVS 99: Senior Thesis/Project should always be AFVS 99A. If you are beginning your thesis or project off-cycle, meaning, in the spring term, enroll in AFVS 99A.

Optional for senior concentrators. Students must be enrolled in AFVS 99 to do a thesis. Students should arrange regular tutorial meetings with their project adviser. Senior theses and projects are led by individual faculty members; however the Director of Undergraduate Studies approves AFVS 99 in each student's Crimson Cart.

Art, Film, and Visual Studies  107

Studies of the Built North American Environment since 1580 (122679)

John Stilgoe

2020 Fall (4 Credits)  Schedule: TR 0900 AM - 1015 AM

Instructor Permissions: Instructor  Enrollment Cap: 25

North America as an evolving visual environment is analyzed as a systems concatenation involving such constituent elements as farms, small towns, shopping malls, highways, suburbs, and as depicted in fiction, poetry, cartography, television, cinema, and advertising and cybernetic simulation.

Course Notes: Offered jointly with the Graduate School of Design as 4105.

Class Notes: Students interested in taking this course are invited to a Zoom shopping session at 9:00AM EST on Tuesday, August 18. The Zoom link will appear on the Canvas course site.

Art, Film, and Visual Studies  108 Section: 1

Stranger than Fiction (108657)

Carrie Lambert-Beatty

2020 Fall (4 Credits)  Schedule: T 1200 PM - 0245 PM

Instructor Permissions: Instructor  Enrollment Cap: 18
Is there an art history of post-truth? False personas, invented figures, museums of unnatural history and other fictive phenomena fill the annals of contemporary art. How do decades of factually-presented fictions, and thousands of temporarily deceived viewers, relate to the cultural changes that generated "truthiness," "fake news" and "The Death of Truth"? In this course you'll learn about installation art, conceptual art, photography, performance and video, while mapping out varieties of fact-based, fictional, and parafictional art, and debating their implications for art history—and for everyday life. (Note: class can be taken for credit in either HAA or AFVS; total enrollment limited to 18.)

Drawing 2: Model Witness (203313)

Katarina Burin

2020 Fall (4 Credits) Schedule: TR 1200 PM - 0245 PM

Instructor Permissions: Instructor Enrollment Cap: 15

This studio art course foregrounds the medium of drawing, investigating its many potentials, both on and off the page. Drawing is positioned as model and as witness, and as something which carries ideas forward. It is experimental, light and flexible, while maintaining the ability to record direct process or be deeply specific.

Students will explore the potential of depicting both literal and metaphorical space, including the space of personal or collected memory, of future possibility and the imprint of time and process. Working in two-and three-dimensions we will strengthen our conceptual, technical and artistic visual skills.

Course Notes: This course is open to anyone who has some experience with creative visual work.

Art, Film, and Visual Studies  118C Section: 1

Curating Contemporary Art: Exhibitions, Artists, Institutions, and Audiences (213509)

Daniel Byers

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: 12
This course introduces the practice and study of curating contemporary art, examining exhibition typologies such as biennials, solo exhibitions, thematic and historical surveys, publications, and public programs; working with living artists; the institutional context of the museum, alternative space, commercial gallery, and performance venue; and questions around audiences and communities. Through exhibition viewings, meetings with curators and artists, and readings and discussion, we will critically engage the role of curator and art institution within a broad cultural and contemporary art context.

Course Notes: Interested students must attend the first meeting of the course to speak with teaching staff about enrollment procedure.

Class Notes: The class will include frequent trips to museums and galleries in the area.

Recommended Prep: History of Art and Architecture 17K: Introduction to Contemporary Art or similar experience.

Thinking With Your Hand: Intermediate Painting (216297)

*Judith Belzer*

2020 Fall (4 Credits)             Schedule: T 1200 PM - 0545 PM

Instructor Permissions: Instructor Enrollment Cap: 12

This class will support developing painters in their explorations of paints as powerful tools for engaging and questioning the world around them, guided by their senses. Using the home as their studio base, students will be encouraged to expand their view of what is close at hand and to transform everyday experience into art. Commitment to an exploratory studio process will be encouraged through directed prompts and open-ended project work. This class is designed for students who have had some studio art experience.

Course Notes: At least one previous AFVS/VES course or previous studio experience recommended.

Class Notes: FALL 2020: Instructions regarding the admissions process for this class will appear in the Canvas course site.

There will be a break scheduled during classtime.

Art, Film, and Visual Studies  133

Sun & Shadow, Sculpture Studio (216299)
This sculpture course considers "distance" and "access" as means of production. "Distance" as in "Zoom" and "access" as in "Main Entrance." In the material life of a sculpture studio, physicality is up in the air. What is the "land" in Land Art? Can a sculpture be imagined into existence? This course considers experiences of remoteness, and repositions both materiality and the artist, to ask if this remoteness can accommodate a sculpture studio.

Class Notes: Enrollment in Sun & Shadow, Sculpture Studio is limited to ten students, selected by lottery. Though the lottery process is random, the department of Art, Film and Visual Studies (AFVS) requires that priority be given to: AFVS concentrators, prospective AFVS concentrators, secondary field students, and graduate students who require a studio course. To enter the enrollment lottery, attend one introductory meeting in shopping week.

Introductory meetings will be held during "shopping week" on Tuesday, August 18 from 9:00–10:30am and Thursday, August 20 from 10:30am - 12:00pm. Please email the instructors if you are unable to attend one of these dates.

Art, Film, and Visual Studies 134S Section: 1

Nah; or, gestures of resistance: Performance, Technology, and Refusal (216782)

With a focus on opacity, refusal, and other gestures of resistance, this studio course will be an experimental testing ground for performance art using new media. We will study performances that refuse, subvert, and question oppressive structures often using new media and technology and the strategies these performances deploy. Students will work intensively to create performance works using sound, video, installation, and networked media (including the internet). Students should be prepared to think critically about the works they produce and be able to articulate their goals for their work. This course will include readings, class dialogue, lectures, screenings, critiques, and performances. This course is being offered by the sound and performance art duo SCRAAATCH.

Class Notes: Course enrollment procedures for this course will appear on the Canvas course site.

Recommended Prep: Previous AFVS course experience helpful, but not required.
Art, Film, and Visual Studies 137K Section: 1

La Commune (216635)
Karthik Pandian

2021 Spring (4 Credits)  
Schedule: T 1200 PM - 0245 PM
Instructor Permissions: None  
Enrollment Cap: n/a

This course is both a study group and a pedagogical experiment in horizontal self-organization. The first weeks will be dedicated to working collectively on the planning, budget, and decision-making protocols of the course itself. Self-organized groups will then study historical and contemporary material (texts, videos/films, artworks) related to rebellion, dismantling the institutions of systemic racism and economic exploitation, and the reallocation of resources towards communal support structures. Groups will report back to the larger collective with pragmatic, analytic, or creative responses to the material in any medium necessary. Collective meetings will take place during the listed course time while smaller group work can be conducted asynchronously according to student schedules. While this course takes its title from Peter Watkins' 2000 film La Commune (Paris, 1871), much of the material will focus on the current global uprising in the wake of George Floyd's murder and the pandemic of phobias (xeno-, trans-, etc) that we are currently beset by. Material includes texts by James Boggs, Hortense Spillers, Saidiya Hartman, Frank B. Wilderson III, Fred Moten and Stefano Harney, Frantz Fanon, Angela Davis, Ruth Wilson Gilmore and others; films and videos by Black Audio Film Collective, Howardena Pindell, Sondra Perry, Nicole Brown, Arthur Jafa, Tony Cokes, Dave McKenzie, Steffani Jemison, Stan Douglas and others. There is a limited budget for the course which will be allocated through a process of collective decision-making.

Art, Film, and Visual Studies 141BR Section: 1

Making Mischief: A Studio Based Seminar (205346)
Sharon Harper

2020 Fall (4 Credits)  
Schedule: MW 0300 PM - 0545 PM
Instructor Permissions: Instructor  
Enrollment Cap: 12

This class supports an independent photographic practice that is an extension of your own interests. The framework of the class will be a comparison of American documentary photographic strategies that arose on the East Coast and on the West Coast in the 1960s and 1970s in order to familiarize you with an array of artists and working methods. We will examine social and historic assumptions regarding photography during this time, and how those assumptions were challenged by emerging uses of photography. This class will ask you to experiment with various photographic strategies demonstrated by the artists we study to expand your understanding of the medium and facility with it. The class is organized around lectures, readings, class discussions, group critiques, guest artist presentations, individual meetings with the instructor and breakout meetings with peers to develop your practice. Technical skill
development is supported by the class Teaching Assistant.
Class enrollment limited to 12 students

Class Notes: Permission of the instructor is required for enrollment. Instructor is looking for a willingness to develop and sustain a self-generated visual practice.

Photography and Ecology (213475)

Makeda Best

2020 Fall (4 Credits) Schedule: R 1245 PM - 0245 PM

Instructor Permissions: Instructor Enrollment Cap: 18

Integrating the study of art history, research-based artistic production, theory, and environmental studies, the aim of this course is to critically and actively explore the contemporary interplay between photographic vision and environmental history; the shifting composition, structure, and function of landscapes; cultural constructions of nature and environmental perceptions; environmental justice, politics, and policy; and, the role of photography in responding to how humans create and impact landscape patterns and process.

Film Directing: Approaching Fiction Now (114116)

Dominga Sotomayor Castillo

2020 Fall (4 Credits) Schedule: TR 0130 PM - 0415 PM

Instructor Permissions: Instructor Enrollment Cap: 10

This course guides students through different issues and challenges in the filmmaking process from the initial development of ideas through to completion.
Throughout the semester, students will write and discuss their own short film scripts. At the end of the first semester, these projects will be ready to move through the pre-production process so that they can be shot during the second semester.

Emphasis is placed on finding a voice, point of view and approaching the film language. There will be formal explorations and various assignments which impose restrictions.

Throughout several personal and group exercises different topics will be explored, such as: directing actors, composition, directorial authorship, as well as the role of camera work in conjunction with narrative structure.

In-class screenings and critiques of student assignments will form an important component of the course.

Class Notes: This course meets from 1:30 to 4:15.

Recommended Prep: AFVS 50 or two other AFVS courses in video or film production required.

**Art, Film, and Visual Studies 150B**

Film Direction: From Script to Screen (113516)

2021 Spring (4 Credits)            Schedule:       TR 0130 PM - 0415 PM
Instructor Permissions: Instructor Enrollment Cap: 10

This production course is an advanced continuation of 150A. It is compulsory for students to have the first draft of their short screenplays on the first day of class. Content includes scene analysis and script revision, directing professional and non-professional actors, cinematography, blocking and mise-en-scène, sound design, editing and post-production. Students will be given assignments related to their written screenplays throughout the course, culminating in what will be their final project: the production of a narrative short film. Film professionals will occasionally be invited to conduct workshops or hold masterclasses with students.

Course Notes: Students seeking to enroll should come to the first class meeting with a developed short narrative screenplay.

Recommended Prep: AFVS 150A or two courses in video production.
Art, Film, and Visual Studies  151BR

Nonfiction Video Projects (113447)

Ross McElwee

2020 Fall (4 Credits)  

Schedule: TR 0900 AM - 1100 AM

Instructor Permissions: Instructor  

Enrollment Cap: 10

Working from a proposal approved in advance by the instructor, each student plans, shoots, and edits a documentary video of his or her design. Shooting should take place over the summer and editing during the fall term. Readings and screenings augment individual work.

Course Notes: In exceptional cases, a student will be permitted to take the course without having filmed over the summer, but the student must have a specific proposal for a documentary that can be both shot and edited during the term. An interview with the instructor is required for admission.

Recommended Prep: At least one AFVS course in live-action film or video.

Art, Film, and Visual Studies  152R Section: 1

Intermediate Video Workshop: Studio Course (117216)

Robb Moss

2021 Spring (4 Credits)  

Schedule: F -

Instructor Permissions: Instructor  

Enrollment Cap: 10

A workshop for students with experience in video to explore further the capabilities of the medium by working in the nonfiction genres of the documentary, the experimental, and the experimental documentary. Students may work singly or together to make either an extended project or a series of shorts.

Course Notes: Students seeking to enroll are encouraged to bring to the first class meeting a paragraph describing a proposed project, whether extended or short.

Class Notes: NOTE: The first meeting of this class will take place on Thursday, Jan. 30 at 10am-12pm in Sever 411.
The normal meeting space is Sever B10.

**Recommended Prep:** One AFVS course in video production.

Experimental Animation: Intermediate Animation Course (115390)

*Young Joo Lee*

2020 Fall (4 Credits)  

**Schedule:**  

<table>
<thead>
<tr>
<th>Instructor Permissions:</th>
<th>Enrollment Cap:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Instructor</td>
<td>12</td>
</tr>
</tbody>
</table>

This studio class explores animation as an artistic expression, different from a commercial studio production. We will study the examples of earlier abstract, non-linear animation works, as well as contemporary animation works in museum and gallery context. Students will work with drawing, collage and cut-up techniques to create abstract works in response to in-class prompts. We will discuss how to structure images and sounds in experimental animation to create desired effects. There will be screenings of contemporary artists’ work in animation and readings of related theories and articles to enrich our understanding of animation as a contemporary art form.

**Class Notes:**  

SHOPPING WEEK NOTE: Due to the instructor’s current time zone, the drop-in shopping week session will be held on Wednesday, Aug. 19, 9am-12pm EST. Please check the course Canvas site for the link and more information.

This course is held from 2pm to 5:45pm EST. There will be mandatory screenings built into class time. Please note that depending on the students enrolling in class, the class time may be divided into 2 sessions to accommodate students in different time zones, therefore the first class meeting is essential. The Zoom link will be on the Canvas site and can be launched from there.

Please e-mail the instructor, Young Joo Lee (youngjoo_lee@fas.harvard.edu) if you are interested in taking the class. These students will be given priority for enrolling. During the first class meeting, interviews will be held if necessary.

Required equipment: Before the beginning of the semester, please take a brief survey on the Canvas course site to determine which equipment you have available. Necessary equipment will be provided.

**Software:** Adobe Creative Suite (After Effects, Premiere Pro, Photoshop, Audition)

**Hardware:** Personal Computer (Mac or Windows), Camera (smartphone is OK), external hard drive, tripod, digital scanner & printer, Wacom tablet, computer mouse
Recommended Prep: This class welcomes students without any previous animation experience, but some video and sound editing and recording knowledge/skills are required.

Art, Film, and Visual Studies 154M

Social Justice Filmmaking (216294)

Julie Mallozzi

2020 Fall (4 Credits)  
Instructor Permissions: Instructor  
Enrollment Cap: 10

Schedule: WF 1200 PM - 0245 PM

This production course will consider filmmaking as a means to explore social justice. Students will learn how to conceive, shoot, and edit digital videos; screen examples of successful works; and meet with accomplished social justice filmmakers. Working individually or in small groups, students will create films investigating topics such as human rights, racial equity, environmental justice, food security, and mass incarceration. Remote learning presents an opportunity to experiment with distributed storytelling and smartphone filmmaking in addition to conventional forms. We will scrutinize our role as makers responding to the complex demands of aesthetics, ethical representation, and social impact.

Class Notes: We ask prospective students to attend the first shopping period meeting on August 19, 12-1:30pm EST; complete a brief online application form; and sign up at for an informal Zoom interview, which will take place that afternoon or the next morning to determine who is the best fit for the course. Links for all three are available on the Canvas site.

Immersive Storytelling Using Mixed Media (216369)

2021 Spring (4 Credits)  
Instructor Permissions: Instructor  
Enrollment Cap: 12

Schedule: T 0300 PM - 0545 PM

This course is a studio class about storytelling using mixed media: moving image, sound, text and virtual reality. We will examine different ways in which artists use audiovisual language to tell stories. Starting with the history of immersive media, the class will study the relationship between visual language and technological development. We will screen examples of relevant
contemporary artworks and analyze the technological aspects and conceptual background of these works. Utilizing moving image, sound, text and virtual reality, students will develop projects, reflecting on the discussions in the class. Critique and presentation of the students' works are essential part of the class.

Foreign Bodies, Directing Images: Non-fiction filmmaker-cinematographers (213728)
Joana Pimenta
2021 Spring (4 Credits) Schedule: TR 0300 PM - 0545 PM
Instructor Permissions: Instructor  Enrollment Cap: 10

This is a filmmaking studio course with a specific focus on cinematography, for students who want to direct and simultaneously film their own work. Filming will be explored as a practice of daily life where one dares to believe in what one sees, and to construct it through images. We will find subjects in transient forms, bodies and spaces, here and elsewhere, and embody them through a continuous practice of filmmaking. Students will work mostly in a non-sync mode of recording sound and image, constructing reality, subject and form through their encounter.

Un cine para hoy: Remapping Latin American Cinema (216313)

Haden Guest
Dominga Sotomayor Castillo

2020 Fall (4 Credits) Schedule: W 1200 PM - 0245 PM

Instructor Permissions: Instructor Enrollment Cap: 12

Challenging traditional assumptions about the national borders defining separate cinemas across Central and South America, this hybrid filmmaking and film studies course explores contemporary Latin America cinema as a vital transnational territory and community defined by a network of filmmakers in close dialogue with one another and joined by a shared desire to create new forms and audiences. Chilean
filmmaker Dominga Sotomayor and film historian Haden Guest will co-teach this course. Each week directors will be invited to present and discuss their films, with some also leading small group production workshops.

Class Notes: Students interested in taking this course are invited to attend a live shopping week session on Wednesday, August 19 at 12:00PM-1:00PM EST. The Zoom link will appear on the Canvas course site. There will be a two hour workshop required for this class to be scheduled.

### Art, Film, and Visual Studies 174

**Art of the Real: Rethinking Documentary** (156235)

*Dennis Lim*

2021 Spring (4 Credits)  
**Schedule:**  
M 0300 PM - 0500 PM

**Instructor Permissions:**  
Instructor

**Enrollment Cap:**  
n/a

This seminar undertakes a survey of documentary and realist movements in cinema from the silent era to the digital present, focusing on periods of crisis and renewal, and paying special attention to the formal, ontological, aesthetic, and ethical questions that have shaped their evolution. We will situate our study of documentary history and theory within a larger discussion of cinema’s complicated relationship with the real, treating documentary not as a clearly demarcated genre but one that shares many points of contact with narrative and experimental cinema. Looking beyond the canon, the class aims to provide students with an expanded view of the real in cinema.

### Art, Film, and Visual Studies 179

**Political Cinema** (216346)

*Dennis Lim*

2020 Fall (4 Credits)  
**Schedule:**  
M 0300 PM - 0500 PM

**Instructor Permissions:**  
Instructor

**Enrollment Cap:**  
15

This seminar surveys the landscape of global political cinema from the explosive 1960s to the unsettled present. We will trace a history of politically engaged filmmaking and explore the role of cinema in revolutionary culture. The class also seeks to expand our understanding of the ways in which cinema can be political. We will consider the relationship between politics and aesthetics, the possibilities of cinema as
politics, and the question of what it means (as Jean-Luc Godard put it) to "make films politically."

Course Notes: There are weekly film screenings required for this course; schedule to be determined.

Class Notes: Students who are interested in taking this class are invited to a live shopping session on Mon., Aug. 17 from 3pm to 4pm; the Zoom link, and more information can be found on the Canvas course site.

Art, Film, and Visual Studies 184E

Under Surveillance: Media, Security, and the Loss of Privacy (216275)

Eric Rentschler

2020 Fall (4 Credits) Schedule: T 1245 PM - 0245 PM

Instructor Permissions: None Enrollment Cap: n/a

With a camera positioned at the entrance to the director's factory, Louis Lumière's famous early film of 1895, La Sortie de l'usine Lumière à Lyon, captured workers as they left for the day. Today, surveillance practices have infiltrated daily lives around the globe, from the ubiquitous cameras on city streets and public spaces to tracking systems that monitor, store, and
monetize even our most intimate activities. In this class we will probe and problematize the modern history of surveillance technologies and monitoring practices, from the first manifestations of police photography to CCTV, drones, racial profiling, GPS technology, and user security on social media and digital platforms. To this end we will look at exemplary features such as *The Conversation* (1974), *Strange Days* (1995), *Caché* (2005), *Red Road* (2006), *The Lives of Others* (2006), and *Snowden* (2016), documentaries like *13th* (2016), *The Creepy Line* (2018), and *The Great Hack* (2019) as well as selected videos and tv programs. We will also consider the analytical and theoretical perspectives of, among others, Michel Foucault, Jean Baudrillard, Wolfgang Ernst, Gilles Deleuze, Harun Farocki, Shoshana Zuboff, Catherine Zimmer, Lev Manovich, Mark Andrejevic, Thomas Levin, Patricia Pisters, and Christian Parenti.

Art, Film, and Visual Studies 196R

Directed Research: Studio Course (119636)

*Stephen Prina*

2020 Fall (4 Credits)  
Instructor Permissions: Instructor  
Enrollment Cap: 10

Schedule: W 0600 PM - 0845 PM

This course is intended for students who have developed the beginnings of a practice they are prepared to pursue. The motive is to assemble a group of disparate artists who come together to exchange thoughts across disciplines: painting next to photography next to writing next to filmmaking, and so on.

Course Notes: This course meets from 6pm to 9pm EST on Wednesdays.

Recommended for concentrators in Art, Film, and Visual Studies in their junior and senior year but also open to others with permission of the instructor.

Class Notes: FALL 2020: There is still space available in this course! Please contact the course's Teaching Assistant, Hadi Fallahpisheh at fallahpisheh@gmail.com for more information.

We adopt the interview process for this class to make an early, personal connection with each applicant and to clarify what is expected in the class. Because the class is "non-denominational," in that any way of working is acceptable, be it painting, sculpture, music, photography, video, design, writing, acts of civil disobedience, performance, etc., we are looking for a range of practices for the class, and students at a range of levels. The class depends upon its
members to be self-motivated and self-determining, in that no specific assignments for studio are made. The members of the class must define projects, develop them, and execute them with the consultation with the professor, teaching assistant, and other members of the class. In other words, we want every applicant to know what they are in for opting to take this class.

Art, Film, and Visual Studies 231
Studio Language (213421)
Nora Schultz
2020 Fall (4 Credits)  Schedule:  MW 0900 AM - 1145 AM
Instructor Permissions:  Instructor  Enrollment Cap:  10

Directed to specific themes in the practices of graduate students and undergraduate students in their junior and senior years, Studio Language considers the intersection of visual art and language (in its many forms). Drawing on intermedia and interdisciplinary work in the wider fields of art making and art theory, the course investigates the relationship between artwork and its conceptualization, contextualization, critique, exhibition, and dissemination.

Course Notes: This course is for graduate students and undergraduates in their junior and senior years.

Class Notes: Enrollment in Studio Language is limited to ten students, selected by lottery. Though the lottery process is random, the department of Art, Film and Visual Studies (AFVS) requires that priority be given to: AFVS concentrators, prospective AFVS concentrators, secondary field students, and graduate students who require a studio course. To enter the enrollment lottery, attend one introductory meeting in shopping week.

Introductory meetings will be held during "shopping week" on Monday, August 17 from 9:00–10:30AM and Wednesday, August 19 from 10:30AM–12:00PM. Please email the instructors if you are unable to attend one of these dates.

This course meets from 9:15 to 12pm EST.

Art, Film, and Visual Studies 241
New Media Theory (110046)
Laura Frahm
2020 Fall (4 Credits)  Schedule:  M 1200 PM - 0200 PM
Instructor Permissions:  Instructor  Enrollment Cap:  12

This graduate course surveys new developments in media theory and provides an overview of advanced approaches to the study of media. We will look at different schools and streams of thought that productively expand and transform the established corpus of media theory, with a special emphasis on recent positions on art, media, and ecology. Weekly blogs, film screenings, and research projects will further enhance our survey of recent media theoretical positions.
**Course Notes:** Open to all graduate students and advanced undergraduate students. This course has mandatory weekly film screenings to be determined.

Sonic Ethnography (108976)

2021 Spring (4 Credits)  
**Schedule:** MW 0600 PM - 0715 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 10

This is a practice-based course in which students record, edit, and produce anthropologically informed audio works which interpret culture and lived experience. Listening sessions will provide a broad context of contemporary work using location recordings, and readings will situate the practice within the growing field of sound studies. In their projects, students will experiment with technical and conceptual strategies of recording and composition as they engage with questions of ethnographic representation through the sensory dimension of sound.

**Recommended Prep:** Experience in media production helpful but not required.

Proseminar in Film and Visual Studies: History (122079)

*Tom Conley*

2021 Spring (4 Credits)  
**Schedule:** TBD

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 15

Considers film history and the relations between film and history as well as pertinent theoretical approaches to historiography. Critical readings of exemplary film historical studies and careful scrutiny of films both in and as history.

**Course Notes:** Required of all Film and Visual Studies graduate students, as well as graduate students intending to declare a secondary field in Film and Visual Studies.

Interested students must attend first meeting of class during shopping week to speak with teaching staff about course enrollment procedure.

Proseminar in Film and Visual Studies: Theory (122080)

Giuliana Bruno

2020 Fall (4 Credits)  
Instructor Permissions: Instructor
Instructor
Enrollment Cap: 12

Schedule: R 1200 PM - 0200 PM

An advanced survey of current debates on the place of the moving image in contemporary visual culture, art practice, and media ecologies, with regards to concepts of space, time, archive, movement, and affect. Topics include visual studies and the culture of modernity, media archaeology and cultural techniques, screen culture in the museum, new media and contemporary art, moving images and architectural space.

Course Notes: Required of all Film and Visual Studies graduate students as well as graduate students intending to declare a secondary field in Film and Visual Studies.

Class Notes: Visit Canvas class site during shopping week for application and registration procedure.

Screens--Projecting Media and the Visual Arts (108653)

Giuliana Bruno

2020 Fall (4 Credits)  
Instructor Permissions: Instructor
Instructor
Enrollment Cap: 12

Schedule: W 1200 PM - 0200 PM

How do screens function as interface between us and the world? What is the role of the screen in contemporary visual arts and media culture? The art of projection has traveled from film theatre to art gallery, from pre-cinematic exhibition to post-medium conditions. We examine this history and archaeology of screen media, and their current cultural and aesthetic dimensions. We explore the architecture of the screen, transforming into environments of screen surfaces and interconnected sites of projection.

Course Notes: There will be occasional film screenings to be arranged. Offered jointly with the Graduate School of Design as 4356.

Class Notes: Visit Canvas class site during shopping week for application and registration procedure.
registration procedure.

Recommended Prep: A course in film or visual theory, art history, architecture studies or the equivalent course in cultural history.

From Biopolitics to Care of the Self (New Course) (216303)

David Joselit

2020 Fall (4 Credits)  

Schedule: W 0300 PM - 0500 PM

Instructor Permissions: Instructor  

Enrollment Cap: 10

This seminar will consist of close readings of Michel Foucault, focusing on his Collège de France lectures (1971 – 1984), and charting his transition from biopolitics, the seizure of human life by apparatuses of power, to “care of the self,” exploring the extent and limits of a subject’s agency to fashion itself. The course will put these ideas in dialogue with thinkers like Rosi Braidotti, Achille Mbembe, Rey Chow, and Judith Butler.

CMP Projects: Production and Publication (216340)

*Joana Pimenta*

2020 Fall (4 Credits)  
Instructor Permissions: Instructor  
Enrollment Cap: 10

The goal of **CMP Projects** is to establish an alternative curatorial and editorial platform for research-based artistic projects in various academic fields, producing and publishing works that bridge different media and formats, and support forms of production positioned between research and practice. The class will work towards curating and supporting the production as well as the diffusion of selected research-based artistic projects; build a network which enables collaboration with other art institutions, museums, art/design schools, artist-run spaces, publishers, book fairs, etc.; invite guest curators, artists and editors to offer critiques and lead workshops. Throughout the semester, the class will produce a new publication series, **CMP projects**, featuring work curated and edited by the students, and produced by artists and researchers from Harvard and beyond. It will serve as an editorial space where research can be articulated experimentally. Artist-researchers pursuing individual publication projects are also welcome to join.

**Class Notes:**  
Course Admission Process: This course is limited to ten students, and an interview with the instructors is required before admission. The interview will be 5 to 10 minutes long, and we will discuss the work you plan to develop during the semester. We are also happy to respond to any questions you may have about the class. If you are interested in enrolling, please contact Joana Pimenta and Noha Mokhtar ([pimenta@fas.harvard.edu](mailto:pimenta@fas.harvard.edu); [mokhtar.noha@gmail.com](mailto:mokhtar.noha@gmail.com)) with a brief description of your work, and links to documentation of any projects.
Interviews will take place on Friday, August 21. (If you are unable to meet with us then, please write to let us know and we will schedule an alternative meeting time.)

Advanced Critical Media Practice (156526)

Lucien Castaing-Taylor
Joana Pimenta

2020 Fall (4 Credits) Schedule: W 0300 PM - 0545 PM

Instructor Permissions: Instructor Enrollment Cap: 10

This course is for graduate students pursuing the PhD Secondary Field in Critical Media Practice, as well as for other students creating artistic or interpretive media projects that are complementary to their scholarship. Open to any media or subject matter, the course is centered around exhaustive, constructive critique, supplemented by workshops, screenings and visiting artists.

Class Notes: Course Admission Process: This course is limited to ten students, and an interview with the instructors is required before admission. The interview will be 5 to 10 minutes long, and we will discuss the work you plan to develop during the semester. We are also happy to respond to any questions you may have about the class. If you are interested in enrolling, please contact Lucien Castaing-Taylor, Joana Pimenta and Noha Mokhtar (lgtaylor@fas.harvard.edu; pimenta@fas.harvard.edu; mokhtar.noha@gmail.com) with a brief description of your work, and links to documentation of any projects. Astronomy
Subject: Astronomy

Astronomy 1
The Big Questions of Astronomy (113797)

David Charbonneau

2020 Fall (4 Credits) Schedule: TBD
Instructor Permissions: Instructor Enrollment Cap: 60

We will discuss the big questions of astronomy that have engaged scientists and the general public alike for centuries: How did the universe begin? What is the ultimate fate of the Sun? How do planets form? Is there life outside the Solar system? Students will use telescopes to study the night sky and examine how the combination of astronomical observations and physical theory have led to an understanding of the vast and dynamic cosmos we inhabit.

Class Notes: In Fall 2020, the course will be offered through remote instruction: There will not be synchronous lectures. Rather, a weekly reading will be assigned, and students will then meet in small groups twice a week with Prof. Charbonneau to discuss the content. Several different weekly time slots will be offered so that any student should be able to identify a reasonable option regardless of their local time zone. Students will also meet weekly in a small group section with their teaching fellow. Each week there will be a brief reading questionnaire and a homework assignment, submitted via Canvas.

Astronomy 2
Celestial Navigation (111305)

Philip Sadler

2021 Spring (4 Credits) Schedule: T 0700 PM - 0900 PM
T 1100 AM - 0100 PM
Instructor Permissions: None Enrollment Cap: 30

Never be lost again! Find your way on sea, land, or air by employing celestial and terrestrial techniques. Acquire expertise in using navigators’ tools (sextant, compass, and charts) while learning the steps to the celestial dance of the sun, moon, stars, and planets. This 108-year-old course continues to rely on practical skills and collaborative problem-solving, while utilizing historical artifacts (instruments, maps, captains’ logs) and student-built devices. Culminating in a day-long cruise to practice navigation skills.

Course Notes: Minimal lecturing; predominantly practical activities with individual attention from teaching staff. Math beyond high school trigonometry
and geometry unnecessary. This course is offered each year.

**Astronomy  5**

Astrosociology (205519)

Gerhard Sonnert

2021 Spring (4 Credits)  

**Schedule:** TR 0900 AM - 1015 AM

**Instructor Permissions:** Instructor

**Enrollment Cap:** 25

In an age of magnificent astronomical progress and discoveries, the increasing knowledge of the cosmos has manifold repercussions in society and culture. This course will examine how outer space-related phenomena impact, or potentially impact, society and culture, and vice versa. Especially in light of the proliferating discovery of exoplanets, an intriguing topic of astrosociology is presented by the possibility of the existence of extraterrestrial civilizations, their detection, communication with them, and even contact.

**Course Notes:** This course is offered each year.

**Recommended Prep:** An introductory course in mechanics, which may be taken concurrently, satisfied by Physics 11a, Physics 15a, Physics 16 or Physical Sciences 12a.

**Requirements:** Prerequisite: Physics 15a, Physics 16, or Physical Sciences 12a. May be taken concurrently.

**Astronomy  16**

Stellar and Planetary Astronomy (118136)

Karin Oberg

2021 Spring (4 Credits)  

**Schedule:** TBD

**Instructor Permissions:** None

**Enrollment Cap:** n/a

This course provides an introduction to the physical principles describing the formation and evolution of stars and their planetary companions. Topics include thermal radiation and stellar spectra; telescopes; energy generation in stars; stellar evolution; orbital dynamics; the Solar system; and exoplanets. This course includes an observational component: students will determine the distance to the Sun, and use the Clay Telescope atop the Science Center to study stellar evolution and detect exoplanets.

**Course Notes:** This course is offered each year.

**Recommended Prep:** An introductory course in mechanics, which may be taken concurrently, satisfied by Physics 11a, Physics 15a, Physics 16 or Physical Sciences 12a.

**Requirements:** Prerequisite: Physics 15a, Physics 16, or Physical Sciences 12a. May be taken concurrently.

Astronomy 17

Galactic and Extragalactic Astronomy (125884)

Daniel Eisenstein

2020 Fall (4 Credits)

Schedule: MWF 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap: 35

This course will introduce you to the physical principles describing galaxies and the composition and evolution of the Universe. We will cover a wide range of topics from nearby galaxies to quasars to the Big Bang.

The goals of the course are 1) to introduce you to the broad sweep of extragalactic astronomy and cosmology, including major concepts and common jargon, 2) to develop detailed applications of physics, particularly mechanics, to galaxies and cosmology, 3) to gain exploratory experience in observational astronomy.

Course Notes: This course is offered each year.

Class Notes: Relative to past years, in Fall 2020 we are making some important changes to the course. While the topics are largely the same, we are going to integrate observational methods and survey astronomy into the course on a weekly basis, using the upcoming Dark Energy Spectroscopic Instrument at the Kitt Peak National Observatory Mayall telescope as a continuing example (http://desi.lbl.gov). In small groups, students will explore the imaging and spectroscopic data sets of DESI, the Legacy Survey, and the Sloan Digital Sky Survey, as a way to learn about the observational practice of astronomy as well as the engineering considerations of a major observatory.

Class Notes: The course requires attendance at both the Monday and Wednesday classes; this is not an asynchronous course. These classes will be interactive discussion and problem-solving sessions, rather than traditional lectures. There will be required readings before Monday in-class discussions. Each week will involve a multi-step assignment, including in-class group work on Wednesdays, a problem set, and a short quiz due by the end of the week. We are designing it to require about 10 hours/week, including class time.

Astronomy 17 is a required course for both the concentration and the secondary field in Astrophysics. Astronomy 16 & 17 form a complete introductory survey of astrophysics. You can take these courses in either order.

Recommended Prep: An introductory course in mechanics, which may be taken concurrently, satisfied by Physics 1la, Physics 15a, Physics 16, or Physical Sciences 12a, as well as a course in integral calculus, which may be taken concurrently, satisfied by Math 1b.
Science is like a well-woven, ever-expanding fabric, designed to uncover Nature's secrets. This course emphasizes the strong connections between subfields of science, showing it as the never-ending and greatest detective story ever told, with evidence always the arbiter. These characteristics are exhibited in the semi-historical treatment of three main themes: unveiling the universe, the earth and its fossils, and the story of life.

Astronomy 50
Introduction to Space Exploration (215962)

Jonathan Grindlay
2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: Instructor Enrollment Cap: 20

The 1960s were the early glory days of space exploration, driven by the space race between the U.S. and the U.S.S.R., the Apollo program, and the successful Moon landings. After this heroic decade, space exploration lost a great deal of its impetus. Yet, very recently, there are clear signs of a reemerging dynamic in space exploration, now characterized by both the emergence of new players and new fields of exploration. This course introduces the students to a comprehensive array of diverse topics. These range from the history and sociology of space exploration to space law and space policy, from the space economy to the physical, astronomical, and engineering basics of space exploration.

Recommended Prep: There are no prerequisites to register for this course.

Astronomy 91R
Supervised Reading and Research (110822)

Karin Oberg

2020 Fall (4 Credits)  Schedule:  TBD
Instructor Permissions:  Instructor  Enrollment Cap:  n/a

Supervised reading and research in a subject of astrophysics that is not normally included in the regular course offerings of the department.

Course Notes:  Students must arrange for course supervision with an individual member of the Department. The course may be counted only once toward the concentration requirements, and may not be taken more than twice. This course is offered each semester.

Requirements:  Prerequisite: Astronomy 16 OR Astronomy 17

Astronomy 98
Research Tutorial in Astrophysics (112487)

Edo Berger
This junior tutorial introduces students to research at the forefront of astrophysics, through individual research projects guided by astronomers at the Center for Astrophysics. Students meet weekly for a discussion of reading materials provided by a guest speaker, and to provide updates on their individual research projects. The course culminates in a written report and an oral presentation (open to all scientists at the CfA).

Requirements: Prerequisite: Astronomy 16 OR Astronomy 17

Astronomy 99A
Senior Thesis in Astrophysics (116041)

John Kovac
2020 Fall (4 Credits) Schedule: R 0300 PM - 0415 PM
Instructor Permissions: None Enrollment Cap: n/a

Individually supervised reading and research leading to the senior thesis. The Harvard-Smithsonian Center for Astrophysics is home to one of the largest groups of astronomers in the world, providing extensive opportunities for undergraduate research. Both Part A and Part B must be taken in the same academic year in order for students to receive credit. Part one of a two part series.

Course Notes: This course is offered each year.

Class Notes: Classes will end at 4:00 pm to allow students to attend the CfA Colloquium.

Requirements: Prerequisite: Astronomy 98

Astronomy 99B
Senior Thesis in Astrophysics (159800)

John Kovac
2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a

Recommended Prep: Astronomy 98.

Requirements: Pre-requisite: ASTRON 99A

Astronomy 100

Methods of Observational Astronomy (125880)

Douglas Finkbeiner

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: 15

In this course we will learn the basic tools of modern astronomical research, including telescopes, detectors, imaging, spectroscopy, and common software. Emphasis will be placed on both the theory behind telescopes and their use, and hands-on experience with real data. Using this basic knowledge we will analyze science-level astronomical data from a wide range of telescopes and review the basic properties of stars, galaxies, and other astronomical objects of interest. The course includes a trip to the F. L. Whipple Observatory on Mount Hopkins, Arizona, to gather data with various telescopes.

Course Notes: This course is offered each year.

Recommended Prep: Astronomy 16 or Astronomy 17.

Requirements: Prerequisite: Astronomy 16 OR Astronomy 17

Astronomy 130

Cosmology (125883)

Xingang Chen

2020 Fall (4 Credits) Schedule: TR 0130 PM - 0245 PM

Instructor Permissions: None Enrollment Cap: n/a

The physical model describing the initial conditions, evolution, and ultimate fate of the Universe. Topics include cosmic dynamics; the Robertson-Walker Metric; curvature; estimating cosmological parameters;
the accelerating universe; dark matter; gravitational lensing; the cosmic microwave background; nucleosynthesis; inflation and the very early universe; formation of structure. Note: Offered in alternate years.

Class Notes: Instructor would prefer the class to meet up to 3 pm. But class times to accommodate students in other time zones will be discussed at the first meeting.

Recommended Prep: Prerequisite: College-level Mechanics (e.g. Physics 15a) and Calculus (e.g. Math 1b)

Astronomy 191

Astrophysics Laboratory (113262)

John Kovac

2021 Spring (4 Credits)  Schedule:  TBD

Instructor Permissions: None  Enrollment Cap: n/a

Laboratory and observational projects in astrophysics. Students design and undertake two projects from a selection including: observational studies of the cosmic microwave background radiation, molecules in interstellar clouds, the rotation of the galaxy, galactic molecular sources with the submillimeter array (SMA), stars and clusters with the Clay Telescope; and laboratory experiments including super-conducting submillimeter detectors, x-ray CCDs, and hard x-ray imaging detectors and telescopes.

Course Notes: Primarily for concentrators in astrophysics or combined concentrators with physics. Students with physics as their primary concentration, but with a serious interest in astrophysics, may take this to satisfy their laboratory requirement (in lieu of Physics 191) upon petition to the Head Tutor in Physics. This course is offered each year.

Class Notes: This course will most likely start at 2 pm and will finish by 5 pm.

Requirements: Prerequisite Astronomy 191: Astronomy 16, OR Astronomy 17, OR Physics 15C

Astronomy 200

Radiative Processes in Astrophysics (124966)

Ramesh Narayan
This course surveys radiation processes and their applications to astrophysical phenomena. Background material in electromagnetic theory, quantum mechanics, relativity and statistical mechanics is briefly reviewed as needed. Thermal and non-thermal radiative processes are discussed, including atomic and molecular transitions, bremsstrahlung, Compton scattering and synchrotron radiation.

Course Notes: Open to seniors concentrating in Astrophysics or Physics. This course is offered each year.

Recommended Prep: Physics 143a.

**Astronomy 201**

Astrophysical Fluids & Plasmas (124099)

*Lars Hernquist*

2021 Spring (4 Credits)  

Schedule: TBD  

Instructor Permissions: Instructor  

Enrollment Cap: 30  

Fluid and gas dynamics with applications drawn from astrophysical phenomena. Topics include: kinetic theory, diffusive effects, incompressible fluids, inviscid and viscous flows, boundary layer theory, accretion disks, fluid instabilities, turbulence, convection, gas dynamics, linear (sound) waves, method of characteristics, Riemann invariants, supersonic flow, non-linear waves, shocks, similarity solutions, blast waves, radiative shocks, ionization fronts, magnetohydrodynamics, hydromagnetic shocks, dynamos, gravitational collapse, principles of plasma physics, Landau damping, computational approaches, stability criteria, particle based (Lagrangian) methods, adaptive mesh refinement, radiation hydrodynamics.

**Astronomy 203**

Interstellar Medium and Star Formation (118138)

*Karin Oberg*

2021 Spring (4 Credits)  

Schedule: TBD  

Instructor Permissions: None  

Enrollment Cap: n/a  

The interstellar medium (ISM) is the reservoir of gas and dust between stars. It is the nursery of new stars and planets, and the depository of energy and material from stellar winds and supernovae. This course will
treat the often extreme physics and chemistry of the interstellar medium under its observed range of temperatures, densities, and radiation fields. It will cover the processes that govern the interactions between the ISM, stars and their host galaxies, including star and planet formation, and feedback from stellar deaths. The observational and laboratory methods and results that underpin the theories of interstellar environments will be highlighted.

Course Notes: This course offered in alternate years.

Stellar Astrophysics (118266)

*Charles Conroy*

2020 Fall (4 Credits) Schedule: R 0830 AM - 0945 AM
T 0700 PM - 0815 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

Stars are the basic building blocks of the universe, and they are responsible for the production of most elements via nucleosynthesis. This course covers the energy generation and transport in stars, stellar atmospheres and radiative transfer, stellar evolution, asteroseismology & variability, compact objects and supernovae.

Course Notes: This course offered in alternate years.

Recommended Prep: Astronomy 200 (may be taken concurrently).

**Astronomy 209**

Exoplanet Systems (108130)

*John Johnson*

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: 40

A survey of the rapidly evolving field of exoplanets with the goal of equipping students with the ability to identify and pursue research questions. Topics include observational methods and instrumentation to detect and characterize exoplanets; properties of stellar hosts; formation and dynamical evolution of planetary systems; composition and physical structure of planets; planetary atmospheres; habitable zones and biosignatures.
Course Notes: This course is intended for graduate students and upper division undergraduates concentrating in astrophysics or related fields. Students who do not have a CfA computer account should contact the course head well in advance of the first day of class. Offered in alternate years.

Recommended Prep: Astronomy 16, and a course in mechanics at the level of Physics 15a or above.

Astronomy 305
Topics in Origins of Life Research (161303)

Dimitar Sasselov

2021 Spring (4 Credits)  Schedule:  TBD
Instructor Permissions:  Instructor  Enrollment Cap:  30

This semester we will lay out a plausible story of how life emerged on Earth from chemistry that led to the synthesis of molecular building blocks, which in turn self-assembled to form cells. I will do that by reviewing two recent papers – the required reading for this course [1,2]. Each week we will also use, as necessary, relevant papers to the topics to be discussed. The list of topics is enclosed in the syllabus, as are some of the papers.

Class Notes:  This course meets at the Center for Astrophysics, 60 Garden St, in the Classroom A-101. Actual class times are 2:00 - 3:15 pm

Additional Course Attributes:

Astronomy 308
Data Mining, Machine Learning, and Deep Learning for Astronomy (215413)

Jaehyon Rhee

2021 Spring (2 Credits)  Schedule:  TBD
Instructor Permissions:  Instructor  Enrollment Cap:  30

One of the greatest challenges in modern astronomy is how to extract meaningful and interpretable results
from data in a timely and systematic manner as astronomical data becomes extreme in volume, acquisition rate, and complexity. Using Python and R, this seminar course introduces modern data science methods and their applications along with real astronomical data sets. Topics include not only fundamental data mining (DM) and machine learning (ML) techniques (i.e., regression, classification, clustering, and time series analysis) but also select advanced deep learning (DL) and artificial intelligence (AI) algorithms (such as CNN, GAN, and RL). By the semester's end, students emerge with knowledge of and skills in data science that empower them to handle big data, carry out data analysis tasks, and interpret meaning out of it. Although designed for astronomy major students, this course is for any student who wants to learn how modern science works with machine learning.

Class Notes: This seminar is considered a half-semester course offering 2 units of credit. Students should review the syllabus before committing to the course to ensure that they have enough flexibility in their schedule to participate in the class and complete the assignments.

Class Notes: Course will meet Thursdays Feb 27 - Apr 16, 2020. Actual class times will be 9:30 AM - 12 Noon.

As an introduction to the principles governing function in the human body, this course is designed to
provide a framework in physiology for future public health researchers and professionals who have not taken college level physiology courses. Emphasis is placed on the concept of homeostasis and on integrative aspects of physiology. Examples of pathophysiology and environmental physiology will highlight these processes.

Course Activities: Problem sets, exams, laboratory

Course note: students should have taken college level introductory biology before taking this class

Course Notes: Offered jointly with the School of Public Health as EH 205

Class Notes: THIS CLASS HAS PRIORITY ENROLLMENT

Priority Wave Groups

Wave 1 | EH Plans and Subplans
Wave 2 | PHD BPH, PHS SBS, PHS EPI & Wave 1
Wave 3 | Open Enrollment

Priority Wave Timing

Wave 1 | 8/13/2020 11:00AM – 8/25/2020 11:59PM
Wave 2 | 8/26/2020 12:00AM – 8/27/202011:59PM
Wave 3 | 8/28/2020 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave's criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

**Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course

**Biological Sci in Public Hlth  210**

Pathophysiology of Human Disease (112431)

*Nancy Long Sieber  
Kristopher Sarosiek*

2021 Spring (4 Credits)  
Schedule: TBD  
Enrollment Cap: n/a

Surveys major human disease problems in the cardiovascular, respiratory, hematopoietic, reproductive, and gastrointestinal systems. Emphasis on understanding the pathophysiologic basis of common disease manifestations and the pathogenesis of the disease process.
The course is designed to expose students to the principles and methods that should be used to determine whether a causal relationship exists between specific doses of an agent and an alleged adverse effect, observed primarily in humans. Integration of principles and methods of toxicology is extremely important since the primary purpose of toxicology is to predict human toxicity. Toxicological data obtained in animal studies must be placed in proper relationship to the exposure observed in the human population. The course deals with organ systems and whole organisms but relies on an understanding of the mechanistic approaches covered in EH508. Key target organs, selected classes of toxic agents and the application of toxicological principles are covered. Students are assigned a topic for a short presentation.

---

Course Notes: Offered jointly with the School of Public Health as EH 504.

Biological Sciences Communications (110521)

*Brendan Manning*

*Zachary Nagel*

2020 Fall (4 Credits) Schedule: MW 0230 PM - 0359 PM

Instructor Permissions: None Enrollment Cap: n/a

Emphasis of this course is effective scientific communication. Students will develop skills in writing and critiquing grants and scientific papers, learn about the grant application process, and present seminars that focus on structure, language and content appropriate for technical and lay audiences. Topics covered will apply to public health concerns in biological sciences across various disciplines.
Course Notes: Required for all first year BPH PhD students.

Course Location: TBA

Cross-listed with DBS 205

The Biological Basis of Human Nutrition (111293)

*Frank M. Sacks*

*Jeremy Furtado*

2021 Spring (4 Credits)  

**Schedule:** TBD

**Instructor Permissions:** Instructor  

**Enrollment Cap:** 30

A review of the biochemistry of carbohydrates, fats, proteins, vitamins, and minerals in the context of human disease. Contemporary topics are emphasized. Particular emphasis given to current knowledge of the mechanisms that may explain the role of diet in the causation and/or prevention of ischemic heart disease, diabetes, obesity, hypertension, and cancer. Recommended dietary intakes of selected nutrients are discussed in order to understand their limitations.

Course Notes: Offered jointly with the Medical School as BPH 733.0 and with the School of Public Health as NUT 202.

Recommended Prep: Introductory nutrition course. Prior familiarity with nutrition and the health sciences expected, as well as a basic knowledge of biochemistry and human physiology.

Biology and Control of Vector-Borne Parasites (214578)

*Barbara Burleigh*

*Daniel Neafsey*

*Flaminia Catteruccia*

*Deepali Ravel*

2021 Spring (4 Credits)  

**Schedule:** TBD

**Instructor Permissions:** Instructor  

**Enrollment Cap:** 20

This advanced readings course focuses on a group of vector-borne parasitic protozoa and helminths that
are responsible for the highest burden of disease in developing countries. Central themes in the biology of transmission, parasite-host interactions and opportunities for control will be covered in the framework of the unique biology of eukaryotic parasites including Plasmodium, Leishmania, trypanosomes and schistosomes. Weekly lectures from Harvard faculty and invited speakers will enhance critical readings of the current literature and student-led discussions, and will emphasize experimental approaches and mechanisms of parasitic infection from the perspective of molecular and cellular biology, genomics, and evolution. Final group presentations of short research proposals will be required. The primary course goal is for students to attain deep mechanistic understanding of select topics in vector-borne parasite biology and to be able to critically evaluate and explain to others the rationale and limitations of disease control measures.

The target audience for this course is early PhD students interested in parasite and vector biology as well as students in the Infectious Disease Epidemiology (ID-Epi) concentration or medical students.

Course Notes: Offered jointly with School of Public Health as IID 250.

Recommended Prep: Strong background in molecular biology, cell biology, genetics; ability to critically read primary experimental literature. If you are unsure of your preparation for this class, please contact the course director.

**Biological Sci in Public Hlth 302QC**

Interdisciplinary Training in Pulmonary Sciences Part II (127599)

2021 Spring (2 Credits)  

**Schedule:** TBD  

TBD  

**Instructor Permissions:** Instructor  

**Enrollment Cap:** 40  

The intersection of environment and health is by necessity an interdisciplinary focus. The most promising advances in lung biology and respiratory disease are resulting from teams of scientists with diverse disciplinary training, including biology, medicine, engineering, and physics. In addition to a strong foundation in a specific discipline, the ability to recognize and act upon opportunities presented by outside disciplines is a crucial skill. This course is designed to train scientists to approach lung biology and respiratory diseases with an interdisciplinary perspective, in particular by bridging the gap between life sciences and physical/engineering sciences. With a focus on laboratory sciences and on mechanistic levels of understanding, course materials will cover 3 main problem areas: asthma, air pollution, and lung infection. The course consists of weekly course-meetings (lectures and case-studies) plus weekly research seminars from the physiology program. Students will gain skills in recognizing the relative strengths and weaknesses of different disciplinary approaches applied to pulmonary sciences, in designing interdisciplinary experiments effectively, and in interpreting interdisciplinary results critically.

**Course Notes:** Offered jointly with the School of Public Health as EH 513.

Class runs from 1/27/20-5/15/20.

Jeffrey Dvorin
Manoj Duraisingh
Dyann Wirth

2020 Fall (2 Credits)              Schedule:              TR 0345 PM - 0515 PM
Instructor Permissions: None               Enrollment Cap: n/a

This course is a survey to introduce core concepts and tools of disease eradication. We will discuss the current tools (or lack of tools), the evidence for their effective use, and their successes and failures, and we will discuss the policies and programs required to effectively use these tools for infectious disease control and eradication.

Recommended Prep: Background in biology required; knowledge of pathogenesis of infectious diseases desirable.

Class Notes: THIS CLASS HAS PRIORITY ENROLLMENT

Priority Wave Groups
Wave 1 | EH Plans and Subplans
Wave 2 | Open Enrollment
Wave 3 | Open Enrollment

-------------------------------------------------------------

Priority Wave Timing
Wave 1 | 8/13/2020 11:00AM – 8/25/2020 11:59PM
Wave 2 | 8/26/2020 12:00AM – 8/27/202011:59PM
Wave 3 | 8/28/2020 12:00AM – Enrollment Deadline (varies by session)

Any student who does not meet the Wave 1 or Wave 2 criteria can add themselves to the waitlist (if enrollment requirements are met) at any time during the enrollment period. At the beginning of each priority wave, students on the waitlist who meet the Wave’s criteria will be automatically enrolled into any remaining seats in the course (pending no time conflicts)

**Cross-Registrants and Non-Degree Students will be enrolled on a space available basis after the enrollment deadline for the course

Molecular Mechanisms of Aging (127931)

*William Mair*

2021 Spring (2 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: n/a

We will explore molecular mechanisms underlying aging and aging-related disease. Topics will include nutrient signaling and energy metabolism, genome stability and proteostasis, interventional approaches to extended longevity, and theories of aging including the free radical theory. Recent and classic literature will be critically discussed.

Course Notes: Course will next be offered in Spring 1 2020

This course will be taught every other year (odd years). Offered jointly with the School of Public Health as GCD 212.

Recommended Prep: Preference given to PhD students in HILS-affiliated programs (e.g., BPH, BBS, etc.)

Biomedical Engineering
Subject: Biomedical Engineering

Biomedical Engineering 110
Physiological Systems Analysis (150189)
Maurice Smith

2020 Fall (4 Credits)  Schedule:  MW 1200 PM - 0115 PM
Instructor Permissions:  None  Enrollment Cap:  n/a

A survey of systems theory with applications from bioengineering and physiology. Analysis: differential equations, linear and nonlinear systems, stability, the complementary nature of time and frequency domain methods, feedback, and biological oscillations. Applications: nerve function, muscle dynamics, cardiovascular regulation. Laboratory: neural models, feedback control systems, properties of muscle, cardiovascular function.

Recommended Prep:  Engineering Sciences 53 (or equivalent); Physical Sciences 12b (or equivalent); and Math 21a and Math21b (or equivalents)

Biomedical Engineering 121
Cellular Engineering (119067)
Kit Parker

2021 Spring (4 Credits)  Schedule:  TBD
Instructor Permissions:  Instructor  Enrollment Cap:  n/a

This is a combined introductory graduate/upper-level undergraduate course that focuses on examining modern techniques for manipulating cellular behavior and the application of these techniques to problems in the biomedical and biotechnological arenas. Applications in drug discovery, regenerative medicine, and cellular agriculture will be discussed. Topics will include controlling behavior of cells through cell-matrix interactions, cytoskeletal architecture, and cell behavior in processes such as angiogenesis and wound healing. Lectures will review fundamental concepts in cell biology before delving into topical examples from current literature. Students will work weekly in the lab learning cell culture techniques, soft lithography, microscopy, and classical in vitro assays measuring cell behavior.

Course Notes:  BE121 and ES222 are the same course. This course has a mandatory laboratory section that will require hands-on work outside of scheduled lecture times.

Requirements:  Prerequisite: LS1a (or LPS A); LS 1b; Math 21b (or equivalent); Physical Sciences 12a and 12b (or equivalents); and Engineering Sciences 53; AND Co-requisite: Biomedical Engineering 110
Biomedical Engineering 125

Tissue Engineering (121282)

David Mooney

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

Fundamental engineering and biological principles underlying field of tissue engineering, along with examples and strategies to engineer specific tissues for clinical use. Students will prepare a paper in the field of tissue engineering, and participate in a weekly laboratory in which they will learn and use methods to fabricate materials and perform 3-D cell culture.

Recommended Prep: LS1a, Chem17 or 20, or biochemistry and cell biology background.

Biomedical Engineering 128

Introduction to Biomedical Imaging and Systems (204470)

Linsey Moyer

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: 24

The course is designed as an introduction for students who want to gain both hands on training as well as an introduction to the physics and image reconstruction techniques involved in generating images. The course will introduce the fundamentals of the major imaging modalities including, but not limited to: electron microscopy, optical microscopy, x-ray, computed tomography, ultrasound, MRI, and nuclear imaging, as well as an overview of in vivo imaging and molecular imaging. This course also includes a lab section every other week.

Course Notes: Enrollment limited to 24 students.

Recommended Prep: Physics, Calculus; Basic biology helpful but not required.

Requirements: Prerequisite: Applied Physics 50b OR Physical Sciences 12b OR Physics 15b OR PHYSCI 3 AND Math1b or higher
Biomedical Engineering 129

Introduction to Bioelectronics (211359)

Jia Liu

2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a

This course provides an introduction to bioelectronics and its applications in neuroscience, neuroengineering, cardiology, wearable technology and so on. The focus is on the basic principles of bioelectricity, biochemistry and physiological behaviors of biological systems and how to design tools to precisely measure and control them. Key themes throughout the course will include bioelectricity, biochemistry, cellular and tissue physiological behavior, optogenetics, sensors, stimulators, circuits, signals, biointerface and applications. This includes both the practical and theoretical aspects of the topic.

Recommended Prep: Applied Physics 50b (OR Physical Sciences 12b, OR Physics 15b), and Math 1a or equivalent. Some background in chemistry and biology at the level of ES 53 is helpful but not required.

Requirements: Prerequisite: LS1a or LPSa; Math 1b; and AP50b or Physical Sciences 12b (or equivalent)

Biomedical Engineering 130

Neural Control of Movement (122341)

Maurice Smith

2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a

Approaches from robotics, control theory, and neuroscience for understanding biological motor systems. Analytical and computational modeling of muscles, reflex arcs, and neural systems that contribute to motor control in the brain. Focus on understanding how the central nervous system plans and controls voluntary movement of the eyes and limbs. Learning and memory; effects of variability and noise on optimal motor planning and control in biological systems.

Course Notes: Offered in alternate years.

Recommended Prep: Mathematics 21b or Applied Mathematics 21b or equivalent, probability and statistics, Applied Physics 50a, Physical Sciences 12a, or equivalent.

Additional Course Attributes:

Biomedical Engineering 131

Neuroengineering (216486)

Jia Liu

2020 Fall (4 Credits)  Schedule:  MW 0300 PM - 0415 PM

Instructor Permissions:  Instructor  Enrollment Cap:  20

This course provides an introduction to biological neural systems, and current engineering efforts to understand, control, and enhance the function of neural systems. The focus is on the basic knowledge of molecular basis, anatomic structures, and electrical functions of central and peripheral nervous systems, and the most state-of-the-art genetic/genomic, optical, electrical, magnetic, and computational tools for nervous systems. Key themes throughout the course will include structures of central and peripheral nervous systems, genetic engineering, RNA sequencing, optogenetics, microscope, bioelectronics, MRI, and computational neuroscience. This includes both the practical and theoretical aspects of the topic.

Course Notes:  Enrollment limited to 20 students total.

Recommended Prep:  ENG-SCI 54 recommended.

Biomedical Engineering 191

Introduction to Biomaterials (110020)

Jennifer Lewis

2021 Spring (4 Credits)  Schedule:  TBD

Instructor Permissions:  Instructor  Enrollment Cap:  24

A biomaterial is any form of matter that is produced by or interacts with biological systems. One of the pillars of biomedical engineering is to use naturally derived and synthetic biomaterials to treat, augment, or replace human tissues. This course examines the structure, properties and processing of biomaterials.

Recommended Prep:  Physical sciences 1, Math 1b.

Requirements:  Prerequisite: (LS 1A or LPS A or PS 1 or PS 11) AND (Math 1b or higher)

Subject: Biophysics

Biophysics 170
Evolutionary and Quantitative Genomics (121318)

Leonid Mirny

2020 Fall (4 Credits)       Schedule:       MWF 1100 AM - 1229 PM
Instructor Permissions:     Enrollment Cap:   n/a

Aims to develop deep quantitative understanding of basic forces of evolution, molecular evolution, genetic variations and their dynamics in populations, genetics of complex phenotypes, and genome-wide association studies. Application of these foundational concepts to cutting edge studies in epigenetics, gene regulation and chromatin; cancer genomics, and microbiomes. Modules consist of lectures, journal club discussions of high impact publications, and guest lectures that provide clinical correlates. Homework assignments and final projects aim to develop hands-on experience and understanding of genomic data from evolutionary principles.

Course Notes: Also listed as HST.508. Harvard students should enroll through Biophysics 170.
Meets remotely for 2020 Fall semester. Contact Instructors for access, or email program administrator.
Mondays & Wednesdays 11:00 am-12:30pm.

Class Notes: Class will be offered as a remote course. First day of class is Wednesday, September 2nd.

Biophysics 205
Computational and Functional Genomics (119807)

Martha Bulyk
Shamil Sunyaev
Peter Sorger

2021 Spring (4 Credits)       Schedule:       TBD
Instructor Permissions:     Instructor      Enrollment Cap:   20

Experimental functional genomics, computational prediction of gene function, and properties and models of complex biological systems. The course will primarily involve critical reading and discussion rather than lectures.

Class Notes: Meets on Harvard Medical School Campus.
Recommended Prep: Molecular Biology (MCB 52 or equivalent), solid understanding of basic probability and statistics.

Additional Course Attributes:

Biophysics 242R

Special Topics in Biophysics (117635)

Venkatesh Murthy
Martha Bulyk
Maofu Liao

2021 Spring (4 Credits)  Schedule: TBD
Instructor Permissions: None  Enrollment Cap: n/a

Biophysical topics emerging from special interest research not normally available in established curriculum. The 2019-20 year's course focuses on the theory and practice of cryo-electron microscopy (cryo-EM) with a particular emphasis on single-particle cryo-EM. Three parts run in parallel throughout the course: general theory lectures, guest lectures on specific subjects, and hands-on sessions on basic image processing. General theory lectures cover electron microscope, image formation, sample preparation, two- and three-dimensional classification, revolutionary technical advancement, and future directions. Guest lectures showcase exciting examples of the application of cryo-EM in different research areas. Hands-on sessions include the steps from image pre-processing to particle classification and refinement. Students will have a good understanding of how to plan, perform, optimize and evaluate single-particle cryo-EM work.

Course Notes: Weekly lectures with discussion sections, guest lectures and hands-on experience.

Class Notes: Course will include four topic blocks that involve a lecture and paper reading/presentation component.

Biophysics 300

Introduction to Laboratory Research (121518)

Venkatesh Murthy
Martha Bulyk

2021 Spring (4 Credits)  Schedule: TBD
Instructor Permissions: Instructor  Enrollment Cap: n/a
Introductory lectures by associated Biophysics faculty members. Lectures Fall semester only accompanied by three periods of instruction in laboratories of structural biology, cell and membrane biophysics, molecular genetics and development, neurobiology, bioinformatics, and physical biochemistry.

Course Notes: Fall semester only: meets on both the Cambridge and HMS campuses. Contact department Admin for fall course location and individual faculty member presentation schedule.

Biostatistics
Subject: Biostatistics

Biostatistics 230
Probability Theory and Applications I (119844)

Marcello Pagano

2020 Fall (4 Credits)  Schedule: MW 0200 PM - 0330 PM
Instructor Permissions: Instructor  Enrollment Cap: 20

Axiomatic foundations of probability, independence, conditional probability, joint distributions, transformations, moment generating functions, characteristic functions, moment inequalities, sampling distributions, modes of convergence and their interrelationships, laws of large numbers, central limit theorem, and stochastic processes.

Course Notes: Offered jointly with the School of Public Health as BST230.

Requirements: Prerequisite: Biostatistics PhD Program

Additional Course Attributes:

<table>
<thead>
<tr>
<th>Attribute</th>

Biostatistics 231
Statistical Inference I (119845)

Robert Gray

2021 Spring (4 Credits)  Schedule: MW 0945 AM - 1115 AM
Instructor Permissions: Instructor  Enrollment Cap: 30

Exponential families, sufficiency, ancillarity, completeness, method of moments, maximum likelihood, unbiased estimation, Rao-Blackwell and Lehmann-Scheffe theorems, information inequality, Neyman-Pearson theory, likelihood ratio, score and Wald tests, uniformly and locally most powerful tests, asymptotic relative efficiency.

Course Notes: Offered jointly with the School of Public Health as BST231.

Requirements: Prerequisite: Biostatistics 230

Additional Course Attributes:

<table>

HARVARD UNIVERSITY
Biostatistics 232
Methods I (119846)
Brent Coull
2020 Fall (4 Credits)  Schedule:  MW 0800 AM - 0930 AM
Instructor Permissions:  Instructor  Enrollment Cap:  35

Introductory course in the analysis of Gaussian and categorical data. The general linear regression model, ANOVA, robust alternatives based on permutations, model building, resampling methods (bootstrap and jackknife), contingency tables, exact methods, logistic regression.

Course Notes: Offered jointly with the School of Public Health as BST232.
Recommended Prep: Signature of instructor required if prereq not met.
Requirements: Prerequisite: Biostatistics PhD Program

Biostatistics 234
Introduction to Data Structures and Algorithms (160641)
Christoph Lange
Georg Hahn
2021 Spring (4 Credits)  Schedule:  MW 1130 AM - 0100 PM
Instructor Permissions:  Instructor  Enrollment Cap:  35

Introduction to the data structures and computer algorithms that are relevant to statistical computing. The implementation of data structures and algorithms for data management and numerical computations are discussed.

Course Notes: Offered jointly with the School of Public Health as BST 234.

Additional Course Attributes:

Biostatistics 235
Advanced Regression and Statistical Learning (119848)
Junwei Lu
2020 Fall (4 Credits)  Schedule:  MW 0945 AM - 1115 AM
Instructor Permissions:  Instructor  Enrollment Cap:  20
An advanced course in linear models, including both classical theory and methods for high dimensional data. Topics include theory of estimation and hypothesis testing, multiple testing problems and false discovery rates, cross validation and model selection, regularization and the LASSO, principal components and dimension reduction, and classification methods. Background in matrix algebra and linear regression required.

Course Notes: Offered jointly with the School of Public Health as BST235.

Requirements: Prerequisite: Biostatistics 231 AND Biostatistics 232

Additional Course Attributes:

<table>
<thead>
<tr>

Biostatistics 238

Principles and Advanced Topics in Clinical Trials (125262)

David Wypij

2021 Spring (4 Credits) Schedule: MW 0200 PM - 0330 PM

Instructor Permissions: Instructor Enrollment Cap: 30

This course focuses on selected advanced topics in design, analysis, and interpretation of clinical trials, including study design; choice of endpoints (including surrogate endpoints); interim analyses and group sequential methods; subgroup analyses; and meta-analyses.

Course Notes: Offered jointly with the School of Public Health as BST 214 & BST 238.

Requirements: Prerequisite: BIST 230 AND BIST 231 (may be taken concurrently)

Additional Course Attributes:

<table>
<thead>
<tr>

Biostatistics 240

Probability Theory and Applications II (119854)

Lorenzo Trippa

2020 Fall (4 Credits) Schedule: MW 0200 PM - 0330 PM

Instructor Permissions: Instructor Enrollment Cap: 15

A foundational course in measure theoretic probability. Topics include measure theory, Lebesgue integration, product measure and Fubini’s Theorem, Radon-Nikodym derivatives, conditional probability, conditional expectation, limit theorems on sequences of random variables, stochastic processes, and weak convergence.

Course Notes: Offered jointly with the School of Public Health as BST240.
Biostatistics 241
Statistical Inference II (119855)

Rui Wang

2021 Spring (4 Credits) Schedule: TR 0200 PM - 0330 PM

Instructor Permissions: Instructor Enrollment Cap: 20

Advanced topics in statistical inference. Limit theorems, multivariate delta method, properties of maximum likelihood estimators, saddle point approximations, asymptotic relative efficiency, robust and rank-based procedures, resampling methods, nonparametric curve estimation.

Course Notes: Offered jointly with the School of Public Health as BST 241.

Requirements: Prerequisite: Biostatistics 240

Additional Course Attributes:

Biostatistics 244
Analysis of Failure Time Data (119849)

L. Wei

2021 Spring (4 Credits) Schedule: MW 0945 AM - 1115 AM

Instructor Permissions: Instructor Enrollment Cap: 20

Discusses the theoretical basis of concepts and methodologies associated with survival data and censoring, nonparametric tests, and competing risk models. Much of the theory is developed using counting processes and martingale methods.

Course Notes: Offered jointly with the School of Public Health as BST 244.

Requirements: Prerequisite: BIOSTAT 233 AND BIOSTAT 240

Additional Course Attributes:

<table>
<thead>
<tr>

Biostatistics 245
Analysis of Multivariate and Longitudinal Data (119850)

Tom Chen

2020 Fall (4 Credits)  Schedule: TR 1130 AM - 0100 PM
Instructor Permissions: Instructor  Enrollment Cap: n/a

The multivariate normal distribution, Hotelling’s T2, MANOVA, repeated measures, the multivariate linear model, random effects and growth curve models, generalized estimating equations, multivariate categorical outcomes, missing data, computational issues for traditional and new methodologies.

Course Notes: Offered jointly with the School of Public Health as BST 245.

Requirements: Prerequisite: Biostatistics 231

Additional Course Attributes:

<table>
<thead>
<tr>

Biostatistics 249
Bayesian Methodology in Biostatistics (119853)

Jeffrey Miller

2021 Spring (4 Credits)  Schedule: TR 0345 PM - 0515 PM
Instructor Permissions: Instructor  Enrollment Cap: 20

General principles of the Bayesian approach, prior distributions, hierarchical models and modeling techniques, approximate inference, Markov chain Monte Carlo methods, model assessment and comparison. Bayesian approaches to GLMMs, multiple testing, nonparametrics, clinical trials, survival analysis.

Course Notes: Offered jointly with the School of Public Health as BST249.

Requirements: Prerequisite: Biostatistics 231 AND Biostatistics 232

Additional Course Attributes:

</table>

Biostatistics 281
Genomic Data Manipulation (126944)

Curtis Huttenhower
Eric Franzosa

2021 Spring (4 Credits)  Schedule: MW 0345 PM - 0515 PM
Instructor Permissions: Instructor  Enrollment Cap: 20
Introduction to genomic data, computational methods for interpreting these data, and survey of current functional genomics research. Covers biological data processing, programming for large datasets, high-throughput data (sequencing, proteomics, expression, etc.), and related publications.

**Course Notes:** Offered jointly with the School of Public Health as BST 281.

**Requirements:** Prerequisite: BST 272 or BST 273

**Biostatistics 282**

Introduction to Computational Biology and Bioinformatics (126946)

*Xiaole (Shirley) Liu*

2021 Spring (4 Credits)

**Schedule:** TR 0130 PM - 0245 PM

**Instructor Permissions:** None

**Enrollment Cap:** n/a

Basic biological problems, genomics technology platforms, algorithms and data analysis approaches in computational biology. There will be three major components of the course: microarray and RNA-seq analysis, transcription and epigenetic gene regulation, cancer genomics.

This course is targeted at both biostatistics and biological science graduate students with some statistics and computer programming background who have an interest in exploring genomic data analysis and algorithm development as a potential future direction.

**Course Notes:** Offered jointly with the School of Public Health as BST 282.

**Class Notes:** This course is also offered as STAT 215/STAT 115.

**Recommended Prep:** Biostatistics degree program or Computational Biology and Quantitative Genetics degree program

**Requirements:** Prerequisite: STAT 110 OR CS 50 OR BIOSTAT PhD Students

### Additional Course Attributes:

Celtic 109
Finn: The Great Gaelic Hero (127630)
Natasha Sumner
2021 Spring (4 Credits) Schedule: MW 1030 AM - 1145 AM
Instructor Permissions: None Enrollment Cap: n/a
This course explores the lengthy and wildly popular Irish and Scottish Gaelic tradition surrounding the hero Finn mac Cumail (Finn McCool). Stories about Finn and his legendary warrior band, the Fianna, have circulated in manuscript, print, and oral forms for well over a millennium. The protectors of Ireland and Gaelic Scotland, Finn and the Fianna are presented alternatively as hunters, warriors, and seers. Embodying heroic qualities valued by their culture at different periods, they undertake seemingly impossible tasks and defend Gaels from foreign and supernatural threat.

In the course, we examine literature about Finn and the Fianna as it is presented in medieval and early
modern manuscripts; we engage with the rich modern folklore of Ireland, Scotland, and Nova Scotia; and we consider the international impact of the tradition by examining James Macpherson's infamous English-language adaptations and the vicious controversy over their 'authenticity' that erupted in the eighteenth century and persists to this day. All Gaelic texts are read in English translation.

### Celtic 110

The Celtic Arthur (216050)

*Joseph Nagy*

2020 Fall (4 Credits)  
**Schedule:** MW 1030 AM - 1145 AM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

We will be reading, in translation, the earliest surviving British Celtic texts featuring the figure of Arthur as well as the prototypes of the legendary figures (such as Merlin, Tristan, Isolde, and Guinevere) popularly associated with him. We will also study the historical context behind the evolution of Arthur from Roman Britain to the era of the Norman Conquest and its aftermath; possible analogs to “Celtic Arthur” and Arthurian tales in Irish tradition; reflections of Arthur in Celtic folklore; and Celtic elements in the treatment of Arthurian story in more recent cultures, including operas and films.

### Celtic 122R

Introduction to Modern Breton (113938)

*Joseph Nagy*

2021 Spring (4 Credits)  
**Schedule:** MTWF 1200 PM - 0115 PM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Basic grammar of the spoken language (KTL), with an emphasis on pronunciation and conversational skills. Simple folk texts will also be read.

### Celtic 138

The Mabinogion: Stories from Medieval Wales (118671)
An exploration of the *Four Branches of the Mabinogi*, Welsh Arthurian romances and tales, and the bardic lore associated with them, in the context of the literary culture of Wales in the twelfth through fourteenth centuries. All texts are read in English translation.

**Celtic 209**

Ireland 1600-1800: Upheaval and Adaptation (216034)

*Natasha Sumner*

2020 Fall (4 Credits)  
**Schedule:**  
F 0130 PM - 0415 PM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

The two centuries considered in this course witnessed some of the most dramatic and fateful changes in Irish history and, indeed, of the British Empire. The period opens in the midst of armed rebellion linking Gaelic Ireland with Catholic allies from continental Europe which threatened to throw off English monarchical control of the island; it closes on the eve of the Act of Union which would see Ireland legislatively linked to England, Scotland, and Wales. In spite of the political dominance of English crown and Parliament, and the cultural destruction wrought by settler colonialism, Ireland’s majority across those 200 years remained Irish-speaking. What do the voices of those witnesses to upheaval tell us about history, culture, colonialism and the character of "modernity" more broadly?

This cross-disciplinary graduate seminar, co-taught by Natasha Sumner (Harvard) and Brendan Kane (University of Connecticut), pairs a consideration of the major historiographical questions associated with early modern Ireland with close study of Irish-language poetry and prose of the seventeenth and eighteenth centuries. In a time of regular conflict and drastic sociopolitical change for the island’s Irish-speaking majority, we will consider authors’ preoccupations in relation to historical events, and explore their changing creative impulses. Broad historical themes such as the emergence of modern imperialism and state formation will be investigated, and macro-historical themes will be tested through localized case studies. From a literary perspective, critical issues to be deliberated include, but are not limited to, the role(s) of the poet in society, tradition and innovation, orality, and intertextuality. Weekly readings will be drawn from primary sources and historical and literary scholarship, and translations of primary sources will be available. Engagement with the secondary historical literature is intended both to set the literary texts in context and to explore questions of methodology, theory, and argument in working with Irish sources.

The seminar is designed to be accessible to graduate students specializing in either history or literature (in Irish or English). Students from other disciplines are also welcome, and are encouraged to contact the instructors with questions: nsumner@g.harvard.edu; brendan.kane@uconn.edu.

N.B.: This course will be taught concurrently at the University of Connecticut and in the event that in-person instruction is permitted, some of our meetings may take place at UConn. There are no prerequisites. Competence in Irish would be helpful, but is not required.

**Recommended Prep:** Competence in Irish would be helpful, but is not required.
### Celtic 231

**Uncertainly Wonderful: Welsh and Irish Literature Read Again (216375)**

**Aled Jones**

2020 Fall (4 Credits)  
**Schedule:** R 1200 PM - 0200 PM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

A chance to read (and to reread) some of the central texts of the medieval 'canon', both prose and poetry, alongside more 'marginal' medieval works. These will be mainly Welsh, but also Irish: e.g., prose legends; political prophecy; poetry of love, praise, mockery and insult. By considering a range of critical studies of these texts, as well as comparative theory and relevant modern rethinkings, our aim will be to develop and focus our own approaches. We ask ourselves which contexts we find relevant, what genres we see being created, and what ways of reading we consider most useful. We know these texts to be wonderful: why exactly is that?

The course is intended to be broadly interdisciplinary and conversation is encouraged between readers and rereaders: students with new perspectives and fresh eyes are welcomed from all areas of study. Relevant Welsh and Irish texts will be provided in translation, though students with relevant linguistic knowledge will be encouraged to engage with the original languages, and with a wider range of texts. Additional close-reading sessions may be arranged.

This Seminar will be taught by Visiting Associate Prof. Aled Llion Jones (Bangor University).

### Celtic 240

**Pursuing Diarmaid and Gráinne: Texts and Contexts (216041)**

**Natasha Sumner**

2021 Spring (4 Credits)  
**Schedule:** MW 0130 PM - 0245 PM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Traditions about the love triangle among the aging military leader Fionn mac Cumhaill, his younger subordinate Diarmaid Ua Duibhne, and Gráinne, the daughter of Irish high king Cormac mac Airt, date as far back as the tenth century in the written corpus of Gaelic literature. The protagonists may have their roots in early Celtic deities, and a handful of medieval texts
reference the events of the tale. As the story spread across the Gaelic world, it took on new forms. The most celebrated version, the lengthy prose text Tóruigheacht Dhiarmada agus Gráinne (The Pursuit of Diarmaid and Gráinne), is thought to have taken shape in Ireland in the fourteenth century, around the same time as four lengthy poetic lays exploring aspects of the tradition emerged in Ireland and Scotland. The story also circulated orally, and the collected body of folklore about Diarmaid and Gráinne’s elopement and Fionn’s vindictive rage exceeds two hundred tales, songs, and anecdotes. Evidence of the story’s continued popularity can be found in the over fifty creative adaptations that have come into being since the mid-nineteenth century, including poems, short stories, novels, dramas, a graphic novel, and a feature film. This graduate seminar will examine the development of this captivating body of narrative, following our tragic lovers as they wend their way through multiple forms and genres, and across seas and oceans, over the past c.1200 years. Situating our readings within the broader literary record, we will explore forms, themes, and parallels, and consider critical issues such as orality and intertextuality. Some translation will be required, but this is not primarily a reading course. Prerequisites: Participants should be competent in at least one Gaelic language (modern or medieval).

Recommended Prep: Participants should be competent in at least one Gaelic language (modern or medieval).

**Irish 132**

Introduction to Modern Irish (119128)

*Natasha Sumner*

2020 Fall (4 Credits)  
**Schedule:** MTWR -
Irish is the first official language of Ireland, and it has been officially recognized in Northern Ireland since 1998. Today Irish is spoken not only in the western ‘Gaeltachtai’ (Irish-speaking regions), but also in cities like Dublin and Belfast. There is Irish-language television, film, radio, and print journalism, and many wonderful poets and fiction writers continue into the present a literary tradition that dates back to the sixth century.

The course introduces students to Irish as it is spoken and written today. Class work is participatory, and includes conversational role play and games as well as grammar study and drills. Audio and audiovisual resources reinforce pronunciation and aural comprehension. Songs, proverbs, and poems are an integral part of the course, introducing students to the vibrant oral and literary tradition of Gaelic Ireland. Meets 4 times a week.

Course Notes: The combination of Irish 132 and 133r satisfies the language requirement. It is recommended in any case that this course be followed by Irish 133r. May not be taken Pass/Fail. Not open to auditors. Meets four times a week for an hour.

**Irish 133R**

Intermediate Modern Irish (119063)

Natasha Sumner

2021 Spring (4 Credits) Schedule: MTWR

Instructor Permissions: None Enrollment Cap: n/a

A continuation of Irish 132, developing students' fluency in spoken and written Irish. As our knowledge of the language expands, we venture into storytelling, journal writing and writing and performing short skits. Internet, audio and video resources complement the study of grammar and select prose texts.

Course Notes: This course, when taken following Irish 132, satisfies the language requirement. May not be taken Pass/Fail. Not open to auditors.

Recommended Prep: Irish 132 or permission of instructor.

Requirements: Prerequisite: IRISH 132

Subject: Breton

Breton 122
Introduction to Modern Breton (216064)
Joseph Nagy
An introduction to the basic grammar of the standard spoken language of Brittany, a region of coastal western Europe deeply rooted in the Celtic tradition. Emphasis will be on pronunciation and conversational skills, but attention will also be paid to the cultural, historical, and folkloric background to this Celtic language. Included among the readings will be simple folk texts. Meets four times a week.

Breton 123
Intermediate Modern Breton (216065)
Joseph Nagy
2021 Spring (4 Credits) Schedule: MTWR -

Subject: Scottish Gaelic

Scottish Gaelic 130 Section: 1
Introduction to Scottish Gaelic (111042)
Natasha Sumner
2020 Fall (4 Credits) Schedule: MTWR -
Instructor Permissions: None Enrollment Cap: n/a
Scottish Gaelic is spoken primarily in communities of the West Highlands and the Hebrides—a group of islands off the west coast of Scotland. There is also a Gaelic community on Cape Breton Island in Nova Scotia. Gaelic language and culture thrive in poetry, fiction, traditional and contemporary music, oral tradition, and a very lively blogosphere.

The course introduces students to Scottish Gaelic as it is spoken and written today. It surveys the grammar while also emphasizing practice in speaking the language. Class work is highly participatory; students are encouraged to take part in a range of communicative activities which enhance oral/aural ability. Translation exercises develop skills in the written language. A range of audio/audiovisual materials and online resources is used to support student learning. Meets four times a week.

Course Notes: The combination of Scottish Gaelic 130 followed by Scottish Gaelic
131r satisfies the language requirement. It is recommended in any case that this course be followed by Scottish Gaelic 131r. May not be taken Pass/Fail. Not open to auditors. Meets 4 times/weekly.

Chemical and Physical Biology  91
Research for Credit in Chemical and Physical Biology (122591)

Dominic Mao

2020 Fall (4 Credits)  Schedule:  TBD

Instructor Permissions:  Instructor  Enrollment Cap:  n/a

91 is research for credit. It cannot be taken as a fifth course. To be eligible to enroll, you must have a Harvard-affiliated principal investigator agree to mentor you for the semester. For this reason, students must reach out to labs and interview with labs ahead of the start of the semester. Students are expected to work an average of 15 hours/week during term time. For Fall 2020, owing to the COVID-19 pandemic, all 91 research projects must be work that can be done remotely (in other words, you will not have access to and cannot perform experiments in lab).

Course Notes:  Limited to CPB concentrators. Students must have secured a position in a laboratory prior to enrolling in the course; the instructor will verify this with the faculty sponsor. Ordinarily may not be taken as a fifth course. Students must complete basic laboratory safety training and other safety training required by the host lab prior to starting work.

Instructor Permissions: Instructor
Enrollment Cap: 30

Laboratory research in topics related to the CPB concentration, culminating in an undergraduate thesis submitted to the CPB undergraduate office for review by members of the Board of Tutors in Biochemical Sciences and the greater Boston research community. The course includes a series of workshops designed to help prepare students for the process of writing their thesis.

Course Notes:
Limited to students writing a thesis in CPB. Students are required to submit a written proposal to the CPB undergraduate office in the summer for review by the Board of Tutors in Biochemical Sciences for enrollment that fall. Only those students whose thesis proposals are approved are eligible to enroll. Ordinarily may not be taken as a fifth course. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit. Students must complete basic laboratory safety training and other safety training required by the host lab prior to starting work.

Chemical and Physical Biology  99B
Laboratory Research for Honors Thesis (159732)

Dominic Mao

2021 Spring (4 Credits)                      Schedule: TBD

Chemistry and Chemical Biology
Subject: Life & Physical Sciences

Life & Physical Sciences  A

Foundational Chemistry and Biology (123833)

Gregory C. Tucci
Nava Gharaei
Sirinya Matchacheep

2020 Fall (4 Credits)  Schedule:  MWF 0900 AM - 1015 AM
Instructor Permissions:  None  Enrollment Cap:  n/a

This course introduces fundamental concepts in chemistry and biology. Topics in chemistry include stoichiometry, acids and bases, aqueous solutions, gases, thermochemistry, electrons in atoms, and chemical bonding. The course also examines biological molecules, the transfer of information from DNA to RNA to protein, and cell structure and signaling.

Course Notes:  Alternative view times will be made available to students in different time zones. These alternatives will be posted after 8/26.

Requirements:  Anti-req: Cannot be taken for credit if Life Sciences 1a, OR Physical Sciences 1, OR Physical Sciences 10, OR Physical Sciences 11, OR Chemistry 17 OR Chemistry 20 already complete

Subject: Physical Sciences

Physical Sciences  1

Chemical Bonding, Energy, and Reactivity: An Introduction to the Physical Sciences (122574)

Kang-Kuen Ni
Sirinya Matchacheep
Nicholas Colella

2021 Spring (4 Credits)  Schedule:  TBD
Instructor Permissions:  None  Enrollment Cap:  n/a

The course covers the chemistry and physics underlying molecular phenomena in the world. Starting from a single electron, the course will build up to atoms, molecules, and materials. Interactions of molecules are studied through thermochemistry, equilibria, entropy and free energy, acids and bases, electrochemistry, and kinetics. Applications include physical principles in biology, global energy demands, and modern materials and technology.
Course Notes: A few operations of calculus are developed and used. Fluency in pre-calculus secondary school mathematics is assumed. Students are expected to have AP or honors level high school chemistry, or have completed Life Sciences 1a or Life and Physical Sciences A (LPS A) with a satisfactory grade.

This course is part of an integrated introduction to the physical science intended for students who plan to pursue a concentration in the physical or life sciences and/or to satisfy a pre-medical requirement in general/inorganic chemistry. Physical Sciences 1 and Physical Sciences 11 cannot both be taken for credit.

Recommended Prep: A few operations of calculus are developed and used. Fluency in pre-calculus secondary school mathematics is assumed. Students are expected to have AP or honors level high school chemistry, or have completed Life Sciences 1a or Life and Physical Sciences A (LPS A) with a satisfactory grade.

Physical Sciences 10

Quantum, Statistical, and Computational Foundations of Chemistry (107367)

Adam Cohen

2020 Fall (4 Credits) Schedule: MWF 1030 AM - 1145 AM

Instructor Permissions: None Enrollment Cap: n/a

An introduction to the fundamental theories of quantum mechanics and statistical mechanics and their role in governing the behavior of matter. The course begins with the quantum behavior of a single electron and develops the elements of the periodic table, the nature of the chemical bond, the bulk electronic and thermal properties of materials, and the thermodynamics of chemical reactions. Applications include semiconductor electronics, solar energy conversion, medical imaging, and the stability and dynamism of living systems. Calculus and numerical simulations will be used extensively. In at-home laboratory exercises, students will construct and apply instruments to illustrate core principles from the course.

Course Notes: Three pre-recorded lectures will be given weekly, which students watch asynchronously. Students are required to attend the interactive live class meetings on Mondays, Wednesdays, and Fridays. During enrollment, students can choose either the 10:30 am - 11:45 am ET blocks on MWF (option 1) or the 7:30 pm - 8:45 pm ET blocks on MWF (option 2). On Mondays, the course instructor Professor Adam Cohen leads the class meeting from 10:30 am - 11:45 am ET. In the 7:30 pm - 8:45 pm class, students will watch a recording of the morning class in an interactive viewing session hosted by teaching fellows. In both Monday sessions, students will participate in breakout rooms, ask questions, and work on exercises. (Students who choose the evening class option are welcome and encouraged to attend the Monday morning class if possible.) On Wednesdays and Fridays, the morning and evening class meetings are repeated sessions where students participate in problem solving discussion with a Section TF and
conduct labs (both numerical simulations and at-home hands-on lab exercises) with a Lab TF.

Physical Sciences 10 and Physical Sciences 11 may be taken in any order. The general chemistry requirement for medical school can be satisfied with any two of the following courses: Life and Physical Sciences A, Life Sciences 1a, Physical Sciences 1, Physical Sciences 10, or Physical Sciences 11.

Recommended Prep: A strong background in chemistry (Chemistry AP score of 5, or Physical Sciences 1, or equivalent preparation), mathematics at the level of Mathematics 1b (may be taken concurrently), and some familiarity with physics (force, energy, work, and electric charge).

Physical Sciences 11

Foundations and Frontiers of Modern Chemistry: A Molecular and Global Perspective (107368)

James Anderson
Gregory C. Tucci

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

The Physical Sciences hold the key to solving unprecedented problems at the intersection of science, technology, and an array of rapidly emerging global scale challenges. The course emphasizes a molecular scale understanding of energy and entropy; free energy in equilibria, acid/base reactivity, and electrochemistry; molecular bonding and kinetics; catalysis in organic and inorganic systems; the union of quantum mechanics, nanostructures, and photovoltaics; and the analysis of nuclear energy. Case studies are used both to develop quantitative reasoning and to directly link these principles to global strategies.

Course Notes: Students are expected to have high school chemistry, or have completed Life and Physical Sciences A (LPS A) or Life Sciences 1a (LS 1a), or have received permission of the instructors. Physical Sciences 10 and Physical Sciences 11 may be taken in any order. The general chemistry requirement for medical students can be satisfied with any two of the following courses: Life and Physical Sciences A, Life Sciences 1a, Physical Sciences 1, Physical Sciences 10, or Physical Sciences 11. NOTE: Physical Sciences 1 and Physical Sciences 11 cannot both be taken for credit.

Recommended Prep: A few operations of calculus are developed and used. Fluency in pre-calculus secondary school mathematics is assumed.

Subject: Chemistry
Chemistry 17
Principles of Organic Chemistry (115137)

Christina Woo

2020 Fall (4 Credits) Schedule: MWF 0130 PM - 0245 PM
Instructor Permissions: None Enrollment Cap: n/a

An introduction to organic chemistry, with an emphasis on structure and bonding, reaction mechanisms, and chemical reactivity.

Course Notes: Open to freshmen with a score of 750 or higher in the College Boards or the Chemistry Placement Examination; and to students who scored 5 on the Chemistry Advanced Placement Examination; and to the students who achieved a grade of B or higher in either Physical Sciences 1, 10, 11, or another college-level introductory chemistry course. Others may enter only by permission of the instructor. The Chemistry 17/27 sequence is intended primarily for students in chemistry or the life sciences, who have completed LPSA or LS1a and one of the PS courses (PS1, PS10, PS11). The Chemistry 20/30 sequence is intended primarily for students planning a concentration in chemistry or the physical sciences. Either sequence satisfies the organic chemistry requirement for medical school. Students may not count both Chemistry 17 and Chemistry 20 for degree credit. On the other hand, Chemistry 27 and Chemistry 30 cover different material, so students interested in taking both courses may choose to do so via one of two sequences: Chemistry 17-27-30 or Chemistry 20-30-27. Chemistry 27 satisfies the biochemistry chemistry requirement for most medical schools.

Chemistry 20
Organic Chemistry (124312)

Logan S. McCarty

2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a

An introduction to structure and bonding in organic molecules; mechanisms of organic reactions; chemical transformations of the functional groups of organic chemistry; synthesis; determination of chemical structures by infrared and NMR spectroscopy.

Course Notes: Chemistry 20/30 is an integrated two-semester sequence that prepares students to study chemistry and other physical sciences, whereas the Chemistry 17/27 sequence focuses on application of organic chemistry concepts to the life sciences. Either sequence satisfies the organic chemistry requirement for medical school and the chemistry concentration. The content of Chemistry 17 is accelerated and
overlaps with topics from both Chemistry 20 and 30. Students may not count both Chemistry 17 and 20 toward the degree. However, Chemistry 27 and Chemistry 20/30 cover different material, so students may choose to take Chemistry 27 after completing the 20/30 sequence.

Recommended Prep: Open to students who scored 4 or 5 on the Chemistry Advanced Placement Examination, or who successfully completed Life Sciences 1A or Life and Physical Sciences A. Others should contact the instructor to discuss their preparation.

**Chemistry 27**

Organic Chemistry of Life (117558)

*Emily Balskus*

2021 Spring (4 Credits)  
**Schedule:** TBD

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Chemical principles that govern the processes driving living systems are illustrated with examples drawn from biochemistry, cell biology, and medicine. The course deals with organic chemical reactivity (reaction mechanisms, structure-reactivity relationships), with matters specifically relevant to the life sciences (chemistry of enzymes, nucleic acids, drugs, natural products, cofactors), and with applications of chemical biology to medicine and biotechnology. An understanding of organic reactions and their "arrow" pushing mechanisms is required.

**Course Notes:** Chemistry 27 and 30 may both be taken for degree credit. See note for Chemistry 17.

**Recommended Prep:** Chemistry 17 or Chemistry 30 or Chemistry 20 with permission of the instructor.

**Chemistry 30**

Organic Chemistry (118925)

*Andrew Myers*

2020 Fall (4 Credits)  
**Schedule:** TRF 0130 PM - 0245 PM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Continuation of Chemistry 20 with a greater focus on challenging problem solving. Fundamental principles of basic reactivity in organic chemistry. Carbonyl chemistry and pericyclic reactions are covered in
particular detail, using principles of stereochemistry, stereoelectronic theory, and molecular orbital theory as a foundation. Students develop skills in planning organic chemical syntheses and are given an introduction to organometallic chemistry.

Course Notes: The course has been optimized for virtual learning with the development of lecture recordings and synchronous instruction sessions. Students are expected to attend two lecture “watch parties” during the week (Primary Sessions: Tuesday and Thursday, 1:30PM–3:00PM EST, Zoom) hosted by Professor Myers and the teaching staff. These sessions will include watching of lecture recordings in small breakout groups over Zoom with teaching staff available for questions and discussion. Alternative sessions will be scheduled on Tuesdays/Thursdays based on student time zone restrictions following registration. Weekly discussion sections (recommended) will be held Wednesdays and Thursdays with several times available. Weekly review sessions will be held Fridays (Primary Session: 1:30PM–3:00PM EST, Zoom, recorded) and will focus on challenging, collaborative problem solving using the week’s lecture material, with attendance strongly encouraged. Office hours and help rooms will be available throughout the week. The course will also feature a final project, containing written and presentation components, focused on the analysis of complex organic molecules from the chemical literature. Laboratory section will include experiment recordings, quizzes, and critiques, with specific information available during the semester.

Recommended Prep:

Chemistry 20 or the equivalent. Chemistry 27 and 30 may both be taken for degree credit. Students who have taken Chemistry 17 are welcome to take the course but should contact the teaching staff to discuss preparations at the start of the semester. First-year students with strong backgrounds in chemistry are encouraged to contact the teaching staff to discuss taking Chemistry 30.

Recommended Prep: See notes section

Chemistry 40

Inorganic Chemistry (123126)

Jarad Mason

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

An introduction to basic concepts of inorganic chemistry. Develops principles of chemical bonding and molecular structure on a basis of symmetry, applying these concepts to coordination chemistry (highlighting synthesis), organometallic chemistry (applications to catalysis), materials synthesis, and bioinorganic processes.
Chemistry  91R

Introduction to Research (113865)

Gregory C. Tucci

2021 Spring (4 Credits)  
Instructor Permissions:  Instructor  
Enrollment Cap:  n/a  
Schedule:  TBD  
Credible note:  Open to a limited number of chemistry concentrators who are accepted as research students without having taken Chemistry 98. Written permission of the sponsor must be filed at the Office of the Associate Director of Undergraduate Studies in Chemistry. Any student enrolling in this course must register the name of his or her research mentor with the course head whose signature must appear on each student's study card. Must be taken Sat/Unsat.

Chemistry 98R
Introduction to Research - Junior Year (112494)

Gregory C. Tucci

2020 Fall (4 Credits)  Schedule: TBD
Instructor Permissions: Instructor  Enrollment Cap: n/a

Research under the direction of, or approved by, a member of the faculty of the Department of Chemistry. This is a junior tutorial.

Course Notes: Open with permission of the instructor to junior chemistry majors who have satisfactorily completed the non-credit Introduction to Research Tutorial in the spring term of the sophomore year. In that non-credit spring term tutorial, taught Tu., Th., 1-2:30, students will attend introductory lectures and research seminars in order to acquaint themselves with departmental research programs. In the junior year, students who complete the non-credit tutorial and obtain placement in a research laboratory will undertake research as Chemistry 98r. Written permission of the research adviser must be filed at the office of the Associate Director of Undergraduate Studies in Chemistry. Any student enrolling in this course must register the name of his or her research mentor with the course head whose signature must appear on each student's study card.

Chemistry 100R

Experimental Chemistry and Chemical Biology (123022)

Heidi Vollmer-Snarr

2021 Spring (4 Credits)  Schedule:  TBD

Instructor Permissions:  Instructor  Enrollment Cap:  n/a

Chem 100R is a project-based synthetic/physical organic, bioanalytical, and chemical biology research course. Students work in 2–4 person groups with course staff on zoom to conduct and contribute to cutting-edge, faculty-derived research. Throughout the semester students use electronic notebooks to keep track of their research findings, which they present in group meetings and write up in a formal research paper. As students learn to communicate technically with other scientists and peers, they also learn to communicate about the broader applications of their research to nonscientific audiences through science advocacy.

Course Notes:  This course will meet on zoom TTh 6:30–8:30 pm ET. Chem 100R is suitable for students with or without extensive laboratory experience, and is open to freshman, sophomores, juniors, and seniors, regardless of concentration.

Recommended Prep:  Chem 30, 27, or S-20ab; and permission of the instructor.

Related Sections: Additional virtual laboratory meetings will be arranged with research project groups at times available to all group members.

Chemistry 101

Chemical Biology Towards Precision Medicine (124554)

Stuart Schreiber

2020 Fall (4 Credits) Schedule: TR 1030 AM - 1145 AM

Instructor Permissions: Instructor Enrollment Cap: 125

Advances in chemistry and biology suggest new ways to discover medicines that address the underlying cause of disease – in a precise and personalized way – and thus to accelerate the understanding and treatment of human disease and to deliver the right medicine to the right patient at the right time. Chemical Biology Towards Precision Medicine teaches students principles of chemical biology and human biology relevant to the discovery of safe and effective therapeutics – precision medicine. The course will explore patient-based 'experiments of nature' that illuminate disease in the context of human physiology prior to even starting a drug-discovery effort. After the first half of the course on "Foundations" a second half of the class will focus on "Applications" – different diseases for which human biology-based approaches offer promise. The indications to be explored in Chem 101 include: infectious disease (COVID, malaria; TB; HIV/AIDS), psychiatric disease (schizophrenia and bipolar disorder), neurodegenerative disease (Alzheimer's Disease), diabetes, cancer, cardiovascular and inflammatory bowel disease, regenerative medicine and aging. Lecture materials will be presented asynchronously via recorded videos, while synchronous in-class learning at the regular class time will explore additional features of Chem 101. For example, we will discuss how citizen–scientists can use their knowledge of science to advance important societal challenges through in-class interactions with policy makers, business leaders and philanthropists – in this case to defeat COVID. We will use Scientists to Stop COVID-19 as a case study.

Chemistry 105 Section: 1
Advanced Organic Chemistry (109454)
Eric Jacobsen
2020 Fall (4 Credits) Schedule: TR 0130 PM - 0245 PM
Instructor Permissions: Instructor Enrollment Cap: n/a
Advanced reactivity principles in organic chemistry. Students learn 1) fundamentals of structure, bonding, and reaction energetics, 2) to identify and propose mechanisms for common organic, organometallic, and catalytic reactions, along with experiments to test those mechanisms; 3) to evaluate the factors controlling rate and selectivity in organic reactions; 4) to understand and analyze the current organic chemistry literature. The overarching goal of this course is to provide students with a solid foundation for a research career in organic chemistry and adjacent fields (chemical biology, inorganic chemistry).
Course Notes: Prerequisites: Two semesters of college-level organic chemistry. At least one prior or concurrent course in physical and/or inorganic chemistry is recommended.

Chemistry 110 Section: 01
The Chemistry and Biology of Therapeutics (110241)
Matthew Shair
Brian Liau
2020 Fall (4 Credits) Schedule: MW 1030 AM - 1145 AM
Instructor Permissions: Instructor Enrollment Cap: 50
This course will cover the chemical and biological principles that govern small molecule therapeutics. We will discuss small molecule conformational analysis, chemical forces that drive small molecule-protein interactions, and small molecule binding to proteins to affect disease states. We will also discuss how protein targets are identified and the frontiers of modern small molecule therapeutics. Protein targets include, but are not limited to kinases, proteases, GTPases, scaffolding proteins, epigenetic modifiers, metabolic enzymes and transcription factors. This course will teach students how to use modern computer modeling applications to perform structure-based design of small molecule ligands.
Course Notes: Course Requirements: Completion of Chem 27 or Chem 30

Chemistry 115
Advanced Organic Chemistry: Synthesis of Complex Molecules (114209)
An integrated course in complex synthetic problem solving that focuses on the development of principles and strategies for synthesis design with a concurrent, comprehensive review of modern synthetic transformations.

Prerequisite: A grade of A in Chemistry 30.

Chemistry 145
Experimental Inorganic Chemistry (109110)

An introduction to experimental techniques designed to demonstrate synthesis of inorganic compounds, and their purification and characterization by interpreting appropriate analytical data. The remote instruction of the course will have five components: (1) A coordinated narrative- and video-instruction for the syntheses of porphyrin macrocycles and metal-metal bonded compounds. (2) Building on the instruction of (1), students will then propose the synthesis of a new compound, a Pacman dipyrrin bimetallic complex. The student's proposed synthesis plan then will be executed by TFS and characterization data of compounds will be provided to students to assess whether their proposed synthesis worked or not. (3) The video instruction will be augmented with lecture modules on numerous characterization techniques (H and multinuclear NMR, cyclic voltammetry, steady-state and time resolved spectroscopy, mass spectrometry, EPR, and magnetism). (4) Kits will be provided for students to perform experiments remotely of relevance to (1) and (2). (5) Special guest speakers will be invited to meet remotely with students, including faculty from top graduate schools in the U.S. to help those interested in preparing for graduate studies, as well as renowned experts in synthetic chemistry.

Course Notes: The class meeting times are not listed in the catalog. Class times will be set to best accommodate enrolled students, taking into consideration time zone and class schedules. Tentatively, a 2 hr session on Tuesday and a 2 hr session on Thursday will be planned with the precise time TBD. Additionally, a 2 hr weekly group meeting, TBD, is planned for in person activities related to class (e.g., TF sessions, further instruction, remote experiments). A survey link will be provided to determine class meeting times once the student enrollment is known (post Aug 25). Attending weekly lectures is required. If student cannot make all meetings in person, they should let the instructor know.
instances where in person attendance is not possible, a combination of recorded lectures and participation in live sessions will be scheduled between the student and instructor.

Recommended Prep: Chemistry 40 and either Chemistry 27 or 30, or permission of the instructor.

Advanced Inorganic Chemistry II (156395)

*Theodore Betley*

2020 Fall (4 Credits)  
**Schedule:** MW 0900 AM - 1015 AM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Transition element chemistry will be discussed with an emphasis on synthesis, structure, bonding, and reaction mechanisms. Connections between molecular structure and electronic structure and how that parleys into reactivity will be emphasized throughout. Advanced problems of interest to inorganic chemistry will be discussed in the context of catalysis, organometallics, and bioinorganic processes. The course will be discussion driven with a heavy reliance on the current literature.

**Chemistry 160**

The Quantum World (112976)

*Suyang Xu*

2020 Fall (4 Credits)  
**Schedule:** MWF 1030 AM - 1145 AM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Quantum mechanics is the fundamental principle of the microscopic world. Quantum mechanics allows us to understand the motion of electrons, atoms and molecules. Only with such understanding, we can rationally design and engineer quantum materials, in order to realize quantum technologies such as quantum information, quantum sensing, and quantum computation. In this class, you will learn the fundamental postulates of quantum mechanics and their implications for the structure and behavior of atoms and molecules. In particular, we will explore the mathematical framework behind molecular bonding, vibration, and rotation. We will also discuss how to probe the properties of atoms and molecules using tunable electromagnetic radiation, more commonly known as light!

The Fall 2020 course will consist of real-time lectures, sections, and office hours. Accommodations will be
made for students who are not in the contiguous US.

Course Notes: Applied Mathematics 21a and 21b, Mathematics 21a and 21b, or equivalent preparation in calculus and differential equations; Physical Sciences 1 or equivalent preparation in chemical bonding and fundamental principles; Physical Sciences 2 or Physics 11a, and Physical Sciences 3 or Physics 11b.

Experimental Physical Chemistry (119035)

Nicholas Colella

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: n/a

Hands-on introduction to physical methods and techniques used widely in chemistry and chemical physics research laboratories. Computer-based methods of data acquisition and analysis are used throughout.

Course Notes: Recommended as an efficient preparation for research in experimental chemistry, chemical physics, engineering sciences, and related disciplines.

Recommended Prep: Chemistry 7, or Physical Sciences 1, or equivalent; Applied Mathematics 21a or Mathematics 21a; one full course in physics or equivalent. Recommended: Chemistry 160, Physics 143a or similar, a course in Quantum Mechanics.
Chemistry 177

The Chemistry, Biology, and Social Implications of Genome Editing (216524)

David Liu

2020 Fall (4 Credits)  
**Schedule:**  
R 0300 PM - 0545 PM  
Instructor Permissions:  
Enrollment Cap: 20

The life sciences and medicine are undergoing a revolution stimulated by breakthrough advances in genome editing technologies. These technologies, including CRISPR, enable researchers and physicians to modify target DNA sequences in the genomes of living cells, including human cells and human embryos. This class will overview the chemistry and biology underlying recent and current genome editing agents. We will also discuss their current limitations, their potential to shape medicine, and some social and ethical implications of their use. In addition to attending lectures that present the chemistry and biology of genome editing, students will analyze recent reports from the scientific literature, and will present their analyses and reasoned opinions during the semester. Participants will also develop and present final projects on an aspect of genome editing to the class at the end of the semester. For advanced undergraduates and graduate students

Chemistry 190

Statistical Mechanics in Chemistry and Biology (128016)

Eugene Shakhnovich

TR 0130 PM - 0245 PM  
Instructor Permissions: None  
Enrollment Cap: n/a

This course will cover interdisciplinary aspects of Chemistry and Biology where Statistical Mechanics played a pivotal role. Topics include: Polymers in solution and condensed phases, equilibrium and dynamics of self-assembly -layers and micelles, protein folding, structure and bioinformatics, reaction dynamics on complex energy landscapes, dynamic and evolution of complex networks.
Chemistry 255
Practical Crystallography in Chemistry and Materials Science (107709)
Shao-Liang Zheng
2021 Spring (4 Credits)  Schedule:  TBD
Instructor Permissions:  Instructor  Enrollment Cap:  10

Due to great technical advances, crystal structure analysis plays an increasingly important role in the structure determination of complex solids. This course involves the basic principles of crystallography and covers advanced aspects of practical crystal structure refinement. Topics include crystal symmetry, space groups, geometry of diffraction, structure factors, and structure refinement. Students will gain a working knowledge of x-ray crystallographic techniques, including how to: grow quality crystals, collect data, reduce data, determine a structure, visualize structure, utilize structural databases, publish crystallographic results. Watch Learning Crystal Structure Analysis at Harvard.

Course Notes:  Chemistry 40 or equivalent.

Chemistry 267
Surface and Interfacial Phenomena (144246)
Cynthia Friend
2020 Fall (4 Credits)  Schedule:  TBD
Instructor Permissions:  None  Enrollment Cap:  n/a

Chemistry 267 will build a foundation for understanding surface and interfacial processes based on three pillars of physical chemistry: thermodynamics, quantum mechanics and kinetics. The overall course objective is to provide a working knowledge of surfaces and interfaces at the molecular level that can be used to predict physical and chemical phenomena. The class will combine overview lectures complemented by readings and in-depth problem solving exercises.

Course Notes:  Recommended for graduate and advanced undergraduate students in Chemistry, Applied Physics, and related areas with interest in Materials Chemistry and Engineering, Surface Chemistry, Applied Physics, and other areas dependent on properties and behavior of interfaces.

The meeting time will be M, W, F 1:30 pm - 2:45 pm ET and will meet via Zoom.

Scientific Teaching and Communications: Practicum (124905)

*Gregory C. Tucci*  
*Lu Wang*  
*Sirinya Matchacheep*

2020 Fall (2 Credits)  
**Schedule:** R 0900 AM - 1000 AM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

This course will teach graduate students how to communicate scientific concepts in the classroom. Students will focus on becoming effective teachers in discussion sections and in the laboratory. The course will emphasize hands-on experience in teaching and explaining scientific concepts. Students must complete both parts of this course (parts A and B) within the same academic year in order to receive credit.

**Course Notes:** Required of all first-year graduate students in the Department of Chemistry and Chemical Biology.

**Class Notes:** Our plan is to meet from 9:00 am - 10:00 am ET on Thursdays starting
from the second week of the semester. We will also offer alternative options for any student if this time is outside of their 7:30am -10:15pm local time.

Classical Studies 97A

Introduction to the Ancient Greek World (116729)

Natasha Bershadsky

2020 Fall (4 Credits)

Schedule: MWF -

Instructor Permissions: None

Enrollment Cap: n/a

This course charts the outlines of what we now call ancient Greece, with its multitude of places, ways of life, and historical changes. We will survey the major transformations of that world, its foundational events, real and imagined, its great wars, and its most important social institutions and cultural traditions. We will also study everyday features, such as food and dress, to uncover the complex systems of signs to which they belonged. We will work with a wide variety of primary sources, both texts and images, and will learn about the challenges of interpreting them, assisted by selected items of scholarship. We will explore how the ancient Greeks perceived the world and themselves in it, and will attempt to listen to the voices of women and slaves that are often muted in our primary sources. Learning about the insights and the blind spots of that civilization, about its mysteries and its drama, may ultimately also help us to know more about ourselves.

Course Notes: Concentrators are required to take either one or two semesters of Classical Studies 97, depending on their concentration track.

Class Notes: Classes will be held live two days per week, for 75 minutes each, and there will be also a live section. Meeting times will be decided in consultation with the interested students.

Classical Studies 97B

Introduction to the Ancient Roman World (124050)

Harry Morgan

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

This course has three components: a chronological survey of Roman history from the beginnings to Late Antiquity; thematic explorations of key features of culture and daily life in Rome as well as other parts of Roman Italy and the provinces (including religion, law and government, elite society, Romanization, urban topography, etc.); and an introduction to the tools and methods available for research on the Roman world, with an emphasis on material culture and documentary sources.

Course Notes: Concentrators are required to take either one or two semesters of Classical Studies 97, depending on their concentration track.
Classical Studies 112

Regional Study: Sicily (156313)

Margaret Andrews

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: 12

An in-depth exploration of the cultural history of Sicily between the Bronze Age and the Norman conquest focusing on questions of change, recurrence, and continuity within the dynamics of the Mediterranean across these two millennia.

Course Notes: This course is required for concentrators in the Classical Civilizations track (beginning with students in the Class of 2016).

Classical Studies 124

Shield of Achilles (215978)

Natasha Bershadsky

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

The description of the great Shield of Achilles, created by the god Hephaestus, takes up a large part of Book 18 of the Iliad. The shield is a microcosm of the world, and its description generates a web of connections with the events of the Trojan War, providing an implicit intertextual commentary on the action of the poem. The Shield is usually imagined as comprised of concentric circles featuring different episodes, and this structure offers a perfect framework for an extensive exploration of a variety of subjects associated with it. The course will combine literary and art-historical investigations with a historical overview of the culture, political organization, and society of archaic Greece. We will discuss the function of the Shield in the Iliad, a warrior’s identity expressed through his shield, and the identity of Achilles in particular; the subject of ekphrasis; and the history of the Iliad. We will study different periods of ancient Greek art—Mycenaean, Geometric, and Orientalizing—and their connections with the images on the Shield of Achilles. Further, by providing contexts for different representations on the Shield, the course will introduce students to an array of subjects, such as ancient Greek cosmology; agriculture and animal husbandry; music and dance; emergence of the polis and early judicial systems; and warfare.
Classical Studies 148

Ancient Slavery (212903)

Harry Morgan

2020 Fall (4 Credits)  Schedule:  TBD
Instructor Permissions:  None  Enrollment Cap:  n/a

This course shines a spotlight on the enslaved populations of Greece and Rome—their thoughts and experiences, hopes and fears. We will consider how far it is possible to reconstruct the lives of slaves in antiquity; and how the ancients themselves justified and normalized the institution of slavery in their literature, philosophy, and rhetoric. We will also explore the dark legacy of ancient slavery in modern times, and ask what can be learned from the comparison of slave systems across different time periods and geographical locales. All readings, ancient and modern, are in English.

Class Notes:  Classes will be held live two days per week for 75 minutes each. Meeting times will be determined according to the availability of enrolled students.

Classical Studies 163

Romans and Barbarians in Late Antiquity (215976)

Adam Trettel

2020 Fall (4 Credits)  Schedule:  TBD
Instructor Permissions:  None  Enrollment Cap:  n/a

Through a series of case studies, this class will explore the shifting relationships between the center and periphery of the Roman world in 300–700 CE. In doing so, students will come to know the different people groups who transformed the later Roman Empire, and eventually made it their own. Students will learn rigorous skills in historical research, and become confident in examining competing claims regarding the "fall" of a great empire. Specific topics include: ancient constructions of barbarism and otherness; migration and mobility; military alliances and changing power centers; innovations in art and architecture; bilingualism and translation.

Class Notes:  Classes will be held live two days per week for 75 minutes each. Meeting times will be determined according to the availability of enrolled students.

Classical Studies 164
Science in the Greco-Roman World (216454)
James Zainaldin
2021 Spring (4 Credits)  Schedule: TBD
Instructor Permissions: None  Enrollment Cap: n/a
This course will provide an introduction to the major scientific traditions of Greek and Roman antiquity. Possible disciplines to be studied include cosmology, physics, mathematics, astronomy, life sciences (biology and medicine), and mechanics/engineering. We will not only consider the theoretical achievements and philosophical premises of Greco-Roman science, but also examine its practical applications and role in ancient society. There will be a comparative unit on Greece, Rome, and China.

Classical Studies 246
Roman Music (215974)
Harry Morgan
2020 Fall (4 Credits)  Schedule: TBD
Instructor Permissions: None  Enrollment Cap: n/a
This graduate seminar will explore the music of ancient Rome, focusing on three main themes: (1) the practical aspects of Roman music (instruments, techniques, performance contexts, etc.); (2) theoretical and philosophical approaches to music; and (3) the influence of music on Roman society, culture, religion and politics, from the archaic period to late antiquity. Through close readings of literary, documentary and material sources, as well as discussions of modern scholarship, we will attempt not only to "reconstruct" the sounds of Roman music, but also to analyze key issues in Roman history from a musical perspective (e.g. Hellenization; imperial self-representation; Christianization).

Class Notes: Class will meet live one day per week for two hours. The day and time will be determined according to the availability of enrolled students.

Subject: Medieval Latin
**Medieval Latin 10**

Introduction to Medieval Latin Literature (203237)

*Adam Trettel*

2021 Spring (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Medieval Latin 10 offers close reading and analysis of post-classical literary texts, both prose and poetry, beginning at an intermediate pace. Participants will improve their reading proficiency while developing an appreciation for features of style, genre, and meter.

**Course Notes:** After Medieval Latin 10, students may take Latin courses at the 100-level, but are encouraged to consult with the Director of Undergraduate Studies in the Classics (classicsDUS@classics.harvard.edu) about their choice of course.

**Recommended Prep:** Any one of the following: Latin 3; Latin 2x; Latin Ax. Students who have not studied Latin at Harvard should take the Latin Placement Exam and consult with the Preceptor in the Classics (livings@g.harvard.edu).

**Additional Course Attributes:**

**Medieval Latin 121**

Latin Literature 1300–1600 CE (215979)

*Adam Trettel*

2021 Spring (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

In this class, we will explore how an innovative group of scholars across the European world utilized Latin to communicate with each other in a time of plague, upheaval, and enormous cultural and religious change. The medieval background to this period of renaissance and reformation will be discussed, in addition to the role that spoken Latin played in the university system and in the development of scientific thought.

Students will gain confidence in approaching a wide range of genres, and become able to detect features such as humor and sarcasm. Texts include poetry, philosophy, scientific works, devotional texts, political and legal treatises, and theology.

**Recommended Prep:** Latin 10 or equivalent experience; please consult with the Preceptor in the Classics (livings@g.harvard.edu).

Medieval Latin 123
Augustine, De civitate dei (215975)

Adam Trettel

2020 Fall (4 Credits)  Schedule: TBD

Instructor Permissions: None  Enrollment Cap: n/a

A close reading of Augustine's "magnum opus et arduum" (great and arduous work) in 22 books, embarked upon following the sack of Rome in 410 CE. Students will explore the how the Bible impacted Augustine's literary style, even as he continued to believe Virgil wrote exquisite and beautiful Latin. Themes to be discussed include his critique of Roman imperial ideology; his appraisal of classical philosophy, especially Platonism; angels, demons, and the fall; secular politics and the doctrine of the "two cities"; fate and the afterlife.

Class Notes: Classes will be held live two days per week for 75 minutes each. Meeting times will be determined according to the availability of enrolled students.

Recommended Prep: Latin 10 or equivalent experience; please consult with the Preceptor in the Classics (livings@g.harvard.edu).

Subject: Latin

Latin AX
Latin Review and Reading (122177)

Ivy Livingston

2020 Fall (4 Credits)  Schedule: MTWR -

Instructor Permissions: None  Enrollment Cap: n/a

Latin Ax is designed for students who have studied some Latin prior to enrollment at Harvard. Participants will review and consolidate their knowledge of Latin grammar and apply that knowledge to the reading of short classical texts, both literary and non-literary (such as inscriptions). Students should leave the course able to read with the precision that is necessary to use primary sources in research.

Course Notes: Students wishing to continue after Latin Ax should proceed to Latin 10. No auditors. May be taken Pass/Fail.

Class Notes: Classes will be held live four days per week for between 60 and 75 minutes each. Meeting times will be determined according to the
availability of enrolled students.

Recommended Prep: Students considering Latin Ax should take the Latin Placement Exam and consult with the Preceptor in the Classics (livings@g.harvard.edu).

Latin 1 Section: LEC
Introductory Latin 1 (203025)

_Ivy Livingston_

2020 Fall (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

Latin 1 is a starting point for those interested in learning to read the Latin language. Participants will begin to gain direct access to the literature and culture of the Roman world through its writings.

Course Notes: Students wishing to continue after Latin 1 should proceed to Latin 2, which continues the introductory sequence and prepares students for Latin 3. Auditors allowed with permission of course head. May be taken Pass/Fail.

Class Notes: Classes will be held live three days per week for between 60 and 75 minutes each: two will be at regularly scheduled times, and one will be separately arranged for small groups. Meeting times will be determined
according to the availability of enrolled students.

Recommended Prep: None. Latin 1 is an introductory course for students with no prior experience. Those who have studied Latin formally are not permitted to enroll in Latin 1, but should instead consider Latin Ax (Review and Reading) or Latin 1x (Accelerated Introduction to Latin); please consult with the Preceptor in the Classics (livings@g.harvard.edu).

Additional Course Attributes:

Latin 1X

Accelerated Introductory Latin 1 (203254)

Ivy Livingston

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

Latin 1x is the first half of a two-semester intensive introduction to the Latin language. Participants will begin to gain direct access to the literature and culture of the Roman world through its writings at a more rapid pace than Latin 1.

Course Notes: Students wishing to continue after Latin 1x should proceed to Latin 2x, which completes the accelerated introductory sequence and prepares students for Latin 10.

No auditors. May be taken Pass/Fail.

Recommended Prep: None, but since 1x is an intensive course, students should feel confident of their ability to learn a highly inflected language relatively quickly, taking into account the demands of other commitments. Students with a little prior experience may take Latin 1x with the permission of the course head.

Latin 2 Section: LEC

Introductory Latin 2 (203253)

Ivy Livingston

2021 Spring (4 Credits) Schedule: TBD
Latin 2 continues from Latin 1. Participants will continue to develop their ability to read Latin with increasing emphasis on classical texts.

Course Notes: Students wishing to continue after Latin 2 should proceed to Latin 3, which concludes the normal introductory sequence. Auditors allowed with permission of course head. May be taken Pass/Fail.

Recommended Prep: Latin 1 or equivalent experience; please consult with the Preceptor in the Classics (livings@g.harvard.edu).

Latin 2X

Accelerated Introduction to Latin 2 (203258)

Ivy Livingston

2020 Fall (4 Credits) Schedule: MTWRF 1030 AM - 1145 AM

Instructor Permissions: None Enrollment Cap: n/a

Latin 2x is the second half of a two-semester intensive introduction to Latin. By the end of the course participants will have been introduced to all the fundamentals of the language and had practice applying their knowledge to the reading of authentic texts.

Course Notes: Students wishing to continue after Latin 2x should proceed to Latin 10. No auditors. May be taken Pass/Fail.

Class Notes: Classes will be held live five days per week for between 60 and 75 minutes each. Meeting times will be determined according to the availability of enrolled students.

Recommended Prep: Latin 1x or equivalent experience; please consult with the Preceptor in the Classics (livings@g.harvard.edu).

Latin 102

Catullus (118174)

*Richard Thomas*

2020 Fall (4 Credits) Schedule: TR 0130 PM - 0245 PM

Instructor Permissions: None Enrollment Cap: n/a

Catullus revolutionized Roman poetry. Focusing on the complex literary culture of late Republican Rome, the course aims to show how this revolution came about and what its consequences were.

Recommended Prep: Latin 10 or equivalent experience; please consult with the Preceptor in the Classics (livings@g.harvard.edu).
Latin 104

Ovid's Metamorphoses (117602)

Richard Thomas

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

Ovid's witty, exuberant, and learned epic of change and mortality encompasses the history of the world from its creation to the apotheosis of Julius Caesar. This course examines the work's shaping of narrative and myth, its generic multiformity (embracing tragic, elegiac, comic, and pastoral motifs, as well as epic), and its equally complex vision of human existence.

Recommended Prep: Latin 10 or equivalent experience; please consult with the Preceptor in the Classics (livings@g.harvard.edu).

Latin 108

Cicero and Sallust on Catiline (114887)

Rachel Love

2020 Fall (4 Credits) Schedule: MWF -

Instructor Permissions: None Enrollment Cap: n/a

Readings of Cicero's *Catilinarian Orations* and Sallust's *Catilinarian Conspiracy* with attention to the style of the two authors, their rhetorical and narrative techniques, and the differences between their accounts of Catiline’s conspiracy.

Class Notes: Classes will be held live three days per week for 60 minutes each. Meeting times will be determined according to the availability of enrolled students.

Recommended Prep: Latin 10 or equivalent experience; please consult with the Preceptor in the Classics (livings@g.harvard.edu).
Latin 112A
History of Latin Literature I (120352)

Jared Hudson

2020 Fall (4 Credits)  
Schedule: MW 0430 PM - 0545 PM

Instructor Permissions: None  
Enrollment Cap: n/a

The literature of the Republic and early Augustan period. Reading of extensive selections from the major authors, with lectures and discussion on the evolution and development of Latin prose and poetry. The course focuses on a variety of issues: Latin individuality through manipulation of inherited Greek forms, metrical and stylistic developments, evolving poetics, intertextuality and genre renewal, dynamic effects of social and political contexts.

Class Notes: Classes will be held live two days per week for 75 minutes each, and there will be a section scheduled separately. Meeting times will be determined according to the availability of enrolled students.

Latin 134
Archaic Latin (110649)

Jeremy Rau

2020 Fall (4 Credits)  
Schedule: MW 1200 PM - 0100 PM

Instructor Permissions: None  
Enrollment Cap: n/a

Essentials of Latin comparative and historical grammar, with readings of early Latin inscriptions, legal texts, and selections from Livius Andronicus, Plautus, Ennius, and Cato.

Additional Course Attributes:
Latin 201
Reading Latin (117068)
Adam Trettel
2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: Instructor Enrollment Cap: n/a
Readings of Latin prose and poetry ranging from archaic to imperial, with emphasis on variety, quantity, and quick comprehension of syntactic, stylistic, and generic features.
Course Notes: Intended for graduate students in Classical Philology as preparation for the general examinations.

Subject: Medieval Greek

Medieval Greek 115
Introduction to Byzantine Greek (121896)
Alexander Riehle
2020 Fall (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a
This course provides an introduction to the language of late antique and Byzantine Greek texts. This "Medieval Greek" should not be understood as a particular, intermediate stage in a linear development from Ancient to Modern Greek, but rather as a conventional designation of a broad continuum of linguistic registers, ranging from archaizing usages ("Atticism") to the so-called vernacular. In the surviving texts, these registers may vary significantly, depending on the author and his (or rarely, her) audience, the genre and other contextual factors. Through a close reading of representative literary and "sub-literary" texts from various periods and genres, the course intends to give students a first impression of this diversity and multi-layeredness of Greek writing in late antiquity and the Middle Ages. Although the main focus will be on grammatical and lexical analysis, we will also discuss related aspects of composition and style.

Class Notes: Classes will be held live two days per week for 75 minutes each. Meeting times will be determined according to the availability of enrolled students.

Recommended Prep: Greek 10 or equivalent.

Greek AX

Ancient Greek Review and Reading (122172)

Ivy Livingston

2020 Fall (4 Credits)  Schedule: MTWR -
Instructor Permissions: None  Enrollment Cap: n/a

Greek Ax is designed for students who have studied some Greek prior to enrollment at Harvard. Participants will review and consolidate their knowledge of Greek grammar and apply that knowledge to the reading of short texts. Students should leave the course able to read with the precision that is necessary to use primary sources in research.

Course Notes: Students wishing to continue after Greek Ax should proceed to Greek 10. No auditors. May be taken Pass/Fail.

Class Notes: Classes will be held live four days per week for between 60 and 75 minutes each. Meeting times will be determined according to the availability of enrolled students.

Recommended Prep: Prerequisites: Students considering Greek Ax should take the Greek Placement Exam and consult with the Preceptor in the Classics (livings@g.harvard.edu).

Greek 1
Introductory Ancient Greek 1 (203024)
Ivy Livingston
Greek 1 is a starting point for those interested in learning to read ancient Greek. Participants will begin to gain direct access to the literature and culture of Greece through its writings. The specific dialect studied is that of Athens, which is the language of, e.g., Plato, Euripides, and Thucydides, as well as the basis for the language of the New Testament.

Course Notes: Students wishing to continue after Greek 1 should proceed to Greek 2, which continues the introductory sequence and prepares students for Greek 3. Auditors allowed with permission of course head. May be taken Pass/Fail.

Class Notes: Classes will be held live four days per week for between 60 and 75 minutes each. Meeting times will be determined according to the availability of enrolled students.

Recommended Prep: None. Greek 1 is an introductory course for students with no prior experience. Those who have studied Greek formally are not permitted to enroll in Greek 1, but should instead consider Greek Ax (Review and Reading) or Greek 1x (Accelerated Introduction to Greek); please consult with the Preceptor in the Classics (livings@g.harvard.edu).

Greek 1X
Accelerated Introduction to Ancient Greek 1 (203257)
Ivy Livingston

Greek 1x is the first half of a two-semester intensive introduction to ancient Greek. Participants will begin to gain direct access to the literature and culture of Greece through its writings at a more rapid pace than Greek 1. The specific dialect studied is that of Athens, which is the language of, e.g., Plato, Euripides, and Thucydides, as well as the basis for the language of the New Testament.

Course Notes: Students wishing to continue after Greek 1x should proceed to Greek 2x, which completes the accelerated introductory sequence and prepares students for Greek 10. No auditors. May be taken Pass/Fail.

Recommended Prep: Prerequisites: None, but since 1x is an intensive course, students should feel confident of their ability to learn a highly inflected language relatively quickly, taking into account the demands of other commitments. Students with a little prior experience may take Greek 1x with the permission of the course head.
Greek 2
Introductory Ancient Greek 2 (203256)

Ivy Livingston

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

Greek 2 continues from Greek 1. Participants will continue to develop their ability to read Greek with increasing emphasis on authentic texts.

Course Notes: Students wishing to continue after Greek 2 should proceed to Greek 3, which concludes the normal introductory sequence. Auditors allowed with permission of course head. May be taken Pass/Fail.

Recommended Prep: Greek 1 or equivalent experience; please consult with the Preceptor in the Classics <a href="mailto:livings@g.harvard.edu">livings@g.harvard.edu</a>.

Greek 2X

Accelerated Introduction to Ancient Greek 2 (203260)

Ivy Livingston

2020 Fall (4 Credits)

Schedule: MTWRF -

Instructor Permissions: None

Enrollment Cap: n/a

Greek 2x is the second half of a two-semester intensive introduction to Greek. By the end of the course participants will have been introduced to all the fundamentals of the language and had practice applying their knowledge to the reading of authentic texts.

Course Notes: Students wishing to continue after Greek 2x should proceed to Greek 10. No auditors. May be taken Pass/Fail.

Class Notes: Classes will be held live five days per week for 75 minutes each. Meeting times will be determined according to the availability of enrolled students.
Recommended Prep: Greek 1x or equivalent experience; please consult with the Preceptor in the Classics (livings@g.harvard.edu).

Introduction to Ancient Greek Literature (203230)

*Ivy Livingston*

2020 Fall (4 Credits)  

**Schedule:**  

- MWF

**Instructor Permissions:** None  

**Enrollment Cap:** n/a

Greek 10 offers close reading and analysis of Greek literary texts, both prose and poetry, beginning at an intermediate pace. Participants will improve their reading proficiency while developing an appreciation for features of style, genre, and meter.
Course Notes: After Greek 10, students may take Greek courses at the 100-level, but are encouraged to consult with the Director of Undergraduate Studies in the Classics (classicsDUS@fas.harvard.edu) about their choice of course. Students may also take Greek 10 more than once, with the permission of the course head. Auditors allowed with permission of course head.

Class Notes: Classes will be held live three days per week for between 60 and 75 minutes each. Meeting times will be determined according to the availability of enrolled students.

Recommended Prep: Any one of the following: Greek 3; Greek 2x; Greek Ax. Students who have not studied Greek at Harvard should take the Greek Placement Exam and consult with the Preceptor in the Classics (livings@g.harvard.edu). Auditors allowed with permission of course head. May be taken Pass/Fail.

Greek 112B

History of Greek Literature II (119867)

Alexander Riehle

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

This course offers a survey of Greek literature from around 400 BC to 400 AD through the lens of rhetorical discourse. We will read extracts from a broad range of texts from the Classical, Hellenistic, Roman and Late Antique periods. The selection will include exemplary orations (e.g., Demosthenes' First Philippic), inserted speeches in narrative texts (e.g., Pericles' famous funeral oration as rendered by Thucydides, Jesus' Sermon on the Mount according to the Gospel of Matthew), a panegyrical poem (Theocritus' Idyll 17), texts about rhetoric and rhetoricians (Aristotle's Rhetoric, Philostratus' Lives of the Sophists, Lucian's satire Teacher of Rhetoric), and rhetorical exercises (Synesius' Encomium of Baldness which he wrote in response to Dio's Encomium of Hair). The close reading and translation of the excerpts will be accompanied by discussions of genre in relation to historical contexts, performance, and discursive and linguistic (dis)continuities.

Greek 114

Homer’s The Iliad (140097)

Naomi Weiss

2020 Fall (4 Credits)  
Schedule: TBD

Instructor Permissions: None  
Enrollment Cap: n/a

The *Iliad* is the foundation of ancient Greek literature. From the archaic period through the classical and beyond, this epic tale remained a cornerstone for Greek discourse about war, heroism, suffering, mortality, the gods, friendship, and much more. In this course, we will read extensive selections from the *Iliad* in Greek, focusing on Books 3, 6, 22, and 24, and the entire poem in English. Our focus will be translation and close reading, but we will also discuss the broader themes and narrative structure of this extraordinarily influential masterpiece. Students will thus improve their ability to read and analyze Greek poetry.

Class Notes: Classes will be held live two days per week for 75 minutes each. Meeting times will be determined according to the availability of enrolled students.

Recommended Prep: Greek 10 or equivalent experience; please consult with the Preceptor in the Classics (livings@g.harvard.edu).

Modern Greek  10

Introduction to Modern Greek Texts (212818)

Calliopi Dourou

2020 Fall (4 Credits)  Schedule:  MWF -
Instructor Permissions:  None  Enrollment Cap:  n/a

This course is designed for students who possess an intermediate level in Modern Greek. It aims at further development of reading and listening comprehension as well as oral and written expression. The students will expand their vocabulary in thematic areas, such as technology, arts, environment, education, and politics. The course will also offer a targeted review of advanced grammatical phenomena, such as passive voice, indirect speech, and subordinate clauses. At the same time, the students will delve deeper into Modern Greek culture by being exposed to various cultural media, including prose (literary and journalistic), film, and music.

Course Notes:  Conducted in Modern Greek. It prepares students to take "MODGRK 100: Introduction to Modern Greek Literature" in the spring.

Class Notes:  Classes will be held live three days per week for 75 minutes each. Meeting times will be determined according to the availability of enrolled students.

Recommended Prep:  Modern Greek BA or BB or equivalent. Consult with Instructor.

Modern Greek  90

Modern Greek Language Tutorials (214511)

Calliopi Dourou

2021 Spring (4 Credits)  Schedule:  TBD
Instructor Permissions:  None  Enrollment Cap:  n/a

Languages in the tutorial program are offered when there is demonstrated curricular or academic need on the part of the student, and when suitable instruction can be arranged. Please contact the instructor to learn more.

Course Notes:  Special topic: Reading Scholarly Modern Greek. This tutorial is addressed to students who want to develop literacy competence in order to read Modern Greek scholarly texts. No prior
knowledge of the language is required: The entirety of the grammatical concepts and forms necessary to comprehend written academic Greek will be covered. The students will also gain familiarity with various academic genres in Greek (among others, articles, chapters, reviews, lecture transcripts). Emphasis is placed on grammar and on reading strategies that enable students to locate, select, and comprehend texts that are central to their research needs. Students will become familiar with the major stylistic features of contemporary academic Modern Greek and will consolidate their competence through various reading, translating, and writing activities. The assigned material will also familiarize students with basic aspects of Modern Greek life and culture.

Modern Greek 100

Advanced Modern Greek: Introduction to Modern Greek Literature (123852)

Calliopi Dourou

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: n/a

Glimpses of Antiquity: Navigating the contours of Hellenism in Modern Greek Literature

Even as early as the fifteenth century, Greek intellectuals had increasingly begun to identify themselves primarily as remnants of ancient Greece. By calling attention to the impressive literary and philosophical achievements of their illustrious ancestors, as well as by foregrounding the continuity between the ancient past and the present, these renowned Hellenists, anticipating the much-coveted regeneration of Greece that Adamantios Korais was later to promote so passionately at the dawn of the nineteenth century, were not ushering in a stridently novel conceptualization of Greek antiquity.

Far from being unprecedented, the view that the Byzantines were descended from the ancient Greeks, spawned primarily in the wake of the Fourth Crusade and the concomitant conquest of Constantinople in 1204, enjoyed considerable popularity already in the thirteenth century, when the Empire of Nicaea proudly played a leading role in the reconfiguration of the Byzantine past and dynamically consolidated the reputation of the Byzantines as the true heirs to the enduring legacy of classical Greece.

At this early date, the newly evoked association with the Byzantines' ancient Greek forebears was mostly intended to bring further kudos to the traditional identity of the Byzantines qua Romans. This association was later to develop into a full-blown alternative identity, which by the second half of the fifteenth century had come to overshadow—or sometimes even eclipse—the identification of the Byzantines as Romans, which had lasted a thousand years.

Against this rich backdrop of sharply shifting perceptions of the ancient Greek past and increased focus on re-elaborations of a Hellenic collective identity, this course will seek to explore the intriguing ways in which Greek writers endeavored to get to grips with their Hellenic heritage in subsequent centuries. Authors to be studied include the following: C. P. Cavafy, Odysseas Elytis, Andreas Kalvos, Kostis Palamas, Alexandros Papadiamantis, Iakovos Pitzipios, Yiannis Ritsos, Giorgos Seferis, Dionysios Solomos, Dido Sotiriou, Georgios Vizyenos.
Modern Greek 145

Dreams and Literature (116787)

Panagiotis Roilos

2020 Fall (4 Credits)  
Schedule: W 1245 PM - 0245 PM

Instructor Permissions: None  
Enrollment Cap: n/a

Against the dual background of ancient and medieval commentaries on the one hand, and modern psychoanalytic and ethnographic studies on the other, diverse literary texts will be explored. The major focus will be on Greek literature, but examples from other European literatures will also be considered (including film). Major topics: typology of dreams; dreams as narratives; dreaming and writing; religious dimensions. Theoretical readings to include: Aristotle, Aelius Aristides, Artemidorus, Synesius of Cyrene; Freud, Jung, Levi-Strauss, Foucault, Lyotard.

Greek Art (108583)

Adrian Staehli

2020 Fall (4 Credits)

Instructor Permissions: None

Enrollment Cap: n/a

The course provides a broad overview of the development of Greek art, architecture, and material culture from the end of the "Dark Ages" through the Archaic and Classical periods to the Hellenistic age. It offers
basic knowledge about core categories of archaeological artifacts and remains within their topographical setting and the context of Greek culture and society, and includes issues of archaeological method and problems of current research.

Class Notes: Class will not be recorded and must be attended live. A few pre-arranged classes will be 90 minutes because they will involve virtual museum visits, which will consist of studying class-related objects and monuments in various European art museums and archaeological collections, co-taught—or co-explored—with the colleagues and curators in charge of these collections.

Classical Archaeology  128

How Houses Build People (215972)

Margaret Andrews

2021 Spring (4 Credits)  Schedule:  TBD
Instructor Permissions:  None  Enrollment Cap:  n/a

People build houses, but how do houses build people? This course will explore the house in both form and concept throughout pre-industrial Western history, with a focus on the ancient Mediterranean world (ca. 1300 BCE–1000 CE). Drawing on modern theories of space and sociology, we will examine how the spatial configurations and broader settings of houses actively shaped the way people acted, interacted, and thought—as both individuals and members of a collective society—within a variety of historical and cultural contexts.

Classical Archaeology  133

Representing the Emperor (156515)

Adrian Staehli

2020 Fall (4 Credits)  Schedule:  F 0945 AM - 1145 AM
Instructor Permissions:  None  Enrollment Cap:  n/a

The seminar offers an introduction to Roman public monuments from the reign of Augustus to the age of Constantine, with emphasis on "state reliefs" (triumphal arches, victory monuments, monumental altars) and imperial portraiture, and will address questions of propaganda and self-display through visual media.

Class Notes: Class will not be recorded and must be attended live.
**Classical Archaeology 253**

The City of Rome (215861)

*Margaret Andrews*

2020 Fall (4 Credits)

**Schedule:** TBD

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Rome was central to the formation of Western European culture. This course examines the archaeology and history of Rome from the Iron Age to the Byzantine "reconquest" (ca. 850 BCE–550 CE) and the range of intellectual and scientific approaches that scholars have used to engage with the city and its legacy. Students will encounter a broad range of sources, both textual and material, from each period that shows how the city physically developed and transformed within shifting historical and cultural contexts. Our main theme will be how Rome in any period was, and still is, a product of both its present and past and how its human and material legacies were constantly shaping and reshaping the city in later periods.

**Class Notes:** Class will meet live one day per week for two hours. The day and time will be determined according to the availability of enrolled students.

**Subject: Classical Philology**

**Classical Philology 211**

Roman Antiquarian Literature (215983)

*Jared Hudson*

2021 Spring (4 Credits)

**Schedule:** TBD

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

This seminar explores the distinctive literary and cultural features of written Roman antiquarianism. Item-based rather than chronological, enumerative rather than narrative, more concerned with the detail of everyday life than with historical events, ancient Roman antiquarianism represents a specific, and often overlooked, way of approaching and conceptualizing the past, one viewed as separate from traditional historiography. The course will trace the development and formal variety of Roman antiquarian literature by investigating recent scholarly work in this area and through in-depth reading of representative Latin texts (Aulus Gellius, Pliny the Elder, and Varro).
Classical Philology 235

Sappho and her Reception in the Ancient World (203652)

Gregory Nagy

2020 Fall (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

The poetics (or songmaking) of Sappho will be studied from a wide variety of perspectives, suited to the research interests of the students enrolled, who are also encouraged to compare the texts of classical Greek and Latin poets like Euripides and Catullus.

Course Notes: Open to non-Classicists as well as Classicists (including advanced undergraduates).

Class Notes: Class will meet live one day per week for two hours. The day and time will be determined according to the availability of enrolled students.

Recommended Prep: No previous knowledge of the historical and philological background is required or expected.

Classical Philology 260

Plautus (215973)

Kathleen Coleman

2020 Fall (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

This seminar will examine the surviving comedies of Plautus from the following perspectives: textual transmission; relationship with Greek New Comedy; comparison with surviving fragments of other Latin comedies; linguistic register; performative context; plot and characterization; and reception. The entire corpus will be covered, with special focus on selected plays.

Class Notes: Class will meet live one day per week for two hours. The day and time will be determined according to the availability of enrolled students.
Classical Philology 295

The Greek Anthology (215982)

Alexander Riehle

2021 Spring (4 Credits)  Schedule:  TBD

Instructor Permissions:  None  Enrollment Cap:  n/a

The Greek Anthology is a conventional term for a series of historical collections assembling and organizing ancient and medieval Greek epigrams. This seminar explores both the history of these collections and the various literary forms (genres, themes and motifs, metrical and stylistic features, etc.) of the epigrams they transmit.

Ancient Studies 201

Oracles and Divination in the Ancient Mediterranean (215990)

Rachel Love

Giovanni Bazzana

2021 Spring (4 Credits)  Schedule:  TBD

Instructor Permissions:  Instructor  Enrollment Cap:  12

This graduate seminar will focus on oracles and divination in the ancient world in their capacity as a widespread phenomenon. The course will deal with texts and material artifacts pulled from a broad range of epochs and regions across the ancient Mediterranean. We will explore the historical, literary, and artistic significance of this evidence in order to understand more adequately, for example, ancient concepts of divine-human communication, integration of divinatory practices into literatures, and authorization in religious and political discourses. This is an interdisciplinary course that focuses on developing research and communication skills across classics, religious studies, and ancient history.

Course Notes:  This seminar is limited to 12 students.

Comparative Literature  97
Tutorial - Sophomore Year (114038)
Thomas Wisniewski
2021 Spring (4 Credits)  Schedule:  TBD
Instructor Permissions:  Instructor  Enrollment Cap:  n/a
How to make a sound demonstration in the field of literary analysis? What are the building blocks for a cogent approach to comparative studies? We'll pay attention to various scales of textual commentary, from the microscopic lens of close reading to the medium scope of thematic reading, with an eye to macroscopic trends in literary history and critical theory. We'll befriend texts ranging from various genres (poetry; fiction; drama) and relate form to content, historical context to contemporary significance, and join the dots connecting notions of authorship to reception theory.

Comparative Literature 107

The Politics of Yiddish (207574)

Saul Zaritt

2020 Fall (4 Credits)  Schedule: TBD
Instructor Permissions: None  Enrollment Cap: n/a

A bastardized German, a jargon, a woman's vernacular, an old world language, a dying and ghostly tongue, a Hasidic language, a queer language, a radical language—these are just a few of the ways that Yiddish has been labeled over its one-thousand-year history. This course will trace the shifting politics attached to Yiddish from its early modern beginnings as a language of translation between Jewish and non-Jewish cultures to its postwar vacillation between a language of mourning and nostalgia, Jewish American humor, Hasidic isolation, and contemporary Jewish radicalism. Through poetry, fiction, essays, and film, we will discuss what it might mean to discover "the secret" language of the Jews" at the origins of Jewish socialism and at the foundations of diaspora nationalism. All texts will be read in translation.
Course timing will be determined in consultation with those enrolled in the course.

## Comparative Literature 108

### Translating World Literature (212721)

**Luke Leafgren**

2020 Fall (4 Credits)

**Schedule:** MW 1030 AM - 1145 AM

**Instructor Permissions:** None

**Enrollment Cap:** n/a

In this course, students will read selections from a dozen works from the canon of world literature with particular attention to their existence as translated texts. The course will highlight the role of translation in the history of a text and its reception within new contexts. By reading different translations of the same work, students will be able to examine the choices translators have made, consider the ethical responsibilities of the translator, and explore the role of translation in mediating the meaning of the text. The course will also incorporate short readings on translation theory and presentations on the original languages of composition. Assignments will include written comparisons of different translations, with the option to translate a text into English.

Comparative Literature  129
Singing Love and Horror Stories: Opera and Greek Mythology (216779)
Katharina Piechocki
Federico Cortese
2021 Spring (4 Credits)  Schedule:  TBD
Instructor Permissions:  Instructor  Enrollment Cap:  20
This course explores the centrality of Greek and Roman mythology in Western opera. We will engage with a broad range of myths to see how they not only informed and transformed opera, from its beginnings in ca. 1600 to the 20th century, but truly shaped opera as a new musical language. Our central interest will be the complex, and yet fascinating, tension between feelings of love and hate—toward a partner or a family member. Myths we will focus on include: Orpheus, Apollo and Daphne, Psyche, Hercules, Oedipus, Electra, Iphigenia in Aulis, and Dido and Aeneas. Composers include Monteverdi, Cavalli, Lully, Purcell, Handel, Gluck, Vivaldi, Rameau, Berlioz, Strauss, Stravinsky, and Enesco.

Class Notes:  A separate meeting time for coaching will be arranged.

Comparative Literature  131
The Arab American Experience in Fiction, Film, and Popular Culture (128114)
Sandra Naddaff
2021 Spring (4 Credits)  Schedule:  TBD
Instructor Permissions:  None  Enrollment Cap:  n/a
Since 9/11, there has been an explosion of cultural work about the Arab-American experience. This course will explore that experience as expressed in various cultural forms--fiction, film, comedy acts, graphic novels, memoirs, art installations, and new media. We will pay particular attention to contemporary works and authors (e.g., Kahf, Nye, Alameddine, Hammad, Abu Jaber), although we will also consider the work of early 20th-century Arab-American writers (Gibran, Rihani, Rizk). Topics include mapping the exilic experience, translation and bilingualism, cultural translation, and the semiotics of food.

Comparative Literature  135
History of Theater (109675)
Katharina Piechocki
2020 Fall (4 Credits)  Schedule:  M 1200 PM - 0245 PM
This course explores the rich history and manifold layers of theater in Europe, the Middle East, Japan, and the New World from antiquity to the present, with a strong focus on early modernity. What is theater and what is its relationship with attendant disciplines such as the visual arts, music, medicine, and philosophy? What does it mean to perform and to represent a written text? What meaning does theater have nowadays and how is it staged, translated, and transformed across a globalized world? How ought we to historicize and think gender difference and non-binary gender identity on stage? How can we assess the importance of the mask (central to the carnival in Venice and the commedia dell'arte)? Authors will include: Sophocles, Aristotle, Muhammad Ibn Daniyal, Gil Vicente, Fernando de Rojas, Machiavelli, Isabella Andreini, Molière, and Sor Juana. We will look at different renderings of ancient and early modern performance(s) in the late 20th and 21st century (Mnouchkine, Wang Chong, Romeo Castellucci, Warlikowski).

### Comparative Literature 159

*Poetry as Musical Performance* (216042)

**Gregory Nagy**

2021 Spring (4 Credits)  
Schedule: TBD  
Instructor Permissions: None  
Enrollment Cap: n/a

This course is inspired by the words of T. S. Eliot, in "The Dry Salvages" (1941): "You are the music / While the music lasts." Participants are encouraged to explore the musicality of poetry composed as poetry, where poets build into their poetry an internal music that invites musical composers to "set it to music." A celebrated example is a lyric poem composed by Heine, which also gets set to music in the form of a Lied by Schumann. Students are free to select for their focus of research any particular kind of poetry, composed in whatever language, including English. No requirement of competence in any language other than English.

### Comparative Literature 171

*Counter-Imperialism and Asian-African Literatures* (216023)

**Annette Lienau**

2020 Fall (4 Credits)  
Schedule: F 1200 PM - 0245 PM  
Instructor Permissions: None  
Enrollment Cap: n/a

The first Asia-Africa conference of newly independent states (held in Indonesia in 1955) was hailed by contemporary observers as an event as significant as the European renaissance in global importance. It inspired a sequence of political and cultural initiatives (including several African-Asian writers' conferences) in pursuit of new forms of cultural exchange and political brokering unmediated by former
colonial centers. This course explores the historic tensions of this transition towards a post-colonial global order across two continents. It takes as its point of departure historic notions of African-Asian political and cultural solidarity to explore important questions about counter-imperial forms of autonomy and anti-colonial practices of lateral alliance and cultural exchange. Moving through a range of literary texts and historical documents that mark this historical transition and its internal tensions, the course invites you to engage with the comparative legacies of African-Asian independence movements and solidarity initiatives as they rose to international circuits of recognition, with implications for enduring cultural debates across the Global South. To the extent that 20th century African-Asian independence movements were considered by many authors in the mid- to late-twentieth century to be politically ambiguous and perennially incomplete, the course more specifically raises the following questions: how did several influential, anti-colonial African and Asian authors and political figures consider the fields of culture and literature to be an extension of their own political engagements? How were the fields of literature and culture comparatively viewed as a way of advancing (anti-colonial) forms of revolutionary change, or of addressing entrenched social grievances and enduring global inequalities? How did writers in the wake of anti-colonial movements reconcile the ambiguities of national independence with the risks of neo-colonial or ethno-nationalist exploitations—at times pursued in the name of lateral solidarities and liberation? And how would counter-colonial efforts to develop transregional, African and Asian forms of cultural exchange contend with the paradox that their "common ground" or shared purpose both derived from and sought to transcend a colonial past? Readings for the course will include Richard Wright's The Color Curtain, an iconic account of the first Asian-African conference of independent states, on the cultural commonalities and uneven temporalities of African-Asian independence movements; theoretical texts on the cultural ambiguities of anti-colonial nationalisms (such as Fanon's The Wretched of the Earth); and essays by major anti-colonial, political figures such as Sukarno, Nasser, Nkrumah, and Senghor. Literary texts will include revolutionary poetry and prose works, from examples of the "strike novel" to writing that challenged the post-revolutionary emergence of dictatorial regimes and cultural censors across both continents. Course assignments will include three analytical papers.

Writing Jewish Modernity (203093)

Saul Zaritt

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

This course will trace the ways in which Jewish writers, in multiple languages, responded to the challenges and opportunities of modernity: emancipation, acculturation, nationalism, antisemitism, industrialization and urbanization, migration and war, and the Holocaust. We will explore the creation of radically new modes of Jewish cultural expression and interrogate the simultaneous attempts to invent a unified Jewish literary tradition. We will read texts (in translation) by such writers as Franz Kafka, Sholem Aleichem, Isaac Babel, Devora Baron, S.Y. Agnon, Delmore Schwartz, and others.

Comparative Literature 186

Comparative Love: The Song of Songs in Western Tradition (216309)

David Stern

2020 Fall (4 Credits)

Schedule: W 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap: n/a

The Song of Songs is, arguably, the greatest love poem in Western literature, but the nature of the love depicted in its verses has been disputed since the time the poem was committed to writing until today. Virtually every type of interpretation has been applied to the poem, from literalist to Jewish and Christian allegorical readings, philosophical and mystical exegeses, and nationalist and political interpretations, not to mention the innumerable implicit meanings underlying the many poems and prose works that have imaginatively recreated the Song through allusion and intertextuality. This course will trace the interpretive career of this unique poem, and in the process explore such basic literary questions as the relation between literalism and allegoresis, the exploitation of literature by religion and other ideologies and its consequences, eros and gender as principles of desire, and the role of influence and appropriation in the history of the poem's interpretation. Readings will include, in addition to the Song itself and select modern scholarship about it, selections from the Old Greek translation, classical Jewish interpretation (midrash and Targum), Origen, medieval Jewish commentaries and secular love poetry, Bernard of Clairvaux and other medieval Christian exegetes, the Zohar and Christian mystics, S.Y. Agnon, and Toni Morrison. All readings will be in translation. No previous knowledge of love required.

Comparative Literature 188

Futurisms (a comparative history) (205146)

Jeffrey Schnapp

2020 Fall (4 Credits)

Schedule: W 1200 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

From its foundation in Feb. 1909 through WWII, futurism developed into the first international cultural-political avant-garde. Its aim was a revolutionary transformation of all spheres of life and its influence extended to the whole of Europe, parts of Asia, and the Americas. Combating the tradi-tionalism of turn-of-the-century European culture, the move-ment sought to found a cosmopolitan (but nationalist) countercul-ture based on the exaltation of youth, speed, violent revolt, innovation, and expe-ri-menta-tion. Hence the move-ment's name: the label "Future-ism" denoting at once adoration of the new and struggle against the prevalence of "past-ism" or passatismo (the idolatry of the past). In its first decade of ex-is-tence Futurism became the first full-fledged cultural-political avant-garde of our cenu-try, ga-ther-ing together pain-ters, musi-cians, archi-tects, political revo-lu-tion-aries, and poets from seve-ral European nations. A key progenitor of later move-ments such as Dada-, Vorticism, and Sur-real-ism, Fu-tur-ism had a powerful forma-tive influence not only on the cul-tural atmo-sphere of Italy during the Fascist era (1922-1945), but also on 20th century cul-ture as a whole.

Course Notes: Previously offered as LITER 127
We will consider classic narratives that incorporate real written documents or personal testimonies into works of fiction, film, and journalism. How do such works blur the line between fiction and reality, between individual testimony and collective experience, in order to construct larger narratives about political repression and political history? We will explore why some testimonies, images, or documentary details feel more "authentic" or "truthful," inspiring a strong response in readers and viewers, while others recede into the background. What is gained or lost when facts are folded into a narrative that does not just inform but also entertains? Why do works of fiction and film create such persuasive versions of the past, and how do these stories shape our sense of political life and state power? We will examine diverse historical documents, individual and collective testimonies, stories, novels, photos, and films from Russia, Eastern Europe, and other regions in order to investigate these questions. Course readings will range from Defoe, Melville, Tolstoy, Dostoevsky, and Babel to Nobel Prize winners Alexander Solzhenitsyn and Svetlana Alexievich, as well as non-fiction from Elena Poniatowska, Ryszard Kapuściński, Javier Cercas, Liao Yiwu, Carlo Ginzburg, and others; we will also discuss films from Errol Morris and Andrei Tarkovsky.

Class Notes: All readings in English.

Comparative Literature  190

Translation: Language at Work (205097)

Marc Shell

What difference does language make? This class begins with Goethe's *Faust*, a work that translates the Bible ("In the beginning was the Word") and teases out the idealist philosophical theorization of translation (Helen of Troy speaking German words in Greek syntax). Seminar participants will then engage collaboratively in comparative readings: the particular language expertise of every one of us will benefit the group as a whole: the final reading list will thus arise from group discussion of the languages we know. The first half of the course considers issues of literalness and literariness along with rhythm and rhyme in both
poetry and prose. At the same time we will discuss simultaneous translation, dubbing, and general ineffability along with American literature written in languages other than English. The second half focuses on the relationships of language translation to economic transfer and to literary metaphor and also considers the roles of inter-linguistic translation in various arts and media: movies, plays, music, and variably 'bilingual' paintings.

Comparative Literature 195

The Borges Machine (216043)

Mariano Siskind

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

Between the 1923 and 1970, Jorge Luis wrote some of the most original poems, short stories, essays and film scripts in Latin America and anywhere in the world, and he redefined the scope and reach of literature. We will examine the signifying power of Borges's aesthetics, and we will consider his work as a literary machine whose output radically transforms aesthetic formations and imaginaries beyond Argentina and Latin America. Thinking about literature as a signifying machine will require us to focus on 'what it does' instead of 'what it means'. Rather than focusing on literature's ontological nature, we will examine what the Borges machine produces: cities and worlds, cultural subjectivities, love and treason, popular and high culture, institutions of knowledge and traditions, and new ways of reading and thinking about aesthetic and social relations.

Comparative Literature 211

Mysticism and Literature (114368)

Luis Giron Negron

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

Examines trends, issues and debates in the comparative study of mystical literature. Close readings of primary works by Jewish, Christian and Muslim authors from the Middle Ages through the 16th century. Premodern authors include Saint John of the Cross, Saint Theresa of Ávila, Mechtild of Magdeburg, Hadewijch, Pseudo-Dionysius, Dante Alighieri, Bernard of Clairvaux, Margery Kempe, Bahya ibn Paquda, Solomon ibn Gabirol, Yehudah Halevi, Moses de León (Sefer ha-Zohar), Maulana Rumi, al-Hallaj, Ibn Farid, Ibn al-'Arabi, and Fariduddin Attar. Topics include poetry and mysticism; allegory, symbolism and Scripture; body and gender; apophasis vs cataphasis; exemplarity and autobiographism; language and experience. Also examines creative engagement of pre-modern mystical literature in selected works by
modern authors (Borges, T.S. Eliot, Rilke), scholars of religion (Bernard McGinn, Moshe Idel, Annemarie Schimmel) and literary / cultural theorists (Michel de Certeau, Michael Sells).

Course Notes: Offered jointly with the Divinity School as 3802.

Comparative Literature 224

Jew Theory (216044)

*Saul Zaritt*

2021 Spring (4 Credits)  
Schedule: TBD  
Instructor Permissions: None  
Enrollment Cap: n/a

This seminar will discuss the possibility of "Jew theory" as a method for theorizing the modern. Beginning with a survey of the history of Jewish studies and its place in the academy, the course will then examine how the figure of the Jew, as symbol and stereotype, enters the work of important thinkers of the nineteenth, twentieth, and twenty-first century—from Marx to Slezkine, from Rosezweig to Blanchot, Derrida, and Agamben. In parallel we explore the potential of new modes of "Jewish cultural studies" emerging over the last decades in Jewish studies.

Comparative Literature 226

Peripheral Modernisms (207621)

David Damrosch

2021 Spring (4 Credits)  Schedule:  TBD
Instructor Permissions:  None  Enrollment Cap:  n/a

The past several years have seen attempts to rethink modernism as a global phenomenon rather than a mostly Anglo-American and West European movement. Center-periphery relations have often been foregrounded in these efforts, and in critiques of them. Building on theoretical statements by Jorge Luis Borges, Oswald de Andrade, Pascale Casanova, Susan Stanford Friedman, Franco Moretti, Oe Kenzaburo, and Roberto Schwarz, this seminar will explore the politics of language, representation, and center-periphery relations in works by Antonio Machado de Assis, Ryunosuke Akutagawa, Higuchi Ichiyo, James Joyce, Miguel Ángel Asturias, Franz Kafka, Eileen Chang, Clarice Lispector, Lu Xun, Ahmet Hamdi Tanpınar, and Pramoedya Ananta Toer. These ambitious attempts to rethink modernism as a global phenomenon rather than a largely Anglo-American and West European movement. Center-periphery relations have often been foregrounded in these efforts, and in critiques of them. Building on theoretical statements and critiques by Jorge Luis Borges, Kenzaburo Oe, Franco Moretti, Pascale Casanova, Emily Apter, Eric Hayot, and Susan Stanford Friedman, this seminar will explore the politics of language, periodization, and center-periphery relations both within and beyond the West, in works by Higuchi Ichiyo, James Joyce, Lu Xun, Ryunosuke Akutagawa, Virginia Woolf, Djuna Barnes, Borges, Kukrit Pramoj, Pramoedya Ananta Toer, and Derek Walcott.

Comparative Literature 229

Affects, Bodies, Ecologies: Borders of Performance from Antiquity to the Early Modern World (216429)

Katharina Piechocki

2020 Fall (4 Credits)  Schedule:  M 0300 PM - 0545 PM
Instructor Permissions:  None  Enrollment Cap:  n/a

Pandemics such as COVID-19 have revealed not only the fragility of the human body within an equally delicate environment, but also our deep connection and commitment to artistic performances—the latter were the first to be canceled due to the high risk of infection and will be the last to return. This course asks how performance in its manifold guises (theater, processions, auto da fés, carnivals, etc.) and the presence (or absence) of the human body in public, on stage, and in the audience was negotiated in the early modern period. With the face covering currently implemented as a mandatory element of our clothing in public spaces, we ask about the history and the "aesthetic of the mask" (Carlos Amorales); the theorizing, practicing, and gendering of space; the relationship between the written and the staged word, between passions and affects (Melissa Gregg and Gregory J. Seigworth), and between the corporeal and the incorporeal (Elizabeth Grosz)—all elements central to the early modern period. Starting from the origins of performance in antiquity (Sophocles, Aristotle) and with an eye to the present, we will explore performance in its different articulations across the early modern world: from Japanese Kabuki to performances in the New World; from puppet theater in North Africa to new forms of theater (tragicomedies, opera, etc.) in Europe.
"We have so much in common. And yet we know so little of each other." In Bandung, 1955, the hosting Indonesian president of the first Asia-Africa conference of independent states, Ahmed Sukarno, identified in these terms Asia and Africa’s shared experience of colonial "unfreedom," lamenting that mutual ignorance had come to define both continents as a geographically and culturally proximate space. Notwithstanding the uneven efforts to correct this paradox of high commonality and mutual ignorance after the Bandung conference, the iconic gathering left open the question of how this challenge would be resolved across Asia and Africa's linguistic diversity and through both continents' shared cultures of historical contact. This graduate course on Asian-African comparatism reconsiders this paradox as a (post)-colonial constraint and an enduring dilemma within the field of Comparative Literature, and challenges graduate students to creatively imagine what lateral, literary comparisons in the "spirit of Bandung" could resemble, including: a re-examination of colonially inflected "master" concepts (like the Europhone concept of literature itself); privileging parallel or resonant histories across Asia and Africa; and retracing under-examined circuits of cultural exchange across both continents. Readings for the course will pair texts now considered classics of (post)-colonial studies (drawing from work within African, West Asian, and Southeast Asian contexts) with more recent, groundbreaking scholarship in the field of Comparative Literature across these regions.
approach to the topic by drawing on cognitive sciences and cognitive anthropology.

Thinking and Writing Transculturally (123880)

Karen Thornber

2021 Spring (4 Credits)  

Instructor Permissions: None  
Enrollment Cap: n/a

This course explores approaches to literature and transculturation in the context of new understandings of human and textual border creation and crossings. Topics include the ethics of dividing cultural products along ethnic, linguistic, and national lines on the one hand and classifying phenomena as global on the other, and the possibilities and ramifications of cross-cultural study. We also examine the relationship between creative production/literary scholarship and ethnic studies, empire and (post)colonialism, identity, travel/migration/exile/diaspora, labor, war, trauma, multilingualism, translanguaging, and world literature. Course readings are drawn from Africa, Asia, and the Americas.

**Comparative Literature 278**

Hyperreality (216046)

Panagiotis Roilos

2021 Spring (4 Credits)  

Instructor Permissions: None  
Enrollment Cap: n/a

The crisis of mimesis and representation in postmodernity—closely connected with social and existential alienation and technological development—often manifests itself in terms of "hyperreality," where any distinction between "the real" and "the simulacrum" is blurred. The boundaries between "reality" and "non-reality" and relevant concepts (e.g. originality, authenticity, mimesis, simulacrum) have been explored and challenged from different but comparable perspectives in philosophy, art, and literature since classical antiquity. This seminar will investigate discourses on, or inspired by "hyperreality" and its epistemological, ontological, and political implications, from antiquity to postmodernity. Authors and thinkers to be discussed include Plato, Descartes, Schopenhauer, Jean Baudrillard, Guy Debord, Gilles Deleuze, Félix Guattari, Umberto Eco, Fredric Jameson, Paul Virilio, Bruno Latour, Elizabeth Grosz, Niklas Bostrom, Lucian, Pedro Calderón de la Barca, Franz Kafka, Jorge Luis Borges, William Gibson, Philip K. Dick, Christine Brocke-Rose, Italo Calvino, Don Dellilo, Julian Barnes.
Comparative Literature 299AR

Comparative Literature in Theory and Practice (111650)

Marc Shell

2020 Fall (4 Credits)  Schedule:  T 1200 PM - 0245 PM

Instructor Permissions:  Instructor  Enrollment Cap:  n/a

An introduction to the discipline of comparative literature, with a look at major trends in the history and, particularly, current theory and practice of the discipline as practiced in the USA. Several guests will join us to discuss their ongoing work in their specific fields of expertise.

Course Notes:  Required of first-year graduate students in Comparative Literature; open to all graduate students interested in the study of literature in transnational and interdisciplinary perspectives.

Great Ideas in Computer Science (119953)

*Henry Leitner*

2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a

An introduction to the most important discoveries and intellectual paradigms in computer science, designed for students with little or no previous background. Explores problem-solving using high and low-level programming languages; presents an integrated view of computer systems, from switching circuits up through compilers and GUI design. Examines theoretical and practical limitations related to unsolvable and intractable computational problems, and the social and ethical dilemmas presented by such issues as software unreliability and invasions of privacy.

Course Notes: May not be taken for credit after completing Computer Science 50.

Computer Science  10

Elements of Data Science (212950)

*Hanspeter Pfister*
*Xiao-Li Meng*
*Liberty Vittert*

2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: Instructor Enrollment Cap: 100

Data science combines data, statistical analysis, and computation to gain insights and make useful inferences and predictions. This course will take a holistic approach to helping students understand the key factors involved, from data collection and exploratory data analysis to modeling, evaluation, and communication of results. Working on case studies and a final project in teams will provide students with hands-on experience with the data science process using state-of-the-art tools. Emphasis will be given to the strengths, trade-offs, and limitations of each method to highlight the importance of merging analytical skills with critical quantitative thinking.

Course Notes: Also offered as STAT 10. Students may not take both for credit.

Please note that the enrollment cap of 100 is a combined total for both STAT 10 and COMPSCI 10.

Class Notes: If you are interested in joining this course please fill out this form [ ]
https://forms.gle/CWG6j4qsiFb6gDRt5] by Wednesday, January 29, 11:59 pm EST. We will notify you on Friday, January 31.

Requirements: Anti-requisite: Cannot be taken for credit if AC 209A or CS 109A or STAT10 or STAT 121A is already complete.

Discrete Mathematics for Computer Science (128073)

*Rebecca Nesson*

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

Widely applicable mathematical tools for computer science, including topics from logic, set theory, combinatorics, number theory, probability theory, and graph theory. Practice in reasoning formally and proving theorems.

Course Notes: Covers material used in Computer Science 121 and Computer Science 124. Ordinarily, not to be taken after those courses or after courses such as Applied Mathematics 106, Applied Mathematics 107, Mathematics 101, and Mathematics 153.

Introduction to Computer Science (152514)

*David Malan*

2020 Fall (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

Introduction to the intellectual enterprises of computer science and the art of programming. This course teaches students how to think algorithmically and solve problems efficiently. Topics include abstraction, algorithms, data structures, encapsulation, resource management, security, software engineering, and web programming. Languages include C, Python, and SQL plus HTML, CSS, and JavaScript. Problem sets inspired by the arts, humanities, social sciences, and sciences. Course culminates in a final project. Designed for concentrators and non-concentrators alike, with or without prior programming experience. Two thirds of CS50 students have never taken CS before. Among the overarching goals of this course are to inspire students to explore unfamiliar waters, without fear of failure, create an intensive, shared
experience, accessible to all students, and build community among students.

Class Notes: This course ordinarily meets for lectures via Zoom on Mondays at 1:30pm–4:15pm, but the course’s first lecture will be Wednesday, 9/2/20. Students may simultaneously enroll in CS50 and another course that meets at the same time, watching recordings of CS50’s lectures and attending the other course via Zoom. The Ad Board has already granted this exception for CS50; no other steps are required. CS50 is ordinarily graded SAT/UNS, though students whose concentration requires letter grades should change their grading status to letter-graded by the term’s fifth Monday. Students may take CS50 SAT/UNS to fulfill the Science and Engineering and Applied Science distribution requirement or the Quantitative Reasoning with Data requirement, but not both. First years may take both CS50 and a freshman seminar SAT/UNS. Graduate students are welcome to cross-register for CS50. All students are expected to attend an orientation meeting via Zoom during the second week of term; students with conflicts may watch a recording thereof. Required sections via Zoom to be arranged. See cs50.harvard.edu for FAQs, syllabus, and what's new for Fall 2020. Have questions about CS50 during Shopping Period? Attend CS50's office hours on Tue 8/18 at 1:30pm EDT or Wed 8/19 at 8:30pm EDT. See cs50.harvard.edu for Zoom URLs!

Computer Science  50

Introduction to Computer Science (for SEAS concentrators unable to take in fall term) (152514)

_David Malan_

_Brian Yu_

2021 Spring (4 Credits) Schedule: TBD

_Instructor Permissions:_ Instructor Enrollment Cap: n/a

Introduction to the intellectual enterprises of computer science and the art of programming. This course teaches students how to think algorithmically and solve problems efficiently. Topics include abstraction, algorithms, data structures, encapsulation, resource management, security, software engineering, and web programming. Languages include C, Python, and SQL plus HTML, CSS, and JavaScript. Problem sets inspired by the arts, humanities, social sciences, and sciences. Course culminates in a final project.

Class Notes: This spring version of CS50 is for SEAS concentrators (or secondaries) who were unable to take the course in Fall 2020. All students, including concentrators and non-concentrators, are encouraged to take CS50 in fall term instead. See cs50.harvard.
**edu/spring** for differences between fall term and spring term. Students must register via my.harvard for and attend weekly class meetings via Zoom on Tuesdays, 3pm–5:45pm. Instructor-led tutorials to be arranged.

**Computer Science 51**

Abstraction and Design in Computation (112960)

*Stuart Shieber*

2021 Spring (4 Credits)  
**Schedule:** TBD

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Fundamental concepts in the design of computer programs, emphasizing the crucial role of abstraction. The goal of the course is to give students insight into the difference between programming and programming well. To emphasize the differing approaches to expressing programming solutions, you will learn to program in a variety of paradigms -- including functional, imperative, and object-oriented. Important ideas from software engineering and models of computation will inform these different views of programming.

**Course Notes:**  
Formerly Introduction to Computer Science II.

**Class Notes:**  
Students interested in enrolling in CS51 for spring 2020 should make sure to attend the two introductory lectures on January 28 and 30 at 10:30am in Science Center B.

Systems Programming and Machine Organization (123623)

*Eddie Kohler*  
*Minlan Yu*

2020 Fall (4 Credits)  
**Schedule:** TBD

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Fundamentals of computer systems programming, machine organization, and performance tuning. This course provides a solid background in systems programming and a deep understanding of low-level machine organization and design. Topics include C and assembly language programming, program optimization, memory hierarchy and caching, virtual memory and dynamic memory management,
concurrency, threads, and synchronization.

Recommended Prep: CS50 or some experience programming in C.

**Computer Science 91R**

Supervised Reading and Research (113257)

2021 Spring (4 Credits)  
Instructor Permissions: Instructor  
Enrollment Cap: n/a  
Schedule: TBD

Supervised individual study of advanced topics in computer science. A student wishing to enroll in Computer Science 91r must be accepted by a faculty member who will supervise the course work. Additional information and a form are available via [https://harvardcs.info/forms/#cs-91r-form](https://harvardcs.info/forms/#cs-91r-form). The form must be filled out and signed by the student and faculty supervisor. Students writing theses may enroll in this course while conducting thesis research and writing.

Course Notes: At most two terms of Computer Science 91r may be taken for academic credit. May not be taken Pass/Fail. Students wishing more information about the range of suitable projects or faculty supervisors should consult the Director of Undergraduate Studies.

System Design Projects (121508)

Krzysztof Gajos

2020 Fall (4 Credits)  

**Schedule:**  
MW 0130 PM - 0245 PM

**Instructor Permissions:**  
Instructor

**Enrollment Cap:**  
15

Cooperative formative research, design, development, and testing of a sizable and realistic sociotechnical system, i.e., a solution to a real-world problem that includes both technical and human components. Students work as a team with a client on a real-world open-ended problem, and gain experience in Computer Science (problem definition, software development, iterative design), and in other fields relevant to the problem. Both student participation in the classroom and effective teamwork outside the classroom are stressed. The specific challenge for Fall 2020 will be announced on the course website.

**Course Notes:**  
Course is enrollment-limited by application

**Recommended Prep:**  
This course is primarily intended for juniors and seniors. Students from any field of study are welcome, though some prior exposure to CS is helpful.

Privacy and Technology (125407)

James Waldo

2020 Fall (4 Credits)  

**Schedule:**  
TR 0130 PM - 0245 PM

**Instructor Permissions:**  
Instructor

**Enrollment Cap:**  
48

What is privacy, and how is it affected by recent developments in technology? This course critically examines popular concepts of privacy and uses a rigorous analysis of technologies to understand the policy and ethical issues at play. Case studies: database anonymity, research ethics, wiretapping, surveillance, and others. Course relies on some technical material, but is open and accessible to all students, especially those with interest in economics, engineering, political science, computer science, sociology, biology, law, government, philosophy.
**Computer Science 107**

*Systems Development for Computational Science (216324)*

*David Sondak*

2020 Fall (4 Credits)  

**Schedule:** TR 1200 PM - 0115 PM  

**Instructor Permissions:** None  

**Enrollment Cap:** n/a  

This is a project-based course emphasizing designing, building, testing, maintaining and modifying software for scientific computing. Students will work in groups on a number of projects, ranging from small data-transformation utilities to large-scale systems. Students will learn to use a variety of tools and languages, as well as various techniques for organizing teams. Most important, students will learn to fit tools and approaches to the problem being solved.

**Class Notes:** Students who previously took CS207 are not eligible to enroll in CS107 or AC207.

**Recommended Prep:** Students are expected to have basic programming experience (Computer Science 50).

**Additional Course Attributes:**

**Computer Science 109A**

*Data Science 1: Introduction to Data Science (109899)*

*Pavlos Protopapas  
Kevin A. Rader  
Christopher Tanner*

2020 Fall (4 Credits)  

**Schedule:** MWF 0900 AM - 1015 AM  

**Instructor Permissions:** None  

**Enrollment Cap:** n/a  

Data Science 1 is the first half of a one-year introduction to data science. The course will focus on the analysis of messy, real life data to perform predictions using statistical and machine learning methods. Material covered will integrate the five key facets of an investigation using data: (1) data collection - data wrangling, cleaning, and sampling to get a suitable data set; (2) data management - accessing data quickly and reliably; (3) exploratory data analysis – generating hypotheses and building intuition; (4) prediction or statistical learning; and (5) communication – summarizing results through visualization, stories, and interpretable summaries. Part one of a two part series. The curriculum for this course builds throughout the academic year. Students are strongly encouraged to enroll in both the fall and spring course within the
same academic year.

Course Notes: Only one of CS 109a, AC 209a, or Stat 121a can be taken for credit. Students who have previously taken CS 109, AC 209, or Stat 121 cannot take CS 109a, AC 209a, or Stat 121a for credit.

Recommended Prep: Programming knowledge at the level of CS 50 or above, and statistics knowledge at the level of Stat 100 or above (Stat 110 recommended).

Requirements: Not to be taken in addition to Applied Computation 209, or Applied Computation 209A, or Statistics 121, or Statistics 121A.

Data Science 2: Advanced Topics in Data Science (203546)

Pavlos Protopapas
Mark Glickman
Christopher Tanner

2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a

Data Science 2 is the second half of a one-year introduction to data science. Building upon the material in Data Science 1, the course introduces advanced methods for data wrangling, data visualization, and statistical modeling and prediction. Topics include big data and database management, interactive visualizations, nonlinear statistical models, and deep learning. Part two of a two part series. The curriculum for this course builds throughout the academic year. Students are strongly encouraged to enroll in both the fall and spring course within the same academic year.

Course Notes: Can only be taken after successful completion of CS 109a, AC 209a, Stat 121a, or equivalent. Students who have previously taken CS 109, AC 209, or Stat 121 cannot take CS 109b, AC 209b, or Stat 121b for credit.

Recommended Prep: CS 109a, AC 209a, or Stat 121a required.

Requirements: Requisite: (Must take CS 109A OR APCOMP 209A OR STAT 121A before taking CS 109B) AND (Not to be taken in addition to CS 109, OR APCOMP 209, OR APCOMP 209B, OR STAT 121, OR STAT 121B.)

Computer Science 121

Introduction to Theoretical Computer Science (119064)

Madhu Sudan
Adam Hesterberg

2020 Fall (4 Credits) Schedule: TR 1030 AM - 1145 AM
Instructor Permissions: None Enrollment Cap: n/a

Computation occurs over a variety of substrates including silicon, neurons, DNA, the stock market, bee colonies and many others. In this course we will study the fundamental capabilities and limitations of computation, including the phenomenon of universality and the duality of code and data. Some of the questions we will touch upon include: Are there functions that cannot be computed? Are there true
mathematical statements that can’t be proven? Are there encryption schemes that can’t be broken? Is randomness ever useful for computing? Can we use the quirks of quantum mechanics to speed up computation?

Course Notes: Students may not receive credit for both CS 121 and CS 125.

Recommended Prep: Experience in formal mathematics at the level of CS 20. A "Homework Zero" will be posted on the course website http://madhu.seas.harvard.edu/courses/Fall2020 by July 31st. It is highly recommended that students complete it before the first lecture.

**Computer Science 124**

Data Structures and Algorithms (115384)

*Micheal Mitzenmacher*

2021 Spring (4 Credits)  

**Schedule:** TBD  

**Instructor Permissions:** None  

**Enrollment Cap:** n/a  

Design and analysis of efficient algorithms and data structures. Algorithm design methods, graph algorithms, approximation algorithms, and randomized algorithms are covered.

Course Notes: Starting in the spring of 2013, Computer Science 124 will assume background from Computer Science 20. Students will not receive credit for both CS 124 and CS 125.

Recommended Prep: Computer Science 50 or equivalent; Computer Science 51 is helpful.

Additional Course Attributes:

Principal techniques will come from cryptography, differential privacy, and the newly emerging areas of adaptive data analysis and algorithmic fairness.

Class Notes: Course enrollment limited. Offered jointly by HLS and SEAS, with interwoven tracks emphasizing, respectively, law and computer science, the tracks will meet jointly and separately every week. Admission is by permission of instructors.

Recommended Prep: Experience with writing proofs.

### Computer Science 141
**Computing Hardware** (113856)

*Vijay Janapa Reddi*

2021 Spring (4 Credits)  
**Schedule:** TBD

Instructor Permissions: None  
Enrollment Cap: n/a

This course introduces fundamentals in designing and building modern information devices and systems that interface with the real world. It focuses on digital devices and systems, and it complements ENG-SCI 152, which focuses on devices and systems that use analog electronics. Topics include: combinational and sequential logic; computer architecture; machine code; and altogether the infrastructure and computational framework composing a MIPS processor. Consideration is given in design to interactions between hardware and software systems. Students will design application specific hardware for an embedded system.

Recommended Prep: CS50 or programming experience required.

### Computer Science 143
**Computer Networks** (118418)

*H. Kung*

2020 Fall (4 Credits)  
**Schedule:** MW 0430 PM - 0545 PM

Instructor Permissions: None  
Enrollment Cap: n/a

Computer networking has enabled the emergence of mobile and cloud computing, creating two of the most significant technological breakthroughs in computing. Computer networks have become even more critical these days since remote activities have become a new norm. We expect several focuses in the coming
years. First, we will witness the emergence of 5G wireless mobile networks, which have already begun to replace the current 4G networks. Second, cybersecurity and privacy will receive unprecedented attention from the industry. Third, blockchain technology, which underlies Bitcoin, creates a new trusted network infrastructure for many new distributed applications. Fourth, distance learning and virtual meetings will push the limits of current multicast and network management technologies. In this course, students will learn basic networking protocols as well as these timely topics.

Class Notes: This course will take place remotely and use synchronized remote lectures and Zoom breakout sessions along with Piazza, Slack, and other collaboration tools. The teaching staff will hold frequent office hours.

Recommended Prep: CS50 (or programming experience) and a strong interest in the subject matter. Lab sessions will be provided to give extra support.

Computer Science 145

Networking at Scale (208314)

Minlan Yu

2021 Spring (4 Credits) Schedule: TBD  
Instructor Permissions: None  Enrollment Cap: n/a

Clouds have become critical infrastructures for many applications in business and society (e.g., social media, public health, and entertainment). In this course, we will take a look inside the cloud infrastructure and learn critical technology trends and challenges in the networking and computing layers. We will discuss the design choices of performance, scalability, manageability, and cost in various cloud companies such as Amazon, Google, Microsoft, and Facebook. This course includes lectures and system programming projects.

More information can be found at https://github.com/minlanyu/cs145spring20.

Recommended Prep: System programming at the level of CS 61 or CS 143

Computer Science 152

Programming Languages (119629)

Nada Amin

2021 Spring (4 Credits) Schedule: TBD  

HARVARD UNIVERSITY
Comprehensive introduction to the principal features and overall design of both traditional and modern programming languages, including syntax, formal semantics, abstraction mechanisms, modularity, type systems, naming, polymorphism, closures, continuations, and concurrency. Provides the intellectual tools needed to design, evaluate, choose, and use programming languages.

Recommended Prep: Computer Science 51; Computer Science 121 is recommended. Students must have good programming skills, be very comfortable with recursion, proofs, basic mathematical ideas and notations, including sets, relations, functions, and induction.

Additional Course Attributes:

**Computer Science 161**

Operating Systems (113847)

James Mickens

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

This course focuses on the design and implementation of modern operating systems. The course discusses threads, processes, virtual memory, schedulers, and the other fundamental primitives that an OS uses to represent active computations. An exploration of the system call interface explains how applications interact with hardware and other programs which are concurrently executing. Case studies of popular file systems reveal how an OS makes IO efficient and robust in the midst of crashes and unexpected reboots. Students also learn how virtualization allows a physical machine to partition its resources across multiple virtual machines. Class topics are reinforced through a series of intensive programming assignments which use a real operating system.

Recommended Prep: Computer Science 61.

Visualization (124364)

Hanspeter Pfister

2020 Fall (4 Credits)

Schedule: W 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap: 80

An introduction to key design principles and techniques for visualizing data. Covers design practices, data and image models, visual perception, interaction principles, visualization tools, and applications.
Introduces programming of web-based interactive visualizations.

Course Notes: Enrollment limited to 80 students.

Recommended Prep: Students are required to have basic programming experience (e.g., Computer Science 50). Web programming experience (HTML, CSS, JS) is a plus.

This course covers the fundamentals of 3D computer graphics using a modern shader-based version of OpenGL. Main topics include: geometric coordinate systems and transformations, keyframe animation and interpolation, camera simulation, triangle rasterization, material simulation, texture mapping, image sampling and color theory. The course also touches on ray tracing, geometric modeling and simulation-based animation.
Computer Science 179

Design of Useful and Usable Interactive Systems (123971)

Elena Glassman

2021 Spring (4 Credits)  Schedule: TBD

Instructor Permissions: Instructor  Enrollment Cap: 71

The course covers skills and techniques necessary to design innovative interactive products that are useful, usable and that address important needs of people other than yourself. You will learn how to uncover needs that your customers cannot even articulate. You will also learn a range of design principles, effective creativity-related practices, and techniques for rapidly creating and evaluating product prototypes. You will also have several opportunities to formally communicate your design ideas to a variety of audiences. You will complete two large team-based design projects.

Computer Science 181

Machine Learning (148156)

David Parkes

2021 Spring (4 Credits)  Schedule: TBD

Instructor Permissions: None  Enrollment Cap: n/a

Introduction to machine learning, providing a probabilistic view on artificial intelligence and reasoning under uncertainty. Topics include: supervised learning, ensemble methods and boosting, neural networks, support vector machines, kernel methods, clustering and unsupervised learning, maximum likelihood, graphical models, hidden Markov models, inference methods, and computational learning theory. Students should feel comfortable with multivariate calculus, linear algebra, probability theory, and complexity theory. Students will be required to produce non-trivial programs in Python.

Recommended Prep: Computer Science 51, Statistics 110, Math 21a and 21b (or equivalent).
Computer Science 182

Artificial Intelligence (110661)

Milind Tambe  
Boaz Barak

2020 Fall (4 Credits)  
Schedule:  
MW 1200 PM - 0115 PM

Instructor Permissions:  
None  
Enrollment Cap:  
n/a

Artificial Intelligence (AI) is an exciting field that has had a tremendous impact on life and society. The goal of this course is to introduce the ideas and techniques underlying the design of computer systems that make intelligent decisions based on data. Topics covered in this course are broadly divided into 1) planning and search algorithms, 2) probabilistic reasoning and representations, and 3) machine learning (although, as we will see, it is impossible to separate these ideas so neatly). Within each area, the course will also present practical AI algorithms being used in the real-world, with a special focus on the recent emergence of applications in "AI for Social Good", i.e., areas of direct societal benefit. The class will include lectures connecting the models and algorithms we discuss to applications in areas such as public health, conservation, social work, education, public safety and also discuss ethical challenges faced in applications of AI in society.

Recommended Prep:  
CS 51; Stat 110 (may be taken concurrently).

Computer Science 187

Introduction to Computational Linguistics and Natural-language Processing (117372)

Stuart Shieber

2020 Fall (4 Credits)  
Schedule:  
TR 1030 AM - 1145 AM

Instructor Permissions:  
Instructor  
Enrollment Cap:  
36

Natural-language-processing applications are ubiquitous: Alexa can set a reminder if you ask; Google Translate can make emails readable across languages; Watson outplays world Jeopardy champions; Grover can generate fake news, and recognize it as well. How do such systems work? This course provides an introduction to the field of computational linguistics, the study of human language using the tools and techniques of computer science, with applications to a variety of natural-language-processing problems such as these. You will work with ideas from linguistics, statistical modeling, and machine learning, with emphasis on their application, limitations, and implications. The course is lab- and project-based, primarily in small teams, and culminates in the building and testing of a question-answering system.

Course Notes:  
Enrollment limited to 36 students.

Recommended Prep:  
Programming ability and computer science knowledge at the level of CS51; knowledge of discrete mathematics, including basic probability, statistics, and logic at the level of CS20; some familiarity with Python programming.
### Computer Science 205

Computing Foundations for Computational Science (128104)

*David Sondak*

2021 Spring (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Computational science has become a third partner, together with theory and experimentation, in advancing scientific knowledge and practice, and an essential tool for product and process development and manufacturing in industry. Big data science adds the ‘fourth pillar’ to scientific advancements, providing the methods and algorithms to extract knowledge or insights from data. The course is a journey into the foundations of Parallel Computing at the intersection of large-scale computational science and big data analytics. Many science communities are combining high performance computing and high-end data analysis platforms and methods in workflows that orchestrate large-scale simulations or incorporate them into the stages of large-scale analysis pipelines for data generated by simulations, experiments, or observations. This is an applications course highlighting the use of modern computing platforms in solving computational and data science problems, enabling simulation, modeling and real-time analysis of complex natural and social phenomena at unprecedented scales. The class emphasizes on making effective use of the diverse landscape of programming models, platforms, open-source tools, computing architectures and cloud services for high performance computing and high-end data analytics.

**Recommended Prep:** Students are expected to have basic programming experience and understanding of algorithms (e.g. CS50/CS51/CS207), familiarity with Python, C or similar, and basic knowledge of Linux including using the command line.

### Computer Science 221

Computational Complexity (111993)

*Madhu Sudan*

2021 Spring (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

A quantitative theory of the resources needed for computing and the impediments to efficient computation. The models of computation considered include ones that are finite or infinite, deterministic, randomized, quantum or nondeterministic, discrete or algebraic, sequential or parallel.

**Recommended Prep:** Computer Science 121 or equivalent.
Computer Science 222

Algorithms at the Ends of the Wire (111994)

Michael Mitzenmacher

2020 Fall (4 Credits)  
Schedule: TR 1200 PM - 0115 PM

Instructor Permissions: None  
Enrollment Cap: n/a

Covers topics related to algorithms for big data, especially related to networks and database systems. Themes include sketch-based data structures, compression, graph and link information, and information theory. Requires a major final research-based project.

Recommended Prep: Computer Science 124.

Additional Course Attributes:

Computer Science 229R

Topics in Theoretical Computer Science: Spectral Graph Theory in CS (120237)

Salil Vadhan

2020 Fall (4 Credits)  
Schedule: TR 0130 PM - 0245 PM

Instructor Permissions: None  
Enrollment Cap: n/a

Eigenvectors and eigenvalues of graphs and their applications to computer science problems, such as clustering, solving linear systems, derandomization, sampling via MCMC, counting, web search, and maximum flow.

Recommended Prep: CS 124 and linear algebra at the level of AM 22a or Math 21b.

Additional Course Attributes:

Computer Science 229R

Topics in Theoretical Computer Science: Biology and Complexity (120237)

Leslie Valiant
Introduces essential elements the theory of error-correcting codes. Focuses on the basic results in the area, taught from first principles. Special focus will be given on results of asymptotic or algorithmic significance. Principal topics include 1. Construction and existence results for error-correcting codes; 2. Limitations on the combinatorial performance of error-correcting codes; 3. Decoding algorithms 4. Applications to other areas of mathematics and computer science. Lecture notes for this course from previous offerings give further details on the material covered. These may be found at http://madhu.seas.harvard.edu/courses/Spring2017.

Class Notes: Instructor permission needed for undergraduates. Undergraduates planning to take the class must write to the instructor indicating (1) what they hope to learn from the class and (2) their level of preparation in math and CS theory (e.g., CS 121, CS 124).

Recommended Prep: CS 121/124/125 or equivalents.

Computer Science 234R

Topics on Computation in Networks and Crowds (109667)

Nicole Immorlica

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

Topics on the design and analysis of algorithms, processes, and systems related to crowds and social networks. Readings in AI, theoretical CS, machine learning, social science theory, economic theory, and operations research.

Recommended Prep: Mathematics 21b, Applied Mathematics 21b, or equivalent; Computer Science 124, and 181 or 182, or equivalents; or permission of instructor.

Additional Course Attributes:

<table>

Computer Science 242

Computing at Scale (160624)

H. Kung

2021 Spring (4 Credits) Schedule: TBD
Scaling computation over parallel and distributed computing systems is a rapidly advancing area of research receiving high levels of interest from both academia and industry. The objective can be for high-performance computing and energy-efficient computing ("green" data center servers as well as small embedded devices). In this course, students will learn principled methods of mapping prototypical computations used in machine learning, the Internet of Things, and scientific computing onto parallel and distributed compute nodes of various forms. These techniques will lay the foundation for future computational libraries and packages for both high-performance computing and energy-efficient devices. To master the subject, students will need to appreciate the close interactions between computational algorithms, software abstractions, and computer organizations. After having successfully taken this course, students will acquire an integrated understanding of these issues. The class will be organized into the following modules: Big picture: use of parallel and distributed computing to achieve high performance and energy efficiency; End-to-end example 1: mapping nearest neighbor computation onto parallel computing units in the forms of CPU, GPU, ASIC and FPGA; Communication and I/O: latency hiding with prediction, computational intensity, lower bounds; Computer architectures and implications to computing: multi-cores, CPU, GPU, clusters, accelerators, and virtualization; End-to-end example 2: mapping convolutional neural networks onto parallel computing units in the forms of CPU, GPU, ASIC, FPGA and clusters; Great inner loops and parallelization for feature extraction, data clustering and dimension reduction: PCA, random projection, clustering (K-means, GMM-EM), sparse coding (K-SVD), compressive sensing, FFT, etc.; Software abstractions and programming models: MapReduce (PageRank, etc.), GraphX/Apache Spark, OpenCL and TensorFlow; Advanced topics: autotuning and neuromorphic spike-based computing. Students will learn the subject through lectures/quizzes, programming assignments, labs, research paper presentations, and a final project. Students will have latitude in choosing a final project they are passionate about. They will formulate their projects early in the course, so there will be sufficient time for discussion and iterations with the teaching staff, as well as for system design and implementation. Industry partners will support the course by giving guest lectures and providing resources. The course will use server clusters at Harvard as well as external resources in the cloud. In addition, labs will have access to state-of-the-art IoT devices and 3D cameras for data acquisition. Students will use open source tools and libraries and apply them to data analysis, modeling, and visualization problems.

Recommended Prep: (1) programming experience (Python, MatLab or C/C++ should be fine); (2) basic knowledge in systems and machine organization; (3) familiarity in data structures and algorithms; and (4) maturity in mathematics (e.g., undergraduate linear algebra and statistics). For students with strong interest in the subject matter and related research topics, one of these four requirements may be waived. Labs and extra support will provide preparation in the first weeks of the semester to help students quickly obtain the background necessary to excel in the course.

Additional Course Attributes:
Tiny machine learning (TinyML) is defined as a fast-growing field of machine learning technologies and applications including hardware (dedicated integrated circuits), algorithms and software capable of performing on-device sensor (vision, audio, IMU, biomedical, etc.) data analytics at extremely low power, typically in the mW range and below, and hence enabling a variety of always-on use-cases and targeting battery-operated devices. The pervasiveness of ultra-low-power embedded devices, coupled with the introduction of embedded machine learning frameworks like TensorFlow Lite for Microcontrollers, will enable the mass proliferation of AI-powered IoT devices. The explosive growth in machine learning and the ease of use of platforms like TensorFlow (TF) make it an indispensable topic of study for modern computer science and electrical engineering students.

**Computer Science 252R**

Advanced Topics in Programming Languages (114807)

*Nada Amin*

2020 Fall (4 Credits)  
**Schedule:** TR 1200 PM - 0115 PM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Seminar course exploring recent research in programming languages. Topics vary from year to year. Students read and present research papers, undertake a research project.

Fall 2020: We will explore programming languages for artificial intelligence. Programming Languages drive the way we communicate with computers, including how we make them intelligent and reasonable. In this advanced topic course, we will look at artificial intelligence broadly construed from the point of view of programming languages. We gain clarity of semantics, algorithms and purpose. Topics include differentiable programming, neuro-symbolic systems, constraint and probabilistic programming, interpretable AI and more. Reading and discussion will be based on a selection of papers, suggested collectively. Grading is based on participation, presentation and final project. For more course information can be found at [http://pl-ai-seminar.seas.harvard.edu/](http://pl-ai-seminar.seas.harvard.edu/)

**Recommended Prep:** Computer Science 152 or permission of the instructor.

Introduction to Distributed Computing (122813)

_James Waldo_

2021 Spring (4 Credits)  
_Schedule:_ TBD  
_Instructor Permissions:_ None  
_Enrollment Cap:_ n/a

An examination of the special problems associated with distributed computing such as partial failure, lack of global knowledge, asynchrony and coordination of time, and protocols that function in the face of these problems. Emphasis on both the theory that grounds thinking about these systems and in the ways to design and build such systems.
Computer Science  263

Systems Security (160579)

James Mickens

2020 Fall (4 Credits)  

Schedule:  
TR 1200 PM - 0115 PM

Instructor Permissions:  
None

Enrollment Cap:  
n/a

This course explores practical attacks on modern computer systems, explaining how those attacks can be mitigated using careful system design and the judicious application of cryptography. The course discusses topics like buffer overflows, web security, information flow control, and anonymous communication mechanisms such as Tor. The course includes several small projects which give students hands-on experience with various offensive and defensive techniques; the final, larger project is open-ended and driven by student interests.

Recommended Prep:

Topics in Data Visualization (211349)

Johanna Beyer

2021 Spring (4 Credits)  

Schedule:  
TBD

Instructor Permissions:  
Instructor

Enrollment Cap:  
30

This course covers advanced topics in data visualization. Over the course of the semester, we will examine seminal works and recent state-of-the-art research in information visualization, scientific visualization and visual analytics. Students will work on a semester-long visualization project that will allow them to visualize their own data sets and write a short paper about their project. We will employ peer-feedback and formal design critiques to analyze each other’s work.

Course Notes:  
Enrollment limited to 30 students. Instructor permission needed.

Recommended Prep:  
CS 171, CS 179, CS 279, or some data visualization experience. Please contact course staff if you are unsure about the course pre-requisites.

Research Topics in Human-Computer Interaction (121985)

_Elena Glassman_

2020 Fall (4 Credits)  
_Instructor Permissions: Instructor_  
_Schedule: MW 1200 PM - 0115 PM_  
_Instructor_  
ENCH Cap: 25

This year only: Students will read and discuss HCI papers about computers working with—or clashing against—the strengths and weakness of human cognition, e.g., the positive and negative impacts of AI recommendation systems and the impact of interruptions on continuity of thought. Activities will include a small number of lectures, discussion of relevant literature in each field, and a project, in which students will work together in groups to design and carry out HCI research.

_Course Notes:_ Designed for PhD students from all areas. Masters students and advanced undergraduates are welcome, particularly those who wish to do research (or write a thesis) in an area related to Human-Computer Interaction.

_Recommended Prep:_ None for PhD students; for undergrads CS 179 or CS 171.

Computer Science 286

Multi-Robot Systems: Control, Communication, and Security (216508)

_Stephanie Gil_

2020 Fall (4 Credits)  
_Instructor Permissions: None_  
_Schedule: MW 0300 PM - 0415 PM_  
_Enrollment Cap: n/a_  

The ability to connect devices over long distances, via the internet, changed our world. The second phase of this revolution, that we are still living in today, came about when these devices became wireless. Now we are at the cusp of a new phase of this evolution where devices are connected, wireless, and controlled—i.e. the robot revolution.

Multi-robot systems are becoming more pervasive; from future autonomous vehicle fleets, to drones, to manufacturing robots. As a result, the question of how to control, coordinate, and secure these systems has been a growing topic in the robotics literature in recent years. In this seminar-style course we will do a deep dive into this topic by reviewing classic and recent results in multi-agent planning and control literature. We will cover a wide gamut of applications from control of groups of flying drones, to decision making in autonomous car networks, to space exploring CubeSats.

This class will treat both the theory and the practical applications behind multi-robot systems. Students with mathematical inclinations and exposure to graph theory, probability theory, linear algebra, and algorithms will derive the most benefit from this course.

_Course Notes:_ This course is a graduate-level seminar course. Motivated advanced
undergraduate students are also welcomed!

Recommended Prep: It will be assumed that students have a strong command of calculus and basic probability theory. An understanding of mathematical optimization methods is preferable. A background in algorithms, dynamics/controls, and intro to robotics would be beneficial.

**Computer Science 290**

PhD Grad Cohort Research Seminar (216811)

*David Brooks*

2020 Fall (4 Credits)  

Schedule: TBD

Instructor Permissions: Instructor  

Enrollment Cap: n/a

In lieu of typical on-campus interactions that normally occur during the first year of the PhD program, this course provides an opportunity for entering CS PhD students to engage with the Harvard CS community and to build a cohort among the entering PhD students. The class is intended for first-year students and students transferring into the Harvard CS PhD program. The class will include an introduction to the community through virtual talks and interactive Q&As with regular course guests. We plan to bring in a broad mixture of CS faculty, current PhD students, and PhD alumni. The course will also include an off-line component primarily consisting of select broad-interest CS research readings and writing assignments.

Course Notes: We will meet synchronously twice a week (two, one-hour meeting slots) at times that accommodate the time zones of students. CS290 will satisfy a CS 200-level technical elective (one of the 10 required classes for the CS PhD degree).

Computer Science 333

Individual Risk (216384)

Cynthia Dwork
Joseph Blitzstein

Instructor Permissions: None
Enrollment Cap: n/a

Risk assessment tools are increasingly deployed in high-stakes settings: What is the probability that the tumor will metastasize? What is the chance that this individual will commit a violent crime in the next two years? What is the probability that the student will graduate within 4 years? But what is the probability of a non-repeatable event? What is the mathematical meaning of "individual risk" and what should we require of a risk assessment algorithm? This reading course will explore different notions of risk, based on different notions of probability, and will connect this literature to notions of regret and indistinguishability from computer science.

Course Notes: Also offered as Stat 333. Only one of CS 333 or Stat 333 may be taken for credit.

Recommended Prep: Familiarity with probability (e.g., Stat 110 and/or exposure through theoretical computer science). Exposure to theoretical computer science will be helpful but is not mandatory.

Earth and Planetary Sciences
Subject: Earth & Planetary Sciences

Earth & Planetary Sciences   6
Introduction to Environmental Science and Engineering (216015)
Elsie Sunderland
Steven Wofsy
2021 Spring (4 Credits)        Schedule: TBD
Instructor Permissions: None    Enrollment Cap: n/a

This course will provide students with an introduction to current topics in environmental science and engineering by providing: an overview of current environmental issues, critically evaluating their underlying science and knowledge limitations, and exploring the best-available engineering solutions to some of our most pressing environmental problems. The course will emphasize the interconnected biological, geological, and chemical cycles of the earth system (biogeochemical cycles) and how human activity affects these natural cycles within each of the major environmental compartments (atmospheric, aquatic, and terrestrial).

Course Notes: EPS 6 is also offered as ESE 6. Students may not take both for credit. This course fulfills the EPS sub-discipline requirement of Atmosphere (s) and Oceans.

Recommended Prep: The course presumes basic knowledge in chemistry, physics, and mathematics at the high school level.

Earth & Planetary Sciences   10
A Brief History of the Earth (203888)
Jerry Mitrovica
Rebecca Fischer
2020 Fall (4 Credits)        Schedule: TR 0130 PM - 0245 PM
Instructor Permissions: Instructor    Enrollment Cap: n/a

This is an introduction to Earth and Planetary science for EPS concentrators and an overview, for those outside the field, of the critical events and processes that have shaped the Earth’s evolution and its place in the solar system. The course is designed to highlight the processes, from tectonic plate to microbial scale, that drive the Earth’s response to (internal and external) perturbations and we will explore both the time scale of those perturbations and the limits of the Earth’s resilience. By considering the full sweep of geological time, from the early Earth to the modern world, the course will take advantage of a series of natural experiments to compare the Earth system during periods with and without atmospheric oxygen, animals, land plants and polar ice sheets, and to compare it, on occasion, with other terrestrial planets.
Course Notes: Students must be able to join one of the lab sections (TBD) in order to enroll in the class. Students who wish to enroll in the class but cannot make the listed class times (due to their local time zone only, not due to scheduling conflicts with other courses) will be eligible for a lecture summary tutorial with Profs. Mitrovica and/or Fischer once a week at a time suitable for everyone unable to make the regular course time - to be determined once students enroll. This course includes a mandatory lab component.

Earth & Planetary Sciences  52

Introduction to Global Geophysics (109231)

Jerry Mitrovica

2020 Fall (4 Credits) Schedule: WF 0430 PM - 0545 PM

Instructor Permissions: None Enrollment Cap: n/a

This course provides a comprehensive introduction to global geophysics and serves as a bridge between introductory Earth science courses and higher-level courses in tectonics, seismology and planetary sciences. Topics include: plate tectonics, the Earth's composition and thermal state, rheology, seismology, ice age dynamics, mantle convection, the Earth's gravity field and geodesy, sea-level changes from deep time to modern, and (if time permits) Earth rotation.

Course Notes: This course fulfills the EPS sub-discipline requirement of Geology, Geophysics and Planetary Science.

Recommended Prep: Applied Mathematics 21a,b (or Mathematics 1a,1b; or Mathematics 21a, b); Physics 15a,b (prior or concurrent) or Physical Sciences 12a,b; or permission of the instructor.

Marine Geochemistry (126174)

David Johnston

2020 Fall (4 Credits) Schedule: TR 0900 AM - 1015 AM

Instructor Permissions: None Enrollment Cap: n/a

An introduction to low temperature biogeochemistry. We will focus on key biogeochemical elements and look to understand the linkages between the biosphere, atmosphere and hydrosphere. The course begins with a description of marine geochemistry (alkalinity and chemical fluxes) and works toward understanding
isotopic fractionation and what it can tell us about the environment. We will explore biogeochemistry over a range of physical and temporal scales.

Course Notes: This course includes a weekly two-hour lab to be arranged. This course fulfills the EPS sub-discipline requirement of either Atmosphere(s) and Oceans or Earth History and Geobiology. Given in alternate years. Formerly offered as EPS 186. Students who have taken EPS 186 cannot take EPS 53 for credit.

Recommended Prep: A course in college chemistry is recommended.

Earthquakes and Tectonics (205190)

Marine Denolle

2021 Spring (4 Credits)

Schedule: TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap: n/a

Introduction to earthquakes in the context of global tectonics, source mechanisms, types of natural and induced quakes. Faults in the field, dating earthquakes, materials of fault cores. Observations, introduction to the theory, and analog modeling of earthquake cycles, mountain building, infrastructure response to earthquake ground motion. Introduction to tsunami hazard and to earthquake risk analysis.

Course Notes: This course fulfills the EPS sub-discipline requirement of Geology, Geophysics and Planetary Science.

Earth & Planetary Sciences  56

Geobiology and the History of Life (108969)

David Johnston

Andrew Knoll

2021 Spring (4 Credits)

Schedule: MW 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap: n/a

Within our solar system, Earth is distinguished as the planet with life. Life was born of planetary processes, has been sustained for some four billion years by planetary processes, and through time has emerged as a set of planetary processes that is important in its own right. In this course we will investigate the ways that Earth and life interact, focusing in particular on the biogeochemical cycles of major elements. This will
provide a framework for interpreting the history of life reconstructed from fossils and phylogeny.

**Course Notes:** Course includes a weekly three-hour lab to be arranged and one field trip. EPS 56 is also offered as OEB 56. Students may not take both for credit. This course fulfills the EPS sub-discipline requirement of Earth History and Geobiology.

**Recommended Prep:** EPS 10, OEB 10, or Life Sciences 1b, or permission of instructor.

**Supervised Reading and Research (110761)**

**Miaki Ishii**

2021 Spring (4 Credits)

**Schedule:** TBD

**Instructor Permissions:** None

**Enrollment Cap:** n/a

Supervised reading and research on topics not covered by regular courses of instruction. Taught by faculty members of the department.

**Course Notes:** Usually intended for junior or senior concentrators in Earth and Planetary Sciences; open to sophomore concentrators under some circumstances. To enroll, students must submit a registration form, which includes permission of their faculty sponsor, to the Academic Administrator.

The Missing Matlab Course: A Practical Introduction to Programming and Data Analysis (122333)

Miaki Ishii

2020 Fall (4 Credits)  Schedule:  TBD

Instructor Permissions:  None  Enrollment Cap:  n/a

Being able to write a working program is not just about syntaxes of the programming language but involves other skills such as debugging and being able to convert a problem at hand to a sequence of commands. This intense course develops these skills for successful program writing by being hands-on. Students will first learn new syntaxes and then spend time writing numerous scripts.

Course Notes: The course time is flexible. The lecture time will be chosen in consultation with students to maximize participation.

No prior knowledge of MATLAB is required. Course meeting time includes lecture and lab. Students are not allowed to audit the course.

Earth & Planetary Sciences 101

Global Warming Science 101 (214499)

Eli Tziperman

2021 Spring (4 Credits)  Schedule:  W 0300 PM - 0545 PM

Instructor Permissions:  None  Enrollment Cap:  n/a

An introduction to the science of global warming/ climate change, meant to assist students to process issues that often appear in the news and public debates. Topics include: the greenhouse effect, and consequences of the rise of greenhouse gasses including sea level rise, ocean acidification, heat waves, droughts, glacier melting, hurricanes and more. Throughout, an ability to critically evaluate observations, predictions and risk will be emphasized. The students will be involved in in-class quantitative analysis of climate observations, feedbacks and models via python Jupyter notebooks that will be provided.

Course Notes: This course fulfills the E-PSCI sub-discipline requirement of Atmosphere(s) and Oceans. E-PSCI 101 is also offered as ESE 101. Students may not take both for credit. For SB students: this course can only count as a science elective in the concentration requirements, and SB students must enroll in E-PSCI 101. AB students may enroll in either E-PSCI 101 or ESE 101 to meet their concentration requirements.

Recommended Prep: Basic calculus and ordinary differential equations, as covered for example by Math 1b, Math 19a, Math 21b.
Earth & Planetary Sciences 102

Data Analysis and Statistical Inference in the Earth and Environmental Sciences (216019)

*Steven Wofsy*

*Roger Fu*

2021 Spring (4 Credits)  
**Schedule:**  
WF 0130 PM - 0245 PM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Statistical inference, deterministic and stochastic models of data, denoising and filtering, data, visualization, time series analysis, image processing, Monte Carlo methods. The course emphasizes hands-on learning using real data drawn from atmospheric and environmental observations, applied by students in projects and presentations.

**Course Notes:** EPS 102 is also offered as ESE 102. Students may not take both for credit.

**Recommended Prep:** Math or Applied Math 21 a and b or equivalent.

Earth & Planetary Sciences 109

Earth Resources and the Environment (114664)

*John Shaw*

2021 Spring (4 Credits)  
**Schedule:**  
TR 0900 AM - 1015 AM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

An overview of the Earth's energy and material resources, including conventional and unconventional hydrocarbons, nuclear fuels, alternative/renewable energy resources, metals, and other industrial materials. The course emphasizes the geologic and environmental factors that dictate the availability of these resources, the methods used to identify and exploit them, and the environmental impacts of these operations. Topics include: coal and acid rain; petroleum exploration, drilling, and production, shale gas/oil, photochemical smog, and oil spills; nuclear power and radioactive hazards; alternative energies (solar, hydroelectric, tidal, geothermal power), metals and mining.

**Course Notes:** Course includes three hours of laboratory work each week and two field trips. EPS 109 is also offered as ESE 109. Students may not take both for credit. Undergraduate engineering students should enroll in ESE 109. This course fulfills the EPS sub-discipline requirement of Geology, Geophysics and Planetary Science. Given in alternate years.
**Recommended Prep:** EPS 10, ES 6, an equivalent course, or permission of instructor.

### Earth & Planetary Sciences  112

**Thermodynamics by Case Study (161215)**

*Scot Martin*

2021 Spring (4 Credits)  
**Schedule:** MW 1200 PM - 0115 PM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** 30

Fundamental concepts and formalisms of conservation of energy and increase of entropy as applied to natural and engineered environmental and biological systems. Pedagogical approach is to start with real-world observations and applications, extracting the underlying fundamentals of thermodynamics from these.

**Course Notes:** EPS 112 is also offered as ES 112. Students may not take both for credit. Undergraduate engineering students should enroll in ES 112. This course fulfills the EPS sub-discipline requirement of Atmosphere (s) and Oceans. Total class capacity of 18 includes students in both ES 112 and EPS 112.
Earth & Planetary Sciences 129

Climate and Atmospheric Physics Laboratory (213672)

Marianna Linz

2020 Fall (4 Credits)

Schedule: R 0300 PM - 0545 PM

Instructor Permissions: None

Enrollment Cap: n/a

This course will take a hands-on approach to learning climate and atmospheric physics. Topics covered will include global scale atmospheric dynamics, synoptic meteorology and weather forecasting, and climate modeling. Some fundamental fluid dynamics will be covered along the way. Half of the weeks will involve experiments using water and food coloring with lab kits that will be provided to each student, and half of the weeks will involve working with observed and/or modeled climate data or running a climate model. Each week will have three components: one 1.5 hour lab session to perform laboratory experiments, run models, and analyze data over zoom; one peer-to-peer feedback/problem solving session; and one 1.5 hour class session. In this flipped-classroom environment, knowledge transfer will occur outside of class through readings, videos, and lab prep in advance of each lab session. Peer-to-peer sessions will be focused on writing up the labs and providing feedback. Class sessions will include a lab discussion, a wrap-up activity, and an introduction to the next week's subject.

Course Notes: EPS 129 is also offered as ESE 129. Students may not take both for credit. This course fulfills the EPS sub-discipline requirement of Atmosphere(s) and Oceans. For SB students: this course can only count as a science elective in the concentration requirements, and SB students must enroll in EPS 129. AB students may enroll in either EPS 129 or ESE 129 to meet their concentration requirements.

Recommended Prep: Physics 12a/15a/16, Math/AM 21a (b recommended) or equivalent or permission of instructor.

Earth & Planetary Sciences 132

Introduction to Meteorology and Climate (123877)

Brian Farrell

2020 Fall (4 Credits)

Schedule: TR 1030 AM - 1145 AM

Instructor Permissions: None

Enrollment Cap: n/a

Physical concepts necessary to understand atmospheric structure and motion. Phenomena studied include
the formation of clouds and precipitation, solar and terrestrial radiation, dynamical balance of the large-scale wind, and the origin of cyclones. Concepts developed for understanding today’s atmosphere are applied to understanding the record of past climate change and the prospects for climate change in the future.

Course Notes: EPS 132 is also offered as ESE 132. Students may not take both for credit. This course fulfills the EPS sub-discipline requirement of Atmosphere(s) and Oceans.

Recommended Prep: Mathematics 21 or Applied Mathematics 21a and 21b; Physical Sciences 12; or permission of instructor.

Exceptional Paleobiological Insights into Animal Evolution (215957)

Javier Ortega-Hernandez

2021 Spring (4 Credits) Schedule: MW 1200 PM - 0115 PM

Instructor Permissions: Instructor Enrollment Cap: 12

In this course we will explore the importance of soft-tissue preservation in the rock record through an
overview of major exceptional fossiliferous sites around the world and throughout the Precambrian to Mid-
Phanerozoic, with particular emphasis on the evolutionary history of invertebrate animals. Our aim is to
produce a thorough understanding of the inherent biases of the fossil record, how exceptional deposits
break with these limitations, and the contribution of exceptional paleontological data towards
reconstructing the origin and early evolution of the major animal groups. In addition, the course offers an
optional week-long field trip during spring break.

Course Notes: EPS 150 is also offered as OEB 150. Students may not take both for
credit. This course fulfills the EPS sub-discipline requirement of Earth
History and Geobiology.

Earth & Planetary Sciences 160

Space Science and Engineering: Theory and Applications (160957)

Robin Wordsworth

2020 Fall (4 Credits)   Schedule: MW 1030 AM - 1145 AM

Instructor Permissions: Instructor   Enrollment Cap: 30

This course is an introduction to the challenges involved in designing spacecraft for observation of Earth
and exploration of other planets. Topics covered include basic atmospheric and planetary science, key
principles of remote sensing, telemetry, orbital transfer theory, propulsion and launch system design, and
thermal and power management.

Course Notes: EPS 160 is also offered as ESE 160. Students may not take both for
credit. Undergraduate engineering students should enroll in ESE 160.
This course fulfills the EPS sub-discipline requirement of Geology,

Recommended Prep: Prerequisite: Math 21a and 21b (or equivalents); and Physical Sciences
12a and 12b (or equivalents)

Hydrology (108750)

Kaighin McColl

2020 Fall (4 Credits)   Schedule: TBD

Instructor Permissions: None   Enrollment Cap: n/a
This course provides an introduction to the global hydrologic cycle and relevant terrestrial and atmospheric processes. It covers the concepts of water and energy balance; atmospheric radiation, composition and circulation; precipitation formation; evaporation; vegetation transpiration; infiltration, storm runoff, and flood processes; groundwater flow and unsaturated zone processes; and snow processes.

Course Notes: The course time is flexible. Lecture and section times will be chosen in consultation with students to maximize participation.

Course includes a weekly 1.5 hour lab session or section for discussion of assigned problems. This course fulfills the EPS sub-discipline requirement of Geology, Geophysics, and Planetary Science. EPS 162 is also offered as ESE 162. Students may not take both for credit.

Recommended Prep: Applied Mathematics 21a,b or Mathematics 21a,b; AND Applied Physics 50a,b, Physics 15a,b or Physical Sciences 12a,b.

Earth & Planetary Sciences 168

Human Environmental Data Science: Agriculture, Conflict, and Health (216421)

Peter Huybers
The purpose of this course is to develop understanding and guide student research of human and environmental systems. In class we will explore agriculture, conflict, and transmissible disease. Study of each topic will involve introduction data, mathematical models, and analysis techniques that build toward addressing a major question at each interface: Have agricultural systems been adapted to climate change? Has drought caused conflict? And does the environment influence the spread of COVID-19? These questions are diverse, but are addressed using common analytical frameworks. Analytical approaches include simple mathematical models of feedback systems, crop development, and population disease dynamics; frequentist statistical techniques including linear, multiple linear, and panel regression models; and Bayesian methods including empirical, full, and hierarchical approaches. You will be provided with sufficient data, example code, and context to come to your own informed conclusions regarding each of these questions. Furthermore, topics covered in class will pro-vide a template for undertaking independent research projects in small teams. Research will either extend on topics presented in class or address other human-environmental questions. Historically, such student projects have sometimes led to senior theses or publication in professional journals.

Course Notes: The course is designed for upper-level undergraduates. Enrollment is by instructor permission. This course fulfills the EPS sub-discipline requirement of Atmosphere(s) and Oceans.

Recommended Prep: There are no specific prerequisites but a background in environmental, physical or life sciences; experience in coding or statistical analysis; and/or facility with differential equations is useful.

Earth & Planetary Sciences 169

Seminar on Global Pollution Issues: Case Study of Lead Biogeochemistry (216016)

Elsie Sunderland

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

This course provides a cross-disciplinary overview of environmental science and how research contributes to public policy and human health risk assessment through a case study of a global pollution issue: lead biogeochemistry. The scientific foundations of environmental research methods are discussed (i.e., analytical chemistry, ecology, use of environmental archives, environmental modeling). Experience conducting multidisciplinary environmental research and data analysis will be provided. Course Activities: Lectures, discussions, case studies, field/lab visits.

Course Notes: Prerequisite: Physical Sciences 1 or 11; and Math 1b. EPS 169 is also offered as ESE 169. Students may not take both for credit. This course fulfills the EPS sub-discipline requirement of Atmosphere(s) and Oceans.

Recommended Prep: Two semesters of undergraduate chemistry including Physical Sciences 1 or Physical Sciences 11; Mathematics 1a & 1b. Knowledge of basic statistics is also helpful.
Field Experiences in Earth and Planetary Sciences (120728)

Miaki Ishii

2020 Fall (4 Credits) Schedule: TBD
Instructor Permissions: Instructor Enrollment Cap: n/a

Attend a domestic or overseas geological field program of 3-6 weeks duration to learn methods of obtaining, synthesizing, and interpreting field observations.

Course Notes: Field programs are selected individually by students with the advice and approval of the instructor. Students must notify the instructor and Academic Administrator of intention to enroll by the course registration deadline of the preceding term. This course fulfills the EPS sub-discipline requirement of either Earth History and Geobiology or Geology, Geophysics and Planetary Science.

Recommended Prep: Permission of instructor.

Earth & Planetary Sciences 174

Field Experiences in Earth and Planetary Sciences (120728)

Miaki Ishii

2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: Instructor Enrollment Cap: n/a

Attend a domestic or overseas geological field program of 3-6 weeks duration to learn methods of obtaining, synthesizing, and interpreting field observations.

Course Notes: Field programs are selected individually by students with the advice and approval of the instructor. Students must notify the instructor and Academic Administrator of intention to enroll by the course registration deadline of the preceding term. This course fulfills the EPS sub-discipline requirement of either Earth History and Geobiology or Geology, Geophysics and Planetary Science.

Recommended Prep: Permission of instructor.
Earth & Planetary Sciences 200

Atmospheric Chemistry and Physics (111855)

Daniel Jacob
Steven Wofsy

2020 Fall (4 Credits)  Schedule:  TBD
Instructor Permissions:  None  Enrollment Cap:  n/a

Tropospheric and stratospheric gas and aerosol chemistry. Carbon, nitrogen, oxygen, and mercury cycles. Implications for climate change, air quality, ecosystems.

Course Notes: The course time is flexible. Lecture and section times will be chosen in consultation with students to maximize participation.

Intended to be an introductory survey of atmospheric chemistry to serve first-year Ph.D. students in the atmospheric sciences as well as students specializing in other areas of Earth & Planetary Sciences or Environmental Science & Engineering. Undergraduate students may take EPS200 with permission of the instructors.

Recommended Prep: College mathematics up to multivariable calculus, basic college physics and chemistry.

Earth & Planetary Sciences 202

Mechanics in Earth and Environmental Science (124688)

James Rice

2020 Fall (4 Credits)  Schedule:  WF 1200 PM - 0115 PM
Instructor Permissions:  None  Enrollment Cap:  n/a

Introduction to the mechanics of fluids and solids, organized around earth and environmental phenomena. Conservation laws, stress, deformation and flow. Inviscid fluids and ocean gravity waves; Coriolis dominated large scale flows. Viscosity and groundwater seepage; convective cells; boundary layers. Turbulent stream flows; flood surges; sediment transport. Elasticity and seismic waves. Pore fluid interactions with deformation and failure of earth materials, as in poro-mechanics of consolidation, cracking, faulting, and landslides. Ice sheets and glacial flow mechanics.

Course Notes: EPS 202 is also offered as APPHY 202. Students may not take both for
Earth & Planetary Sciences  208
Physics of Climate (122549)
Zhiming Kuang
2020 Fall (4 Credits)
Instructor Permissions: None
Enrollment Cap: n/a
Overview of the basic features of the climate system (global energy balance, atmospheric general circulation, ocean circulation, and climate variability) and the underlying physical processes.
Course Notes: This course includes a computer lab to be arranged.
Recommended Prep: Applied Mathematics 105 (may be taken concurrently); Physics 15 or Physical Sciences 12a,b; or permission of the instructor.

Earth & Planetary Sciences  220
A Survey of Planetary Sciences (207622)
Roger Fu
2020 Fall (4 Credits)
Instructor Permissions: None
Enrollment Cap: n/a
An overview of the key processes that govern the planetary bodies of the solar system and a survey of current topics of research.
Course Notes: Course includes two additional 3-hour labs, two 3-hour meetings for telescopic observations, and a 2-day field trip. Given in alternate years.
Recommended Prep: Multivariable calculus and introductory mechanics (Math 21A and Physics 15A or equivalent). Introductory EPS class such as EPS 10.
Earth & Planetary Sciences 231
Climate Dynamics (119890)

Eli Tziperman

2021 Spring (4 Credits) Schedule: TR 0130 PM - 0245 PM
Instructor Permissions: None Enrollment Cap: n/a

The course covers climate dynamics and climate variability phenomena and mechanisms, and provides hands-on experience running and analyzing climate models, as well as using dynamical system theory tools. Among the subjects covered: energy balance and greenhouse effect, El Nino, thermohaline circulation, abrupt climate change, millennial variability (DO and Heinrich events), glacial-interglacial cycles, the ocean carbonate system and CO2 changes, warm past and future climates, and more.

Course Notes: Given in alternate years.

Recommended Prep: Background in geophysical fluid dynamics or permission of instructor.

Earth & Planetary Sciences 236
Environmental Modeling and Data Analysis (120783)

Steven Wofsy
Daniel Jacob

2020 Fall (4 Credits) Schedule: WF 0300 PM - 0415 PM
Instructor Permissions: None Enrollment Cap: n/a

Graduate-level introduction to environmental modeling and data analysis: data visualization, statistical inference, Bayes Theorem, optimal estimation, adjoint methods, Monte Carlo methods, time series analysis, denoising; principles and numerical methods for chemical transport and inverse models.

Course Notes: The course time is flexible. Lecture and section times will be chosen in consultation with students to maximize participation.

Focused on computer-based projects, 2-4 hours per week, in small groups, adapted for on-line instruction in 2020. Suitable for: graduate students and advanced undergraduates in Earth and Planetary Sciences, Environmental Science and Engineering, Applied Math, Chemistry, and Physics. At MIT: EAPS, Civil & Environmental. Helpful to have preparation in differential equations, or atmospheric science, but not required.

Recommended Prep: Applied Mathematics 105; a course in atmospheric chemistry (EPS 133 or 200 or equivalent); or permission of the instructors.
Earth & Planetary Sciences 241

Isotope Geochemistry and Processes of Planetary Evolution (146721)

Stein Jacobsen

2021 Spring (4 Credits)  
Schedule: M 0300 PM - 0545 PM

Instructor Permissions: None  
Enrollment Cap: n/a

Course Notes: Given in alternate years.

Earth & Planetary Sciences  258B

Planetary Dynamics: Magnetic Fields (215881)

Jeremy Bloxham

2021 Spring (4 Credits)  Schedule: MW 0300 PM - 0415 PM
Instructor Permissions: None  Enrollment Cap: n/a

An introduction to the generation of planetary magnetic fields by self-sustaining dynamo action. Magnetohydrodynamics: derivation of the induction equation from Maxwell's equations; the perfectly-conducting limit and frozen-flux; flux expulsion; diffusion and re-connection. Kinematic dynamo theory: Cowling's theorem; existence proofs; the Bullard-Gellman formalism; mean-field theories; fast dynamos. Dynamical considerations: the Navier-Stokes equation; rotating magnetoconvection; Taylor states; torsional oscillations and MAC-waves. Thermodynamic considerations: energy and entropy equations; the core heat flux problem. Numerical dynamo models.

Course Notes: Given in alternate years or upon announcement. Students can take EPS 258a and EPS 258b in either order.

Recommended Prep: Applied Mathematics 104, 105; Physics 153 or equivalent; or permission of instructor.

Theoretical Seismology: Part 2. Low-Frequency Seismology (107767)

Miaki Ishii

2020 Fall (4 Credits)  Schedule: WF 1200 PM - 0115 PM
Instructor Permissions: Instructor  Enrollment Cap: n/a
This course covers theoretical basis for low-frequency seismology. The topics covered include boundary conditions, eigenfunctions and frequencies of the Earth, normal-mode summations for synthetic seismogram calculations, surface waves, and model-ray duality.

Course Notes: Given in alternate years or upon announcement.

Recommended Prep: Part 1 of EPS262 on theoretical body-wave seismology

Earth & Planetary Sciences  268

Machine Learning across the Earth and Planetary Sciences (203361)

Marine Denolle

2021 Spring (4 Credits) Schedule: R -

Instructor Permissions: None Enrollment Cap: n/a

This graduate research seminar combines machine learning with applications in the Earth and Planetary Sciences. The class will consist of literature review augmented with significant data curation and coding. Students will decide on topics and machine learning tools may include supervised learning (e.g., for seismic tomography, detection of earthquakes, impact craters, exoplanets), physics-driven discovery (e.g., estimating simple ODE’s to represent wave propagation, ENSO cycles, the earthquake cycle), time series analysis (e.g., on glacier length time series and/or climate reanalysis information), acceleration of multiphysics numerical modeling and for emulation of sub-grid scale processes (e.g., for small-scale earthquake processes, cloud parameterization, or ice sheet hydrology).

Learning outcomes are: 1) knowledge of the successes and challenges in using machine learning (ML) for specific problems in the Earth and Planetary Sciences, 2) knowledge in the ML tools in supervised and unsupervised learning, 3) knowledge gained through hands-on experience in a coding project, and 4) familiarity with ethical standards and debates surrounding reproducibility, transparency, open source code development, open data availability, and open access publishing.

The seminar will build toward a group or individual project given at the end of the term. Students are expected to read and present papers and work at least 2-3 hours per week outside of their class on their projects. Computing will be performed on FAS Research Computing, a personal desktop, or other cloud computing options that could become available. Class time will be dedicated to presentations and coding activities.

Course Notes: Given in alternate years.

Recommended Prep: Knowledge in a high level programming language with easy access to a machine learning toolkit (e.g., Matlab, Python, and/or Julia). Students are expected to bring their laptop with Python and/or MATLAB and/or Julia on the first day of class. The instructors will help students meet this requirement if contacted beforehand.

Earth & Planetary Sciences 286
Biogeochemistry of Cryptic Cycles (126176)
David Johnston
Ann Pearson
2020 Fall (4 Credits)    Schedule: R 0900 AM - 1145 AM
Instructor Permissions: Instructor    Enrollment Cap: n/a

We will explore the geochemical importance of cryptic, or "net-zero", cycles in Earth surface process. A classic example is the deep sedimentary methane cycle, in which the net energy source is organic matter and the net sink is sulfate. Despite being nearly zero-sum, the existence of this cycle impacts the geochemical rates and signatures of other sedimentary processes. We will explore this, and other, topics from the perspective of questions such as how would the ocean-atmosphere system be different if this set of coupled reactions had not evolved? What other hidden reactions could be similarly important? We will draw from literature mainly on light stable- and radio-isotopic approaches to investigating these processes.

Course Notes: Given in alternate years.

Recommended Prep: EPS 186 and 187 or equivalent; or permission of instructor.

This course will provide formal mentorship in a variety of skills essential for an academic career in geosciences. Students will be guided through modules that provide practical tools to improve strategies for reading, paper writing, proposal writing, teaching, giving research seminars, informal networking, and peer review. Peer-to-peer feedback and group exercises will be used in addition to typical formats such as written assignments and oral presentations. The units are designed to complement the curriculum of graduate students as they prepare for the qualifying exam.

Course Notes: This course is an elective and will not count toward the breadth or subject requirements. Students must obtain permission of the advisor before enrolling.

Between History and Literature (159552)

_Wai-yee Li_

2020 Fall (4 Credits)  

**Schedule:**  
W 1200 PM - 0245 PM  

**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a  

This course will explore what it means to read historical texts as literature and to take a historical view of literary texts. What role should historical understanding and historical imagination play in literary criticism? How is "historical knowledge" understood? What is the role of imagination in the writing of history? How do allegorical and philological interpretations function in the reading of historical and literary texts? What does it mean to read fictional texts as responses to historical events? We will consider these questions from three perspectives: the genealogies (and rewriting) of figures and stories, the role of genres and contexts in shaping reception, and the relationship between history and fiction.

Chinese Literature 267R Section: 01

Topics in Tang Literature: Seminar (115521)

Xiaofei Tian

2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a

This semester’s focus is on the ninth-century poetry and prose.

Recommended Prep: Two years of literary Chinese or equivalent.
Chinese Literature 285 Section: 01

The Literary Life of Things in China (215833)

Thomas Kelly

2020 Fall (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

This seminar investigates literary strategies for depicting and animating things in premodern China. We will trace the development of the principal genres for talking about objects, from yongwu poetry and riddle tales, to inscriptions, colophons, and manuals of taste. How, we will ask, have authors probed and reimagined human attachments to things. How have practices of collecting and connoisseurship transformed Chinese literary culture? How have objects been used to think about what it means to be human in the Chinese literary tradition. Our discussions will engage recent scholarship on materiality from the fields of literary theory and the history of material culture. The course will include viewing sessions in the Harvard Art Museums and Harvard-Yenching Library.

Class Notes: Meeting time will be determined according to enrolled students' availability.

Chinese History 142 Section: 01

Cultural History of the Later Ming and Early Qing (215841)

Peter K. Bol

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

The goal of the course is to examine tensions and contradictions that emerged in elite culture during the course of the period 1570-1680 as they appeared in new literary forms, gendered writing, art styles, gardening, philosophical debates, knowledge about the natural world, religious activities, and learning from the West.

Topics to be covered:
- What was the 17th crisis?
- New wealth
Neo-Confucian learning after Wang Yangming:
From moralist politics to statecraft: from the Donglin Academy to the Restoration Society
New turns in painting: Chen Hongshou, Wu Bin, etc. The return of portraiture.
Religious disciplines: Buddhist monks and new religions
Literati Fictions: Morality and Emotional Responses
Learning of (the Lord in) Heaven
Turning to Heaven-and-Earth
Evidenced Studies

#### Chinese BB

**Elementary Modern Chinese (124237)**

**Xiaoshi Yu**

**2021 Spring (4 Credits)**

**Schedule:** TBD

**Instructor Permissions:** None

**Enrollment Cap:** n/a

This is a continuation (second semester) of the Elementary Modern Chinese. It is designed for students who have completed the first semester of Elementary Modern Chinese I (Chinese BA) or the equivalent. The course will further develop students' communicative skills in the listening and speaking modalities, and at the same time shift the focus of instruction gradually towards reading and writing. It provides more practice on syntactic structures, usage and their communicative functions, and prepares students for intermediate-level classes.

**Course Notes:** No auditors. May not be taken Pass/Fail.

**Requirements:** Prerequisite: Chinese BA or equivalent.

Advanced Modern Chinese for High-Proficiency Learners (207494)
Ya Ting Fan
2020 Fall (4 Credits) Schedule: MWF 1030 AM - 1145 AM
Instructor Permissions: None Enrollment Cap: n/a
Continuation of Chinese 130xb,130b. This course aims at further developing students’ ability to use Chinese in advanced and complex contexts, and process and generate sentences with complex structures used mainly in formal speech and writing.
The objectives of this course include: 1) enabling students to gain a deeper understanding of Chinese cultural conventions and assumptions, and the ability to "read between the lines" and discern the subtle connotations often present in Chinese speech and writing, 2) giving students the skills and confidence to use Chinese in a number of important, practical settings, including job interviews and academic forums, 3) enabling students to express their opinions and feelings more accurately, appropriately and coherently, and to offer more detailed and vivid descriptions and narrations.

Course Notes: No auditors. May not be taken Pass/Fail.
Recommended Prep: Chinese 130xb or equivalent.

Dan Wang

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

Designed for students interested in international business, employment or internships in Chinese-speaking communities (China, Taiwan, Singapore), or for students who simply want to improve their Chinese proficiency with a focus on authentic social and professional interactions. Students will develop their professional communication skills (both spoken and written), as well as gaining a broad business vocabulary. No specific background in business or economics is required.

Course Notes: Conducted in Chinese. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students.

Chinese 166R

Chinese in the Humanities (108397)

Jennifer Li-Chia Liu

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

Advanced language practice through the reading and analysis of authentic academic texts in humanities disciplines (e.g., art, literature, cinematic studies). May be offered independently in Chinese, or linked with an English-language content course. Specific content varies by year.

Topic: Chinese Cinema

Course Notes: All readings and discussions in Chinese. Counts toward Language Citation in Modern Chinese.
Recommended Prep: Grade of B or better in Chinese 140b or equivalent proficiency.

Subject: Korean
This introductory course is designed to provide a basic foundation in modern Korean language and culture by focusing on the balanced development of the interpersonal (speaking), interpretive (listening & reading), and presentational (formal speech & writing) skills. Students in Korean BA begin by learning the complete Korean writing system (Hangul), which is followed by lessons focusing on basic conversational skills, cultural competence, and grammatical structures. To provide sufficient opportunities to apply what has been learned in class, there are small group drill sessions, language tables, and a number of other cultural activities.

Class Notes: All lecture and discussion will meet for the duration of 1 hour.

Korean BX
Elementary Korean for Advanced Beginners (114383)

Hi-Sun Kim
Korean Bxa is an accelerated course designed for those who have received significant exposure to Korean language and culture and thus have some listening and speaking skills, but haven't had sufficient opportunity to develop their knowledge of basic reading, writing, and grammar. This course will cover important grammatical structures covered Elementary Korean (Ba and Bb) for the purpose of providing tools to build upon the existing level of each student's Korean language ability.

Class Notes: A 30 minute discussion section (2-3 students per section) for a more focused speaking practice will be scheduled on either Tuesdays or Thursdays between 1:30-2:30 after classes begin. This will replace the "Related Section" currently listed.

Korean 120A
Intermediate Korean (117220)
Ahsil Noh

2020 Fall (4 Credits) Schedule: MWF 1030 AM - 1145 AM
Instructor Permissions: None Enrollment Cap: n/a
Korean 120a is the first half of the intermediate course designed for students who have successfully completed Elementary Korean or students who have an equivalent proficiency level. This course aims to increase students' ability to communicate in Korean in a wide range of daily life situations with an equal focus on expanding and on consolidating students' knowledge of the fundamental grammar of Korean. Students are introduced to reading and listening materials of increasing complexity on a variety of topics in modern Korean society and culture. In addition, in order to develop a deeper understanding of the basic structures of the Korean vocabulary, simple Chinese characters will be introduced in this course.

Class Notes: All lecture and discussion will meet for the duration of 1 hour.

Recommended Prep: Korean Bb or equivalent.

Korean 123XB
Intermediate Korean for Advanced Beginners (161278)

Hi-Sun Kim

2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: Instructor Enrollment Cap: n/a

Korean 123xb is a continuation of Korean Bx and is for those who have received significant exposure to Korean language and culture and thus have some listening and speaking skills. It is an accelerated course...
covering important grammatical structures and materials from Intermediate Korean (120a and 120b) for the purpose of providing tools to build upon the basic foundation of student's Korean language ability. Hence, this class is designed to meet the linguistic needs that are unique to heritage language students to (i) increase accuracy in grammar, (ii) develop basic reading writing skills, and (iii) expand vocabulary through introduction of Chinese characters. Upon completion of this course, students will be fast-tracked into an upper-level course (e.g. Korean 130a).

Class Notes: A 30 minute discussion section (2-3 students per section) for a more focused speaking practice will be scheduled on either Tuesdays or Thursdays after classes begin.

Korean 130A

Pre-advanced Korean (111235)

Jee Hyun Lee

2020 Fall (4 Credits) Schedule: MW 1200 PM - 0200 PM

Instructor Permissions: None Enrollment Cap: n/a

Korean 130a is designed for students who have completed Intermediate Korean 120b or have equivalent proficiency. Students will consolidate previously learned grammatical patterns and vocabulary through written and audio-visual materials on a variety of topics. By exploring these topics in Korean, students will not only enhance their language skills of listening, reading, speaking and writing in Korean, but will also allow them to better comprehend Korean culture and society. Emphasis will be placed on developing abilities to present opinions and elaborate ideas through discussions and writings. Moreover, Chinese characters will be added in this course with the purpose of expanding vocabulary to the advanced level.

Class Notes: Related sections: 1 hour small group discussion section will be added on T 12-1pm OR T 1-2pm

Recommended Prep: Korean 120b or equivalent.

Korean 140A

Advanced Korean (116633)

Ahsil Noh

2020 Fall (4 Credits)  Schedule: MW 1200 PM - 0200 PM

Instructor Permissions: None  Enrollment Cap: n/a

Korean 140a is designed to enhance students beyond the high-intermediate level in reading, speaking, and writing skills in order to begin understanding socio-cultural and historical issues of contemporary Korea. Hence, the aim of the course includes (i) comprehending authentic materials from contemporary Korean mass media, (ii) following essential points of oral and written discourses that are linguistically complex, (iii) discussing concrete topics relating to major issues of contemporary Korean society and culture through supporting opinions, refutations, hypotheses, and detailed explanations of ideas, and (iv) writing about a variety of topics of Korean culture and society in detail with significant accuracy in grammar and structure. Furthermore, further development of knowledge in Chinese characters, idioms, proverbs, maxims, will be covered in this course.

Class Notes: Related sections- Additional 1-hour Hanja class will be added during the course (suggested time is Th 12-1pm)

Recommended Prep: Korean 130b or equivalent.

Korean 150A

Readings in Cultural Studies (115517)

Jee Hyun Lee

2020 Fall (4 Credits)  
Schedule:  
F 1200 PM - 0245 PM

Instructor Permissions: None  
Enrollment Cap: n/a

Korean 150a is the first half of a content-based Korean language course, designed for promoting language proficiency at the high advanced level. The goal of this course is to achieve critical thinking and a deeper understanding of controversial issues in Korean culture, society, and history through the language. Students are expected to apply advanced language skills in formal settings in analyzing contemporary texts and media, discussing historical and current events, and formulate opinions and arguments on various topics. Texts and media are drawn from authentic sources in various genres such as literary works, editorials, academic essays, films, TV dramas, documentaries, etc. In-class debates, presentations, and academic research writing will be emphasized.

Class Notes:  
Related sections: Additional Hanja class (1 hour) will be added during the course

Recommended Prep: Korean 140b or equivalent.

This class teaches students how to read classical Japanese, the standard written form of the Japanese language from ancient times into the 20th century. It is the language of classical poetry, great works of prose like the *Tale of Genji*, and dramatic forms like the noh and kabuki theaters. It is the language in which the emperor announced Japan’s surrender in 1945, and it is even used by many Japanese poets to this day. By the end of the semester, students will have learned the fundamental grammar, usage, and vocabulary of the classical language, enabling them to read any of the texts above—and many more—with the aid of a dictionary. We will also read together through portions of canonical classical texts throughout the course. Because modern Japanese evolved from classical Japanese, students will deeply enrich their understanding of the modern language along the way.

Class Notes: Meeting time will be determined according to enrolled students’ availability.

Recommended Prep: Japanese 130b.

Japanese History  120 Section: 01
Japanese Religions in the 20th and 21st Centuries (119698)

Helen Hardacre
2021 Spring (4 Credits)  Schedule: TBD
Instructor Permissions: None  Enrollment Cap: n/a

An examination of religion and society from the end of the Meiji period (1912) to the present. This course explores the meaning of the modern in Japanese religions, the development of the public sphere and religion's relations with it, religion and nationalism, and the interconnections of religion and social change with materialism, consumerism, pacifism, and spiritualism.

Course Notes: Offered jointly with the Divinity School as 3958.
Recommended Prep: General knowledge of Japanese history and religion is helpful. Enrollment in Japanese History 115 recommended but not required.

### Japanese History 151A Section: 01

Introduction to Edo and Meiji Period hentaigana (215836)

*Shigehisa Kuriyama*

2020 Fall (2 Credits)  

**Schedule:**  

W 0730 PM - 0845 PM

Instructor Permissions: None  

Enrollment Cap: n/a

This course offers a basic introduction to reading *hentaigana* the various cursive forms of *hiragana* with which the greater part of texts and image inscriptions of premodern Japan were composed. The course will concentrate chiefly on mastering the *hentaigana* found in printed books and images of the Edo and Meiji periods, but it will also cover a limited number of common *kuzushiji* (cursive rendering of Chinese characters). No prior experience with cursive scripts is assumed, but students should normally have taken three years of modern Japanese.

Topics in Japanese Cultural History (120567)

*Shigehisa Kuriyama*

2021 Spring (4 Credits)  

**Schedule:** TBD

Instructor Permissions: None  

Enrollment Cap: n/a

The course will focus on the interplay of pictures and texts in Edo Japan in a wide variety of genres, including natural history, shunga, popular literature, how-to manuals, and advertisements. In addition to training students in the cultural analysis of printed illustrations, the course will also help students develop facility in reading *hentaigana* materials.

**Recommended Prep:** Advanced reading knowledge of Japanese with some acquaintance with (or at least concurrent study of) *<em>bungo</em>* and *<em>kambun</em>*.

Introduction to the Study of East Asia: Issues and Methods (145419)
Melissa M. McCormick

2021 Spring (4 Credits)  
Schedule: TBD  
Instructor Permissions: None  
Enrollment Cap: n/a

This interdisciplinary and team-taught course provides an introduction to several of the approaches and methods through which the societies and cultures of East Asia can be studied at Harvard, including history, philosophy, literary studies, political science, film studies, anthropology and gender studies. We consider both commonalities and differences across the region, and explore how larger processes of imperialism, modernization, and globalization have shaped contemporary East Asian societies and their future trajectories.

Course Notes: Required of sophomore concentrators and secondary field candidates. Open to freshmen. EAS 97ab may not be taken Pass/Fail.

Political Economy of 21st Century China: Junior Tutorial (212974)

Daniel Koss

2021 Spring (4 Credits)  
Schedule: TBD  
Instructor Permissions: None  
Enrollment Cap: n/a

This course examines central challenges facing the Chinese leadership since 2000, in (1) domestic politics, (2) economics, and (3) foreign policy. Concepts and methods from the social sciences are introduced to analyze topics including the SARS health crisis, the strained leadership transition to Xi Jinping, internet censorship, the great variety of protests, policy experimentation, factions in elite politics, ethnic minorities, state-led development with the emergence of companies designated as national champions, anti-corruption efforts, rising inequality, artificial intelligence (AI) in the country’s digital strategy, international power transitions, China’s entry into the World Trade Organization (WTO), the ongoing trade dispute, and the Belt and Road initiative. This is a junior tutorial with enrollment capped at 10 students.

East Asian Studies  99B

Tutorial - Senior Year (159890)

Melissa M. McCormick

2021 Spring (4 Credits)  

Schedule:  TBD

Instructor Permissions: Instructor  Enrollment Cap: n/a

Thesis guidance under faculty direction. Part two of a two part series.

Course Notes: All students writing an EAS or joint EAS thesis will attend a research and writing workshop that meets twice each term.

East Asian Studies  115  Section: 01

Japanese Monsters (216390)

Bill Tsutsui

2021 Spring (4 Credits)  

Schedule:  TBD

Instructor Permissions: None  Enrollment Cap: n/a

Academic "monster studies" has boomed over the past twenty years and Japan offers a rich history for exploring how a culture's monstrous imagination has been shaped by (and in turn shaped) social, political, economic, and technological change. This course will examine Japan's rich profusion of monsters in a variety of media (folklore, fiction, manga and anime, film, character goods, video games), with a focus on the 19th century to the present. Ranging from Noh plays to Godzilla movies to Hello Kitty advertisements, we will experience monsters in Japanese mythology, religion, and folk belief; the supernatural in court and warrior culture; the cataloging and commercialization of monsters in early modern Japan; science, the nation, and the making of "modern" monsters; nuclear anxiety and kaiji films; nostalgia and the cute (kawaii) in the postwar "monster boom"; and urban legends, cryptozoology, and Pokémon in millennial
Japan. Through an immersion in the history of Japan's fantastical creatures, this course will develop what Jeffrey Jerome Cohen calls “a method of reading cultures from the monsters they engender.”

No prior knowledge of Japanese language or history is required or assumed.

East Asian Studies 141 Section: 01

East Asian Religions: Traditions and Transformations (126199)

James Robson

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

This course provides an introduction to the study of East Asian religions. It covers the development of Buddhism, Daoism, Confucianism and Shinto. It is not a comprehensive survey, but is designed around major conceptual themes, such as ritual, image veneration, mysticism, meditation, death, and category formation in the study of religion. The emphasis throughout the course is on the hermeneutic difficulties attendant upon the study of religion in general, and East Asian religions in particular.

Course Notes: Offered jointly with the Divinity School as 3010.

---

East Asian Studies 142 Section: 01

Wisdom (215842)

Shigehisa Kuriyama

Thomas Kelly

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

The potential geographical, temporal, and conceptual scope of a course on wisdom is obviously vast, and I have little doubt that the emphases of this course will evolve with each iteration. But for next spring, I plan to weave together two strands: One strand will focus on reflections about the nature and history of wisdom, and will explore questions such as these:
a. What is wisdom, anyway?
b. What is the relationship between wisdom and science?
c. How have conceptions of wisdom varied with time and place?
d. What is the meaning and value of “folk wisdom”?
e. How should we understand the idea of wise foolishness?
f. Can wisdom be taught? And if it can, how?

The other strand will focus on some of the major forms through which wisdom has been communicated:

a. aphorisms and maxims
b. proverbs and adages
c. fables and parables
d. riddles
e. pictures
f. essays

Key themes that we will recur in our study of forms will be the relationship between wisdom and the notions of memorability, portability, and gnomic obscurity. While evidence from East Asian philosophy, religion, and literature will figure prominently in the course, the readings will also draw significantly on materials from many other parts of the world, and consider as well the recent burgeoning of writings about wisdom in fields outside the humanities, including medicine, psychology, and sociology.

Animated Spirituality: Japanese Religion in Anime, Manga, and Film (109543)

Helen Hardacre

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

This course addresses the representation of religion in Japanese popular culture, with emphasis on anime, manga, and film. The course examines depictions of religious figures, themes, and human dilemmas in contemporary popular culture as a gateway to understanding the significance of religion in Japanese society and history.

East Asian Studies  197

China's Cultural Revolution (212976)

Daniel Koss
This course introduces a cataclysmic movement that brought the People's Republic of China to the brink of anarchy: The Great Proletarian Cultural Revolution (1966-1976). The first part looks at historical precursors, including rebellion in the imperial era, political movements in the Republican Era, Communist campaigns and purges, as well as the Great Leap Forward famine that cost tens of millions of lives. Paying equal attention to elite politics at Mao Zedong's "court" and the lived experiences of ordinary citizens, the second part focuses on the evolution of the turmoil, once Mao had called for "bombarding the headquarters" of his own party state, discussing the "Gang of Four," the "attempted coup" by Lin Biao, the Red Guards and the worker rebels in Shanghai, local power seizures and factional warfare, military crackdowns, and the return to order. The third part begins with the reception of the movement abroad, and focuses on its afterlives, including the quasi-pluralist lessons drawn in the immediate aftermath, the role of Cultural Revolution legacies in decisions such as the violent crackdown on the Tiananmen protesters in 1989, and memory politics under Xi Jinping. No language requirement.

Class Notes: EAS 197 can be counted as EAS 98 Junior Tutorial.

East Asian Studies 198

Political Parties of East Asia (212977)

Daniel Koss

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

East Asia has been home to an astonishing assortment of political parties, covering the spectrum from democratic to authoritarian institutions, including some of the world's most sophisticated and resilient political organizations. We begin with China's Communist Party, revisiting its foundation in 1921, its rise during the Sino-Japanese War 1937-45, and its transformation from a revolutionary party to a party in power; then turn to the present day to cover the deep reach of the party into society, the activities and functions of ordinary members, as well as the dynamics of the leading echelons. The second part of the course focuses on Japan, including the origins of political parties in the late 19th century, the post-War emergence of the perennial ruling party, the age of grand money politics under Tanaka Kakuei, the electoral reform of 1993, and the origins of the party's current strength. The third part consists of case studies, covering contemporary parties in North and South Korea, parties in Taiwan before and after the democratic transition, as well as parties in Malaysia and Vietnam, with their multiple connections to East Asia. The course also puts East Asian parties into a comparative perspective to other world regions.

As Africa faces daunting challenges, the "Beijing model" invites intriguing alternative visions to the poorly performing designs by traditional foreign actors in the region. Moving from Chinese farm households in Mozambique to state-owned copper mines in Zambia, military bases in East Africa and the United Nations headquarters, this seminar critically assesses the potential for China's presence to transform Sub-Saharan Africa. After identifying the intellectual stakes (week 1), and discussing anecdotal glimpses from the grassroot-levels (week 2), the class deals with traditional development assistance, along with Maoist attempts to revolutionize the "world countryside" – resulting in legacies such as a China-trained guerilla fighter serving as the President of Zimbabwe. We then discuss the current footprint of Beijing, including its influence on elite politics, Chinese public and private business interests, and the diversity of the one million Chinese migrants to Africa. Four sessions specialize on (1) resource extraction versus opportunities for human capital development (2) debt-traps of Western and Eastern origins (3) emerging tensions over human rights policies (4) and the military dimension, including China’s role in Peace-Keeping Operations. Finally, the course addresses how the Chinese presence may transform established multilateral institutions, and the challenges associated with African migration to China. Social science research will be read alongside journalistic accounts and primary documents, such as leaked diplomatic cables and strategy papers. Will Africa become "Beijing's Second Continent," of the neo-colonial or tributary kind? What promises does the China model hold for Africans? How do the partners on both continents react to experiences of disillusionment and retreat? The assignments are designed to train students for public policy work and require close group collaboration.

East Asian Studies 304
EALC Teaching Practicum (212681)
Wai-yee Li
2020 Fall (2 Credits)            Schedule: TBD           Enrollment Cap: n/a
Instructor Permissions: None       

This course is intended for graduate students in the Department of East Asian Languages and Civilizations, who are either first-time teachers or first-time teaching fellows (TF) in the department. While convened by the EALC PF, who will serve as a resource on weeks that are departmentally specific, invited experts trained in each week's topics will primarily run the course. It will begin by providing students with a tool-kit for effectively fulfilling their role as TF in the remote learning environment. This will include strategies for online teaching, managing and engaging students in the virtual classroom, and effective grading and feedback methods. The course will then transition into more specific topics that may arise in the classroom, and finally expand to consider broader issues that we all face when teaching in East Asian Studies departments.
The course will meet for a total of 9 times. We will meet weekly for weeks 1-4 and bi-weekly for the remainder of the semester, in two-hour sessions. There are a total of 9 sessions, as well as the expectation that participants complete the Bok Center's self-paced Canvas site before the first course meeting. Students must successfully complete the course before advancing to their general exams. Each meeting will focus on a specific skill and is intended to give students the chance to not only think about how they want to teach, but also the opportunity to put those ideas into practice before stepping into the classroom. Beyond its specific weekly agendas, the course is intended to provide a comfortable space to voice concerns, discuss anxieties, identify fears, and share successes. Students are encouraged to raise issues about teaching and professional growth. The syllabus is flexible and can respond to student needs and concerns as the semester progresses, so please be sure to provide your feedback as we go along.

The course is primarily intended for students currently in the fall semester of their G3 year, although G2 students are also welcome to enroll in the course. For G3 students, this is a chance to use actual materials from your assigned course to prepare for leading discussion sections in parallel with the demands of the semester. For G2 students, who will not yet have a teaching assignment, you will be asked to consult with your advisor about what course you are most likely to teach in the coming year, obtain a syllabus used in previous years for that course, and prepare for class activities based on those readings and potential lecture topics. Class requirements regarding collecting midterm feedback and class observation/recording may be completed during the following academic year without repeating the course.

Class Notes: Meeting time will be determined according to enrolled students' availability.

**Subject: E Asian Film & Media Studies**

**E Asian Film & Media Studies 128** Section: 01

Korean Cinema as World Cinema (216433)
In recent times, world cinema has witnessed the rise of South Korean cinema as an alternative to Hollywood and includes many distinguished directors such as Park Chan-wook, Lee Chang-dong, Kim Ki-duk, and Bong Joon-ho. This course examines the aesthetics, history, and storytelling of South Korean film, and analyzes several key texts that are critical for understanding this field of study. How is Korean cinema shaped by (re)interpretations of history and society? How do we understand Korean cinema vis-à-vis the public memories of the Korean War, industrialization, social movements, economic development, and globalization? And how do aesthetics and storytelling in Korean cinema contribute to its popularity among local spectators and to its globality in shaping the contours of world cinema? By deeply inquiring into such questions, students will learn how to critically view, think about, and write about film. Primary texts include literature and film. All films will be screened with English subtitles.

Class Notes: This course will be taught by Tian Li. Her faculty page can be found here. Meeting time may change depending on availability of enrolled students.

E Asian Film & Media Studies 230A Section: 01

Topics in Asian Media Studies (215839)

Alexander Zahlten
Tomiko Yoda

2020 Fall (2 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

The course covers theoretical issues connected to the emerging field of Asian Media Studies. (AMS). First, it surveys recent developments in the field and delineates the various disciplinary lineages they are a part of. Second, it maps basic conceptual tensions inherent in this new field.

Some of the questions the course will address are: How does the combination of media studies and area studies change basic premises in both of these fields? What are the current approaches in the emerging field of Asian Media Studies, what are the most relevant interventions? What intellectual issues does a possible tension between historically oriented and speculatively oriented Asian Media Studies raise?

The course puts special emphasis on developing students' projects and will include regular student presentations and book reviews. Additionally, the course will also fulfill professional development functions: over the course of the year students will each develop and refine one conference presentation and one journal article related to their research interests.
Students must complete both terms of this course (Parts A and B) within the same academic year to receive credit.

Class Notes: Classes will be taught bi-weekly over two semesters.
Class meeting times to be determined according to enrolled students' availability.

Additional Course Attributes:

E Asian Film & Media Studies 230B Section: 01

Topics in Asian Media Studies (215840)

Alexander Zahlten

Tomiko Yoda

2021 Spring (2 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

The course covers theoretical issues connected to the emerging field of Asian Media Studies.

(AMS). First, it surveys recent developments in the field and delineates the various disciplinary lineages they are a part of. Second, it maps basic conceptual tensions inherent in this new field.

Some of the questions the course will address are: How does the combination of media studies and area studies change basic premises in both of these fields? What are the current approaches in the emerging field of Asian Media Studies, what are the most relevant interventions? What intellectual issues does a possible tension between historically oriented and speculatively oriented Asian Media Studies raise?

The course puts special emphasis on developing students' projects and will include regular student presentations and book reviews. Additionally, the course will also fulfill professional development functions: over the course of the year students will each develop and refine one conference presentation and one journal article related to their research interests.

Students must complete both terms of this course (Parts A and B) within the same academic year to receive credit.

Class Notes: Classes will be taught bi-weekly over two semesters.

Requirements: Pre-requisite: EAFM 230A

#### East Asian Buddhist Studies 256R Section: 01

Chinese Buddhist Texts - Readings in Medieval Buddhoh-Daoist Documents: Seminar (125643)

*James Robson*

2020 Fall (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a
This seminar focuses on the careful textual study and translation of a variety of Chinese Buddho-Daoist texts through the medieval period.

Course Notes: Offered jointly with the Divinity School as 3233.

Class Notes: Meeting time will be determined according to enrolled students' availability.

Recommended Prep: Reading knowledge of classical Chinese required.

Subject: Korean History

**Korean History 115 Section: 01**

Korean History Through Film (108233)

*Sun Joo Kim*

2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a

This course is to examine history of premodern Korea through select Korea’s contemporary feature films. Films and dramas with historical themes and personages have been very popular in Korea. We will examine the content of the films, and investigate how “true” or “false” they represent Korea’s past, how they imagine and invent Korea’s past, in what ways films are useful in better understanding Korean history, people’s lives and practices.

Course Notes: conference course with 1 discussion section

Subject: Chaghatay

Chaghatay A

Elementary Chaghatay (214585)

Aizezi Gulina

2020 Fall (4 Credits)  Schedule: MWF 1030 AM - 1145 AM

Instructor Permissions: None  Enrollment Cap: n/a

This course is intended to develop a basic reading knowledge of Chaghatay, the classical antecedent of modern Uzbek and modern Uyghur, and the common literary language of all Central Asian Turks from the fourteenth to the early twentieth centuries. The course includes a survey of Chaghatay literature as well as a discussion of grammar, the writing system, and lexicographical resources; the class meetings will be devoted to both textbook-based instruction and (particularly in the second half of the semester) the reading of samples from Chaghatay texts drawn from printed sources and manuscript copies.

Economics
Subject: Economics

Economics 10A
Principles of Economics (Microeconomics) (113326)

Anne Le Brun

2021 Spring (4 Credits)  Schedule: TBD
Instructor Permissions: Instructor  Enrollment Cap: 50

Economists study human behavior using a combination of models and data. Ec 10a introduces students to economic models by using intuitive discussions, graphical analysis and, in some cases, very basic algebra. The models study individual decision-making and markets, and range from classical approaches like supply and demand to more recent approaches that consider informational limitations and behavioral mistakes. We will also use data to understand the strengths and weaknesses of these models. The course also discusses the role that ethics and values play in people’s choices and in policy discussions including an understanding and critique of approaches like utilitarianism and libertarianism. The goal of the course is to provide students with a set of tools that will help them develop answers for themselves on how to make better choices and participate in debates on major public policy issues in areas including tax policy, inequality, discrimination and the environment.

Course Notes: Ec 10a is the first half of an integrated sequence that continues with the study of macroeconomics in Ec 10b. Students may elect to take only the fall microeconomics course and receive four credits. This sequence is designed with two types of students in mind. For students who will never take another economics course, Ec 10a and 10b provide a self-contained training to prepare them to understand and engage with economic issues. For students who end up deciding to be Economics Concentrators, Ec 10a and 10b provide a wide-ranging introduction to the field and are required courses. The Department of Economics strongly encourages students considering concentrating in Economics to take these courses during their first year in the college. Ec 10a and 10b are not duplicative of AP Economics courses but aim to provide a broader perspective and a deeper engagement with public policy. Ec 10a or 10b fulfill the Social Sciences divisional distribution requirement. It is not necessary for students to take both halves of Ec 10 to fulfill this requirement.

Recommended Prep: There is no mathematics background requirement. No calculus is used in the course and the use of algebra is very limited. Ec 10a is strongly recommended in advance of Ec 10b which covers macroeconomics.

</tr>
</tbody>
</table>
Ec 10b continues the curriculum presented in Ec 10a, moving to the study of macroeconomics including the growth of the overall economy, business cycles, and economic crises. Ec 10b explains what economists do and do not understand about these issues by developing analytical approaches and examining data, including studying the global financial crisis and the economic crisis caused by COVID-19. The course also explains how policy makers can dampen economic fluctuations using monetary policy (i.e., government influence over interest rates and government regulation of banks), fiscal policy (e.g., government control of spending and taxation), and financial rescues in economic crises. We will also discuss how macroeconomic policies work in an international context, including the factors that affect exchange rates, trade deficits, international capital flows, and how these link economies around the world. Like Ec 10a, Ec 10b introduces students to economic models and discusses both how they are supported and how they are contradicted by available data.

Course Notes: Ec 10b is the second half of an integrated sequence that begins with the study of microeconomics in Ec 10a. Students may elect to take only the fall microeconomics course and receive four credits. This sequence is designed with two types of students in mind. For students who will never take another economics course, Ec 10a and 10b provide a self-contained training to prepare them to understand and engage with economic issues. For students who end up deciding to be Economics Concentrators, Ec 10a and 10b provide a wide-ranging introduction to the field and are required courses. The Department of Economics strongly encourages students considering concentrating in Economics to take these courses during their first year in the college. Ec 10a and 10b are not duplicative of AP Economics courses but aim to provide a broader perspective and a deeper engagement with public policy. Ec 10a or 10b fulfill the Social Sciences distribution requirement for the General Education program. It is not necessary for students to take both halves of Ec 10 to fulfill this requirement.

Class Notes: Ec 10b meets in lectures on Mondays and Wednesdays 10:30-11:45 a.m. that you can join synchronously or asynchronously. Sections are available at a wide range of times on Thursdays and Fridays and must be joined synchronously. You may simultaneously enroll in Ec 10b and another course that meets during the Monday and Wednesday lecture times. You will need to keep up with all lectures on video and attend sections which meet at various times on Thursdays and Fridays.

Recommended Prep: There is no mathematics background requirement. No calculus is used in the course and the use of algebra is very limited. Taking Ec 10a which covers microeconomics and is taught in the Fall is strongly encouraged but is not a formal prerequisite.

Economics   20
Introduction to Data Analysis (212557)

Isaiah Andrews

2021 Spring (4 Credits)   Schedule:   TBD
Instructor Permissions:   Instructor   Enrollment Cap:   40

This course will introduce students to data analytic methods useful for answering social science questions. The course will cover the fundamentals of probability and statistics while introducing students to causal inference, quasi-experimental methods, and regression analysis. All the methods studied in the course will be motivated and illustrated with real-world applications. This course does not require any prior coursework in economics, but is complementary to Econ 50 and satisfies the prerequisites for Econ 1123.

Course Notes:   Students cannot receive EC credit for both Ec 20 and Stat 104. If Stat 104 has been taken, a writing requirement for Ec 20 is possible.

Recommended Prep:   High school algebra,

Economics   50A
Using Big Data to Solve Economic and Social Problems with Laboratory Component (216409)

Gregory Bruich

2021 Spring (4 Credits)   Schedule:   TBD
Instructor Permissions:   None   Enrollment Cap:   n/a

This course is a modified version of Economics 50, ordinarily taught by Raj Chetty and Gregory Bruich. Economics 50a will instead be taught by Gregory Bruich.

Economics 50a will show how "big data" can be used to understand and address some of the most important social and economic problems of our time. The course will give students an introduction to frontier research and policy applications in economics and social science in a non-technical manner that does not require prior coursework in economics or statistics, making it suitable both for students exploring economics for the first time, as well as for more advanced students. The course will include discussions with leading researchers and practitioners, who use big data in real-world applications.

Topics include equality of opportunity, education, racial disparities, innovation and entrepreneurship, health care, climate change, criminal justice, tax policy, and poverty in developing countries. In the context of these topics, the course will provide an introduction to basic methods in data science, including regression, causal inference, and machine learning.
In empirical projects and weekly labs, students will work with real data to learn how the methods discussed in the course can be implemented in practice.

Students will participate in weekly labs, collaborative work, and discussions with leading researchers and practitioners. The class content will include short videos featuring Raj Chetty, Greg Bruich, and others.

Education in the Economy (126777)

*Lawrence Katz*

*Claudia Goldin*

2021 Spring (4 Credits)

**Schedule:**

M 1245 PM - 0245 PM

**Instructor Permissions:** Instructor

**Enrollment Cap:** 30

An exploration of the role of education in the economy using historical, comparative, and current policy perspectives. Topics include the theory of human capital, role of education in economic growth and distribution, the educational production function, vouchers, charter schools, class size, standards, school equalization, for-profit educational institutions, and the gender gap in college completion. A serious research paper is required, as are several short critical essays of the literature. This is a junior tutorial.

**Course Notes:** This course requires special action- application or lottery- to enroll. Visit economics.harvard.edu/page/junior-seminar-0 and the course canvas site for more information.

**Class Notes:** This course requires attendance to all 12 classes.

**Recommended Prep:** Ec 1010a and 1010b (or 1011a and 1011b), one of stats 100, 104 or 110, and Ec 1123 or 1126 (or concurrent enrollment in 1123 or 1126).

Economics 980EE

The Behavioral Economics of Poverty and Development (204014)

*Gautam Rao*

2021 Spring (4 Credits)

**Schedule:** TBD

**Instructor Permissions:** Instructor

**Enrollment Cap:** 30

This is a junior tutorial.
Economics 980FF
Economics of the Coronavirus (junior seminar) (216079)
Dale Jorgenson
2020 Fall (4 Credits)  Schedule:  W 0300 PM - 0545 PM
Instructor Permissions:  Instructor  Enrollment Cap:  18
This course is intended for economics concentrators, ideally in their junior year. One of the primary objectives is to provide an opportunity for students to present possible topics for an undergraduate dissertation.
Class Notes:  Course will be taught from 3:00-5:00pm

Economics 980MM
Designing Real-World Experiments to Improve Firm Decision-Making and Public Policy (212568)
Amanda Pallais
2021 Spring (4 Credits)  Schedule:  TBD
Instructor Permissions:  Instructor  Enrollment Cap:  18
Field experiments (experiments that take place in real-world settings) are increasingly being used to analyze public policies, make business decisions, and test theories. The most recent economics Nobel Prize recognized experiments' role in alleviating global poverty. This class will dive into how to design a field experiment and learn about some of the most exciting recent experimental research. It will also use experiments to learn about the research process. We will discuss how to frame a question so that the research informs policy, when to trust research discussed in the popular press, and how to interpret and apply results to improve decision-making.

Economics 980U

Immigration Economics (126771)

George Borjas

2020 Fall (4 Credits)  Schedule:  T 0945 AM - 1145 AM

Instructor Permissions:  Instructor  Enrollment Cap:  20

There has been a resurgence of large-scale international migration in the past few decades. This course explores the economic determinants and consequences of these population flows. Specific topics include the study of how immigrants are non-randomly selected from the population of the countries of origin, the measurement and implications of economic assimilation in the receiving country, the impact of the flows on the labor markets of both receiving and sending countries, and the calculation of the economic benefits from immigration. This is a junior tutorial.

Course Notes:  A research paper will be required.

Recommended Prep:  Ec 1010a and 1010b (or 1011a and 1011b), one of stats 100, 104 or 110, and Ec 1123 or 1126 (or concurrent enrollment in 1123 or 1126).

Economics 980W

Policy Options in Health Economics (107675)

Ariel Pakes

2021 Spring (4 Credits)  Schedule:  TBD

Instructor Permissions:  Instructor  Enrollment Cap:  n/a

Description: The seminar will focus on policy issues in health economics. We will read papers on an assortment of policy options and formulate frameworks for analyzing their likely impacts on outcomes of interest. Examples include the analysis of mergers in hospital and insurance markets, the choice of capitation vs fee for service contracts and its impact on cost and quality of care, policy options for health insurance, and the re-structuring of health service providers. Where possible we will use data and do the analysis quantitatively. Some knowledge of microeconomic and statistical tools, particularly those related to industrial organization, will be helpful (a few of the needed techniques will be taught during the course). This is a Junior Tutorial.

Course Notes:  This course requires special action- application or lottery- to enroll. Visit economics.harvard.edu/page/junior-seminar-0 and the course canvas site for more information.

Class Notes:  This course will meet from 12:45-2:45pm

Recommended Prep:  Ec 1010a and 1010b (or 1011a and 1011b), one of stats 100, 104 or 110, and Ec 1123 or 1126 (or concurrent enrollment in 1123 or 1126).

Economics 980X

Personal Economics : Junior Seminar (108892)

Claudia Goldin

2020 Fall (4 Credits)          Schedule:       M 1200 PM - 0245 PM
Instructor Permissions:   Instructor Enrollment Cap:   30

How are the most personal choices and life transitions decided? When and whom do you marry, how many children do you have, how much education should you obtain, and which careers or jobs will you pursue? Much will be explored in terms of change over time, particularly concerning the economic emergence of women and the growing role of government. Readings draw on economic theory, empirical analyses, history, and literature from the 19th century to the present. This is a Junior Tutorial.

Class Notes:           Course will start at 12:45pm

Recommended Prep:  Ec 1010a and 1010b (or 1011a and 1011b), one of stats 100, 104 or 110, and Ec 1123 or 1126 (or concurrent enrollment in 1123 or 1126).

Behavioral Finance (203866)

Jeremy Stein

2021 Spring (4 Credits)          Schedule:       TBD
Instructor Permissions:   Instructor Enrollment Cap:   30

This junior seminar will provide an overview of theoretical and empirical research on asset pricing that adopts a "behavioral" perspective, i.e. that considers the joint consequences of: (i) investors who have either less than fully rational beliefs or non-standard preferences; and (ii) various impediments to arbitrage. We will also spend considerable time fleshing out the implications of investor sentiment for corporate finance, macroeconomics, and public policy.

Class Notes:           Course will take place from 12:00-2:00pm

Recommended Prep:  Ec 1010a and 1010b (or 1011a and 1011b), one of stats 100, 104 or 110, and Ec 1123 or 1126 (or concurrent enrollment in 1123 or 1126).

A Libertarian Perspective on Economic and Social Policy (119951)

*Jeffrey A. Miron*

2020 Fall (4 Credits)  

**Schedule:**  
MW 0130 PM - 0245 PM  

**Instructor Permissions:** None  

**Enrollment Cap:** n/a  

Analyses the libertarian perspective on economic and social policy. This perspective differs from both liberal and conservative views, arguing for minimal government in most arenas. Policies addressed include drug prohibition, gun control, public education, abortion rights, gay marriage, income redistribution, and campaign finance regulation.

**Recommended Prep:** Ec 10a and Ec 10b.

**Economics 1025**

From Gorbachev to Putin: The Economics and Politics of the Russian Transition (203356)

*Maxim Boycko*

2021 Spring (4 Credits)  

**Schedule:** TBD  

**Instructor Permissions:** Instructor  

**Enrollment Cap:** 16  

The course covers the transformation of Russia from "mature socialism" of the early days of Mikhail Gorbachev to the present-day mix of market economics and authoritarian politics under Vladimir Putin. After introducing the basic concepts of capitalism, socialism, and transition the course focuses on Russia’s key economic and political reforms. Additional topics include the Russian energy sector, oligarchs, corruption, and Putin's foreign policy. Students will have reading assignments twice a week, participate in classroom discussions, make an oral presentation, prepare an empirical note, and take midterm and final exams.

**Recommended Prep:** Prerequisites: Ec10a, Ec10b or equivalents; and Stat104 or equivalent.

**Additional Course Attributes:**

**Economics 1033**

The Economics of Networks (160360)
Social and economic networks are an essential part of the fabric of modern life. Some examples: the complex trading networks that underlie modern financial markets and supply chains; social media platforms; networks of personal connections that help people find jobs. These networks profoundly affect the economy and society more broadly: for instance, financial interdependencies are critical in economic crises, while rumors on Twitter have come to play a central role in our politics. How can we make sense of these phenomena—as individuals, within companies, and as policymakers? This seminar teaches models from the economics and statistics of networks that are essential to the task. Topics include the diffusion of information and rumors, racial segregation, and the network origins of recessions. We emphasize how network models relate to key ideas from microeconomics. For a sense of the course, see reviews of Econ980O: this course will focus on similar material without the project component.

Recommended Prep: Stat 110, Applied Math 101, Math 154, or equivalent; Ec 1010/1011a

**Economics 1036**

The Psychology and Economics of Beliefs (204421)

**Matthew Rabin**

2021 Spring (4 Credits)  

Instructor Permissions: Instructor  

Enrollment Cap: 30  

This seminar focuses on how individuals and groups come to form beliefs about important things in their lives. What medicines are effective? What investment strategies make sense? What careers are lucrative? What effect would a 10% tax cut this year have on the unemployment rate two years from now? How many total hours will you sleep next week? What GPA will you have when you graduate Harvard? What is the probability you will enter a post-graduate program after college—and how does that depend on your GPA? We will review theories and evidence about how individuals develop their beliefs from experience, personal observations, and by learning from others. The organizing theme will be to compare the assumption of full rationality that is traditional in economic theory to evidence identified by psychologists and others about errors people make, and the consequences of these errors for beliefs. When do people become overconfident that they know the right answer? Are their beliefs internally consistent? When do groups of people all come to the same conclusions, and how likely are such consensus beliefs to be correct? Readings for the course will include academic research in psychology, economic theory, empirical economics, and historical and sociological research about prevailing beliefs. The course requires participation in discussions, a short presentation, problems sets, and research-oriented written assignments. Given the nature of the course, full attendance (insofar as it is consistent with your health and the health of those around you) is required, no auditing is permitted, and enrollment will be open solely to Harvard University undergraduates. (No exceptions!) Because of the heavy emphasis in lectures and problem sets on rigorous formal theories and measurements along the lines of mainstream economics, the course requires background in microeconomics, mathematics, and statistics (e.g., Bayes' Theorem, univariate distributions, law of large numbers, and the central limit theorem). Completion of courses at the level of Math 21A and Stats 110 are strongly advised, and Math 1A, Economics 1010A or 1011A, and Stats 104 or their equivalents are required. Note that all students must obtain instructor consent prior to enrolling.
in the class; please see the course syllabus or consult Professor Rabin, or the Teaching Fellow (William Murdock, wmurdock@g.harvard.edu) if you have concerns about your fit for the course.

**Course Notes:** Course will take place from 10am-12pm.

**Recommended Prep:** Ec 1010a prereq. Helpful to have taken Stat 110 or Stat 104.

**Course Attributes:**

Sports Economics (211392)

**Judd Cramer**

2021 Spring (4 Credits)  

**Schedule:** TBD

**Instructor Permissions:** Instructor  

**Enrollment Cap:** 80

This course will apply economic principles from game theory, labor economics, and econometrics to analyze a wide range of issues primarily in the realm of professional sports and collegiate athletics rigorously with a focus on causality. Topics include: the hot hand; expansion and rival leagues; franchise relocation and venue construction; revenues from merchandising, broadcast rights and their distribution; free agency, arbitration, and salary caps; player development through amateur drafts and minor leagues; NCAA rules on scholarships and eligibility; in-game strategy; and financial aspects of collegiate athletic programs. Class discussion, problem sets, and an exam will form the bulk of the course requirements. Readings will draw upon a variety of sources, including Andrew Zimbalist’s Baseball and Billions, Robert Frank and Phil Cook’s The Winner-Take-All Society, and newspaper, magazine and academic journal articles.

**Recommended Prep:** Econ 1010a, Stat 104, Concurrent Enrollment in econometrics  

(Previous completion recommended)

**Economics 1050**

Strategy, Conflict, and Cooperation (123893)

**Robert Neugeboren**

2021 Spring (4 Credits)  

**Schedule:** TBD

**Instructor Permissions:** None  

**Enrollment Cap:** n/a

Game theory is the study of interdependent decision-making. In the early days of the cold war, game theory was used to analyze an emerging nuclear arms race; today, it has applications in economics, psychology, politics, the law and other fields. In this course, we will explore the "strategic way of thinking"
as developed by game theorists over the past sixty years. Special attention will be paid to the move from zero-sum to nonzero-sum game theory. Students will learn the basic solution concepts of game theory -- including minimax and Nash equilibrium -- by playing and analyzing games in class, and then we will take up some game-theoretic applications in negotiation settings: the strategic use of threats, bluffs and promises. We will also study the repeated prisoner's dilemma and investigate how cooperative behavior may emerge in a population of rational egoists. This problematic -- "the evolution of cooperation" -- extends from economics and political science to biology and artificial intelligence, and it presents a host of interesting challenges for both theoretical and applied research. Finally, we will consider the changing context for the development of game theory today, in particular, the need to achieve international cooperation on economic and environmental issues.

The course has two main objective: to introduce students to the fundamental problems and solution concepts of noncooperative game theory; and to provide an historical perspective on its development, from the analysis of military conflicts to contemporary applications in economics and other fields. No special mathematical preparation is required.

Recommended Prep: Economics 10a

**Economics 1052**

Game Theory and Economic Applications (111817)

*Shengwu Li*

2021 Spring (4 Credits)  

Schedule: TBD

Instructor Permissions: None  

Enrollment Cap: n/a

Game theory is a mathematical method for analyzing strategic situations. It deals with situations in which multiple people must make interdependent decisions, such as chess, poker, bargaining, oligopoly pricing, and warfare. Topics include strategic-form and extensive-form games, rationalizability, Nash equilibrium, and subgame-perfect equilibrium. We will study applications such as long-term cooperation, auctions, mechanism design, and division of treasure between pirates.

Course Notes: Students may not take both Economics 1051 and Economics 1052 for credit.

Recommended Prep: The only formal prerequisite for this course is Mathematics 21a. Students should have a strong grasp of calculus, basic probability theory, and some exposure to proofs. No prior knowledge of game theory is necessary.

Economics 1057
Game Theory with Applications to Social Behavior (203555)

Erez Yoeli
Moshe Hoffman

2020 Fall (4 Credits)  Schedule:  TR 0900 AM - 1015 AM
Instructor Permissions:  Instructor  Enrollment Cap:  40

Game theory is the formal toolkit for analyzing situations in which payoffs depend not only on your actions (say, which TV series you watch), but also others’ (whether your friends are watching the same show). You’ve probably already heard of some famous games, like the prisoners’ dilemma and the costly signaling game. We’ll teach you to solve games like these, and more, using tools like Nash equilibrium, subgame perfection, Bayesian Nash equilibrium, and the one-shot deviation principle.

Game theory has traditionally been applied to understand the behavior of highly deliberate agents, like heads of state, firms in an oligopoly, or participants in an auction. However, we’ll apply game theory to social behavior typically considered the realm of psychologists and philosophers, such as why we speak indirectly, in what sense beauty is socially constructed, and where our moral intuitions come from.

Each week, students are expected to complete a problem set, to read 2-3 academic papers, and to complete a 1-2 page response to short essay questions (‘prompts’) on these readings. All assignments can be completed in groups of two. Tutorials are not required but are highly recommended for students without a substantial background, especially in math. There will also be a final exam.

Economics 1078
Analyzing Education Policy (204433)

Michela Carlana

2020 Fall (4 Credits)  Schedule:  M 1200 PM - 0115 PM
Instructor Permissions:  Instructor  Enrollment Cap:  10

This course examines a variety of education policy issues in the United States and abroad, with an emphasis on rigorous econometric evaluation of such policies. By the course’s end, students should have an analytical framework that allows them to think clearly about the impacts of education policies, as well as be able to distinguish good research from bad. The first half of the course reviews important empirical techniques in the context of broad questions, such as whether people make educational decisions by weighing benefits and costs and whether education improves students’ long-term outcomes. The second half of the course centers on debates in which teams of students will argue for a given policy proposition and I will argue against it, with the aim of sharpening everyone’s arguments on the basis of existing empirical evidence. Prerequisites: Familiarity with regression analysis and causal inference, or permission of the instructor.

Economics 1084
The Causes and Consequences of Inequality (213427)

David Deming
2020 Fall (4 Credits)

Schedule: W 0415 PM - 0715 PM
Instructor Permissions: Instructor
Enrollment Cap: 20

Why has earnings inequality in the U.S. and other developed countries increased so much since the 1970s? What are the consequences of rising inequality, and what can we do about it? This course provides an overview of what social science has to say about the causes and consequences of inequality, and engages students in a critical and balanced discussion of the positive and normative issues concerning rising inequality. Example topics include: 1) the key role of education and skills in rising inequality among the "99 percent"; 2) inequality in childhood and family environments, including schooling; 3) the role of changes in economic institutions such as unionization and the minimum wage; 4) rising wealth inequality, taxation and capital mobility; 5) global issues in inequality, including outsourcing, immigration and trade. We will also consider the consequences of rising inequality for political and social institutions in the U.S. and around the world, including (for example) political capture by elites and preferences for redistributive social policy. Course assignments will ask students to analyze and develop policy solutions for addressing rising inequality in the U.S. and around the world.

Course Notes: This course is offered jointly with HKS as SUP-206.

We will also consider the consequences of rising inequality for political and social institutions in the U.S. and around the world, including (for example) political capture by elites and preferences for redistributive social policy. Course assignments will ask students to analyze and develop policy solutions for addressing rising inequality in the U.S. and around the world.
1.7 billion adults around the world do not have access to a financial account. Why has it been so challenging to reach this population? What financial product innovations have worked for banking poor customers? How do the underbanked make do without access to the formal financial market? This course investigates the functioning of the financial market for low income populations, with a focus on developing countries. Example topics include: 1) the link between financial market development and economic growth; 2) financial literacy and consumer protection; 3) savings; 4) credit; 5) insurance; 6) mobile banking and digital payments. The course will cover relevant economic principles, business case studies, product design experiments, and research papers.

Recommended Prep: Ec 10A

---

Economics 1123

Introduction to Econometrics (123033)

Gregory Bruich

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

An introduction to multiple regression techniques with focus on economic applications. Discusses extensions to discrete response, panel data, and time series models, as well as issues such as omitted variables, missing data, sample selection, randomized and quasi-experiments, and instrumental variables. Also develops the ability to apply econometric and statistical methods using computer packages.

Course Notes: Students may take both Economics 1123 and Statistics 139 for credit. However, Statistics 139 will not count as the econometrics requirement for the economics concentration. Only one course can count towards EC credit; either Economics 1123 or Economics 1126. Both courses can count towards college credit regardless of the order they are taken.
**Economics 1123**

Introduction to Econometrics (123033)

Quantitative Methods in Economics (113637)

*Elie Tamer*

2020 Fall (4 Credits)  
**Schedule:** MW 1030 AM - 1145 AM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Topics include conditional expectations and its linear approximation; best linear predictors; omitted variable bias; panel data methods and the role of unobserved heterogeneity; instrumental variables and the role of randomization; various approaches to inference on causal relations.

**Course Notes:** Only one course can count towards EC credit; either Economics 1123
or Economics 1126. Both courses can count towards college credit regardless of the order they are taken.

Students who fulfill the econometrics requirement with Economics 1126 and who intend to pursue Honors should note that the Honors exam assumes knowledge of the material covered in Economics 1123.

Recommended Prep: Math 18, 21a, Applied Math 21a.

**Economics 1310**

The Economy of China (107811)

*Richard Cooper*

2021 Spring (4 Credits)  
Schedule: TBD  
Instructor Permissions: None  
Enrollment Cap: n/a

This course critically examines China’s remarkable economic performance in the post-Mao era and places this performance in historical and comparative context. Topics covered include China’s economic structure, institutions, inequality, trade, population, and public policy.

Course Notes: Writing requirement: A research paper is required. This course meets the concentration writing requirement.

Recommended Prep: Ec 10a and Ec 10b.

Public Economics: Designing Government Policy (117818)

*Stefanie Stantcheva*  
*Stan Veuger*

2020 Fall (4 Credits)  
Schedule: MW 0300 PM - 0415 PM  
Instructor Permissions: None  
Enrollment Cap: n/a

This course analyzes what role the government plays and should play in a market economy, especially those policies that work through taxes and government spending. It covers topics such as tax and welfare policy, unemployment insurance, social security,
environmental protection, and state and local policy. The course emphasizes recent empirical research on policy issues and will teach students how to conduct such studies.

The first half of the course, taught by Professor Stantcheva, will cover the basic principles of public economics. These principles will be used to shed light on current questions and debates on tax policy, the provision of public goods, and social insurance.

The second half of the course, taught by Professor Veuger, will highlight recent empirical research on business taxation, the regulatory state, political economy, and multilevel government. In this part of the course we will also see how the theoretical and empirical approaches covered in the course can be and have been used to inform and assess the economic policy response to the COVID-19 crisis, in particular in the United States and Europe.

Course Notes: Students should have some knowledge of basic calculus and statistics, but there is no formal mathematics prerequisite. Offered jointly with the Kennedy School as SUP-125. This course offers an optional writing requirement which if completed will satisfy the concentration writing requirement.

Recommended Prep: Economics 1010a or 1011a or permission of the instructors. Familiarity with multivariate calculus and econometrics (at the level of economics 1123 or 1126) is desirable.

Economics 1415

Analytic Frameworks for Policy (107613)

Richard Zeckhauser

2020 Fall (4 Credits)  Schedule: MW 1030 AM - 1145 AM

Instructor Permissions: Instructor  Enrollment Cap: 3

This course develops abilities in using analytic frameworks in the formulation and assessment of public policies. It considers a variety of analytic techniques, particularly those directed toward uncertainty and interactive decision problems. It emphasizes the application of techniques to policy analysis, not formal derivations. Students encounter case studies, methodological readings, modeling of current events, the computer, a final exam, and challenging problem sets.

Course Notes: Jointly offered with the Kennedy School as API-302.

Class Notes: Course will take place at HKS in L-230.

Recommended Prep: Economics 1011a or permission of instructor.

Economics of European Integrations (127519)

*Hans-Helmut Kotz*

2020 Fall (4 Credits)

**Schedule:** TR 1030 AM - 1145 AM

**Instructor Permissions:** Instructor

**Enrollment Cap:** 40

The aim of the course is to give students familiarity with a broad range of European policy issues: integration of markets (for goods, services, and labor), monetary union (ECB) and its consequences for fiscal policy, financial sector regulation as well as supervision. It is offered for students who would like to employ the tools they have learned in principles of economics and introductory micro and macro courses on real world cases. This implies to write and present a paper (mandatory writing requirement).

**Course Notes:** Writing requirement: A research paper is required. This course meets the concentration writing requirement.

**Recommended Prep:** Ec 10a and Ec 10b.

The study of the political economy of religion is grounded in two intellectual strands of thought developed in economics and sociology. The economic approach views religious competition and church-state relations as market phenomena. The absence of state religion allows for competition, thereby creating an environment for a plurality of religious faiths in society. The continual subdividing of religion into sects ensures an open and competitive market whereby no one single religion dominates. The sociological approach focuses on religious beliefs and activities as rational choices as well as cultural phenomena. Religious beliefs are a part of cultural traits, values, and organizations which contribute to economic outcomes. As in commercial activity, people respond to religious costs and benefits in a predictable, observable manner. Religious beliefs that promote hard work, thrift, and honesty can be found across the world’s major religions. The key question is: How does a society promote these values and in what circumstances does it, intentionally or unintentionally, discard them? People choose a religion (the theory of sects) and the degree to which they participate and believe (if at all). In this course we discuss a wide range of topics—religious competition, secularization (and its varieties), pluralism and tolerance, the structure of religious organizations, religion and individual behavior—that highlight the contributions and areas of further research in the field of political economy of religion.
Recommended Prep: Economics 1010a or 1011a. A statistics course is highly desirable.

**Economics 1499**

Low Interest Rates, Secular Stagnation and Macroeconomic Policy (217408)

*Lawrence H. Summers*

*Paul Tucker*

2020 Fall (4 Credits)

**Schedule:** R 1200 PM - 0245 PM

**Instructor Permissions:** Instructor

**Enrollment Cap:** n/a

With real interest rates negative for nearly a decade and nominal interest rates close to zero throughout the industrial world, we are in a new era for macroeconomic policy making. This seminar course will focus on the reasons for low real rates, their impact on growth, inflation, inequality and financial stability, and their implications for macroeconomic policy.

The focus of the class will be on student research papers. Students will be expected to choose a topic related to the course theme and write a 25- to 30-page original research papers developing, applying and testing relevant economic theory. Students will work closely with one of the course instructors and an economics PhD student on their papers.

Examples of topic areas for papers might include: The role of risk premiums vs. savings-investment gaps in explaining interest rate fluctuations; the influence of social insurance on aggregate demand; Ricardian equivalence and the impact of fiscal policy in raising long run demand; the implications of low rates for target returns on institutional portfolios, financial stability, and creative destruction; saving gluts and current account surpluses; the risks of destabilizing deflation; and lessons from the Japanese experience.

Only students with significant exposure to advanced undergraduate courses in economics and statistical and quantitative work should consider this class. This class is potentially open to seniors writing theses on this topic. Admission is by permission of the instructors; Charles W. Eliot University Professor Lawrence Summers and Sir Paul Tucker, the Former Deputy Governor of the Bank of England.

**Course Notes:** Interested students should send a transcript and a 250-word statement of why they want to take the class to: Lhs@lawrencesummers.com.

**Class Notes:** This course will take place from 12:00-2:00pm.

International Trade and Investment (111749)

*Pol Antras*

2020 Fall (4 Credits) Schedule: MW 1030 AM - 1145 AM

Instructor Permissions: None Enrollment Cap: n/a

Analyzes the causes and consequences of international trade and investment. Focuses on the interplay of economic theory and empirical descriptions of foreign trade and direct investment patterns.

Recommended Prep: Economics 1010a1, 1010a2, or 1011a.

International Financial and Macroeconomic Policy (111477)

*Kenneth Rogoff*

2020 Fall (4 Credits) Schedule: MW 1030 AM - 1145 AM

Instructor Permissions: Instructor Enrollment Cap: n/a

Advanced theoretical and empirical analysis of contemporary international macroeconomic policy issues in both industrialized and developing economies. Topics include exchange rates, international capital flows, debt crises, growth, and policy coordination.

Class Notes: Potentially open to some modification with final course time agreed
after enrollment has stabilized.

Requirements: Prerequisite: Econ 1010b OR Econ 1011b

**Economics 1550**

International Macroeconomics (116356)

*Jeffrey Frankel*

2021 Spring (4 Credits)  
**Schedule:** TBD  
**Enrollment Cap:** 20

This course deals with the macroeconomics of open economies. Topics include the foreign exchange market, devaluation, and import and export elasticities; the simultaneous determination of the trade balance, national income, the balance of payments, money flows and price levels; capital flows in internationally integrated financial markets; monetary and fiscal policy in open economies, including at the Zero Lower Bound for interest rates; crises; international macroeconomic interdependence and policy coordination; supply relationships, inflation, and nominal anchors for monetary policy; currency unions; the determination of exchange rates in international money markets; and international portfolio diversification.

**Course Notes:** Offered jointly with HKS as BGP-620.

**Class Notes:** Course will take place at HKS, Rubenstein 306.

**Recommended Prep:** Economics 1010a (or 1011a) and 1010b (or 1011b).

Industrial Organization: Theory and Applications (116133)

*Robin Lee*

2020 Fall (4 Credits)  
**Schedule:** MW 0130 PM - 0245 PM  
**Enrollment Cap:** 40

Theoretical and empirical analysis of contemporary topics in industrial organization. Topics may include the determinants of market structure and equilibrium; price competition; collusion, horizontal and vertical relationships and mergers (with applications to antitrust policy); innovation and intellectual property rights; network externalities and platform (two-sided) markets; and issues in auctions and market design.  
**Prerequisite:** Ec1010a or 1011a
Course Notes: Students may not take both Economics 1640 and Economics 1642 for credit.

Recommended Prep: Economics 1010a1, 1010a2, or 1011a.

Firms, Markets and Competition (124646)

Myrto Kalouptsidi

2021 Spring (4 Credits)  Schedule: TBD

Instructor Permissions: None  Enrollment Cap: n/a

This course studies firms, markets and competition. We will study the theory of industrial organization, focusing on analyzing the way firms make decisions, as well as the impact of those decisions on market outcomes such as market prices, quantities, the type of products offered and social welfare. The fundamental questions addressed in this course include: Why are markets organized the way they are? How does market organization affect firm behavior, such as firm production or pricing? How does the behavior of firms in turn affect the market structure, such as the number of firms or the range of products offered? We will use formal models in order to address these questions. The goals of the course include the development of intuition for firm strategic behavior, such as pricing, as well as the development of skills for the analysis of formal models. The textbook will provide background and introduction to a variety of topics, many of which will be covered in class in greater depth. Lectures (along with problem sets) will be the core of the course.

Course Notes: Ec 1640 and Ec 1642 may not both be taken for credit.

Optional writing Requirement: This course offers an optional writing requirement which if completed will satisfy the concentration writing requirement. This is a hands-on course, and students will be expected to use Stata or other statistical software to perform data analysis.

Recommended Prep: Economics 1010a1, 1010a2, or 1011a

Economics 1745

Corporate Finance (117237)

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

Introduction to corporate finance, including capital budgeting, capital structure of firms, dividend policy, corporate governance, and takeovers. Prerequisites for this course include Economics 1010a1, 1010a2, or 1011a, Mathematics 18, and Statistics 100.

Class Notes: course will be taught by visiting Professor Dan Bergstresser.

Recommended Prep: Economics 1010a1, 1010a2, or 1011a, Mathematics 18, and Statistics 100.

Requirements: Prerequisite: (ECON 1010A AND ECON 1010B) OR (ECON 1011A AND MATH 18 AND STAT100)
### Economics 1746 Section: 01

Financial Crises and Recessions of the 21st Century (207618)

*Karen Dynan*

2021 Spring (4 Credits)  
Instructor Permissions: None  
Enrollment Cap: n/a

This course will explore what lessons we can draw from the experience of the U.S. economy during the financial crisis and Great Recession. We will look at research on what factors precipitated the boom and bust in the housing market and how the resulting mortgage crisis rippled through the global financial system and ultimately generated the most severe economic downturn since the Great Depression. We will learn not only about the macroeconomic consequences of these events but also about the high human costs. We will analyze the policies the government used to stabilize the financial system, mitigate foreclosures, and provide fiscal and monetary support to the economy. The course will conclude by considering the lessons in the context of the current state of the U.S. economy, with an emphasis on what we will need to do to fight the next economic downturn.

Recommended Prep: Ec1011b and Ec1010b

### Economics 1800

The Economics of Cities (111292)

*Edward Glaeser*

2021 Spring (4 Credits)  
Instructor Permissions: None  
Enrollment Cap: n/a

Addresses the central questions of why cities exist, what roles will cities continue to play in the economy, and what determines the rise and fall of cities. Special attention is paid to cities and information, and social problems in cities.

Recommended Prep: Social Analysis 10 and Statistics 100.
Economics 1818

Economics of Discontinuous Change (112195)

Richard Freeman

2021 Spring (4 Credits)  Schedule:  TR 0100 PM - 0215 PM

Instructor Permissions:  Instructor  Enrollment Cap:  40

Explores discontinuous changes in the economic position of groups and countries and presents mathematical and computer simulation models designed to illuminate the theme that economic and social lives are changed by sudden sharp shocks that generate positive feedback loops rather than the normal workings of markets that equilibrate through negative feedbacks. Will include effects of the Covid19 pandemic on the economy, Great Depression and 2008 collapse of Wall Street, growth/decline of trade unions which occurs in spurts, and such patterns as segregation of groups, power laws in income inequality growth/decline in social pathologies in neighborhoods, and Malthusian concerns about the environment. Models include nonlinear simulations, neural networks, finite automata, evolutionary stable strategies, and agent-based simulations with attention on getting evidence on key parameters from diverse empirics, from big data to case studies.

Course Notes: Key requirement is an independent research paper. Professor and TF will provide guidance on topic, help in obtaining data, information from firms, etc. This course meets the concentration writing requirement, if the paper is a substantive, solo-authored, original research work (not a literature review). Students should have some mathematical background, but there is no prerequisite.

Economics 1936

Keynes (107388)

Stephen Marglin

2020 Fall (4 Credits)  Schedule:  TR 0130 PM - 0245 PM

Instructor Permissions:  None  Enrollment Cap:  n/a

This course explores the birth, death, and resurrection of The General Theory of Employment, Interest and Money from the Great Depression (1929-1939) to the Great Recession (2008-?). A major goal is to lay out a coherent argument that, for all its theoretical innovation, The General Theory did not deliver: the argument why a market system, even an idealized system with all of the warts removed, may fail to provide jobs for willing workers. In the process we will examine the orthodoxy that Keynes attacked and that resurfaced in the 1960s and 70s; the key concepts underlying the models implicit in The General Theory; and the attempts of the Keynesian mainstream to make peace with both Keynes and orthodoxy. We will also explore the applicability of The General Theory to the long run. A final section will view the present economic difficulties through a Keynesian lens.

Recommended Prep:  Economics 1010b or 1011b, or permission of instructor; a year of
college calculus allowing students to understand mathematical notation and concepts (derivatives, maximization, etc.) even though mathematics will be used very sparingly.

Economics 2035

Psychology and Economic Theory (156371)

Matthew Rabin

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

This course explores ways that psychological research indicating systematic departures from classical economic assumptions can be translated into formal models that can be incorporated into economics. Topics include ways utility theory can be improved--such as incorporating reference dependence, news utility, social preferences, self image, and other belief-based tastes--and ways we can relax assumptions of perfect rationality--such as incorporating focusing effects, limited attention, biased prediction of future tastes, present-biased preferences, biases in probabilistic judgment, and errors in social inference. The course will emphasize (a) careful interpretation and production of new evidence on relevant departures, (b) formalizing this evidence into models that can, with discipline and rigor, generate sharp predictions using traditional economic approaches, and (c) exploring economic implications of those models presented. Although we will primarily emphasize (b), the course is meant to be useful to students whose interests lie anywhere in this spectrum, under the premise that all such research will be improved by a greater appreciation of the full spectrum. The course is intended for PhD students in the Business Economics and Economics programs and others who have a solid background in microeconomic theory at the level of introductory PhD courses in these programs. While obviously appropriate to those wishing to specialize in "behavioral economics", the course is also designed for those interested in doing research in particular fields of economics. And while the course centers on theoretical models (learning and evaluation will center around solving formal problem sets), the theory is focused towards its empirical implementability and economic relevance, so that the course is also designed for those interested in theory-influenced empirical research.

Course Notes: This course is cross listed with HBS as HBSDOC 4155.

Economics 2040

Experimental Economics (123849)
This course provides an introduction to experimental methods and their applications in economics. We will focus on (i) the use of lab experiments in establishing causal effects, testing models, and illuminating mechanisms; (ii) field experiments in behavioral economics; and (ii) the measurement of preference parameters and behavioral traits in lab-in-the-field settings. Topics include bounded rationality, wishful thinking, moral values and social image concerns, gender, the measurement of preferences in lab and large-scale survey settings, and the explanatory power of behavioral traits for field behaviors. We will cover methodological topics including the relationship between experiments and theory, simple process-tracing techniques, internet experiments, and surveys. Students will become acquainted with the full process of designing an experiment, and class discussions will place heavy emphasis on the development of early-stage research ideas. The course is intended not just for those with an interest in behavioral and experimental economics per se, but also for those who wish to measure behavioral parameters in non-lab settings in applied work or to conduct field experiments.

Course Notes: Open to undergraduates with permission of the instructor.

Economics 2059

Decision Theory (121331)

Tomasz Strzalecki

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

This course prepares students for pure and applied research in axiomatic decision theory. We start with a rigorous treatment of the classical topics that are at the heart of all of economics (utility maximization, expected utility, discounted utility, Bayesian updating, dynamic consistency, option value). We then delve into a number of modern topics inspired by the observed violations of the classical models (“exotic preferences” used in macro-finance, ambiguity aversion, temptation and self-control). The last part of the course explores the recently flourishing literature on stochastic choice (which is related to, but distinct from, discrete choice econometrics). Prerequisites: basic microeconomic theory at the level of Mas Colell, Whinston, Green; being comfortable with abstract models.

**Economics 2110**  
Section: 1

Econometrics I (120668)

*Gregory Bruich*
Economics 2110 and 2115 comprise a two-course sequence for first-year graduate students seeking training in econometric methods at a level that prepares them to conduct professional empirical research. Economics 2110 (fall) reviews probability and statistics, then covers the fundamentals of modern econometrics, with a focus on regression methods for causal inference in observational and experimental data. Prerequisites: undergraduate courses in probability and statistics, regression analysis, linear algebra, and multivariate calculus.

Course Notes: Enrollment limited to PhD candidates in economics, business economics, health policy, public policy, and political economy and government (PEG).

Recommended Prep: The two-course sequence is open only to qualified PhD students from HKS, HBS, GSE, and HSPH, but occasionally others may be admitted at the discretion of the instructor (if the instructor is convinced that such individuals can perform well and would not negatively affect the nature and pace of the course).

Economics 2115

Econometric Methods II (205523)

2021 Spring (4 Credits)

Instructor Permissions: Instructor

Enrollment Cap: n/a

Economics 2110 and 2115 comprise a two-course sequence for first-year graduate students seeking training in econometric methods at a level that prepares them to conduct professional empirical research. Economics 2115 (spring) covers topics (different methods) in current empirical research. Faculty members from across the university will teach modules each covering a different method of causal inference, including but not limited to instrumental variables, panel data methods, and regression discontinuity and kink designs. The course will emphasize a mixture of theory and application, with problem sets focused on the replication or extension of recent papers utilizing these methods.

Course Notes: This course is designed for PhD candidates in health policy, public policy, education policy, the Business School DBA program. Qualified undergraduates are also permitted to take the course with permission of the instructor.

Recommended Prep: Prerequisite: Economics 2110 or the equivalent.

Economics 2120  Section: 1
Principles of Econometrics (115026)
Elie Tamer
2020 Fall (4 Credits)  Schedule:  MW 1200 PM - 0115 PM
Instructor Permissions:  Instructor  Enrollment Cap:  n/a

Linear predictor as approximation to conditional expectation function. Least-squares projection as sample counterpart. Splines. Omitted variable bias and panel data. Bayesian inference for parameters defined by moment conditions. Finite sample frequentist inference for the normal linear model. Statistical decision theory and dominating least squares with many predictor variables; applications to estimating fixed effects (teacher effects, place effects) using panel data. Asymptotic inference in the generalized method of moments framework. Likelihood inference using information measures to define best approximations within parametric models. Instrumental variable models and the role of random assignment; applications include models of demand and supply and the evaluation of treatment effects.

Course Notes:  Enrollment is limited to PhD students in the Economics Department, Business Economics program, and PEG program. Other students wanting to enroll in the course should contact the instructor.

Recommended Prep:  probability at the level of Statistics 110; linear algebra.

Economics 2140

Econometric Methods (120662)
Isaiah Andrews
2021 Spring (4 Credits)  Schedule:  TBD
Instructor Permissions:  None  Enrollment Cap:  n/a

This course continues the first year sequence in econometrics and covers a variety of topics and ideas that are important for pursuing and interpreting empirical research in economics. The first half of the course covers core econometric approaches that are important for a wide range of applications, including identification analysis, asymptotic approximations, large sample theory for estimation and hypothesis testing, and the bootstrap. The second part of the course examines a range of complementary topics and new developments, including reasons why canonical econometric methods may be unreliable (such as model misspecification, identification failure, and the incidental parameters problem) and extensions of and alternatives to the traditional econometric paradigm (such as partial identification, Bayesian inference, nonparametrics, and machine learning). Economic applications will be discussed throughout. Enrollment limited.

Recommended Prep:  Economics 2120 or equivalent.

Economics 2148
Topics in Econometrics: Optimization-Conscious Econometrics (110300)

2020 Fall (4 Credits) Schedule: TR 0300 PM - 0415 PM
Instructor Permissions: None Enrollment Cap: n/a

Economics 2148 will study key optimization methods and concepts underpinning classical econometric estimators.

First, we study Markov Chain Monte Carlo methods and theory. Then, each optimization topic is studied through the lens of an econometric method. Linear programming is studied via quantile regression, numerical linear algebra is studied via partial identification in ordinary least-squares, integer programming is studied via exact sparse methods, and so on. We will be particularly interested in questions at the intersection of econometrics and optimization.

Modern research in econometrics often intersects with machine learning and big data questions. Likewise, while the overlap of econometrics with optimization and operations research has traditionally been limited, previously intractable large scale or combinatorially difficult econometrics problems are now being solved using modern optimization software and heuristics. This lays out a rich research agenda and opens up consequential new questions for econometricians. How can machine learning methods be used for econometric regression analysis and causal inference? How can modern optimization methods be applied to solve previously intractable econometric problems? What are the statistical consequences of changes made for numerical reasons? How does one do inference on the output of nonstandard optimization problems? At the heart of these new estimation and inference questions lies the need to design and understand estimators as the product of algorithms and optimization problem, not only the minimand and of objective functions.

Class Notes: This course will be taught by visiting Professor Guillaume Pouliot.
## Economics 2325
### Comparative Historical Economic Development (126819)

*Nathan Nunn*

2021 Spring (4 Credits)  
*Schedule:* TBD  
*Instructor Permissions:* None  
*Enrollment Cap:* n/a

The course examines the historical origins of differences in the economic and social development of societies. Participants discuss recent research in the field and present their own work in progress.

**Course Notes:** This course is targeted to second-year Ph.D. students in economics. It is not open to undergraduate or Masters students. The course fulfills the distribution requirement.

## Economics 2330
### History and Human Capital (124933)

*Lawrence Katz*  
*Claudia Goldin*

2021 Spring (4 Credits)  
*Schedule:* TBD  
*Instructor Permissions:* None  
*Enrollment Cap:* n/a

Explores a range of subjects concerning human capital, historically and comparatively. Topics include fertility, mortality, health, immigration, women's work, child labor, retirement, education, inequality, slavery, unionization, and governmental regulation of labor, all within the broader context of economic history.

**Course Notes:** Satisfies the graduate distribution requirement. Open to undergraduates on a limited basis with permission of instructor.

Economics 2338
Behavioral Development Economics (160359)

Gautam Rao

2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: Instructor Enrollment Cap: 30

This graduate level course will focus on the intersection of two rapidly growing fields in economics - development economics, and behavioral economics. We will study applications of behavioral economics to development questions, and ask whether there is a special behavioral science of poverty and development. Methods covered will include field experiments, lab experiments, tests of theory and combining experiments with structural estimation.

Economics 2340
Transportation and Development: Evidence and Quantitative Models (215901)

Gabriel Kreindler

2020 Fall (4 Credits) Schedule: TR 0900 AM - 1015 AM
Instructor Permissions: None Enrollment Cap: n/a

How does spatial mobility affect firms, migrants, commuters and job-seekers? What barriers hamper mobility at these different scales? What are the equilibrium implications of changes in travel costs, for example, due to infrastructure improvements? This course discusses recent research on the links between transportation and the economy, with a focus on developing countries. It focuses on the interplay between empirical evidence and quantitative models, and students will gain hands-on experience with both. The first part of the course introduces the workhorse models and empirical tools, which we then apply to topics in infrastructure, migration, urban traffic congestion, and urban mobility and labor markets.

Economics 2360
The Microeconomics of Development (207641)

Emily Breza

2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: Instructor Enrollment Cap: 30

This course covers the microeconomic foundations of development economics. We will focus on market
frictions that may hinder growth in developing countries. Topics include labor markets, land markets, and credit markets. We will also discuss the economics of the household and social networks. The course will use both theoretical and empirical tools.

**Economics 2390**

Development Economics (156645)

*Michael Kremer*

2020 Fall (4 Credits)   
**Schedule:** TBD

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

This course covers theoretical models and empirical methods in development economics. Topics include health, education, household economics, small and medium enterprise finance, technology adoption, corruption, and the intersection of behavioral economics and development. The course will also review a range of research designs including experiments, natural experiments, and structural approaches.

Additional Course Attributes:

**Economics 2410A**

Macro-Finance: Rational and Behavioral (125372)

*Xavier Gabaix*

2020 Fall (4 Credits)   
**Schedule:** MW 0600 PM - 0715 PM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

1. **Bounded rationality:** we'll go over a behavioral version of basic microeconomics (consumer theory, Arrow Debreu), basic macroeconomics (real and monetary) and public economics.

2. **Macroeconomics with heterogeneity:** we'll study how microeconomic shocks can generate macro fluctuations; network models in macro-finance; models of the income distribution.

3. **Finance:** we'll study unified macro-finance models. First, with perfect financial markets: we'll review unified models of stocks, bonds, options and exchange rates. Second, with imperfect financial markets: we'll study how this sheds light on financial crises and currency movements. Time permitting, we'll review some behavioral finance, merging all three themes. The course is geared toward two types of students, and has accordingly two tracks, "behavioral" and "finance", with corresponding emphasis in the homework and exam.

Economics 2416
Advanced Topics in Empirical Macroeconomics (207940)

Gabriel Chodorow-Reich

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: 30

The course will explore topics in applied macroeconomics, with emphasis on the intersection of empirical analysis and theory. Topics may include monetary policy, fiscal policy, financial frictions, and labor markets. The course will present a variety of empirical methods, such as the narrative approach, VAR analysis, and the use of cross-sectional data in macroeconomics.

Course Notes: This will be a 6 week long course taught in the first half of the semester.

Political Economy of Non-Democracies (215796)

David Yang

2020 Fall (4 Credits) Schedule: TR 0130 PM - 0245 PM

Instructor Permissions: Instructor Enrollment Cap: 30

Non-democratic regimes have been the oldest and most common form of political governance. This course studies the forces of stability and forces of change in non-democratic regimes. Concerning the forces of stability, we will cover topics such as repression, hatred, state coercion, information control, corruption, co-optation, and political trust and norms. Concerning the forces of change, we will cover topics such as democratization, collective actions, conflict, nation building, reform and privatization, state capacity, bureaucracy, and the role of institutions on economic development and innovation. We will explore these topics both theoretically and empirically. Students will be exposed to various workhorse models in political economy, as well as recent advances in empirical methods such as natural experiments, field experiments, lab experiments, lab-in-the-field experiments, and text analyses.

Economics 2450A

Public Economics and Fiscal Policy I (110660)

Nadarajan Chetty
2020 Fall (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a
The course will focus on a range of topics in public economics including welfare estimation of tax and expenditure policies, including income and commodity taxation, public goods, education, and place-based policies. We will also discuss foundations for government intervention, including market failures such as externalities and asymmetric information. Throughout, the focus will be on using theoretical models to motivate empirical analyses to uncover the desirability of government intervention in the economy and to quantify the welfare impacts of such policies.
Class Notes: This course will be co-taught with visiting Professor Hunt Alcott.
Requirements: Prerequisite: (Economics 2010a AND Economics 2010b) OR (Economics 2020a AND Economics 2020b)

Economics 2730
Theoretical and Empirical Perspectives on Entrepreneurship: Organizational Economics and Growth (161299)

Josh Lerner
William Kerr
Entrepreneurship—the formation and growth of new firms—is a complex phenomenon that has historically attracted relatively little academic attention. In recent years, however, scholars in a variety of disciplines have been devoting increasing attention to this topic. This course explores the emerging work in this dynamic area. Reflecting the complex nature of entrepreneurship, the course will touch on literature in a variety of academic disciplines. The 2019-20 class focuses on works from the industrial economics, labor economics, organizational economics, economic geography, macroeconomics and sociology literatures; the 2020-21 class focuses on works from the corporate finance and behavioral economics literatures. Students taking the course for credit will be expected to complete three referee reports and a paper proposal. This course is cross listed as HBS 4351.

Class Notes: Course location: HBS Cumnock 130.

**Economics 2810B**

Labor Economics and Labor Market Institutions (112770)

*Amanda Pallais*

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

Examines the operation of the labor market and evaluation of labor market policies. Topics: labor econometrics, theories of wage determination, changes in the wage structure, unemployment, labor market institutions, and globalization and the labor market.
Economics 2880

Economics of Science (124078)

Richard Freeman

2021 Spring (4 Credits)  

Schedule:  
WR 0300 PM - 0430 PM

Instructor Permissions:  Instructor  
Enrollment Cap:  40

Analyzes economic issues regarding the role of science and RD in the economy and in the deployment and productivity of scientists, engineers, and highly skilled technical workers. Topics include: wage levels/employment prospects; stipend policy, education/recruitment, student unionization/post-doc organization, career choices/trajectories, with reference to women; scientific competition/collaboration, and affects of the Covid19 pandemic on the economics of science.

Course Notes:  
Key requirement is graduate-level research paper, potentially using big data set on scholarly paper, R&D spending, patents, etc.

Economics 2901

Early-Stage Research and Discussions on Behavioral and Experimental Economics (210858)

Gautam Rao

2021 Spring (4 Credits)  

Schedule:  
TBD

Instructor Permissions:  Instructor  
Enrollment Cap:  30

This working group is intended for students doing research in empirical behavioral economics. Each week, two students will discuss early-stage ideas or in-progress work and receive feedback from other participants. Enrollment is by permission of the instructor, and restricted to PhD students. Pre-requisites include having completed field courses in behavioral economics (typically at least two of Ec 2030, 2035, 2040, 2338).

Additional Course Attributes:

Justice: Ethics in an Age of Pandemic and Racial Reckoning (217418)

Michael Sandel
Sergio Imparato

2020 Fall (4 Credits)  Schedule:  MW 0730 PM - 0845 PM
MW 1030 AM - 1145 AM

Instructor Permissions: Instructor  Enrollment Cap: n/a

What is a just society? What do we owe one another as citizens? What is a good life? These questions, long debated by philosophers, arise with special urgency at a time of pandemic and racial reckoning. The course explores these questions by considering how philosophers have tried to answer them, and by debating contemporary issues—in politics and everyday life—that prompt us to ask: What's the right thing to do? Topics include controversies about equality and inequality, individual rights and the common good, the role of government and markets, and competing conceptions of identity and community. Cases include ethical questions arising from the pandemic and recent debates about racial justice.

Class meetings integrate video materials with live discussion—sometimes with the class as a whole, sometimes in small breakout sessions. Due to the participatory nature of the course, students are expected to attend all class meetings. Those unable to attend in the morning are welcome to attend the evening version of the course (M and W, 7:30-8:45pm). This is not a recorded version of the morning class, but a live, participatory session covering the same material and led by Dr. Sergio Imparato. All students will also have a weekly, small group discussion section.

Justice is a University Course, which means that students from all Harvard schools are able to enroll.

Note: UNV102 is not an HGSE course. Students must cross-register into GENED 1171 at the Faculty of Arts and Sciences. Enrollment is limited to 750. Students who submit a petition to enroll by August 21 will have priority. A lottery will run Monday, August 24, with approvals and denials sent out at 11:59 p.m. that day.
Engineering Sciences 20R
Science & Engineering for Managing COVID Seminar (216462)

Evelyn Hu
Michael P. Brenner
John Doyle

2020 Fall (4 Credits) Schedule: M 1200 PM - 0200 PM

Instructor Permissions: Instructor Enrollment Cap: 14

Modules in the course will explore the nature of pandemics, COVID-19, the critical elements in modeling, analyzing and mitigating the spread of COVID-19.

Class Notes: The 14 students enrolled in ENG-SCI 20r will meet collectively for two hours a week with a companion class, FRSEMR 52I, of 14 first-year students. For team projects, there will be 7 teams of 4 people, with each team having two first-year students and two upperclass students.

Recommended Prep: None needed: a book on the 1918 Flu will be assigned as a pre-read.

Engineering Sciences 24
Flavor Molecules of Food Fermentation: Exploration and Inquiry (156947)

Pia Sorensen

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: 28

Microorganisms produce a diverse array of specialized small molecules as part of their metabolic processes. In this course we will study the production, properties, and characterization of these molecules through the lens of food fermentation. In particular, we will focus on the small molecules that contribute taste and aroma in fermented foods. Students will experience the scientific inquiry process in a creative way by designing and implementing their own research project based on a fermented food of their choosing. Still a field with much potential for discovery, interested students are invited to continue their research project in the summer.

Recommended Prep: Ls1a , LPSA or equivalent; first semester Organic Chemistry recommended but not required.

**Engineering Sciences  50**

Introduction to Electrical Engineering (14008)

*Marko Loncar*

2021 Spring (4 Credits)  

**Schedule:** TBD  

**Instructor Permissions:** None  

**Enrollment Cap:** n/a

The main course objectives are to introduce students to the exciting and powerful world of electrical engineering and to explain how gadgets that we use every day actually work. After taking ES 50, you will be able to leverage the power of electricity to build systems that sense, control and program the physical world around you. Examples include intelligent and autonomous systems (robots), audio amplifiers (e.g. guitar amp), interactive art installations, light-shows, mind-controlled machines, and so on.

**Recommended Prep:** Enthusiasm, curiosity and desire to build things! Previous engineering or programming experience is NOT needed. The amount of high school physics required is minimal, and is limited to basic concepts only.

Computer-Aided Machine Design (148434)

*Michele Rosen*

2020 Fall (4 Credits)  

**Schedule:** MWF 1030 AM - 1145 AM  

**Instructor Permissions:** Instructor  

**Enrollment Cap:** 60

An introductory course in the design, fabrication, and assembly of mechanical and electromechanical devices. Topics include: Engineering graphics and tolerances; Structural design and material selection; Machine elements and two-dimensional mechanisms; DC motors; Design methodology. Emphasis on hands-on work and team design projects using professional solid modeling CAD software and numerically controlled machine tools.

**Course Notes:** Intended for freshmen and sophomores.

**Recommended Prep:** High school calculus; high school physics.

Quantitative Physiology as a Basis for Bioengineering (122339)

Daniel Needleman
Linsey Moyer

2020 Fall (4 Credits)  Schedule:  MWF 1200 PM - 0115 PM
Instructor Permissions:  None  Enrollment Cap:  n/a

This course is designed as an introduction to thinking as a bio/biomedical engineer and is recommended for first years and sophomores but open to all students. Simple mathematical models are used to represent key aspects of organ systems function. Core engineering concepts are explored through mechanical and electrical examples within the human body. The primary focus is on quantitative descriptions of organ systems function and control in terms of physical principles and physiologic mechanisms. It includes a foundation in human organ systems physiology, including cardiovascular, pulmonary, and renal systems. Emphasis will be given to understanding the ways in which dysfunction in these systems gives rise to common human disease processes.

Course Notes:  Open to first-year students.
Class Notes:  Additional synchronous office hours will be available to students who cannot attend lectures at the primary course time. This course also includes a weekly laboratory section.

Recommended Prep:  Calculus at the high school level

Humanitarian Design Projects (208044)

Christopher Lombardo

2020 Fall (2 Credits) Schedule: T 0600 PM - 0715 PM
Instructor Permissions: Instructor Enrollment Cap: 30

Multi-year long team projects that provide an engineering experience working with partner communities on real-world problems. Projects provide exposure to problem definition, quantitative analysis, modeling, generation of creative solutions utilizing appropriate technology, engineering design trade-offs, and documentation/communication skills. These projects will be implemented with our project partners after the appropriate design and approvals have been obtained.

Course Notes: This course is part of a two-semester sequence. Students are strongly encouraged to enroll ENG-SCI 91HFR in two consecutive semesters. Enrollment limited.

Class Notes: Class time may change based on students' availability.

Guided reading and research.

Course Notes: An ES91r project must possess engineering content at a level similar to other technical engineering courses at SEAS and include many, but not necessarily all, of the following elements: modeling, simulation, design, measurement, and data analysis.

Normally open to candidates accepted for work on a specific topic by a member of the faculty of the School of Engineering and Applied Sciences. Normally may not be taken for more than two terms; may be counted for concentration in Engineering Sciences with prior approval and if taken for graded credit. Applicants must file a project application form prior to the course registration deadline to receive permission to enroll. Project application forms may be obtained from the SEAS website or the Office of Academic Programs, Pierce Hall 110.

Startup R & D (109272)

*Paul Bottino*

2020 Fall (4 Credits)  
**Schedule:**  
T 0300 PM - 0545 PM

**Instructor Permissions:**  
Instructor

**Enrollment Cap:**  
n/a

Students do field-based work in entrepreneurship to develop their existing startup and explore new ideas and opportunities for startup design. The course is for students seeking innovation experience as a founder of a startup. Students may work individually; teams are preferred. Requires self-directed, independent work and active outreach to mentors, customers, and partners for guidance and feedback in addition to that provided by the instructor. Students will share their work regularly and engage in a peer-to-peer feedback forum. The coursework is customized to the needs of each student and their startup role and includes development of product, technology, market, business, organization and leadership.

**Course Notes:**  
Enrollment limited; permission of instructor required.

**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

Individual engineering design projects which demonstrate mastery of engineering knowledge and techniques. During the year, each student will pursue an appropriate capstone project which involves both
engineering design and quantitative analysis and culminating in a final oral presentation and final report/thesis. Students must complete both parts of this course, fall and spring, in order to receive credit.

Course Notes: Ordinarily taken in the senior year. Enrollment is conditional on the student having an approved project before May 1 in the spring semester preceding actual enrollment. Formal project approval rests with ES100 teaching staff. Weekly lectures (fall only) and one hour weekly sections (throughout the year) are mandatory.

Requirements: Pre-Requisite: ENG-SCI 96 OR ENG-SCI 227

Thermodynamics by Case Study (160454)

Scot Martin
Fundamental concepts and formalisms of conservation of energy and increase of entropy as applied to natural and engineered environmental and biological systems. Pedagogical approach is to start with real-world observations and applications, extracting the underlying fundamentals of thermodynamics from these.

Course Notes: ES 112 is also offered as EPS 112. Students may not take both for credit. Undergraduate engineering students should enroll in ES 112. Total class capacity of 18 includes students in both ES 112 and EPS 112.

Mathematical Modeling (156427)
Zhiming Kuang

Abstracting the essential components and mechanisms from a natural system to produce a mathematical model, which can be analyzed with a variety of formal mathematical methods, is perhaps the most important, but least understood, task in applied mathematics. This course approaches a number of problems without the prejudice of trying to apply a particular method of solution. Topics drawn from biology, economics, engineering, physical and social sciences.

Course Notes: Engineering Sciences 115 is also offered as Applied Mathematics 115. Students may not take both for credit. Undergraduate Engineering Students should enroll in Engineering Sciences 115.

Class Notes: Enrollment limited to 40 students for ENG-SCI/APMTH 115.

Requirements: Prerequisite: Must take APMTH 105 OR APMTH 108 OR APMTH 104 OR MATH 112 OR STAT 110 before taking ENG-SCI 115

Introduction to the Mechanics of Solids (131270)
Joost Vlassak
2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None
Enrollment Cap: n/a

A first course in the mechanical sciences which introduces elements of continuum mechanics and explains how materials and structures stretch, bend, twist, shake, buckle, and break. Stress-strain behavior of materials. Statically determinate and indeterminate structures. Stress and strain, equations of motion or equilibrium, strain-displacement relations. Torsion. Beam theory with applications to beam deflections, vibrations, and buckling. Three laboratory sessions required.

Recommended Prep: Applied Physics 50a, Physical Sciences 12a, or 15a and Applied Mathematics 21a or Mathematics 21a (previously) and Applied Mathematics 21b or Mathematics 21b (previously or concurrently).

Requirements: Prerequisite: Math 21a (or equivalent); and Physical Sciences 12a, Physics 15a, or Applied Physics 50a; AND Co-requisite: Math 21b (or equivalent)

Mechanical Systems (144157)
Modeling and analysis of mechanical systems. Topics include 3D rigid body dynamics, resonance, damping, frequency response, Laplace transform methods, Lagrange’s equations, multiple degree-of-freedom systems and an introduction to control and continuous systems. Analytical modeling will be supplemented with numerical simulations and lab experiments. Laboratory exercises will explore vibration, and stabilization using data acquisition systems.

Requirements: Prerequisite: Math 21a and 21b (or equivalents); and Physical Sciences 12a (or equivalent)

Engineering Sciences  128
Computational Solid and Structural Mechanics (133525)

Katia Bertoldi

Introduction to finite element methods for analysis of steady-state and transient problems in solid and structural mechanics. Implementation of simple MATLAB codes and use of existing general-purpose software (ABAQUS). Final project offers opportunities to extend focus to fluid mechanics and heat transfer and to explore additional software (e.g. COMSOL, FEniCS), if desired.

Course Notes: Offered alternate years.

Recommended Prep: Engineering Sciences 120 or equivalent introduction to the mechanics of deformable materials.

Additional Course Attributes:

Engineering Sciences  139
Innovation in Science and Engineering: Conference Course (118939)

David Weitz

Explores factors and conditions contributing to innovation in science and engineering; how important
problems are found, defined, and solved; roles of teamwork and creativity; and applications of these
tools to other endeavors. Students receive practical and professional training in techniques to define
and solve problems, and in brainstorming and other individual and team approaches.

Course Notes: Offered jointly with the Design School as SCI-06272. Taught through a
combination of lectures, discussions, and exercises led by innovators
in science, engineering, arts, and business.

Requirements: Anti-Req: May not be taken for credit if ENG-SCI 239 already complete

Computer Vision (216372)

*Todd Zickler*

2020 Fall (4 Credits)

Schedule: TR 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

An introduction to the mathematical, optical, and computational foundations of computer vision, with a
focus on applications in augmented reality and robotic perception. Topics include: camera optics, digital
color photography pipelines, multi-camera geometry, image processing and manipulation, simultaneous
localization and mapping, lighting and material estimation, and 3D scanning. Emphasis on combining
mathematical modeling with robust algorithms for solving ill-posed problems.

Recommended Prep: Applied Mathematics 22a or Mathematics 21b, Computer Science 51 or 61.

**Engineering Sciences 150**

Probability with Engineering Applications (116859)

*Yue Lu*

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

This course introduces the fundamentals of probability theory for parameter estimation and decision
making under uncertainty. It considers applications to information systems as well as other physical and
biological systems. Topics include: discrete and continuous random variables, conditional expectations,
Bayes' rules, laws of large numbers, central limit theorems, Markov chains, Bayesian statistical inferences, and parameter estimations.

Requirements: Prerequisite: (Applied Math 21a or Math 21a or equivalent) AND Corequisite: (Applied Math 21b or Math 21b or equivalent)

Additional Course Attributes:

Circuits, Devices, and Transduction (207597)

Gu-Yeon Wei

2020 Fall (4 Credits) Schedule: MW 0300 PM - 0415 PM

Instructor Permissions: None Enrollment Cap: n/a

This course introduces fundamentals in designing and building modern information devices and systems that interface with the real world. It focuses on devices and systems that use analog electronics, and it complements COMPSCI 141, which focuses on digital devices and systems. Topics of this course include: time and frequency domain analysis of simple 1st and 2nd order circuits; operational amplifiers and op-amp circuits; basic semiconductor physics; PN junctions and diodes; bipolar junction transistors (BJT); field-effect transistors (MOSFETs); bias circuits and current sources; amplifier gain and bandwidth; frequency response, feedback, noise, and stability. Further, students are introduced to select transducers, particularly motors and their concomitant drive schemes, but also photocells, photodiodes, and semiconductor lasers to highlight device design and characterization.

Requirements: Prerequisite: Math 1a and 1b; AND Co-requisite: Physical Sciences 12b or Physics15b or Applied Physics 50b

Additional Course Attributes:

**Engineering Sciences  153**

Laboratory Electronics (156518)

Thomas Hayes

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: 20

A lab-intensive introduction to electronic circuit design. Develops circuit intuition and debugging skills through daily hands-on lab exercises, each preceded by class discussion, with minimal use of mathematics and physics. Moves quickly from passive circuits, to discrete transistors, then concentrates on operational
amplifiers, used to make a variety of circuits including integrators, oscillators, regulators, and filters. The digital half of the course treats analog-digital interfacing, emphasizes the use of microcontrollers and programmable logic devices (PLDs).

Course Notes: Limited to 20 students. Engineering Sciences 153 is also offered as Physics 123/223. Students may not take both for credit. Engineering students should enroll in ES153. Undergraduate physics students should enroll in Physics 123. Graduate students should enroll in Physics 223.

Additional Course Attributes:

Engineering Sciences 155

Systems and Control (207626)

Na Li
Yue Lu

2020 Fall (4 Credits) Schedule: MW 0130 PM - 0245 PM

Instructor Permissions: None Enrollment Cap: n/a

This course and its follow-on course ENG-SCI 156 concern the fundamentals of information systems in the real world. Together they provide a comprehensive foundation in signal processing, systems design and analysis, control, and communications, while also introducing key linear-algebraic concepts in the context of authentic applications. The first course, ENG-SCI 155, focuses on the basic principles of feedback and its use as a tool for inferring and/or altering the dynamics of systems under uncertainty. Topics include linear algebra, the elemental representations of dynamic systems, stability analysis, the design of estimators (e.g., Kalman Filter) and feedback controllers (e.g., PID and Optimal Controller). The class includes both the practical and theoretical aspects of the topic.

Recommended Prep: Applied math 21a, b or Math 21a, b or equivalent are encouraged to be taken concurrently but not required. Additional sections and materials of linear algebra will be provided in the course.

Requirements: Prerequisite: Math 1a and Math 1b

Additional Course Attributes:

Engineering Sciences 156

Signals and Communications (148148)

Flavio du Pin Calmon

2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: None          Enrollment Cap: n/a

This course is a follow-on to ENG-SCI 155 and continues to develop the fundamentals of information systems in the real world. It focuses on the analysis and manipulation of signals in the time and frequency domains in the context of authentic applications. Topics include: the sampling theorem, convolution, and linear input-output systems in continuous and discrete time. Further, students are introduced to transforms—including Fourier, discrete cosine, wavelet, and PCA / SVD ‘transforms’—that map between vector spaces via matrix multiplication as a method to ease analysis provided conditionalized knowledge. Randomness, noise, and filtering. Waves and interference in the context of communications; antennae, phasors, modulation, multiplexing. Applications in communications and data science.

Recommended Prep: Applied Mathematics 21b or Mathematics 21b.

Requirements: Prerequisite: Math 21a and Math 21b (or equivalents), or Applied Math 22a

Additional Course Attributes:

Engineering Sciences 157

Biological Signal Processing (109358)

Demba Ba

2020 Fall (4 Credits)          Schedule:          TR 1030 AM - 1145 AM

Instructor Permissions: None          Enrollment Cap: n/a

This is the first course on Biological Signal Processing, the science of collection, representation, manipulation, transformation, storing of biological signals, and the use of modern scientific computing tools (Python, Jupyter notebooks) to interpret biological signals and tell engaging and informative stories using biological data. The signals of interest can be deterministic, semi-periodic, transient, random, stationary, non-stationary, etc., depending on their source and generation mechanism. We will use EEG, EKG, temperature data, neural spiking data, and data from Covid-19 as examples. Our focus will be on foundational signal processing concepts that can be applied in a variety of biological applications. Examples include the Fourier Transform, Principal Component Analysis, Clustering, etc. Applications include those to patient monitoring, diagnostics, patient prognostics, online monitoring, and the computation of wellness measures. For many of us, one frustrating aspect of Covid-19 is our inability to understand figures that are reported, such as infection rates and numbers. We will introduce you to a powerful suite of mathematical and scientific computing tools will enable you to evaluate and make decisions based on evidence and data.

Recommended Prep: It is helpful, but not necessary, for students to have taken Engineering Sciences 150 or 156 prior to Engineering Sciences 157.

Requirements: Prerequisite: Math 21a and Math 21b (or equivalents)

Additional Course Attributes:

Engineering Sciences 170
Engineering Quantum Mechanics (207088)
Prineha Narang
2021 Spring (4 Credits)  Schedule: TBD
Instructor Permissions: None  Enrollment Cap: n/a

As a first course in quantum mechanics, tailored for engineering, applied mathematics and computer science students, this course will teach concepts needed to engineer a quantum world, to understand quantum mechanical properties of materials and build an intuition for quantum information science. The course will be a hybrid of lectures on theory, state-of-the-art computational methods ('theory-lab') in quantum simulations and we will use IBM Q Experience, an open access quantum computer. Topics will include periodic potentials and the tight-binding approach, quantizing vibrations in solids, spin matrices and an introduction to qubits. Assignments will teach the basics of the Python programming language, introduce students to open source scientific software and electronic structure methods.

Course Notes: This course also includes a weekly theory lab section.
Recommended Prep: Math 21a (multivariable calculus) and Math 21b (linear algebra)

Materials Selection and Design (216405)

David Clarke

2020 Fall (4 Credits)  Schedule: TR 0130 PM - 0245 PM
Instructor Permissions: None  Enrollment Cap: n/a

The repertory of materials available to engineers today and embodied in engineering systems includes tens of thousands of different materials, as well as naturally occurring ones. This course addresses why specific materials are selected for particular applications and the rational basis for their selection. The course is intended to serve as an introduction to the principles and methodology of selecting materials for engineering components based on the functionality and purpose of the component in different system applications and operating environments. The selection specification includes satisfying a variety of objectives, such as minimizing weight, cost (financial as well as environmental), end of life recycling and material scarcity.

Engineering Sciences 222

Advanced Cellular Engineering (114808)

Kit Parker

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: n/a

This is a combined introductory graduate/upper-level undergraduate course that focuses on examining modern techniques for manipulating cellular behavior and the application of these techniques to problems in the biomedical and biotechnological arenas. Applications in drug discovery, regenerative medicine, and cellular agriculture will be discussed. Topics will include controlling behavior of cells through cell-matrix interactions, cytoskeletal architecture, and cell behavior in processes such as angiogenesis and wound healing. Lectures will review fundamental concepts in cell biology before delving into topical examples from current literature. Students will work weekly in the lab learning cell culture techniques, soft lithography, microscopy, and classical in vitro assays measuring cell behavior.

Course Notes: BE121 and ES222 are the same course. This course has a mandatory laboratory section that will require hands-on work outside of scheduled lecture times.

Recommended Prep: Inorganic chemistry, cell biology, physics, and mathematics at the level of Applied Mathematics 21 or Mathematics 21. Suggested courses include organic chemistry and molecular biology.

Engineering Sciences 231
Energy Technology (125380)

Michael Aziz

2021 Spring (4 Credits)  Schedule:  TBD
Instructor Permissions:  Instructor  Enrollment Cap:  n/a

Principles governing energy generation and interconversion. Current and projected world energy use. Selected important current and anticipated future technologies for energy generation, interconversion, storage, and end usage.

Course Notes:  Students may not take both Engineering Sciences 231 and Engineering Sciences 229 for credit.

Recommended Prep:  One semester of college-level calculus-based physics and familiarity with chemistry at the high school advanced placement level.

Engineering Sciences 234
Technology Venture Immersion (211051)

2021 Spring (4 Credits)  Schedule:  
Instructor Permissions:  Instructor  Enrollment Cap:  30
Using a learning-by-doing approach, student teams will work on their own venture concepts in this intensive immersion course. The course will convey concepts and builds skills required in early stage technology ventures, including problem finding (human-centered design, customer discovery), solution finding (ideation methods, prototyping, user testing), business model validation (hypothesis generation, minimum viable products, lean experimentation), sales and marketing methods, venture financing, and team building and leadership skills. Enrollment limited to first-year MS/MBA: Engineering Sciences students only.

Course Notes: This course is limited to first-year MS/MBA: Engineering Sciences students only. Intensive January term course, Jan. 9-Jan. 24.

### Engineering Sciences 239

Advanced Innovation in Science and Engineering: Conference Course (118942)

*David Weitz*

2020 Fall (4 Credits)    
**Schedule:** TR 0130 PM - 0245 PM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Students are expected to meet all the requirements of Engineering Sciences 139 and in addition are required to prepare an individual term project with significant analytic emphasis in an area of scientific or technological innovation.

**Course Notes:** Offered jointly with the Design School as SCI-06272.

### Additional Course Attributes:

Engineering Sciences 258

Introduction to Bioelectronics (215116)

Jia Liu

2021 Spring (4 Credits)  
Schedule: TBD

Instructor Permissions: None  
Enrollment Cap: n/a

The contents and course requirements are similar to those of Biomedical Engineering 129 (BE 129), with the exception that students enrolled in Engineering Sciences 258 (ENG-SCI 258) are expected to undertake a substantial course project.

Recommended Prep: Applied Physics 50b (OR Physical Sciences 12b, OR Physics 15b), and Math 1a or equivalent. Some background in chemistry and biology at the level of ES 53 is helpful but not required.

Additional Course Attributes:

Engineering Sciences 273

Optics and Photonics (123351)

Federico Capasso
Marko Loncar

2020 Fall (4 Credits) Schedule: MW 0300 PM - 0415 PM
Instructor Permissions: None Enrollment Cap: n/a

The focus is on the foundations of optics/photonics and on some of its most important modern developments and applications. Powerful and widely used computational tools will be developed in the sections. Topics to be covered: Maxwell's equations, Free space optics. Reflection, refraction, polarization (Jones Calculus and Stokes parameters); interference and diffraction. Light-matter interaction, dispersion and absorption. Guided wave optics (including optical fibers). Perturbation and couple mode theory, transfer matrix methods; numerical methods. Optical resonators. Photonic crystals. Near-field optics. Metal optics and Plasmonics. Metamaterials and Metasurfaces.

Course Notes: Open to graduate students and advanced undergraduates.

Recommended Prep: Elements of Electromagnetism, such as taught in Applied Physics 50b, Physics 15b, Physical Sciences 12b, Engineering Sciences 151 or equivalent.

Additional Course Attributes:

<table>

Engineering Sciences 274

Quantum Devices (118028)

Marko Loncar
Federico Capasso

2020 Fall (4 Credits) Schedule: TR 1200 PM - 0115 PM
Instructor Permissions: None Enrollment Cap: n/a

The focus of this course are quantum devices that have revolutionized the field of information science and technology. Particular emphasis this year will be on optical devices and communication technology. First, quantum devices that have enabled development of internet will be discussed, including semiconductor lasers, modulators and photo-detectors. Next, emerging quantum devices that will lead to so-called "second quantum revolution" and development of quantum internet and quantum computers will be introduced. These include single-photon sources and detectors, quantum memories, physical implementations of quantum gates, etc.. Topics that will be covered include quantum dots, color centers in solids, trapped ions and atoms, photon pair generation, quantum teleportation, quantum cryptography and quantum repeaters. The course is a mixture of quantum mechanics, semiconductor device physics, nanophotonics, quantum electronics and quantum optics.

Recommended Prep: Undergraduate level quantum mechanics such as Physics 143a or equivalent.
**Engineering Sciences 280**

Systems Engineering (208004)

*Robert D. Howe*

*Venkat Venkatasubramanian*

2020 Fall (4 Credits)  
**Schedule:** TBD

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 30

This is the first core course for students in the MS/MBA: Engineering Sciences program, to be taken in August of the first year of the program. The course will begin with methods for modeling engineering and business systems, including discrete and continuous systems and feedback controls. Students will write simple simulations and then use professional modeling software to simulate complex systems. Students will next learn design methodology, including stakeholder modeling, ideation, and decision making tools. A final team project will involve design of a system, including simulation and prototyping.

**Course Notes:** This course is limited to first-year MS/MBA: Engineering Sciences students only. Intensive 3-week course, Aug. 7-23.

**Recommended Prep:** Calculus, linear algebra, differential equations.

**Requirements:** First year MS/MBA students only

**Additional Course Attributes:**

**Engineering Sciences 285**

Integrated Design (212920)

*B Altringer*

*Roberto Verganti*

2020 Fall (4 Credits)  
**Schedule:** MT 0430 PM - 0630 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 35

Leading advanced design projects requires the integration of multiple skill areas and ongoing learning about the best data-driven tools to guide development. This course is structured to provide a comprehensive education in all stages of the new product design process, from idea generation to concept development, detailed design and prototyping, testing and integrating data into design decisions. The emphasis is on the way that design teams must both generate and utilize data to make decisions under conditions of extreme uncertainty. A critical feature of modern technical design challenges is that the problem space and solution space are often poorly defined, and/or to a large extent unbounded. The course aims to provide students with rigorous analytical tools to deal with such uncertainties.
Course Notes: This course is limited to second-year MS/MBA: Engineering Sciences students only. Requires instructor consent.

Recommended Prep: Integrated Design is a required core course for the Harvard MS/MBA joint degree program. It builds on skills and tools developed in prior courses in the MS/MBA core sequence. Specifically, students enrolled in this course must have taken Systems Engineering, which covers advanced statistical analysis techniques, data analytics, and the modeling and simulation of complex engineered systems. Students must also have taken the intensive course Technology Venture Immersion, which covers the fundamentals of achieving product-market fit in early-stage ventures, encompassing tools and techniques for problem finding (e.g., customer interviewing and persona development) and solution finding (e.g., brainstorming, prototyping, user testing and defining a Minimum Viable Product).

Engineering Sciences 292A

Launch Lab/Capstone 1 (214579)

2021 Spring (4 Credits)

Instructor Permissions: Instructor

Enrollment Cap: 35

The MS/MBA Capstone is an intensive project that requires teams of students to apply and integrate the skills they have learned across core disciplines developed in the program curriculum. Specifically, teams will be expected to design, build and launch a new technology-based product/service venture, and thereby to demonstrate mastery with respect to three areas of knowledge: Design Knowledge: The use of human-centered design methods to understand users, identify solutions to their needs, and gather feedback via rapid, iterative prototyping. Technical Knowledge: The use of rigorous system engineering methods to plan, design, develop, build, and test a complex technology-based product/service, integrating knowledge across multiple engineering disciplines. Business Knowledge: The use of business model analysis and lean experimentation methods to develop and test a set of hypotheses that capture how the new product/service will create value, including business model design, pricing, sales and marketing, operating model and profit formula.

The Capstone is divided into two parts, the first of which is an immersive course completed during the January term of the G2 year (Capstone I). The subsequent spring course (Capstone II) follows on from and builds upon work completed in January. In Capstone II, dedicated mentors will be allocated to each team based upon the specific projects they are completing. Given students prior coursework, a working knowledge of human-centered design methods, systems engineering techniques, and business modeling and lean experimentation is assumed. Launch Lab therefore focuses on the practical application of these skills to team projects, supplemented by content in three areas: i) seminars on advanced methods and techniques, ii) workshops that demonstrate how to put these skills and tools into practice, and iii) guest speakers who share their experience in the areas of design, technology and business.

Course Notes: Open to MS/MBA: Engineering Sciences students only.
Engineering Sciences  292B

Launch Lab/Capstone 2 (214580)

Russell J Wilcox

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: 35

Professional Writing for Scientists and Engineers (207614)

Jenny Hoffman

Suzanne Smith

2020 Fall (4 Credits) Schedule: W 0300 PM - 0500 PM

Instructor Permissions: Instructor Enrollment Cap: 15
This class leads students to develop their skills in the critical reading and writing of science and engineering. Genres will include research articles, grant proposals, school/fellowship/job applications, or lay abstracts & press releases for the non-scientific public. Crucially, students will be empowered not only to achieve their own writing goals, but also to break down these learned skills and impart them to others, as effective collaborators and mentors of younger students.

Course Notes: We welcome graduate students and senior undergraduates! Enrollment is limited to 15 students. Tentative meeting time is 3-5pm on Weds, but may be updated based on student preference.

Methods & Practices in Design Engineering (214632)

*Nabil Harfoush*

*Arianna Mazzeo*

2020 Fall (4 Credits)  

**Schedule:**  

R 1200 PM - 0245 PM

**Instructor Permissions:** Instructor  

**Enrollment Cap:** n/a

This course is a practice-focused introduction to applied design research and analysis methods on human subjects (individuals or groups) and on organizations in a post-pandemic urban context. The first part of the course provides an introduction to qualitative research methods such as observation, interviewing and emergent design fiction from a cultural and systemic perspective. The second part introduces learners to key methods and tools for analyzing enterprises and their resilience. The course is intended to complement the knowledge of students in engineering, sciences, and multidisciplinary programs and provide them with practical skills in domains adjacent to their fields. The course is suitable for students and for graduate and undergraduate students of many disciplines.

Methodologies in Design Engineering (213398)

*Kit Parker*

*Fawwaz Habbal*

2020 Fall (4 Credits)  

**Schedule:**  

F 1245 PM - 0245 PM

**Instructor Permissions:** Instructor  

**Enrollment Cap:** n/a

This is a SAT/UNSAT seminar course focused on design thinking, analysis, planning, and executing the development of engineered systems. Weekly meetings will include discussions and assigned readings of
case studies and examples of the systems surrounding the developing technical system. Organizing and executing research, innovation, and product design at the scales from academic group, to startup, to major industry will be discussed. The course is designed to allow the engineer and designer to integrate technical knowledge into an executable framework as an individual or leader of a design team.

Course Notes: Enrollment subject to approval of the instructor, with first and second year MDE graduate students receiving priority. Undergraduates are not allowed to enroll.

Solving Tech's Public Dilemmas (107995)

*Ash Carter*

2020 Fall (4 Credits)  

**Schedule:**  

MW 0130 PM - 0245 PM

**Instructor Permissions:** Instructor

**Enrollment Cap:** 20

This course identifies and analyzes alternative solutions to the dilemmas that disruptive technology is posing to public good in the digital, biotech, and jobs and training domains. The objective is for students to craft technologically-informed practical public-private approaches to some of the key policy issues of our time. It begins with a brief history of successful and unsuccessful governance of far-reaching technological changes in the past. The first part of the course treats the ongoing digital revolution, crafting solutions to issues of social media responsibility, cybersecurity, and artificial intelligence (AI). It then turns to the biotech revolution that is gathering momentum, addressing genome editing, bioweapons and bioterror, and the role of venture capital in biotech. The third segment of the course addresses the ways that technology is disrupting the nature of work and lifelong training. The example of driverless cars will be used to illustrate the challenges and opportunities that technology provides to sustain cohesive and prosperous societies in the era of tech ”disruption”. Assignments stress development of key writing and speaking skills.

Course Notes: Cannot be used for computer science or engineering concentration credit. Also offered by HKS as IGA 505.

Engineering Sciences 301

SEAS Teaching Practicum (125374)

John Girash

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: n/a
Practicum emphasizing an active but reflective approach to teaching applied sciences and engineering; designed for graduate students in any SEAS area, not specifically Engineering Sciences. Topics: presentation and communication; in-class teaching and interaction; developing, grading and giving feedback on assignments; course head / TF relations and expectations; cognition and learning. Seminar style with an emphasis on observation, practice, feedback, and reflection. While the primary context of the course is classroom-style teaching, those interested in developing instructional communication skills in other contexts within science and engineering -- labs/studios, presentations, etc. -- are quite welcome, and course tasks can be adjusted for such.

Course Notes: Unlike most 300-level courses at SEAS, this is a class with a regular meeting time and some assignments, largely involving lesson prep and brief background reading. The class will alternate between "teaching weeks" (likely taking until 5:45) and "reflection weeks" (aiming to end at 5pm). Counts towards the Derek Bok Center’s <a href="https://bokcenter.harvard.edu/teaching-certificate">Teaching Certificate</a>. Graduate students from all science and engineering fields within Harvard are welcome. Postdocs and motivated undergraduates may audit, doing the same work as enrolled graduate students. Formerly COMPSCI 365.
