This seminar uses histories between Asia and the United States to illuminate one of the most urgent issues of our time: the relationship between borders, human mobility, and society. Moving across histories of Asian migration that tie into indigenous, black, and other migrant histories, this seminar expands our understanding of what constitutes "the border," and how migrant lives were made and remade in relation to such borders. The readings for each week enunciate the forms of border making this seminar explores which include but are not limited to: deportation, documentation, public health, gender and sexuality, and borderlands.

Slavery was a ubiquitous phenomenon in Europe, Africa, and Asia in the centuries between the fall of Rome and the rise of the Atlantic slave system. Using a mixture of primary and secondary readings, this course offers students a survey of the medieval forms of slavery in Europe, North Africa, the Middle East, and the Indian Ocean, with additional comparative readings where relevant. A major focus will be the distinctly gendered forms of slavery that emerged in Christian and Muslim lands in the Mediterranean between 1200 and 1500. Assessments will include participation, several short papers, and a capstone project.

History 12G Section: 01
Atlantic Slave Wars (216003)

Vincent Brown
2021 Spring (4 Credits) Schedule: R 1245 PM - 0245 PM
Instructor Permissions: Instructor Enrollment Cap: 15

This course explores how the violence of imperial expansion and transatlantic enslavement remade the history of Europe, Africa, and the Americas. European imperial conflicts extended the dominion of capitalist agriculture. African battles fed captives to the transatlantic trade in slaves. Masters and their subalterns struggled with one another continuously. These clashes amounted to a borderless slave war: war to enslave, war to expand slavery, and war against slaves, precipitating wars waged by the enslaved against slaveholders, but also between slaves themselves. Examining how conflicts in one part of the world travel and take root in another will enhance our understanding of the relationship between European, African, and American history.

How Empires Fall: Case Studies and Theoretical Approaches from the Bronze Age to Today (216181)

Henry Gruber
2021 Spring (4 Credits) Schedule: W 0300 PM - 0545 PM
Instructor Permissions: Instructor Enrollment Cap: 15

What happens when empires fall? In this course, we will examine three historical imperial collapses from the deep past: the Bronze Age Collapse, the fall of Rome, and the end of Aztec Empire. We examine these events from a material and archaeological perspective, supplemented with primary source readings in translation, analyzing the varying impacts of internal dissention, external military conflict, climate change, and pandemic disease. Then we will turn to the present and examine decolonization and its legacies, as well as questions of contemporary empire. The course is writing focused, and assignments build to a final research paper.

Instances of statelessness and refugeedom dominate headlines today. But what does "statelessness" mean? Rather than solely focusing on contemporary legal interpretations of statelessness, this course emphasizes twentieth century global, regional, and national histories within which statelessness emerged as a political and legal category. Engaging judgments, treaties, videos, and images, students explore postwar displacement, decolonization, postwar reconstruction and Cold War tensions. The course also dwells on the limits of refugee regimes: including the partition of India, forced repatriations in Sri Lanka, and asylum-seeking in Hong Kong. A final module discusses ethical and political issues at stake in writing histories of statelessness, and discusses potential archives, including the use of oral histories.

Course Notes: The first meeting for the course will be Thursday, September 4th. The final meeting day and time may be adjusted depending on enrollment after the course registration deadline on Wednesday, September 9th.

What constitutes social movements and how do they challenge structures of social, cultural, and political domination? In what ways have social movements and popular mobilizations shaped everyday life and modern state forms in the twentieth century Arab world? This synchronous online course will address these questions by examining the local, regional, national, and international contexts within which social movements have operated in the Arab world from the late Ottoman to the contemporary era. We will study popular politics through the prism of intellectual and social history, political and anthropological theories, gender, and film, drawing on works on Algeria, Bahrain, Egypt, Iraq, Lebanon, Oman, Palestine, Saudi Arabia, and Syria.
History 12K Section: 01

Arabs, Jews, and "Arab Jews" in the Modern Middle East (216117)

Caroline Kahlenberg

2021 Spring (4 Credits) Schedule: T 1200 PM - 0245 PM

Instructor Permissions: Instructor Enrollment Cap: 15

What has it meant to be an Arab, a Jew, or an "Arab Jew" in the modern Middle East? We will historicize these identities by tracing their shifting meanings in the late 19th and 20th-century Arabic-speaking world, from Morocco to Iraq to Yemen. We'll examine everyday relationships and political encounters between Jews and Arabs in the context of the Ottoman Empire, British and French colonialism, Zionism and Arab nationalism, anti-Semitism and Islamophobia, and the ongoing Israeli-Palestinian conflict. Students will be assigned fiction literature, primary documents, podcasts, theoretical texts, visual sources, and films.

History 12L Section: 01

Power and Protest: U.S. Social Movements in the 1960s and 1970s (216116)

Lisa McGirr

2021 Spring (4 Credits) Schedule: M 0945 AM - 1145 AM

Instructor Permissions: Instructor Enrollment Cap: 15

The 1960s and 1970s witnessed dynamic movements of collective action in the United States and the world. This research seminar charts the key events, actors, ideas and strategies of these movements—from civil rights and black power to women’s rights and the conservative movement—and situates them within the central economic, social, and geopolitical developments of the post-World War II period. Students will gain an understanding of why so many different social movements emerged in this moment and explore their trajectories and successes and failures.
History 12M Section: 01
Abolitionist Women and Their Worlds (216001)

Tiya Miles
2021 Spring (4 Credits) Schedule: W 1245 PM - 0245 PM
Instructor Permissions: Instructor Enrollment Cap: 15

What was life like for women who stood at a major crossroads of history? What was required, in tumultuous times, to think and act boldly? This course focuses on women from diverse racial and regional backgrounds who labored to abolish slavery in the United States and then enlarged their political visions to include a range of progressive causes: anti-racism, desegregation, temperance, black suffrage, and women's suffrage. We will explore the texture of women's experiences in the 19th century, the conditions that gave rise to multifaceted societal change, and the ways in which that change unfolded. Finally, our course will consider how these women's stories are remembered in present-day public culture and whether knowledge of this era can play a role in the urgent societal issues of our own time.

History 12N Section: 01
Abolition Ecologies: Nature, Race, and Labor in the United States (217623)

Rebecca Croog
2021 Spring (4 Credits) Schedule: T 0945 AM - 1145 AM
Instructor Permissions: Instructor Enrollment Cap: 15

This seminar examines the space between environment and history in the contemporary United States. Our task is to explore the ways that power takes on spatial elements in distinct historical
settings. We will use "abolition ecologies" as a framework for analyzing US history, travelling across a variety of places and spaces—from prisons to protests to wildfires—to understand how nature, race, and labor shape American cultures. You will learn to think differently about terms like "sustainability" and "equality" and gain experience in spatial analysis, using maps as sources and narratives for finding clues about changing notions of space.

History  13C  Section: 01

St. Louis from Lewis and Clark to Michael Brown (159640)

Walter Johnson

2021 Spring (4 Credits)  Schedule:  R 0945 AM - 1230 PM

Instructor Permissions:  Instructor  Enrollment Cap:  15

St. Louis was the epicenter of American empire in the nineteenth century: the point of embarkation for Lewis and Clark; the military headquarters for U.S. Indian wars. It was likewise central to the history of slavery: from the Missouri Compromise to Dred Scott. The city’s intertwining of the history of empire and race continued through the twentieth century in its prominent role in the defense industry as well as the history of segregation, urban "redevelopment," and police violence. How does the global capitalist and imperialist history of St. Louis relate to its recalcitrant inequality, structural racism, and endemic violence?

"Black Indians": History, Identity, and Theory (212655)

Tiya Miles

2020 Fall (4 Credits)  Schedule:  W 1200 PM - 0245 PM

Instructor Permissions:  Instructor  Enrollment Cap:  15
This seminar will explore intersections in African American and Native American histories with an emphasis on pivotal moments in the shaping of a modern identity referred to as "Black Indian." Students in this seminar will explore and analyze historical contexts and contingencies leading to thick interactions between people of African descent and indigenous Americans as well as experiential testimony by individuals asserting mixed race and/or bi-cultural Afro-Native identities. During our time together, students will discover not only the impact that black and native peoples have had on one another, but also the impact they (and ideas about them) have had on the development and sustainment of an American national identity.

Soulcraft and Statecraft in China and the West (217465)

James Hankins

2021 Spring (4 Credits)  Schedule:  M 0300 PM - 0500 PM

Instructor Permissions:  Instructor  Enrollment Cap:  15

Comparative study of how Western and Chinese societies have sought to improve the moral and intellectual quality of governing elites. The course explores meritocratic political thought and institutions principally in imperial China, ancient Greece, the Roman empire, and Western Europe in the Renaissance. We will address questions such as: What counts as merit in political elites? What kind of learning can best produce personal virtue and insight into government? How can a society or a political system successfully "elevate the worthy”? What laws and constitutional devices have been used to support traditional meritocracies and to minimize corruption, closed elites, and popular discontent with elite claims to authority? Special attention will be paid to Confucian political thought, including modern political Confucianism. All readings are in English.

The New Deal and American Liberalism (126678)

Brett Flehinger

2020 Fall (4 Credits)  Schedule:  W 0645 PM - 0845 PM
This course studies the responses to the Great Depression that formed the New Deal. Particular attention will be paid to the connection between policy development and the rise of American Liberalism. Major topics include Social Security, economic redistribution, Keynesianism, social planning, regulatory reform, conservative critiques of the New Deal and others.

U.S. History: Major Themes in the Twentieth Century (125517)
Lisa McGirr
2020 Fall (4 Credits)    Schedule:    M 0945 AM - 1145 AM
Instructor Permissions:  Instructor    Enrollment Cap:    15
The twentieth-century United States is a vibrant and flourishing field of historical study. The goal of this seminar is to introduce students to the central questions, problems and debates in the history of the "American century." Students will learn how the literature of history has developed through reading both older and newer approaches. Readings focus on questions of politics, political culture, the state and social life. The course is both thematic and chronological (as well as necessarily selective). Students are expected to prepare well for seminar and to participate actively in discussion. Each class will begin with a brief introduction to the readings (no more than five minutes) by a member of the seminar. The idea here is for one student to take special responsibility for leading discussion, raising questions and problems posed by the reading.

History  80G Section: 01
Travelers to Byzantium (108055)
Dimiter Angelov
2021 Spring (4 Credits)    Schedule:    R 1200 PM - 0245 PM
Instructor Permissions:  Instructor    Enrollment Cap:    15
This seminar is based on the fascinating firsthand accounts of travelers who visited Constantinople and other areas of Byzantine world. The texts will generate questions for discussion and research on a wide range of issues, such as Byzantine civilization, cross-cultural contacts in the Middle Ages, the practice and experience of travel, and the interrelationship of travel, ethnography, and politics. Sources will be chosen from among the works of western, Islamic, Jewish, and Russian travelers.
History 82D Section: 01

French Colonial Encounters: 1870's to Present (117904)

Mary Lewis

2021 Spring (4 Credits) Schedule: M 1245 PM - 0245 PM

Instructor Permissions: Instructor Enrollment Cap: 15

Explores and compares three colonies in the French Empire: French West Africa, Algeria, and Indochina, considering how colonial rule was extended, how individuals responded, and what reverberations there were between colony and metropole.

Recommended Prep: No foreign languages required, however one language relevant to the regions studied (e.g. French, Arabic, Vietnamese, etc.) is helpful.

History 82F Section: 01

The Origins of the Cold War: The Yalta Conference (1945) (124495)

Serhii Plokhii

2020 Fall (4 Credits) Schedule: M 0300 PM - 0500 PM

Instructor Permissions: Instructor Enrollment Cap: 15

The Yalta Conference is analyzed in the context of the long-term geostrategic goals of the United States, the United Kingdom, and the USSR. Special attention is paid to psychological and cultural aspects of the negotiating process.
History 83A Section: 01

Markets and States: The History of Economic Thought Since 1750 (121621)

Emma Rothschild

2020 Fall (4 Credits)  Schedule: T 1245 PM - 0245 PM
Instructor Permissions: Instructor  Enrollment Cap: 15

Examines the history of various kinds of economic thought, including 18th century laissez-faire political economy and late 19th century theories of economic and social reform. Will consider writings in different media from scientific theories to economic periodicals. Students will prepare individual research projects.

Harvard and Slavery (110365)

Sven Beckert

2021 Spring (4 Credits)  Schedule: W 1200 PM - 0200 PM
Instructor Permissions: Instructor  Enrollment Cap: 15

Will explore the links between Harvard and slavery during the first 229 years of the university’s history. Students will write original research papers on various aspects of the history of Harvard University and slavery, including how resources extracted from slave labor benefited the university, the ways Harvard administrators and faculty supported or struggled against the institution of slavery, and what kinds of links the university built to slaveholders.

“What is Intellectual History?” (109927)

*Ann Blair*

2021 Spring (4 Credits)  
**Schedule:**  
W 0300 PM - 0545 PM  
**Instructor Permissions:**  
Instructor  
**Enrollment Cap:** 15

Intellectual historians study almost every period, place, and theme in human history: from classical times to the present, from Asia to the Americas, by examining philosophy and religion, social and political thought, literature and art, and other expressions of human agency and intention that range from ancient epics to graphic novels. This section will draw examples from a wide range of moments and regions to ask how intellectual history has developed as a field, what methods it uses, and how it can be distinguished from other forms of history even as it informs debates of interest to all historians.

**Course Notes:** Required of all History concentrators and offered every spring semester. Typically taken in the spring term of sophomore year, but first‐semester sophomores planning to concentrate in History are encouraged to take it at the first opportunity. Open to students taking a secondary field in History and to students in other concentrations (space permitting). This course may not be audited or taken Pass/Fail. It enrolls prior to shopping period through the History concentration. Please contact the ADUS in History or the admin tutor in History 97 (Matthew Sohm, msohm@g.harvard.edu), if you wish to enroll without being a regular‐sequence concentrator in History, preferably by Thanksgiving.

“What is Imperial History?” (109930)

*Sugata Bose*
Though empires have recently disappeared from the map, for historians these sprawling multi-ethnic, multi-confessional states remain crucial laboratories for the study of violence, power, ideology, aesthetics, and identity. This section will introduce students to the many ways historians define empires and interpret the experiences of those who inhabited them. How does one write the history of such diverse, expansive entities? How does imperial history incorporate the perspectives of disenfranchised, enslaved, and colonized peoples? What is its scale? How does the work of historians relate to images of empire generated through public commemoration and popular memory?

Course Notes: Required of all History concentrators and offered every spring semester. Typically taken in the spring term of sophomore year, but first-semester sophomores planning to concentrate in History are encouraged to take it at the first opportunity. Open to students taking a secondary field in History and to students in other concentrations (space permitting). This course may not be audited or taken Pass/Fail. "What is Urban History?" (110445)

Lizabeth Cohen

The COVID-19 crisis and its economic fallout have directed new attention to the viability of cities in the United States. This seminar will explore the methods, sources, and ideas historians have employed to understand the evolution and significance of American urban environments. How central have cities been to American identity? What changes have taken place in the way cities have related to their larger metropolitan areas? How have ethnicity, race, gender, and sexuality played out in the urban experience? What impact have cities had on the health of the American environment? Questions like these will drive this seminar.

Course Notes: Required of all History concentrators and offered every spring semester. Typically taken in the spring term of sophomore year, but first-semester sophomores planning to concentrate in History are encouraged to take it at the first opportunity. Open to students taking a secondary field in History and to students in other concentrations (space permitting). This course may not be audited or taken Pass/Fail.

"What is Biography?" (110446)

Jill Lepore

2021 Spring (4 Credits) Schedule: T 1200 PM - 0245 PM

Instructor Permissions: Instructor Enrollment Cap: 15

Biographers write histories of lives. Their storytelling is often novelistic but their standards of evidence are those of the historian. They confront distinctive questions: What lives are worth writing? What is the relationship between the individual and society? What rules govern the relationship between biographers and their subjects? How has the art of biography changed over the centuries, and what forces have driven those changes? In this section, we'll read both notable biographies and the critical literature on biography as a genre that is often seen to be at odds with the conventions of other kinds of historical writing.

Course Notes: Required of all History concentrators and offered every spring semester. Typically taken in the spring term of sophomore year, but first-semester sophomores planning to concentrate in History are encouraged to take it at the first opportunity. History 97P Section: 01

"What is Indigenous History?" (215835)
While some first peoples prefer culturally specific identities over the general term "indigenous," others embrace indigeneity as an opportunity to establish global connections, explore overlapping colonialisms, assert political identities, or seek redress through international institutions. This seminar investigates the challenges and opportunities to be found in indigenous history. Drawing from the Americas, the Pacific, the Arctic, Asia and elsewhere, we will consider settler colonialism, genocide, slavery and survivance, representational politics, and a range of common challenges such as language loss, climate change, and reconciliation. We’ll explore colonial archives and oral histories, political tracts and legal cases, autobiographies, protest movements, and more.

Course Notes: Required of all History concentrators and offered every spring semester. Typically taken in the spring term of sophomore year, but first-semester sophomores planning to concentrate in History are encouraged to take it at the first opportunity. Open to students taking a secondary field in History and to students in other concentrations (space permitting). This course may not be audited or taken Pass/Fail. History 1001 Section: 01

The War in Vietnam (205257)

Fredrik Logevall

2021 Spring (4 Credits) Schedule: MW 1030 AM - 1145 AM

Instructor Permissions: None Enrollment Cap: n/a

The struggle for Vietnam occupies a central place in the history of the 20th century. How did it happen? Why did first France and then the United States wage large-scale war there, and why did both powers fail in their effort to subdue the revolutionary Vietnamese forces? And what is the legacy of the struggle for our world and for U.S. foreign policy today? This course examines these and related questions, with particular attention to the long period of direct American involvement. The events will be considered in their relationship to Vietnam’s history, to American politics and society, and to the concurrent Cold War.

Course Notes: This course is jointly-offered with the Kennedy School as IGA-291. The enrollment for HKS students is 10. No prior college level History is required or assumed. Students seeking to fulfill their Social Sciences distribution requirement and freshmen welcome.

The 20th Century United States: Politics, Society, Culture (212669)

Lisa McGirr

2021 Spring (4 Credits) Schedule: TR 0900 AM - 1015 AM
Instructor Permissions: None Enrollment Cap: n/a

This course charts key developments in the history of the 20th century United States beginning with United States emergence as a leader of global capitalism. Topics include World War I, twenties culture wars, the New Deal, World War II, the Cold War, sixties social movements, neo-liberalism, and the rise of mass incarceration. The contest over the meaning of American freedom at all levels of American society—from Congressional debates to the picket line—forms a central theme. The course includes discussion of high and low politics, political economy, and shifting patterns of culture. The course has two goals: First, to provide the foundational knowledge about past political struggles that will help students understand the roots of issues still wrestled with today; and second to introduce students to historical thinking and interpretation through the analysis of primary and secondary sources. No prerequisites are required and the course is open to all undergraduates.

Course Notes: No prior college level History is required or assumed. Students seeking to fulfill their Social Sciences distribution requirement and freshmen welcome.

History 1004 Section: 01

Modern Europe, 1789 to the Present (207529)

Carla Heelan

2021 Spring (4 Credits) Schedule: MW 0300 PM - 0415 PM
Instructor Permissions: None Enrollment Cap: n/a

To many Europeans over the past two centuries, their modernity was evident in every aspect of their lives, from musical innovation to industrial development, from expanding educational opportunities to new technologies of warfare. Yet how exactly did Europeans understand modernity—and, for that matter, how
do we—and how does the period from the French revolution to the present cohere? Many, in fact, experienced these two hundred-odd years as arguably a time of conflict and rupture rather than coherence. Yet historians nonetheless describe the changes of these centuries—urbanization; nationalism; mass migration; political transformation; war; imperial expansion; cultural turmoil—as various aspects of the modern experience. In class you will engage with written records, and visual and aural media, in order to make your own claims about European modernity and its lasting influence on our world today.

Course Notes: No prior college level History is required or assumed. Students seeking to fulfill their Social Sciences distribution requirement and freshmen welcome.

History 1006 Section: 01

Native American and Indigenous Studies: An Introduction (207523)

*Philip Deloria*

2020 Fall (4 Credits)  

**Schedule:** MW 1030 AM - 1145 AM  

**Instructor Permissions:** None  

**Enrollment Cap:** n/a

Though American Indian people make up 1.7% of the U.S. population, their importance outweighs the census numbers. Native American history and politics define critical issues in law, energy, land management, and government, while the culture industries inevitably confront the curious hold that indigenous people have on American culture. American conquest and colonialism invite connection and comparison across a global scale, particularly in settler states such as Canada, Australia, and Aotearoa/New Zealand. This course offers a broad introductory survey of these and other issues as it explores the development and current state of the history-based interdisciplinary field known as Native American and indigenous Studies.

Course Notes: No prior college level History is required or assumed. Students seeking to fulfill their Social Sciences distribution requirement and freshmen welcome.

History 1008 Section: 01

The State of Israel in Comparative Perspective (203044)
This course addresses controversies surrounding the history of Zionism and the state of Israel. Central to these controversies are questions of comparison. Is Zionism a movement for collective liberation, like national movements of stateless or colonized peoples, or a variety of western colonialism? Does Israeli statecraft operate within a normal geopolitical spectrum, or is it unusually expansionist and aggressive? This course seeks to answer such questions through a broad and deep analysis that spans the 19th and 20th centuries, pays close attention to Israel’s social and cultural history as well as high politics and military affairs, and imbeds modern Israel into multiple global contexts.

History 1015 Section: 01

Native American Women: History and Myth (212666)

Tiya Miles

2021 Spring (4 Credits) Schedule: TR 0130 PM - 0245 PM

Instructor Permissions: None Enrollment Cap: n/a

This course explores histories of women from diverse indigenous nations within the current boundaries of the United States. We will attend closely to methods and sources employed in historical inquiry about Native women even as we track change over time in a range of contexts. We will address multiple themes that intersect in Native women’s experience: tensions between history and myth, concepts of family and intimate relationships, spiritual understandings and notions of tradition, gender roles and cross-cultural gender difference, processes of colonialism, conceptions of land and effects of land dispossession, cultural negotiation and adaptation, public representation and misrepresentation, and personal, familial, and tribal perseverance.

History 1023 Section: 01

Japan in Asia and the World (142657)

Andrew Gordon

David Howell
Japan is a collection of islands, but its past and present unfolds through continuous interaction with wider worlds. This course places Japan in contexts of Asian and global history. It begins with the people, institutions, and ideas of premodern Japan, from the emergence of a court-centered state 1500 years ago to a warrior-dominated society centuries later. We then examine the tumultuous process of change from the 19th century through the present and explore how people in Japan have dealt with the dilemmas of modernity that challenge us all.

Course Notes: No prior college level History is required or assumed. Students seeking to fulfill their Social Sciences distribution requirement and freshmen welcome.

The British Empire (125049)

Maya Jasanoff

2020 Fall (4 Credits) Schedule: MW 1030 AM - 1145 AM

Instructor Permissions: None Enrollment Cap: n/a

Less than a century ago the British Empire ruled a quarter of the world. This course surveys the empire's extraordinary rise and fall from the American Revolution to World War II. Course presents a narrative of key events and personalities, introduces major concepts in the study of global history, and considers the empire's political and cultural legacies for the world today. Includes multimedia presentations, in-class discussion and debate, and engaging readings ranging from Niall Ferguson to Mahatma Gandhi.

Course Notes: No prior college level History is required or assumed. Students seeking to fulfill their Social Sciences distribution requirement and freshmen welcome.

Race, Capitalism, and the Coming of the Civil War (123124)  
Walter Johnson  
2020 Fall (4 Credits)  
Schedule: TBD  
Instructor Permissions: None  
Enrollment Cap: n/a  
This course treats the history of the 19th-century US and the Civil War in light of the history of US imperialism, especially the War of 1812, the Mexican-American War, and the illegal invasions of Cuba and Nicaragua in the 1850s. Likewise, it relates the history of slavery in the US to the Haitian Revolution, the Louisiana Purchase, Indian removal, Atlantic cotton, land and money markets, and the hemispheric history of antislavery.  
Course Notes: No prior college level History is required or assumed. Students seeking to fulfill their Social Sciences distribution requirement and freshmen welcome.  
Class Notes: Please refer to the History 1028 canvas site to view the lectures for the course online. Professor Johnson will be in touch to set up a separate time to meet with students who are enrolled in the course.

Byzantine Civilization (108059)  
Dimiter Angelov  
2021 Spring (4 Credits)  
Schedule: MW 1030 AM - 1145 AM  
Instructor Permissions: None  
Enrollment Cap: n/a  
The Byzantine (Eastern Roman) Empire outlived the fall of Rome by a thousand years. In what ways did Byzantium preserve the institutions and politics of imperial Rome? In what ways was it a medieval civilization? How did Byzantium’s professional armies, able diplomats, and brilliant intellectuals ensure its survival and renewed expansion? This course traces the story of the Byzantine Empire between c. 600 and 1453, setting it in the context of medieval and world history.  
Course Notes: No prior college level History is required or assumed. Students seeking to fulfill their Social Sciences distribution requirement and freshmen welcome.

History 1036 Section: 01

Modern South Asia (116237)

*Sugata Bose*

2020 Fall (4 Credits)  
**Schedule:** MW 1200 PM - 0115 PM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

This course provides the historical depth in which to understand modern and contemporary South Asia in broad Indian Ocean and global contexts. It explores the history, culture, and political economy of the subcontinent which provides a fascinating laboratory to study such themes as colonialism, nationalism, partition, the modern state, democracy development, religious identities, and relations between Asia and the West. Significant use of primary written sources (in English) and multi-media presentations.

**Course Notes:** No prior college level History is required or assumed. Students seeking to fulfill their Social Sciences distribution requirement and freshmen welcome.

First Empires: Power and Propaganda in the Ancient World (159593)

*Gabriel Pizzorno*

2021 Spring (4 Credits)  
**Schedule:** TR 0300 PM - 0415 PM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

This course traces the continuum of socio-political and cultural developments in the Near East that led, over the course of three millennia, from stateless societies to the emergence of Assyria as the first empire in history. The class focuses on the long-term history of power centralisation, and the role of ideology and propaganda in overcoming resistance to this concentration of authority. The course material covers a broad evidentiary and chronological range. We will employ textual, visual, and archaeological sources to explore the evolution of the political and cultural landscape in the Near East and the Mediterranean, from the emergence of the first city-states in the late fourth millennium BCE to the early development of Roman imperial ideology around the start of the Common Era.

Reasoning from the Past: Applied History and Decision Making (213257)

Fredrik Logevall

2020 Fall (4 Credits)  

Schedule:  
MW 1200 PM - 0115 PM

Instructor Permissions:  
Instructor

Enrollment Cap:  
5

This course provides a basis for using history as a tool for analyzing foreign, security, and scientific policy. It also calls attention to some common fallacies in reasoning from history and discusses ways to avoid them. Along the way, we will consider the evolution of the modern international system and particularly the evolving role of the United States.

Course Notes:  
Offered jointly with the Kennedy School as IGA 125 A/IGA 125 B. The enrollment limit for FAS students is 5.

Class Notes:  
Students enrolled in this course attend two 75-minute class meetings a week. To support remote learning across time zones, students may register for one of two sections of this course. Both sections of the course meet together for one of the weekly meetings and meet in separate time blocks for the other weekly meeting. Course sections and meeting times are listed separately in my.harvard for registration.

Early Modern Europe, 1450-1789 (107973)

Tamar Herzog

2020 Fall (4 Credits)  
Schedule:  
MW 0900 AM - 1015 AM

Instructor Permissions: None  
Enrollment Cap: n/a

This course is an introductory survey of European Early Modern history, from the fifteenth to the late eighteenth century. Organized chronologically and thematically, it examines developments from the late Middle Ages to the Age of Revolutions, including the passage from feudalism to urban institutions, the Renaissance, European Expansion overseas, the Protestant and the Catholic Reformations, the Scientific Revolution, the Rise of Absolutism, slavery, the Enlightenment, and Revolutions. Meetings will alternate between lecture and discussion of primary sources (available in English translation).
History 1206 Section: 01

Empire, Nation, and Immigration in France since 1870 (109409)

Mary Lewis

2020 Fall (4 Credits) Schedule: TR 1030 AM - 1145 AM
Instructor Permissions: None Enrollment Cap: n/a

This course explores the history of France from the foundation of the Third Republic to the beginning of the 21st century. Topics include the advent of modern left-wing, right-wing, and anti-Semitic politics; imperial expansion and its consequences; the devastating impact of the First World War; the tumultuous interwar era; the Second World War and the politics of resistance, collaboration, and memory; decolonization; the May 1968 movement; immigration and identity politics since the 1970s.

Course Notes: No prior college level History is required or assumed. Students seeking to fulfill their Social Sciences distribution requirement and freshmen welcome.

German History: A User's Guide (110285)

Alison Frank Johnson

2020 Fall (4 Credits) Schedule: TR 1200 PM - 0115 PM
Instructor Permissions: None Enrollment Cap: n/a

German History loomed like a specter over the twentieth century. In the twenty-first century, Americans have been debating the relevance and legitimacy of comparisons between German history and our contemporary world. How useful is German history for understanding our current moment? How might our present-day concerns distort what we see in the past? This course will examine the history of Germans in Europe and elsewhere, starting with the revolutions of 1848 and ending with the separation of Austria, West Germany, and East Germany following the Second World War. Themes will be war, insurrection, and terrorism, revolution and counter-revolution,
gender and sexuality, reform, violence, anti-Semitism, racial thinking and racism, and migration.

Course Notes: This course is also offered through the German Department as German 143. Credit may be earned for either German 143 or History 1265, but not both. No prior college level History is required or assumed. Students seeking to fulfill their Social Sciences distribution requirement and freshmen welcome.

German Social Thought, Nietzsche to Habermas (126545)

Peter Gordon

2020 Fall (4 Credits) Schedule: TR 1030 AM - 1145 AM
Instructor Permissions: None Enrollment Cap: n/a

A philosophical and historical survey of major debates in modern German social theory over the span of a century, from Nietzsche's anti-foundationalist critique of morality and truth to Habermas's attempt to rebuild a pragmatist-transcendentalist theory for ethical and discursive reason after the collapse of metaphysics. Readings by Nietzsche, Weber, Heidegger, Adorno, Horkheimer, and Habermas.

Course Notes: This course is equivalent to German 140. Credit may be earned for History 1323 or German 140, but not both.
History 1324 Section: 01

French Social Thought, Durkheim to Foucault (126546)

Peter Gordon

2021 Spring (4 Credits) Schedule: TR 1030 AM - 1145 AM

Instructor Permissions: None Enrollment Cap: n/a

A survey of major themes and debates in modern French social theory over the span of a century, from Durkheim's neo-Kantian theory of the social symbolic to Foucault's conception of the historical a priori, concluding with the recent emergence of neo-liberal conceptions of both history and society. Major readings by Durkheim, Mauss, Sartre, Kojève, Fanon, de Beauvoir, Lévi-Strauss, Lacan, Althusser, Derrida, and Foucault.

History of American Populisms (126293)

Brett Flehinger

2021 Spring (4 Credits)  Schedule:  MW 0900 AM - 1015 AM
Instructor Permissions: None  Enrollment Cap: n/a

This course studies the American Populist tradition that defines the common "people" as the foundation of American economic and political life and thrives on opposition between the people and "elite" interests. The class places the formal Populist movement of the late nineteenth century in broader context, from Jeffersonian tradition through the rise of anti-elitist and anti-government movements characterized by George Wallace, Sarah Palin, the Tea Parties, and the political rise of Donald Trump.

Course Notes: No prior college level History is required or assumed. Students seeking to fulfill their Social Sciences distribution requirement and freshmen welcome.

Modern China (109621)

Arunabh Ghosh

2021 Spring (4 Credits) Schedule: TR 1200 PM - 0115 PM

Instructor Permissions: None Enrollment Cap: n/a

This lecture course will provide a survey of some of the major issues in the history of post-imperial China (1912-). Beginning with the decline of the Qing and the dramatic collapse of China's imperial system in 1911, the course shall examine how China has sought to redefine itself anew over the past one-hundred years. The revolutionary years of 1911, 1949, and 1978 will serve as our three fulcrums, as we investigate how China has tussled with a variety of 'isms' (such as republicanism, militarism, nationalism, socialism, and state capitalism) in its pursuit of an appropriate system of governance and social organization. In so doing, we shall also explore the social, economic, cultural, and scientific changes wrought by these varied attempts at state-building.

East Asian Environments: China, Japan, Korea (205113)

Ian J. Miller

2021 Spring (4 Credits) Schedule: MW 1030 AM - 1145 AM

Instructor Permissions: None Enrollment Cap: n/a

The future is not what it used to be. Nowhere is this more evident than in the natural world, where climate change and fading biodiversity, energy anxieties and environmental disasters have undermined the bedrock of history: the assumption of a stable continuity between past, present, and future. This class visits East Asia—China, Japan, and the Koreas, vibrant economies and agents of historical change, to explore the transformation of the natural world in modern times. We will analyze nuclear power plants and cruise rivers, explore industrial ruins and debate public policy as we define Asia's role in the global environmental future.

Course Notes: No prior college level History is required or assumed. Students seeking to fulfill their Social Sciences distribution requirement and freshmen welcome.

Modern Japan: Empires and Aftermaths (215991)

Andrew Gordon

2020 Fall (4 Credits) Schedule: TR 0130 PM - 0245 PM

Instructor Permissions: None Enrollment Cap: n/a

Examines Japan in the 20th century world, first its rise and fall as an empire, then its integration into an American dominated world order. Looks at political, social, economic and cultural aspects of the Japanese experience of modernity from the late 19th century through World War II. Then turns to the "rise and fall" of Japan's world beating economy, and the great social and cultural transformations of the postwar decades. Offers historical context for contemporary issues ranging from economic crisis and inequality to tension with Asian neighbors.

Course Notes: No prior college level History is required or assumed. Students seeking to fulfill their Social Sciences distribution requirement and freshmen welcome.

Intro to Harvard History: Beyond the Three Lies (212928)

Zach Nowak

2021 Spring (4 Credits) Schedule: MW 0730 PM - 0845 PM

Instructor Permissions: None Enrollment Cap: n/a

Harvard's history is a story of professors, students, courses, and research that has led to world-changing innovations. But it is also a story of student unrest, gender unease, and the exclusion of women and minorities, enslaved people, Native Americans, and working-class people. All of them made Harvard and left traces in its archives, libraries, and museums, its buildings, and even in its soil. Some Harvard stories have been told; others have been forgotten. In this class, we will uncover Harvard’s past. There will be several field trips to Harvard's archives and museums and other places on campus most students will never visit. If you wish, the University Archives will preserve your final paper on Harvard history for perpetuity.

Course Notes: This class was designed especially for first-gen students, first-years, sophomores, and those who haven't taken a college History class.
HIST 1636 will change the way you see Harvard and give you research and writing skills to use for all your other courses.

History 1852  Section: 01

The Game: College Sports as History (216325)

Zach Nowak

2020 Fall (4 Credits)  Schedule:  TR 0730 PM - 0845 PM

Instructor Permissions:  None  Enrollment Cap:  n/a

The old adage about sports—"It's only a game"—just isn’t true. Athletics, especially at the collegiate level, has always been much more than just a game. College sports were responses to the grinding tedium of the colonial-era curriculum; a way to establish hierarchy among students in the nineteenth century; an important source of revenue and a powerful driver of alumni giving in the twentieth.

In this class, students will use the lenses of race, class, and gender to examine events in American sports history. College gyms, fields, stadiums, and rinks have been the scenes of both delightful distraction and the battlefields for all sorts of controversies. College sports, in other words, are an integral part of American cultural and social history. The course uses the lens of college sports, and Harvard College athletics, in particular, to gain insights into the "Game" and the ways athletics both was impacted by and, in turn, shaped wider currents of cultural and social change in American history.

Students will use three digital archives—the Crimson, Harvard Alumni Bulletin back issues, and scanned records on various Harvard and Radcliffe teams—to write several short, archivally-based research papers. Students will also carry out one oral history with a past Harvard scholar-athlete; this will be deposited in the Harvard archives. There is an option to do this with a high school student as part of a Mindich Program community engagement component.

Course Notes:  This class was designed especially for first-gen students, first-years, sophomores, and those who haven’t taken a college History class.

Class Notes:  This class has been designed with the particular challenges of remote learning in mind. See the course’s Canvas site for a detailed description of how the instructor will respond to these challenges.

Narrative History: Art and Argument (207531)

Maya Jasanoff

2020 Fall (4 Credits) Schedule: M 0300 PM - 0545 PM

Instructor Permissions: Instructor Enrollment Cap: 15

Who, what, where, when, how, and why? The elements of history are the elements of a story, and the art of writing history is the art of how to tell it. This course offers an intensive workshop on the art and craft of historical narrative. Through reading (from T. B. Macaulay to Hilary Mantel) and in-class writing exercises we will develop a repertoire of techniques to address issues central to historical story-telling, such as establishing scene and character, handling evidence, and embedding argument. Open to any advanced undergraduates and graduate students interested in writing as a craft.

Racial Capitalism and the Black Radical Tradition (205076)

Vincent Brown
Walter Johnson

2020 Fall (4 Credits) Schedule: R 0300 PM - 0500 PM

Instructor Permissions: Instructor Enrollment Cap: 15

This course explores a history of radical responses to a world system dependent on war, empire, enslavement, and genocide. Guided by the writings of such scholars as W.E.B. Du Bois, C.L.R. James, Eric Williams, Walter Rodney, and Cedric Robinson, among others, students will examine the history of racial capitalism through the rebellions it has inspired, considering them as crucial occasions in the making of a black radical tradition.

Course Notes: Students in the course will be required to write weekly responses, and a twenty-page final paper.

Pacific History (107925)
David Armitage

2021 Spring (4 Credits) Schedule: M 1245 PM - 0245 PM
Instructor Permissions: Instructor Enrollment Cap: 15

The Pacific Ocean covers a third of the Earth’s surface and one-third of humanity lives on its shores and islands, from Russia to New Zealand and from Southeast Asia to South America. This seminar introduces students to oceanic and global history via works in Pacific history by scholars of the Pacific Islands, Asia, Australasia, Europe, and the Americas. Themes covered include cultural encounters, exploration, migration, history of science, geopolitics, and economic history.

Course Notes: Students can count the course towards the fulfillment of an Ethnic Studies Secondary Field.

Austrian History in Literature (212656)
Alison Frank Johnson
Nadine Schwakopf

2021 Spring (4 Credits) Schedule: T 1245 PM - 0245 PM
Instructor Permissions: Instructor Enrollment Cap: 15

This course uses Austrian literature to think through some of the most pressing questions of modern European (and, specifically, Austrian) history. We will read some of the greatest novels and novellas in modern German-speaking literature as learn about the Habsburg monarchy, turn-of-the-century Vienna, the First and Second World Wars, the expulsion of Austrian Jewry, and postwar mythmaking. Important themes include: women’s role in society and in the family; the rise of nationalism as a social and political force and the viability of multinational empires; sex and sexuality; justice, mercy, and retribution; what Austria is and what it means to be Austrian; anti-Semitism, Zionism, and European Jewry; cultural, political, and violent forms of social protest; the transformative power of war. Open to undergraduate and graduate students, with the permission of the instructor.

Course Notes: This course is equivalent to German 179. Credit may be earned for History 1919 or German 179, but not both.

Slavery, Disease, and Race: Brazil in the Atlantic World (159657)

Sidney Chalhoub

2020 Fall (4 Credits) Schedule: W 1245 PM - 0245 PM
Instructor Permissions: Instructor Enrollment Cap: 15

Of the estimated 12.5 million people taken from Africa to be enslaved in the Americas, 4.9 million went to Brazil alone (in contrast to about 450 thousand who arrived in the United States). The black population in the country today is the second largest worldwide, inferior only to Nigeria. In this seminar we will explore slavery and emancipation in Brazil in its connections with Africa, the Caribbean, and the United States. The relation between disease (especially yellow fever epidemics), labor struggles, and the making of racial ideologies in the Atlantic world in the age of slave emancipation and in the post-emancipation period will be emphasized.

History 1933 Section: 01

Literature and Urban History: Views from Brazil and the United States (217616)

Sidney Chalhoub
Bruno Carvalho

2021 Spring (4 Credits) Schedule: M 0300 PM - 0500 PM
Instructor Permissions: Instructor Enrollment Cap: 15

In this seminar we will focus on novels about urban experience, paying particular attention to how they represent what subordinate peoples do with what is done to them (the enslaved and their descendants, migrants, dependents, women, workers). We will study major authors and works of late 19th- and early 20th-century fiction in Brazil and the United States, attentive to points of contact between cities in both countries during a period of intensive urbanization. Questions of class, gender and identity-formation in the general context of defining and setting new limits of citizenship rights will be emphasized.

Course Notes: This course is also offered through the Romance Languages and Literatures Department as ROM-STD 138. Credit may be earned for either ROM-STD 138 or History 1933, but not both.
**History 1934 Section: 01**

Topics in Music from 1800 to the Present (217621)

*Peter Gordon*

*Alexander Rehding*

2021 Spring (4 Credits)  
**Schedule:** W 0945 AM - 1145 AM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 15

*Adorno and Music.* The philosopher, composer, and sociologist Theodor W. Adorno counts as one of the most important musical thinkers of the twentieth century. While the range of musical figures he approved of was extraordinarily focused (going barely beyond Beethoven, Mahler, Wagner, and Schoenberg), he created a central role for music in his philosophy. The very abstraction and remoteness of absolute music, he argued, allowed it to offer critical insights on the state of modern society. In this seminar we will discuss key texts by Adorno and his circle, and work through a number of key musical works in his orbit. No discussion of Adorno would be complete without consideration of his controversial views on jazz and sound media. A background in music may be advantageous but is not a requirement.

**Course Notes:** Counts for credit as one of the following German 133, History 1934 or Music 193R.

Social Revolutions in Latin America (159555)

*Alejandro de la Fuente*

2021 Spring (4 Credits)  
**Schedule:** T 1200 PM - 0245 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 15

This course seeks to explain why social revolutions have taken place in Latin America and analyzes their
impact on the region. The objective is for students to gain a critical understanding of the origins, development, and impact of revolutionary movements in Latin America during the twentieth century. The course examines several case studies, which may include Mexico, Cuba, Chile, Nicaragua, the Zapatista uprising in Chiapas, and the so-called "Bolivarian revolution" of Venezuela. Our goal is to identify similarities and differences among these cases.

Course Notes: This course is also offered through the African and African American Studies Department as AFRAMER 199X. Credit may be earned for either History 1937 or AFRAMER 199X, but not both.

The Imperial Map: Geographic Information in the Age of Empire (213281)

Kelly A. O'Neill

2020 Fall (4 Credits) Schedule: TR 0900 AM - 1015 AM

Instructor Permissions: Instructor Enrollment Cap: 15

Maps and empires have entangled histories. In this course we will examine the evolution of geographic information technology and the way imperial states and subjects used atlases, boundary surveys, town plans, and topographical maps to manage information flows and
generate political and cultural capital. We will learn to speak the language of maps: particularly maps of the Russian Empire. Through units devoted to Siberia, the Black Sea, and European Russia, we will reconstruct the history of an empire through maps held right here at Harvard.

**History 1951** Section: 01

Japanese Imperialism and the East Asian Modern (124016)

*Ian J. Miller*

2021 Spring (4 Credits)  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** 15

Explores the role of Japanese imperialism in the making of modern East Asia. By the 1940s Japan's empire stretched from the cold northern woods of Sakhalin Island to Taiwan, Korea, China, and Southeast Asia. We use the analysis of this world-historical force to examine the tensions between modernization and imperialism across the region. Readings will take us to Manchurian museums, Shanghai jazz clubs, and Burmese battlefields.

**Course Notes:** No knowledge of Japanese language or history required.

Pandemics in History (217521)

*Erez Manela*

2021 Spring (4 Credits)  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** 15

Pandemics have shaped human societies since the dawn of time. In this course, we will explore the impact of different outbreaks of pandemic disease on history, with a focus on the last two hundred years. Our central questions will be: How have human responses to disease outbreaks been shaped by political, social, and cultural contexts? And how have pandemics in turn reshaped politics, societies, and cultures in their wake?
History 1973A Section: 01

Re-Wilding Harvard (216270)

Joyce Chaplin
David Moreno Mateos

2020 Fall (2 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: 15

This is a year-long class on rewilding, returning a habitat to an earlier form. We will: research historical and cultural definitions of wilderness and landscape, identify what precolonialist habitats were like in New England, survey how such places have been and might be restored, and then we will rewild part of Harvard. The class is open to both graduate students and undergraduates in a broad and relevant range of disciplines and will fulfill conference course credit in the History Department. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Course Notes: This course will be jointly offered with the Graduate School of Design as SCI 6375A/B.

Class Notes: In order to accommodate students, the meeting day and time for the course will be determined after the course registration deadline on Wednesday, September 9th.

The Soviet Empire, 1917-1991 (215999)

*Terry Martin*

2020 Fall (4 Credits) Schedule: T 1200 PM - 0245 PM

Instructor Permissions: Instructor Enrollment Cap: 15

This course will analyze the Soviet Union as a multi-national state and ask to what extent it functioned as an empire and how its strategies of national rule evolved from the revolution to 1991. It will also analyze Soviet foreign policy towards other Communist states in eastern Europe and in Asia and ask to what extent these were imperial. Finally, it will look at how strategies of domination over non-Russians in the USSR and abroad interacted in the collapse of European Communism.

The Nuclear Age: An International History (216004)

*Serhii Plokhi*

2021 Spring (4 Credits)  
Schedule: T 0945 AM - 1145 AM  
Instructor Permissions: Instructor  
Enrollment Cap: 15

This course discusses the history of nuclear weapons as a defining factor in international politics of the second half of the twentieth century. It offers a reexamination of what has become known in historiography as the first nuclear age at a time when the world is entering a new nuclear age marked by the collapse of Cold War-era arms control treaties and the renewal of the nuclear arms race. The readings discuss the impact of nuclear weapons on strategic thinking during the Cold War, failed attempts to establish international control over nuclear weapons, the birth of the non-proliferation regime, and the limited success of denuclearization since the Cold War.

Jewish History as World History: Graduate Readings Seminar (216479)

Derek Penslar

2020 Fall (2 Credits)  
Schedule: W 0900 AM - 1100 AM

Instructor Permissions: Instructor  
Enrollment Cap: 10

Although Jews have historically been dispersed throughout much of the world, until recently modern Jewish historians have worked within the framework of the nation-state. In this class we will read both older and newer works of Jewish history through a comparative, trans-national, and international lens. We will assess the strengths and weaknesses of local, national, regional, and global approaches to the study of the Jews of modern Europe, the Middle East and North Africa, and the Americas. Aside from active participation in and facilitation of weekly meetings, the course’s main requirement is a 20-page historiographical essay on a subject chosen by the student and relevant to the course’s purview. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Requirements: Pre-requisite HIST 2008A

Energy History: Seminar (216169)

Ian J. Miller

2020 Fall (4 Credits) Schedule: F 0945 AM - 1145 AM

Instructor Permissions: Instructor Enrollment Cap: 10

This seminar is a critical introduction to the history and historiography of energy, a field entangled with the history of fossil-fueled climate change. We will work our way back into the history of energy, using theories of energy to rethink such key issues as industrialization, labor, empire, and urbanization. In the process, we will rethink stark distinctions between socialism and capitalism; bodies and environment; nature and culture. And we will pay particular attention to the edges of the field: where are the opportunities for new work? What new questions does a focus on energy allow us to ask?

Class Notes: This course will meet Friday mornings beginning at 9:45am and ending at 11:45am.

Legal History Workshop: Legal Pluralism (215929)

Tamar Herzog

Charles Donahue

2020 Fall (4 Credits) Schedule: M 0500 PM - 0700 PM

Instructor Permissions: Instructor Enrollment Cap: 11

This workshop aims to provide students with an historical perspective on the phenomenon of
legal pluralism world-wide, but with a focus on the medieval and early modern worlds, Europe and its colonies. Assignments and class discussions will feature a mix of major works in the field of legal history, introducing students to critical methodologies and historiographical debates, and workshop presentations by leading historians currently writing on questions of legal pluralism. Further information about the topics to be covered will be available on the course website closer to the Fall semester.

Course Notes: Law students will have the choice of adding a writing credit to this two-credit workshop by completing a substantial paper. Those who choose to write a substantial paper will receive three credits (two classroom, one writing) upon successful completion of the course; those who do not complete substantial papers will receive two classroom credits. All FAS graduate students who enroll in the workshop must complete a substantial paper and will receive four credits upon successful completion of the course. The enrollment limit for FAS students is 11. This course is jointly-offered with the Law School as Law 3046.

Medieval Societies and Cultures: Proseminar (143662)

Daniel Smail

2020 Fall (4 Credits)  
 **Schedule:** R 0300 PM - 0545 PM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Introduction to the study of medieval history and to the literature basic to the examination field. Readings include both canonical works as well as recent studies. Though designed for specialists in medieval European history, the course welcomes all non-specialists interested in exploring large issues of comparative history and chronological depth.

**Course Notes:** May not ordinarily be credited as one of the research seminars required in the first-year program.

**Recommended Prep:** Reading knowledge of French and/or German.

Reading in Late Antique and Medieval History: Seminar (205068)
Michael McCormick
2021 Spring (4 Credits) Schedule: M 0300 PM - 0545 PM
Instructor Permissions: None Enrollment Cap: n/a

A critical introduction to and group discussion of special themes in the historiography of late antique and medieval history with readings in English and French or German, culminating in a term paper. Themes will range from transdisciplinary approaches to history to "is there a Mediterranean history"?

Course Notes: Open to advanced undergraduates with permission of the instructor.

Medieval Law (112622)

Charles Donahue

2021 Spring (4 Credits) Schedule: T 0500 PM - 0700 PM
Instructor Permissions: None Enrollment Cap: n/a

Readings focused alternately on the English legal tradition and on the Roman-canonical tradition. The topic for 2020-21 will be the English legal tradition. Short papers analyzing texts will be required but not a research paper.

Course Notes: Offered jointly with the Law School as Law 2371.

Recommended Prep: Some Latin required.

Digital Archives: Europe and European Empires: Seminar (216295)

Alison Frank Johnson

2020 Fall (4 Credits) Schedule: W 1245 PM - 0245 PM
Instructor Permissions: Instructor Enrollment Cap: 12

This seminar will offer students the opportunity to familiarize themselves with and make scholarly use of digital archives. We will begin with an overview of digital collections of documents, books,
images, and manuscripts made available by archives, museums, libraries, and governments. Students will then prepare original research papers using the collection or collections of their choice. For graduate students or advanced undergraduates with permission of the instructor.

Religion and Public Life in North America, 16th Century to the Present: Seminar (216178)

_James Kloppenberg_  
_Catherine Brekus_  
_David Holland_

2020 Fall (2 Credits)  
**Schedule:** W 1230 PM - 0230 PM

Instructor Permissions: Instructor  
Enrollment Cap: n/a

Examines the long historical relationship between religion and American public life. Contrary to the predictions of previous generations of scholars, religion remains a potent force in the U.S. Secularization, once imagined as the inevitable result of modernity, has not relegated religion to the realm of private life or reduced its influence in political, economic, and legal debates. The course is especially interested in tracing the role of religion in shaping conversations about religious freedom, war, democracy, social reform, capitalism, and the common good. Particular attention will be paid to change and development over time, especially in regard to two key terms
of "religion" and "public." Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Course Notes: This course will be jointly offered with the Harvard Divinity School as HDS 2341A.

Graduate Readings in 20th-Century African-American History: Seminar (122157)
Evelyn Brooks Higginbotham

2020 Fall (4 Credits) Schedule: R 1200 PM - 0200 PM
Instructor Permissions: Instructor Enrollment Cap: 10

In this graduate seminar we will read books and articles on topics that reflect the diverse experiences and ideologies of African Americans in the twentieth century. We will discuss and analyze differing historical interpretations and methodologies. We will also explore a variety of historical writings, e.g., biography, intellectual history, race and gender studies, labor history, transnational history, etc. Students are required to write a short report on a recommended reading each week, in addition to being prepared to discuss the required reading. A historiographic paper will be due at the end of the term.

Administrating Differences in Latin America: Historical Approaches (203325)
Alejandro de la Fuente
Tamar Herzog

2020 Fall (2 Credits) Schedule: W 0300 PM - 0545 PM
Instructor Permissions: Instructor Enrollment Cap: 15

The Latin American History Seminar and Workshop is a yearlong research seminar and workshop that meets every other week to study a central question in Latin American history (in the fall) and provide opportunities for scholars to share their own work and learn about the scholarship of others in a workshop form (in the spring). In 2016-2017 we will discuss how differences were defined, negotiated, represented, and challenged in colonial Latin American, creating both inclusion and exclusion. Among differences considered would be distinctions between local and metropolitan; citizens and foreigners; narratives of origin and ancestry based on racial, ethnic, or religious criteria; and gender distinctions. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Preparing for the Field: An Introduction to Sources and Methods in Studying PRC History: Seminar (216814)

Arunabh Ghosh

2020 Fall (4 Credits)  
**Schedule:** W 0300 PM - 0545 PM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** 20

This shared online graduate course aims to prepare students in North American universities for historical research on the People’s Republic of China. In this incarnation (its fourth), it is jointly hosted by Arunabh Ghosh, Harvard University, and Jacob Eyferth, University of Chicago. It is open to Harvard and Chicago graduate students and qualified students from other institutions. The rationale for co-teaching this course is that PRC history is emerging as a separate field, but that most institutions don’t have enough PhD students in this subfield to justify a dedicated PRC research seminar. In origin, this is an archive course with a focus on how to gain access to PRC archives, locate materials, read handwritten texts, and interpret official documents. Since Chinese government restrictions (not to mention the coronavirus) have imposed limits on archival research, we will also discuss non-archival research methods, including oral history, the use of published and "semi-published" materials, digital research, archival research outside the PRC, and work with "garbage materials" (垃圾资料) acquired from private vendors.

History of Global Capitalism: Seminar (212679)

Sven Beckert
Sophus Reinert

2020 Fall (2 Credits)                                    Schedule: M 0345 PM - 0545 PM
Instructor Permissions: Instructor Enrollment Cap: 15

The history of capitalism is one of the most important topics in the study of the past, as the expansion of capitalism has revolutionized almost all aspects of human life in almost all areas of the world during the past 500 years. The seminar will introduce students to a lively debate among social scientists on what this capitalist revolution has been about and how best to explain it. We will read canonical texts in the field, debate current research and guide student research in the field. We will study capitalism from a global and historical perspective. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Pre-requisite: HIST 3920A

Additional Course Attributes:
History and Literature

Subject: History & Literature

**History & Literature  90AN**

God Save the Queen! Ruling Women from Rome to the Renaissance (127654)

*Sean Gilsdorf*

2021 Spring (4 Credits)  Schedule: MW 0130 PM - 0245 PM

Instructor Permissions: Instructor  Enrollment Cap: 10

This seminar will explore female rulership in Europe from the late Roman empire to the age of Elizabeth I. Discussion of varied texts and images (most of them primary sources in translation) will reveal the role of queens within their societies, their relationship to broader social and cultural institutions such as the Christian Church, and the ways in which queens were celebrated, criticized, and imagined by writers and artists of their time.

Class Notes: Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature's application to enroll by 11:59 pm EST on Tuesday, January 19, 2021. Instructors will notify students of enrollment.

This seminar is open to all undergraduates, but priority will be given to sophomores interested in concentrating in History & Literature.

Museums in America (205588)

*Reed Gochberg*

2020 Fall (4 Credits)  Schedule: M 1200 PM - 0245 PM

Instructor Permissions: Instructor  Enrollment Cap: 10

In this seminar, we will consider the literary and cultural history of American museums from the eighteenth century to the present. How have museums prompted broader discussions about taste, expertise, and authority? How can we understand the legacies of historical collecting practices for contemporary institutions? And how have recent debates about decolonization, repatriation, and accessibility informed new ideas about what role museums can play in American culture? Throughout the semester, we will examine a range of sources, from fiction, museum catalogues, and periodicals to paintings, artifacts, and installations; we will also research objects in Harvard's museum collections and develop a collaborative digital exhibit.
Class Notes: Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature’s application to enroll by August 21. Instructors will notify students of enrollment decisions on August 24.

This seminar is open to all undergraduates, but priority will be given to sophomores interested in concentrating in History & Literature.

**History & Literature  90DR**

American Speeches (212821)

*Drew Faust*

2020 Fall (4 Credits)  
**Schedule:** M 0300 PM - 0500 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 12

This course will explore speeches across the sweep of American history, examining them both as windows into their own era and as texts created to inform and persuade. We will ask who speaks and how and the ways that has evolved over time, and we will seek to identify the enduring and changing elements of effective oratory from Jonathan Edwards to Frederick Douglass to contemporary commencement addresses and campaign speeches. Assignments include the composition and delivery of a speech.

Class Notes: Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature’s application to enroll by August 21. Instructors will notify students of enrollment decisions on August 24.

If the number of applications exceed the capacity, preference will be given to History & Literature and History concentrators, and to seniors, juniors, then sophomores.

Red Scares (212825)

*Steven Biel*

*Lauren Kaminsky*

2021 Spring (4 Credits)  
**Schedule:** T 1200 PM - 0245 PM
Socialism was a buzzword of the 2020 U.S. election, and some have even argued that associating Joe Biden with Venezuelan and Cuban socialism helped Donald Trump win the state of Florida. This course reveals how charges of fealty to radical "foreign" ideologies have operated as rhetorical and political strategies for much of U.S. history. The so-called First Red Scare, precipitated by World War I and the Bolshevik Revolution in Russia, followed on fears and persecution of anarchists, socialists, and other labor radicals in the late-19th and early-20th centuries. In the Second Red Scare after World War II, the House Un-American Activities Committee (HUAC), Senator Joseph McCarthy, the FBI, and others conducted widespread investigations of suspected communists and purged "subversives" from all levels of government, the entertainment industry, public and private schools, colleges and universities. Beginning with mid 19th-century fears that revolutionary uprisings could spread from Europe to the United States, "Red Scares" explores anxieties about subversion and perversion in American politics and culture. Readings will include texts by Emma Goldman, Eugene V. Debs, Sacco and Vanzetti, John Dos Passos, Langston Hughes, Elia Kazan, Richard Wright, Whittaker Chambers, and Lillian Hellman, as well as films such as Bisbee ‘17, On the Waterfront, My Son John, The Lavender Scare, Salt of the Earth, and The Manchurian Candidate.

Class Notes: Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature's application to enroll by 11:59 pm EST on Tuesday, January 19, 2021. Instructors will notify students of enrollment.

This seminar is open to all undergraduates, but priority will be given to sophomores interested in concentrating in History & Literature.

Race and American Empire (213373)

Ernest Mitchell

2020 Fall (4 Credits) Schedule: R 0300 PM - 0545 PM

Instructor Permissions: Instructor Enrollment Cap: 10

This course examines the early 20th century expansion of U.S. military influence in the Atlantic and Pacific, and how this expansion shaped and was shaped by theories of race. Beginning with the Spanish-American War (1898), we will follow a series of U.S. interventions in the Atlantic (Cuba, Dominican Republic, Haiti, Honduras, Mexico, Nicaragua, Panama, Puerto Rico, Venezuela) and Pacific (Guam, Hawaii, Philippines). We will also explore the tensions between imperialism and white supremacy, as theorized by Madison Grant and Lothrop Stoddard. Special attention will be paid to black intellectuals (W.E.B. Du Bois, Anna Julia Cooper, Katherine Dunham, Jessie Fauset, Amy Jacques Garvey, Langston Hughes, Zora Neale Hurston, James Weldon Johnson, Eric Walrond, Ida B. Wells) who both aided and contested U.S. imperial designs. Through photographs, architecture, film, novels, ethnographies, memoirs, speeches, and cartoons, we will...
study debates about the international role of the U.S. through World War II.

Class Notes: Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature's application to enroll by August 21. Instructors will notify students of enrollment decisions on August 24.

This seminar is open to all undergraduates, but priority will be given to sophomores interested in concentrating in History & Literature.

History & Literature 90DZ

Too Soon? Comedy in Europe's Tragic Twentieth Century (213374)

Kathryn Brackney

2021 Spring (4 Credits) Schedule: R 1200 PM - 0245 PM

Instructor Permissions: Instructor Enrollment Cap: 10

In the first half the twentieth century, Europe was the site of two wars that depleted the world's population, dislocated millions, and stripped once diverse regions of the continent of their minority populations. Later, even as Europe managed to rebuild, progress occurred under the shadow of two hegemonic superpowers in possession of weapons capable of incinerating not just both sides of the Iron Curtain but the entire planet. In a 1966 profile of Bertolt Brecht for The New Yorker, Hannah Arendt wrote of "the terrible freshness of the post-war world"—in which all that poets could do in the rubble was laugh at the sky that remained. As Europe destroyed and reinvented itself through the twentieth century, how did humor serve as a tool for working through all this tragedy? This course will draw on sources in various media to examine how comedy can be a means of not just coping with history but investigating it. We will consider humor as a tool of political critique, historical analysis, and mourning and pay particular attention to the boundaries and historicity of taste. Assigned readings and films include works by Terry Eagleton, Sigmund Freud, Hannah Arendt, Karel Čapek, Ernst Lubitsch, Jean-Luc Godard, Milos Forman, Leander Haußmann, and Yasemin Şamdereli.

Class Notes: Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature's application to enroll by 11:59 pm EST on Tuesday, January 19, 2021. Instructors will notify students of enrollment.

This seminar is open to all undergraduates, but priority will be given to sophomores interested in concentrating in History & Literature.

History & Literature  90EC
A Cultural History of the Internet (216225)
Briana Smith
2020 Fall (4 Credits)  Schedule:  R 0300 PM - 0545 PM
Instructor Permissions:  Instructor  Enrollment Cap:  10
This course introduces students to the hippies, hobbyists, hackers, cyberspace explorers, and Second Lifers who embraced digital networks as a means to transcend geographic limitations and connect humans in virtual communities online since the late 1960s. We will also examine how corporate and government entities responded to the digital utopian ethos of egalitarianism, communalism, and anarchy. We will explore this history against the backdrop of the late Cold War, the Reagan era, neoliberalism and globalization, Y2K, 9/11, the 2008 global financial crisis, and 2020, and through the lens of race, gender, class, and subculture. Film, music, art, archived websites, memoirs, manifestos, fiction, and non-fiction will shed light on the ways popular culture shaped and was shaped by the rise of networked computing. While course materials are primarily rooted in the United States, we will consider both transnational connections as well as attempts to forge supranational networks in cyberspace.

Class Notes:  Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature's application to enroll by August 21. Instructors will notify students of enrollment decisions on August 24.

This seminar is open to all undergraduates, but priority will be given to sophomores interested in concentrating in History & Literature.

History & Literature  90ED
Music and Resistance in the Modern United States (216241)
Lucy Caplan
2020 Fall (4 Credits)  Schedule:  MW 1200 PM - 0115 PM
Instructor Permissions:  Instructor  Enrollment Cap:  10
While music is often touted as a "universal language" that generates social harmony, it also expresses dissent from and resistance to the status quo. This course asks how music works as a type of social and political resistance, and what aesthetic and formal qualities enable it to do so. We will explore the relationship between music and resistance in the twentieth- and twenty-first-century United States, in contexts that range from Ma Rainey’s defiant blues songs to Lin-Manuel Miranda’s blockbuster musical Hamilton. Focusing especially (but not exclusively) on African American music and musicians, we will consider how music informs modes of resistance tied to race, class, gender, and sexuality. In addition to
asking how music can resist extant arrangements of power, we will also consider the types of futures that
music can imagine. By examining an array of historical sources, theoretical texts, and sonic archives,
students will develop the ability to analyze music from a critical and interdisciplinary perspective. There will
also be opportunities for hands-on and creative projects.

Class Notes: Seminars meet for two hours of synchronous class discussion each
week.

To register, complete History & Literature's application to enroll by
August 21. Instructors will notify students of enrollment decisions on
August 24.

This seminar is open to all undergraduates, but priority will be given to
sophomores interested in concentrating in History & Literature.

Fighting the Climate Crisis (216227)

Patrick Whitmarsh

2020 Fall (4 Credits)

Schedule: MW 0130 PM - 0245 PM

Instructor Permissios: Instructor Enrollment Cap: 10

Humanity currently faces a rapidly worsening environmental situation in light of the global climate crisis:
rising seas and ocean acidification, deforestation and ecosystem collapse, and species extinction at
alarming rates. Behind these worrying developments, however, lies a human history of imperialism,
industrialization, and globalization that remains inextricable from the so-called natural world. Recent
efforts in climate justice, such as Extinction Rebellion and the Green New Deal, have sought to counter this
history by imagining new visions for sustainable societies. In this course, students will explore the ways
that storytelling and history intersect with the discourse on the global climate crisis, as well as the social
responsibilities of artists, businesses, and citizens in effecting climate justice. The course is divided into
three units: the first covers early environmental movements from 1945 to 1970, leading to the establishment
of the first Earth Day; the second covers 1971 to 2001, from the 1970s oil crises to the terror attacks of
September 11th, 2001; and the final unit looks at the period from 2002 to the present, tracing the increasing
politicization of climate change and culminating with the United States' withdrawal from the Paris Climate
Agreement. Throughout these units, we will study materials from environmental history, politics, and
fiction by writers such as Ursula K. Le Guin, Octavia Butler, and Ted Chiang. While exploring these cultural
and literary documents, students will reflect on historical outcomes and unrealized possibilities, as well as
the delicate connections between past, present, and future—how what we do today affects what happens
tomorrow.

Class Notes: Seminars meet for two hours of synchronous class discussion each
week.

To register, complete History & Literature's application to enroll by
August 21. Instructors will notify students of enrollment decisions on
August 24.

This seminar is open to all undergraduates, but priority will be given to
sophomores interested in concentrating in History & Literature.
History & Literature  90EF

White Rage: Progress and Backlash in American History (216228)

Andrew Pope

2020 Fall (4 Credits)               Schedule: W 1200 PM - 0245 PM
Instructor Permissions: Instructor    Enrollment Cap: 10

The course examines how people struggled to achieve the full-promise of freedom throughout American history. The organizing theme of the course is the cycle of progress and retrenchment, of revolutions and counter-revolutions, that has come to define American life. The course begins with enslaved people's struggles for freedom and the white planters who created a form of representative government to maintain the institution. From there, we proceed chronologically through American history to the present, exploring changing notions of community, strategies used to gain freedom, and the range of violent responses that groups seeking liberation encountered. Our readings will include a play by Suzan Lori-Parks, manifestos by white power advocates, George Schulyer's novel Black No More, literary criticism by Toni Morrison, political speeches, oral history interviews with formerly enslaved people and migrant workers, among many other historical and literary sources. While race has been an important element to every debate about political representation in American history, most debates represented overlapping interests of race, gender, class, and even sexuality. As such, we will take up each issue throughout the semester. In a presidential election cycle dominated by white rage, we will study how it has shaped American history in the past and its lasting consequences in the present.

Class Notes: Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature's application to enroll by August 21. Instructors will notify students of enrollment decisions on August 24.

This seminar is open to all undergraduates, but priority will be given to sophomores interested in concentrating in History & Literature.

Human Rights and Ethnic Studies (216229)

Mark Sanchez

2020 Fall (4 Credits)               Schedule: M 0300 PM - 0545 PM
Instructor Permissions: Instructor    Enrollment Cap: 10
Human rights is often considered a bulwark against authoritarianism and fascism, our "last utopia," but others have critiqued human rights as either a new form of imperialism or as an imposition of western values on the rest of the world. These debates demonstrate that human rights is both a powerful way of calling attention to matters of injustice as well as an idea that is itself the subject of critique. How did this come to be? In this class, we will track the increased attention on human rights in the latter half of the 20th century. Together we will explore how organizers, writers, and intellectuals in the tradition of what we broadly call Ethnic Studies have engaged the dilemmas of human rights while trying to work towards a more just world. We will cover how human rights became an important diplomatic tool during the Cold War, exploring the rise of institutions such as the United Nations and Human Rights Watch. However, we will also engage alternative, grassroots histories of human rights. For example, we will discuss how queer writers and writers of color offered their own emancipatory visions of rights. We will look at social movements such as the Third World Liberation Front Strikes of the late 1960s as calls for more expansive notions of rights. Overall, this class will ask us to confront how even the notion of "rights" has a history. It will ask us to consider that the idea that some have "rights" is often accompanied by others' "rightlessness." Ultimately, this class will provide a space for us to consider the question that activists have long asked: can rights save us?

**Class Notes:**

Seminars meet for two hours of synchronous class discussion each week.

**History & Literature 90EH**

Asian American Genre Fictions (216230)

*Ellen Song*

2020 Fall (4 Credits)  

**Schedule:**  

TR 1200 PM - 0115 PM

**Instructor Permissions:**  

Instructor  

Enrollment Cap: 10

There was an explosion of works by Asian American authors on the American publishing scene near the turn of the millennium, an unexpected consequence of the Immigration and Naturalization Act of 1965, which brought an influx of immigrants from Asia and dramatically altered the demographic composition of the U.S. The descendants of these post-1965 immigrants comprise a diverse group of Asian American authors, and in this course, we study the many different genres and forms of contemporary Asian American fiction. Asian American literature is often associated with certain themes (inter-generational conflict in families, fraught nature of immigrant identity, etc.), but this course instead emphasizes the formal qualities of contemporary Asian American writing alongside their domestic and global historical contexts. We will consider, for example, the spy narratives of Chang-rae Lee's Native Speaker and Viet Thanh Nguyen's The Sympathizer; the noir style of Suki Kim's The Interpreter, a murder mystery; "corporate novels" like Ling Ma's Severance; or works that question the expectations placed onto racialized authors, like Nam Le's short story "Love and Honor and Pity and Pride and Compassion and Sacrifice." What are the aesthetic characteristics of these works? What, if any, are their political investments? In asking these questions, this course seeks to understand, from our vantage point, just what about them is "Asian American" anyway?
Class Notes: Seminars meet for two hours of synchronous class discussion each week.
To register, complete History & Literature's application to enroll by August 21. Instructors will notify students of enrollment decisions on August 24.
This seminar is open to all undergraduates, but priority will be given to sophomores interested in concentrating in History & Literature.

History & Literature  90EI
Islam in Early America (216231)
Arianne Urus
2021 Spring (4 Credits) Schedule: W 0300 PM - 0545 PM
Instructor Permissions: Instructor Enrollment Cap: 10

Muslims first arrived on the shores of the Americas at the turn of the sixteenth century, yet their long history in the western hemisphere has been largely forgotten. For centuries Islam was the second-most widely practiced monotheistic religion in the Americas, after Catholicism; some Muslims came from Spain to escape persecution at the hands of the Inquisition for continuing to practice their religion, while others were taken captive and forcibly crammed into the hulls of ships on the West African coast and transported across the Atlantic, where, in 1522, they participated in the first uprising of enslaved men and women in the Americas on a sugar plantation on the island of Hispaniola (the site of present-day Haiti and the Dominican Republic). From the very beginning of European imperialism in the Atlantic World, Muslims were integral to the history of what scholars call "Vast Early America." Their stories are entwined with the larger threads of early American history including those of missionary work, European interimperial conflict, slavery, the genocide of Native peoples, and capitalism. This course unfolds in four units that will take us from the first early modern European encounters with Islam to the stories of Muslim agents of European conquest and Muslim resistance to enslavement in the Caribbean and US South, to how the Founding Fathers thought about Islam and the status of Muslims in the early Republic. We will work with sources ranging from Laila Lalami's 2014 novel, The Moor's Account, to Thomas Jefferson's copy of the Qur'an, as well as the autobiography of Omar Ibn Said written in Arabic from a jail cell in South Carolina and Rhiannon Gidden's new opera based on Said's story.

Class Notes: Seminars meet for two hours of synchronous class discussion each week.
To register, complete History & Literature's application to enroll by 11:59 pm EST on Tuesday, January 19, 2021. Instructors will notify students of enrollment.

Espionage: A Cultural History (216232)

Duncan White

2021 Spring (4 Credits)  Schedule:      M 1200 PM - 0245 PM
Instructor Permissions: Instructor  Enrollment Cap:  10

Over the course of the twentieth century the spy thriller became a central part of our culture, changing the way people imagined how the state operates in secret. Why are we attracted to stories of paranoia and conspiracy? What is the history of this genre, and how is it intertwined with the history of espionage? Does espionage fiction glamorize the work of spy agencies? Or help challenge it? The course is divided into four units. The first will consider the origins of the spy thriller and how the obsession with espionage fiction was connected to the creation of the Secret Services in Britain, reading stories by Baroness Orczy, Arthur Conan Doyle, and Rudyard Kipling. The second unit shift its focus to British spies in the Cold War and, against the backdrop of Soviet penetration of MI5 and MI6, will explore the different ideas of espionage offered by the glamor of James Bond and the "insider" fiction of Elizabeth Bowen and John le Carré. The third unit focuses on American spying, and considers the way the CIA has been represented on page and screen, and the relationship of these fictions to the actual operations of the agency, including political subversion, covert action, and targeted assassinations. In doing so we will also consider how writers like Viet Thanh Nguyen, Lauren Wilkinson, and Mohsin Hamid have challenged the conventions of the spy thriller genre. In the final unit we will explore the role of espionage in the "War on Terror," and reflect on how surveillance techniques developed by intelligence agencies have become part of our everyday lives.

Class Notes: Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature’s application to enroll by 11:59 pm EST on Tuesday, January 19, 2021. Instructors will notify students of enrollment.

This seminar is open to all undergraduates, but priority will be given to sophomores interested in concentrating in History & Literature.
Midcentury America saw the explosion of a genre on the page and screen—the hardboiled crime novel and the film noir. Noir represented a foil to postwar optimism: its protagonists were cynics and loners. Filled with lurid crimes and deeds, noir suggested a dark underbelly to American society and its promises of domestic fulfillment, economic stability, and institutional support. Husbands and wives plotted each other's murders; the city streets beckoned with sin; and the police were no match for the private detective. Yet even while these stories foregrounded alienation, they had a mass cultural appeal to American audiences. This class will examine noir not only as an aesthetic—brutality disguised in beauty—but also as a social commentary on American life in the 1940s and 50s. How did cultural conceptions of the tough guy and femme fatale reflect or shape the gender and sexual politics of the era? How did noir speak to anxieties surrounding race, ethnicity, and social class? And how did America's anti-heroes reflect a changing conception of nationhood and citizenship in the atomic age? By looking at cultural works like films, novels, and true crime pieces in the context of postwar psychology and sociology, we will consider what audiences' fascination with violence, murder, and deceit revealed about the American identity.

Class Notes:
Seminars meet for two hours of synchronous class discussion each week.

History & Literature  90EL

France and its "Others:" Race, Nation, and Identity in (Post)Imperial Society (216234)

John Boonstra

In a controversial—and bestselling—recent novel, Michel de Houellebecq imagines France's government and society taken over from within by Muslim extremists who impose Sharia law. Fears of internal "colonization"—by Muslims, immigrants, Jews, Americans, and various "Others"—are nothing new in French history. Yet, by tapping into the growing influence of the anti-immigrant extremist right in French politics over the past several decades, the popularity of Houellebecq's novel raises a number of provocative questions for contemporary French—and global—society: how has a country premised on the
"equality" and "fraternity" of all of its citizens continued to exclude religious, ethnic, and racial "Others?"
And, perhaps more perplexingly, how did what was once a global empire—whose reach extended from the
South Pacific to the Caribbean, from North and sub-Saharan Africa to Southeast Asia—become so anxious
about being "colonized" within Europe itself? Most proximately, how did the violence of France’s colonial
wars—in Algeria and Indochina especially—and the tumult of postcolonial migration shape the fears and
fantasies of national and imperial identity?

This course will address these questions by taking a longer and wider view of the (post)colonial
experiences of twentieth-century France. Surveying works of history, politics, literature, anthropology, and
film—from Sartre and de Beauvoir to Houellebecq and Sarkozy, Ousmane Sembène and Frantz Fanon to
Azouz Begag, Linda Lè, and Alain Mabanckou—we will seek to understand how the perceived dangers of
invasion drew on and departed from the ambiguities and insecurities of imperial power.

Class Notes: Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature’s application to enroll by August 21. Instructors will notify students of enrollment decisions on August 24.

This seminar is open to all undergraduates, but priority will be given to sophomores interested in concentrating in History & Literature.

Empire and Archive in the Colonial Americas (216235)

Alan Niles

2020 Fall (4 Credits) Schedule: W 1200 PM - 0245 PM

Instructor Permissions: Instructor Enrollment Cap: 10

How do we know the histories of colonialism and empire? In this course, we will study how European
expansion in the Americas fueled and was fueled by the production of records and representations of
colonial spaces and their peoples. We will study how violence and resistance shaped alternative systems of
knowledge making among Indigenous and African communities, including oral histories, wampum,
featherwork, graffiti, and vodou. We will work with sources by canonical authors including Columbus,
Montaigne, Mary Rowlandson, and Juana Inés de la Cruz alongside the works of anonymous or unfamiliar
writers, artists, and craftspeople including Afro-Brazilian healers, Tupinambá featherworkers, and the
Massachusett and Nipmuc printers who worked in Harvard Yard. Throughout our course, we will ask: what
interplay of power, resistance, and chance produces an artwork, document, or memory of the past—or
ensures its survival and visibility in the present? What responsibility does a historian or critic have towards
the silences of the archive and what strategies might recover marginalized perspectives from the past?
How can attending to these histories of the archive shape the stories we tell today?

Class Notes: Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature’s application to enroll by August 21. Instructors will notify students of enrollment decisions on
August 24.

This seminar is open to all undergraduates, but priority will be given to sophomores interested in concentrating in History & Literature.

For the Fall 2020 semester all course readings are accessible through the Canvas site. Assignments are designed to take advantage of the many digital collections of sources relating to the colonial past available online. In class, we will make virtual visits to archives and collections available at Harvard.

History & Literature  90EN

Latin American Revolutions (216236)

James Mestaz

2020 Fall (4 Credits) Schedule: MW 0430 PM - 0545 PM

Instructor Permissions: Instructor Enrollment Cap: 10

This course explores the origins, trajectory, and outcomes of three twentieth century Latin American revolutions: Mexican, Cuban, and Nicaraguan. Students will analyze what these three revolutions shared in common, such as the causes, which included discrimination, US imperialism, state violence, economic inequity, and political marginalization, but also consider the nuances of what made them different, and in which ways the later revolutions were inspired by the previous ones. The class will rely on primary sources, such as novels, film, photographs, music, murals, and manifestos to explore how all sectors of society helped foment changes to the physical, economic, and social landscapes in these countries. Students will investigate community grassroots mobilization tactics and what the revolution meant for marginalized groups such as indigenous, women, or queer people. Learning the difficulties of implementing profound change will help students understand how resistance and democracy meant different things to different communities, and how the definition of what is meant by a revolution evolved over time. Studying Latin American Revolutions will help students grasp the complexities of our increasingly globalized society, and reconsider the efficacy of our own political systems, freedoms, and democracy.

Class Notes: Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature’s application to enroll by August 21. Instructors will notify students of enrollment decisions on August 24.

The Reinvention of New York City (216237)

Michael King

2020 Fall (4 Credits)    Schedule:     MW 0300 PM - 0415 PM
Instructor Permissions:  Instructor       Enrollment Cap:  10

The recent history of New York City is one of crisis, resilience, and rebirth. From the terrorist attacks of 9/11 to the devastation of the pandemic, New Yorkers have experienced tragedy and reinvented their city in its aftermath. This is a cycle with a deeper history: in this course we will focus on how New York City reinvented itself in the Seventies and Eighties. On October 16, 1975, New York City was on the brink of bankruptcy. With nearly five hundred million dollars of debt due the next day and only thirty-four million in its bank, catastrophe seemed inevitable. Fortunately, the city was able to raise funds and avoid bankruptcy. Nevertheless, New York City was and had been a space on fire—both literally and figuratively speaking—for at least a decade prior. Landlords burned down buildings to collect insurance; Black, Latinx and LGBTQ communities fought for the right to claim space and protections. In the midst of these fires, however, many different communities seized upon cheap rent and abandoned spaces in order to use them as sites of profound community- and art-making. This course will explore the social and historical contexts under which the residents of New York City contended with precarity in order to create vibrant spaces of living. In order to understand how individuals and communities both understood and created the city around them, students will look at a wide variety of texts, including but not limited to songs, visual art, performance pieces, editorials, and oral histories. Students will be encouraged in how the New York City they know was shaped by this history and what lessons can be drawn from this period of unprecedented creativity as the city once again faces a precarious future.

Class Notes:    Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature's application to enroll by August 21. Instructors will notify students of enrollment decisions on August 24.

This seminar is open to all undergraduates, but priority will be given to sophomores interested in concentrating in History & Literature.

The Global History of Pests (216238)

Samuel Dolbee

2020 Fall (4 Credits)    Schedule:     W 0600 PM - 0845 PM
Instructor Permissions:  Instructor       Enrollment Cap:  10

Pests have had impacts large and small on human life, serving as sources of lethal pandemics and minor annoyance alike. But what constitutes a pest has varied greatly over time and space. This course examines these themes with a focus on the late nineteenth century and early twentieth century, an era of optimism for pest eradication and visions of environmental control more broadly. It subsequently turns to the
consequences of these efforts--both life-saving and deleterious--to the present. Throughout, the course contextualizes pests as products of sedentary agriculture, empire, and capitalism. Topics include mosquitoes and revolution in Haiti, street dogs and health in Istanbul, and rats and race in Baltimore. The course also touches on the broader cultural resonance of pests, by attending to how the language of pests has come to apply to invasive species, germs, and certain humans. The sources for thinking through these questions are broad, ranging from Frantz Fanon’s The Wretched of the Earth to Disney public health reels featuring The Seven Dwarfs happily spraying insecticides to Rachel Carson’s Silent Spring. In sum, the course brings together environmental history, the history of medicine, and the history of science to consider how humans have created pests and pests have created humans.

Class Notes: Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature’s application to enroll by August 21. Instructors will notify students of enrollment decisions on August 24.

History & Literature   90EQ

Nuclear Imperialisms (216239)

Rebecca Hogue

2020 Fall (4 Credits)

Schedule: TR 0600 PM - 0715 PM

Instructor Permissions: Instructor

Enrollment Cap: 10

This course will examine nuclear narratives in global contexts as reminders and remainders of empire. Are nuclear futures only tied to whims of unpredictable world leaders, or are they already part of our daily realities? Whose stories of nuclear proliferation are told, and whose are suppressed? Drawing on government propaganda, activist writing, television, fiction, photography, poetry, and film from 1945 to the present, this course will explore the cultural and material legacies of radiation around the world. From American "atomic culture" of the 1940s and '50s to Cold War era peace movements in the Pacific Islands to nuclear disasters like Chernobyl and Fukushima, we will assess whether nuclear cultures have changed over time by using a place-based investigation of nuclear research, uranium mining, atomic bombs, "clean" energy, and anti-nuclear resistance. Course texts will include poetry by Kathy Jetnil-Kijiner and Craig Santos Perez, fiction by Ruth Ozeki and Robert Barclay, documentaries such as The Atomic Café and The Return of Navajo Boy, as well as popular film and television like Dr. Strangelove (1964), Star Trek (1967), and Godzilla (1954).

Class Notes: Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature’s application to enroll by August 21. Instructors will notify students of enrollment decisions on August 24.

This seminar is open to all undergraduates, but priority will be given to sophomores interested in concentrating in History & Literature.
History & Literature  90ER

Industrialization and Inequality: from the Gilded Age to the Progressive Era (216240)

Morgan Day Frank

2020 Fall (4 Credits)  Schedule: W 0300 PM - 0545 PM

Instructor Permissions: Instructor  Enrollment Cap: 10

Industrialization after the Civil War transformed American life in dramatic and horrifying ways, and it transformed "literature" as a category of cultural consumption too. Some writers, like the muckrakers, believed that their work had the capacity to shape public life. Others like Henry James conceived of their writing as art that operated according to its own rules. Still others like Ambrose Bierce grew pessimistic about literature's capacity to accomplish anything whatsoever. This course will examine American literature at the turn of the twentieth century, when robber barons enriched themselves and many Americans were plunged into deep poverty. Through readings like Edith Wharton's Custom of the Country, Mark Twain's Mysterious Stranger, and Sutton Griggs's Imperium in Imperio, we will consider the literary response to a range of historical developments, including the rise of consumer capitalism, the industrial nation's fascination with pre-industrial life, and the creation of African American secret societies. By studying the shifting meanings of the literary as the country moved from the unfettered capitalism of the Gilded Age to the regulatory apparatuses of the Progressive Era, we will ultimately seek to better understand the meaning of literature in our own fraught historical moment. Whether we should turn to literature to solve our problems, or whether literature is itself part of the problem, are questions we will pose over the course of the semester.

Class Notes: Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature's application to enroll by August 21. Instructors will notify students of enrollment decisions on August 24.

This seminar is open to all undergraduates, but priority will be given to sophomores interested in concentrating in History & Literature.

History & Literature  90ES

Prison Abolition (216326)

Thomas Dichter

2021 Spring (4 Credits)  Schedule: MW 1200 PM - 0115 PM

Instructor Permissions: Instructor  Enrollment Cap: 24
Is prison abolition a serious proposal, an aspirational ideal, a trendy slogan, or a blueprint for social transformation? This interdisciplinary and community-engaged course situates the prison abolition movement in deep historical context and explores its current relation to the politics of criminal justice reform. We will study the movement's connections to slavery abolitionism, anti-lynching activism, Indigenous struggles for sovereignty, and the Black Power movement. We will examine the emergence of the modern prison abolitionist movement in the 1970s, as well as more recent developments concerning immigration detention, Black Lives Matter, and COVID-19. Our readings will include interdisciplinary scholarship on the carceral state in addition to protest writings and activist materials. A major component of the course will be collaborative activities and service with community organizations focused on incarceration and the criminal legal system, through which we will consider what prison abolitionist ideas might look like in action. There will be opportunities for dialogue with scholars and activists as we investigate prison abolition not as a singular policy, but as a rich and challenging set of questions for rethinking matters of violence, inequality, and social change.

Class Notes: Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature's application to enroll by 11:59 pm EST on Tuesday, January 19, 2021. Instructors will notify students of enrollment.

This seminar is open to all undergraduates, but priority will be given to sophomores interested in concentrating in History & Literature.

History & Literature  90ET

Asian America’s Vietnam War (217633)

Catherine Nguyen

2021 Spring (4 Credits)  

Schedule: R 0300 PM - 0545 PM

Instructor Permissions: Instructor Enrollment Cap: 10

"All wars are fought twice, the first time on the battlefield, the second time in memory," Viet Thanh Nguyen has argued. In this seminar, we will challenge how the Vietnam War is remembered in the United States by focusing on the work of Asian Americans and the Southeast Asian diaspora. From the 1960s onward, the American perspective and the figure of the white American soldier have dominated the history of and the imagination surrounding the Vietnam War. As a result, the experiences of the Vietnamese, and of Southeast Asia and Asian America more broadly, have been pushed to the periphery. This seminar brings them back front and center. Reading a range of texts and artwork, we will study the various narratives of war, refugees, and the diaspora and will place the Vietnam War in a longer historical perspective that illuminates the imperial legacies of the conflict. We will engage with Vietnamese narratives of the war that include soldier and civilian perspectives as well as diasporic works. We will consider the Asian American experience of the war: soldiers and veterans, the Third World Liberation Front, and anti-war protests. And we will examine the diversity of the Southeast Asian experience and cultural productions. This seminar offers us the opportunity to think together about how the Vietnam War as a historical event as well as category of Asian American/Vietnamese/Southeast Asian experience can allow for analyses and critiques of war, empire, and diaspora that speak to contemporary discussions of citizenship and belonging and the U.
S. immigration policies.

With funding from History & Literature and the Asia Center, this seminar offers a mini speaker series with scholars in critical refugee studies and Southeast Asian diasporic artists and cultural producers. These events are required for seminar students and will be open to the public.

Class Notes: Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature's application to enroll by 11:59 pm EST on Tuesday, January 19, 2021. Instructors will notify students of enrollment.

This seminar is open to all undergraduates, but priority will be given to sophomores interested in concentrating in History & Literature.

Landmarks of World Architecture (113337)

David Roxburgh
Patricio del Real

2021 Spring (4 Credits) Schedule: TR 1200 PM - 0115 PM
Instructor Permissions: None Enrollment Cap: n/a

Examines major works of world architecture and the unique aesthetic, cultural, and historical issues that frame them. Faculty members will each lecture on an outstanding example in their area of expertise, drawing from various historical periods and diverse cultures such as modern and contemporary Europe and America, early modern Japan, Mughal India, Renaissance Europe, and ancient Egypt. Weekly discussion sections will develop thematically, expanding on the given examples to focus on significant issues in the analysis and interpretation of architecture.

History of Art & Architecture   18K
Introduction to Japanese Art (118347)

Melissa M. McCormick

2020 Fall (4 Credits) Schedule: TR 0430 PM - 0545 PM
Instructor Permissions: Instructor Enrollment Cap: 24

This course surveys artistic production in Japan from the prehistoric period to the twenty-first century. The goal is not to define the national or “Eastern” character of Japanese art, but to interrogate manifestations of human creativity produced in the archipelago on their own terms. Students learn to analyze key examples of painting, prints, sculpture, and architecture, while also exploring calligraphy, garden design, ceramics, performance art, and fashion. Essential themes include the relationship between art and sociopolitical development, the complexities of Sino-Japanese cultural exchange, and the integration of art into the practice and conceptualization of religion and philosophy, as well as the performance of gender, race, and class.

Class Notes: The two weekly synchronous meetings will consist of short lectures, interactive exercises focused on visual analysis, discussions of the readings and lecture content, and student-led short presentations. There are no prerequisites for this course; all are welcome.

Enrollment is limited to 24. To register please complete the questionnaire by
August 21. Instructors will notify students of enrollment status on August 24.

Medieval Media (215760)

Jeffrey Hamburger

2020 Fall (4 Credits)                      Schedule:          TR 0130 PM - 0245 PM
Instructor Permissions:     None             Enrollment Cap:     n/a

From the invention of the icon and the book in late Antiquity to printing and panel painting in the 15th century, the Middle Ages harnessed new visual media to revolutionary effect. The course examines space (architecture), light (stained glass), body (sculpture/relic), figure (fresco, tempera, oil), word (roll/codex), abstraction (diagram), mass media (printing).

Course Notes: This is an introductory seminar without prerequisites intended exclusively for undergraduates. Students will meet twice a week with one session acting as a lecture and the other as a discussion of that week's topic.

Spanish Golden Age Painting: Truth and Deceit (205401)

Felipe Pereda

2020 Fall (4 Credits)                      Schedule:          TR 1030 AM - 1145 AM
Instructor Permissions:     None             Enrollment Cap:     n/a

The art of the Spanish Golden Age is well known for its radical naturalism, on the one hand, and its intense religious imagery, on the other. This course will be an introduction to the major artists of this period – Murillo, Velázquez, Zurbarán and others— from the point of view of painting's power to produce visual illusions and deceive their spectators. Consequently, the course will consider artistic tropes of illusion and disillusionment in relation to early modern debates on belief and skepticism.

'Making Buildings Beautiful': Politics, Power, and Architecture (215877)

Patricio del Real

2020 Fall (4 Credits)  Schedule:  MW 0130 PM - 0245 PM
Instructor Permissions:  None  Enrollment Cap:  n/a

Should the U.S. government or any government have an official style, and if so, what style should it be? The recent presidential executive order, called "Making Federal Buildings Beautiful Again," has brought the problem of beauty and the question of style centerstage to cultural debates on architecture and the built environment. But it's not a new debate. This undergraduate lecture course examines the ways architecture has serviced the nation-state, and advanced political, economic and social ideologies. It examines how architecture has been used as a tool of political and cultural power and a technique for social governance. We will focus on the 20th and 21st Century, examining case studies from across the globe. We will explore paradigmatic examples of aesthetic fundamentalism such as the embrace of classical architecture in Nazi Germany and Stalinist Russia, and the promotion of architectural modernism by the Vargas' Dictatorship in Brazil, and Mussolini's Fascist Italy. We will look at memorialization through architecture such as the recent National Museum of African American History and Culture in Washington DC and the Ningbo History Museum in China; engage current debates on monuments and collective memory; and explore the democratizing use of contemporary architecture and urbanism in Colombia. The course looks at "the good, the bad and the ugly" examining architectural aesthetics as a form of cultural power. It focuses on pressing issues affecting our shared built environment as we confront an uncertain future. In short, we will look at why, today, Architecture continues to have meaning, and answer whether buildings need to be "beautiful" or significant.

Money Matters (216165)

Evridiki Georganteli

2021 Spring (4 Credits)  Schedule:  TR 1030 AM - 1145 AM
Instructor Permissions:  Instructor  Enrollment Cap:  48

Money is everywhere. As both an abstract construct and a material entity, money makes the world go around. Since before the invention of writing, money has been a common facet of everyday life, informing how we think and how we act. The course explores how societies across human history have made, used, and valued money in divergent ways. We will consider money as an object of aesthetic appreciation, an ethical problem, an architect of social relations, and environmental disruptor, a tool of political resistance, and much more. How has coinage design been a function of money's role as a political, religious, and
cultural symbol? Is money a measure of value, and how does it align with other potential values, such as religious, moral, and aesthetic ones? Is it ethically neutral or an instrument of moral vice or virtue? What were the debates surrounding the rise of paper money beginning in the eighteenth century? How was money used as a tool of political resistance during the suffragette movement? Does money get recycled, and what is the environmental cost of different money forms today? What are the links between art, literature, theater, cinema, and money?

China in Twelve Artworks (161270)
Eugene Wang
2021 Spring (4 Credits)  Schedule: MW 1200 PM - 0115 PM
Instructor Permissions: Instructor  Enrollment Cap: n/a

China is grasped through twelve artworks, spanning three millennia from the Bronze Age to the twentieth century. These artworks form both a timeline and a jigsaw puzzle with recurrent themes, e.g., the correlation between cosmos, body, and mind. The course consists of case studies, revealing both larger intellectual trends and the nuanced way artworks engage established formal conventions. Students learn about China through art and acquire visual literacy that takes art on its own terms.

Design Speculations: Senior Design Tutorial (207690)

*Megan Panzano*

2020 Fall (4 Credits)  
**Schedule:** R 0900 AM - 1145 AM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** 14

This seminar will serve as a design platform for inquiry, documentation and analysis in relation either to the thesis topic or capstone project of interest to each student. Thesis students will be responsible for selecting a Thesis Advisor (or Advisors) with whom they will meet regularly to develop specific intention, substance and methodology of the thesis research and paper. This seminar is a support of independent thesis and/or independent project research, extending methodological inquiry of the project topic to design where students may convene to collectively discuss and experiment with design speculations – design tests that explore research through the visual and spatial language of architecture. The course will cover topics general to design research with discussions, assignments, and readings focused on three main themes in relation to architectural design: Discourse, the development of a proposition for the role and significance of architecture relative to the project topic of interest; Method, the design steps/process of working through a design application/inquiry of those ideas; and Context, the relationship of the project topic of study to broader surroundings which include but are not limited to the discipline of architecture,
cultural contexts, technical developments and/or typologies. The seminar will emphasize and support the translation of ideas emerging from independent research into visual forms of representation including, but not limited to, drawings, diagrams, images, study models, and short animations. The techniques of representation reviewed will be catered to the project topics of individual students, but will also form a part of the general discussion of the course.

HAA 96A Transformations or HAA 96B Connections design studios is a pre-requisite to the Design Speculations course.

History of Art & Architecture 96A

Architecture Studio I: Transformations (109375)

Zachary Seibold

2021 Spring (4 Credits)  
Instructor Permissions: Instructor  
Enrollment Cap: 18  
Schedule: MF 0130 PM - 0415 PM

Architecture assembles multiple models, surfaces, and materials; it is not a single monolithic thing, rather it is comprised of disparate parts and organizational systems operating at different scales. Design, the bringing together of these elements, requires sensitivity, registers scale, and renders perceptual effect. This course is an introductory architectural design studio focused on building foundational architectural concepts and design methodologies studied through a process of making. A series of physical modeling/fabrication assignments explore spatial and organizational transformations as a consequence of the changing interactions among material, fabrication technique, and form. Resultant expressions of space, scale, and perceptual effects are discussed and evaluated in relation to a series of course readings that frame the intentions of each assignment within architectural theory and history discourse.

Both studios in the Architecture Studies Track (Transformations HAA 96A and Connections HAA 96B) explore architectural means and methods of design. Each begins from a different scale of inquiry, but converges at a similar end. This studio originates at the scale of material - focusing on specific capacities and effects thereof as well as the details of assembly - and expands from this to an investigation of an occupiable architectural scale in relation to a dynamic site.

The course emphasizes fluency in the visual and spatial communication of ideas through instruction in 2D drawing and 3D modeling techniques. Technical workshops are provided in choreography with serial assignments encompassing drafting and 3D modeling (AutoCAD + Rhino), techniques of fabrication (Rhino to various outputs), 3D printing, and representational processing (Adobe Creative Suite). The studio exposes students to critical architectural thinking and design methods for more broad disciplinary application following. No particular skill set, technical or otherwise, is a required prerequisite for this course; students from all backgrounds are welcome.

Architecture Studio II: Connections (110362)

Elle Gerdeman

2021 Spring (4 Credits)  Schedule:  TR 0130 PM - 0415 PM

Instructor Permissions:  Instructor  Enrollment Cap:  18

The practice of architecture fundamentally asks us to continuously engage with, and re-conceptualize, the world for which we are designing. As such, architecture as a discipline is not only about designing buildings, but also about challenging us to imagine new ways of seeing the world. This studio takes on the challenge through a series of design exercises focused on understanding, engaging with, and reimagining the urban condition. Throughout the course, we will approach architectural design as both a method of producing urban environments, and also as an avenue through which to understand our cities. We will be directly confronting the social, political, and environmental contexts that are necessarily implicated in any design process.

Both studios in the Architecture Studies Track (Transformations HAA 96A and Connections HAA 96B) explore architectural means and methods of design. Each begins from a different scale of inquiry, but converges towards a similar end. This studio originates at the scale of the urban site, and begins with a set of design research assignments that ask students to imagine the city from the perspective of a non-human agent. Extrapolating abstract principles from these agents, we will be mobilizing the possibilities of architectural representation to reimagine the city through mapping, diagraming, and collage.

The studio culminates in a design proposal for a site in Harvard Square. Students will be given an architectural brief, and will produce projects that address existing site conditions, programmatic space requirements, and projected users of the site. Technical workshops will provide all the necessary skills required for the course, and will allow students to develop aptitude in architectural drawing, mapping, rendering, and simple animation. No existing expertise or technical proficiency is necessary for this course. Students from all backgrounds are welcome; we will be encouraging interdisciplinary thinking throughout the design research process.

Junior Group Tutorial (113117)

Joseph Koerner

2021 Spring (4 Credits)  
Schedule: T 0300 PM - 0500 PM  
Instructor Permissions: Instructor  
Enrollment Cap: n/a  

Group tutorial, offers concentrators the choice of several study groups investigating a particular field of art of architectural history.

Course Notes: Required of concentrators, generally in the Junior year.

Class Notes: This semester's tutorial will offered on the title "East Asian Painting: China, Korea, Japan."
"The three regions of East Asia—China, Japan, and Korea—reveal intimate conjunctions and integration in their pictorial vocabulary and source of inspiration. This course explores important works of East Asian painting from the fourth to the early twentieth century. While having students get familiar with the format, material, subject matter, and terminology in East Asian painting, the course aims to nurture in-depth understanding of critical issues pertaining to various historical periods and genres. Each session will proceed chronologically and focus on one or two central pieces alongside with related themes to explore: painting theory, gender, materiality, literati culture, transnationalism, and patronage. In doing so, this course will provide students with solid foundation for advanced readings in East Asian art history."

From Byzantium to the British Isles: The Materiality of Late Antiquity (205052)

Evrildiki Georganteli

2021 Spring (4 Credits)       Schedule:     M 0900 AM - 1145 AM
Instructor Permissions:       Instructor    Enrollment Cap:  12

This course explores the extraordinary cultural transformation of Europe, the Mediterranean, and the Middle East underwent from Diocletian's reorganization of the Roman Empire in the late third century to the Islamic conquest of the Iberian Peninsula in the eighth century. Monuments and sites, sculpture, mosaics, frescoes and ceramics, icons and relics, textiles, coins, and seals chart the movement of people, commodities, and ideas along routes of warfare, pilgrimage, trade, and diplomacy. Was the world of late antiquity still bearing the hallmarks of Roman connectivity, administration, and culture? Were Ireland and Anglo-Saxon England really the edge of the known world? What was the extent of the Eastern Roman Empire’s cultural power in late antique Europe, Africa, and the Middle East? How did religious changes influence urban topographies, geographies of power, and artistic choices?

Research stunning works of art from collections across the globe. Go behind the scenes in the Metropolitan Museum. Handle metalwork, textiles, coins, and seals in the Harvard Art Museums and the Dumbarton Oaks Collections. Visit a city in late antique Macedonia. Be an archaeologist for a day and explore Harvard’s flagship dig at the archaeological Exploration of Sardis. Map your findings on the Digital Atlas of Roman and Medieval Civilizations, and create podcasts about your favorite objects.

Class Notes: Classes are expected to only run for 2 hours and 15 minutes.

Hagia Sophia: Architecture, Space and Ceremony (109959)
Ioli Kalavrezou
2021 Spring (4 Credits) Schedule: W 0300 PM - 0545 PM
Instructor Permissions: Instructor Enrollment Cap: 15

The seminar will investigate an architectural masterpiece, the famous 6th c. Church of Hagia Sophia of Constantinople, now Istanbul. The monument stands at the forefront of the supreme architectural achievements not only of the emperor Justinian but of all Medieval and Byzantine domed architecture. It is best known for its unique design, its dome of unprecedented scale, and its splendid mosaics, now very much in the lime light. The seminar will analyse issues of design and materials, structure, symbolism and ritual performances.

Albrecht Dürer became the world’s first world-famous artist largely because he invested his talent in the new medium of print. Multiplying his work a thousand fold and disseminating it (on sheets of paper) to innumerable viewers in multiple locations, print made Dürer the first beneficiary of “distance viewing” and, thus, a perfect topic for “distance learning” forced on us by the current pandemic. Looking together, creatively, at this artist’s fascinating and enduring oeuvre — all available online — we will explore the wider cultural dynamics of Renaissance and Reformation that underlay the making, and the breaking, of art.

This course, taught from original drawings in the collection of the Harvard Art Museums, explores a broad range of topics associated with the materials, functions, preservation, collecting, exhibiting, and cataloguing of European and American drawings from the fifteenth century through the nineteenth century. Emphasis will be placed on close examination of the drawings, and discussions will include identification of media, characteristics of the execution, inscriptions, and other details that contribute to an understanding of the creation, purpose, and history of each sheet. Class members will collaborate on creating a virtual exhibition of drawings from the Harvard collections, to be presented online. Assignments involve reading, writing, and working directly from the objects. Broad knowledge of the history of European and American art is desirable but not required.

This course is about two things. First it's an introductory course to the art of Francisco de Goya (1746-1828) at the time of the Enlightenment and early Romanticism. It will look into his formation in the institutions of the Old Regime (Travel to Rome, member of the Royal Academy, Court Artist) and explore how Goya challenged this artistic culture, exploring new ideas for the meaning of art, of its public and of the role of the artist in society. Second, the course will discuss Goya's work (from his early "caricatures," the Caprichos, to the Disasters of the War) in relation to modern debates about testimony, witnessing and trauma.

Harvard Square (212807)

Suzanne Blier

2020 Fall (4 Credits) Schedule: M 1200 PM - 0245 PM

Instructor Permissions: Instructor Enrollment Cap: 15

Harvard Square has a rich history; under its earlier name of Newtowne (founded in 1630), it was once the site of the Massachusetts capital. Much has changed. This class looks back on the many changes Harvard Square has undergone, recent challenges it has faced, and asks class members to think forward about how it might be re-envisioned. This class will combine work in local archives on issues related to history and policy, meetings with local Cambridge officials, and an array of local design and drawing assignments. Learn how Harvard fits in; Be part of the change.

Stranger than Fiction (108657)

Carrie Lambert-Beatty

2020 Fall (4 Credits) Schedule: T 1200 PM - 0245 PM

Instructor Permissions: Instructor Enrollment Cap: 18
Is there an art history of post-truth? False personas, invented figures, museums of unnatural history and other fictive phenomena fill the annals of contemporary art. How do decades of factually-presented fictions, and thousands of temporarily deceived viewers, relate to the cultural changes that generated "truthiness," "fake news" and "The Death of Truth"? In this course you'll learn about installation art, conceptual art, photography, performance and video, while mapping out varieties of fact-based, fictional, and parafictional art, and debating their implications for art history—and for everyday life. (Note: class can be taken for credit in either HAA or AFVS; total enrollment limited to 18.)

**History of Art & Architecture 176G**

Women as Photographers in Weimar Germany and in Exile (215889)

*Benjamin Buchloh*

2021 Spring (4 Credits)  
**Schedule:** R 0300 PM - 0545 PM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** 15

An extraordinary number of women trained to become photographers in Weimar Germany (1919-1933). Their presence and practices dramatically altered the conditions of visual culture in a country that had never achieved the levels of French modernism, for example, neither in terms of its aesthetic complexity nor in terms of its contributions to nation state identity. Female photographers not only changed the almost purely patriarchal structures of official German culture, but they also contributed to a fundamentally different model of artistic identity, one that was not only subversive in terms of its gender politics, but also dismantled hierarchical orders at large, thus dramatically expanding the spectrum of collective interest and participation in processes of representation, be they reflections on the everyday lives of the urban masses, on sexual politics and the New Woman, or trans-national travel, fashion and consumption as presented in the rapidly expanding industries of the illustrated magazines. The majority of these photographers had to emigrate after 1933, either because they were Jewish or because their left wing politics were prosecuted, or because their progressive aesthetic principles and projects were no longer tolerated by the Nazi Regime.

Thus the second part of the seminar will not only trace the dis- and relocations of these figures, but also explore the impact of exile on cultural identities and practices in the second half of the twentieth century.

**History of Art & Architecture 177G**

Workshop of Revolution: From Studio to Street After 1917 (215882)

*Maria Gough*

2020 Fall (4 Credits)  
**Schedule:** W 0300 PM - 0545 PM
Recent events have reminded us of the phenomenal power of the real-time convergence of people in public space. What is the role and responsibility of the artist in such moments of far-reaching political, social, and cultural upheaval and transformation? Should artists uphold the (modernist) principle of the autonomy of the work of art? Or should they commit to the social turn that has characterized much artistic production of the last decade or so?

To help us debate this fundamental question, this course brings to the table one of the most extraordinary historical examples we have of artists radicalizing their aesthetic practices, tactics, and strategies to meet revolutionary objectives—that of the avant-gardes that emerged in Russia in the wake of the 1917 revolutions.

Remarkable for the number of women in their ranks, the Soviet avant-gardes of the 1920s and 1930s reconceptualized what it meant to be an artist. They advanced collective practices, counter-monuments, the politicization of abstraction, and innovative modes of exhibition design. Inventing new typologies of small-form architecture, such as agitational kiosks and vehicles, they transcended their traditional domain (studio, gallery, and museum) to operate directly in the public realm of the street. They designed demonstrations, outdoor theatrical spectacles, and workers’ clubs for the enlightenment, relaxation, and entertainment of ordinary people. To expand their outreach, they moved away from the production of unique objects (paintings, sculpture) to engage instead the mass-distribution forms of industrial production, photography, film, print media, and poster, book, clothing, and textile design.

What lessons, whether positive or negative, might we learn from their example?

Artists include: Vladimir Tatlin, Liubov Popova, Varvara Stepanova, Elena Semenova, Kazimir Malevich, Aleksandra Ekster, Aleksandr Rodchenko, Valentina Kulagina, Gustavs Klucis, Sophie Küppers, Marii Bri-Bein, Aleksandr Deineka, Dziga Vertov, Elizaveta Svilova, and El Lissitzky.

Course readings comprise short polemical essays by artists and their contemporary apologists and critics, and key texts by art historians and theorists. All readings in English.

Open to all graduate and undergraduate students. (To facilitate their preparation, undergrads will have, in addition to the regular course meeting, a dedicated one-hour section with a TF.)

Requirements: --Weekly preparation of readings (all available on Canvas); --Attendance and participation (via Zoom) at a two-hour meeting per week (and, for undergrads, also the one-hour prep section)--One or two 10-minute class presentations on the reading;--Paper of 10-12 pages (undergrads), 15-25 pages (grad students).

Class Notes: There will be an open house event on Wednesday, August 19th, from 4-5 pm ET. Please stop by. For more information, visit our Canvas page.

History of Art & Architecture 177K

Art After State Violence: The Paris Commune & its Repression (216466)

Maria Gough

2021 Spring (4 Credits)  
Instructor Permissions: Instructor  
Enrollment Cap: n/a

Schedule:  
T 1200 PM - 0245 PM

How have artists responded to state violence? How has their work remembered, suppressed, erased, or otherwise forgotten acts of violence administered by states against their own citizens? When confronted by this type of violence, what is the responsibility of the artist who is neither its victim nor perpetrator? Prompted by such questions, this course analyzes photographs produced during, and paintings and drawings made in the three decades following the Paris Commune of 1871. An urban uprising motivated by the anarchist belief that power should be held by those directly affected by its exercise, the Commune existed for just over two months before its violent repression, which resulted in the death of thousands of Parisians. We begin with photography, then still a young medium, and then analyze the work of leading modernist painters such as Courbet, Manet, Morisot, Degas, Seurat, Signac, and Luce, considering the extent to which their work grapples--directly or indirectly--with this major historical trauma.

History of Art & Architecture 178N

Architecture in the "museum" (215902)

Patricio del Real

2021 Spring (4 Credits)  
Instructor Permissions: Instructor  
Enrollment Cap: 15

Schedule:  
W 0300 PM - 0545 PM

Why has architecture entered the museum? Today, art museums continue to expand their offering on "buildings," some even opening departments dedicated to architecture and design. In these privileged exhibition spaces, architecture abandons its place in the world – its practical and everyday interactions in the built environment – to enter the realm of representation. At the same time, exhibitions are part of the production of architecture, conditioning its practice and stimulating its culture. This reading/research proseminar examines architecture as a cultural object in display. It looks for the historical conditions that normalized its presentation in the museum. Our focus: architecture exhibitions in the expanded field of exhibitionary practices, from professional associations to ministries of public works, that led architecture to enter the "museum." We will look at: key exhibitions; their materials; what and how is put on display (models, drawings, and objects); archives; collecting and acquisitions policies; curatorial strategies. Our aim is to go beyond well-known exhibitions and explore why architecture has become a tool for cultural authority, elite aesthetics, market consolidation, and political soft power. The course will run in parallel with seminars held at UNAM, Mexico, and PUC, Chile, led by local faculty members. Each seminar will focus on their national architectural and cultural contexts and work to survey and construct an Americanist geography of curatorial practices in architecture during the 20th century. Students are required to attended public presentations in the lecture series: Why Architecture Belongs in the Museum.
Undergraduate approval from instructor.

Nihonga: Modern Japanese Painting (215903)

Yukio Lippit

2021 Spring (4 Credits)  
**Schedule:** M 0300 PM - 0545 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 10

This seminar studies the history of modern Japanese painting through an examination of Nihonga, a neotraditional form of painting that emerged in the late nineteenth century. Conceptualized in part by Ernest Fenollosa and Okakura Kakuzo, Nihonga selectively combined traditional Japanese formats, materials, and subject matter with European pictorialism, and would go on to become the defining pictorial mode of academic painting in Japan, exerting a strong influence across the Asian world. A major premise of the seminar is that Nihonga is as essential to a study of global artistic modernism as any other genre or movement.

Chinese Sonic Painting: How to Picture Voice (215883)

Eugene Wang

2020 Fall (4 Credits)  
**Schedule:** M 0900 AM - 1145 AM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 15

Can paintings project voice? Can soundscape be pictured? The seminar explores the long-standing Chinese tradition of "sonic painting" that captures lyric voice. It seeks to go beyond the text/image paradigm by shifting the focus on the voice effect in painting. In doing so, the course develops a methodology of characterizing the art of senses and pictorial means of performing voices, such as "singing" and lamentation.

Global Art: Comparative Approaches in Art History & Ethnography (215884)

*Suzanne Blier*

2020 Fall (4 Credits)  
Schedule: M 0300 PM - 0545 PM

Instructor Permissions: Instructor  
Enrollment Cap: 15

The course explores art in global context, among those traditions in Africa, Oceania, and Native America, fields shared by both art history and anthropology. How does each discipline address local perspectives on art? Readings will be drawn from historical and more recent study. Issues addressed will be: approaches to field analysis, comparative perspectives, the role of history, artists, art markets, museums. Students will gain an understanding of the global art forms under consideration, and different disciplinary approaches, as well as questions important to the understanding of visual engagement.

Art in a State of Siege (215904)

Joseph Koerner

2021 Spring (4 Credits)  Schedule:  W 0300 PM - 0545 PM
Instructor Permissions:  Instructor  Enrollment Cap:  15

What challenges and opportunities arise for artists and writers working under dire conditions—martial, political, medical, and natural states of emergency? To what extent are such exceptional conditions the
rule (as Walter Benjamin proposed)? Co-taught by Stephen Greenblatt (English) and Joseph Leo Koerner (History of Art), this course considers art and literature in states of siege against the backdrop of juridical theories of such states.

Course Notes: This class is co-taught by Stephen Greenblatt and is also offered as English 227s.

Art Writing in Persianate Culture (216264)

David Roxburgh

2020 Fall (4 Credits)  Schedule:  T 1200 PM - 0245 PM

Instructor Permissions: Instructor  Enrollment Cap:  12

This seminar is focused on the reading and critical study of primary written sources about art in Persian and English translation from the 15th through 17th centuries focused on Persianate culture. Secondary sources in Persian and European languages are also considered for their approaches and methods to the examination of written sources.

The written sources are arranged chronologically and span several genres including the petition (Arzadasht), the calligrapher's treatise (Simi Nishapuri, Sultan Ali Mashhadi, and Baba Shah Isfahani), the artist's treatise (Sadiqi Beg), the travel narrative (Ghiyath al-Din Naqqash and Abd al-Razzaq Samarqandi), the album preface (Dust Muhammad), biographies of poets (Dawlatshah Samarqandi and Sam Mirza), biographies of artists and calligraphers (Qazi Ahmad and Mustafa Ali), and the memoir (Jahangir). Study of these sources will attend as much to their form, language, genre, literary history, and authorship as to their content and value for art history.

American Racial Ground (216085)

Sarah Lewis

2020 Fall (4 Credits)  Schedule:  M 0900 AM - 1145 AM

Instructor Permissions: Instructor  Enrollment Cap:  12
How are artists, and how are disciplines in the arts and humanities, responding to the hyper-visuality of racial injustices on American ground? This course explores how visual artists including Mark Bradford, Theaster Gates, Amy Sherald, Xaviera Simmons, Hank Willis Thomas, and Kehinde Wiley, and new landmarks—such as the Equal Justice Initiative's National Memorial to Peace and Justice and the creation of Black Lives Matter Plaza—have initiated a new set of "groundwork" tactics in the Stand Your Ground Era in the United States. Stand Your Ground laws, first established in 2005 and now in over thirty-three states, define the right to self-defense, to claim the ground on which one stands if there is a perception of "reasonable threat." The law disproportionately affects black and brown lives today. These artworks prompt the question, What does it mean to not be able to "Stand Your Ground"? What are the representational tools available to show the frequent challenge to this upright position as a statement of sovereignty over one's own life? How has the manifold meaning of the term "ground"—as both reason, fact, but also soil itself, opened up a mode of critical inquiry to address the injustices wrought at our feet? Just as the field of environment studies has begun to consider its nexus with racial inequity; this course will approach these representations of the "ground" with a critical race art history perspective. It will give students the chance to consider the "groundwork" that artists have created as both practical labor for civic society, and as a prompt for new, critical methodological inquiry in the arts and humanities at large. Enrollment is limited to graduate students and a few undergraduates by application.

Class Notes: This class will meet for a 2-hour session on Mondays between 9:45 AM and 11:45 AM.

Class Notes: American Racial Ground Application
I wish I could accept every student who wanted to enroll in this course, but it is limited to 12 students.

Please read carefully:
1. Please fill out this application and email it to TF Jessica Williams at jessicawilliams@g.harvard.edu if you have interest in taking this course by 5pm on August 21st.
2. Request Instructor Permission to enroll on my.harvard.edu by 5pm on August 23rd.
3. Accept or decline your spot. You will receive an email from Jessica Williams about whether you've been accepted or placed on the wait list by 5pm, August 22nd. You have 24 hours to accept your spot. To accept, go to my.harvard.edu, navigate to your Crimson Cart, and click "enroll" (you may need to "validate" your Cart before doing so). To decline, send an email to jessicawilliams@g.harvard.edu. There will be a short waitlist. We will contact waitlisted students about openings on August 23rd. Students from the waitlist who are offered a spot will have 24 hours to accept.

The Graphic Method: Recording the Body in Line, Film, and Flame (215885)

Jennifer L. Roberts

2020 Fall (4 Credits)  Schedule: R 0300 PM - 0545 PM

HARVARD UNIVERSITY  Page 1951 of 4008  3/13/2021 0:22 AM
Beginning in the mid-nineteenth century and coalescing in the work of French polymath Étienne-Jules Marey, scientists worked systematically to develop methods of detecting and recording the elusive, invisible motions of living bodies. Hoping to penetrate the ephemeral secrets of vitality itself, they devised instruments that allowed the body to “write” its own signatures directly, usually as waveforms or photographic traces in time. The “Graphic Method” (the term was coined by Marey) is best known within art history for its central role in the development of chronophotography and cinema in the work of Marey and Eadweard Muybridge. But it had a much wider range of applications and implications: for example, it was synonymous with the development of dynamic medical imaging (the cardiograph was Marey’s invention) and sound recording (the phonograph is a graphic trace of a sound wave). By the early twentieth century, the graphic method seemed to have disturbed every existing model of time, form, and expression in the humanities and sciences. And it had a long and continuing impact on modern and contemporary art. This course is designed for graduate students and advanced undergraduates. It will begin with a close look at Marey’s work, then move to a thematic format. The course readings and discussions will focus primarily on the period from 1870-1920, but student research projects may address more recent works of art and visual culture.

Deception (110252)

*Carrie Lambert-Beatty*

2021 Spring (4 Credits)  

**Schedule:**  
R 0300 PM - 0545 PM  

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 12  

This course will treat questions of trickery, deceit, and duplicity as characteristics of art, and attempt to theorize the aesthetics of deception. The approach will be through contemporary art, where artists have reinvented the old association between art and illusion, but students of any period or culture will be able to pursue their interests as the class treats the long history, and complicated theory, of art’s association with trickery.

**Course Notes:** Primarily for graduate students.

Buddhist Visualization: Dunhuang Caves (215886)
The cluster of embellished caves at Dunhuang, China, is among the largest decorated Buddhist cave complexes in the world, spanning the fourth to the fourteenth century. With 492 caves decorated with murals and sculptures, Dunhuang is the largest art gallery in situ in the world. The course explores the visual programs of Dunhuang caves. The disparate textual sources on which the murals are based do not explain their convergence in the same cave. A deep logic of world-making binds them together. Using available digital reconstructions that proffer spatial experience of the Dunhuang caves, we address some key questions: how do disparate murals in each cave add up to form a program and imply a process? What process? How do these cave visualize and stage the Buddhist spacetime and mental theater of meditation?

Tutorial - Sophomore Year (115419)
Anne Harrington
2021 Spring (4 Credits)  Schedule:  M 1200 PM - 0200 PM
Instructor Permissions:  Instructor  Enrollment Cap:  55
Sophomore tutorial is a hands-on course that introduces students to some of the most exciting and
productive questions in the history of science, technology and medicine, while developing critical reading, presentation and discussion skills. Small groups of students will tackle different aspects of a larger theme each week and share discoveries in sessions led by the faculty instructor. The course will be further enhanced by a series of supervised individual projects.

**Course Notes:** Required for undergraduate concentration in History and Science. Students must register for the plenary class session that meets on Mondays from 12:00-2:00pm, as well as a weekly section to be arranged.

Knowing the World: An Introduction to the History of Science (123398)

Hannah Marcus

Benjamin Wilson

2020 Fall (4 Credits)  Schedule:  TBD

Instructor Permissions:  None  Enrollment Cap:  n/a

What are the origins of modern science and of the scientific method? Have the ways of knowing the world of different cultures and societies changed over time? How has scientific knowledge been related to other enterprises such as art, religion, literature, and commerce? We will ask these questions and more through a broad survey of many of the crucial moments in the development of science from the Scientific Revolution of the 17th century to the present day. Topics and figures will include Galileo, evolution, eugenics, the atomic bomb, and the human genome project.

Starstruck! The History, Culture, and Politics of American Astronomy (213529)

Sara Schechner
2021 Spring (4 Credits)  
**Schedule:** T 0300 PM - 0545 PM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** 12

This hands-on course will introduce key episodes and issues in the history of American astronomy by close looking at rare early scientific instruments and tangible objects in Harvard collections. Starting with the story of Captain John Smith, Pocahontas, and a sundial, the course will move from colonial relations with Native Americans to the controversial placement of observatories on sacred mountaintops today. In between, we will discuss the roles of religion, politics, science, and culture in the promotion of astronomy in American society. Topics will include comets and extraterrestrials, observatories, westward expansion, time selling, and the role of women. Each unit will begin with anchoring objects, and students will work behind the scenes in the Collection of Historical Scientific Instruments. There will also be opportunities to make and use your own instruments to engage with early methods of production and observation.

Foreign Bodies: On Health and Migration (212935)

*Eram Alam*

2020 Fall (4 Credits)  
**Schedule:** R 0300 PM - 0545 PM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** 10

During the twentieth century, unprecedented human mobility has raised significant questions regarding migration and health. Whether coerced or voluntary, these migratory flows reverberate through individuals,
communities, populations, environments, and the body politic in unexpected ways. This course will focus on the relationship between health and migration and ask the following questions: How are moving bodies named and managed? What are the political, economic, juridical, and medical implications of movement? How is risk defined and constructed in relation to migration? Readings will include case studies from around the world, supplemented with theoretical and literary texts.

Course Notes: Enrollment limited to 20.

Graphic! Visualizing Medicine from Textbooks to Comics (205361)

Soha Bayoumi

2021 Spring (4 Credits) Schedule: M 0300 PM - 0545 PM

Instructor Permissions: Instructor Enrollment Cap: 25

Visuals play an important role in the history and practice of medicine, from medical textbooks to medical imaging, and from hospital signage and public health posters to comics and graphic novels. This course will examine the use of visuals in medicine, and will place particular emphasis on the new academic and creative field known as "Graphic Medicine"—examining the interface between the medium of comics and the discourse of medicine and healthcare. Over the course of the semester, we will ask questions about how attending to the visual allows us to think in new ways about diagnostic practices, therapeutics, medical consumerism, doctor-patient communication, and ways in which patients and caregivers narrate their personal experiences of disease. We will pay careful attention to questions of class, race and gender, and to larger ethical and political issues raised by our materials. This semester, the course will also examine the visual culture of the COVID-19 pandemic from public signage to comics.

Sick and Tired of Being Sick and Tired: A History of Health Disparities in America (216802)

Evelynn Hammonds

2021 Spring (4 Credits) Schedule: MW 1030 AM - 1145 AM

Instructor Permissions: None Enrollment Cap: n/a
Since the arrival of Africans from Africa to America, their health and health care has been a critical issue for the nation. From the era of slavery to the present, African Americans have been disproportionately burdened by disease and ill health. Health disparities are the "inequalities that occur in the provision of healthcare and access to healthcare across different racial, ethnic and socioeconomic groups." This course examines this issue over the long time frame from the 17th century to the present. Currently, compared to the white population, African Americans are at an overall greater risk for many serious and life threatening diseases. This course will examine how these disparities emerged over time. It will explore the strategies and practices that African Americans and other ethnic groups employed to improve their health care. It will also examine the ways that cities, states and the federal government supported or ignored the health of African Americans and other marginalized communities. We will give special attention to the impact of the COVID-19 pandemic on these communities.

### History of Science 172

**Mental Health Matters: Recurring Themes and Unfinished Business (216373)**

*Anne Harrington*

2020 Fall (4 Credits)  

**Instructor Permissions:** Instructor  

**Enrollment Cap:** 30

This new course offers an opportunity to explore some of the unfinished business of modern-day mental health care through an historical lens, from incarceration to health inequities to trauma to the role of drugs and biological thinking. Mental health matters! But history matters too, because understanding the forces that have brought us to our current moment arms us with insights that allow us to do better. This course has also been built from the ground up, to take advantage of the potential of online learning. The course may be online, but it is far from "virtual" -- on the contrary, the heart of this course will be the active real-time engagement it will offer all students who enroll.

**Course Notes:** Students must register for the plenary class session that meets on Mondays from 12:00-2:45am OR 3:00-5:45pm, as well as a weekly section to be arranged.

**Mental Health Matters: Recurring Themes and Unfinished Business (216373)**
Anne Harrington

2020 Fall (4 Credits)  
**Schedule:** M 0300 PM - 0545 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 30

This new course offers an opportunity to explore some of the unfinished business of modern-day mental health care through an historical lens, from incarceration to health inequities to trauma to the role of drugs and biological thinking. Mental health matters! But history matters too, because understanding the forces that have brought us to our current moment arms us with insights that allow us to do better. This course has also been built from the ground up, to take advantage of the potential of online learning. The course may be online, but it is far from "virtual" -- on the contrary, the heart of this course will be the active real-time engagement it will offer all students who enroll.

**Course Notes:** Students must register for the plenary class session that meets on Mondays from 12:00-2:45am OR 3:00-5:45pm, as well as a weekly section to be arranged.

Psychotherapy and the Modern Self (156325)

Elizabeth Lunbeck

2021 Spring (4 Credits)  
**Schedule:** R 0300 PM - 0545 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 15

This course explores the history behind today's psychotherapeutic landscape, looking at sites ranging from the clinician's office to the modern workplace to the media. We look at the development, methods, aims, efficacy, and limitations of a range of psychotherapeutic modalities from Freud's time to our own — among them psychoanalytic, psychodynamic, cognitive, behavioral, manualized, and evidence-based treatments as well as family, sex, and group therapies. We also explore how, in the midst of challenges posed by the COVID-19 pandemic, longstanding therapeutic precepts have been called into question; notably, teletherapy — once considered a suspect practice — has enjoyed overnight acceptance. The course examines long-standing tensions running through the therapeutic project: Is psychotherapy best conceived of as a quest for self-improvement or as a means to relieve symptoms? Should it aim to alter cognition and/or behavior, or should it focus instead on the inner life? Is mind or brain its proper object? Is it an indulgence or a necessity? Is its efficacy subject to scientific measurement? And, if so, in what does cure consist? Throughout, we will ask what sort of person (and problems) is envisioned by each approach, whether explicitly or implicitly. How do therapists think about their practices? How have writers and poets, media personalities and comics, embraced or disdained and made sense or made fun of psychotherapy? The question of the relationship between professional practices and the rise of a popular therapeutic sensibility is central to the course. Do we suffer less and enjoy greater self-knowledge one hundred years after the invention of the talking cures?

Humans in Space: Past, Present, Future (160334)
Matthew Hersch
2020 Fall (4 Credits) Schedule: W 0300 PM - 0545 PM
Instructor Permissions: Instructor Enrollment Cap: 24
This seminar will offer an intensive, engaging investigation into human spaceflight’s origins and future, beginning with ancient anticipations and ending with space travel in the 21st century and beyond. Conducted remotely but drawing upon a range of provocative sources, this seminar’s readings, audiovisual media, hands-on activities, and discussions will trace the development of the technologies humans have used to leave their home planet and place these technologies within the context of cultural and social change, in the United States and around the world.

Communicating Science (107619)
Alex Csiszar
2021 Spring (4 Credits) Schedule: W 0300 PM - 0500 PM
Instructor Permissions: Instructor Enrollment Cap: 12
Are new digital and social media revolutionizing how we know the world? Is a networked science a more open, and public, science, and is this a good or a bad thing? How do scientists and the public decide what is a legitimate scientific fact? These questions, hotly debated these days, go back a surprisingly long way. In this seminar, we will interrogate current upheavals in scientific communication (especially, but not exclusively, in connection with the COVID-19 pandemic) by taking a critical eye toward the long history of making science into public knowledge, from the rise of scientific news to the growing role of social media in scientific life.

Information: History, Politics, and Ethics (208317)

Alex Csiszar

2021 Spring (4 Credits)  
Schedule: T 0945 AM - 1145 AM  
Instructor Permissions: Instructor  
Enrollment Cap: 12

Does information have a history? The control and manipulation of data has become central to politics, economics, and daily life. But what came before this age of bits and big data? How did we get to this point? This course will examine the changing meaning and significance of information from diverse perspectives including technology, gender, ethics, and materiality over the last several centuries. Topics will include information technologies from printing to digital computing, news and disinformation in social media, information labor, state secrecy, and the self as data. The course will include several optional field trips including a printing workshop and a visit to a bioinformatics production facility.

The World We Made: Technology and Society (203610)

Matthew Hersch

2021 Spring (4 Credits)  
Schedule: W 1200 PM - 0245 PM  
Instructor Permissions: Instructor  
Enrollment Cap: 24

For as long as people have lived on Earth, they have shaped their world and have, in turn, been shaped by it. This lecture course surveys humans’ relationships with the built world, beginning with the origins of civilization and extending through the present day. During the semester, we will track the development of transformative technologies—from fire-making to the Internet—throughout human history and across the globe, and place them in their social contexts. In so doing, we will learn how humanity chooses which technologies to exploit, and how human society is transformed by those choices.

Butcher. Baker. Candlestick maker. Despite our best efforts, many of us are or will be defined by our work. In this seminar, we will explore how this most fundamental of human activities intersected with developments in science and technology in modern history. Three interrelated questions inform our inquiry: First, how does work serve as an object of scientific and technological inquiry (e.g. scientific management)? Second, how do changes in science and technology affect the nature of work (e.g. mechanization and automation)? And third, who is considered a scientific or technological worker? Taking these questions into the past and across multiple cultural contexts, we seek to develop critical ways of thinking about such key issues as the value of labor and the future of work.

Significant Stories: Podcasting the History of Science (216453)

David Unger

2020 Fall (4 Credits) Schedule: R 0300 PM - 0545 PM

Instructor Permissions: Instructor Enrollment Cap: 10

In this project-based class, students will create an audio-rich podcast series that uses objects from Harvard's Collection of Historical Scientific Instruments (CHSI) to explore the history of science teaching at Harvard and to put the online transformation of classes this semester in historical context.

Students will learn the skills needed to research, plan, record, and produce broadly accessible non-fiction audio stories. Students will also learn how to transform scholarly observations into stories that are meaningful to a broad audience using techniques from museum interpretation, public history, and journalism.

Factory to Gig: The Technology of Work (217640)

David Unger

2021 Spring (4 Credits) Schedule: R 0300 PM - 0545 PM
Instructor Permissions: Instructor Enrollment Cap: 24

This class will help you understand the structure of working life and to imagine possibilities for the future. We will look at the development the key social technologies of wage labor, bureaucracy and management, and the global division of labor. Each of these technologies was created as the result of power struggles and the pursuit of wealth, each was shaped by race and gender, and each has been an important site of resistance and critique. We will also look at alternative social technologies such as cooperative enterprise, the commons, and solidarity economies.

Why Trust Science? (216010)

Naomi Oreskes

2020 Fall (4 Credits) Schedule: MW 1200 PM - 0115 PM
Instructor Permissions: None Enrollment Cap: n/a

The covid-19 pandemic has poignantly illustrated what can happen when scientific advice is ignored. Yet, at the same time, opinion surveys show that many Americans are distrustful of science and scientists, particularly when scientific findings seem to contradict their worldview. This class examines the basis for trust in science. We will explore the question of whether there is a scientific method, the role of consensus in science, the reasons why scientists sometimes come to faulty conclusions, and how we, as citizens, can judge scientific information and make informed choices in our lives. Topics may include the scientific basis for understanding climate change, the ozone hole, the sources of pandemics, the benefits (or lack thereof) of vitamins, and why you should wear sunscreen and floss your teeth.

History of Science 212
Death and the Body in the Age of Plague (207909)

Hannah Marcus
Though we all will die, ideas and practices surrounding death have differed across time and space. This course will examine death and dead bodies in an era defined by epidemic and the ravages of disease. Our graduate seminar has three interrelated goals. First, we will engage with a range of fascinating primary sources about death and dead bodies in the late medieval and early modern world. Second, we will read the most important historical literature on the topics of death, dying, and the many scientific, political, and religious uses of dead bodies. The final goal of the course is for students to produce an original research paper. Most (but not all) of the sources on the syllabus will deal with Christian death, though I very much welcome students interested in considering these themes and pursuing research about different religious and geographical contexts.

**History of Science 220HT** Section: SEM

Critical History: Time, Cause, and Agency (216374)

*Peter Galison*

2020 Fall (4 Credits)  
Schedule: W 1200 PM - 0245 PM
Instructor Permissions: Instructor  
Enrollment Cap: 12

This will be a small, intense seminar aimed at exploring the underlying metaphysics of historical writing. Using Foucault (especially his meta-historical works) as our guiding thread, we will examine critically the assumptions that lie behind the idea of causal plenitude (that events all have causal explanations); time, continuity, dislocation. Positivism, historical-structuralism, objectivity will be topics, along with the tension between structural and agential historical argument. Reading will be heavy, writing light. Meetings will include not only full-group but also smaller breakout sessions every week. The goal, in the midst of the pandemic, is to put aside (for this moment) a primary focus on professionalization and instead to see how deeply we can go into the foundational premises of historical reason. Because this is an all-in intensive venture, it will not be possible to have auditors.

Course Notes: This is a full credit, half term course. Enrollment by permission of the instructor.

**History of Science 229**

The Nuclear Age: Critical Historical Perspectives (217646)
This seminar uses the history of the nuclear age to explore the relationship between science, society, and the state. It also uses critical perspectives from the history of science and the field of science studies to examine classic questions about the nuclear age. Did the use of atomic bombs by the United States against Japan end the Second World War? Did nuclear arsenals stabilize the Cold War, and can they be deployed or even used rationally? How and why was nuclear technology conceived as a path to national autonomy and postcolonial development? Can the risks associated with complex nuclear technologies be managed? How has the nuclear age impacted global environments and human health? One of the seminar’s goals will be to consider how historians and science studies scholars might intervene in debates over policy and public memory.

Current Issues in the History of Medicine: Seminar (126322)

Allan Brandt

Explores new methods for understanding disease, medicine, and society, ranging from historical demography to cultural studies. Topics include patterns of health and disease, changes in medical science and clinical practice, the doctor-patient relationship, health care systems, alternative healing, race and medicine, and representations of the human body. The course will focus on historical problem-framing, research strategies, and writing. This year the course will center attention on influential first books, typically based on doctoral dissertations. Among issues to be considered are topic choice, historiography, narrative and theory, and audience. Writing requirements for the course will center on strategies for reviewing books and their evaluation.

History of Science 248

Epidemics and Other Crises (216011)
Epidemics continue to challenge human populations, causing substantial mortality and provoking dramatic societal responses. At the same time, there are many other health significant threats (e.g., cigarettes, air pollution, the climate crisis) that generate little concern or attention. This graduate seminar will examine the historical literature on epidemics and other health threats to explore the nature of the threats, how societies have responded, and how these histories can inform our understanding of medicine and public health. We will also explore the roles that historians can play when these crises strike: can we distill useful lessons from history?

Histories of Science from the Peripheries to the Center (216452)

Gabriela Soto Laveaga

In this graduate seminar we examine how knowledge produced in frontiers, along borders, and so-called peripheral regions shaped scientific and technological innovation across the globe. By de-centering the sites of knowledge production students will learn to critically examine and expand our known histories of science, medicine, and technology. Special focus will be given to the role that the pursuit of racial difference played in shaping technologies that measure said "difference" among ethnic groups and colonized people.

History of Science  282

Genre and Knowledge (156487)

Alex Csiszar

2020 Fall (4 Credits)

Schedule: T 0945 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap: 20

This semester, Genre and Knowledge will focus on genres, formats, and technologies that have been associated with claims to universal knowledge. Shifting away from an exclusive focus on the category of genre, we seek to interrogate and understand historically how claims to totality have been undergirded by infrastructures, writing and publishing projects, and aesthetic commitments. By what means are boundaries drawn in order to legitimize a claim to totality? What is left out, or transformed into insignificance, by those claims? Have science and the study of nature been privileged domains for such claims, and why? How have claims about universality been resisted or shown to be partial, local, or otherwise inaccurate?

Course Notes: This course will satisfy the pre-1800 requirement for doctoral students in History of Science.

Class Notes: The precise timing of our meeting may shift depending on the constraints of participants.

Sources and Methods in the History of Technology (160503)

Matthew Hersch

2021 Spring (4 Credits)

Schedule: M 1200 PM - 0245 PM
Intended for graduate students, this seminar provides a comprehensive introduction to the field of history of technology and surveys its canonical works. Readings by authors like Thomas Hughes, Jennifer Light, and Fred Turner will explore the evolving histories of industrialization, computing, military and aerospace technologies, gender and technology, and other areas of student interest. Students will also gain experience working with primary sources, including archival documents, oral histories, popular media, memoirs, and material culture. At the conclusion of the term, each student will prepare a research prospectus suitable for a grant application or future work in the field.

Science, Power and Politics (122718)

Sheila Jasanoff

2020 Fall (4 Credits) Schedule: W 0200 PM - 0400 PM

Instructor Permissions: Instructor Enrollment Cap: 10

This seminar introduces students to the major contributions of the field of science and technology studies (STS) to the analysis of politics and policymaking in democratic societies. The objective is to expand students' understanding of the ways in which science and technology participate in the creation of social and political order. The seminar is devoted to reading and analyzing works by scholars in STS and related fields who have addressed such topics as the relationship between scientific and political authority, science's relations with the state, science and democracy, scientific and technical controversies, and citizenship in technological societies.

Course Notes: Undergraduates may enroll only by permission of the instructor. Offered jointly with the Kennedy School as IGA-513.

Class Notes: Please note that the first class meeting will be held on Wednesday, September 2, 2020.

The Past and Futures of the University (217876)

Peter Galison
This small, intense graduate seminar is aimed at exploring the changing structure, aims, and impact of the university, from early days through our present vexed moment to possible futures. Reading will be heavy, writing light. Meetings will include not only full-group but also smaller breakout sessions every week. The goal is to explore the foundational premises of why we have universities, where they come from and where they are heading. Each week we will explore a different facet of the university in its many forms, from the early, religious university through the growth of the research university—and all the ways it is has been transformed by war (hot and cold), corporatization, politics and social dislocation and unrest. Because this is an all-in intensive venture, it will not be possible to have auditors.

Course Notes: This is a full credit, half-term course. Enrollment by permission of the instructor.

Agnotology: The History of Knowledge and Ignorance (203706)

Naomi Oreskes

Historians of science have traditionally been concerned with the production of scientific knowledge, but in recent years have turned their attention to the production of ignorance. This course focuses on the production of ignorance as a social, political, cultural, economic and epistemic question, with attention both to techniques of deliberate ignorance production, and to the inadvertent and often uncontested production of ignorance that arises from accepted research practices and from the conditions that shape the direction and forms of scientific inquiry.

Course Notes: Open to graduate students and advanced undergraduates in history of science, and to others with instructor’s permission.

History Beyond the Classroom: Foundational Discussions about Research (216467)

Peter Galison
Elizabeth Lunbeck

2020 Fall (2 Credits) Schedule: T -

Instructor Permissions: Instructor Enrollment Cap: 25

The pandemic has shut down travel, but History Beyond the Classroom carries on. This course brings colleagues from around the world into conversation with first and second year graduate students. We meet four times each semester to discuss the work of invited guests—leading scholars in the field-- on the methods and topics that they see as central to contemporary and developing work in the History of Science. Intended as an adjunct to preparation for the general examination.

Course Notes: Limited to first and second-year doctoral students in History of Science. This is the first part of a two-semester course. Ordinarily, both semesters are required.

**Sophomore Tutorial in Human Evolutionary Biology (122625)**

*Daniel Green*

2021 Spring (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a  

An introduction to the issues and methods of human evolutionary biology, focusing on evolutionary theory, the concept of adaptation, and their application to human evolution. Weekly readings and discussions, with biweekly writing assignments that integrate major course themes.

**Course Notes:** Required of and limited to Human Evolutionary Biology concentrators.  
**Requirements:** Course open to Undergraduate Students Only

### Human Evolutionary Biology 99A

**Tutorial - Senior Year (122595)**

*Sarah Kessler*

2020 Fall (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** 30  

Research and writing of the Senior Thesis.

**Course Notes:** Limited to honors candidates. Permission of the faculty advisor required. Part one of a two part course.  
**Requirements:** Course open to Senior Students Only

**Human Evolutionary Biology 1210**

Research in Human Biomechanics and Physiology (127206)

*Andrew Yegian*  
*Sarah Kessler*

2021 Spring (4 Credits) Schedule: T 0130 PM - 0245 PM

**Instructor Permissions:** Instructor

Enrollment Cap: 8

Introduces students to experimental techniques used to investigate the musculoskeletal structure and physiology of humans. Students undertake a supervised research project in the Skeletal Biology and Biomechanics Laboratory. Students meet to introduce their project, discuss their work and progress, and to present their final results, as well as for several lectures on writing and presenting research findings. An extensive commitment of time in the laboratory is required. Grades are based on the work completed, the oral presentation, and a short research paper.

**Course Notes:** This course fulfills the research seminar concentration requirement for Human Evolutionary Biology

**Class Notes:** The first meeting will occur as scheduled in the course catalog, but subsequent meetings will take place approximately every two weeks at a time and day that fits the students' schedules.

**Recommended Prep:** Recommended: Life Sciences 2 or Human Evolutionary Biology 1420

**Additional Course Attributes:**

Human Evolutionary Biology 1212
Climate Change and Human Evolution (205546)
Daniel Green
2020 Fall (4 Credits) Schedule: R 0300 PM - 0500 PM
Instructor Permissions: None Enrollment Cap: n/a
This course will explore the relationship between climate, environment and human evolution. How did hominins and other mammals adapt to global cooling and grassland expansion? Is there any correlation between climate and the adaptive radiation that produced multiple Australopithecine lineages and the genus Homo? How might the environments of Eurasia have influenced the dispersal of Homo sapiens out of Africa? And how are anthropogenic climate change and environmental degradation affecting human health, subsistence and conflict today? What is the future of our species?
Course Notes: This course counts as an HEB elective for HEB concentrators.

Human Evolutionary Biology 1290
Genes, Mind, and Culture (159565)
Joseph Henrich
2020 Fall (4 Credits) Schedule: MW 1030 AM - 1145 AM
Instructor Permissions: Instructor Enrollment Cap: n/a
Unlike other species, humans are heavily reliant on learning from others to acquire many important aspects of their behavior, and this cultural transmission has created a second system of inheritance that has driven much of our species' genetic evolution. In addition to having shaped our species' anatomy and physiology, cultural evolution has important implications for understanding human nature, and for how to tackle basic problems in psychology, economics and anthropology. The first third of this course will develop the basic principles and lines of inquiry while the remainder will apply, hone and refine them by exploring economic development, the history of modern institutions, and global inequality.

Human Evolutionary Biology 1310
Hormones and Behavior (112219)

Carole Hooven

2021 Spring (4 Credits)  Schedule:  TR 1030 AM - 1145 AM
Instructor Permissions:  None  Enrollment Cap:  n/a

An introduction to the interaction between hormones and behavior, emphasizing research in humans. General principles of endocrine physiology are presented. The course then focuses on how hormones affect the brain and body in early development and later in adulthood, and the relationship of hormones to sex and gender. We will explore human reproduction, energy metabolism, mating and sexuality, parental behavior, stress, and dominance interactions.

Class Notes:  In the online format, we plan to have two 25-minute asynchronous, plus one 50-minute synchronous class meetings, in addition to a 50-minute discussion section. Class meetings/discussions will be broken up if needed, to ensure each section is 20 people or fewer.

Human Evolutionary Biology 1311
Evolution of Human Locomotion (213579)

Andrew Yegian

2020 Fall (4 Credits)  Schedule:  TR 1030 AM - 1145 AM
Instructor Permissions:  Instructor  Enrollment Cap:  12

In this course we will examine how the human body evolved to allow our extraordinary form bipedal locomotion. We will survey the hominin fossil record to understand the major transitions in human evolution from climbing to walking to running, and you will learn basic techniques in experimental biomechanics and physiology through laboratory exercises and seminar-style discussions.

Recommended Prep:  Life Sciences 2 and/or HEB 1420 recommended but not required.

Human Evolutionary Biology 1317
Evolution, Anatomy and Physiology of Sleep (217869)

Joanne Clark Matott

2021 Spring (4 Credits)

Schedule: MW 1030 AM - 1145 AM
Instructor Permissions: Instructor
Enrollment Cap: 8

This research seminar will introduce students to current theories on the evolution of sleep, the neuroanatomical basis of sleep and wake regulation, and the interpretation of physiological sleep recordings. Students will also gain insight into project planning (and grant application writing), experimental design, and data analysis. This twice-weekly seminar will consist of lectures and group discussion, and will provide scheduled time for one-on-one meetings, scientific writing practice, and data analysis.

Course Notes: This course counts as a Junior Research Seminar.

Human Evolutionary Biology 1326
Ancient DNA as a Window Into the Human Past (216425)

David Reich

2020 Fall (4 Credits)

Schedule: MW 1200 PM - 0115 PM
Instructor Permissions: Instructor
Enrollment Cap: 15

Over the last decade, ancient DNA technology has made it possible to ask and answer questions that were impossible to address before, and the findings that have emerged are profoundly challenging and enriching previous understandings of the past gleaned from fields outside genetics. This course is aimed at providing students with the tools needed to critically evaluate and perform original research. The centerpiece of the course will involve students learning how to analyze ancient DNA data—including unpublished data produced by the instructor’s lab—leading to a final project in which students will write an original research paper based on their analysis of data, mentored by the instructor and/or members of the instructor's laboratory. The course format will include lectures aimed at providing students with an understanding of major issues in this field (starting from an assumption that students have no background), and seminar-style discussions critically assessing papers and student research projects.

Course Notes: This course is offered by the Human Evolutionary Biology Department—whose students will be guaranteed a minimum of 1/3 of the spots in the course—but would also be of interest for students in Computer Science, Statistics, Organismic and Evolutionary Biology, Anthropology, Molecular and Cellular Biology, and History. This course is aimed at providing deep disciplinary knowledge in Ancient DNA research and as such could be a jumping-off point for students.
who wish to do an Honors Senior Thesis in this area or carry out Ph.D. thesis research in Ancient DNA.

Recommended Prep: Computer programming background (AP Computer Science or equivalent). Statistics background (AP Statistics or equivalent). Students who do not have computer or statistics background but are highly motivated to take the course should write to the instructor to have a discussion about whether they might have the background needed to take the course.

Human Evolutionary Biology 1328

Evolutionary Medicine: Comparative Perspectives on Medical, Surgical and Psychiatric Illness (205490)

Barbara Natterson-Horowitz

2020 Fall (4 Credits) Schedule: TR 0600 PM - 0715 PM

Instructor Permissions: None Enrollment Cap: n/a

Heart attacks, breast cancer, anxiety and eating disorders occur across the animal kingdom. Taught by a physician, the course explores the species-spanning and evolutionary origins of medical, surgical, and psychiatric illnesses. A 'mini-medical school' format will be used to introduce students to ten forms of human pathology emphasizing the typical mechanistic explanations of disease causation offered by physicians followed by in depth evolutionary analyses. Both physical and mental illnesses will be explored across the animal kingdom with a special focus on how emerging awareness of psychopathology in animals can alter the perception (stigma) and treatment of mental illness in human beings.

Human Evolutionary Biology 1330

Primate Social Behavior (113837)

Martin Surbeck
Isaac Schambberg

2020 Fall (4 Credits) Schedule: TR 1030 AM - 1145 AM

Instructor Permissions: Instructor Enrollment Cap: n/a

A review of the behavioral interactions in natural primate populations, drawing on experimental, observational, and theoretical studies. Discussion of ecological, physiological, and developmental bases of primate social behavior, with special attention to the evolution of patterns of behavioral interactions among
individuals of different age, sex, relatedness, and status. Topics include sexual conflict, sexual selection, and mating systems; care of offspring and other aid-giving; manipulative and cooperative aspects of communication; competition, dominance, and territoriality; and the evolution of social relationships.

**Course Notes:** This course fulfills the behavior concentration requirement for Human Evolutionary Biology.

**Human Evolutionary Biology 1334**

Grunts, gurgles, and grammar: primate communication and the origins of language (217870)

*Isaac Schamberg*

2021 Spring (4 Credits)  

**Schedule:**  

- T 0300 PM - 0545 PM  

**Instructor Permissions:**  

- Instructor  
- Enrollment Cap: 15

This seminar examines the evolution of language through four big questions: 1) How does language differ from the communication of other primates? 2) For what purpose did language evolve? 3) Why (and how) do infants learn language? 4) What is the relationship between cognition and language? In addressing these questions, the course will draw on findings from psychology, anthropology, linguistics, and, especially, primatology.

**Human Evolutionary Biology 1339**

The Human Brain in the Animal Kingdom (214351)

*Erin Hecht*

2021 Spring (4 Credits)  

**Schedule:**  

- MW 1030 AM - 1145 AM  

**Instructor Permissions:**  

- Instructor  
- Enrollment Cap: 30

Our brains make us what we are. How did they get that way? How are they different from other animals', and how are they similar? This course will explore the structure and function of the modern human brain and examine the selective pressures that have impacted the evolution of human neuroanatomy and cognition. Frequent comparisons will be made with other primate and non-primate species in order to situate an understanding of Homo sapiens within the context of the broader animal kingdom.
Additionally, the course will delve into the types of methodological approaches used to study these topics and consider the frontiers of new knowledge in this area. The course will integrate research and theory from biological anthropology, archaeology, psychology, ethology, and neuroscience. Topics covered include the evolution of large brains in humans and other species; the emergence of human-unique phenomena like language, complex tool use, music, and mathematics; social cognition and theory of mind; individual variation and brain plasticity during learning; and domestication and self-domestication.

Recommended Prep: Recommended prep/prerequisite: HEB 1280 Human Nature

Human Evolutionary Biology 1361

Hormones and Life History Physiology (203615)

Susan Lipson

2020 Fall (4 Credits) Schedule: TR 0300 PM - 0415 PM

Instructor Permissions: Instructor Enrollment Cap: 10

A survey of human (especially female) life history physiology and the role of hormones in orchestrating key life course transitions, in allocating energy to optimize fitness, and in determining health and disease. This framework will be used as a basis for discussion of real-world issues, including racial disparities in reproductive outcomes and in the tempo of growth and development and questions concerning fertility and infertility.

Course Notes: The course is a hybrid of lectures and seminar discussions.

Recommended Prep: Prerequisite for enrollment: Human Evolutionary Biology 1418, Life Sciences 2, another relevant (e.g., OEB, SCRB) course, or with permission of instructor.

Requirements: Anti-req: Cannot be taken for credit if HEB 1351 already complete

Human Evolutionary Biology 1381

The Arrogant Ape: Rethinking our Relationships to Others (213580)
Darwin’s theory of evolution offered a powerful counternarrative to the scala naturæ, thus redefining the place of Homo sapiens in the natural world. But a great irony presents itself when a species so-named for its wisdom is currently causing the sixth mass extinction of life on earth. In this seminar, we will explore this apparent contradiction, assess why it has come to be part of our evolutionary legacy, and discuss theory and research that counteracts its profound negative potential.

Human Evolutionary Biology 1387
The Origins of Human Physiologic Synchronization (217868)

Barbara Natterson-Horowitz

2021 Spring (4 Credits)  Schedule: WF 1200 PM - 0115 PM
Instructor Permissions: Instructor  Enrollment Cap: 4

When humans sing in unison, march in step, pray in groups or engage in intimate conversations and activities some physiologic synchronization occurs. Synchronization of physiology (entrainment) can also influence human empathy, aggression and the perception of threat, pain, affiliation, and more. Significant gaps exist in our understanding of how, why and when physiologic entrainment evolved. Some answers may be found in the mechanisms underlying schooling in fish, flocking in birds and herding in mammals. Understanding how and why entrainment evolved can help us better interpret the evolution of human responses, decision-making, emotional states.

Students will work closely with faculty in twice weekly lab meetings and will investigate a central research question related to the origins of human autonomic physiologic entrainment. Students in this seminar will work intensively and collaboratively to identify:

a. a range of mechanistic explanations currently understood to underlie autonomic entrainment in human groups;
b. evidence related to the role of autonomic entrainment in human cooperation;

c. evidence related to autonomic entrainment in other social vertebrates

Human Evolutionary Biology 1403
The Biology of Human Aging (216420)

Noreen Tuross
2020 Fall (4 Credits)
Schedule: R 1245 PM - 0245 PM
Enrollment Cap: 8

Instructor Permissions: Instructor

The course covers current concepts of human aging including the challenge that human aging presents to evolutionary theory. We will explore cellular and molecular aging research in model systems; focus on the underlying mechanisms involve in the wear and tear of life, and discuss the impacts of race and climate change on human aging.

Course Notes: The course will involve recorded lectures, weekly responses, individual meetings, class discussion

Recommended Prep: Prerequisite of LS1b

Human Evolutionary Biology 1410
Gut Microbiome and Human Health (204010)

Rachel Carmody
2021 Spring (4 Credits)
Schedule: R 1200 PM - 0200 PM
Enrollment Cap: n/a

Instructor Permissions: Instructor

Microorganisms residing in the human gastrointestinal tract outnumber our own cells and together encode at least 100 times as many unique genes. In this research seminar, we explore gut microbial contributions...
to human physiology in states of health and disease. We consider how the human gut is colonized, the
factors shaping the structure and function of the gut microbiome, and the pivotal roles of the gut
microbiome in digestion, energy regulation, immunity, development, drug metabolism, and behavior. We
evaluate fast-growing evidence for the gut microbial modulation of metabolic syndrome, cardiovascular
disease, cancer, and neurodevelopmental and neurodegenerative disorders, and discuss prospective
microbiome-targeted approaches for the prevention and treatment of human disease. The weekly two-hour
lab will introduce students to experimental and computational techniques used to investigate the gut
microbiome, enabling students to pilot novel research projects that dovetail with topics discussed in
seminar.

Course Notes: This course fulfills the research seminar requirement for Human
Evolutionary Biology.

Preference will be given to Human Evolutionary Biology concentraters
fulfilling a research seminar requirement and Human Evolutionary
Biology graduate students.

Recommended Prep: Life Sciences 2 or permission of instructor.

**Human Evolutionary Biology 1420**

Human Evolutionary Anatomy (116069)

*Neil Roach*

*Joanne Clark Matott*

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

How does the human body function? How do our organs develop and grow? Why did we evolve this
strange bipedal form? This course explores human anatomy, with an emphasis on the function, structure
and evolution of the muscular, skeletal, nervous, circulatory, digestive and reproductive systems. Lectures
are combined with small laboratory learning experiences and virtual investigations of human cadavers.

Course Notes: This course fulfills the anatomy/physiology concentration requirement
for Human Evolutionary Biology

Recommended Prep: Life Sciences 2 recommended, but not required

Human Evolutionary Biology 1451
Primate Functional Genetics and Genomics (109815)

Terence Capellini

2021 Spring (4 Credits)  
Schedule: TR 1030 AM - 1145 AM
Instructor Permissions: Instructor  
Enrollment Cap: n/a

Recent advances in genetics, genomics, and developmental biology are improving our understanding of human and non-human primate biological traits. These disciplines, when incorporated into a multi-faceted context, can reveal the mechanistic basis of evolutionary adaptations. This seminar is designed to investigate and critically evaluate foundational and novel research in primates (and other organisms) that employs the tools of these trades. In doing so, students are exposed to an integrative perspective upon which to explore classic and modern questions in functional biology.

Course Notes: This course fulfills the research seminar concentration requirement for Human Evolutionary Biology

Recommended Prep: Life Sciences 1b or equivalent genetics/genomics course.

Human Evolutionary Biology 1480
Building the Human Body (156174)

Terence Capellini  
Neil Roach

2020 Fall (4 Credits)  
Schedule: TR 1030 AM - 1145 AM
Instructor Permissions: Instructor  
Enrollment Cap: 20

Humans and our primate relatives are incredibly variable. This variation results from natural selection operating on the developmental mechanisms that control anatomy and physiology. While these mechanisms remain mostly undiscovered, we are beginning to understand these complex processes due to major advances in technology that have pushed the fields of genetics, genomics and developmental biology rapidly forward. This research-centered course explores these relationships in the context of the human paleontological record. We focus on the evolution and development of the musculoskeletal system, which includes the cranium, axial skeleton and limbs, and present studies that cast light on the developmental genetic mechanisms that underlie major transitions in human evolution.

Course Notes: This course fulfills the research seminar requirement for Human Evolutionary Biology and includes a mandatory laboratory section.

Class Notes: This course fulfills the following Human Evolutionary Biology concentration requirements: 1. Junior Research Seminar, 2.
Anatomy/Physiology, 3. Upper level.
This course will use a flipped format with lectures viewed independently and live laboratories, discussions and demonstrations.

Recommended Prep: LS1b (Genetics, Genomics, and Evolution). Introductory courses in paleoanthropology, anatomy helpful but not required.

Human Evolutionary Biology 1600
Evolutionary Genetics of Complex Human Traits (161269)

Maryellen Ruvolo

2020 Fall (4 Credits) Schedule: MWF 1200 PM - 0115 PM

Instructor Permissions: Instructor Enrollment Cap: 8

We need to move beyond the “one gene – one trait” framework of Mendelian genetics in order to understand many human traits that are of compelling evolutionary and biomedical significance. "Complex traits" are those determined by multiple genes, environmental factors, and their interactions. Some diseases that kill us (e.g., heart disease) are complex traits, as are a wide range of physical and behavioral features, such as height, metabolism, language, depression, and countless more. Complex traits are far easier to study in model organisms than in humans, where we are dependent on naturally-occurring variants. Arguably the best characterized human complex traits are those for which the most NIH dollars and researchers’ efforts have been spent, and these include schizophrenia, autism spectrum disorder, and other neurodevelopmental and neuropsychiatric disorders. By paying close attention to the genetic bases of these disorders and their contributing environmental components, we will develop a useful framework for analyses of other human complex traits. Increasingly, researchers are realizing that epigenetic modifications (chemical “tags” added onto DNA that can change gene expression) and microbes living in the human gut (the microbiome) also influence the final forms of these disorders. In this advanced small-group seminar, we will evaluate their multiple genomic and environmental causes, what animal models and stem cell "organoids" can tell us, whether natural selection acts to maintain these disorders in the population, and the importance of studying world-wide population diversity for uncovering the full range of genetic factors. Our discussions will span topics from the gene and neurobiological levels to the societal.

Course Notes: This course is appropriate for upper-level undergraduate students, as well as first and second year HEB graduate students. Auditing is not available for this course. Class sessions are simultaneous for "live" seminar discussions; optional Friday sessions are for small-group meetings with instructor, office hours, and/or occasional full class sessions in weeks with Monday holidays. Students are expected to be available to attend optional Friday sessions as required. Directions for applying to register for this course will appear on the Canvas course website.

Recommended Prep: Prerequisites are an A or B grade in Life Sciences 1b or demonstrated knowledge of basic quantitative genetics (please consult with instructor).
Human Evolutionary Biology 1610

Genes and Human Adaptations (203909)

Maryellen Ruvolo

2021 Spring (4 Credits)

Schedule: MW 1200 PM - 0115 PM

Instructor Permissions: Instructor

Instructor

Enrollment Cap: 8

Adaptations are defined as features that enhance survival and reproduction, and they are the products of evolution by natural selection. For spring 2021, we focus on three main topics. First, language is a universal human adaptation. How can we understand its evolution by looking at its underlying genetic bases and using model organisms to investigate the function of key mutations? Second, lifespan evolved to become longer in humans over the last 6-7 million years. How can we apply a comparative perspective to understand why long life is adaptive for a species? Humans also vary in lifespan. How can we discover ongoing selective pressures on longevity using genetic information, and how might those forces vary among populations and in different environments? Third, infectious diseases have been one of the strongest selective agents on the human genome. How have humans adapted to them over the course of evolution? For a complementary viral perspective, we will investigate evolution of the novel coronavirus causing the current pandemic, SARS-CoV-2, to see how it emerged (in the wild or in a lab?) and ask whether any of its variants are adaptive (and hence worrisome for humans).

Other topics: Is natural selection occurring in contemporary humans? Can we detect its footprints using genetic and genomic data? Looking to the future, what selective pressures will climate change impose on humans, and how might we respond to these challenges? Students will have the opportunity to investigate any human adaptation in their final research papers, including “classic” examples, such as malarial adaptations, high-altitude adaptation, skin pigmentation as a response to UV radiation, and dietary adaptations. We may also cover some of these in class as time allows.

Recommended Prep: REQUIRED prerequisites: An A or B grade in Life Sciences 1b

Human Evolutionary Biology 2390

Genes, Mind, and Culture (213600)

Joseph Henrich

2020 Fall (4 Credits) Schedule: MWF 1030 AM - 1145 AM

Instructor Permissions: None Enrollment Cap: n/a

Unlike other species, humans are heavily reliant on learning from others to acquire many important aspects of their behavior, and this cultural transmission has created a second system of inheritance that has driven much of our species' genetic evolution. In addition to having shaped our species' anatomy and physiology, cultural evolution has important implications for understanding human nature, and for how to tackle basic problems in psychology, economics and anthropology. The first third of this course will develop the basic principles and lines of inquiry while the remainder will apply, hone and refine them by exploring economic development, the history of modern institutions, and global inequality.

Human Evolutionary Biology 3596

Laboratory Methods in Human Developmental Genetics (160709)

Terence Capellini

2021 Spring (4 Credits)  Schedule:  TBD
Instructor Permissions:  Instructor  Enrollment Cap:  n/a

Supervised independent laboratory research focusing on discovering the developmental genetic and genomic mechanisms that control musculo-skeletal development in the context of human evolutionary anatomy. Students will be conducting research in Professor Terry Capellini’s Developmental and Evolutionary Genetics Lab.

Course Notes:  Limited to graduate students in Human Evolutionary Biology.
Requirements:  Course open to Graduate Students Only

Humanities 10A

A Humanities Colloquium: From Homer to Valeria Luiselli (110440)

Stephen Greenblatt  
David Atherton  
Glenda Carpio  
Jay Harris  
Deidre Lynch  
Mark Schiefsky

2020 Fall (4 Credits)  
Schedule: T 1030 AM - 1145 AM

Instructor Permissions: Instructor  
Enrollment Cap: 90

2,500 years of essential works, taught by six professors. Humanities 10a includes works by Homer, Plato, Sappho, Sophocles, Augustine, Murasaki, Shakespeare, Saikaku, Equiano, Mary Shelley, Dickinson, Walcott, Morrison and Luiselli. One 75-minute lecture plus a 75-minute discussion seminar led by the professors every week. Students will receive instruction in critical writing one hour a week, in writing labs and individual conferences. Students also have opportunities to participate online in a range of cultural experiences, ranging from plays and musical events to museum and library collections.

Course Notes: The course is open only to freshmen. Students who complete Humanities 10a meet the Harvard College Curriculum divisional distribution requirement for Arts & Humanities. Students who take both Humanities 10a and Humanities 10b fulfill the College Writing requirement. This is the only course outside of Expository Writing that satisfies the College Writing requirement. No auditors. The course may not be taken Pass/Fail.

Humanities 10B

A Humanities Colloquium: From James Joyce to Homer (110441)

Sean Kelly  
Jill Lepore  
Beth Blum  
Stephen Greenblatt  
Louis Menand  
Jay Harris
2,500 years of essential works, taught by six professors. Humanities 10b is open only to students who completed Humanities 10a in Fall 2020. Humanities 10b includes works by Joyce, Du Bois, Nietzsche, Douglass, Austen, Wollstonecraft, Marguerite de Navarre, Dante, Plato, Sophocles and Homer, as well as the Federalist Papers. One 75-minute lecture plus a 75-minute discussion seminar led by the professors every week. Students continue to receive instruction in critical writing one hour a week, in writing labs and individual conferences. Students also have opportunities to participate online in a range of cultural experiences, ranging from plays and musical events to museum and library collections.

Course Notes: The course is open only to freshmen. Students who complete Humanities 10a meet the General Education distribution requirement for Arts & Humanities. Students who take both Humanities 10a and Humanities 10b fulfill the College Writing requirement. This is the only course outside of Expository Writing that satisfies the College Writing requirement. No auditors. The course may not be taken Pass/Fail.

Humanities 20

A Colloquium in the Visual Arts (122550)

Yukio Lippit
Ewa Lajer-Burcharth
Joseph Koerner
Jennifer L. Roberts
David Roxburgh
Sarah Lewis

Schedule: M 1200 PM - 0115 PM
Instructor Permissions: Instructor
Enrollment Cap: 72

An introduction to major works of art and architecture from around the world, co-taught by a team of six professors. Subjects include Frederick Douglass and Photography, Hokusai, the Parthenon and Persepolis, Dürer, women artists, Zen Buddhist Art, Muybridge, Beckmann, the EJI Memorial to Peace and Justice, Mughal Painting, Manet, and Hooke. Consists of one 75-minute lecture plus a 75-minute discussion seminar led by the professors every week. Students will also participate in weekly looking labs and special lectures, workshops and screenings outside the class.

Note: The course is now open to all undergraduate students. Students who complete Humanities 20 meet the General
Education distribution requirement for Arts & Humanities. No auditors are allowed, and the course may not be taken Pass/Fail. Enrollment is limited to 72.

Class Notes: The course is now open to all undergraduates. An application is no longer necessary to enroll in this course. Students who complete Humanities 20 meet the Harvard College Curriculum distribution requirement for Arts & Humanities. No auditors are allowed, and the course may not be taken Pass/Fail. Enrollment is limited to 72.

**Humanities 90**

Making It: A Sophomore Seminar in the Humanities (216637)

Robin Kelsey

Suzannah Clark

2020 Fall (4 Credits)  

**Schedule:** M 0300 PM - 0500 PM

Instructor Permissions: Instructor Enrollment Cap: 12

The Sophomore Seminar in the Humanities is a new course for sophomores, regardless of intended Concentration, who wish to deepen their engagement in the humanities. Each week in the seminar, guided by a distinguished guest, we will focus on a particular creative form – the novel, for example – with the aim of refining our powers of observation, interpretation, and articulation. In this way, we will learn new ways to approach the meaning of poems, documents, paintings, photographs, films, arguments, and songs. If successful, the course will not only give us insight into these creative forms, it will also enhance our relationship to the world.

Course Notes: The course is designed for sophomores, who will receive preference through an application process. However, students from all class years are welcome to apply. Applications are due the end of Shopping Week. For more information, visit the course website. Students who complete Humanities 90 meet the Harvard College Curriculum divisional distribution for Arts & Humanities. No auditors are allowed, and the course may not be taken Pass/Fail. Enrollment is limited to 12.

One two-hour guest lecture, one 75-minute seminar led by the professors, and one one-hour section every week.

Linguistics 73C  
Beginning ASL III (205111)  
Andrew Bottoms  
2020 Fall (4 Credits)  
Schedule: TR 1200 PM - 0115 PM  
Instructor Permissions: Instructor  
Enrollment Cap: n/a  
ASL III is designed for students who have completed ASL levels I and II. Students come to ASL III with an understanding of the fundamentals of ASL comprehension and production. These foundational courses (ASL I and II) introduce students to the language using a natural acquisition approach without explicit focus on grammatical rules. ASL III has an increased focus on the appropriate ways to converse with members of the Deaf community. In this class, students will learn how to tell stories that adhere to the pragmatic and linguistic standards of the Deaf community with a focus on stylistically appropriate production. In this class, students will learn how to engage with members of the Deaf community in respectful and culturally appropriate ways. In addition to fostering language development, we will discuss the history and culture of the Deaf community.

Course Notes: This course is limited to 15 students.

Additional Course Attributes:

Linguistics 73D  
Beginning ASL IV (205124)  
Andrew Bottoms  
2021 Spring (4 Credits)  
Schedule: TR 1200 PM - 0115 PM  
Instructor Permissions: Instructor  
Enrollment Cap: n/a  
ASL IV course will build on the foundation set in the first three levels of ASL and will focus on expressive language at a more advanced level. Students will have an opportunity to play with the language and explore different literary genres including: classifier stories, narratives of personal experience, visual vernacular and ASL poetry. Given that language learning doesn't happen in isolation, we will continue our exploration of Deaf culture and norms in order to develop a deeper understanding of the Deaf community. Growing out of this discussion, students will learn what it means to work as an ally to the Deaf community and avoid oppressive behavior. Other issues to be discussed include recognizing audism in oneself and others and how to appropriately respond.

Course Notes: This course is limited to 15 students.

Language, Structure, and Cognition (122514)
Kathryn Davidson
2020 Fall (4 Credits)  Schedule: M 0130 PM - 0245 PM
Instructor Permissions: None  Enrollment Cap: n/a
What do the world's almost 7,000 languages have in common? Why do they show recurrent commonalities and principled differences? What do they reveal about the human ability for speaking and thinking? How do languages develop? How do they die? This course addresses these and related questions while introducing the languages of the world; their distribution, recurrent structural properties, and genetic classification; processes of language contact; and the relationship between language and the brain.

Sentence Structure (121089)

C.-T. James Huang
What determines how the words in a sentence are put together in a given language? This course introduces the field of syntax, and the study of order and structure among words. Students will learn to construct and evaluate syntactic analyses and argumentation and will be exposed to variation and universals in the syntactic patterns found in natural languages. The course will also provide an introductory survey of syntactic phenomena, including question formation, the passive, anaphora, and agreement.

**Linguistics 104**

Word Structure (125790)

Jonathan Bobaljik

2020 Fall (4 Credits)  

Schedule: TR 0130 PM - 0245 PM

Instructor Permissions: None  

Enrollment Cap: n/a

This course investigates the nature and structure of words through the lens of contemporary morphological theory. What's in a word? Topics include the place of word formation in relation to phonological and syntactic phenomena, morphological processes, and the nature of the lexicon. Emphasis on the analysis of morphological phenomena in a range of typologically diverse languages.

course requirement: LING 83 or LING 101

Sounds of Language (111954)

Kevin Ryan

2020 Fall (4 Credits)  

Schedule: TR 1200 PM - 0115 PM

Instructor Permissions: None  

Enrollment Cap: n/a

What are the sounds of the world languages, and how are they organized to make words and sentences? Why are some sounds hard to hear or make? Is there a ‘universal inventory’ of sounds? This class introduces students to the sounds of the world’s languages, and provides tools for studying them systematically. We will study the setup to transfer thoughts from one brain to another.
Linguistics 107
Introduction to Indo-European (110658)

Jay Jasanoff

2021 Spring (4 Credits)  
Schedule: MW 1030 AM - 1145 AM
Instructor Permissions: None  
Enrollment Cap: n/a

An introduction to the historical study of the Indo-European languages, using the comparative method to arrive at a picture of the parent language of the family, Proto-Indo-European.

Linguistics 112
Syntactic Theory I (114153)

C.-T. James Huang

2020 Fall (4 Credits)  
Schedule: W 0945 AM - 1145 AM
Instructor Permissions: None  
Enrollment Cap: n/a

This course provides an intensive introduction to generative syntactic theory. Emphasis on syntactic argumentation. Topics center on foundational problems in the theory of syntax, including phrase structure of nominals and clauses, varieties of movement, locality, argument structure, ellipsis case agreement, and the syntax-semantics interface.

Recommended Prep: Linguistics 102, equivalent, or permission of the instructor.
Linguistics 114
Morphological Theory (111957)
Jonathan Bobaljik
2020 Fall (4 Credits) Schedule: M 0900 AM - 1100 AM
Instructor Permissions: None Enrollment Cap: n/a
This course provides an intensive introduction to morphological theory. Students will be introduced to current research and areas of debate in morphology proper, in morpho-syntax, and in morpho-phonology.

Recommended Prep: course requirement: Ling 102, 104, and 105, equivalent, or permission of the instructor.

Additional Course Attributes:

Linguistics 115
Phonological Theory I (123439)
Kevin Ryan
2020 Fall (4 Credits) Schedule: R 0900 AM - 1100 AM
Instructor Permissions: None Enrollment Cap: n/a
This course is an intensive introduction to phonological theory and experimental work in phonology. This includes rule-based and constraint-based approaches, the typology of phonological processes (vowel and consonant harmony, assimilation and dissimilation, lenition and fortition, etc.), and phonological acquisition. Experimental approaches will deal with gradience, exceptionality, and productivity with an introduction to the quantitative methodologies that these phenomena require.

Recommended Prep: Linguistics 105, equivalent, or permission of the instructor

Linguistics 116
Semantic Theory I (122515)
Kathryn Davidson
2020 Fall (4 Credits) Schedule: T 0900 AM - 1100 AM
Instructor Permissions: None Enrollment Cap: n/a
An introductory course on semantics in generative grammar. This course provides the formal tools to investigate the truth-conditional meanings of sentences. Topics covered include: compositionality, type theory and the fundamentals of clause structure, quantifier scope, and variable-binding.

**Recommended Prep:** Linguistics 106, equivalent, or permission of the instructor.

Language Universals (123446)

Jonathan Bobaljik

2021 Spring (4 Credits)  
**Schedule:** TR 0900 AM - 1015 AM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Provides an introduction to the study of cross-linguistic variation and analyzes alternative approaches to language universals (functional explanations, processing explanations, explanations in terms of universal grammar). Topics to be studied include word order, case marking, agreement, lexical categories, subject- hood, and information structure. Sampling techniques and the use of hierarchies will also be covered.

**Recommended Prep:** Either Linguistics 83,101 or 102 or permission from instructor.

History and Prehistory of the Japanese Language (114299)

Wesley Jacobsen

2021 Spring (4 Credits)  
**Schedule:** M 0300 PM - 0500 PM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

An examination of evidence from the comparative method, internal reconstruction, and written documents for reconstructing prehistoric stages of the Japanese language and an overview of major developments in
Japanese phonology and grammar from the Nara period through the present day

Recommended Prep: Knowledge of Japanese equivalent to Japanese 120b, or familiarity with historical linguistics, or permission of the instructor.

Reading or Special Topics Course (124075)

Jonathan Bobaljik

2020 Fall (4 Credits)  Schedule: TBD
Instructor Permissions: Instructor  Enrollment Cap: n/a

Reading or Special Topics courses by individual arrangement with a faculty member. These courses examine material and skills not covered in regular course offerings, normally tailored to graduate students' individual curricular needs. These courses may involve hands-on work with special collections, as well as laboratory and/or experimental work with the department's relevant facilities, including the Meaning & Modality Lab and the Phonetics Lab, as appropriate.

In his seminal work from 1945, How to Solve It, George Polya introduced principles of mathematical problem solving that are widely applicable to problems in science and engineering. This year-long class focuses on building a powerful and portable problem-solving and modeling tool kit while bridging the divide between mathematics and science courses. The second semester will be organized around projects in areas of student interest. Both Math ESPA and Math ESPB must be taken in the same academic year to receive credit.

The study of functions and their rates of change. Fundamental ideas of calculus are introduced early and used to provide a framework for the study of mathematical modeling involving algebraic, exponential, and logarithmic functions. Thorough understanding of differential calculus promoted by year long reinforcement. Applications to biology and economics emphasized according to the interests of our students.

This is a lecture course taught in small sections. This course, when taken together with Mathematics Mb, can be followed by Mathematics 1b. Mathamatics Ma and Mb together cover all the material in Mathematics 1a (and more).

Fall Section Times: MWF 9:00, MWF 10:30, MWF 12, MWF 1:30, and MWF 4:30 with sufficient enrollment.

Reshma Menon, Hakim Walker, Harini Chandramouli
Students must enroll in a section by August 26th. Instructions will be found under Announcements on the Course Website.

If none of the above class times fall between 7:30 am and 10:15 pm in your time zone we will try to accommodate if we have the resources.

**Mathematics MB**

Introduction to Functions and Calculus II (113464)

*Emily Braley*

2021 Spring (4 Credits)  
Schedule: TBD  
Instructor Permissions: None  
Enrollment Cap: n/a  

Continued investigation of functions and differential calculus through modeling; an introduction to integration with applications; an introduction to differential equations. Solid preparation for Mathematics 1b.

Course Notes: This is a lecture course taught in small sections. This course, when taken together with Mathematics Ma, can be followed by Mathematics 1b. Mathematics Ma and Mathematics Mb together cover all the material in Mathematics 1a (and more).

Class Notes: Spring Section Times: MWF 9:00, MWF 10:30, MWF 12, MWF 1:30, and MWF 4:30 with sufficient enrollment.

Emily Braley, Eriko Hironaka, Hakim Walker, Harini Chandramouli, Reshma Menon.

**Requirements:** Prerequisite: Mathematics MA

**Mathematics 1A**

Introduction to Calculus (123680)

*Oliver Knill*
The development of calculus by Newton and Leibniz ranks among the greatest achievements of the past millennium. This course will help you see why by introducing: how differential calculus treats rates of change; how integral calculus treats accumulation; and how the fundamental theorem of calculus links the two. These ideas will be applied to problems from many other disciplines.

Course Notes: In the fall, Math 1a is taught in small sections. In the spring, Math 1a is taught in a larger lecture format. Mathematics Ma and Mb together cover all of the material in Mathematics 1a (and more).

Class Notes: Spring Section Time: MWF 10:30 and a weekly lab section to be arranged.

Recommended Prep: A solid background in precalculus.

Requirements: Anti-requisite: cannot be taken for credit if MATH S-1AB already complete

**Mathematics 1B**

Calculus, Series, and Differential Equations (111010)

*Voula Collins*

2021 Spring (4 Credits)  

**Schedule:** TBD  

**Instructor Permissions:** None  

**Enrollment Cap:** n/a  

Speaking the language of modern mathematics requires fluency with the topics of this course: infinite series, integration, and differential equations. Model practical situations using integrals and differential equations. Learn how to represent interesting functions using series and find qualitative, numerical, and analytic ways of studying differential equations. Develop both conceptual understanding and the ability to apply it.

**Course Notes:** This course is taught in small sections.

**Class Notes:** Spring Section Times: MWF 9:00, MWF 10:30, MWF 12:00, MWF 1:30, MWF 3:00, and MWF at 4:30 with sufficient enrollment.

**Recommended Prep:** Mathematics 1a or Ma and Mb; or 5 on the AB advanced placement test; or an equivalent background in mathematics.

**Requirements:** Anti-requisite: cannot be taken for credit if MATH S-1AB already complete

Mathematics 18A

Multivariable Calculus for Social Sciences (125396)

Drew Zemke

2020 Fall (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a

Focus on concepts and techniques of multivariable calculus most useful to those studying the social sciences, particularly economics: functions of several variables; partial derivatives; linear approximation; multiple integrals; directional derivatives and the gradient; constrained and unconstrained optimization, including the method of Lagrange multipliers. Covers topics from Mathematics 21a most useful to social sciences.

Course Notes: Mathematics 21b can be taken before or after Mathematics 18. Examples draw primarily from economics and the social sciences, though Mathematics 18 may be useful to students in certain natural sciences. Students whose main interests lie in the physical sciences, mathematics, or engineering should consider Math 21a or Applied Math 22a.

Class Notes: Fall Section times: MWF 10:30 (with sufficient enrollment) and MWF 1:30.

Students must enroll in a section by August 26th. Instructions will be found under Announcements on the Course Website.
Recommended Prep: Mathematics 1b or equivalent, or a 5 on the BC Advanced Placement Examination in Mathematics.

Requirements: Anti-Requisite: Not to be taken in addition to Mathematics 21a or Applied Mathematics 22a

Mathematics 18B/19B

Linear Algebra, Probability, and Statistics (213535)

Brendan Kelly

2021 Spring (4 Credits)  

Schedule: MWF 0130 PM - 0245 PM

Instructor Permissions: None  
Enrollment Cap: n/a

Probability, statistics and linear algebra with applications to life sciences, chemistry, environmental sciences, economics and social sciences. Students will learn to use computing software to perform relevant calculations on data sets coming from these areas of study. Linear algebra includes matrices, eigenvalues, eigenvectors, determinants, and applications to probability, statistics, dynamical systems. Basic probability and statistics are introduced, as are standard models, techniques, and their uses including the central limit theorem, Markov chains, curve fitting, regression, and pattern analysis.

Mathematics 19A

Modeling and Differential Equations for the Life Sciences (110596)

John Cain

2020 Fall (4 Credits)  

Schedule: MWF 1030 AM - 1145 AM

Instructor Permissions: None  
Enrollment Cap: n/a

Considers the construction and analysis of mathematical models that arise in the life sciences, ecology and environmental life science. Introduces mathematics that include multivariable calculus, differential equations in one or more variables, vectors, matrices, and linear and non-linear dynamical systems. Taught via examples from current literature (both good and bad).

Course Notes: This course is recommended over Math 21a for those planning to
concentrate in the life sciences and ESPP. Can be taken with or without Mathematics 21a,b. Students with interests in the social sciences and economics might consider Mathematics 18. This course can be taken before or after Mathematics 18.

Recommended Prep: A course in one variable calculus preferably at the level of Mathematics 1b.

Mathematics 21A

Multivariable Calculus (119196)

Matthew Demers
Serena Wurmser

2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a

To see how calculus applies in practical situations described by more than one variable, we study: Vectors, lines, planes, parameterization of curves and surfaces, partial derivatives, directional derivatives and the gradient, optimization and critical point analysis, including constrained optimization and the Method of Lagrange Multipliers, integration over curves, surfaces and solid regions using Cartesian, polar, cylindrical, and spherical coordinates, divergence and curl of vector fields, and the Green’s, Stokes’s, and Divergence Theorems.

Course Notes: This course is taught in small sections. May not be taken for credit by students who have passed Applied Mathematics 22a.

Class Notes: Spring Section Times: MWF 9:00, MWF 10:30, MWF 12, MWF 1:30, MWF 3:00 with sufficient enrollment, and MWF 6:00 pm with sufficient enrollment.

David Freund, Benjamin Gammage

If none of the above class times fall between 7:30 am and 10:15 pm in your time zone we will try to accommodate if we have the resources.

Recommended Prep: Mathematics 1b or an equivalent background in mathematics.

Requirements: Anti-requisite: Not to be taken in addition to AM 22b

Mathematics 21B
Linear Algebra and Differential Equations (110989)

Jill Guerra

2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a

Matrices provide the algebraic structure for solving myriad problems across the sciences. We study matrices and related topics such as linear transformations and linear spaces, determinants, eigenvalues, and eigenvectors. Applications include dynamical systems, ordinary and partial differential equations, and an introduction to Fourier series.

**Mathematics 22A**

Vector Calculus and Linear Algebra I (207485)

*Dusty Grundmeier*

2020 Fall (4 Credits)  
**Schedule:** MWF 1200 PM - 0115 PM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

This course covers multivariable calculus and linear algebra for students interested in mathematical sciences. It covers the same topics as Mathematics 21, but does so with more rigor. Students are taught techniques of proof and mathematical reasoning. The workload and content is comparable with the Mathematics 21 sequence. But unlike the latter, the linear algebra and calculus are more interlinked.

Linear Algebra and Real Analysis I (111695)
Paul Bamberg

2020 Fall (4 Credits)  Schedule:  R 0300 PM - 0545 PM

Instructor Permissions:  Instructor  Enrollment Cap:  60

Linear algebra: vectors, linear transformations and matrices, scalar and vector products, basis and dimension, eigenvectors and eigenvalues, including an introduction to the R scripting language. Single-variable real analysis: sequences and series, limits and continuity, derivatives, inverse functions, power series and Taylor series. Multivariable real analysis and calculus: topology of Euclidean space, limits, continuity, and differentiation in n dimensions, inverse and implicit functions, manifolds, Lagrange multipliers, path integrals, div, grad, and curl. Emphasis on topics that are applicable to fields such as physics, economics, and computer science, but students are also expected to learn how to prove key results.

Course Notes:  Students are expected to watch videos of the lectures from Fall 2015 before attending class. Weekly two-hour classes will consist of a one-hour seminar in which students present key definitions and proofs and a one-hour activity-based session in which students work in small groups to solve problems. Students are expected to continue in either Mathematics 23b (recommended for students who are thinking of concentrating in mathematics, the physical sciences, or engineering) or Mathematics 23c (recommended for students who are not sure of their concentration, or who are thinking about a concentration in the social sciences, economics, computer science, life sciences or data science). Either alternative will provide a solid foundation for a concentration in mathematics or any field that uses mathematics.

Class Notes:  This section assumes a background in sequences and series, covers applications of linear algebra and calculus to data analysis, teaches the R scripting language, has required programming assignments in R, and meets the QRD.

Recommended Prep:  Mathematics 1b or a grade of 4 or 5 on the Calculus BC Advanced Placement Examination, plus an interest both in proving mathematical results and in using them. No background in linear algebra, real analysis, or multivariable calculus is assumed.

Instructor Permissions: None  
Enrollment Cap: n/a

A rigorous, integrated treatment of linear algebra and multivariable calculus. Topics: Riemann and Lebesgue integration, determinants, change of variables, volume of manifolds, differential forms, and exterior derivative. Stokes’s theorem is presented both in the language of vector analysis (div, grad, and curl) and in the language of differential forms.

Course Notes: Mathematics 23b is a sequel to Mathematics 23a, recommended for students who are thinking of concentrating in mathematics, the physical sciences, or engineering. Students are expected to watch videos of the lectures from spring 2016 before attending class. Weekly two-hour classes will consist of a one-hour seminar in which students
present key definitions and proofs and a one-hour activity-based session in which students work in small groups to solve problems.

Recommended Prep: Mathematics 23a.

Requirements: Prerequisite: MATH 23A OR (MATH 21A AND MATH 21B) AND (Not to be taken in addition to MATH 23C)

Mathematics 23C

Mathematics for Computation, Statistics, and Data Science (205386)

Paul Bamberg

2021 Spring (4 Credits) Schedule: TR 0130 PM - 0245 PM

Instructor Permissions: None Enrollment Cap: n/a

Proof strategies and logic. Sets, countability, sigma fields, and axiomatic foundations of probability. Summation of series and evaluation of multiple integrals, with emphasis on calculation of expectation and variance. Abstract vector spaces and inner product spaces, with applications to analysis of large datasets. Key functions and theorems of mathematical statistics. A brief introduction to classical vector calculus as used in electromagnetic theory. Students will learn to use some of the statistical and graphical display tools in the R scription language.

Course Notes: This course is a sequel to Mathematics 23a, recommended for students who are not sure of their concentration or who are thinking about a concentration in the social sciences, economics, computer science, life sciences or data science. Graduate students wishing to take this course for credit should speak with Dr. Bamberg to arrange enrollment in Mathematics 370 instead.

Recommended Prep: Mathematics 23a or Mathematics 21a and 21b. The latter option is for seniors who are preparing for graduate programs in statistics, computer science, or data science.

Requirements: Prerequisite: MATH 23A OR (MATH 21A AND MATH 21B) AND (Not to be taken in addition to MATH 23B)

Mathematics 25A
Theoretical Linear Algebra and Real Analysis I (110808)
Arnav Tripathy
2020 Fall (4 Credits) Schedule: MWF 1030 AM - 1145 AM
Instructor Permissions: None Enrollment Cap: n/a
A rigorous treatment of linear algebra. Topics include: Construction of number systems; fields, vector spaces and linear transformations; eigenvalues and eigenvectors, determinants and inner products. Metric spaces, compactness and connectedness.

Course Notes: Expect to spend a lot of time doing mathematics.

Recommended Prep: 5 on the Calculus BC Advanced Placement Examination and some familiarity with writing proofs, or the equivalent as determined by the instructor.

Theoretical Linear Algebra and Real Analysis II (110855)
Arnav Tripathy
2021 Spring (4 Credits) Schedule: MWF 1030 AM - 1145 AM
Instructor Permissions: None Enrollment Cap: n/a
A rigorous treatment of basic analysis. Topics include: convergence, continuity, differentiation, the Riemann integral, uniform convergence, the Stone-Weierstrass theorem, Fourier series, differentiation in several variables. Additional topics, including the classical results of vector calculus in two and three dimensions, as time allows.

Course Notes: Expect to spend a lot time doing mathematics.

Requirements: Prerequisite: Mathematics 25A OR Mathematics 55A

Mathematics 55A
Studies in Algebra and Group Theory (113627)

Denis Auroux

2020 Fall (4 Credits)  Schedule: MWF 1030 AM - 1145 AM
Instructor Permissions: Instructor  Enrollment Cap: n/a

A rigorous introduction to abstract algebra, including group theory and linear algebra. This course covers the equivalent of Mathematics 25a and Mathematics 122, and prepares students for Mathematics 123 and other advanced courses in number theory and algebra. (A course in analysis such as Mathematics 25b or 55b is recommended for Spring semester.)

Course Notes: Mathematics 55a is an intensive course for students who are comfortable with abstract mathematics. (Students without this background will gain it and learn the material from Math 55a,b in other courses by continuing into the Mathematics Concentration as sophomores.) Students can switch between Mathematics 55a and either Mathematics 25a, 23a, 22a, 21a during the first three weeks without penalty.

Live lectures will take place Mondays, Wednesdays, and Fridays, 10:30-11:45am, US Eastern time. Attendance is recommended, but not mandatory. The instructor will offer other opportunities for interaction with students who cannot attend the live lecture.

Recommended Prep: Familiarity with proofs and abstract reasoning; and commitment to a fast moving course.

### Mathematics 101

Sets, Groups and Topology (122943)

Ana Balibanu

2020 Fall (4 Credits)

Instructor Permissions: None

An introduction to rigorous mathematics, axioms, and proofs, via topics including set theory, symmetry groups, and low-dimensional topology.

Course Notes: Familiarity with algebra, geometry and/or calculus is desirable. Students who have already taken Mathematics 22a,b, 23a,b, 25a,b or 55a,b should not take this course for credit. This course given fall term and repeated spring term.
Recommended Prep: An interest in mathematical reasoning. Acquaintance with algebra, geometry and/or calculus is desirable. Students who have already taken Math 25a,b or 55a,b should not take this course for credit.

Requirements: Anti-Req: Not to be taken in addition to Mathematics 23a,b or 25a,b or 55a,b.

Mathematics 101 Section: 01
Sets, Groups and Topology (122943)
Janet Chen
2021 Spring (4 Credits)
Schedule: MW 0300 PM - 0415 PM
Instructor Permissions: None Enrollment Cap: n/a
An introduction to abstract mathematical thought and proof techniques, via topics including set theory, group theory, analysis, and topology.

Course Notes: Students who have already taken Mathematics 25a,b or 55a,b should not take this course for credit. Ordinarily, students who have already taken Mathematics 22a,b or 23a,b should not take this course for credit, but they may do so with the instructor's permission. This course is given fall term and repeated spring term.

Recommended Prep: An interest in mathematical reasoning. Acquaintance with algebra, geometry and/or calculus is desirable.

Requirements: Anti-Req: Not to be taken in addition to Mathematics 23a,b or 25a,b or 55a,b.

Introductory Real Analysis (109817)
Christian Brennecke
2021 Spring (4 Credits)
Schedule: MW 0900 AM - 1015 AM
Instructor Permissions: None Enrollment Cap: n/a
An introduction to mathematical analysis and the theory behind calculus. An emphasis on learning to understand and construct proofs. Covers limits and continuity in metric spaces, uniform convergence and spaces of functions, the Riemann integral.

Recommended Prep: Mathematics 19a,b or 21a,b and either an ability to write proofs or concurrent enrollment in Mathematics 101 or 102; or an equivalent background in mathematics.

Requirements: Anti-Req: Not to be taken in addition to Mathematics 23a,b or 25a,b or 55a,b.

Mathematics 116

Real Analysis, Convexity, and Optimization (118302)

Paul Bamberg

2020 Fall (4 Credits)        Schedule:           TR 1030 AM - 1145 AM
Instructor Permissions:      None                   Enrollment Cap:  n/a

Develops the theory of convex sets, normed infinite-dimensional vector spaces, and convex functionals and applies it as a unifying principle to a variety of optimization problems such as resource allocation, production planning, and optimal control. Topics include Hilbert space, dual spaces, the Hahn-Banach theorem, the Riesz representation theorem, calculus of variations, and Fenchel duality. Students will be expected to understand and come up with proofs of theorems in real and functional analysis.

Recommended Prep: Mathematics 22a,b, 23a,b or 25a,b or 55a,b; or Mathematics 21a,b plus at least one other more advanced course in mathematics; or an equivalent background in mathematics.

Probability and Random Processes with Economic Applications (127947)

Paul Bamberg

2021 Spring (4 Credits)        Schedule:           TR 1030 AM - 1145 AM
Instructor Permissions:      None                   Enrollment Cap:  n/a
A self-contained treatment of the theory of probability and random processes with specific application to the theory of option pricing. Topics: axioms for probability, calculation of expectation by means of Lebesgue integration, conditional probability and conditional expectation, martingales, random walks and Wiener processes, and the Black-Scholes formula for option pricing. Students will work in small groups to investigate applications of the theory and to prove key results.

Linear Algebra and Applications (120228)

Dylan Wilson

2020 Fall (4 Credits)  

Schedule: MW 1200 PM - 0115 PM

Instructor Permissions: None  

Enrollment Cap: n/a

Real and complex vector spaces, linear transformations, determinants, inner products, dual spaces, and eigenvalue problems. Applications to some or all of the following: geometry, systems of linear differential equations, optimization, and Markov processes. This course emphasizes learning to understand and write rigorous mathematics.
Recommended Prep: Mathematics 19b or 21b or an equivalent background in mathematics.
Requirements: Anti-req: Not to be taken in addition to Mathematics 22b, 23a or 25a or 55a.

Number Theory (111533)

Melanie Wood

2021 Spring (4 Credits) Schedule: MW 1200 PM - 0115 PM

Instructor Permissions: None Enrollment Cap: n/a

Factorization and the primes; congruences; quadratic residues and reciprocity; continued fractions and approximations; Pell's equation; selected Diophantine equations; theory of integral quadratic forms. Also, selected applications to coding, introduction to elliptic curves and introduction to zeta functions if time permits.

Recommended Prep: Mathematics 22a or 23a or 25a or 101 or 122; or 55a which can be taken concurrently; or an equivalent experience and comfort level with abstract mathematics.

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Presents several classical geometries, these being the affine, projective, Euclidean, spherical and hyperbolic geometries. They are viewed from many different perspectives, some historical and some very topical. Emphasis on reading and writing proofs.

**Recommended Prep:** Mathematics 19a,b or 21a,b or 22a,b or 23a or 25a or 55a which may be taken concurrently; or an equivalent background in mathematics.

**Additional Course Attributes:**

Topological Spaces and Fundamental Group (111458)

*Dennis Gaitsgory*

2020 Fall (4 Credits)  
**Schedule:** TR 1200 PM - 0115 PM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

First, an introduction to abstract topological spaces, their properties (compactness, connectedness, metrizability) and their corresponding continuous functions and mappings. Then, an introduction to algebraic topology including homotopy theory, fundamental groups and covering spaces. (See the course website for plans to accommodate diverse time zones of students in this course.)

**Recommended Prep:** Some acquaintance with metric space topology as taught in Mathematics 22a,b, 23a,b, 25a,b, 55a,b, 101, 102, or 112; and with groups as taught in Mathematics 101, 122 or 55a.

Mathematics 136

Differential Geometry (111133)

Christopher Gerig

2020 Fall (4 Credits)  
Schedule:  WF 0900 AM - 1015 AM

Instructor Permissions:  None  
Enrollment Cap:  n/a

The course is an introduction to Riemannian geometry with the focus (for the most part) being the Riemannian geometry of curves and surfaces in space where the fundamental notions can be visualized.

Recommended Prep:  Mathematics 19a,b or 21a,b or 22a,b or 23a or 25a or 55a (may be taken concurrently); or an equivalent background in mathematics.

Mathematics 137

Algebraic Geometry (116452)

Fabian Gundlach

2021 Spring (4 Credits)  
Schedule:  WF 0130 PM - 0245 PM

Instructor Permissions:  None  
Enrollment Cap:  n/a

Affine and projective spaces, plane curves, Bezout's theorem, singularities and genus of a plane curve, Riemann-Roch theorem.
Mathematics 145B
Set Theory II (156120)
Assaf Shani
2020 Fall (4 Credits) Schedule: TR 0300 PM - 0415 PM
Instructor Permissions: None Enrollment Cap: n/a
An introduction to large cardinals and their inner models, with special emphasis on Woodin's recent advances toward finding an ultimate version of Godel's L. Topics include: Weak extender models, the HOD Dichotomy Theorem, and the HOD Conjecture. (After the first lecture, the course will arrange meeting times to accommodate all students.)
Requirements: Prerequisite: Mathematics 145A
Additional Course Attributes:

Mathematics 152 Section: SEM
Discrete Mathematics (116191)
Dylan Wilson
2021 Spring (4 Credits) Schedule: MW 1200 PM - 0115 PM
Instructor Permissions: Instructor Enrollment Cap: 32
An introduction to finite groups, finite fields, finite geometry, finite topology, combinatorics, graph theory, and (for section 2 only) elementary algebraic topology. A recurring theme of the course is the symmetry group of the regular icosahedron. Elementary category theory will be introduced as a unifying principle. Taught in a seminar format: students will gain experience in presenting proofs at the blackboard.
Course Notes: Covers material used in Computer Science 121 and Computer Science 124. Enrollment limited to16.
Recommended Prep: For section 1: Mathematics 19b or 21b. Previous experience with proofs is not required. For section 2: Mathematics 23a or 25a or an equivalent background in
Mathematics 154
Probability Theory (113811)

Cesar Cuenca

2021 Spring (4 Credits)  Schedule:  MW 1030 AM - 1145 AM

Instructor Permissions:  None  Enrollment Cap:  n/a

An introduction to probability theory. Discrete and continuous random variables; distribution and density functions for one and two random variables; conditional probability. Generating functions, weak and strong laws of large numbers, and the central limit theorem. Geometrical probability, random walks, and Markov processes.

Recommended Prep:  A previous mathematics course at the level of Mathematics 19ab, 21ab, or a higher number. For students from 19ab or 21ab, previous or concurrent enrollment in Math 101 or 102 or 112 may be helpful. Freshmen who did well in Math 22a, 23a, 25a or 55a fall term are also welcome to take the course.

Mathematics 155R Section: 01
Combinatorics (116196)

Piotr Pstragowski

2020 Fall (4 Credits)  Schedule:  WF 0300 PM - 0415 PM

Instructor Permissions:  None  Enrollment Cap:  n/a

An introduction to counting techniques and other methods in finite mathematics. Possible topics include:
the inclusion-exclusion principle and Mobius inversion, graph theory, generating functions, Ramsey's theorem and its variants, probabilistic methods.

Recommended Prep: Prerequisites: familiarity with proofs. A previous mathematics course at the level of Mathematics 23ab, 25ab, 55ab, 101, 102, or 112 would be enough.

Mathematics in the World (159763)

*Joseph D. Harris*

2021 Spring (4 Credits) Schedule: TR 0130 PM - 0245 PM

Instructor Permissions: None Enrollment Cap: n/a

An interactive introduction to problem solving with an emphasis on subjects with comprehensive applications. Each class will be focused around a group of questions with a common topic: logic, information, number theory, probability, and algorithms.

Recommended Prep: Mathematics 19b or 21b or 22a,b or 23a; or an equivalent background in mathematics. More importantly, students should have a broad mathematical curiosity and be eager to brainstorm during in-class problem solving sessions.

Derived Categories in Geometry and Algebra (215941)

*Elden Elmanto*

2021 Spring (4 Credits) Schedule: TR 0900 AM - 1015 AM

Instructor Permissions: None Enrollment Cap: n/a

Derived categories is the right framework to view derived functors (Ext, Tor, higher direct images, cohomology etc.) in geometry and algebra. A fruitful, modern perspective is to view derived categories themselves as invariants of the objects (varieties, groups, algebras etc.) that one is interested in. In this seminar style class, we will start from the very beginning of the story with basic notions of categories and
functors, equipping ourselves with an extensive list of examples. We will then study the notion of additive and abelian categories where one can do homological algebra. We will perform some important calculations of derived functors, including sheaf and group cohomology and equip ourselves with important tools such as spectral sequences. From this we will place everything in context using the language of triangulated and derived categories. In the last part of the class we will explore some "modern classics" from algebra and algebraic geometry using the theory we developed.

Recommended Prep: A first course in algebraic geometry and algebraic topology.

Topics in Complex Analysis: From Conformal Invariants to Percolation (115741)

Curtis McMullen

2021 Spring (4 Credits)       Schedule: TR 1200 PM - 0115 PM

Instructor Permissions: None       Enrollment Cap: n/a

The flexibility of conformal mappings is a cornerstone of geometry and analysis in the complex plane. Conformal invariance also underpins the remarkable properties of scaling limits of discrete random processes in two dimensions.

This course will provide an introduction to foundational results and current developments in the field. Topics may include invariants such as the hyperbolic metric, extremal length, harmonic measure and capacity;
quasiconformal mappings; and random processes such as Brownian motion, percolation and SLE.

Finite Height Chromatic Homotopy Theory (215943)
Piotr Pstragowski
2021 Spring (4 Credits)  Schedule:  WF 0300 PM - 0415 PM
Instructor Permissions:  None  Enrollment Cap:  n/a
In chromatic homotopy theory, one explores the link between the arithmetic of formal groups and the stable homotopy theory; we will focus on those aspects of this relationship which are visible at finite height. We will begin with the local structure of the moduli of formal groups and discuss how it is reflected and the topological side through the Lubin-Tate spectrum, then describe the current state of knowledge on several open questions on the subject, such as the vanishing and the splitting conjectures. Further topics will depend on the interests of the participants.

Free Probability, Random Matrices and Random Partitions (216005)

Cesar Cuenca

2021 Spring (4 Credits)  
**Schedule:** TR 0130 PM - 0245 PM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a  

Free Probability theory was introduced by Voiculescu almost forty years ago in the context of operator algebras. Since then, the theory has found connections to a wide range of areas of mathematics. We will study the general theory and its links to random matrices and representation theory. Specifically, we first discuss general aspects of the probability theory, including combinatorial (free cumulants, non-crossing partitions) and analytical (R-transform, subordination, central limit theorem). Then we apply it to the study of large random matrices. Finally, we discuss application to the representation theory of large groups (symmetric and unitary groups of growing rank).

**Mathematics 273X**

Distributions of Class Groups of Global Fields (216281)

Melanie Wood

2020 Fall (4 Credits)  
**Schedule:** WF 0130 PM - 0245 PM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a  

As we vary over number fields, what distribution of class groups do we see? More generally, as we vary over number fields, how many (and how large) unramified extensions do the number fields have? Starting with the case of quadratic fields, we will learn about what was classically known about class groups of...
quadratic fields, and the conjectures of Cohen and Lenstra on their distribution, including many different motivations for the conjectures. We will learn about the relationship between class group distributions and counting number fields, and learn about the heuristics on counting number fields. We will learn about probability distributions on abelian groups that arise in these conjectures, and how they are determined by their moments. We will then learn what is known about how this picture generalizes to arbitrary number fields. We will then learn about two major recent research directions in this area: (1) Bounding class groups of number fields, and (2) Applications of topological component counting to class groups of function fields.

The lectures will reference many recent papers and also include a significant amount of material that is considered "known by experts" but is not in the literature. There will be weekly problem sets to give students a chance to work with the concepts introduced. Project ideas relating to the course topics will be suggested, and a final project will be required of undergraduates, which can include any blend of exposition, original computations, and computer programming. Some project topics could lead to original research by graduate students beyond the course.

Students in this class should have a strong, general undergraduate level math background plus familiarity with algebraic number theory and aspects of class field theory and algebraic geometry. People with questions about whether their math background prepares them for this class should contact Professor Wood.

Ergodic Theory, Geometry and Dynamics (216468)

_Curtis McMullen_

2020 Fall (4 Credits)  
_Schedule:_  
TR 1200 PM - 0115 PM

_Instructor Permissions:_  
None  
_Enrollment Cap:_  
_n/a_

A survey of fundamental results and current research. Topics may include: Ergodic theory and unitary operators; hyperbolic manifolds; geodesic and horocycle flows; Mostow rigidity; Kazhdan’s property T; expanding graphs; martingales, random walks and Furstenberg’s theorem; unipotent flows and Ratner rigidity; planes in 3-manifolds and moduli spaces.

Quantum Geometry (215951)

_Benjamin Gammage_
2020 Fall (4 Credits)  
**Schedule:** TR 1030 AM - 1145 AM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

A survey of some applications of topological quantum field theory to geometry. Possible topics: computations in the Fukaya category with applications to the homological mirror symmetry program, and the geometry of moduli spaces of supersymmetric gauge theories with applications to representation theory.

Introduction to Statistical Physics and Concentration and Inequalities (215917)  

*Horng-Tzer Yau*

2020 Fall (4 Credits)  
**Schedule:** TR 1200 PM - 0115 PM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

We will discuss the following two topics in the class: 1. The classical and current approach to prove some concentration inequalities, including the logarithmic Sobolev inequalities. 2. Elementary properties of SK spin glasses and Parisi's solution. Depending on the progress of the class, some applications of these topics will also be discussed.

Topics in Invariant Descriptive Set Theory (215950)  

*Assaf Shani*

2021 Spring (4 Credits)  
**Schedule:** WF 0300 PM - 0415 PM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

A problem in mathematics is classifying objects up to some notion of isomorphism. Famous examples include: the classification of compact orientable surfaces up to homeomorphism by their genus and classification of Bemoulli shifts up to isomorphism by their entropy. Descriptive set theory allows for a precise study of the complexity of various classification problems and the possible invariants which they admit. Topics: Polish groups and their actions on Polish spaces, definable equivalence relations, classifications problems and invariants, and interactions between these topics and forcing. For example, we will develop Hjorth's theory of turbulence, which provides a method for showing that certain isomorphism problems cannot be classified by any "reasonable invariants", and give an equivalent condition in terms of
forcing, recently introduced by Larson-Zapletal. The topics will be flexible depending on students' interests.

Seiberg-Witten Theory and Generalizations (215949)

Christopher Gerig

2021 Spring (4 Credits) Schedule: WF 0900 AM - 1015 AM

Instructor Permissions: None Enrollment Cap: n/a

The construction in gauge theory of the Seiberg-Witten invariants, and generalized equations (examples: Vafa-Witten, SL(2,C) connections, multiple spinors, PU(n) monopoles). Along the way some possible applications to the geometry of 3-and 4-manifolds will be mentioned.

Mathematics 288Y

Analytic Number Theory Over Function Fields (216269)

Mark Shusterman

2021 Spring (4 Credits) Schedule: TR 0130 PM - 0245 PM

Instructor Permissions: None Enrollment Cap: n/a

A blend of arithmetic, geometric, and topological techniques will be used to gain insight into positive characteristic versions of classical problems in analytic number such as moments of L-functions, correlations of arithmetic functions, distribution of class groups.
Mathematics 290

Birational Geometry of Algebraic Varieties (215980)

Dori Bejleri

2020 Fall (4 Credits)                     Schedule:          MW 1200 PM - 0115 PM
Instructor Permissions: None                   Enrollment Cap:      n/a

The classification of algebraic varieties up to birational equivalence is one of the major questions of higher dimensional algebraic geometry. This course will serve as an introduction to the subject, focusing on the minimal model program (MMP). The MMP is the part of the classification program which attempts to describe the "simplist" representatives within a given birational equivalence class. If time permits, we will discuss applications of the MMP to moduli of higher dimensional varieties.

Mathematics 295Y

Arithmetic Dynamics (215937)

Laura DeMarco

2021 Spring (4 Credits)        Schedule:          MW 0130 PM - 0245 PM
Instructor Permissions: None                   Enrollment Cap:      n/a

We will discuss various connections between complex-algebraic dynamical systems and arithmetic geometry.
**Mathematics 296**

D-Modules in Birational Geometry (215938)

*Mihnea Popa*

2021 Spring (4 Credits)  
**Schedule:** MW 1030 AM - 1145 AM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a  

Topics related to the use of D-modules and Hodge modules in birational and complex geometry: Hodge filtration, V-filtration, Bernstein-Sato polynomial, multiplier ideals, vanishing theorems, Hodge ideals.

Development, Stem Cells and Regeneration (111215)

Andrew Lassar
John Flanagan
Guillermo Garcia-Cardena
Vandana Gupta
Karl Koehler
Jordan Kreidberg
Jessica Lehoczky
Sean Megason
Olivier Pourquie

2021 Spring (4 Credits)

Schedule: MW 0200 PM - 0359 PM
Instructor Permissions: Instructor
Enrollment Cap: 16

This course is evenly divided between lectures and conference sessions which cover the principles that guide vertebrate development and stem cell maintenance in various renewing tissues; in addition, we discuss how these principals can be leveraged to generate cells/tissues for regenerative biology or disease modeling in vitro. Specific topics include a molecular dissection of the signaling pathways, gene regulatory networks, and epigenetic mechanisms that control primary axis formation and regional specification, establishment of cell fate, homeotic genes and patterning, cell migration and cell-cell signalling, organoid models of nervous system development and their application, axon development and regeneration, neuromuscular development and mechanistic insights for human birth defects, skeletal muscle stem cells in aging and disease, morphogenesis of branched tubular systems, vasculogenesis, biomechanical regulation of developmental processes, limb development and regeneration, stem cell maintenance in various renewing tissues, germ cells and pluripotency, and directed differentiation of ES and iPS cells for regeneration and disease modeling. We will discuss how state of the art technologies in iPS organoids, cell lineage labeling, genetic manipulation, and genome wide epigenomic/transcriptomic analyses can be employed to study organ development, stem cells and regeneration.

Students employ the knowledge gained by lectures and conference sessions to identify two interesting new research goals in either vertebrate development, stem cell, or regenerative biology and present research proposals to achieve these goals. Thus, a goal of this course is for students to learn how to synthesize the literature to come up with their own novel research ideas, and develop a strategy to investigate their hypotheses.

Course Notes: This course is offered as CELLBIO207 and also as DRB207. Offered jointly with the Medical School as CB 710.0. Includes lectures and conference sessions in which original literature is discussed in depth. Short research proposals are required in lieu of exams.

Class Notes: This course will run from Jan 25 - May 12, on Mondays and Wednesdays from 2:00pm - 4:00pm. Meeting Location: Online information to be provided by Andrew_Lassar@hms.harvard.edu.

Recommended Prep: Introductory courses in both Cell and Molecular Biology.

Instructor Permissions: Instructor
Enrollment Cap: 16

This virtual laboratory and lecture-based course is designed to provide a survey of model systems and technical approaches utilized in developmental, stem cell, and regenerative biology. Students will complete a series of virtual mini-rotations with laboratories of DRB faculty across the Harvard campuses and affiliated hospitals. Students engage with faculty and trainees to gain experience with a variety of models, experimental techniques, and research areas. Each day of the course will consist of an overview lecture followed by virtual lab tours, protocol observations or activities, and interactive discussions and/or case study sessions. Activities are designed to facilitate student, lab member, and PI interactions. The course will culminate in a social event with the larger DRB community and short, informal student-led (five minutes, five slides) brainstorming sessions inspired by a lab session of their choosing.

Course Notes: This is an intensive January course. Open to first-year and second-year BBS students [HDRB undergraduates with approval of the course director]. Not repeatable for credit.

Class Notes: This course runs from Jan 11 - Jan 22, Mon - Fri, from 11:00am-3:00pm. Please reach out to mara_laslo@hms.harvard.edu with any questions.
Course meeting only on Jan 11; presentations only on Jan 22; optional DRB welcome party on Jan 21. Online information to be provided on course page or by instructor.

Principles of Molecular Biology (116477)

Joseph John Loparo
Karen Adelman
Stirling Churchman
Frank Slack
Alan Brown
Johannes Walter

2020 Fall (4 Credits)  Schedule:  MWF 1230 PM - 0129 PM
Instructor Permissions:  None  Enrollment Cap:  n/a

Principles of Molecular Biology is a course organized around the Central Dogma of Biology with presentations covering fundamental aspects of DNA and RNA structure, their function and their interactions with proteins. The course opens with a discussion of the physical and chemical properties that drive the interactions of proteins with nucleic acids. This is used as a basis for understanding the material presented in the subsequent five modules, which cover DNA replication, DNA repair, gene regulation, transcription, RNA processing and translation. Throughout this course an emphasis will be placed on how the structure of small molecular machines (proteins) define their function in the processes and pathways that are introduced.

Course Notes:  Offered jointly with the Medical School as BP 723.0.

Class Notes:  Meeting Dates: September 2 through December 7, 2020.
Curriculum Fellow: Madhvi Venkatesh, madhvi_venkatesh@hms.harvard.edu

Recommended Prep:  Intended primarily for graduate students familiar with basic molecular biology or with strong biology/chemistry background.

Cellular and organismal metabolism, with focus on interrelationships between key metabolic pathways and human disease states. Genetic and acquired metabolic diseases and functional consequences. Interactive lectures and critical reading conferences are integrated with clinical encounters.

Course Notes: Enrollment is limited to all HILS graduate students with adequate preparation in cell biology and biochemistry.

Class Notes: This course will run from Jan 25 - May 7, on M/W/F from 9:00am - 10:30am. Meeting Location: Remote - via Zoom/Canvas

Recommended Prep: Prerequisites for undergraduate students only. For undergraduates interested in this course, a knowledge of introductory biochemistry, genetics, and cell biology is required (MCB 63 or MCB 60 or LIFESCI50, and MCB 64 or equivalent); plus one year of organic chemistry (Chem 17/27 or 20/30). Please petition the course instructor for an exemption.

Principles of Drug Action in People (156104)

Philip Cole
Sara Buhrlage
Catherine Dubreuil

2021 Spring (4 Credits) Schedule: TR 0330 PM - 0459 PM

Instructor Permissions: None Enrollment Cap: n/a

This course will discuss principles of drug discovery drug modalities and drug pharmacology. In the first part of the course, fundamental aspects of receptor and enzyme targeting agents, drug mechanism, drug metabolism, pharmacokinetics and pharmacodynamics, small molecules, proteins, and nucleic acid drugs will be described. In the second part of the course, pharmacology of therapeutics that act on the cardiovascular, immunologic, and central nervous systems will be covered. The course will include frontier lectures on antiviral agents, cardiac drugs, and treatments for brain diseases and a journal club on specialized topics in drug discovery. A range of knowledgeable instructors enlisted from the Harvard Medical School faculty and pharmaceutical scientists will participate in teaching this course.

Class Notes: This course will run from January 26 until May 4, Tuesdays and Thursdays from 3:30pm - 5:00pm. The meeting location will be virtual via Zoom.
**Biolog Chem & Molecular Pharm  250**

Biophysical and Biochemical Mechanisms of Protein Function (204396)

Andrew Kruse  
Stephen Blacklow  
Eric Fischer  
Philip Cole

2021 Spring (4 Credits)  
Schedule: TR 1100 AM - 1159 AM

Instructor Permissions: Instructor  
Enrollment Cap: 40

Biophysical and Biochemical Mechanisms of Protein Function focuses on the molecular mechanisms that underlie essential biochemical processes such as signal transduction. Major topics include biochemical thermodynamics and conformational equilibria, protein structure and folding, receptor pharmacology, allostery, and enzymatic mechanisms of signaling. The course includes both content lectures and research frontiers seminars focused on current research in biochemistry with an emphasis on signal transduction in therapeutically relevant pathways.

Class Notes: Classes will run from Jan 26- Apr 29. Meeting Location: Zoom link will be available on course website

Recommended Prep: A foundational biochemistry course is recommended as a prerequisite (we expect students to have a solid understanding of the core concepts in biochemistry and molecular biology, including knowledge of the amino acids and their properties as well as the central dogma).

David Golan
Catherine Dubreuil
Mark Namchuk
2021 Spring (2 Credits)  Schedule:  MTWRF 1000 AM - 1159 AM
Instructor Permissions:  Instructor  Enrollment Cap:  56
This intensive course, held during three weeks in January (14 class days), covers principles of pharmacology and their translation into new drug development. Students participate in project groups, composed primarily of graduate students, to propose a drug development strategy from target choice through clinical trials. Most sessions include lectures, panel discussions, and/or case studies presented by Harvard faculty and faculty experts from the pharmaceutical and biotechnology industries; most afternoons are either unscheduled or provide scheduled time to work on the group project. Evaluation is based on written and oral presentations of the group project and on class participation. Enrollment may be limited.

Class Notes:  Please Note: Schedule runs outside the J-Term semester dates. Class sessions will begin on January 4 and will run until January 22, from 10:
00am - 12:00pm. There will be live synchronous content via Zoom, contact Catherine Dubreuil for more information.

Seminars in Molecular Mechanistic Biology (207006)

Madhvi Venkatesh

2021 Spring (2 Credits)        Schedule:          MW 0500 PM - 0559 PM
Instructor Permissions:  Instructor    Enrollment Cap:  30

Seminars in Molecular Mechanistic Biology is a series of student work-in-progress talks that meets once a month during the academic year. Students who are presenting will receive feedback from both the faculty and the other students in the Molecular Mechanistic Biology (MMB) program. The peer-to-peer structure of this course (which is only open to students in MMB) should build community and a sense of belonging to the program. It will also help students develop a deeper understanding of the study of molecular mechanisms outside of their own labs and build relationships with faculty.

Course Notes: Registration for this class is limited to students who are a part of the Molecular Mechanistic Biology program. Students should contact Madhvi Venkatesh (madhvi_venkatesh@hms.harvard.edu) regarding enrollment.

Class Notes: This class will run from Feb 8 - May 5. The classes will be held on M/W from 5:00pm - 6:00pm. Meeting location: Students will be contacted directly with Zoom details.

Biolog Chem & Molecular Pharm  370
Advanced Topics in Biological Chemistry and Molecular Pharmacology (114232)

Rosalind Segal

2020 Fall (4 Credits)  
Schedule: TBD  
Instructor Permissions: None  
Enrollment Cap: n/a

A series of reading and discussion seminars, each running for a half term (7 weeks). Two seminars, which can be taken in different terms, are required for credit.
Course Notes: Non-DMS students must get permission from the Division of Medical Sciences before registering for this course. Please contact us at 617-432-0162 or visit the DMS Office at T-MEC 435, 260 Longwood Avenue, Boston.

Subject: Neurobiology - Graduate

**Neurobiology - Graduate 212**

Mathematical Tools for Neuroscience (216813)

*Eleanor Batty*  
*John Assad*  
*Lucy Lai*  
*Alex Chen*

2020 Fall (4 Credits)  
Schedule: TR 0300 PM - 0429 PM  
Instructor Permissions: Instructor  
Enrollment Cap: 30

This course aims to equip graduate students with the fundamental skills in quantitative modeling necessary for neuroscience research and to serve as a solid foundation for further computational neuroscience classes. The course is aimed at second- or third-year students in the Neuroscience PhD program, and is open to other graduate students in the biosciences. This course will cover the basics of linear algebra, differential equations, probability/statistics, and machine learning (focusing on areas applicable to neuroscience). You will not need any math experience beyond high school calculus. Some amount of coding in Python is necessary for this class. This course will be a flipped classroom course with prerecorded lectures and students working together on problem sets & programming exercises during class time.

Class Notes: Meeting Dates Sept 8, 2020- Dec 10, 2020

Recommended Prep: There will be some programming exercises in Python so some coding experience will be necessary (email instructor for advice on how to prepare).

This course will endow students with the broad conceptual fluency in the discipline of neuroscience required to relate genes to circuit function, metabolism to neurological disease, and cell biology to neural computations. Through a combination of lectures and in-class activities, students will learn to design, quantitatively analyze, and interpret experiments that address a variety of questions spanning molecular to systems neuroscience. During the first semester, students will think critically about the fundamental units of the nervous system within the context of cellular function, electrical conduction, and chemical signaling. The second half of the course builds upon this foundation to focus on broadly defined "networks of neural function" as related to coordinated neural activity, the concerted execution of genetic programs, and anatomically defined structural networks. The course culminates with students writing a grant proposal in the style of the NIH NRSA.

Part one of a two part series. The curriculum for this course builds throughout the academic year. Students are strongly encouraged to enroll in both the fall and spring course within the same academic year.

Course Notes: Please note that Program in Neuroscience (PiN) students must take both semesters to fulfill the requirement. Non-PiN students may enroll in just the fall semester with the instructor's approval

Class Notes: Meeting Dates: September 8 through December 15, 2020.

Schedule:  
TR 1030 AM - 1159 AM

Instructor Permissions:  
Instructor  
Enrollment Cap:  
25

This course will endow students with the broad conceptual fluency in the discipline of neuroscience required to relate genes to circuit function, metabolism to neurological disease, and cell biology to neural computations. Through a combination of asynchronous lectures and synchronous class discussions, students will learn to design, quantitatively analyze, and interpret experiments that address a variety of questions spanning molecular to systems neuroscience. During the first semester (NB215A), students will think critically about the fundamental units of the nervous system within the context of cellular function, electrical conduction, and chemical signaling. The second half of the course (NB215B) builds upon this foundation to focus on broadly defined "networks of neural function" as related to coordinated neural activity, the concerted execution of genetic programs, and anatomically defined structural networks. The course culminates with students writing a grant proposal in the style of the NIH NRSA.

Course Notes:  
Full year course. Students may not enroll for the second semester unless they have completed the first semester; however, students may elect to take just the first semester. Please note that Program in Neuroscience (PIN) students must take both semesters to fulfill the requirement.

Class Notes:  
Classes will run from Jan 26 to April 29, on Tuesdays and Thursdays from 10:30am - 12:00pm EST. Meeting Location: Online information to be provided on course page or by instructor.

Recommended Prep:  
Students must successfully complete first semester of course (NEUROBIO 215A).

Neurobiology - Graduate 230

Visual Recognition: Computational and biophysical perspective (107755)

Gabriel Kreiman

2020 Fall (4 Credits)  Schedule: M 0300 PM - 0459 PM
Instructor Permissions: Instructor  Enrollment Cap: 50

How does cerebral cortex store information, compute and learn? How can we build prosthetic devices to fix or augment brain function? How can we build biologically inspired artificial intelligence? This course will examine these questions in the context of visual cognition. Topics: architecture of visual cortex, neurophysiology, visual consciousness, computational neuroscience, models of pattern recognition and computer vision, artificial intelligence, brain-machine interfaces.

Course Notes: Course website: http://klab.tch.harvard.edu/academia/classes/hms_neuro300_vision/hms_neuro300_vision.html
Neurobiology 230, Visual Recognition, brain-machine interfaces and artificial intelligence

Neuro 230 cannot be taken if Neuro 130 has been taken. Neuro 230 cannot be taken concurrently with Neuro 130.

Class Notes: Meeting Dates Sept 9 - Nov. 30, 2020

Recommended Prep: Life Sciences 1a (or Life and Physical Sciences A) and Life Sciences 1b (or equivalent). Recommended: Math (Maa/Mab, Math 1A,1B, Math 19 a or equivalent). Physical Sciences 1. MCB 80.

This course will be held in Biolabs 2062.

Requirements: Anti-Req: Cannot be taken for credit if NEURO 130 already complete.

Neurobiology - Graduate 240

Biological and Artificial Intelligence (213361)

Gabriel Kreiman

2021 Spring (4 Credits)  Schedule: T 0300 PM - 0500 PM
Instructor Permissions: None  Enrollment Cap: n/a

This course provides a foundational overview of the fundamental ideas in computational neuroscience and
the study of Biological Intelligence. At the same time, the course will connect the study of brains to the blossoming and rapid development of ideas in Artificial Intelligence. Topics covered include the biophysics of computation, neural networks, machine learning, Bayesian models, theory of learning, deep convolutional networks, generative adversarial networks, neural coding, control and dynamics of neural activity, applications to brain-machine interfaces, connectomics, among others. Lectures will be taught by leading Harvard experts in the field.

Course Notes: Jointly offered with the Faculty of Arts & Sciences as NEURO 140. Please visit the sites below for additional information: http://klab.tch.harvard.edu/academia/classes/BAI/bai.html or https://canvas.harvard.edu/courses/84784

Class Notes: Classes will run from Jan 26 - Apr 27. They will be held on Tuesdays from 3:00pm - 5:00pm. Meeting location: Zoom information to be provided on the course website.

Recommended Prep: Basic knowledge of multivariate calculus, differential equations, linear algebra, elementary probability theory, basic computer programming skills

Neurobiology - Graduate 300

Advanced Topics in Neurobiology (117896)

Rosalind Segal

2020 Fall (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

Topics cover areas at the molecular, cellular, and systems levels in both basic and clinical neuroscience. A series of reading and discussion seminars, each running for a half term (seven weeks).

Course Notes: Two seminars, which can be taken in different terms, are required for credit. Non-DMS students must get permission from the Division of Medical Sciences before registering for this course. Please contact us at 617-432-0162 or visit the DMS Office at T-MEC 435, 260 Longwood Avenue, Boston.

Quantitative Methods for Biologists (107877)

Michael Springer
Richard Born

2020 Fall (2 Credits)    Schedule:    TBD

Instructor Permissions:    Instructor    Enrollment Cap:    n/a

The goal of this virtual camp is to introduce you to programming in the MATLAB environment and to show you the power this provides for analyzing data and for gaining intuition about the behavior of complex systems through the use of numerical simulations. Some of you, upon encountering in the previous sentence words like "programming" and "numerical simulations," will feel the cold hand of fear grip your stomach, because you have never done any programming and, in fact, have tried to avoid math as much as possible. If so, YOU ARE PRECISELY THE PERSON WE HAD IN MIND as we were planning the course. We are aiming to help you break through this barrier of darkness and fear into the radiant sunshine of quantitative enlightenment. The true beauty of MATLAB, as we will personally demonstrate, is that it allows people who are not mathematically adept (e.g. some of the instructors of this course) to use powerful numerical methods and visualization tools to gain an understanding of concepts that are very difficult to grasp analytically.

Class Notes: This course has two components: 1) an asynchronous component during which students will work at their own pace, viewing prerecorded mini-lectures and answering questions through an edX course and 2) a synchronous component that will consist of Zoom meetings with live mini-reviews and coding exercises that will be done in small break-out groups of 3-4 students.

Meeting Dates: Aug 10-21. MWF, 12:00pm-5:00pm (one hour break from 2pm-3pm), T/Th, TBD (drop-in/homework) all course times are Eastern Standard

Sign up here:https://hms.az1.qualtrics.com/jfe/form/SV_6W18Qau6zVDm3Hf

Please put this course on your fall term study card if you wish to receive credit for it. Email jennie_epp@hms.harvard.edu, with enquiries.

Neurobiology - Graduate 308QC

Thinking about data: probability and statistics for the life sciences (205051)

Richard Born  
Brian Healy

2020 Fall (2 Credits)  
Schedule: W 0500 PM - 0659 PM  
Instructor Permissions: Instructor  
Enrollment Cap: 100

Probability & statistics taught with an emphasis on using simulations and re-sampling methods to both analyze data and understand core statistical concepts. Prior to class, students will view online lectures from Dr. Brian Healy's biostatistics course. In class, we will focus on MATLAB coding exercises to practice different approaches to analyzing real data sets, with an emphasis on resampling methods.

Course Notes: This course will use a flipped design in which students will view video lectures from Dr. Brian Healy's Biostatistics Certificate Course (offered through Catalyst) prior to in-class programming exercises.

Class Notes: Course will start on September 2, 2020 and run through October 21, 2020.

Recommended Prep: Students are required to take Neurobiology 306QC as a pre-requisite for this course.

Neurobiology - Graduate 315QC

Human Neuroanatomy and Neuropathology (205296)

Matthew Frosch
Jean Augustinack

2020 Fall (2 Credits)  

Schedule: MWF 1000 AM - 1159 AM

Instructor Permissions: Instructor  
Enrollment Cap: 20

This course will cover human neuroanatomy in depth, with an emphasis on the functional implications of structure and medical implications of lesions. Teaching occurs through lectures, small group sessions, brain dissection and homework assignments.

Course Notes: Restricted to Graduate Students only. This course is offered as part of NB200/HT130. Students may not co-register for both courses.

Class Notes: For the fall semester 2020, this course will be taught on-line with both asynchronous content and synchronous sessions held via Zoom. Course material as well as Zoom access will be through the HMS Canvas site.

Course will begin on September 28 - October 30, 2020.

Neurobiology - Graduate 320QC

Neuroendocrine pathways: Brain, Hormones and Behavior (217654)

Victor Navarro

2021 Spring (2 Credits)  Schedule:  R 0130 PM - 0259 PM
Instructor Permissions:  None  Enrollment Cap:  n/a

This course focuses on the study of the neuro-endocrine interactions that determine the organizational and functional effects of hormones in the brain throughout development. The course will address a) the role of hormones in the differentiation of the brain; b) the role of the brain in the maintenance of the body homeostasis through the regulation of the different endocrine axes; c) central control of sexual maturation (puberty); d) regulation of the hypothalamic neuronal networks by peripheral factors (e.g. metabolism, stress, environment, endocrine disruptors); e) effect of hormonal cues on behavior (interaction between amygdala and the hypothalamus); f) senescence of the neuroendocrine systems (e.g. the hypothalamus after menopause). At the end of the course, the students will gain basic knowledge of the interactions between the brain and the endocrine system, which is essential for the full understanding of neurobiological processes.
Class Notes: Classes run from Feb 4 - Mar 25, on Thursdays from 1:30pm - 3:00pm. Meeting Location: Online information to be provided on course page or by instructor

Recommended Prep: Familiar with basic neurobiological concepts.

Neurobiology - Graduate 321QC  Section: 0001

Introduction to Python (217822)

Eleanor Batty

2021 Spring (2 Credits)  Schedule:  MWF 0300 PM - 0459 PM
Instructor Permissions:  Instructor  Enrollment Cap:  25

This course provides an introduction to Python focused on tools used in biology and neuroscience research. We will cover basic Python, fundamental concepts such as object-oriented programming, scientific programming libraries such as NumPy and SciPy, and plotting/visualization libraries. This class will consist of a combination of lectures and hands-on exercises designed around biology and neuroscience applications.

Class Notes:  This course will run from Jan 4 - Jan 22, on M/W/F from 3:00pm - 5:00pm. Meeting Location: Online information to be provided on course page or by instructor.

Neurobiology - Graduate 325L

Genetic Dissection of Inhibitory Modulation in the Central Nervous System (109103)

Uwe Rudolph

2021 Spring (4 Credits)  
Schedule: TBD
Instructor Permissions: None  
Enrollment Cap: n/a
### Neurobiology - Graduate 325L

**Genetic Dissection of Inhibitory Modulation in the Central Nervous System (109103)**

*Uwe Rudolph*

2020 Fall (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

### Neurobiology - Graduate 326

**Age-Dependent Mechanisms of Perinatal Brain Injury (119610)**

*Frances Jensen*

2020 Fall (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

### Neurobiology - Graduate 326

**Age-Dependent Mechanisms of Perinatal Brain Injury (119610)**

*Frances Jensen*

2021 Spring (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a
### Neurobiology - Graduate 326L

Extracellular Matrix/neuron/glia Interactions in Pathophysiology of Schizophrenia & Bipolar Disorder (109104)

*Sabina Berretta*

2020 Fall (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

### Neurobiology - Graduate 326L

Extracellular Matrix/neuron/glia Interactions in Pathophysiology of Schizophrenia & Bipolar Disorder (109104)

*Sabina Berretta*

2021 Spring (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

### Neurobiology - Graduate 327

Rotation Course in Neurosciences (116607)

*John Assad*

2020 Fall (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

**Course Notes:** Primarily for students in Neuroscience.
### Neurobiology - Graduate 327R

Lab Rotations in Neurosciences (109330)

*John Assad*

*Taralyn Tan*

2020 Fall (4 Credits)  
**Schedule:** TBD  
**Enrollment Cap:** n/a

**Subject: Virology**

**Virology 200**

Introduction to Virology (116413)

*Jonathan Abraham*  
*Philip Kranzusch*
2020 Fall (4 Credits)

**Schedule:**
MW 0130 PM - 0345 PM

**Instructor Permissions:** Instructor  **Enrollment Cap:** 20

Introduction to virology. The lecture component reviews the basic principles of virology and introduces the major groups of human viruses. Weekly discussion groups critically analyze selected papers from the literature.

**Course Notes:** There will be mid-term and final projects consisting of proposals based on laboratory rotations. Offered jointly with the Medical School as MG 705.0. [http://www.courses.fas.harvard.edu/6075](http://www.courses.fas.harvard.edu/6075)

**Class Notes:** Meeting dates: Sept 9 - Dec 14, 2020

**Recommended Prep:** Pre-Requisite: Current Virology PhD student, or upon special consent

**Additional Course Attributes:**

**Virology 201**

Virology (110546)

Benjamin Gewurz
Joseph G. Sodroski
Sun Hur
Aaron Schmidt
Todd Allen
Galit Alter

2021 Spring (4 Credits)

**Schedule:**
MF 1030 AM - 1200 PM

**Instructor Permissions:** Instructor  **Enrollment Cap:** 20

The course focuses on the following areas of virology: (i) epigenetic regulation, (ii) RNA virus replication mechanisms, (iii) innate responses to viral infection, (iv) inhibition of viral infection. The course will comprise lectures as well as reviewing literature that describes fundamental breakthroughs relevant to these areas. Within those areas, the class will read and discuss papers dealing with virus structure, replication, pathogenesis, evolution, emerging viruses, chronic infection, innate and adaptive immunity, anti-viral drugs/vaccines. Special emphasis will be placed on preparing students to critically evaluate the literature, formulate hypotheses and design experiments.

**Course Notes:** Course format will be lectures, literature-based critical reading and discussion. Prepare and defend a written research proposal. Offered jointly with the Medical School as MG 723.0.

**Class Notes:** Classes will run from Jan 25 - May 5. They will be held on Mondays and Fridays from 10:30am - 12:00pm. Meeting Location: Online information to be provided on course page or by instructor.

**Recommended Prep:** Graduate standing and permission required.
Virology 202

Proposal Writing (117649)

Kate Jeffrey
Daniel Lingwood
Alejandro Balazs
Todd Allen

2020 Fall (4 Credits)   Schedule: W 0145 PM - 0359 PM

Instructor Permissions: Instructor   Enrollment Cap: 12

Students will write, present, and evaluate research proposals in the areas of virus replication, viral pathogenesis and treatment and prevention of viral infections.

Course Notes: Offered jointly with the Medical School as MG 724.0.

Class Notes: Meeting Dates Sept 4 - Oct 30, 2020. First class meets Sept 4, 2020 4:00pm - 6:00pm

Recommended Prep: General background in biochemistry and virology.

Virology 300QC

Advanced Topics in Virology (127510)

Rosalind Segal

2020 Fall (2 Credits) Schedule: TBD

Instructor Permissions: None   Enrollment Cap: n/a

A series of reading and discussion seminars, each running for a half term (7 weeks).

Course Notes: Non-DMS students must get permission from the Division of Medical Sciences before registering for this course. Please contact us at 617-432-0162 or visit the DMS Office at T-MEC 435, 260 Longwood Avenue,
Boston.

Virology 330

Critical Readings in Virology (117526)

Rosalind Segal

2020 Fall (4 Credits)  Schedule: TBD
Instructor Permissions: None  Enrollment Cap: n/a

A series of reading and discussion seminars, each running for a half term (seven weeks). Different topics are covered each term.

Course Notes: Two seminars, which can be taken in different terms, are required for credit. Non-DMS students must get permission from the Division of Medical Sciences before registering for this course. Please contact us at 617-432-0162 or visit the DMS Office at T-MEC 435, 260 Longwood Avenue, Boston.

Subject: Medical Sciences

Medical Sciences 250AB

Human Functional Anatomy (120066)

Lee Gehrke
Trudy Van Houten
Mohini Lutchman
Sabine Hildebrandt

2020 Fall (4 Credits)  Schedule: MWF 0200 PM - 0459 PM
Instructor Permissions: Instructor  Enrollment Cap: 48

Lectures, small group cases, and live-streamed prosections provide a thorough exploration of the gross structure and function of the human body. Fundamental principles of embryology and bioengineering promote analytical approaches to understanding the body's design.

Course Notes: Open to qualified graduate students with permission of the course director. The course has a minimum enrollment of 30. This course requires rental of a locker for a fee. Offered jointly with the Medical
School as HT010.

Class Notes: Meeting Dates Sept 9- Dec 11, 2020

### Medical Sciences 300QC

Conduct of Science (127507)

Kristin White

2020 Fall (2 Credits)

**Schedule:** TBD

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

This course is a required course for all DMS students and all who receive support from NIH training grants. The goal of this course is to inform students about the appropriate conduct of research and the many ethical and social problems that they may encounter during their research career in graduate school. The course consists of three lectures for the entire class and five highly interactive sessions with a small group of fellow students moderated by a faculty member. Some of the issues that will be discussed in this course include appropriate methods of collecting laboratory data, interactions with members of the laboratory and the mentor and issues dealing with research misconduct.

**Course Notes:** All current G2 students must register for this course on their Fall Semester study cards. Specific enrollment instructions will be sent to current G2s and other eligible students in the upcoming weeks. Please contact dms_courses@hms.harvard.edu for enrollment inquiries.

**Class Notes:** The dates and topics for the three lectures are:

- **Lecture One:** Research Integrity: It’s a Matter of Public Trust, Gretchen Brodnicki, J.D., HMS Dean for Faculty and Research Integrity  
  Date/Time: Tuesday, September 29, 2020, at 3:00-4:30 p.m. EDT

- **Lecture Two:** Conflict Resolution Skills for the Researcher, Melissa Brodrick, Ombudsperson, Harvard Medical School  
  Date/Time: Tuesday, October 20, 2020, at 3:00-4:30 p.m. EDT

- **Lecture Three:** Inclusive Excellence in Research: Creation of a Vibrant, Scientific Global Community, Kathy Takayama, Ph.D., Visiting Fellow, Amherst CTL  
  Date/Time: Tuesday, November 17, 2020, at 3:00-4:30 p.m. EDT

Medical Sciences 312QC
Graduate TA Training in the Biomedical Sciences (207116)

Bradley Coleman
Taralyn Tan
Mara Laslo

2021 Spring (2 Credits) Schedule: TBD
Instructor Permissions: Instructor Enrollment Cap: 50

MED-SCI 312QC is designed to be an 'on the ground' training for Longwood-based teaching assistants. The course instructs graduate student teaching assistants in the pedagogy and course management skills required to be an effective TA. The course begins with three two-hour class sessions that focus on the basics of evidence-based teaching practice and practical strategies for working with students. As the semester progresses, students use their work as TAs as the basis for continued instruction and reflection on teaching best practices and the challenges of their application in real-world settings.

Course Notes: Open to any HILS graduate student serving as a Teaching Assistant, pending approval of the Curriculum Fellow working in their course (or by special arrangement approved by the Director of the Curriculum Fellows Program). All students interested in registering for MED-SCI 312QC should also register for the Graduate TA Training in the Biomedical Sciences nanocourse. Any interested student may attend the first three sessions of MED-SCI 312QC and receive nanocourse credit, regardless of whether they are a current TA.

In this course, Ph.D. Pathfinder, students will learn about the many career paths available to people with advanced degrees in biomedical research including academia, biotech, patent law, science writing/publishing, consulting/business, education, and science policy/regulation. Students will also learn how to find opportunities on and off campus to take the next step in their career plans.

A Ph.D. education provides students with fundamental knowledge about the principles and practice of the scientific method and promotes development of problem-solving skills in ways that are quite useful for many different professions. Students will have the opportunity to learn from experienced professionals representing each of these paths, to learn about strategies for career development, curriculum enrichment, and networking opportunities that will make them competitive for their career of choice.

The course is open to all Ph.D. students interested in learning about the range of career options available to biomedical Ph.Ds. The course includes talks, didactic sessions, workshops and networking events to promote interactions between students and invited speakers. There will be a special emphasis on helping students with their own skill self-assessment to assist in career and professional development. After each session there will be a small networking reception for both the students and lecturers.

Course Notes: Students are required to attend all five sessions for course credit.

Class Notes: Meeting Dates October 19-23, 2020; M-F 5:00pm - 7:00pm

Internships are considered an integral part of a student's educational experience and should be viewed as a path toward a student's career development. As such, approved internships can receive academic credit via this course number.

Course Notes: Ordinarily, each student will be limited to one internship during his/her PhD career. The internship must be discussed with the PI and DAC committee (or, program advisor, where applicable) prior to approval. Not all students may be eligible for internships, due to program requirements, academic standing or advisor input.

Subject: Human Bio & Translational Med

Human Bio & Translational Med 200

Pathology of Human Disease (107843)

Scott Lovitch

2021 Spring (4 Credits) Schedule: R 0900 AM - 1259 PM
T 0900 AM - 1059 AM

Instructor Permissions: None Enrollment Cap: n/a

This course provides a comprehensive overview of human pathology with emphasis on mechanisms of disease and modern diagnostic technologies. Topics include (1) general mechanisms of disease (inflammation, infection, immune injury, host response to foreign materials, transplantation, genetic disorders and neoplasia), (2) pathology of major organ systems, and (3) review of diagnostic tools from invasive surgical pathology to non-invasive techniques such as diagnostic imaging and molecular pathology. The objectives of this course are achieved through a set of integrated lectures and laboratories, as well as a student-driven term project leading to a formal presentation on a medical, socioeconomic, or technological issue in human pathology.

Course Notes: Enrollment may be limited. Jointly offered with HMS as HT035.0

Class Notes: Classes will run from Feb 2 - May 13. On Tuesdays, classes will be held from 9:00am - 11:00am. On Thursdays, classes will be held from 9:00am - 1:00pm. Meeting Location: Online information to be provided on course page or by instructor.

Recommended Prep: General biology.

Human Bio & Translational Med 235

Principles of Human Disease: Physiology and Pathology (109394)

Connie Cepko

2020 Fall (4 Credits) Schedule: MWF 0900 AM - 1029 AM
Instructor Permissions: None Enrollment Cap: n/a

This course covers the normal physiology and pathophysiology of selected organs, through lectures, readings, tutorials based on clinical cases, and patient presentations. Human biology is emphasized, with some examples also drawn from model organisms. Recent therapeutic approaches, including RNAi, gene therapy, and genome editing will be covered.

Course Notes: Course enrollment is open to graduate students from any program as well as undergraduates.

Class Notes: The first class will be held on September 2

Recommended Prep: Knowledge of introductory biochemistry, molecular biology, and cell biology required (MCB52 and MCB54 or equivalent and one year of organic chemistry for undergraduates is recommended).

Imaging and Microscopy Methods in Biology and Medicine (107418)
Lev Perelman
2020 Fall (2 Credits) Schedule: T 0300 PM - 0459 PM
Instructor Permissions: Instructor Enrollment Cap: 15
Introduce modern imaging modalities used in biology and medicine with emphasis on modalities frequently employed in cellular and molecular biology. Overview of basic principles of light and electron microscopy and modern advanced light microscopy techniques such as confocal, light sheet, STED, multi-photon, super-resolution, and chromatin-sensitive CLASS. Discuss modality-specific molecular probes and genetic targeting in microscopy which includes optogenetics and CRISPR-based photoactivatable transcription systems.

Class Notes: Classes will begin on September 29, 2020, and run through December 1, 2020.

Darlene Dartt  Magali Saint-Geniez

2021 Spring (2 Credits)  Schedule: M 0300 PM - 0459 PM
Instructor Permissions: None  Enrollment Cap: n/a

This course provides an overview of the pathogenic process of prevalent ocular diseases. The goals of the course are: (i) to explore the structural and functional aspects of the eye relevant to understanding the
pathology, (ii) to review the manifestations of the disease and its effects on vision, (iii) to discuss current views and research in the pathophysiology, and strategies for therapeutic intervention. For most sessions, the basic science and clinical topics will be presented by two faculty lecturers.

Class Notes: Classes will run Jan 25 - May 10 on Mondays from 3:00pm - 5:00pm. Meeting Location: Online information to be provided on course page or by instructor.

Subject: Genetics

Genetics 201
Principles of Genetics (113752)

Fred Winston
Maxwell Heiman
Tom Bernhardt
Steven McCarroll
Jenna Galloway
Stephanie Mohr

2020 Fall (4 Credits)  Schedule:  TBD
Instructor Permissions:  None  Enrollment Cap:  n/a

An in-depth survey of genetics, beginning with basic principles and extending to modern approaches and special topics. We will draw on examples from various systems, including bacteria, yeast, Drosophila, C. elegans, zebrafish, mouse, and human.

Course Notes:  Intended for first-year graduate students. Offered jointly with the Medical School as GN 701.0.

Class Notes:  This course will be taught online in 2020. Lectures, problems sets, and exams will be posted at the course website during the semester, between Sept 2 - Dec 10. The first lecture with an introduction to the course will be posted at the course web site on Wed., Sept 2.

Genetics 216
Advanced Topics in Gene Expression (111358)

Fred Winston
Robert Kingston
Stephen Buratowski

2021 Spring (4 Credits)  Schedule:  T 0230 PM - 0529 PM
Instructor Permissions:  Instructor  Enrollment Cap:  16

This course covers different topics in gene regulation, covering genetic, genomic, biochemical, and molecular approaches. A small number of topics are discussed in depth, using the primary literature. Topics range from prokaryotic transcription to eukaryotic development.
Course Notes: BCMP 310QC has merged with Genetics 216. Offered jointly with the Medical School as GN 703.0.

Class Notes: Classes will be held Jan 26 - May 4, from 2:30pm-5:30pm. Meeting Location: Online information to be provided on course page or by instructor

Recommended Prep: BCMP 200 and Genetics 201. All students taking Genetics 216 should read and be prepared to discuss the papers for the first meeting. The readings can be downloaded from the course website.

Genetics 228

Genetics in Medicine - From Bench to Bedside (121745)

David Sweetser

2021 Spring (4 Credits) Schedule: F 0200 PM - 0459 PM

Instructor Permissions: None Enrollment Cap: n/a

Focus on translational medicine: the application of basic genetic discoveries to human disease. Each three-hour class will focus on a specific genetic disorder and the approaches currently used to speed the transfer of knowledge from the laboratory to the clinic. Each class will include a clinical discussion, a patient presentation if appropriate, followed by lectures, a detailed discussion of recent laboratory findings and a student led journal club. Lecturers will highlight current molecular, technological, bioinformatic and statistical approaches that are being used to advance the study of human disease. There is no exam. Students will present one paper per session in a journal club style. Attendance and active participation for the duration of all class meetings is required. If you are unable to attend class, or cannot be present for the entire session you are expected to contact the course instructor. Two incomplete or missed sessions will result in a failing grade.

Please do not sign up if you know you will have to miss 2 or more sessions. For more information visit https://ecor.mgh.harvard.edu/Default.aspx?node_id=375

Course Notes: Undergraduates wishing to enroll should contact the instructor at dsweetser@mgh.harvard.edu to request permission and give a description of their previous genetics training.

Class Notes: This course will run from Jan 29 to April 23, on Fridays from 2:00pm - 5:00pm. Meeting location: Online information to be provided on course page or by instructor.

Recommended Prep: Genetics 201 or equivalent.

Genetics 302QC
Teaching 101: Bringing Effective Teaching Practices to your Classroom (127555)
Saoirse McSharry
Bradley Coleman
2021 Spring (2 Credits) Schedule: R 0830 AM - 1029 AM
Instructor Permissions: Instructor Enrollment Cap: 16
A course for development of practical skills for effective teaching. Primary focus is hands-on experience with objective-oriented lesson planning and execution, with emphasis on active learning techniques and how they can be applied in both large and small enrollment classes.

Course learning objectives:
By the end of this course, participants will be able to:
* Describe strategies for cultivating course climates that are student-centered and inclusive
* Create assessments, in-class activities, and instructional methods that align with course objectives
* Facilitate discussions and other learning activities in small- and large-group contexts
* Collect and apply constructive feedback from students and colleagues to improve teaching effectiveness

Class Notes: This class runs from Feb 4 - Mar 25 and will be held on Thursdays from 8:30am - 10:30am (Synchronous Live Sessions). Meeting location: Online information to be provided on course page or by instructor.
In addition to the live sessions, each week will require 1-2 hours of asynchronous classwork which may include written or recorded work to be submitted on Canvas prior to the live session.

Recommended Prep: This course is complementary to CELLBIO 306qc: Teaching 100, but neither course is a prerequisite for the other. Postdocs and other Harvard affiliates who are not current students may be allowed to audit as space allows. Please contact the instructors to request permission to audit.

The goal of this course is to apply a number of genomic tools over the course of a semester-long guided research project, learn how to utilize the complimentary statistical tools for analysis, and to discuss the strategies and final data presentation from published papers. Using example sequence datasets, students will analyze differential gene expression and changes. The class will explore the featured tool, related statistical methods together in an interactive manner followed by a discussion of the tools/stats as seen in published work. After taking this class students will be able to apply each online tool to their own research and will be able to identify and use new genomic resources to address future research directions.

Course Notes: Students will need to bring a laptop to class each day.

Class Notes: Classes meet Feb 2 - Apr 6, from 10:00am-12:00pm. Meeting location: Online information for this course will be provided by instructor

Recommended Prep: Genetics 201 or with permission from the instructor.

Subject: Speech & Hearing Sciences

Speech & Hearing Sciences  200

Introduction to Sound, Speech, and Hearing (108212)

Satrajit Ghosh  
Sunil Puria  
Hideko Nakajima  

2020 Fall (4 Credits)  

Schedule:  
M 0900 AM - 0959 AM  
WF 0900 AM - 1029 AM  

Instructor Permissions: None  
Enrollment Cap: n/a  

Speech and hearing are fundamental to our ability to communicate, yet in the US alone millions of people suffer from some form of speech or hearing impairment. As engineers and scientists, it is important to understand the underlying principles of speech and hearing. The goals of this course are to introduce students to the acoustics, anatomy, physiology, and mechanics related to speech and hearing and to build a foundational understanding of one of the most complex, interdisciplinary, and fascinating areas of bioengineering. Particular attention will be paid to how humans generate and perceive speech. Topics include acoustic theory of speech production, basic digital speech processing, control mechanisms of speech production and basic elements of speech and voice perception. These fundamental topics will be explored through applications and challenges involving acoustics, speech recognition, and speech disorders, which are especially relevant given the ubiquity of recording and playback devices such as smartphones and home assistants. On the hearing side, topics include acoustics and mechanics of the outer ear, middle ear, and cochlea, how pathologies affect their function, and methods for clinical diagnosis. Surgical treatments and medical devices such as hearing aids, bone conduction devices, and implants will also be covered.

Course Notes: This course is taught as course in consort with HST.714J at the Massachusetts Institute of Technology.

Class Notes: First Meeting Date Sept 2, 2020  
Course Website https://goo.gl/rhNqY4  

Recommended Prep: Mathematical methods in science (Applied Mathematics 21a or Mathematics 21a) or equivalent. Calculus and introductory physics. Rigid body mechanics (Physics 11A), or Electrical circuits (Engineering Science 154) or permission of the instructor.
Speech & Hearing Sciences 201
Biology of the Inner Ear (108213)
M. Liberman
2020 Fall (4 Credits) Schedule: TR 0900 AM - 1015 AM
M 0100 PM - 0229 PM
Instructor Permissions: Instructor Enrollment Cap: 12
Normal biology, biophysics, physiology and morphology of the inner ear, its sensory innervation and
efferent control systems, and the mechanisms underlying sensorineural hearing loss and balance
disorders. Material is presented through lectures, laboratory exercises and discussions of the primary
literature.

Class Notes: First Meeting Date Sept 3, 2020
Recommended Prep: Introductory neurobiology recommended.
Lecture notes will be available online.

Speech & Hearing Sciences 202
Clinical Aspects of Speech and Hearing (108217)
Ramon Franco
2021 Spring (4 Credits) Schedule: MW 0500 PM - 0659 PM
Instructor Permissions: Instructor Enrollment Cap: 15
Clinical approach to speech and hearing disorders as practiced by physicians, audiologists, speech
clinicians, and rehabilitation specialists. Includes virtual observation of patient care in clinic and operating
rooms, as well as lectures, discussion groups, and laboratory experience in audiological and vestibular
testing.

Course Notes: Classes to be held remotely. Class meeting times may change
according to physician OR and clinic schedules.

Class Notes: Classes run from Feb 1 - Apr 28, on Mondays and Wednesdays, from 5:00pm - 7:00pm. Meeting location: Online information to be provided on
course page or by instructor.

Recommended Prep: Anatomy of Speech and Hearing, Acoustics of Speech and Hearing, or
permission of the course director

Anatomy of Speech and Hearing (108218)

Barbara Fullerton
James Heaton

2021 Spring (4 Credits)  Schedule: MTWRF 0930 AM - 1129 AM
Instructor Permissions: Instructor  Enrollment Cap: 14

This course covers anatomy of the head and neck with videos of some of the detailed anatomy. We will stress structures important in speech and hearing. Lecture topics include basic neuroanatomy, imaging, surgery and cancer of the head and neck. We are unable to offer the usual cadaver lab for the course this year.

Course Notes: This an intensive January course, offered jointly with MIT as HST 718. Students should be comfortable with basic biology.

Class Notes: Please Note: Schedule runs outside the J-Term semester dates. Class sessions will begin on January 4th and will run until January 29th, from 9:30am - 11:30am, Monday - Friday. This class will be remote via zoom, until further notice from HMS.

Daniel Polley
M. Brown
Anne Takesian
Julie Arenberg
Joshua McDermott
Bertrand Delgutte

2021 Spring (4 Credits)  Schedule: MWF 0930 AM - 1129 AM
Instructor Permissions: Instructor  Enrollment Cap: 20

Neural structures and mechanisms mediating the detection, localization and recognition of sounds. General principles are conveyed by theme discussions of auditory masking, sound localization, musical pitch, cochlear implants, cortical plasticity and auditory scene analysis.

Course Notes: Offered jointly with MIT HST.723.
Class Notes: Classes will run from Jan 27 - Apr 26. They will be held on M/W/F from 9:30am - 11:30am. Meeting Location: Online information to be provided on course page or by instructor.

Recommended Prep: Neurobiology 200 or permission of the instructor.

Subject: Microbiology

Microbiology 201
Molecular Biology of the Bacterial Cell (126271)

David Rudner
Tom Bernhardt
Simon Dove
Deepali Ravel
Sophie Helaine

2021 Spring (4 Credits)  
Schedule: TR 1000 AM - 1159 AM  
Instructor Permissions: None  
Enrollment Cap: n/a

This course is devoted to bacterial structure, physiology, genetics, and regulatory mechanisms. The class consists of lectures and group discussions emphasizing methods, results, and interpretations of classic and contemporary literature.

Course Notes: The Spring 2021 version of this course will include synchronous, online lectures and paper discussions as well as asynchronous paper reading and problem set assignments. Interested students with questions about accessibility and/or time zone conflicts should
contact the course directors as soon as possible.

Class Notes: This class will run from Jan 26 - April 27. They'll be held on Tuesdays and Thursdays from 10:00am - 12:00pm, EST. Meeting Location: Online information to be provided on course page or by instructor.

Microbiology 202

Mechanisms of Bacterial Pathogenesis and Host Immune Response (126269)

Marcia Goldberg
Jonathan Kagan
Deepali Ravel
Michael Starnbach
Darren Higgins
Sophie Helaine

2020 Fall (4 Credits) Schedule: TR 1000 AM - 1159 AM
Instructor Permissions: Instructor Enrollment Cap: 20

This course focuses on molecular mechanisms of bacterial pathogenesis and the host response to infection. The class consists of lectures and group discussions emphasizing themes of pathogenesis, methods, results, and interpretations of classic and contemporary literature. Subjects including bacterial secretion systems, mechanisms of entry into host cells, biofilm formation, and motility are viewed primarily from the pathogen's perspective, whereas topics including inflammasome activation, TLR signaling, and adaptive immune responses provide a host-centric view. Additional sessions are spent examining current methods of antibiotic discovery and vaccine development. The course also introduces students to the wide diversity of pathogenic bacteria. Organisms discussed include pathogenic E. coli, Shigella species, Vibrio cholerae, Listeria monocytogenes, Chlamydia trachomatis, Pseudomonas aeruginosa and Staphylococcus aureus, as well as a discussion of the challenges presented by currently unculturable species. Where relevant, connections will also be made with pathogenesis and immune responses to viruses, parasites, and fungi.

Course Notes: Designed to complement Microbiology 201; however, students who have not taken Microbiology 201 previously are welcome. Designed for graduate students in their first year or beyond, however undergraduates with specific interest in the field may also enroll.

Class Notes: The Fall 2020 version of this course will include synchronous, online lectures and paper discussions as well as asynchronous paper reading and problem set assignments. Interested students with questions about accessibility and/or time zone conflicts should contact the course director as soon as possible.

MICRO202 was previously listed as MICRO214; course evaluations for the current version of this class can be accessed under the course number MICRO214
Microbiology 205

Mechanisms of Microbial Pathogenesis (146757)

_Clyde Crumpacker_

_Harvey Simon_

2020 Fall (4 Credits)

**Schedule:** TR 0830 AM - 1229 PM

**Instructor Permissions:** Instructor

**Enrollment Cap:** 40

The mechanisms of bacterial, mycoplasmal, fungal, and viral pathogenesis are covered. Topics are selected for intrinsic interest and cover the spectrum of pathophysiologic mechanisms of the infectious process. Emphasis on pathogenesis at the molecular level.

**Course Notes:** Offered jointly with the Medical School as HT 040.

**Class Notes:** Meeting Dates: Sept 8 - Dec 12, 2020.

**Recommended Prep:** A background course in molecular biology is strongly encouraged.

Microbiology 210

Microbial Sciences: Chemistry, Ecology, and Evolution (125823)

_Michael Gilmore_

2021 Spring (4 Credits)

**Schedule:** F 0945 AM - 1145 AM

**Instructor Permissions:** Instructor

**Enrollment Cap:** 20

This is an interdisciplinary graduate-level and advanced undergraduate-level course in which students explore topics in molecular microbiology, microbial diversity, and microbially-mediated geochemistry in depth. This course will be taught by faculty from the Microbial Sciences Initiative. Topics include the origins of life, biogeochemical cycles, microbial diversity, and ecology.

**Course Notes:** Also offered as Organismic and Evolutionary Biology 290.

**Class Notes:** Class run from Jan 29 - Apr 23, on Fridays from 9:4am - 11:45am.
Microbiology 213
Social Issues in Biology (122708)

Richard Born
David Glass

2021 Spring (4 Credits)  
Schedule: R 0200 PM - 0359 PM
Instructor Permissions: Instructor  Enrollment Cap: 20

This discussion course covers historical and contemporary readings about controversial issues related to biology and the social responsibility of scientists. This year we've made a virtue of the necessity to teach online, which has freed us up to enlist input from colleagues from a variety of disciplines in far-flung geographical locations: Jill Fisher on racial inequalities in testing new pharmaceuticals; Emily Hamilton on the public perception of vaccinations; Michael Pollan on the history and current use of psychedelic drugs; Sarah Lewis on the legacy of Louis Agassiz and the Zealy Daguerreotypes; and Christine Korsgaard on the ethics of animal experimentation. Our goal is to provide future scientists with a background for considering the ethical and social implications of biology.

Course Notes: Offered jointly with the Medical School as MG 722.0.

Class Notes: This class will run from Jan 28 - Apr 22, with no class on Apr 17. The class is held on Thursdays from 2:00pm - 4:00pm. Meeting location: Online information to be provided on course page or by instructor.

Recommended Prep: Some background in genetics.

Microbiology 302QC  
Introduction to Infectious Disease Research: Infectious Diseases Consortium Boot Camp (109380)  
Dyann Wirth  
Deepali Ravel  
2021 Spring (2 Credits)  
Schedule: TRF 0200 PM - 0459 PM  
Instructor Permissions: Instructor  
Enrollment Cap: 15  
This January boot camp course provides a fun, informative introduction to the breadth of infectious disease research carried out at Harvard and beyond. Students will have the chance to meet faculty,
students, and fellows in infectious disease roles across the university. The course will focus on several aspects of infectious diseases:

1. Underlying biology of infectious diseases and the diverse pathogens that cause them
2. Modern approaches to studying infectious diseases, including experimental biology, epidemiology, bioinformatics, and clinical microbiology
3. Modern approaches to developing new interventions, including drugs, vaccines, diagnostics, and public health measures

Class Notes: This course will run from Jan 12 - Jan 22, from 2:00pm - 5:00pm EST (with breaks). It is designed for life sciences graduate students but is open for cross-registration from other students. The Winter 2021 version of this course will be taught primarily through synchronous online lectures, discussions, and workshops. Interested students with questions about accessibility and/or time zone conflicts should contact the course directors as soon as possible. Online information to be provided on course page or by instructor.

Microbiology 312
Acquired and Innate Immunity to Pneumococci (126377)

Richard Malley
2021 Spring (4 Credits)  
Schedule: TBD  
Instructor Permissions: None  
Enrollment Cap: n/a

Microbiology 312
Acquired and Innate Immunity to Pneumococci (126377)

Richard Malley
2020 Fall (4 Credits)  
Schedule: TBD  
Instructor Permissions: None  
Enrollment Cap: n/a
Microbiology 313

T-Lymphocyte Responses to Bacterial Pathogens (114635)

Michael Starnbach

2020 Fall (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a

Microbiology 313

T-Lymphocyte Responses to Bacterial Pathogens (114635)

Michael Starnbach

2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a

Microbiology 315

Signaling Networks That Regulate Synapse Development (110091)

Michael Greenberg

2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a
Microbiology 315
Signaling Networks That Regulate Synapse Development (110091)
Michael Greenberg
2020 Fall (4 Credits)  Schedule: TBD
Instructor Permissions: None  Enrollment Cap: n/a

Microbiology 316
Host Pathogen Interactions (117274)
Stephen Lory
2021 Spring (4 Credits)  Schedule: TBD
Instructor Permissions: None  Enrollment Cap: n/a

Microbiology 316
Host Pathogen Interactions (117274)
Stephen Lory
2020 Fall (4 Credits)  Schedule: TBD
Instructor Permissions: None  Enrollment Cap: n/a
Microbiology 317

Molecular Mechanisms in Pathogenesis (124931)

John Mekalanos

2020 Fall (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Microbiology 317

Molecular Mechanisms in Pathogenesis (124931)

John Mekalanos

2021 Spring (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Microbiology 318

Mechanisms of RNA virus pathology explored in cerebral organoids from human embryonic stem cells (110558)

Lee Gehrke

2020 Fall (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a
**Microbiology 318**

Mechanisms of RNA virus pathology explored in cerebral organoids from human embryonic stem cells (110558)

*Lee Gehrke*

2021 Spring (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

**Microbiology 319**

Molecular pathogenesis of human malaria infection (160765)

*Jeffrey Dvorin*

2021 Spring (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

**Microbiology 319**

Molecular pathogenesis of human malaria infection (160765)

*Jeffrey Dvorin*

2020 Fall (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a
Microbiology 320
Epigenetic Regulation of DNA Virus Infection (113543)

David Knipe
2020 Fall (4 Credits)  
Schedule: TBD  
Instructor Permissions: None  
Enrollment Cap: n/a

Microbiology 320
Epigenetic Regulation of DNA Virus Infection (113543)

David Knipe
2021 Spring (4 Credits)  
Schedule: TBD  
Instructor Permissions: None  
Enrollment Cap: n/a

Microbiology 324
Bacterial Pathogenesis and Vaccine Development (112811)

Gerald Pier
2021 Spring (4 Credits)  
Schedule: TBD  
Instructor Permissions: None  
Enrollment Cap: n/a
Microbiology 324
Bacterial Pathogenesis and Vaccine Development (112811)

Gerald Pier

2020 Fall (4 Credits)  
Schedule: TBD  
Instructor Permissions: None  
Enrollment Cap: n/a

Microbiology 326
Biology and virulence of enteric pathogens (124203)

Matthew Waldor

2021 Spring (4 Credits)  
Schedule: TBD  
Instructor Permissions: None  
Enrollment Cap: n/a

Microbiology 326
Biology and virulence of enteric pathogens (124203)

Matthew Waldor

2021 Spring (4 Credits)  
Schedule: TBD  
Instructor Permissions: None  
Enrollment Cap: n/a
Microbiology 328
Molecular Biology of Epstein Barr Virus Infection and Transformation of B Lymphocytes (131596)

Elliott Kieff
2020 Fall (4 Credits)  Schedule: TBD
Instructor Permissions: None  Enrollment Cap: n/a

Microbiology 328
Molecular Biology of Epstein Barr Virus Infection and Transformation of B Lymphocytes (131596)

Elliott Kieff
2021 Spring (4 Credits)  Schedule: TBD
Instructor Permissions: None  Enrollment Cap: n/a

Microbiology 329
The Regulation of Gene Expression in Pathogenic Bacteria (120013)

Simon Dove
2020 Fall (4 Credits)  Schedule: TBD
Instructor Permissions: None  Enrollment Cap: n/a
### Microbiology 329

The Regulation of Gene Expression in Pathogenic Bacteria (120013)

*Simon Dove*

2021 Spring (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

### Microbiology 330

Bacterial Chromosome Dynamics and Cell Biology (119613)

*David Rudner*

2020 Fall (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

### Microbiology 330

Bacterial Chromosome Dynamics and Cell Biology (119613)

*David Rudner*

2021 Spring (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a
Microbiology 331
Modeling Mechanisms of Bacterial Pathogenesis (120014)

Cammie Lesser

2020 Fall (4 Credits)  
Schedule: TBD  
Instructor Permissions: None  
Enrollment Cap: n/a  

Additional Course Attributes:

Microbiology 332
Gene Regulation of Prokaryotes (125575)

Ann Hochschild

2021 Spring (4 Credits)  
Schedule: TBD  
Instructor Permissions: None  
Enrollment Cap: n/a
Microbiology 332
Gene Regulation of Prokaryotes (125575)
Ann Hochschild
2020 Fall (4 Credits)
Schedule: TBD
Instructor Permissions: None
Enrollment Cap: n/a

Microbiology 335
Molecular Biology of Parasites (115472)
Dyann Wirth
2021 Spring (4 Credits)
Schedule: TBD
Instructor Permissions: None
Enrollment Cap: n/a

Microbiology 335
Molecular Biology of Parasites (115472)
Dyann Wirth
2020 Fall (4 Credits)
Schedule: TBD
Instructor Permissions: None
Enrollment Cap: n/a
Microbiology 336
Pathogen-Host Interactions (114338)

Marcia Goldberg

2020 Fall (4 Credits)  
Schedule: TBD  
Instructor Permissions: None  
Enrollment Cap: n/a

Microbiology 336
Pathogen-Host Interactions (114338)

Marcia Goldberg

2021 Spring (4 Credits)  
Schedule: TBD  
Instructor Permissions: None  
Enrollment Cap: n/a

Microbiology 338
Engineering immunity to dissect host-pathogen interactions (160769)

Alejandro Balazs

2021 Spring (4 Credits)  
Schedule: TBD  
Instructor Permissions: None  
Enrollment Cap: n/a
Additional Course Attributes:

Subject: Immunology

Immunology 201
Advanced Topics in Immunology (148547)

Thorsten Mempel
Shiv Pillai

2020 Fall (4 Credits)  Schedule:  TR 1230 PM - 0245 PM
Instructor Permissions:  Instructor  Enrollment Cap:  50

This course provides an intensive and in-depth examination of a selection of fundamental concepts in immunology. It takes advantage of the unique expertise of members of our Immunology faculty to illustrate
how these concepts have been established and continue to be developed based on seminal work in the field including contributions from their own laboratories.

Course Notes: Intended for students who have had prior exposure to immunology on the undergraduate level. In the absence of such exposure, students must obtain the permission of the Course Director. Offered jointly with the Medical School as IM 702.0.

Class Notes: Meeting Dates Sept 3 - Dec 3

Recommended Prep: A background in genetics and biochemistry strongly recommended.

Immunology 202

Immune and Inflammatory Diseases (148503)

Wendy Garrett

2021 Spring (4 Credits) Schedule: TR 0900 AM - 0959 AM

Instructor Permissions: None Enrollment Cap: n/a

IMM202 builds on IMM201 and explores fundamental principles of immunology in the context of immune and inflammatory diseases. Through a series of lectures and discussion, students will survey a broad range of diseases in which the immune system is essential. Topics will include not only diseases that mobilize classical immunity but also conditions to which we now know the immune systems contributes. Students will use oral and written exercises to learn how to evaluate and synthesize major concepts and tools germane to immunology's relationship to bioscience.

Course Notes: Offered jointly with the Medical School as IM 712.0.

Class Notes: This class runs from Jan 26 - May 6 on Tuesdays and Thursdays, from 9:00am - 10:00am. Meeting Location: Online information to be provided on course page or by instructor

Recommended Prep: Immunology 201 or its equivalent.

Immunology 204
Critical Readings for Immunology (143254)
Duane Wesemann
2021 Spring (4 Credits) Schedule: R 1100 AM - 0115 PM
Instructor Permissions: None Enrollment Cap: n/a
Original research articles from fields including immunology, biochemistry, genetics, and cell and developmental biology will be critically analyzed in an intensive small group format. Grading will be based on class participation and oral presentations.
Course Notes: Required for first-year immunology students, open to second-year immunology students. No auditors. Offered jointly with the Medical School as IM 703.0.
Class Notes: This class will run from Jan 28 - Apr 22, on Thursdays from 11:00am to 1:15pm. Meeting location: Online information to be provided on course page or by instructor

**Immunology 300**

Advanced Topics in Immunology (141598)

*Rosalind Segal*

2020 Fall (4 Credits)  

Schedule: TBD  

Instructor Permissions: None  

Enrollment Cap: n/a  

Reading and discussion seminars each running for a half term (7 weeks). Two seminars, which can be taken in different terms, are required for credit. Topics include the role of intracellular and transmembrane protein phosphates in signal transduction.

Course Notes: Intended for first- and second-year Immunology graduate students. Non-DMS students must get permission from the Division of Medical Sciences before registering for this course. Call 617-432-0162 or visit the DMS Office at T-MEC 435, 260 Longwood Avenue, Boston.

Immunology 301
Immunology Seminar (142204)

Shiv Pillai
Galit Alter

2021 Spring (4 Credits)    Schedule:  W 0200 PM - 0259 PM
                          W 1230 PM - 0159 PM

Instructor Permissions:    Instructor    Enrollment Cap:  20

Gives students exposure to research topics in Immunology. Students prepare for the weekly seminar through readings, discussions, and preparing brief write-ups. These discussions are facilitated by members of the Committee on Immunology.

Course Notes: Required for, and limited to, first-year Immunology graduate students. All others will be evaluated for enrollment on a case by case basis.

Class Notes: Class sessions will be held from Jan 25 to Apr 28, on Wednesdays. The Discussion Class will be held from 12:30pm - 2:00pm. The Meet and Greet will be held from 2:00pm - 3:00pm. Meeting location: Online information to be provided on course page or by instructor.

Neuro-Immunology in Development, Regeneration and Disease (130342)

_Isaac Chiu_
_Beth Stevens_
_Michael Carroll_
_Jun Huh_

2021 Spring (2 Credits)  

Schedule:  
W 0100 PM - 0259 PM

Instructor Permissions: None  
Enrollment Cap: n/a

It is increasingly clear that the nervous system and immune system share parallel molecular pathways, and communication between neurons and immune cells play significant roles in homeostasis and disease. This course will investigate current topics in neuro-immunology: CNS development, chronic pain, neurodegeneration, aging, axon regeneration, auto-immunity and infection. We will focus our discussions on molecular mechanisms shared by the immune and nervous systems and the molecular cross-talk between these two systems.

Course Notes: Each class will cover a specific topic in neuro-immunology. Students should be prepared to lead discussions on pre-selected papers for each session.

Class Notes: Class will be held from Mar 17 - May 5, on Wednesdays from 1:00pm - 3:00pm. Meeting location: Online information to be provided on course page or by instructor.

_Judith Agudo_

2020 Fall (2 Credits)  

Schedule: TBD
Instructor Permissions: Instructor  Enrollment Cap: 20

There have been many exciting recent developments in the cancer immunology field, and multiple therapeutic approaches have shown efficacy against diverse types of cancer. This course will emphasize new mechanistic insights, specifically on the following topics: Mechanisms of spontaneous protective anti-tumor immunity; Key effector cell populations of anti-tumor immunity; Innate immune pathways in tumor immunity; Inflammation and tumor microenvironment; Immunosuppressive mechanisms in tumor immunity; Targeting of inhibitory receptors; Cancer vaccines.

Course Notes: Must be PhD student at Harvard or postdoctoral fellow.
Class Notes: Meeting Dates: M, 4:00pm - 6:00pm. Nov 2 – Dec 14, 2020

Immunology 318QC
Innate immunity and viral infection of the lung - coronaviruses, flu and lung superinfections (217871)

Ivan Zanoni
2021 Spring (2 Credits)  Schedule:  T 1100 AM - 1230 PM
Instructor Permissions:  None  Enrollment Cap:  n/a

The course will focus on the innate immune response elicited in the lung in response to viral infections. Particular focus will be given to RNA viral infections such as coronaviruses and influenza viruses. The role of innate immune cells, interferons, and other immune mediators in resolving and/or aggravating the viral infection will be discussed. Also, how an initial response against the virus facilitates the development of secondary bacterial superinfections will be analyzed. Basic knowledge of immunology is expected in order to follow the content of this course.

Class Notes:  This class will run from Mar 23 until Apr. 27 on Tuesdays, from 11:00am - 12:30pm. Meeting Location: Online information to be provided on course page or by instructor.

2020 Fall (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a

Immunology 337L
Vascular and Cell Biology of Inflammation and Wound Healing (146665)

Christopher Carman

2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a

Immunology 337L
Vascular and Cell Biology of Inflammation and Wound Healing (146665)

Christopher Carman

2020 Fall (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a
Immunoology 339
Function and Regulation of Cellular Adhesion Mechanisms (144591)

Martin Hemler
2020 Fall (4 Credits)
Schedule: TBD
Instructor Permissions: None
Enrollment Cap: n/a

Immunoology 339
Function and Regulation of Cellular Adhesion Mechanisms (144591)

Martin Hemler
2021 Spring (4 Credits)
Schedule: TBD
Instructor Permissions: None
Enrollment Cap: n/a

Immunoology 340
The Human Major Histocompatibility Complex, Immune Function, and Disease (143640)

Chester Alper
2020 Fall (4 Credits)
Schedule: TBD
Instructor Permissions: None
Enrollment Cap: n/a
### Immunology 340

The Human Major Histocompatibility Complex, Immune Function, and Disease (143640)

*Chester Alper*

2021 Spring (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Subject: Cell Biology

Cell Biology 201

Principles of Cell Biology (108339)

Adrian Salic  
Wade Harper  
Senthil Muthuswamy  
John Hanna
This is a graduate level course in which students examine both fundamental and novel concepts and methodologies in cell biology with expert faculty from the field. Through a combination of weekly asynchronous lectures on content and methodology, and weekly synchronous problem-solving and paper discussion sections, students will explore a broad range of topics including: the molecular basis of cellular organization, subcellular compartmentalization, protein trafficking, chromosome organization and epigenetics, regulated ubiquitin-proteasome pathways, cell cycle regulation, signal transduction, and more.

By the end of this course, students should be able to:

- Evaluate primary scientific literature from a broad range of topics in cell biology;
- Identify current questions in cell biology and the co-evolving methodologies used to address those questions;
- Design appropriate experimental approaches to address hypotheses related to cell biology.

Course Notes: Methodological focus on current approaches in cell biology including quantitative tools. Emphasis on experimental design. Offered jointly with the Medical School as CB 713.0.

Class Notes: Meeting Dates: Sept 2, Dec 10, 2020
Curriculum Fellow, Saoirse McSharry saoirse_mcsharry@hms.harvard.edu

Recommended Prep: Basic knowledge in biochemistry, genetics, and cell biology.

Development, Stem Cells and Regeneration (111215)

Andrew Lassar
John Flanagan
Guillermo Garcia-Cardena
Jordan Kreidberg
Jessica Lehoczky
Sean Megason
Olivier Pourquie
Vandana Gupta
Karl Koehler

2021 Spring (4 Credits)  

Instructor Permissions: Instructor  Enrollment Cap: 16

This course is evenly divided between lectures and conference sessions which cover the principles that guide vertebrate development and stem cell maintenance in various renewing tissues; in addition, we discuss how these principals can be leveraged to generate cells/tissues for regenerative biology or disease modeling in vitro. Specific topics include a molecular dissection of the signaling pathways, gene regulatory networks, and epigenetic mechanisms that control primary axis formation and regional specification, establishment of cell fate, homeotic genes and patterning, cell migration and cell-cell signalling, organoid models of nervous system development and their application, axon development and regeneration, neuromuscular development and mechanistic insights for human birth defects, skeletal muscle stem cells in aging and disease, morphogenesis of branched tubular systems, vasculogenesis, biomechanical regulation of developmental processes, limb development and regeneration, stem cell maintenance in various renewing tissues, germ cells and pluripotency, and directed differentiation of ES and iPS cells for regeneration and disease modeling. We will discuss how state of the art technologies in iPS organoids, cell lineage labeling, genetic manipulation, and genome wide epigenomic/transcriptomic analyses can be employed to study organ development, stem cells and regeneration.

Students employ the knowledge gained by lectures and conference sessions to identify two interesting new research goals in either vertebrate development, stem cell, or regenerative biology and present research proposals to achieve these goals. Thus, a goal of this course is for students to learn how to synthesize the literature to come up with their own novel research ideas, and develop a strategy to investigate their hypotheses.

Course Notes: This course is offered as CELLBIO207 and also as DRB207. Offered jointly with the Medical School as CB 710.0. Includes lectures and conference sessions in which original literature is discussed in depth. Short research proposals are required in lieu of exams.

Class Notes: This course will run from Jan 25 - May 12, on Mondays and Wednesdays from 2:00pm - 4:00pm. Meeting Location: Online information to be provided by Andrew_Lassar@hms.harvard.edu.

Recommended Prep: Introductory courses in both Cell and Molecular Biology.

2021 Spring (4 Credits)  
Instructor Permissions: Instructor  
Enrollment Cap: 24

Schedule: MW 1230 PM - 0159 PM

This semester long course takes a molecular approach to examine the basis of human cancer. The main concepts that we will cover include: cancer genetics and epigenetics, tumor suppressor genes and oncogenes, signal transduction, DNA damage and repair, angiogenesis, metastasis and invasion, apoptosis, cancer stem cells, and tumor immunology and immunotherapy. Lectures will be delivered by experts in the various fields to provide an integrated perspective on past, current and future approaches in cancer biology research. Many of the lecturers are also clinical oncologists and hematologists, who will provide insight into how molecular advances are impacting patient care now, and are likely to do so in the future. In addition, students will participate in workshops in which they will delve more deeply into the primary literature of several of these topics.

**Course Notes:** Given alternate years with Cell Biology 211.

**Class Notes:** Classes run from Jan 25 - April 28. Meeting Location: Online information to be provided on course page or by instructor

**Recommended Prep:** Advanced biochemistry, molecular genetics, and cell biology.
Cell Biology 235

History and Philosophy of Experimentation in Biology (156733)

David Glass
Janet Browne
Ned Hall

2020 Fall (4 Credits)

Schedule: M 0630 PM - 0829 PM

Instructor Permissions: Instructor
Enrollment Cap: 30

How did developments in philosophy of science, technology, and statistics relate to practices in biology over time? We will trace the influence of particular philosophical arguments concerning science that have developed over the last 500 years, following the development of distinct types of "Scientific Method" in biology. The course will offer a foundation for exploring how today’s dominant scientific method relates to scientific research, medicine, and society's popular understanding of science, and may help give perspective as to how modern practices of scientific method have come to be. Learning of alternate approaches to science and scientific epistemology might be of particular importance now, given current controversies relating to the reproducibility of many published findings.

Class Notes: Meeting Dates: Sept 7 - Nov 30, 2020

Cell Biology 300

Advanced Topics in Cell, Molecular, and Developmental Biology (116986)

Rosalind Segal

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: None
Enrollment Cap: n/a

A series of reading and discussion seminars, each running for a half term (seven weeks). Different topics are covered each term.

Course Notes: Two seminars, which can be taken in different terms, are required for credit. Non-DMS students must get permission from the Division of Medical Sciences before registering for this course. Please contact us at 617-432-0162 or visit the DMS Office at T-MEC 435, 260 Longwood Avenue, Boston.

Advanced Experimental Design for Biologists (127479)
David Glass
Randall King
2021 Spring (2 Credits) Schedule: M 0630 PM - 0829 PM
Instructor Permissions: Instructor Enrollment Cap: 24
This course will focus on both the theory and practice of experimental design. The emphasis is on project planning and vetting, individual experimental design, and trouble-shooting. Special focus will be placed on methods to avoid experimental bias, and potential sources of inappropriate interpretation. Also the importance of system validation is especially emphasized.

Course Notes: Special consent required - preference given to Therapeutics Certificate Program students.

Class Notes: These classes will run from Jan 25 - Mar 8. They will be held on Mondays from 6:30pm - 8:30pm. Meeting location: Online information to be provided on course page or by instructor.

Cell Biology 306QC
Teaching 100: The Theory and Science of Teaching (107400)
Bradley Coleman

2020 Fall (2 Credits)
Instructor Permissions: Instructor
Enrollment Cap: 20

For many graduate students and medical educators, teaching will be part of their career, whether as mentoring, formal classroom teaching, or teaching in the hospital. In addition, the theory and research evidence accumulating in the disciplines of cognitive psychology, neuroscience, and from STEM classrooms, has turned the question of "How do we best teach science?" into its own scientific discipline. The Theory and Science of Teaching focuses on understanding why certain teaching methods are effective by examining the scientific research and theoretical frameworks that support these methods. We will read and discuss foundational educational and cognitive psychology texts and primary literature, and then develop course materials that allow us to put these ideas into practice.

Course Notes: The course has been designed as a companion to Genetics 302qc: Teaching 101, but neither course is a prerequisite of the other.

Class Notes: Each week class will meet from 8:00-9:30AM for a synchronous Zoom
session. This will be complemented with substantial required asynchronous learning. These two components will combine to meet the course objectives are equally important to students' learning.

Class begins September 14th with a series of asynchronous introductory activities. The first synchronous class meeting is September 24th and these run through November 19th. There is no class on October 15th.

**Recommended Prep:** Make It Stick, by Brown, Roediger and McDaniel is required pre-reading and should be completed before the first day of class. A required asynchronous 'module 0' will be released on Canvas September 14th.

Deep Learning for Biomedical Image Analysis (217645)
Faisal Mahmood
2021 Spring (2 Credits) Schedule: W 0200 PM - 0359 PM
Instructor Permissions: Instructor Enrollment Cap: 40

Biomedical image analysis is undergoing a paradigm shift due to artificial intelligence and deep learning. This course will cover basic concepts of deep learning and convolutional neural networks for biomedical image analysis as well as current challenges and opportunities. The lectures will include fundamentals of classification, characterization, detection, segmentation and enhancement in biomedical images. Using a variety of different microscopy and pathology datasets the course will follow a 'learning-by-doing' model where each lecture will be accompanied by hands-on training in using these methods in practice. The course assumes no prior knowledge of deep learning or image analysis. Basic knowledge of python is recommended but not required.

Course Notes: Basic knowledge of python is recommended but not required.
Class Notes: This class will run from Feb 10 - Mar 31. The classes will be held on Wed., from 2:00pm - 4:00pm. Meeting location: Online information to be provided on course page or by instructor.

Biomedical Informatics 201

Concepts in genome analysis (208016)

Shamil Sunyaev
Michael Baym
Cheng-Zhong Zhang
Heng Li

2020 Fall (4 Credits) Schedule: MW 0230 PM - 0359 PM

Instructor Permissions: None Enrollment Cap: n/a

This course focuses on quantitative aspects of genetics and genomics, including computational and statistical methods of genomic analysis. We will introduce basic concepts and discuss recent progress in population and evolutionary genetics and cover principles of statistical genetics of Mendelian and complex traits. We will then introduce current genomic technologies and key algorithms in computational biology and bioinformatics. We will discuss applications of these algorithms to genome annotation and analysis of epigenomics, cancer genomics and metagenomics data. Proficiency in programming and basic knowledge of genetics and statistics will be assumed.

Biomedical Informatics 313QC

Computing Skills for Biomedical Sciences (208164)

Nils Gehlenborg
Theodore Feldman

2020 Fall (2 Credits) Schedule: TR 0800 AM - 0829 AM

Instructor Permissions: Instructor Enrollment Cap: 4

This course will prepare students for advanced graduate level classes that require practical programming and data analysis skills through active learning methods. The main focus of this course is to familiarize students with the R programming language. Additionally, students will learn about the command line on Linux-based systems, high-performance computing environments, and fundamental data analysis approaches. The skills taught in this course will enable students to design and implement programs for reproducible data analysis, manage file-based datasets, apply basic statistical, algorithmic, and visual approaches for data interpretation, and execute analyses on a compute cluster.

Course Notes: Cross listed with HMS as BMI 713. BMIF 313qc is graded SAT/UNSAT. If a letter grade is preferred, students can cross-register through my.harvard for BMI 713.
Class Notes: Classes will run from September 3 - October 17, 2020
Section 1, Tu/Th, 8:00 AM - 8:30 AM  
Section 2, Tu/Th, 2:00 PM - 2:30 PM  
All classes will be held via Zoom and in addition to the synchronous instruction during the above times, the course will be using various asynchronous learning approaches for a total of 3 hours per week.

Computational Statistics for Biomedical Sciences (208256)

2020 Fall (2 Credits)  
Schedule: TR 0800 AM - 0829 AM

Instructor Permissions: Instructor  
Enrollment Cap: 4

This course will provide a practical introduction to statistical analysis of biological and biomedical data. Basic techniques will be covered, including descriptive statistics, elements of probability, hypothesis
testing, nonparametric methods, correlation analysis, and linear regression. Emphasis will be on how to choose appropriate statistical tests, how to assess statistical significance, and how to avoid common mistakes in analysis of large datasets. This course is geared toward graduate students in the biological sciences, but others are welcomed as auditors if space permits. No previous knowledge in statistics is required, but some proficiency in R will be assumed.

Course Notes: This course is geared toward graduate students in the biological sciences, but others are welcomed as auditors if space permits. No previous knowledge in statistics is required, but some proficiency in R will be assumed. Cross listed with HMS as BMI 715.

Class Notes: Classes will run from October 22 through December 12.
Section 1, Tu/Th, 8:00 AM - 8:30 AM, Section 2, Tu/Th, 2:00 PM - 2:30 PM

2021 Spring (4 Credits)  
Instructor Permissions: Instructor

Schedule: MW 1030 AM - 1229 PM
Enrollment Cap: n/a
BBS 230 is an integrated literature analysis course comprised of two related components: (1) intensive faculty-led paper discussion on Mondays and (2) workshops with TFSs to assess individual student skills in critically evaluating and reviewing the scientific literature on Wednesdays.

Course Notes: This course is required for first year BBS and second year BIG students, and is open only to BBS and second year BIG students

Class Notes: This class runs from Jan 25 - April 14. It will be held Mondays and Wednesdays from 10:30am-12:30pm. Meeting Locations: Online information to be provided on course page or by instructor

Biological & Biomedical Sci 301

Embedded Teaching Practicum (for Graduate Teaching Assistants) (127207)

Ronald Heustis
Madhvi Venkatesh

2020 Fall (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: 60

The Embedded Teaching Practicum serves to enhance the teaching experience for TAs and the learning experience for enrollees in the core BBS courses. While TAs serve different functions and experience teaching from different perspectives in each of our core courses, they collectively serve a vital role in helping with the delivery of a contemporary, high-quality and accessible education to HMS graduate students. The embedded teaching practicum provides practice-based training in curriculum design, developing learning objectives, assessment development and DBER; facilitating a group discussion; professionalism in the classroom; and preparation for teaching throughout and beyond time in graduate school. Teaching assistants are provided training and experience in the development of an early-career teaching philosophy.

Class Notes: This course runs from August 18 2020 - December 10, 2020. Time varies by date; details of date and time to be shared by instructors.

TAs should contact Jason Heustis, ronald_heustis@hms.harvard.edu. Required Course for TAs working in BCMP 200. Open to TAs serving in other BBS core classes. Registration for this class is limited to students serving as Teaching Assistants for BBS core. Class meetings will be scheduled during daytime and evening hours, and will be
communicated by the instructor. TAs are required to participate in all synchronous and asynchronous components of the course in which they are serving as a TA.

**Biological & Biomedical Sci 311**

Meromit Singer lab (215771)

*Meromit Singer*
The Singer group focuses on elucidating gene networks that regulate T cell function in cancer and autoimmunity, as well as the mechanisms by which bi-directional interactions take place between the T cells and their environment.

We use statistics, machine learning and algorithmic design to analyze high-throughput data generated in our lab (e.g. single-cell RNA-Seq) and model T cell regulation and function in tissue. We follow up on our predictions with in vivo perturbations (e.g. with CRISPR-Cas9) to validate and improve our models.

Critical Thinking and Research Proposal Writing (156089)

*Rosalyn Adam*  
*John Clohessy*  
*Matthew Harris*

2020 Fall (4 Credits)  
Schedule: TBD

Instructor Permissions: None  
Enrollment Cap: n/a

A group tutorial systematically guiding students in the writing of original, hypothesis-driven research proposals from initial topic selection through completion of a final draft.

Course Notes: This course is open to second year BBS students. Others need permission of the instructor. Dates, times, and locations for Sessions 3 and 4 will be determined by the faculty running the tutorial sessions. Students will be able to sign up for their specific group on a first-come, first-served basis until the group limit (5 students) is reached. The BBS office will coordinate this process. Group assignments will be posted on the course website.

Class Notes: Session 1 (Lecture) will be on September 10, 2020, from 2:00 - 4:00pm. Session 2 (Lecture) will be on October 1, 2020, from 2:00 - 4:00pm.

Students who have joined a lab will be offered a section which run from October - December  
Students who have not yet joined a lab will be offered a section which run from November - January

Recommended Prep: Check course website for downloadable material at https://canvas.

Medieval Studies 109
Poverty, Wealth, and Religion in the Middle Ages (203670)

Brian FitzGerald

2020 Fall (4 Credits) Schedule: MW 0130 PM - 0245 PM
Instructor Permissions: None Enrollment Cap: n/a

This seminar considers the ethical, political, and spiritual questions arising from the existence of wealth and poverty, the rich and the poor, in medieval European culture. What was the relationship between Christian charity and economic activity in the Middle Ages? How did the religious values of a simple, austere life inform or conflict with changes in both Church and society? Drawing on saints’ lives, theological treatises, art and architecture, and the work of authors such as Augustine, Aquinas, Thomas More, and Martin Luther, the course will examine how the interaction of spiritual ideals and material realities shaped cultural developments and affected beliefs and practices from late antiquity to the Protestant Reformation.

Sex, Love, and Marriage in the Middle Ages (205890)

Sean Gilsdorf

2020 Fall (4 Credits) Schedule: TR 0130 PM - 0245 PM
Instructor Permissions: None Enrollment Cap: n/a

This class explores the relationships of passion, love, and obligation that bound men and women over the course of nearly two millennia, from Rome in the first century B.C.E. to sixteenth-century Italy. In particular, it focuses on how those relationships were organized legally and institutionally, on the social roles created by such relationships, and on the connection (or lack thereof) between marriage, love, and sexual passion. Although marriage in the West long was viewed as an exclusively heterosexual estate, the course also considers how homosocial and homosexual desires have affected it throughout history.

English Legal History, 600-1600 (142694)

Elizabeth Kamali

2021 Spring (4 Credits)  
Schedule: MT 1030 AM - 1150 AM

Instructor Permissions: None  
Enrollment Cap: n/a

An introduction to the legal and constitutional history of England from the Anglo Saxons to the end of the Tudor period, essentially 600 – 1600, including the development of private (e.g., contract, torts, property) and public law (e.g., criminal and constitutional law). No previous background in English legal history is assumed.

Course Notes: Meets together with HLS 2165.

At Cross Purposes: The Crusades in Material Culture (109230)

Evridiki Georganteli

2020 Fall (4 Credits)  
Schedule: W 0900 AM - 1145 AM

Instructor Permissions: Instructor  
Enrollment Cap: 15

Crusading expeditions in the Holy Land, Spain and Eastern Europe from 1096 until the end of the Middle
Ages shaped the political, socio-economic and cultural map of Europe and the Middle East. This course explores the multifaceted encounters between crusaders, Byzantines, Jews, Armenians and Muslims through the material traces they left behind: architecture, Byzantine objects dispersed across Western Europe, coins, sculptures, frescoes, and manuscripts from the East and the West.

Creativity Research: Eccentrics, Geniuses, and Harvard Students (128215)

*Shelley Carson*

2020 Fall (4 Credits)  

Schedule:  

Instructor Permissions: Instructor

Enrollment Cap: 15

Examines human creativity from three perspectives: a) empirical research sources, b) case studies of eminent creative achievers, and c) ourselves as creative subjects. Topics include the definition and measurement of creativity, the creative process, the neuroscience of creativity, the creative personality, the role of family life and culture in creativity, the relationship of creativity to IQ, gender differences, and the relationship of creativity to psychopathology. The course format will consist of a combination of lectures, student presentations, and discussion. Students will write a final paper on the topic of their choice related to creativity.

Class Notes:  

Course inquiries to Dr. Carson at shcarson@live.com. Preference to juniors in MBB tracks or MBB secondary field. Admission to this
course is via lottery. Link to lottery form will be available at https://mbb.harvard.edu/seminars by 9 a.m. (Eastern U.S. Daylight Time/EDT) on Friday 21 August. Lottery deadline is 11:59 p.m. (Eastern U.S. Daylight Time/EDT) the same day.

What Disease Teaches about Cognition (109866)

William Milberg

2021 Spring (4 Credits) Schedule: T 0345 PM - 0545 PM

Instructor Permissions: Instructor Enrollment Cap: 14

Seeks to reconcile the complicated and messy problems of patients with brain disease with the concise analysis of precisely defined cognitive functions in normal subjects. Students will learn to overlay cognitive functions on to the brain in disease - at the gross dissection and imaging levels - and to understand some of the complex interactions of individual cognitive operations in disease. Includes dissection of a human brain, mapping on to imaging, dissection of multi-dimensional clinical disorders into their component functional parts.

Class Notes: Course inquiries to Dr. Milberg at william_milberg@hms.harvard.edu. Enrollment preference to juniors in MBB tracks or MBB secondary field. Admission to this course is via lottery. Link to lottery form will be available at https://mbb.harvard.edu/seminars by 9 a.m. (Eastern U.S. Standard Time.EST) on Tuesday 19 January 2021. Lottery deadline is 11:59 p.m. (EST) the same day.

Functional Neuroimaging of Psychiatric Disorders: Insights into the Human Brain-Mind (160759)

David Silbersweig

2021 Spring (4 Credits) Schedule: R 0300 PM - 0500 PM

Instructor Permissions: Instructor Enrollment Cap: 15

Functional brain imaging has revolutionized the study of systems-level behavioral neuroscience and
psychiatric disorders, through the ability to localize and characterize distributed brain activity directly associated with perception, cognition, emotion and behavior in disorders where there are not gross brain lesions. This seminar will introduce students to translational neuroimaging methods at the interface of neuroscience, psychology and medicine. It will cover recent and ongoing advances in our understanding of fronto-limbic-subcortical brain circuitry across the range of psychiatric disorders (e.g. mood disorders, anxiety disorders, psychotic disorders, personality disorders, addictions). It will discuss new, emerging biological (as opposed to descriptive) taxonomies and conceptualizations of mental illness and its treatment. It will explore the implications of such knowledge for issues such as consciousness, meaning, free will, emotion, resilience, and religiosity. It will incorporate clinical observations, scientific data and readings, and examine future directions in brain-mind medicine.

Class Notes: 
Course inquiries to Dr. Silbersweig at dsilbersweig@partners.org. Preference to juniors in MBB tracks or MBB secondary field. Admision to this course is via lottery. Link to lottery form will be available at https://mbb.harvard.edu/seminars by 9 a.m. (Eastern U.S. Standard Time/EST) on Tuesday 19 January 2021. Lottery deadline is 11:59 p.m. (EST) the same day.

**Mind, Brain & Behavior 980N Section: 1**

Neuroaesthetics (161267)

_Nancy Etcoff_

2020 Fall (4 Credits) **Schedule:** R 1200 PM - 0200 PM

_Instructor Permissions:_ Instructor **Enrollment Cap:** 15

Focuses on neuroaesthetics, an emerging field offering a scientific perspective on the nature of art and the ways that art reveals human nature. Integrates findings from neuroscience, psychology, evolutionary biology, philosophy, and scholarship in the arts and humanities. Begins with a brief history of ideas on aesthetics, art, beauty, and pleasure. Considers the neural underpinnings of response to art in the brain's reward system and default network. Among the questions considered: Why are people drawn to art that is neither conventionally beautiful nor entirely pleasurable? Is art a vehicle for simulating experiences and understanding other minds? What does it mean to "enjoy" sad music or chills and thrills in response to fiction or film? Can art promote well-being? The course will focus on visual art, fiction, film, and to a lesser extent, music, and on our response to art rather than its creation. The course will include a semester long gallery classroom at the Harvard Art Museum with original works of art from the museum's collections that will serve as primary source materials for study and as subjects of assignments.

Class Notes: Preference to juniors in MBB tracks or MBB secondary field. Admission to this course is via lottery. Link to lottery form will be available at https://mbb.harvard.edu/seminars by 9 a.m. (Eastern U.S. Daylight Time/EDT) on Friday 21 August. Lottery deadline is 11:59 p.m. (Eastern U.S. Daylight Time/EDT) the same day.
Mind, Brain & Behavior 980P Section: 1

The Role of Music in Health and Education (205158)

Lisa Wong

2020 Fall (4 Credits)  Schedule:  R 0300 PM - 0500 PM

Instructor Permissions:  Instructor  Enrollment Cap:  18

Music shapes the course of human history at both a micro and macro scale; The "universal language" has the power to connect people who share no other common ground. Its power to bind people together is intuitively understood, but only through recent neuroimaging advances over the past few decades have scientists been able to move past intuition to reveal its impact on the brain. In this course, we will examine the exciting progress of the fields of music, science, and social science, through a variety of lenses, and meet some of the experts in the field. Who are the key investigators and practitioners in today's emerging music/brain landscape? What are the latest discoveries about how music affects the brain? How does how we hear and listen impact our perception of music? Who are some of the key influencers in music and social change? This course invites students to deepen their relationship with music, exploring different aspects of the art form through the lens of neuroscience, education, medicine, music therapy, public health and social justice. By the end of this course, the learner will (1) understand the effect of music on the developing brain; (2) understand the mechanism of hearing music; (3) consider the pathophysiology of disordered movement and hearing and how music can be used therapeutically; and (4) understand how other disciplines can add to their knowledge of the therapeutic uses of music. Given the transdisciplinary nature of the work, students will be introduced to literature from different disciplines and use these resources to explore their own individual interests in music.

Mind, Brain & Behavior 980R Section: 1

Psychopaths and Psychopathy: Psychological, Neuroscientific, Legal, and Policy Issues (207090)
Psychopathy is often used to describe individuals who act in criminal even non-criminal predatory or conscience-less fashion. It is not, however, an official term in the Diagnostic and Statistical Manual of Mental Disorders, though antisocial personality disorder has in the past been described as encompassing psychopathy and sociopathy. Psychopathy was explored by Cleckley in his 1944 book The Mask of Sanity: and by Robert Hare in his 1999 book Without Conscience, and in his 2003 revision of his Psychopathy Check-list. My psychology department seminar on Psychopaths and Psychopathy a decade ago focused on behavioral research and case studies up to that time. By that time the American Psychiatric Association had issued a statement that psychopaths and those with antisocial personality disorder were not, for heuristic reasons, eligible for the insanity defense. Also, at that time, the determination that a convicted killer was a psychopath was often a strong indicator that the death penalty was warranted. Since then neuroscience research has increasingly explored brain structure and brain function in relation to the disorder causing some professionals to reevaluate the applicability of former positions on insanity and other defenses. Related research has further examined social and philosophical factors, and further operationalized behavioral considerations. In this interdisciplinary discussion-based seminar, students from any of a number of concentrations will examine and discuss that newer research in the context of previous research, and will write and present a briefer case study as well as a longer paper about a topic of their choosing.

The last decade has seen a revolution in mapping the human brain "connectome" of functional and structural wiring patterns that generate our emotions, thoughts, and behaviors. In this course, we will learn the basics of the magnetic resonance imaging (MRI) methods used for connectomics research - functional and diffusion MRI. Key methodological and interpretational issues for each technique, including drawing from comparative neuroanatomy research that aims to integrate MRI connectomic measures with tracer injection connectivity measures in animals, to gain a deeper understanding of MRI measures of connectivity. We will discuss some of the key brain networks comprising the functional connectome, and the links between the functional connectome and the white matter structural connectome. Last, tremendous advancements in human brain connectomics have been made possible by efforts to collect "big"
neuroimaging data in thousands and thousands of individuals. We will discuss some of these key open access resources for connectomics research, including: the Human Connectome Projects with petabytes of neuroimaging and phenotyping data collected in thousands of individuals across the entire lifespan and in numerous brain diseases; the Adolescent Brain Cognitive Development (ABCD) decade-long longitudinal study of childhood through adolescence in 10,000 kids, and the largest neuroimaging study in the world – the UK Biobank that is collecting imaging, genetics, medical records, and deep phenotyping data in 100,000 individuals. This wave of "big data" is providing exceptional opportunities for advancements in connectomics and in machine learning applications to human health, yielding breakthroughs every day in our understanding of how our brains work, and what makes us uniquely us when we are healthy and when we are sick.

**Course Notes:** Course inquiries to Prof. Nickerson at lisa_nickerson@hms.harvard.edu. Enrollment preference to juniors in MBB tracks or MBB secondary field. Admission to this course is via lottery. Link to lottery form will be available at https://mbb.harvard.edu/seminars by 9 a.m. (Eastern U.S. Standard Time. EST) on Tuesday 19 January 2021. Lottery deadline is 11:59 p.m. (EST) the same day.

**Mind, Brain & Behavior  980W**

Creativity at the Edge: Health, Music and Community (217885)

*Lisa Wong*

2021 Spring (4 Credits)  

**Schedule:**  

R 0300 PM - 0500 PM

**Instructor Permissions:** Instructor  

**Enrollment Cap:** 15

In 2016, an ad hoc committee of artists, scientists, physicians and college administrators was convened by the National Academies of Sciences, Engineering, and Medicine's Board of Higher Education and Workforce Development to consider the role of the arts and humanities in STEMM. The committee published its conclusions in the 2018 report The Integration of the Humanities and Arts with Sciences, Engineering, and Medicine in Higher Education: Branches from the Same Tree, asserting that interdisciplinary integration "is associated with positive learning outcomes that may help students enter the workforce, live enriched lives, and become active and informed members of a modern democracy." The healing arts of music and medicine draw on similar creative and intuitive skills. In this time of uncertainty when cultural differences seem sharpened, it is even more important for creative individuals to understand these similarities and apply them to healing. Through interdisciplinary conversations on the arts, humanities and sciences, Drs. Lisa Wong and Cristina Pato will lead this semester seminar and invite the expertise of guest neuroscientists, artists and social scientists, many of whom live and work in more than
one domain (ie, physician/musician; artist/activist; musician/scholar) to help the students discover their
paths to creative healing. In these times, we must, as artists, healthcare providers, scientists and scholars,
seek ways of knowing that transcend disciplines. Like their scientific peers, musicians are experts in
innovation and experimentation. Each work of art or piece of music, reflects the artist's unique individual
and collective history, perspective and experience: practiced, researched, and iterated into an artistic
expression. In 2013 at the Nancy Hanks Lecture for Americans for the Arts, cellist Yo-Yo Ma postulated that
the scientific concept of "edge effect" could be applied to artistic and cultural development. In ecology, the
"edge effect" describes the intense bioactivity that occurs where two divergent ecosystems meet. Ma
contends that the ecological edge effect is an example of Nature's creativity, explaining that "in that
transition zone, because of the influence the two ecological communities have on each other, you find the
greatest diversity of life as well as the greatest number of new life forms." He went on to draw a parallel
with the arts: that the greatest diversity of creative arts and new artistic "life forms" arise when artists learn
from each others' cultures. Through inquiry-based learning, students and faculty will engage in the creative
practice of listening, observation and discussion. They will gain a deeper understanding of the "edge
effect" and its application to the arts and sciences as a pathway to healing, integration and regeneration.
The course will be led by Cristina Pato DMA and Lisa Wong MD as instructors, who will be joined by guest
artists and scientists. Objectives: (1) to understand modes of inquiry through the lens of the sciences and
the performing arts, particularly music and medicine; (2) through critical reading, scientific and artistic
inquiry, to consider several aspects of healing, considering society, community and public health; (3) to
explore creative expression as an essential communication tool. In the final creative collaboration and
paper, students will be invited to pursue their own creative interest while demonstrating their
understanding of interdisciplinary work.

Course Notes: Course inquiries to Dr. Wong at lisamwonghu@gmail.com. Enrollment
preference to juniors in MBB tracks or MBB secondary field. Admission to this course is via lottery. Link to lottery form will be

Molecular and Cellular Biology
Subject: Molecular & Cellular Biology

Molecular & Cellular Biology   60

Cellular Biology and Molecular Medicine (110424)

Dominic Mao
Vladimir Denic
Michel Becuwe

2020 Fall (4 Credits)  Schedule:  W 0900 AM - 1030 AM
Instructor Permissions:  None  Enrollment Cap:  n/a

MCB 60 provides an introduction to the principles of molecular and cellular biology and their connections to biomedicine. The course explores how medical syndromes provide insights into biological processes and how biological mechanisms underlie human disease and physiology. Topics range from DNA repair, protein folding and vesicle transport to metabolism, cell migration, and cancer. Content for lecture topics comprising of reading and viewing material will be released weekly followed by mandatory, interactive live sessions with the instructors. Weekly sections will combine a laboratory that focuses on experimental design and data analysis, primary literature reading, and review of lecture materials.

Class Notes:
- About three 15-min lecture videos and reading material will be posted every week ahead of live discussion sessions with the instructors. Multiple watch parties of the lecture videos with peers and course staff will be available.
- Two, duplicate 90-minute live discussion sessions with instructors per week. Students are required to attend one of the two sessions.
- One 90-min live section that combines lab, lecture review, and paper discussion is required.
- Schedules of all live sessions TBA, after students are polled for availability.

Recommended Prep:  LS 1b recommended.

Requirements:  Prerequisite: LPS A OR LS 1a OR LS 50A AND LS 50B

Molecular & Cellular Biology   63

Biochemistry and Molecular Medicine (110450)

Alain Viel
Jessica Liu
The course integrates an introduction to the structure of macromolecules and a biochemical approach to cellular function. Topics addressing protein function will include enzyme kinetics, the characterization of major metabolic pathways and their interconnection into tightly regulated networks, and the manipulation of enzymes and pathways with mutations or drugs. An exploration of simple cells (red blood cells) to more complex tissues (muscle and liver) is used as a framework to discuss the progression in metabolic complexity. Students will also develop problem solving and analytical skills that are more generally applicable to the life sciences.

Class Notes: Live Lecture will be each Thursday from 1:30 - 2:45. Live Discussion Sections are planned for Tuesday throughout the day.

Requirements: Prerequisite: LS 1a OR LPS A OR LIFESCI 50A/B

Molecular & Cellular Biology  64

Cell Biology in the World (110451)

Jessica Liu

This course teaches fundamental concepts in cell biology in the context of several individual life histories drawn from different parts of the world. Each life case focuses on key aspects of human development, growth, aging and disease while providing a nuanced view of the interplay between the life sciences, geography and culture. For example, the Human Immunodeficiency Virus and AIDS in South Asia is used to explore mucosal immunity and the basis for estimating relative infection risk, while a comparative discussion of aging in the United States and Japan is used to explore cellular metabolism and its relationship to protein damage and turnover. Each case delves into the cell biology of major biological events across the life history of a human being from different geographical and cultural backgrounds.

Physical Biochemistry: Understanding Macromolecular Machines (114796)
Monique Brewster
Maxim Prigozhin

2021 Spring (4 Credits)  
Instructor Permissions: None  
Enrollment Cap: n/a

Schedule: MWF 1030 AM - 1145 AM

The course aims to develop fundamental concepts of biochemistry as they apply to macromolecules, including protein and nucleic acid structure, thermodynamics and kinetics, ligand interactions and chemical equilibria. The course will also emphasize how these concepts are used in studies of the structure and function of biological molecules, including examples from metabolism. The course will consist of synchronous, interactive lectures and a weekly synchronous section. In section, students will undertake a discovery-based remote laboratory research project in which they will apply these concepts toward understanding the structure and function of the ATPase domain from the ABC transporter associated with antigen processing (TAP).

Requirements: Prerequisite: (LPS A OR LS 1a) AND (CHEM 20 OR CHEM 17)

Molecular & Cellular Biology   68

Cell Biology Through the Microscope (109851)

Ethan Garner
Jeff W. Lichtman
Michel Becuwe

2021 Spring (4 Credits)  
Instructor Permissions: Instructor  
Enrollment Cap: 24

Schedule: TR 0130 PM - 0245 PM

MCB 68 explores three fundamental fields of eukaryotic cell biology: chromosome segregation, cell motility, and neuroscience. Each topic is approached from a historic and technical perspective. Students will discover these systems as the scientific field did, learning how each successive advance in microscopy revealed new biological details. Students will come away with a theoretical and hands-on understanding of microscopy as well as a grasp of the biological findings each technology revealed.

Recommended Prep: An additional introductory course in biology (e.g., MCB 60, MCB 80 or SCRB10) is recommended but not required. The course design, level, and content is best suited for students in their sophomore year

Requirements:  
Prerequisite: LS 1a OR LPS A

Molecular & Cellular Biology  80

Neurobiology of Behavior (117711)

Jeff W. Lichtman
Kathleen Quast

2020 Fall (4 Credits)    Schedule:     F 1030 AM - 1145 AM
Instructor Permissions:  None       Enrollment Cap:  n/a

An introduction to the ways in which the brain controls mental activities. The course covers the cells and signals that process and transmit information, and the ways in which neurons form circuits that change with experience. Topics include the neurobiology of perception, learning, memory, emotion, and neurologic disorders. This year we are combining interactive, didactic videos with "live" Friday sessions, group projects, and small discussion sections.

Course Notes: The course is open to students with little formal training in biology.

Requirements: Anti-Requisite: Cannot be taken for credit if MCB 81 or NEURO 80 already complete.

Molecular & Cellular Biology  91

Research for Credit in Molecular and Cellular Biology (122529)

Dominic Mao

2020 Fall (4 Credits)    Schedule:     TBD
Instructor Permissions:  Instructor       Enrollment Cap:  n/a

91 is research for credit. It cannot be taken as a fifth course. To be eligible to enroll, you must have a Harvard-affiliated principal investigator agree to mentor you for the semester. For this reason, students must reach out to labs and interview with labs ahead of the start of the semester. Students are expected to work an average of 15 hours/week during term time. For Fall 2020, owing to the COVID-19 pandemic, all 91 research projects must be work that can be done remotely (in other words, you will not have access to and cannot perform experiments in lab).

Laboratory Research for Honors Thesis (159651)

Dominic Mao

2021 Spring (4 Credits)  Schedule:  TBD
Instructor Permissions:  None  Enrollment Cap:  30

For honors candidates writing a thesis in Molecular and Cellular Biology. Ordinarily may not be taken as a fifth course. Students must complete both terms of this course (A and B) in order to receive credit.
**Molecular & Cellular Biology 100**

Experimental Research in Molecular and Cellular Biology (160364)

*Alain Viel*

2020 Fall (4 Credits)  
**Schedule:** R 0300 PM - 0545 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a

A laboratory course that immerses students in a dynamic project-based research environment. Participate in experimental projects directly linked with ongoing faculty research. Students select a project from the following research tracks: neurobiology, microbial sciences, cell biology, and synthetic biology. New projects, including some in other research fields, are offered every term. In a highly collaborative atmosphere, students form a fully-functional and diverse research group based on the sharing of ideas and progress reports between projects. The spring microbiology project is part of the "genomes to Biomes" series. This course cannot be taken concurrently with LifeSci 100

**Recommended Prep:** LPS A or LS 1a or permission of the instructor. Students interested in a neurobiology project will need MCB 80 or permission of the instructor.

Molecular & Cellular Biology 111

Mathematics in Biology (117342)

Elena Rivas

2020 Fall (4 Credits) Schedule: MWF 1030 AM - 1145 AM

Instructor Permissions: Instructor Enrollment Cap: n/a

MCB111 is meant for biologists who want to learn mathematical principles relevant to current biological research, as well as for mathematically oriented students who want to explore applications in biology. The course theme is mathematical modeling of biological processes, with a special emphasis on probabilistic models and inference. More than half of the course covers topics on information theory, Bayesian inference, statistics, probabilistic modeling, and neural networks. The last section of the course covers dynamical systems in biology, including random walks, feedback control, and molecular population dynamics. Each week-long unit is devoted to one specific topic, and is based in one or more scientific papers selected from the recent literature. The best way to learn in this course is through the homework. They are very hands-on, and usually require coding to implement some mathematical concept through a particular biological example. For instance, one unit is devoted to maximum likelihood methods in the context of Quantitative Trait Loci analysis; another unit explores probabilistic models in the context of inferring ancestry and recombination breakpoints from genomic reads in fly populations. More information about the course can be found at mcb111.org.

Recommended Prep: Mathematics 19 or higher.

Biological Data Analysis (203081)

Sean Eddy

2020 Fall (4 Credits) Schedule: MWF 0300 PM - 0415 PM

Instructor Permissions: Instructor Enrollment Cap: 100

Biology has become a computational science, requiring analysis of large data sets from genomics,
imaging, and other technologies. This course teaches computational methods in biological data analysis, using an empirical and experimental framework suited to the complexities of biological data, emphasizing computational control experiments. The course is primarily aimed at biologists learning computational methods, but is also suited for computational statistical scientists learning about biological data.

Cellular Basis of Neuronal Function (114789)

Ryan W. Draft  
Kathleen Quast  

2021 Spring (4 Credits)  

**Schedule:**  
MW 0300 PM - 0415 PM

**Instructor Permissions:**  
Instructor  
Enrollment Cap:  
60

The essential function of a neuron is to processes complex signals derived from the external world. In doing so, neurons employ diverse mechanisms that respond to chemical and electrical signals with incredible sensitivity and plasticity. In this course, we will study these electrical, molecular, and cellular processes using biophysical and biological approaches. Specifically, we will explore topics on excitable membranes, neurotransmission, ion channels, dendritic integration, intracellular signaling, and synaptic plasticity in the context of real cells and brain circuits.

Laboratory section (75 minutes) will be scheduled ad hoc after enrollment on either Weds, Thurs, or Friday.

**Class Notes:**  
MCB 115 is also offered as NEURO 115. Students may not enroll in both.

**Requirements:**  
Pre-requisite: MCB/NEURO 80 or Instructor Approval.  
Anti-requisite: Cannot be taken for credit if NEURO 115 is already complete

---

**Molecular & Cellular Biology 125**

Molecular Basis of Behavior (159655)

Catherine Dulac  

2021 Spring (4 Credits)  

**Schedule:**  
TR 0130 PM - 0245 PM
Modern molecular genetic approaches are teaching us a great deal on how the brain controls behaviors. This course will cover newly developed experimental strategies of molecular neuroscience, and how they have helped uncover the nature and identity of behavior circuit components. How genes and molecules affect behaviors will be investigated through key examples of mammalian behaviors with an emphasis on instinctive and social behaviors, their expression, development, and associated mental disorders.

Class Notes: MCB 125 is also offered as NEURO 125. Students may not enroll in both.

Requirements: Anti-Req: Students who have taken NEURO 125 cannot take this course for credit.

Molecular & Cellular Biology 129

The Brain: Development, Plasticity and Decline (124817)

Sam Kunes

2020 Fall (4 Credits)

Schedule: MWF 1030 AM - 1145 AM

Instructor Permissions: Instructor

Enrollment Cap: 12

A lecture and discussion course on how the brain develops, employs plasticity to adapt to its environment and undergoes functional decline with aging. Topics include the birth, death and identity of neurons, axon guidance and synaptic specificity, adult neurogenesis, developmental disorders of synaptic function and memory, including autism and Alzheimer's Disease. We explore how the brain loses function with aging. Course assignments emphasize critical evaluation of the primary literature, experimental design and scientific writing.

Requirements: Anti-Requisite: Cannot be taken for credit if NEURO 129 already complete.

Molecular & Cellular Biology 131

Computational Neuroscience (117859)

Haim Sompolinsky
Follows trends in modern brain theory, focusing on local neuronal circuits as basic computational modules. Explores the relation between network architecture, dynamics, and function. Introduces tools from information theory, statistical inference, and the learning theory for the study of experience-dependent neural codes. Specific topics: computational principles of early sensory systems; adaptation and gain control in vision, dynamics of recurrent networks; feature selectivity in cortical circuits; memory; learning and synaptic plasticity; noise and chaos in neuronal systems.

Recommended Prep: Basic knowledge of multivariate calculus, differential equations, linear algebra, and elementary probability theory.

Requirements: Anti-Requisite: Cannot be taken for credit if NEURO 131 already complete.

Molecular & Cellular Biology 133

Unique Cells and Organisms (212828)

Nicholas Bellono

This course focuses on how specialized molecular physiology gives rise to unique features across interesting organelles, cells and creatures. Guest lecturers and instructors will emphasize primary literature and scientific writing to strengthen students' skills in critical thinking, interpretation of data, and experimental design. Students will design a research project based on their selection of a model organism, carry out and analyze an initial experiment, and plan future directions. Students will end their semester by developing a research proposal and presentation based on their own curiosity in an interesting biological question emerging from their initial experiments.

Class Notes: Students are required to attend each lecture (virtually). At the first class meeting, students and instructors will agree on a mutually desired time for the remaining lectures based on time-zones and availability.

Recommended Prep: MCB/NEURO 80, or equivalent introductory Neuro course is most optimal for preparation.

Requirements: Prerequisite: MCB 60 OR MCB 80 OR NEURO 80 OR SCRB 10

Molecular & Cellular Biology  143

Neurobiology of Vision and Blindness (207772)

Joshua Sanes

2021 Spring (4 Credits)  Schedule:  TR 0130 PM - 0245 PM
Instructor Permissions:  Instructor  Enrollment Cap:  20

The visual system fascinates biologists, in part because humans are such visual animals. This also makes loss of vision a pressing concern: many Americans regard blindness as the worst ailment they could get, fearing it more than Alzheimer's or AIDS. For these reasons, as well as because of its relative accessibility, the visual system is a favored model for studying fundamental aspects of neurobiology, as well as for testing novel therapeutic approaches, such as gene therapy. This course will cover key topics in the structure, function and development of the mammalian visual system, and then use them as a basis for considering causes of blindness and potential cures.

Class Notes:  MCB 143 is also offered as NEURO 143. Students may not enroll in both.

Recommended Prep:  MCB 80 or NEURO 80 is recommended.

Requirements:  Pre-requisite: MCB/NEURO 80 or Instructor Approval.
Anti-requisite: Cannot be taken for credit if NEURO 143 is already complete.

Molecular & Cellular Biology  145

Neurobiology of Perception and Decision Making (123271)

Naoshige Uchida

2020 Fall (4 Credits)  Schedule:  TR 1030 AM - 1145 AM
Instructor Permissions:  Instructor  Enrollment Cap:  30

One of the current goals of neuroscience is to understand neuronal circuits underlying perception and behavior. Recent advances in neuroscience have allowed us to glimpse neuronal processes that link perception and decision making. How is sensory information processed in the brain? How does an animal choose its action? How does an animal learn from ever-changing environments and adjust their behavior? The course will examine neurophysiological studies in perception and decision-making.
Molecular & Cellular Biology 146

Experience-Based Brain Development: Causes and Consequences (123272)

Takao Hensch

2021 Spring (4 Credits)  Schedule: TR 0300 PM - 0415 PM

Instructor Permissions: Instructor  Enrollment Cap: n/a

At no time in life does the surrounding environment so potently shape brain function as in infancy and early childhood. This course integrates molecular/cellular biology with systems neuroscience to explore biological mechanisms underlying critical periods in brain development. Understanding how neuronal circuits are sculpted by experience will motivate further consideration of the social impact on therapy, education, policy, and ethics.

Requirements: Prerequisite: (LPS A OR LS 1a) AND MCB 80, and cannot be taken for credit if NEURO 146 already complete.

Molecular & Cellular Biology 148

The Neurobiology of Pain (159880)

Ryan W. Draft

2020 Fall (4 Credits)  Schedule:  TBD

Instructor Permissions: Instructor  Enrollment Cap: 24

This course will explore the neurobiological systems and mechanisms underlying both acute and chronic pain. Topics will include nociceptive/sensory systems, molecular basis and modulation of pain, neuroanatomy of peripheral and central pain circuits, pain pathologies, pharmacological and non pharmacological treatments. The emphasis will be on understanding basic neurobiological concepts underlying pain systems and reading/discussing the primary scientific research in the field.

Class Notes: Course time will be agreed upon by the enrolled students and instructor during shopping period.
Molecular & Cellular Biology 165

Interplay between Viruses and their Hosts (156010)

Victoria D'Souza

2021 Spring (4 Credits) Schedule: TR 0900 AM - 1015 AM

Instructor Permissions: None Enrollment Cap: n/a

This course provides a foray into virology, advanced cell biology, biochemistry and structural biology topics through the lens of viruses as they invade their hosts. To demonstrate concepts, a particular emphasis is placed on the human immunodeficiency virus (HIV), which provides well-studied examples of intricate virus-host interactions that occur throughout its complex life cycle.

Requirements: Prerequisite: MCB 60 OR (MCB 52 AND MCB 54)

Molecular & Cellular Biology 169

Molecular and Cellular Immunology (111720)

Shiv Pillai

2020 Fall (4 Credits) Schedule: TR 1030 AM - 1145 AM

Instructor Permissions: None Enrollment Cap: n/a

The immune system is the frontier at which molecular biology, cell biology, and genetics intersect with the pathogenesis of disease. This year the entire course will be taught through the lens of COVID19, examining the underlying scientific bases of pathogenesis, protection, treatment and prevention. The course examines in depth the cellular and molecular mechanisms involved in the development and function of the immune system and also analyzes the immunological basis of human diseases in general. Apart from COVID19, we
will discuss AIDS, autoimmunity, allergic disorders, primary immunodeficiency syndromes, transplantation, and cancer.

**Recommended Prep:** Genetics and cell biology strongly recommended.

**Requirements:** Prerequisite: LPS A OR LS 1a

**Molecular & Cellular Biology 170**

Brain Invaders: Building and Breaking Barriers in the Nervous System (109636)

*Laura Magnotti*

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: 24

The brain has evolved a unique but very effective system to protect itself from invaders. In this course, we will explore the specific defenses that the nervous system uses to protect itself. We will also examine how some pathogens evade or breach those defenses and the impact of those invasions. Finally, we will explore how scientists have been able to translate their understanding of these pathogenic mechanisms into technologies for research and therapeutic applications.

Class Notes: MCB 170 is also offered as NEURO 170. Students may not enroll in both.

Requirements: Pre-requisite: (LPS A OR LS1a) AND MCB/NEURO 80 or Instructor Approval. Anti-requisite: Cannot be taken for credit if NEURO 170 is already complete

Biochemistry of Membranes (112742)

*Guido Guidotti*

2020 Fall (4 Credits) Schedule: MW 0300 PM - 0545 PM

Instructor Permissions: Instructor Enrollment Cap: 25

A course on the properties of biological membranes, essential elements for cell individuality,
communication between cells, and energy transduction. Topics include: membrane structure; membrane protein synthesis, insertion in the bilayer and targeting; transporters, pumps and channels; electron transport, H+ gradients and ATP synthesis; membrane receptors, G proteins and signal transduction; membrane fusion.

Recommended Prep: MCB 60 or MCB 52 and MCB 54 are recommended but not required.

Chromosomes (114864)

Nancy Kleckner

2021 Spring (4 Credits) Schedule: TR 0100 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

Chromosome morphogenesis in prokaryotic and eukaryotic organisms. Topics will include chromosome structure, interactions between chromosomes (sisters and homologs), DNA recombination and repair, topoisomerases, transposable elements and site-specific recombination, epigenetic inheritance. Genetic, cytological, and biochemical approaches will be integrated. Lecture, reading, and discussion of classical and current literature and consideration of future experimental directions.

Advanced Mathematical Techniques for Modern Biology (127011)

Sharad Ramanathan

2020 Fall (4 Credits) Schedule: TR 0130 PM - 0245 PM

Instructor Permissions: Instructor

Enrollment Cap: 20

How do we find biologically meaningful patterns in a large amount of data? How do animals learn to use patterns in the environment to infer information despite the ignorance of the underlying laws? The course will introduce Bayesian analysis, maximum entropy principles, hidden markov models and pattern theory in order to study DNA sequence, gene expression and neural spike train data. The relevant biological background will be covered in depth.

Recommended Prep: A strong background in calculus, linear algebra, fourier analysis,
complex analysis at the advanced undergraduate level and an introductory knowledge of probability theory is required. Knowledge of statistical mechanics and comfort with programming will be useful.

Molecular & Cellular Biology 290B

Current Topics in Molecular, Cellular and Organismal Biology (159566)

Vladimir Denic

2021 Spring (2 Credits)  
**Schedule:**  
F 1200 PM - 0115 PM

Instructor Permissions: Instructor  
Enrollment Cap: n/a

This class teaches students how to publicly present scientific papers to a diverse audience with emphasis on contextualizing the scientific problem under discussion, critically presenting the essential data, and using an engaging presentation style. Required for all first year graduate students in the Molecules, Cells and Organisms (MCO) Training Program.

Molecular & Cellular Biology 291

Genetics, Genomics and Evolutionary Biology (124899)

Craig Hunter  
James Mallet

2021 Spring (4 Credits)  
**Schedule:**  
MWF 1030 AM - 1145 AM

Instructor Permissions: Instructor  
Enrollment Cap: 30

This course covers the fundamentals of classical genetics, molecular genetics, macro- and microevolution, phylogenetics, and developmental evolution. The emphasis is on major concepts and terminology, reading landmark primary literature, and acquainting students with research techniques.

Course Notes: Required for first year graduate students in the Molecules, Cells and Organisms (MCO) Training Program.
Molecular & Cellular Biology 292

Cellular Biology, Neurobiology and Developmental Biology (124900)

Amanda Whipple
Joshua Sanes
Bence Olveczky

2020 Fall (4 Credits) Schedule: TR 0130 PM - 0330 PM
Instructor Permissions: Instructor Enrollment Cap: 15

The biology of the individual cell lies at the heart of multi-cellular phenomena such as development and neural function. This course will emphasize critical evaluation of the primary literature, experimental design and scientific writing.

Course Notes: Required for first year graduate students in the Molecules, Cells and Organisms (MCO) Program, but open to graduates of all programs.

Molecular & Cellular Biology 293

Biochemistry, Chemical and Structural Biology (124901)

Doeke Hekstra
Daniel Needleman

2020 Fall (4 Credits) Schedule: MWF 0130 PM - 0245 PM
Instructor Permissions: Instructor Enrollment Cap: 15

This course will introduce basic principles in general, organic and physical chemistry, including kinetics and thermodynamics, as well as macromolecular structure. Concepts will be illustrated with examples taken from the visual system.

Course Notes: Required for first year graduate students in the Molecules, Cells and Organisms (MCO) Training Program.
Molecular & Cellular Biology 294
Interesting Questions in Physical Biology (122422)
Nancy Kleckner
2020 Fall (4 Credits)  
Schedule: TR 1200 PM - 0245 PM
Instructor Permissions: Instructor  
Enrollment Cap: n/a

Physical biology can be defined as a discipline that seeks to understand biological processes through the lens of physics and engineering. Faculty and students will unite to review current research with the aim of identifying and pondering interesting emerging questions in this area. Combination of lecture and discussion format. Comprises a series of two-week modules, most of which are given by a one or a pair of faculty drawn from MCB, Physics and SEAS.

Course Notes: Intended primarily for first year graduate students in the EPB PhD track of the MCO program but available to other graduate students and advanced undergraduates as space permits.

Scientific Integrity (156950)

Naoshige Uchida

Polina Kehayova

2020 Fall (2 Credits)  Schedule:  TBD

Instructor Permissions:  Instructor  Enrollment Cap:  n/a

MCB 350 is a discussion forum on scientific integrity using case studies to examine basic ethical and regulatory requirements for conducting research, and fulfills the National Institutes of Health (NIH) and National Science Foundation (NSF) requirements for formal Responsible Conduct of Research (RCR) instruction. Students are required to complete a pre-course assignment, attend all lectures including the final lecture in February, participate in class discussions, and complete a final course evaluation. A certificate will be issued upon successful completion of the course.

Course Notes: According to NIH Guidelines, students are required to take a Scientific Integrity Refresher Course every four years (*MCB 351).

Molecular & Cellular Biology 352

Microscopy (156952)

Jeff W. Lichtman
Douglas Richardson

2021 Spring (2 Credits)

Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: n/a

This course presents the fundamental concepts that underlie modern light microscopy in a rigorous but non-mathematical way for biological applications. The students will learn about the four major frameworks for light (ray optics, wave optics, electromagnetism, and quantum optics). The ways lenses work, the theory of resolution, and the optical design of the compound microscope will be described. The course will also describe the photo-physical principles that underlie fluorescence and genetically encoded fluorescent proteins, and light detector and imaging strategies. Scanning (confocal and 2P), light sheet and super-resolution microcopies will also be described. We will end with a tour of the Harvard Center of Biological Imaging.

Visualizing, Analyzing and Presenting Macromolecular Structures with PyMOL (160523)

Rachelle Gaudet

2021 Spring (2 Credits)

Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: n/a

PyMOL is one of the most popular software programs to display and explore high-resolution structures of macromolecules. It is readily used to create publication-quality figures, and movies and animations of structural information. In this course, you will learn the basics of PyMOL and be able to display, explore and present three-dimensional structures of macromolecules. With this basic training, you will be able to generate high-quality images and simple movies, and have the resources to learn more on your own to
generate more complex displays.

Molecular & Cellular Biology 359

Identity and Empowerment in Science (217617)

Ethan Garner

2021 Spring (2 Credits)  

Schedule: TR -

Instructor Permissions: Instructor  

Identity and Empowerment in Science is a four-part workshop that equips graduate students with the tools to make science more diverse and inclusive. Adapted from SSQBIO's curriculum, the course discusses how our identities shape our experience in science, different levels at which privilege operates (Ideological, Interpersonal, Internalized, and Institutional), and strategies for self and mutual empowerment and institutional change. The overarching framework for the curriculum is the "four I's" framework (adopted from social science literature) for understanding privilege and oppression. The "I"s are: Ideology (the idea that certain people/traits are superior), Interpersonal (how people interact), Internalized (how people view themselves), and Institutional (the "system" and how it operates).

Life Sciences  1A
An Integrated Introduction to the Life Sciences: Chemistry, Molecular Biology, and Cell Biology (121189)

Daniel Kahne
Rachelle Gaudet
Monique Brewster
Sien Verschave

2020 Fall (4 Credits)  Schedule:  T 0130 PM - 0245 PM
Instructor Permissions:  None  Enrollment Cap:  n/a

What are the fundamental features of living systems? What are the molecules imparting them and how do their chemical properties explain their biological roles? The answers form a basis for understanding the molecules of life, the cell, diseases, and medicines. In contrast with traditional presentations of relevant scientific disciplines in separate courses, we take an integrated approach, presenting chemistry, molecular biology, biochemistry, and cell biology framed within central problems such as the biology of HIV and cancer.

Course Notes:  For more information about the assignment process, please see the course website in the fall. This course, in combination with Life Sciences 1b, constitutes an integrated introduction to the Life Sciences.

Class Notes:  Please sign up for ONE of the two lecture components.

The first lecture for all students will be held live on Thursday, September 3rd at either 1:30 pm, or 7:30 pm. All other Thursdays will be for optional instructor office hours.

An Integrated Introduction to the Life Sciences: Genetics, Genomics, and Evolution (121191)

Hopi Hoekstra
Andrew Berry
Pardis Sabeti
Annie Park
Nava Gharaei

2021 Spring (4 Credits) Schedule: TR 0130 PM - 0245 PM
Instructor Permissions: None Enrollment Cap: n/a

How are observable characteristics of organisms influenced by genetics? How do genomes change over time to produce the differences we see among species? This course takes an integrated approach, showing how genetics and evolution are intimately related, together explaining the patterns of genetic variation we see in nature, and how genomics can be used to analyze variation. In covering Mendelian genetics, quantitative genetics, and population genetics, this course will emphasize developments involving our own species.

Course Notes: This course, in combination with Life Sciences 1a, constitutes an integrated introduction to the Life Sciences.

Andrew Murray
Michael Desai
Aravinthan Samuel
Emma Nagy
Cara Weisman

2020 Fall (8 Credits)  Schedule:  MTWRF 1030 AM - 1145 AM
Instructor Permissions:  Instructor  Enrollment Cap:  30

This is an intensive two-semester, double course that introduces the natural sciences as an integrated whole to students who have a very strong interest in science. Our goal is to teach students how to solve scientific problems by drawing methods and concepts from biology, chemistry, physics, and mathematics. The course uses examples from biology as an integrating theme, principles from physics and mathematics to reduce complex problems to simpler forms, and computer simulation to allow students to develop their intuition about the behavior of the dynamical systems that control the physical and biological universe. The course includes bootcamps to introduce students to biological experiments and the computer language, Python. Each semester will include a project lab, in which students will work in small teams to do original research on unsolved biological problems.

Life Sciences 100

Experimental Research in the Life Sciences (119061)

Alain Via

2020 Fall (4 Credits) Schedule: R 0300 PM - 0545 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

A laboratory course that immerses students in a dynamic project-based research environment. Participate in experimental projects directly linked with ongoing faculty research. Students select a project from the following research tracks: neurobiology, microbial sciences, cell biology, and synthetic biology. New projects, including some in other research fields, are offered every term. In a highly collaborative atmosphere, students form a fully-functional and diverse research group based on the sharing of ideas and progress reports between projects. The spring microbiology project is part of the "genomes to Biomes" series.

Course Notes: Location of the first meeting will be announced on the course website. Open to freshmen, sophomores, juniors, and seniors, regardless of concentration, and suitable for students either with or without extensive laboratory experience. The course may only be repeated once and the second enrollment must be approved by the instructor.

Recommended Prep: Students interested in a neurobiology project will need MCB 80 or permission of the instructor. Please also note that students cannot take MCB 100 and LS 100 at the same time.

Requirements: Prerequisite: LPS A OR LS 1a

Music 1
Introduction to Western Music, from Bach to Beyoncé (114594)
This course introduces you to a variety of Western art music repertories, and a range of ways to think, talk, and write about them. While we explore some of the great “classics” of the Western musical canon, including works by male composers such as Bach, Beethoven, and Stravinsky, we also discover the critical roles played by renowned female performers, patrons, and writers, as well as the significant impacts made by artists of color, such as Pulitzer-prize winner Kendrick Lamar, and Beyoncé. Ending in the present day, we investigate what music means in a global context, and a world increasingly shaped by new technologies and digital networks. During the semester, you will build a robust vocabulary to analyze music and talk about it. You will gain an understanding of social, political, and cultural histories of art music, and deepen your awareness of the role of music in your life. Finally, by the end, you'll possess a strong command over a substantial repertory. No prior knowledge of music history or musical notation is necessary. Students are graded on the improvements they make in engaging with the material. By the end of class, you'll be more prepared for a lifetime of informed and hopefully enjoyable music listening.

Music 2

Foundations of Tonal Music I (118594)

Joseph Jakubowski

Seeks to develop a greater understanding of music, musical analysis, and critical listening. We will study some of the organizing principles of musical works (from a range of styles) by means of composition projects, score analysis, and aural skills. While reading knowledge of simple musical notation is helpful, there will be at least one section for students with no previous experience. Additional sections required on Mondays and Fridays, 10:30 - 11:45 am

Course Notes: Open to all students.

Class Notes: Lecture schedule is Wednesday at 10:30 am and the required two sections are Monday and Friday at the same time. Once class enrollment is set, any conflicts with time zones will be managed.
Music 4

Introduction to Composition (111353)

Yvette Jackson

2020 Fall (4 Credits)  
Instructor Permissions: Instructor  
Enrollment Cap: 14

Schedule: M 1245 PM - 0245 PM

Open to students with little or no prior experience in composition. Explores ways of thinking about and organizing basic compositional elements such as melody, harmony, rhythm and instrumental color, as well as developing skills of score preparation and analytical listening. The primary focus of the course is a series of short compositional exercises, culminating in a somewhat longer final project. Workshop performances of students’ music take place throughout the term.

Recommended Prep: Some prior experience in music theory or permission of the instructor.

Music 14A

Harvard-Radcliffe Collegium Musicum (110114)

Andrew Clark

2020 Fall (2 Credits)  
Instructor Permissions: Instructor  
Enrollment Cap: n/a

Schedule: T 0645 PM - 0845 PM

Choral music finds itself in a state of upheaval as current health risks render communal singing impossible. This semester, the Harvard-Radcliffe Collegium Musicum will creatively adapt its work to sustain our values of joy, care and well-being, empowerment, and musical excellence during our physically-distant time. The confluence of the COVID-19 pandemic and social unrest inspires us to invoke the best of the mixed-choir tradition and compels our community to reimagine choral practice in a COVID and post-COVID era.

Our rehearsals will balance a familiar choral experience with music-making rooted in authentic, student-driven artistic expression. This year, we will uphold the Collegium tradition of performing large-scale works such as Handel's Messiah with the Harvard Baroque Chamber Orchestra. We will also draw upon the creativity of our members to develop small- and large-group projects that promote individual agency and make use of new technologies. Collegium members are given a unique opportunity to develop experience in arts administration, concert production, marketing, tour planning, and other facets of non-profit leadership. Students may optionally explore enrichment in the areas of individualized vocal study, choral composition, advanced ear-training and sight singing, and choral repertoire. In partnership with Harvard’s Mindich Program for Engaged Scholarship, Collegium will also design and implement projects that engage with public schools, nursing homes, and hospitals severely impacted by the COVID-19 crisis.
Our collective work will culminate in a multimedia performance, an act and artifact of this pivotal moment in
time.

Course Notes: Audition required. For audition and further information, visit www.singatharvard.com The course is graded SAT/UNSAT based on attendance and participation. This course may be taken repeatedly, but to receive credit the course must be taken in the Fall and Spring semesters consecutively. A maximum of four semesters (two years) may be counted as credit towards the degree.

Harvard-Radcliffe Collegium Musicum (160655)

Andrew Clark

2021 Spring (2 Credits) Schedule: T 0645 PM - 0845 PM

Instructor Permissions: None Enrollment Cap: 60

Harvard-Radcliffe Collegium Musicum (SATB choir). Harvard's nationally acclaimed mixed choir, Collegium, performs a dynamic and innovative repertoire from classical masterpieces to new compositions by renowned, emerging, and student composers. Through collaborative projects, tours, and community engagement, the ensemble fosters a passionate community of student musicians. Collegium frequently partners with the other Harvard Choruses--the Glee Club, and the Radcliffe Choral Society--to perform large-scale works. Students must complete both parts of this course (parts A and B) within the same academic year in order to receive credit.

Course Notes: Audition required. For audition and further information, visit www.singatharvard.com The course is graded SAT/UNSAT based on attendance and participation. Music  15A
Harvard Glee Club (110115)

Andrew Clark

2020 Fall (2 Credits)  

Schedule:  
MW 0430 PM - 0530 PM

Instructor Permissions:  
Instructor
Enrollment Cap:  
n/a

How did choral communities navigate moments of societal crisis and calamity in the past? How might we invoke the lessons and wisdom of history to find inspiration to fortify us during this challenging moment? Since its founding in 1858, the Harvard Glee Club has endured through world wars, pandemics, and social turmoil. Rooted in its core virtues of glee, good humor, unity, and joy, the 2020-2021 Harvard Glee Club will aspire to build its own legacy of resilience and ingenuity.

The Glee Club is a tenor and bass ensemble performing music written in the male chorus tradition. Through excellence in performance, student-management, education, community, tradition, and philanthropy, the Glee Club offers a unique musical experience for all members. This year, we will study and sing timeless and timely choral works from a variety of eras and cultures, including revered pieces that the group performed often during similar moments of crisis in the past. We will learn from composers and poets who created works in response to isolation and catastrophe and reflect on their relevance today in both full-ensemble and small-group projects. Enrichment in the areas of individualized vocal study, choral composition, advanced ear-training and sight singing, and choral repertoire may be explored optionally as students desire. Glee Club members will also design and implement community engagement projects guided by Harvard's Mindich Program for Engaged Scholarship, including collaborations with the Ashmont Boy Choir in Dorchester.

The semester will culminate in a multimedia presentation of our collective work as both an act and artifact of this pivotal moment in time.

Course Notes: Audition required. The group is open to tenor and bass singers; we welcome, value, and support students of all gender identities. For audition and further information, visit www.singatharvard.com The course is graded SAT/UNSAT based on attendance and participation. This course may be taken repeatedly, but to receive credit the course must be taken in the Fall and Spring semesters consecutively. A maximum of four semesters (two years) may be counted as credit towards the degree.

2021 Spring (2 Credits)  
**Schedule:**  
MW 0430 PM - 0530 PM  
**Instructor Permissions:** None  
**Enrollment Cap:** 60  

Harvard Glee Club (TTBB Choir). Founded in 1858, the Glee Club is a tenor-bass choral ensemble, performing music from the male choral tradition, an open to any student at Harvard University. The Glee Club collaborates with arts groups on campus and at other universities, and across the world on annual tours. Through excellence in performance, education, community-building, tradition, and philanthropy, the Glee Club offers a unique musical experience for all members. Students have numerous opportunities to take on administrative and musical leadership roles within the ensemble. The Glee Club frequently collaborates with the Harvard-Radcliffe Collegium Musicum and the Radcliffe Choral Society, as well as the Harvard-Radcliffe Orchestra, to perform large-scale works. Students must complete both parts of this course (parts A and B) within the same academic year in order to receive credit.

**Course Notes:** Audition required. For audition and further information, visit www.singatharvard.com

The course is graded SAT/UNSAT based on attendance and participation. This course may be taken repeatedly, but to receive credit the course must be taken in the Fall and Spring semesters consecutively. A maximum of four semesters (two years) may be counted as credit towards the degree.

**Requirements:** Pre-requisite: MUSIC 15A

**Music 16A**

Radcliffe Choral Society (110128)
Founded in 1899, the Radcliffe Choral Society is Harvard's oldest women's organization and one of the country's preeminent collegiate treble choruses. As we confront the limitations and opportunities of a virtual semester, how might we continue to honor our rich history and further the group's legacy? How do we synthesize and relate knowledge and personal experiences to make meaningful art during this time?

The Radcliffe Choral Society promotes excellence in women's choral music and celebrates the extraordinary community formed through its music-making. During this time of virtual learning, we will continue to foster the appreciation and enjoyment of women's choral music through the commissioning of new works for women's voices and exploring music from Medieval chant and Renaissance polyphony to Romantic partsongs and folk music from around the globe. Students are given a unique opportunity to develop experience in arts administration, concert production, marketing, tour planning, and other facets of non-profit leadership. The course offers voluntary opportunities for singers to cultivate their musicianship in the areas of individualized vocal study, choral composition, advanced ear-training and sight singing, and choral repertoire.

RCS members, in partnership with Harvard's Mindich Program for Engaged Scholarship, will design and implement its annual Rising Voices Treble Choral Festival, as an online conference in the Spring of 2021, collaborating with peer treble choruses and distinguished guests. The festival will investigate the intersections between social justice, feminism, and art-making in response to the pandemics of COVID-19 and racial violence in America. The fall 2020 semester will culminate in a multimedia presentation of our collective work as both an act and artifact of this pivotal moment in time.

Course Notes: Audition required. The group is open to soprano and alto singers; we welcome, value, and support students of all gender identities. For audition and further information, visit www.singatharvard.com The course is graded SAT/UNSAT based on attendance and participation. This course may be taken repeatedly, but to receive credit the course must be taken in the Fall and Spring semesters consecutively. A maximum of four semesters (two years) may be counted as credit towards the degree.

The Radcliffe Choral Society, founded in 1899, is a treble (soprano-alto) choral ensemble of about 40-50 members, open to any student at Harvard University. The ensemble performs a distinctive repertoire spanning nine centuries of choral literature: sacred and secular, a cappella and accompanied, and choral-orchestral works. Featuring a student led a cappella group, 'Cliffe Notes, RCS aims to foster the appreciation and celebration of women's choral music through the commission of new works for soprano and alto voices, high-caliber performances, music festivals as well as annual domestic and international travel. The choir strives to honor its history and further its legacy of excellence in treble choral music and an extraordinary community formed through music-making. RCS frequently collaborates with the Harvard-Radcliffe Collegium Musicum and the Glee Club, as well as the Harvard-Radcliffe Orchestra, to perform large-scale works. Students must complete both parts of this course (parts A and B) within the same academic year in order to receive credit.

Music 26

The Music of Women Creators (216083)

Anne Shreffler

2020 Fall (4 Credits) Schedule: TR 1200 PM - 0115 PM

In spite of significant gains in gender equality over the last half century, women creators remain dramatically underrepresented in the music world, in all genres of music and in all categories of musical production: as composers, improvisors, producers, conductors, and even as performers.

The course is intended to celebrate and acknowledge the contributions of women creators to the history of music. We will focus on a selection of contributions of female and non-binary musicians who have
composed, improvised, or collaboratively created music in the 20th and 21st centuries. We will listen closely to their music, asking questions such as: what were the historical, institutional, cultural and educational factors that supported or hindered their work? How do they define their gender identities, gender roles, and sexual orientation, and to what extent do these relate to their work? How does these identities function intersectionally with others, such as racial, class, national, and transnational identities? How has their work been received? What structures have historically enabled inclusion into the musical canon and exclusion from it?

We will also talk about activism: how to “move the needle” and work towards great representation of women’s music in different genres today. A class visit to the Schlesinger Library will help us to unlock the potential in women’s archives.

We will consider a wide range of women creators from the early 20th century to the present, with examples from classical, jazz, and popular music. The syllabus will focus on five to seven case studies, examining women creators within a particular cultural and political network. A sample list could include: Florence Price, Ruth Crawford Seeger, Elisabeth Lutyens, Nina Simone, Pauline Oliveros, Meredith Monk, Younghi Pagh-Paan, Carla Bley, Irène Schweizer, Mary Lou Williams, Laurie Anderson, Tanya Leon, Chaya Czernowin, Björk, Nkeiru Okoye, Okkyung Lee, Reena Esmail, Nicole Mitchell, Maria Schneider, Caroline Shaw, Du Yun, and Alex Temple.

Goals:

• To recognize women's experiences and contributions in music of the 20th and 21st centuries
• To listen to a lot of good music
• To gain a basic understanding of gender theory and feminism
• To learn about how using a gender lens changes how we think of music and music history

Course Notes: This course is open to anyone interested in questions of music and gender - music concentrators, joint concentrators, those studying music as a secondary field, students in dual degree programs with Berklee and NEC. Students from other departments who have some background in music (any style or genre) are welcome. Basic musical literacy will be helpful, but knowledge of music theory is not required (there are no pre-requisites).

Music 51A

Theory Ia (125212)
Joseph Jakubowski

2020 Fall (4 Credits) Schedule: R 0945 AM - 1145 AM
Instructor Permissions: Instructor Enrollment Cap: n/a

Harmony is just one of many powerful tools that can be enacted in order to understand, hear, perform, and
create music. Alongside this parameter of music is rhythm, meter, phrase, voicing, orchestration, ensemble, text, counterpoint, and many other modes of engagement. The 51 sequence in the Music Department explores, through elements and parameters of music theory and musicianship, what makes music compelling to us as listeners, performers, and composers. Students will explore concepts of music theory through direct engagement with existing repertoire, unfolding the foundations of tonal music from melody and harmony to rhythm and meter and from expectation and implication to style and genre. The course returns to a few core questions throughout: How is tonal music constructed? How do its systems generate expectations, associations, and styles? What is the relationship of structure and meaning to theories and associations? How do aspects of pitch, rhythm, meter, timbre, etc., combine in a complete musical work, and how does music theory present a composite analysis of such a work? Why would we want to examine music in this way and what can it teach us about writing, performing, listening, and talking about music?

Course Notes: For this course a placement exam is required, which is offered the Friday (August 30) before classes begin. Please see the Canvas course website for M51a for more information. Music 51a is highly encouraged for concentrators, especially those who wish to take additional and more advanced theory courses in the department. Students interested in theory are encouraged to take the placement exam in their freshman year. Dual degree students are likewise encouraged to take Music 51a and Music 51b.

Class Notes: Placement tests will be offered on a dedicated Canvas site. Please email the course head to be added to this Canvas site. The test must be completed by Friday, August 21st, to give us time to grade them and make a recommendation by the registration deadline. The results of this test will help us recommend whether you should take this course, the preparatory Music 2 (offered in Spring), or jump to the more advanced second semester (51B; this option is rare). If a rising freshman or sophomore has taken the AP Theory test (and scored a 5), they can automatically register for 51A without sitting for the placement exam in August/September. AP scores and Placement Test scores hold for two years; if you are a junior or senior, or would like to try and place out of 51A and/or 51B, you must take the test.

There are a total of two section meetings for this course. Section I will likely meet on Mondays at 3:00 - 4:00 pm or 4:00 - 5:00 pm. The second section will be scheduled when the course roster is confirmed.

Recommended Prep: Basic theory and ear-training skills, ability to read music, Music 2, or equivalent experience.

Music 51B

Theory Ib (125213)
Harmony is just one of many powerful tools that can be enacted in order to understand, hear, perform, and create music. Alongside this parameter of music is rhythm, meter, phrase, voicing, orchestration, ensemble, text, counterpoint, and many other modes of engagement. The 51 sequence in the Music Department explores, through elements and parameters of music theory and musicianship, what makes music compelling to us as listeners, performers, and composers. Specifically, in Music 51b, students will continue building on what they learned in the fall semester, gaining familiarity with more advanced theoretical and analytical approaches to tonal music, including fugal counterpoint, chromatic harmony, and classical form. Students will also explore the relevance of tonal techniques to a wide array of popular and non-Western music styles, and they will consider how theoretical knowledge and performance practice inform one another. Coursework includes a combination of concrete skills test, ear-training, short compositional exercises, and written responses to more open-ended questions aimed at developing the student's ability to speak confidently about the inner workings of tonal music.

Course Notes: You must either place directly into Music 51b via the August placement test or pass 51a in order to register for this course. If more than two semesters have passed since completing 51a, you will need permission from the Instructor to register for the course; this may include a quick refresher test. This course, when taken for a letter grade, meets the Distribution Requirement for Arts and Humanities.

Class Notes: Sections will likely be on Mondays at 3:00 or 5:00 pm.

Recommended Prep: Music 51a or equivalent.

**Music 97L**

Critical Listening (204967)

*Kay Shelemay*

2020 Fall (4 Credits) Schedule: M 1030 AM - 1145 AM

**Instructor Permissions:** Instructor  Enrollment Cap: 25

This course will explore musical perception as shaped by physiological, social, and cultural processes of everyday life. We will address the complex relationship between speech and music and the challenge of using one to communicate about the other. Through listening to a wide range of musical styles elucidated by written and audio-visual resources, we will contrast and compare music’s meanings through rapidly changing times and in different locales.

**Course Notes:** Music 97L and Music 97T are required for the Music concentration. Students from other departments are welcome to attend with permission of instructor.
Music 97T

Critical Thinking (204975)

Carolyn Abbate

2021 Spring (4 Credits)

Schedule: W 1200 PM - 0200 PM  
  M 1030 AM - 1145 AM

Instructor Permissions: Instructor  Enrollment Cap: 15

Performing music, listening to music, composing music, playing music – these are all familiar activities. By comparison, thinking about music is far less mainstream, sounds stuffy, and does not really seem to offer as much pleasure, as pastimes go. Music 97T is here to prove those assumptions wrong. We will explore music philosophy (which has grappled with sounds ranging from Ancient Greek modes to hip-hop), and which asks basic questions like, does music have an ethics, can experiencing music change how we see the world? Or, can music even be grasped in words? We will take an objective look at the way academic disciplines box music of every and all kinds in, but can also expand our horizons about music’s workings and its social roles and realities. And we'll explore “vernacular thinking,” which is the conviction that thinking about music may not take place in words, or take forms conventionally understood as philosophy or analysis, and may come from people outside our intellectual boxes.

Class Notes: This course is for undergraduate students only.

Class Notes: Lecture on Monday, 10:00 am - 11:45 am

Sections on Wednesdays, 12:00 - 2:00 pm

Music 98R

Tutorial - Junior Year (116489)

How Music Speaks (216219)

_Federico Cortese_

_Yosvany Terry_

2020 Fall (4 Credits)  

Schedule: T 0300 PM - 0500 PM

Instructor Permissions: None  
Enrollment Cap: n/a

This course explores some aspects that have made music uniquely relevant for centuries in a variety of cultures and societies, with a particular focus on Western, Latin American, African and African Diaspora music. The way we experience music may vary in different places or cultures according to its traditional functions, its meaning and our own personal relationship with it. There are, however, continuous exchanges, mutual enrichments and common traits. Students will become familiar with a selected repertoire from Europe, the Americas North and South and the Caribbean gaining insight and practical experience with music form, and rhythmic and melodic patterns by studying the recordings and looking at the score of key compositions.

The repertoire will range from George Bizet to Alberto Ginastera, from Mozart to Ligeti, Bartok to De Falla, from Manuel Saumell to Alejandro G. Caturla, from Jelly Roll Morton to Egberto Gismonti, just to name a few. This course is a non-exhaustive survey of classical, popular and indigenous musical traditions from around the world. Our goal is to expand the horizons and the awareness of listeners and performers alike, while redefining what we think of music. In this process, we aim to stimulate a fresh approach to our own diverse musical traditions.

Recommended Prep: There are no pre-requisites for this course but some knowledge of music and or instruments is helpful.

Music Theory & Interpretation (114188)

_Suzannah Clark_

2020 Fall (4 Credits)  

Schedule: R 0945 AM - 1145 AM

Instructor Permissions: None  
Enrollment Cap: n/a

This course focuses on how analyzing music through the lens of different music-theoretical models brings
out different—and sometimes contradictory—interpretations. Students will be introduced to a range of advanced modern-day theoretical models. Armed with these theoretical perspectives, the emphasis of the course will be on exploring how our musical analyses influence the way we listen to performances and recordings, and how we might imagine the music ought to go if we were to perform it ourselves. Our repertoire will include songs by Schubert, Schumann, and Liszt and instrumental music by Haydn, Mozart, Schubert, Schumann, and Brahms. Some of these composers also read theory treatises written by their contemporaries, and thus we shall also consider how a historical appreciation of music theory can foster new ways of understanding, hearing, and performing some of the most famous musical works of the eighteenth and nineteenth centuries.

For students interested in performing, there will be opportunities to apply these concepts to pieces you already know, are learning in other music courses, or wish to get to know. Writing assignments will develop techniques in music journalism, concert and recording reviews, program notes, and academic writing.

Class Notes: Prerequisite: Music 51 or permission of the instructor.

Recommended Prep: Music 51 or equivalent.

Post-Tonal Analysis (113890)

**Christopher Hasty**

2021 Spring (4 Credits) Schedule: W 0300 PM - 0500 PM

Instructor Permissions: None Enrollment Cap: n/a

Intensive survey of compositional styles and techniques from Bela Bartok to Toshio Hosokawa. Five pieces will be selected for repeated listening and close analysis. Here the focus will be on the interaction of musical domains – pitch, rhythm, timbre, gesture. We will also discuss historical and aesthetic issues surrounding these and other pieces. Among these issues is the emergence of various "pre-compositional" procedures. An introduction to compositional systems and to set-class theory will be provided.

Recommended Prep: Music 51 or permission of instructor.
