2021 Spring (4 Credits) Schedule: W 0300 PM - 0545 PM
Instructor Permissions: Instructor Enrollment Cap: 10

Muslims first arrived on the shores of the Americas at the turn of the sixteenth century, yet their long
history in the western hemisphere has been largely forgotten. For centuries Islam was the second-most
widely practiced monotheistic religion in the Americas, after Catholicism; some Muslims came from Spain
to escape persecution at the hands of the Inquisition for continuing to practice their religion, while others
were taken captive and forcibly crammed into the hulls of ships on the West African coast and transported
across the Atlantic, where, in 1522, they participated in the first uprising of enslaved men and women in the
Americas on a sugar plantation on the island of Hispaniola (the site of present-day Haiti and the Dominican
Republic). From the very beginning of European imperialism in the Atlantic World, Muslims were integral to
the history of what scholars call “Vast Early America.” Their stories are entwined with the larger threads of
early American history including those of missionary work, European interimperial conflict, slavery, the
genocide of Native peoples, and capitalism. This course unfolds in four units that will take us from the first
early modern European encounters with Islam to the stories of Muslim agents of European conquest and
Muslim resistance to enslavement in the Caribbean and US South, to how the Founding Fathers thought
about Islam and the status of Muslims in the early Republic. We will work with sources ranging from Laila
Lalami’s 2014 novel, The Moor’s Account, to Thomas Jefferson’s copy of the Qur’an, as well as the
autobiography of Omar Ibn Said written in Arabic from a jail cell in South Carolina and Rhiannon Gidden’s
new opera based on Said’s story.

Class Notes: Seminars meet for two hours of synchronous class discussion each
week.
To register, complete History & Literature’s application to enroll.
This seminar is designed for first-years and sophomores, who are especially encouraged to apply.

Espionage: A Cultural History (216232)

Duncan White
2021 Spring (4 Credits) Schedule: W 1200 PM - 0245 PM
Instructor Permissions: Instructor Enrollment Cap: 10

Over the course of the twentieth century the spy thriller became a central part of our culture, changing the
way people imagined how the state operates in secret. Why are we attracted to stories of paranoia and
conspiracy? What is the history of this genre, and how is it intertwined with the history of espionage?This
course will consider the historical origins of spying, exploring how the modern intelligence agencies had
their origins in the project of empire. The bulk of the course will be divided into three units. The first will
consider the British spy panic of the early twentieth century, in which a wave of pseudo-realistic espionage
fiction, including from Erskine Childers, Baroness Orczy and William le Queux, contributed to an
atmosphere of panic and paranoia about Germany ahead of the First World War. The second unit focuses on the central role played by espionage in the Cold War, from the Cambridge Five to COINTELPRO. We will consider how espionage worked in the conflict, while thinking about the role that spies played in the popular imagination, from the glamor of James Bond to the "insider" realism of Helen MacInnes, Graham Greene, and John Le Carré, to revisionist thrillers like Viet Than Nguyen's The Sympathizer and Lauren Wilkinson's American Spy. In the final unit we will explore how espionage changed during the War on Terror, considering how spying was set up as a weapon against terrorism in the popular imagination, from Homeland to Zero Dark Thirty. In the final week we will consider the idea of surveillance capitalism and the idea that espionage is now inextricably part of our everyday lives.

Class Notes: Seminars meet for two hours of synchronous class discussion each week.
To register, complete History & Literature's application to enroll.
This seminar is designed for first-years and sophomores, who are especially encouraged to apply.

History & Literature 90EK

American Noir (216233)  
Angela Allan

2021 Spring (4 Credits)  
Schedule: M 1200 PM - 0245 PM
Instructor Permissions: Instructor  
Enrollment Cap: 10

Midcentury America saw the explosion of a genre on the page and screen—the hardboiled crime novel and the film noir. Noir represented a foil to postwar optimism: its protagonists were cynics and loners. Filled with lurid crimes and deeds, noir suggested a dark underbelly to American society and its promises of domestic fulfillment, economic stability, and institutional support. Husbands and wives plotted each other's murders; the city streets beckoned with sin; and the police were no match for the private detective. Yet even while these stories foregrounded alienation, they also had a mass cultural appeal to American audiences. We will examine noir not only as an aesthetic—filled with brutality stylishly dressed up in beauty—but also as a political commentary on disillusionment and conformity. How did representations of the tough guy and the femme fatale reflect or shape the gender and sexual politics of the era? How were race and ethnicity imagined as criminal categories for suspicion? And how did America's anti-heroes reflect a changing conception of nationhood and citizenship in the atomic age? By looking at cultural works like film, novels, and true crime pieces next to works of sociology and psychology from the period, we will consider what audiences' fascination with violence, murder, and deceit revealed about the American identity.

Class Notes: Seminars meet for two hours of synchronous class discussion each week.
To register, complete History & Literature's application to enroll.
This seminar is designed for first-years and sophomores, who are especially encouraged to apply.

Additional Course Attributes:

| Attribute | Value(s) |
In a controversial—and bestselling—recent novel, Michel de Houellebecq imagines France's government and society taken over from within by Muslim extremists who impose Sharia law. Fears of internal "colonization"—by Muslims, immigrants, Jews, Americans, and various "Others"—are nothing new in French history. Yet, by tapping into the growing influence of the anti-immigrant extreme right in French politics over the past several decades, the popularity of Houellebecq's novel raises a number of provocative questions for contemporary French—and global—society: how has a country premised on the "equality" and "fraternity" of all of its citizens continued to exclude religious, ethnic, and racial "Others?" And, perhaps more perplexingly, how did what was once a global empire—whose reach extended from the South Pacific to the Caribbean, from North and sub-Saharan Africa to Southeast Asia—become so anxious about being "colonized" within Europe itself? Most proximately, how did the violence of France's colonial wars—in Algeria and Indochina especially—and the tumult of postcolonial migration shape the fears and fantasies of national and imperial identity?

This course will address these questions by taking a longer and wider view of the (post)colonial experiences of twentieth-century France. Surveying works of history, politics, literature, anthropology, and film—from Sartre and de Beauvoir to Houellebecq and Sarkozy, Ousmane Sembène and Frantz Fanon to Azouz Begag, Linda Lê, and Alain Mabanckou—we will seek to understand how the perceived dangers of invasion drew on and departed from the ambiguities and insecurities of imperial power.

Class Notes: Seminars meet for two hours of synchronous class discussion each week.
To register, complete History & Literature's application to enroll by August 21. Instructors will notify students of enrollment decisions on August 24.
This seminar is open to all undergraduates, but priority will be given to sophomores interested in concentrating in History & Literature.
colonial spaces and their peoples. We will study how violence and resistance shaped alternative systems of knowledge making among Indigenous and African communities, including oral histories, wampum, featherwork, graffiti, and vodou. We will work with sources by canonical authors including Columbus, Montaigne, Mary Rowlandson, and Juana Inés de la Cruz alongside the works of anonymous or unfamiliar writers, artists, and craftspeople including Afro-Brazilian healers, Tupinambá featherworkers, and the Massachusetts and Nipmuc printers who worked in Harvard Yard. Throughout our course, we will ask: what interplay of power, resistance, and chance produces an artwork, document, or memory of the past—or ensures its survival and visibility in the present? What responsibility does a historian or critic have towards the silences of the archive and what strategies might recover marginalized perspectives from the past? How can attending to these histories of the archive shape the stories we tell today?

Class Notes: Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature’s application to enroll by August 21. Instructors will notify students of enrollment decisions on August 24.

This seminar is open to all undergraduates, but priority will be given to sophomores interested in concentrating in History & Literature.

For the Fall 2020 semester all course readings are accessible through the Canvas site. Assignments are designed to take advantage of the many digital collections of sources relating to the colonial past available online. In class, we will make virtual visits to archives and collections available at Harvard.

History & Literature  90EN

Latin American Revolutions (216236)

James Mestaz

2020 Fall (4 Credits) Schedule: MW 0430 PM - 0545 PM

Instructor Permissions: Instructor Enrollment Cap: 10

This course explores the origins, trajectory, and outcomes of three twentieth century Latin American revolutions: Mexican, Cuban, and Nicaraguan. Students will analyze what these three revolutions shared in common, such as the causes, which included discrimination, US imperialism, state violence, economic inequity, and political marginalization, but also consider the nuances of what made them different, and in which ways the later revolutions were inspired by the previous ones. The class will rely on primary sources, such as novels, film, photographs, music, murals, and manifestos to explore how all sectors of society helped foment changes to the physical, economic, and social landscapes in these countries. Students will investigate community grassroots mobilization tactics and what the revolution meant for marginalized groups such as indigenous, women, or queer people. Learning the difficulties of implementing profound change will help students understand how resistance and democracy meant different things to different communities, and how the definition of what is meant by a revolution evolved over time. Studying Latin American Revolutions will help students grasp the complexities of our increasingly globalized society, and reconsider the efficacy of our own political systems, freedoms, and democracy.
The recent history of New York City is one of crisis, resilience, and rebirth. From the terrorist attacks of 9/11 to the devastation of the pandemic, New Yorkers have experienced tragedy and reinvented their city in its aftermath. This is a cycle with a deeper history: in this course we will focus on how New York City reinvented itself in the Seventies and Eighties. On October 16, 1975, New York City was on the brink of bankruptcy. With nearly five hundred million dollars of debt due the next day and only thirty-four million in its bank, catastrophe seemed inevitable. Fortunately, the city was able to raise funds and avoid bankruptcy. Nevertheless, New York City was and had been a space on fire—both literally and figuratively speaking—for at least a decade prior. Landlords burned down buildings to collect insurance; Black, Latinx and LGBTQ communities fought for the right to claim space and protections. In the midst of these fires, however, many different communities seized upon cheap rent and abandoned spaces in order to use them as sites of profound community- and art-making. This course will explore the social and historical contexts under which the residents of New York City contended with precarity in order to create vibrant spaces of living. In order to understand how individuals and communities both understood and created the city around them, students will look at a wide variety of texts, including but not limited to songs, visual art, performance pieces, editorials, and oral histories. Students will be encouraged in how the New York City they know was shaped by this history and what lessons can be drawn from this period of unprecedented creativity as the city once again faces a precarious future.
History & Literature  90EP
The Global History of Pests (216238)

Samuel Dolbee

2020 Fall (4 Credits)  
Schedule:  W 0600 PM - 0845 PM  
Instructor Permissions:  Instructor  
Enrollment Cap:  10

Pests have had impacts large and small on human life, serving as sources of lethal pandemics and minor annoyance alike. But what constitutes a pest has varied greatly over time and space. This course examines these themes with a focus on the late nineteenth century and early twentieth century, an era of optimism for pest eradication and visions of environmental control more broadly. It subsequently turns to the consequences of these efforts—both life-saving and deleterious—to the present. Throughout, the course contextualizes pests as products of sedentary agriculture, empire, and capitalism. Topics include mosquitoes and revolution in Haiti, street dogs and health in Istanbul, and rats and race in Baltimore. The course also touches on the broader cultural resonance of pests, by attending to how the language of pests has come to apply to invasive species, germs, and certain humans. The sources for thinking through these questions are broad, ranging from Frantz Fanon’s The Wretched of the Earth to Disney public health reels featuring The Seven Dwarfs happily spraying insecticides to Rachel Carson’s Silent Spring. In sum, the course brings together environmental history, the history of medicine, and the history of science to consider how humans have created pests and pests have created humans.

Class Notes:  
Seminars meet for two hours of synchronous class discussion each week.

Nuclear Imperialisms (216239)

Rebecca Hogue

2020 Fall (4 Credits)  
Schedule:  TR 0600 PM - 0715 PM  
Instructor Permissions:  Instructor  
Enrollment Cap:  10

This course will examine nuclear narratives in global contexts as reminders and remainders of empire. Are nuclear futures only tied to whims of unpredictable world leaders, or are they already part of our daily realities? Whose stories of nuclear proliferation are told, and whose are suppressed? Drawing on government propaganda, activist writing, television, fiction, photography, poetry, and film from 1945 to the present, this course will explore the cultural and material legacies of radiation around the world. From American “atomic culture” of the 1940s and ’50s to Cold War era peace movements in the Pacific Islands to
nuclear disasters like Chernobyl and Fukushima, we will assess whether nuclear cultures have changed over time by using a place-based investigation of nuclear research, uranium mining, atomic bombs, "clean" energy, and anti-nuclear resistance. Course texts will include poetry by Kathy Jetnil-Kijiner and Craig Santos Perez, fiction by Ruth Ozeki and Robert Barclay, documentaries such as The Atomic Café and The Return of Navajo Boy, as well as popular film and television like Dr. Strangelove (1964), Star Trek (1967), and Godzilla (1954).

Class Notes: Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature's application to enroll by August 21. Instructors will notify students of enrollment decisions on August 24.

This seminar is open to all undergraduates, but priority will be given to sophomores interested in concentrating in History & Literature.

**History & Literature  90ER**

Industrialization and Inequality: from the Gilded Age to the Progressive Era (216240)

*Morgan Day Frank*

2020 Fall (4 Credits)  

Schedule: W 0300 PM - 0545 PM

Instructor Permissions: Instructor  

Enrollment Cap: 10

Industrialization after the Civil War transformed American life in dramatic and horrifying ways, and it transformed "literature" as a category of cultural consumption too. Some writers, like the muckrakers, believed that their work had the capacity to shape public life. Others like Henry James conceived of their writing as art that operated according to its own rules. Still others like Ambrose Bierce grew pessimistic about literature's capacity to accomplish anything whatsoever. This course will examine American literature at the turn of the twentieth century, when robber barons enriched themselves and many Americans were plunged into deep poverty. Through readings like Edith Wharton's Custom of the Country, Mark Twain's Mysterious Stranger, and Sutton Griggs's Imperium in Imperio, we will consider the literary response to a range of historical developments, including the rise of consumer capitalism, the industrial nation's fascination with pre-industrial life, and the creation of African American secret societies. By studying the shifting meanings of the literary as the country moved from the unfettered capitalism of the Gilded Age to the regulatory apparatuses of the Progressive Era, we will ultimately seek to better understand the meaning of literature in our own fraught historical moment. Whether we should turn to literature to solve our problems, or whether literature is itself part of the problem, are questions we will pose over the course of the semester.

Class Notes: Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature's application to enroll by August 21. Instructors will notify students of enrollment decisions on August 24.

This seminar is open to all undergraduates, but priority will be given to sophomores interested in concentrating in History & Literature.

Prison Abolition (216326)

Thomas Dichter

2021 Spring (4 Credits)  
Schedule: TR 1200 PM - 0115 PM

Instructor Permissions: Instructor  
Enrollment Cap: 30

Is prison abolition a serious proposal, an aspirational ideal, a trendy slogan, or a blueprint for social transformation? This interdisciplinary and community-engaged course situates the prison abolition movement in deep historical context and explores its current relation to the politics of criminal justice reform. We will study the movement’s connections to slavery abolitionism, anti-lynching activism, Indigenous struggles for sovereignty, and the Black Power movement. We will examine the emergence of the modern prison abolitionist movement in the 1970s, as well as more recent developments concerning immigration detention, Black Lives Matter, and COVID-19. Our readings will include interdisciplinary scholarship on the carceral state in addition to protest writings and activist materials. A major component of the course will be collaborative activities and service with community organizations focused on incarceration and the criminal legal system, through which we will consider what prison abolitionist ideas might look like in action. There will be opportunities for dialogue with scholars and activists as we investigate prison abolition not as a singular policy, but as a rich and challenging set of questions for rethinking matters of violence, inequality, and social change.

Class Notes: Seminars meet for two hours of synchronous class discussion each week.

To register, complete History & Literature’s application to enroll.

This seminar is designed for first-years and sophomores, who are especially encouraged to apply.

History of Art & Architecture   18K
Introduction to Japanese Art (118347)

Melissa M. McCormick
2020 Fall (4 Credits) Schedule: TR 0430 PM - 0545 PM
Instructor Permissions: Instructor Enrollment Cap: 24

This course surveys artistic production in Japan from the prehistoric period to the twenty-first century. The goal is not to define the national or “Eastern” character of Japanese art, but to interrogate manifestations of human creativity produced in the archipelago on their own terms. Students learn to analyze key examples of painting, prints, sculpture, and architecture, while also exploring calligraphy, garden design, ceramics, performance art, and fashion. Essential themes include the relationship between art and sociopolitical development, the complexities of Sino-Japanese cultural exchange, and the integration of art into the practice and conceptualization of religion and philosophy, as well as the performance of gender, race, and class.

Class Notes: The two weekly synchronous meetings will consist of short lectures, interactive exercises focused on visual analysis, discussions of the readings and lecture content, and student-led short presentations. There are no prerequisites for this course; all are welcome.

Enrollment is limited to 24. To register please complete the questionnaire by August 21. Instructors will notify students of enrollment status on August 24.
History of Art & Architecture  45M

Medieval Media (215760)

Jeffrey Hamburger

2020 Fall (4 Credits)  Schedule:  TR 0130 PM - 0245 PM

Instructor Permissions:  None  Enrollment Cap:  n/a

From the invention of the icon and the book in late Antiquity to printing and panel painting in the 15th century, the Middle Ages harnessed new visual media to revolutionary effect. The course examines space (architecture), light (stained glass), body (sculpture/relic), figure (fresco, tempera, oil), word (roll/codex), abstraction (diagram), mass media (printing).

Course Notes:  This is an introductory seminar without prerequisites intended exclusively for undergraduates. Students will meet twice a week with one session acting as a lecture and the other as a discussion of that week’s topic.

History of Art & Architecture  56G

Spanish Golden Age Painting: Truth and Deceit (205401)

Felipe Pereda

2020 Fall (4 Credits)  Schedule:  TR 1030 AM - 1145 AM

Instructor Permissions:  None  Enrollment Cap:  n/a

The art of the Spanish Golden Age is well known for its radical naturalism, on the one hand, and its intense religious imagery, on the other. This course will be an introduction to the major artists of this period – Murillo, Velázquez, Zurbarán and others— from the point of view of painting’s power to produce visual illusions and deceive their spectators. Consequently, the course will consider artistic tropes of illusion and disillusionment in relation to early modern debates on belief and skepticism.
Should the U.S. government or any government have an official style, and if so, what style should it be? The recent presidential executive order, called "Making Federal Buildings Beautiful Again," has brought the problem of beauty and the question of style centerstage to cultural debates on architecture and the built environment. But it’s not a new debate. This undergraduate lecture course examines the ways architecture has serviced the nation-state, and advanced political, economic and social ideologies. It examines how architecture has been used as a tool of political and cultural power and a technique for social governance. We will focus on the 20th and 21st Century, examining case studies from across the globe. We will explore paradigmatic examples of aesthetic fundamentalism such as the embrace of classical architecture in Nazi Germany and Stalinist Russia, and the promotion of architectural modernism by the Vargas’ Dictatorship in Brazil, and Mussolini’s Fascist Italy. We will look at memorialization through architecture such as the recent National Museum of African American History and Culture in Washington DC and the Ningbo History Museum in China; engage current debates on monuments and collective memory; and explore the democratizing use of contemporary architecture and urbanism in Colombia. The course looks at "the good, the bad and the ugly" examining architectural aesthetics as a form of cultural power. It focuses on pressing issues affecting our shared built environment as we confront an uncertain future. In short, we will look at why, today, Architecture continues to have meaning, and answer whether buildings need to be “beautiful” or significant.

Money is everywhere. As both an abstract construct and a material entity, money makes the world go around. Since before the invention of writing, money has been a common facet of everyday life, informing how we think and how we act. The course explores how societies across human history have made, used, and valued money in divergent ways. We will consider money as an object of aesthetic appreciation, an ethical problem, an architect of social relations, and environmental disruptor, a tool of political resistance, and much more. How has coinage design been a function of money's role as a political, religious, and cultural symbol? Is money a measure of value, and how does it align with other potential values, such as religious, moral, and aesthetic ones? Is it ethically neutral or an instrument of moral vice or virtue? What were the debates surrounding the rise of paper money beginning in the eighteenth century? How was money used as a tool of political resistance during the suffragette movement? Does money get recycled,
and what is the environmental cost of different money forms today? What are the links between art, literature, theater, cinema, and money?

China in Twelve Artworks (161270)

_Eugene Wang_

2021 Spring (4 Credits)  Schedule: MW 1200 PM - 0115 PM

**Instructor Permissions:** Instructor

**Enrollment Cap:** n/a

China is grasped through twelve artworks, spanning three millennia from the Bronze Age to the twentieth century. These artworks form both a timeline and a jigsaw puzzle with recurrent themes, e.g., the correlation between cosmos, body, and mind. The course consists of case studies, revealing both larger intellectual trends and the nuanced way artworks engage established formal conventions. Students learn about China through art and acquire visual literacy that takes art on its own terms.

History of Art & Architecture  92R
Design Speculations: Senior Design Tutorial (207690)
Megan Panzano
2020 Fall (4 Credits)  Schedule:  R 0900 AM - 1145 AM
Instructor Permissions:  Instructor  Enrollment Cap:  14

This seminar will serve as a design platform for inquiry, documentation and analysis in relation either to the thesis topic or capstone project of interest to each student. Thesis students will be responsible for selecting a Thesis Advisor (or Advisors) with whom they will meet regularly to develop specific intention, substance and methodology of the thesis research and paper. This seminar is a support of independent thesis and/or independent project research, extending methodological inquiry of the project topic to design where students may convene to collectively discuss and experiment with design speculations – design tests that explore research through the visual and spatial language of architecture. The course will cover topics general to design research with discussions, assignments, and readings focused on three main themes in relation to architectural design: Discourse, the development of a proposition for the role and significance of architecture relative to the project topic of interest; Method, the design steps/process of working through a design application/inquiry of those ideas; and Context, the relationship of the project topic of study to broader surroundings which include but are not limited to the discipline of architecture, cultural contexts, technical developments and/or typologies. The seminar will emphasize and support the translation of ideas emerging from independent research into visual forms of representation including, but not limited to, drawings, diagrams, images, study models, and short animations. The techniques of representation reviewed will be catered to the project topics of individual students, but will also form a part of the general discussion of the course.

HAA 96A Transformations or HAA 96B Connections design studios is a pre-requisite to the Design Speculations course.

Architecture assembles multiple models, surfaces, and materials; it is not a single monolithic thing, rather it is comprised of disparate parts and organizational systems operating at different scales. Design, the bringing together of these elements, requires sensitivity, registers scale, and renders perceptual effect. This course is an introductory architectural design studio focused on building foundational architectural concepts and design methodologies studied through a process of making. A series of physical modeling/fabrication assignments explore spatial and organizational transformations as a consequence of the changing interactions among material, fabrication technique, and form. Resultant expressions of space, scale, and perceptual effects are discussed and evaluated in relation to a series of course readings that frame the intentions of each assignment within architectural theory and history discourse.

Both studios in the Architecture Studies Track (Transformations HAA 96A and Connections HAA 96B) explore architectural means and methods of design. Each begins from a different scale of inquiry, but converges at a similar end. This studio originates at the scale of material - focusing on specific capacities and effects thereof as well as the details of assembly - and expands from this to an investigation of an occupiable architectural scale in relation to a dynamic site.

The course emphasizes fluency in the visual and spatial communication of ideas through instruction in 2D drawing and 3D modeling techniques. Technical workshops are provided in choreography with serial assignments encompassing drafting and 3D modeling (AutoCAD + Rhino), techniques of fabrication (Rhino to various outputs), 3D printing, and representational processing (Adobe Creative Suite). The studio exposes students to critical architectural thinking and design methods for more broad disciplinary application following. No particular skill set, technical or otherwise, is a required prerequisite for this course; students from all backgrounds are welcome.

The practice of architecture fundamentally asks us to continuously engage with, and re-conceptualize, the world for which we are designing. As such, architecture as a discipline is not only about designing buildings, but also about challenging us to imagine new ways of seeing the world. This studio takes on the challenge through a series of design exercises focused on understanding, engaging with, and reimagining the urban condition. Throughout the course, we will approach architectural design as both a method of producing urban environments, and also as an avenue through which to understand our cities. We will be directly confronting the social, political, and environmental contexts that are necessarily implicated in any design process.

Both studios in the Architecture Studies Track (Transformations HAA 96A and Connections HAA 96B)
explore architectural means and methods of design. Each begins from a different scale of inquiry, but converges towards a similar end. This studio originates at the scale of the urban site, and begins with a set of design research assignments that ask students to imagine the city from the perspective of a non-human agent. Extrapolating abstract principles from these agents, we will be mobilizing the possibilities of architectural representation to reimagine the city through mapping, diagraming, and collage. The studio culminates in a design proposal for a site in Harvard Square. Students will be given an architectural brief, and will produce projects that address existing site conditions, programmatic space requirements, and projected users of the site. Technical workshops will provide all the necessary skills required for the course, and will allow students to develop aptitude in architectural drawing, mapping, rendering, and simple animation. No existing expertise or technical proficiency is necessary for this course. Students from all backgrounds are welcome; we will be encouraging interdisciplinary thinking throughout the design research process.

History of Art & Architecture  138M

From Byzantium to the British Isles: The Materiality of Late Antiquity (205052)

Evridiki Georganteli

2021 Spring (4 Credits)  Schedule:  M 0900 AM - 1145 AM
Instructor Permissions:  Instructor  Enrollment Cap:  12

This course explores the extraordinary cultural transformation of Europe, the Mediterranean, and the Middle East underwent from Diocletian’s reorganization of the Roman Empire in the late third century to the Islamic conquest of the Iberian Peninsula in the eighth century. Monuments and sites, sculpture, mosaics, frescoes and ceramics, icons and relics, textiles, coins, and seals chart the movement of people, commodities, and ideas along routes of warfare, pilgrimage, trade, and diplomacy. Was the world of late antiquity still bearing the hallmarks of Roman connectivity, administration, and culture? Were Ireland and Anglo-Saxon England really the edge of the known world? What was the extent of the Eastern Roman Empire’s cultural power in late antique Europe, Africa, and the Middle East? How did religious changes influence urban topographies, geographies of power, and artistic choices?

Research stunning works of art from collections across the globe. Go behind the scenes in the Metropolitan Museum. Handle metalwork, textiles, coins, and seals in the Harvard Art Museums and the Dumbarton Oaks Collections. Visit a city in late antique Macedonia. Be an archaeologist for a day and explore Harvard’s flagship dig at the archaeological Exploration of Sardis. Map your findings on the Digital Atlas of Roman and Medieval Civilizations, and create podcasts about your favorite objects.

History of Art & Architecture 157K
The Age of Albrecht Dürer (159977)
Joseph Koerner
2020 Fall (4 Credits) Schedule: W 0300 PM - 0545 PM
Instructor Permissions: Instructor Enrollment Cap: 15
Albrecht Dürer became the world’s first world-famous artist largely because he invested his talent in the new medium of print. Multiplying his work a thousand fold and disseminating it (on sheets of paper) to innumerable viewers in multiple locations, print made Dürer the first beneficiary of "distance viewing" and, thus, a perfect topic for "distance learning" forced on us by the current pandemic. Looking together, creatively, at this artist's fascinating and enduring oeuvre — all available online — we will explore the wider
cultural dynamics of Renaissance and Reformation that underlay the making, and the breaking, of art.

Drawing Lessons (216058)

_Margaret Grasselli_

2021 Spring (4 Credits)  
**Schedule:**  
F 1200 PM - 0245 PM  

**Instructor Permissions:**  
Instructor  
**Enrollment Cap:**  12  

This course, taught from original drawings in the collection of the Harvard Art Museums, explores a broad range of topics associated with the materials, functions, preservation, collecting, exhibiting, and cataloguing of European and American drawings from the fifteenth century through the nineteenth century. Emphasis will be placed on close examination of the drawings, and discussions will include identification of media, characteristics of the execution, inscriptions, and other details that contribute to an understanding of the creation, purpose, and history of each sheet. Class members will collaborate on creating a virtual exhibition of drawings from the Harvard collections, to be presented online. Assignments involve reading, writing, and working directly from the objects. Broad knowledge of the history of European and American art is desirable but not required.

Francisco de Goya (203078)

_Felipe Pereda_

2021 Spring (4 Credits)  
**Schedule:**  
M 1200 PM - 0245 PM  

**Instructor Permissions:**  
Instructor  
**Enrollment Cap:**  15  

This course is about two things. First it’s an introductory course to the art of Francisco de Goya (1746-1828) at the time of the Enlightenment and early Romanticism. It will look into his formation in the institutions of the Old Regime (Travel to Rome, member of the Royal Academy, Court Artist) and explore how Goya challenged this artistic culture, exploring new ideas for the meaning of art, of its public and of the role of the artist in society. Second, the course will discuss Goya’s work (from his early "caricatures," the Caprichos, to the Disasters of the War) in relation to modern debates about testimony, witnessing and trauma. The class will take place, half in the seminar-room, half at the museum’s study-room looking at prints and drawings from his own work and other contemporary masters.
History of Art & Architecture 170G

Harvard Square (212807)

*Suzanne Blier*

2020 Fall (4 Credits)  
**Schedule:** M 1200 PM - 0245 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 15

Harvard Square has a rich history; under its earlier name of Newtowne (founded in 1630), it was once the site of the Massachusetts capital. Much has changed. This class looks back on the many changes Harvard Square has undergone, recent challenges it has faced, and asks class members to think forward about how it might be re-envisioned. This class will combine work in local archives on issues related to history and policy, meetings with local Cambridge officials, and an array of local design and drawing assignments. Learn how Harvard fits in; Be part of the change.

Stranger than Fiction (108657)

*Carrie Lambert-Beatty*

2020 Fall (4 Credits)  
**Schedule:** T 1200 PM - 0245 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 18

Is there an art history of post-truth? False personas, invented figures, museums of unnatural history and other fictive phenomena fill the annals of contemporary art. How do decades of factually-presented fictions, and thousands of temporarily deceived viewers, relate to the cultural changes that generated "truthiness," "fake news" and "The Death of Truth"? In this course you'll learn about installation art, conceptual art, photography, performance and video, while mapping out varieties of fact-based, fictional, and parafictional art, and debating their implications for art history— and for everyday life. (Note: class can be taken for credit in either HAA or AFVS; total enrollment limited to 18.)

An extraordinary number of women trained to become photographers in Weimar Germany (1919-1933). Their presence and practices dramatically altered the conditions of visual culture in a country that had never achieved the levels of French modernism, for example, neither in terms of its aesthetic complexity nor in terms of its contributions to nation state identity. Female photographers not only changed the almost purely patriarchal structures of official German culture, but they also contributed to a fundamentally different model of artistic identity, one that was not only subversive in terms of its gender politics, but also dismantled hierarchical orders at large, thus dramatically expanding the spectrum of collective interest and participation in processes of representation, be they reflections on the everyday lives of the urban masses, on sexual politics and the New Woman, or trans-national travel, fashion and consumption as presented in the rapidly expanding industries of the illustrated magazines. The majority of these photographers had to emigrate after 1933, either because they were Jewish or because their left wing politics were prosecuted, or because their progressive aesthetic principles and projects were no longer tolerated by the Nazi – Regime.

Thus the second part of the seminar will not only trace the dis- and relocations of these figures, but also explore the impact of exile on cultural identities and practices in the second half of the twentieth century.

Recent events have reminded us of the phenomenal power of the real-time convergence of people in public space. What is the role and responsibility of the artist in such moments of far-reaching political, social, and cultural upheaval and transformation? Should artists uphold the (modernist) principle of the autonomy of the work of art? Or should they commit to the social turn that has characterized much artistic production of the last decade or so?

To help us debate this fundamental question, this course brings to the table one of the most extraordinary historical examples we have of artists radicalizing their aesthetic practices, tactics, and strategies to meet revolutionary objectives—that of the avant-gardes that emerged in Russia in the wake of the 1917 revolutions.

Remarkable for the number of women in their ranks, the Soviet avant-gardes of the 1920s and 1930s reconceptualized what it meant to be an artist. They advanced collective practices, counter-monuments, the politicization of abstraction, and innovative modes of exhibition design. Inventing new typologies of small-form architecture, such as agitational kiosks and vehicles, they transcended their traditional domain (studio, gallery, and museum) to operate directly in the public realm of the street. They designed
demonstrations, outdoor theatrical spectacles, and workers’ clubs for the enlightenment, relaxation, and entertainment of ordinary people. To expand their outreach, they moved away from the production of unique objects (paintings, sculpture) to engage instead the mass-distribution forms of industrial production, photography, film, print media, and poster, book, clothing, and textile design.

What lessons, whether positive or negative, might we learn from their example?

Course readings comprise short polemical essays by artists and their contemporary apologists and critics, and key texts by art historians and theorists. All readings in English.

Open to all graduate and undergraduate students. (To facilitate their preparation, undergrads will have, in addition to the regular course meeting, a dedicated one-hour section with a TF.)

Requirements: --Weekly preparation of readings (all available on Canvas); --Attendance and participation (via Zoom) at a two-hour meeting per week (and, for undergrads, also the one-hour prep section)--One or two 10-minute class presentations on the reading;--Paper of 10-12 pages (undergrads), 15-25 pages (grad students).

Class Notes: There will be an open house event on Wednesday, August 19th, from 4-5 pm ET. Please stop by. For more information, visit our Canvas page.

History of Art & Architecture  177K

Art After State Violence: The Paris Commune & its Repression (216466)

Maria Gough

2021 Spring (4 Credits)  Schedule: T 1200 PM - 0245 PM

Instructor Permissions: Instructor  Enrollment Cap: n/a

What does art look like after the state has slaughtered its own citizens? This course examines the extraordinary story of the Paris Commune, a popular uprising in 1871 that was brutally suppressed by the French national government, resulting in the death of at least 10,000 civilians, if not many thousands more.

We begin with the situation on the ground during the Commune, dedicating sessions to such topics as: the barricade as architectural typology; the use and manipulation of photography for partisan purposes; and the activism of the painter Courbet, including his putative role in the destruction of the Vendôme Column (an imperial-era monument commemorating Napoleon's military conquests abroad). We then turn to examine the different ways in which modern painters responded to the Commune's repression with
sessions on: Manet’s representation of state violence; the fact that Impressionist painting, seemingly so oblivious to this violence, flowered in the 1870s, almost immediately in its wake; and the complex relationship between post-Impressionist art and anarchist thought in the 1880s and 1890s.

Open to all graduate and undergraduate students. (To facilitate their preparation, undergrads will have, in addition to the regular course meeting, a dedicated one-hour section with a TF.)

How might our mainstream histories of modern art change if we more fully acknowledged the Paris Commune and its repression as a key source of inspiration and/or trauma for modern artists in the decades that followed? What might this example of art after state violence tell us about comparable episodes in other places and historical moments?

Open to graduate students and undergraduates.

Requirements:
--preparation of weekly readings, attendance at class meetings (via Zoom), and participation in discussion (40%);
--one or two brief introductory class presentations (10%);
--one research paper (undergrads 10-12 pages; graduate students 15-25 pages), topic to be chosen in consultation with the instructor (50%).

Open to all graduate and undergraduate students. (To facilitate their preparation, undergrads will have, in addition to the regular course meeting, a dedicated one-hour section with a TF.)

Architecture and the "Museum" (215902)

Patricio del Real

2021 Spring (4 Credits) Schedule: M 0900 AM - 1145 AM

Instructor Permissions: Instructor Enrollment Cap: 15

Why has architecture entered the museum? Today, art museums continue to expand their offering on "buildings," some even opening departments dedicated to architecture and design. In these privileged exhibition spaces, architecture abandons its place in the world – its practical and everyday interactions in the built environment – to enter the realm of representation. At the same time, exhibitions are part of the production of architecture, conditioning its practice and stimulating its culture. This proseminar examines architecture as a cultural object in display. It looks for the historical conditions that normalized its presentation in the museum. Our focus: architecture exhibitions in the expanded field of exhibitionary practices, from professional associations to ministries of public works, that led architecture to enter the museum. We will look at: key exhibitions; their materials; what is put on display (models, drawings and objects); archives; collecting and acquisitions policies; curatorial strategies. Our aim, however, is to go beyond well-known exhibitions and explore why architecture has become a tool for cultural authority, elite aesthetics, market consolidation, and political soft power.
History of Art & Architecture  183N

Nihonga: Modern Japanese Painting (215903)

Yukio Lippit

2021 Spring (4 Credits)  Schedule:  M 0300 PM - 0545 PM

Instructor Permissions:  Instructor  Enrollment Cap:  15

This seminar studies the history of modern Japanese painting through an examination of Nihonga, a neotraditional form of painting that emerged in the late nineteenth century. Conceptualized in part by Ernest Fenollosa and Okakura Kakuzo, Nihonga selectively combined traditional Japanese formats, materials, and subject matter with European pictorialism, and would go on to become the defining pictorial mode of academic painting in Japan, exerting a strong influence across the Asian world. A major premise of the seminar is that Nihonga is as essential to a study of global artistic modernism as any other genre or movement.

History of Art & Architecture  186X

Chinese Sonic Painting: How to Picture Voice (215883)

Eugene Wang

2020 Fall (4 Credits)  Schedule:  M 0900 AM - 1145 AM

Instructor Permissions:  Instructor  Enrollment Cap:  15

Can paintings project voice? Can soundscape be pictured? The seminar explores the long-standing Chinese tradition of "sonic painting" that captures lyric voice. It seeks to go beyond the text/image paradigm by shifting the focus on the voice effect in painting. In doing so, the course develops a methodology of characterizing the art of senses and pictorial means of performing voices, such as "singing" and lamentation.

History of Art & Architecture  198G

Global Art: Comparative Approaches in Art History & Ethnography (215884)
The course explores art in global context, among those traditions in Africa, Oceania, and Native America, fields shared by both art history and anthropology. How does each discipline address local perspectives on art? Readings will be drawn from historical and more recent study. Issues addressed will be: approaches to field analysis, comparative perspectives, the role of history, artists, art markets, museums. Students will gain an understanding of the global art forms under consideration, and different disciplinary approaches, as well as questions important to the understanding of visual engagement.

Art in a State of Siege (215904)

*Joseph Koerner*

2021 Spring (4 Credits)  

**Schedule:**  

W 0300 PM - 0545 PM  

**Instructor Permissions:**  

Instructor  

**Enrollment Cap:**  

15  

What challenges and opportunities arise for artists and writers working under dire conditions—martial, political, medical, and natural states of emergency? To what extent are such exceptional conditions the rule (as Walter Benjamin proposed)? Co-taught by Stephen Greenblatt (English) and Joseph Leo Koerner (History of Art), this course considers art and literature in states of siege against the backdrop of juridical theories of such states.

**Course Notes:** This class is co-taught by Stephen Greenblatt and is also offered as
English 227s.

Art Writing in Persianate Culture (216264)

David Roxburgh

2020 Fall (4 Credits) Schedule: T 1200 PM - 0245 PM

Instructor Permissions: Instructor Enrollment Cap: 12

This seminar is focused on the reading and critical study of primary written sources about art in Persian and English translation from the 15th through 17th centuries focused on Persianate culture. Secondary sources in Persian and European languages are also considered for their approaches and methods to the examination of written sources.

The written sources are arranged chronologically and span several genres including the petition (Arzadasht), the calligrapher’s treatise (Simi Nishapuri, Sultan Ali Mashhadi, and Baba Shah Isfahani), the artist’s treatise (Sadiqi Beg), the travel narrative (Ghiyath al-Din Naqqash and Abd al-Razzaq Samargandi), the album preface (Dust Muhammad), biographies of poets (Dawlatshah Samargandi and Sam Mirza), biographies of artists and calligraphers (Qazi Ahmad and Mustafa Ali), and the memoir (Jahangir). Study of these sources will attend as much to their form, language, genre, literary history, and authorship as to their content and value for art history.

History of Art & Architecture 274

American Racial Ground (216085)

Sarah Lewis

2020 Fall (4 Credits) Schedule: M 0900 AM - 1145 AM

Instructor Permissions: Instructor Enrollment Cap: 12

How are artists, and how are disciplines in the arts and humanities, responding to the hyper-visuality of racial injustices on American ground? This course explores how visual artists including Mark Bradford, Theaster Gates, Amy Sherald, Xaviera Simmons, Hank Willis Thomas, and Kehinde Wiley, and new landmarks—such as the Equal Justice Initiative’s National Memorial to Peace and Justice and the creation of Black Lives Matter Plaza—have initiated a new set of “groundwork” tactics in the Stand Your Ground Era in the United States. Stand Your Ground laws, first established in 2005 and now in over thirty-three states, define the right to self-defense, to claim the ground on which one stands if there is a perception of “reasonable threat.” The law disproportionately affects black and brown lives today. These artworks prompt the question, What does it mean to not be able to "Stand Your Ground"? What are the representational tools available to show the frequent challenge to this upright position as a statement of sovereignty over
one's own life? How has the manifold meaning of the term "ground"—as both reason, fact, but also soil itself, opened up a mode of critical inquiry to address the injustices wrought at our feet? Just as the field of environment studies has begun to consider its nexus with racial inequity; this course will approach these representations of the "ground" with a critical race art history perspective. It will give students the chance to consider the "groundwork" that artists have created as both practical labor for civic society, and as a prompt for new, critical methodological inquiry in the arts and humanities at large. Enrollment is limited to graduate students and a few undergraduates by application.

Class Notes: This class will meet for a 2-hour session on Mondays between 9:45 AM and 11:45 AM.

Class Notes: American Racial Ground Application
I wish I could accept every student who wanted to enroll in this course, but it is limited to 12 students.

Please read carefully:
1. Please fill out this application and email it to TF Jessica Williams at jessicawilliams@g.harvard.edu if you have interest in taking this course by 5pm on August 21st.
2. Request Instructor Permission to enroll on my.harvard.edu by 5pm on August 23rd.
3. Accept or decline your spot.

You will receive an email from Jessica Williams about whether you've been accepted or placed on the wait list by 5pm, August 22nd. You have 24 hours to accept your spot. To accept, go to my.harvard.edu, navigate to your Crimson Cart, and click "enroll" (you may need to validate your Cart before doing so). To decline, send an email to jessicawilliams@g.harvard.edu. There will be a short waitlist. We will contact waitlisted students about openings on August 23rd. Students from the waitlist who are offered a spot will have 24 hours to accept.

History of Art & Architecture 276

The Graphic Method: Recording the Body in Line, Film, and Flame (215885)

Jennifer L. Roberts

2020 Fall (4 Credits) Schedule: R 0300 PM - 0545 PM

Instructor Permissions: Instructor Enrollment Cap: 10

Beginning in the mid-nineteenth century and coalescing in the work of French polymath Étienne-Jules Marey, scientists worked systematically to develop methods of detecting and recording the elusive, invisible motions of living bodies. Hoping to penetrate the ephemeral secrets of vitality itself, they devised instruments that allowed the body to "write" its own signatures directly, usually as waveforms or photographic traces in time. The "Graphic Method" (the term was coined by Marey) is best known within art history for its central role in the development of chronophotography and cinema in the work of Marey and Eadweard Muybridge. But it had a much wider range of applications and implications: for example, it was synonymous with the development of dynamic medical imaging (the cardiograph was Marey’s invention)
and sound recording (the phonograph is a graphic trace of a sound wave). By the early twentieth century, the graphic method seemed to have disturbed every existing model of time, form, and expression in the humanities and sciences. And it had a long and continuing impact on modern and contemporary art. This course is designed for graduate students and advanced undergraduates. It will begin with a close look at Marey's work, then move to a thematic format. The course readings and discussions will focus primarily on the period from 1870-1920, but student research projects may address more recent works of art and visual culture.

Deception (110252)

*Carrie Lambert-Beatty*

2021 Spring (4 Credits)  

**Schedule:**  

R 0300 PM - 0545 PM

**Instructor Permissions:**  

Instructor  

**Enrollment Cap:**  

15

This course will treat questions of trickery, deceit, and duplicity as characteristics of art, and attempt to theorize the aesthetics of deception. The approach will be through contemporary art, where artists have reinvented the old association between art and illusion, but students of any period or culture will be able to pursue their interests as the class treats the long history, and complicated theory, of art’s association with trickery.

**Course Notes:**  

Primarily for graduate students.

Buddhist Visualization: Dunhuang Caves (215886)

*Eugene Wang*

2020 Fall (4 Credits)  

**Schedule:**  

R 0300 PM - 0545 PM

**Instructor Permissions:**  

Instructor  

**Enrollment Cap:**  

12

The cluster of embellished caves at Dunhuang, China, is among the largest decorated Buddhist cave complexes in the world, spanning the fourth to the fourteenth century. With 492 caves decorated with murals and sculptures, Dunhuang is the largest art gallery in situ in the world. The course explores the visual programs of Dunhuang caves. The disparate textual sources on which the murals are based do not explain their convergence in the same cave. A deep logic of world-making binds them together. Using available digital reconstructions that proffer spatial experience of the Dunhuang caves, we address some key questions: how do disparate murals in each cave add up to form a program and imply a process? What process? How do these cave visualize and stage the Buddhist spacetime and mental theater of meditation?

History of Science 97
Tutorial - Sophomore Year (115419)
Anne Harrington

2021 Spring (4 Credits)  
Instructor Permissions: Instructor  
Enrollment Cap: 55

Schedule: TBD

Sophomore tutorial is a hands-on course that introduces students to some of the most exciting and productive questions in the history of science, technology and medicine, while developing critical reading, presentation and discussion skills. Small groups of students will tackle different aspects of a larger theme.
each week and share discoveries in sessions led by the faculty instructor. The course will be further enhanced by a series of supervised individual projects.

Course Notes: Required for undergraduate concentration in History and Science. Students must register for the plenary class session that meets on Mondays from 9:00-11:45am OR 12:00-2:45pm, as well as a weekly section to be arranged. The 9:00 am class will begin at 9:45 am. The 12:00pm class will begin at 12:45 pm.

Knowing the World: An Introduction to the History of Science (123398)

_Hannah Marcus_

_Benjamin Wilson_

2020 Fall (4 Credits)  

Schedule: TBD

Instructor Permissions: None  

Enrollment Cap: n/a

What are the origins of modern science and of the scientific method? Have the ways of knowing the world of different cultures and societies changed over time? How has scientific knowledge been related to other enterprises such as art, religion, literature, and commerce? We will ask these questions and more through a broad survey of many of the crucial moments in the development of science from the Scientific Revolution of the 17th century to the present day. Topics and figures will include Galileo, evolution, eugenics, the atomic bomb, and the human genome project.

Starstruck! The History, Culture, and Politics of American Astronomy (213529)

_Sara Schechner_

2021 Spring (4 Credits)  

Schedule: TBD

Instructor Permissions: Instructor  

Enrollment Cap: 12

This hands-on course will introduce key episodes and issues in the history of American astronomy by close looking at rare early scientific instruments and tangible objects in Harvard collections. Starting with the story of Captain John Smith, Pocahontas, and a sundial, the course will move from colonial relations with Native Americans to the controversial placement of observatories on sacred mountaintops today. In between, we will discuss the roles of religion, politics, science, and culture in the promotion of astronomy in American society. Topics will include comets and extraterrestrials, observatories, westward expansion, time selling, and the role of women. Each unit will begin with anchoring objects, and students will work behind the scenes in the Collection of Historical Scientific Instruments. There will also be opportunities to make and use your own instruments to engage with early methods of production and observation.
History of Science 130

Heredity and Reproduction (156318)

Sarah Richardson

2020 Fall (4 Credits) SCHEDULE: TR 0900 AM - 1015 AM

Instructor Permissions: Instructor Enrollment Cap: 10

The sciences of human heredity and reproduction from Aristotle to Margaret Atwood. Readings include classic philosophical, scientific, and literary sources. The course takes up themes of technology and control; gender, race, class, and sexuality; scientific ethics; and interactions between biology and society.

Foreign Bodies: On Health and Migration (212935)

Eram Alam

2020 Fall (4 Credits) SCHEDULE: R 0300 PM - 0545 PM

Instructor Permissions: Instructor Enrollment Cap: 10

During the twentieth century, unprecedented human mobility has raised significant questions regarding migration and health. Whether coerced or voluntary, these migratory flows reverberate through individuals, communities, populations, environments, and the body politic in unexpected ways. This course will focus on the relationship between health and migration and ask the following questions: How are moving bodies named and managed? What are the political, economic, juridical, and medical implications of movement? How is risk defined and constructed in relation to migration? Readings will include case studies from around the world, supplemented with theoretical and literary texts.

Course Notes: Enrollment limited to 20.

Graphic! Visualizing Medicine from Textbooks to Comics (205361)
Visuals play an important role in the history and practice of medicine, from medical textbooks to medical imaging, and from hospital signage and public health posters to comics and graphic novels. This course will examine the use of visuals in medicine, but will place particular emphasis on a new academic and creative field known as "graphic medicine"—medical comics and graphic novels. Over the course of the semester, we will ask questions about how attending to the visual allows us to think in new ways about diagnostic practices, therapeutics, medical consumerism, doctor-patient communication, and ways in which patients and caregivers narrate their personal experiences of disease. We will pay careful attention to questions of class, race and gender, and to larger ethical and political issues raised by our materials.

Evelynn Hammonds

Since the arrival of Africans from Africa to America, their health and health care has been a critical issue for the nation. From the era of slavery to the present, African Americans have been disproportionately burdened by disease and ill health. Health disparities are the "inequalities that occur in the provision of healthcare and access to healthcare across different racial, ethnic and socioeconomic groups." This course examines this issue over the long time frame from the 17th century to the present. Currently, compared to the white population, African Americans are at an overall greater risk for many serious and life threatening diseases. This course will examine how these disparities emerged over time. It will explore the strategies and practices that African Americans and other ethnic groups employed to improve their health care. It will also examine the ways that cities, states and the federal government supported or ignored the health of African Americans and other marginalized communities. We will give special attention to the impact of the COVID-19 pandemic on these communities.

Mental Health Matters: Recurring Themes and Unfinished Business (216373)
This new course offers an opportunity to explore some of the unfinished business of modern-day mental health care through an historical lens, from incarceration to health inequities to trauma to the role of drugs and biological thinking. Mental health matters! But history matters too, because understanding the forces that have brought us to our current moment arms us with insights that allow us to do better. This course has also been built from the ground up, to take advantage of the potential of online learning. The course may be online, but it is far from "virtual" -- on the contrary, the heart of this course will be the active real-time engagement it will offer all students who enroll.

Course Notes: Students must register for the plenary class session that meets on Mondays from 12:00-2:45am OR 3:00-5:45pm, as well as a weekly section to be arranged.

Humans in Space: Past, Present, Future (160334)

Matthew Hersch
This seminar will offer an intensive, engaging investigation into human spaceflight's origins and future, beginning with ancient anticipations and ending with space travel in the 21st century and beyond. Conducted remotely but drawing upon a range of provocative sources, this seminar's readings, audiovisual media, hands-on activities, and discussions will trace the development of the technologies humans have used to leave their home planet and place these technologies within the context of cultural and social change, in the United States and around the world.

Information: History, Politics, and Ethics (208317)

Alex Csiszar

Does information have a history? The control and manipulation of data has become central to politics, economics, and daily life. But what came before this age of bits and big data? How did we get to this point? This course will examine the changing meaning and significance of information from diverse perspectives including technology, gender, ethics, and materiality over the last several centuries. Topics will include information technologies from printing to digital computing, news and disinformation in social media, information labor, state secrecy, and the self as data. The course will include several optional field trips including a printing workshop and a visit to a bioinformatics production facility.

Significant Stories: Podcasting the History of Science (216453)

David Unger

In this project-based class, students will create an audio-rich podcast series that uses objects from Harvard’s Collection of Historical Scientific Instruments (CHSI) to explore the history of science teaching at Harvard and to put the online transformation of classes this semester in historical context.

Students will learn the skills needed to research, plan, record, and produce broadly accessible non-fiction
audio stories. Students will also learn how to transform scholarly observations into stories that are meaningful to a broad audience using techniques from museum interpretation, public history, and journalism.

Why Trust Science? (216010)

Naomi Oreskes

2020 Fall (4 Credits) Schedule: MW 1200 PM - 0115 PM

Instructor Permissions: None Enrollment Cap: n/a

The covid-19 pandemic has poignantly illustrated what can happen when scientific advice is ignored. Yet, at the same time, opinion surveys show that many Americans are distrustful of science and scientists, particularly when scientific findings seem to contradict their worldview. This class examines the basis for trust in science. We will explore the question of whether there is a scientific method, the role of consensus in science, the reasons why scientists sometimes come to faulty conclusions, and how we, as citizens, can judge scientific information and make informed choices in our lives. Topics may include the scientific basis for understanding climate change, the ozone hole, the sources of pandemics, the benefits (or lack thereof) of vitamins, and why you should wear sunscreen and floss your teeth.

Death and the Body in the Age of Plague (207909)

Hannah Marcus

2021 Spring (4 Credits) Schedule: M 0300 PM - 0545 PM

Instructor Permissions: Instructor Enrollment Cap: 20

Though we all will die, ideas and practices surrounding death have differed across time and space. This course will examine death and dead bodies in an era defined by epidemic and the ravages of disease. Our graduate seminar has three interrelated goals. First, we will engage with a range of fascinating primary sources about death and dead bodies in the late medieval and early modern world. Second, we will read the most important historical literature on the topics of death, dying, and the many scientific, political, and religious uses of dead bodies. The final goal of the course is for students to produce an original research paper. Most (but not all) of the sources on the syllabus will deal with Christian death, though I very much welcome students interested in considering these themes and pursuing research about different religious and geographical contexts.

**History of Science 220HT Section: SEM**

**Critical History: Time, Cause, and Agency (216374)**

*Peter Galison*

2020 Fall (4 Credits)  
**Schedule:** W 1200 PM - 0245 PM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** 12  

This will be a small, intense seminar aimed at exploring the underlying metaphysics of historical writing. Using Foucault (especially his meta-historical works) as our guiding thread, we will examine critically the assumptions that lie behind the idea of causal plenitude (that events all have causal explanations); time, continuity, dislocation. Positivism, historical-structuralism, objectivity will be topics, along with the tension between structural and agential historical argument. Reading will be heavy, writing light. Meetings will include not only full-group but also smaller breakout sessions every week. The goal, in the midst of the pandemic, is to put aside (for this moment) a primary focus on professionalization and instead to see how deeply we can go into the foundational premises of historical reason. Because this is an all-in intensive venture, it will not be possible to have auditors.

**Course Notes:**

This is a full credit, half term course. Enrollment by permission of the instructor.

Epidemics and Other Crises (216011)
David Shumway Jones

2020 Fall (4 Credits) Schedule: R 0945 AM - 1145 AM
Instructor Permissions: Instructor Enrollment Cap: 25

Epidemics continue to challenge human populations, causing substantial mortality and provoking dramatic societal responses. At the same time, there are many other health significant threats (e.g., cigarettes, air pollution, the climate crisis) that generate little concern or attention. This graduate seminar will examine the historical literature on epidemics and other health threats to explore the nature of the threats, how societies have responded, and how these histories can inform our understanding of medicine and public health. We will also explore the roles that historians can play when these crises strike: can we distill useful lessons from history?

History of Science 269
Histories of Science from the Peripheries to the Center (216452)
Gabriela Soto Laveaga

2020 Fall (4 Credits) Schedule: R 0300 PM - 0545 PM
In this graduate seminar we examine how knowledge produced in frontiers, along borders, and so-called peripheral regions shaped scientific and technological innovation across the globe. By de-centering the sites of knowledge production students will learn to critically examine and expand our known histories of science, medicine, and technology. Special focus will be given to the role that the pursuit of racial difference played in shaping technologies that measure said "difference" among ethnic groups and colonized people.

Science and New Technologies in South Asia, Latin America, and Africa (205434)

_Gabriela Soto Laveaga_

2021 Spring (4 Credits)  
_Schedule:_  TBD

_Instructor Permissions:_  Instructor  
_Instructor:_  Enrollment Cap:  20

This seminar uses examples from Latin America, South Asia, and Africa to explore key ideas in STS and history of science. Students will understand how concepts such as citizenship, race, class and poverty influence and reshape the practice of science on the ground. Co-taught with Professors Clapperton Mavhunga and Dwai Banerjee (MIT Program in Science, Technology, and Society); the class will meet at Harvard.

**History of Science  282**

Genre and Knowledge (156487)

_Alex Csiszar_

2020 Fall (4 Credits)  
_Schedule:_  T 0945 AM - 1145 AM

_Instructor Permissions:_  Instructor  
_Instructor:_  Enrollment Cap:  20

This semester, Genre and Knowledge will focus on genres, formats, and technologies that have been associated with claims to universal knowledge. Shifting away from an exclusive focus on the category of genre, we seek to interrogate and understand historically how claims to totality have been undergirded by infrastructures, writing and publishing projects, and aesthetic commitments. By what means are boundaries drawn in order to legitimate a claim to totality? What is left out, or transformed into insignificance, by those claims? Have science and the study of nature been privileged domains for such claims, and why? How have claims about universality been resisted or shown to be partial, local, or otherwise inaccurate?
Course Notes: This course will satisfy the pre-1800 requirement for doctoral students in History of Science.

Class Notes: The precise timing of our meeting may shift depending on the constraints of participants.

Science, Power and Politics (122718)

Sheila Jasanoff

2020 Fall (4 Credits)  

**Schedule:** W 0200 PM - 0400 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 10

This seminar introduces students to the major contributions of the field of science and technology studies (STS) to the analysis of politics and policymaking in democratic societies. The objective is to expand students' understanding of the ways in which science and technology participate in the creation of social and political order. The seminar is devoted to reading and analyzing works by scholars in STS and related fields who have addressed such topics as the relationship between scientific and political authority, science's relations with the state, science and democracy, scientific and technical controversies, and citizenship in technological societies.

Course Notes: Undergraduates may enroll only by permission of the instructor. Offered jointly with the Kennedy School as IGA-513.

Class Notes: Please note that the first class meeting will be held on Wednesday, September 2, 2020.

### History of Science 293

Agnotology: The History of Knowledge and Ignorance (203706)

Naomi Oreskes

2021 Spring (4 Credits)  

**Schedule:** W 1245 PM - 0245 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 25

Historians of science have traditionally been concerned with the production of scientific knowledge, but in recent years have turned their attention to the production of ignorance. This course focuses on the production of ignorance as a social, political, cultural, economic and epistemic question, with attention
both to techniques of deliberate ignorance production, and to the inadvertent and often uncontested production of ignorance that arises from accepted research practices and from the conditions that shape the direction and forms of scientific inquiry.

Course Notes: Open to graduate students and advanced undergraduates in history of science, and to others with instructor's permission.

History Beyond the Classroom: Foundational Discussions about Research (216467)

Peter Galison  
Elizabeth Lunbeck

2020 Fall (2 Credits)  Schedule:  T -
Instructor Permissions:  Instructor  Enrollment Cap:  25

The pandemic has shut down travel, but History Beyond the Classroom carries on. This course brings colleagues from around the world into conversation with first and second year graduate students. We meet four times each semester to discuss the work of invited guests—leading scholars in the field—on the methods and topics that they see as central to contemporary and developing work in the History of Science. Intended as an adjunct to preparation for the general examination.

Course Notes:  Limited to first and second-year doctoral students in History of Science. This is the first part of a two-semester course. Ordinarily, both semesters are required.

Human Evolutionary Biology 1210

Research in Human Biomechanics and Physiology (127206)

Andrew Yegian

Sarah Kessler

2021 Spring (4 Credits)  Schedule: TBD

Instructor Permissions: Instructor  Enrollment Cap: 8

Introduces students to experimental techniques used to investigate the musculoskeletal structure and physiology of humans. Students undertake a supervised research project in the Skeletal Biology and Biomechanics Laboratory. Students meet to introduce their project, discuss their work and progress, and to present their final results, as well as for several lectures on writing and presenting research findings. An extensive commitment of time in the laboratory is required. Grades are based on the work completed, the oral presentation, and a short research paper.

Course Notes: This course fulfills the research seminar concentration requirement for Human Evolutionary Biology

Class Notes: The first meeting will occur as scheduled in the course catalog, but subsequent meetings will take place approximately every two weeks at a time and day that fits the students' schedules.

Recommended Prep: Recommended: Life Sciences 2 or Human Evolutionary Biology 1420

Additional Course Attributes:

Human Evolutionary Biology 1212

Climate Change and Human Evolution (205546)

Daniel Green

2020 Fall (4 Credits) Schedule: R 0300 PM - 0500 PM
Instructor Permissions: None Enrollment Cap: n/a

This course will explore the relationship between climate, environment and human evolution. How did hominins and other mammals adapt to global cooling and grassland expansion? Is there any correlation between climate and the adaptive radiation that produced multiple Australopithecine lineages and the genus Homo? How might the environments of Eurasia have influenced the dispersal of Homo sapiens out of Africa? And how are anthropogenic climate change and environmental degradation affecting human health, subsistence and conflict today? What is the future of our species?

Course Notes: This course counts as an HEB elective for HEB concentrators.

Human Evolutionary Biology 1290

Genes, Mind, and Culture (159565)

Joseph Henrich

2020 Fall (4 Credits) Schedule: MW 1030 AM - 1145 AM
Instructor Permissions: Instructor Enrollment Cap: n/a

Unlike other species, humans are heavily reliant on learning from others to acquire many important aspects of their behavior, and this cultural transmission has created a second system of inheritance that has driven much of our species' genetic evolution. In addition to having shaped our species' anatomy and physiology, cultural evolution has important implications for understanding human nature, and for how to tackle basic problems in psychology, economics and anthropology. The first third of this course will develop the basic principles and lines of inquiry while the remainder will apply, hone and refine them by exploring economic development, the history of modern institutions, and global inequality.

Human Evolutionary Biology 1310

Hormones and Behavior (112219)

Carole Hooven

2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a
An introduction to the interaction between hormones and behavior, emphasizing research in humans. General principles of endocrine physiology are presented. The course then focuses on how hormones affect the brain and body in early development and later in adulthood, and the relationship of hormones to sex and gender. We will explore human reproduction, energy metabolism, mating and sexuality, parental behavior, stress, and dominance interactions.

Human Evolutionary Biology 1311

Evolution of Human Locomotion (213579)

*Andrew Yegan*

2020 Fall (4 Credits)  
**Schedule:** TR 1030 AM - 1145 AM

**Instructor Permissions:**  
Instructor  
**Enrollment Cap:** 12

In this course we will examine how the human body evolved to allow our extraordinary form bipedal locomotion. We will survey the hominin fossil record to understand the major transitions in human evolution from climbing to walking to running, and you will learn basic techniques in experimental biomechanics and physiology through laboratory exercises and seminar-style discussions.

**Recommended Prep:** Life Sciences 2 and/or HEB 1420 recommended but not required.

Human Evolutionary Biology 1326

Ancient DNA as a Window Into the Human Past (216425)

*David Reich*

2020 Fall (4 Credits)  
**Schedule:** MW 1200 PM - 0115 PM

**Instructor Permissions:**  
Instructor  
**Enrollment Cap:** 15

Over the last decade, ancient DNA technology has made it possible to ask and answer questions that were impossible to address before, and the findings that have emerged are profoundly challenging and enriching previous understandings of the past gleaned from fields outside genetics. This course is aimed at providing students with the tools needed to critically evaluate and perform original research. The centerpiece of the course will involve students learning how to analyze ancient DNA data—including unpublished data produced by the instructor's lab—leading to a final project in which students will write an original research paper based on their analysis of data, mentored by the instructor and/or members of the instructor's laboratory. The course format will include lectures aimed at providing students with an understanding of major issues in this field (starting from an assumption that students have no background), and seminar-style discussions critically assessing papers and student research projects.
Course Notes: This course is offered by the Human Evolutionary Biology Department—whose students will be guaranteed a minimum of 1/3 of the spots in the course—but would also be of interest for students in Computer Science, Statistics, Organismic and Evolutionary Biology, Anthropology, Molecular and Cellular Biology, and History. This course is aimed at providing deep disciplinary knowledge in Ancient DNA research and as such could be a jumping-off point for students who wish to do an Honors Senior Thesis in this area or carry out Ph.D. thesis research in Ancient DNA.

Recommended Prep: Computer programming background (AP Computer Science or equivalent). Statistics background (AP Statistics or equivalent). Students who do not have computer or statistics background but are highly motivated to take the course should write to the instructor to have a discussion about whether they might have the background needed to take the course.

Human Evolutionary Biology 1328
Evolutionary Medicine: Comparative Perspectives on Medical, Surgical and Psychiatric Illness (205490)

*Barbara Natterson-Horowitz*

2020 Fall (4 Credits)  
Schedule: TR 0600 PM - 0715 PM  
Instructor Permissions: None  
Enrollment Cap: n/a

Heart attacks, breast cancer, anxiety and eating disorders occur across the animal kingdom. Taught by a physician, the course explores the species-spanning and evolutionary origins of medical, surgical, and psychiatric illnesses. A 'mini-medical school' format will be used to introduce students to ten forms of human pathology emphasizing the typical mechanistic explanations of disease causation offered by physicians followed by in depth evolutionary analyses. Both physical and mental illnesses will be explored across the animal kingdom with a special focus on how emerging awareness of psychopathology in animals can alter the perception (stigma) and treatment of mental illness in human beings.

Human Evolutionary Biology 1330
Primate Social Behavior (113837)

*Martin Surbeck*  
*Isaac Schamberg*

2020 Fall (4 Credits)  
Schedule: TR 1030 AM - 1145 AM
A review of the behavioral interactions in natural primate populations, drawing on experimental, observational, and theoretical studies. Discussion of ecological, physiological, and developmental bases of primate social behavior, with special attention to the evolution of patterns of behavioral interactions among individuals of different age, sex, relatedness, and status. Topics include sexual conflict, sexual selection, and mating systems; care of offspring and other aid-giving; manipulative and cooperative aspects of communication; competition, dominance, and territoriality; and the evolution of social relationships.

Course Notes: This course fulfills the behavior concentration requirement for Human Evolutionary Biology.

Human Evolutionary Biology 1339

The Human Brain in the Animal Kingdom (214351)

_Erin Hecht_

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: 30

Our brains make us what we are. How did they get that way? How are they different from other animals', and how are they similar? This course will explore the structure and function of the modern human brain and examine the selective pressures that have impacted the evolution of human neuroanatomy and cognition. Frequent comparisons will be made with other primate and non-primate species in order to situate an understanding of Homo sapiens within the context of the broader animal kingdom. Additionally, the course will delve into the types of methodological approaches used to study these topics and consider the frontiers of new knowledge in this area. The course will integrate research and theory from biological anthropology, archaeology, psychology, ethology, and neuroscience. Topics covered include the evolution of large brains in humans and other species; the emergence of human-unique phenomena like language, complex tool use, music, and mathematics; social cognition and theory of mind; individual variation and brain plasticity during learning; and domestication and self-domestication.

Recommended Prep: Recommended prep/prerequisite: HEB 1280 Human Nature

Human Evolutionary Biology 1361

Hormones and Life History Physiology (203615)

_Susan Lipson_
A survey of human (especially female) life history physiology and the role of hormones in orchestrating key life course transitions, in allocating energy to optimize fitness, and in determining health and disease. This framework will be used as a basis for discussion of real-world issues, including racial disparities in reproductive outcomes and in the tempo of growth and development and questions concerning fertility and infertility.

Course Notes: The course is a hybrid of lectures and seminar discussions.

Recommended Prep: Prerequisite for enrollment: Human Evolutionary Biology 1418, Life Sciences 2, another relevant (e.g., OEB, SCRB) course, or with permission of instructor.

Requirements: Anti-req: Cannot be taken for credit if HEB 1351 already complete

**Human Evolutionary Biology 1381**

The Arrogant Ape: Rethinking our Relationships to Others (213580)

*Christine Webb*

2020 Fall (4 Credits)  
Schedule: R 0900 AM - 1115 AM

Instructor Permissions: Instructor  
Enrollment Cap: 20

Darwin's theory of evolution offered a powerful counternarrative to the scala naturæ, thus redefining the place of Homo sapiens in the natural world. But a great irony presents itself when a species so-named for its wisdom is currently causing the sixth mass extinction of life on earth. In this seminar, we will explore this apparent contradiction, assess why it has come to be part of our evolutionary legacy, and discuss theory and research that counteracts its profound negative potential.

Coming of Age on Planet Earth (205493)

*Barbara Natterson-Horowitz*

2021 Spring (4 Credits)  
Schedule: TBD

Instructor Permissions: Instructor  
Enrollment Cap: n/a

The challenges of adult maturation are not unique to our species. Some young adult animals take risks and
lose their lives, others respond to stress with eating problems or to traumatic first sexual encounters with subsequent dysfunction. The course will use a comparative approach to explore how young adult animals learn to be safe, how they acquire or lose status and rank, how they come of age sexually, and how they learn to survive and thrive on their own. The course will combine analysis of literature from scientific fields (behavioral ecology, endocrinology and evolutionary biology) and the humanities (coming of age short stories and novels) for a comparative analysis of the common challenges of maturation across the animal kingdom and in human life.

Human Evolutionary Biology 1403

The Biology of Human Aging (216420)

Noreen Tuross

2020 Fall (4 Credits) Schedule: R 1245 PM - 0245 PM

Instructor Permissions: Instructor Enrollment Cap: 8

The course covers current concepts of human aging including the challenge that human aging presents to evolutionary theory. We will explore cellular and molecular aging research in model systems; focus on the underlying mechanisms involve in the wear and tear of life, and discuss the impacts of race and climate change on human aging.

Course Notes: The course will involve recorded lectures, weekly responses, individual meetings, class discussion

Recommended Prep: Prerequisite of LS1b

Human Evolutionary Biology 1410

Gut Microbiome and Human Health (204010)

Rachel Carmody

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: n/a

Microorganisms residing in the human gastrointestinal tract outnumber our own cells and together encode at least 100 times as many unique genes. In this research seminar, we explore gut microbial contributions to human physiology in states of health and disease. We consider the pivotal roles of the gut microbiota in digestion, detoxification, energy regulation, and immunity, and discuss emerging evidence for the microbial modulation of risks and/or treatment of metabolic syndrome, cardiovascular disease, cancer, and
behavioral disorders. Students will be introduced to bench and bioinformatics techniques used to investigate gut microbial communities, allowing students to pilot projects that dovetail with topics discussed in seminar.

Course Notes: This course fulfills the research seminar requirement for Human Evolutionary Biology.

Preference will be given to Human Evolutionary Biology concentrators fulfilling a research seminar requirement and Human Evolutionary Biology graduate students.

Recommended Prep: Life Sciences 2 or permission of instructor.

Human Evolutionary Biology 1420

Human Evolutionary Anatomy (116069)

Neil Roach
Joanne Clark Matott

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

How does the human body function? How do our organs develop and grow? Why did we evolve this strange bipedal form? This course explores human anatomy, with an emphasis on the function, structure and evolution of the muscular, skeletal, nervous, circulatory, digestive and reproductive systems. Lectures are combined with small laboratory learning experiences and visits to the Harvard Medical School to study human cadavers.

Course Notes: This course fulfills the anatomy/physiology concentration requirement for Human Evolutionary Biology

Recommended Prep: Life Sciences 2 recommended, but not required

Human Evolutionary Biology 1451

Primate Functional Genetics and Genomics (109815)

Terence Capellini

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: n/a
Recent advances in genetics, genomics, and developmental biology are improving our understanding of human and non-human primate biological traits. These disciplines, when incorporated into a multi-faceted context, can reveal the mechanistic basis of evolutionary adaptations. This seminar is designed to investigate and critically evaluate foundational and novel research in primates (and other organisms) that employs the tools of these trades. In doing so, students are exposed to an integrative perspective upon which to explore classic and modern questions in functional biology.

Course Notes: This course fulfills the research seminar concentration requirement for Human Evolutionary Biology

Recommended Prep: Life Sciences 1b or equivalent genetics/genomics course.

Additional Course Attributes:

Human Evolutionary Biology 1480

Building the Human Body (156174)

Terence Capellini
Neil Roach

2020 Fall (4 Credits)  Schedule: TR 1030 AM - 1145 AM

Instructor Permissions:  Instructor  Enrollment Cap: 20

Humans and our primate relatives are incredibly variable. This variation results from natural selection operating on the developmental mechanisms that control anatomy and physiology. While these mechanisms remain mostly undiscovered, we are beginning to understand these complex processes due to major advances in technology that have pushed the fields of genetics, genomics and developmental biology rapidly forward. This research-centered course explores these relationships in the context of the human paleontological record. We focus on the evolution and development of the musculoskeletal system, which includes the cranium, axial skeleton and limbs, and present studies that cast light on the developmental genetic mechanisms that underlie major transitions in human evolution.

Course Notes: This course fulfills the research seminar requirement for Human Evolutionary Biology and includes a mandatory laboratory section.

Class Notes: This course fulfills the following Human Evolutionary Biology concentration requirements: 1. Junior Research Seminar, 2. Anatomy/Physiology, 3. Upper level.

This course will use a flipped format with lectures viewed independently and live laboratories, discussions and demonstrations.

Recommended Prep: LS1b (Genetics, Genomics, and Evolution). Introductory courses in paleoanthropology, anatomy helpful but not required.

</table>
We need to move beyond the "one gene – one trait" framework of Mendelian genetics in order to understand many human traits that are of compelling evolutionary and biomedical significance. "Complex traits" are those determined by multiple genes, environmental factors, and their interactions. Some diseases that kill us (e.g., heart disease) are complex traits, as are a wide range of physical and behavioral features, such as height, metabolism, language, depression, and countless more. Complex traits are far easier to study in model organisms than in humans, where we are dependent on naturally-occurring variants. Arguably the best characterized human complex traits are those for which the most NIH dollars and researchers' efforts have been spent, and these include schizophrenia, autism spectrum disorder, and other neurodevelopmental and neuropsychiatric disorders. By paying close attention to the genetic bases of these disorders and their contributing environmental components, we will develop a useful framework for analyses of other human complex traits. Increasingly, researchers are realizing that epigenetic modifications (chemical "tags" added onto DNA that can change gene expression) and microbes living in the human gut (the microbiome) also influence the final forms of these disorders. In this advanced small-group seminar, we will evaluate their multiple genomic and environmental causes, what animal models and stem cell "organoids" can tell us, whether natural selection acts to maintain these disorders in the population, and the importance of studying world-wide population diversity for uncovering the full range of genetic factors. Our discussions will span topics from the gene and neurobiological levels to the societal.

Course Notes: This course is appropriate for upper-level undergraduate students, as well as first and second year HEB graduate students. Auditing is not available for this course. Class sessions are simultaneous for "live" seminar discussions; optional Friday sessions are for small-group meetings with instructor, office hours, and/or occasional full class sessions in weeks with Monday holidays. Students are expected to be available to attend optional Friday sessions as required. Directions for applying to register for this course will appear on the Canvas course website.

Recommended Prep: Prerequisites are an A or B grade in Life Sciences 1b or demonstrated knowledge of basic quantitative genetics (please consult with instructor).
Natural selection produces genetic changes that make a population better able to reproduce and survive in an ever-changing environment, a process known as adaptation. We will examine the genetic bases of adaptations common to all humans (since divergence from our closest primate relatives) and those that have occurred in particular populations and individuals as humans dispersed around the globe and responded to the challenges of novel environments, diets, parasites, and infectious diseases, including those with potential biomedical relevance. We will focus on the genetic evidence for adaptations as detected from the signals left by natural selection on the genome, including polygenic traits. To place human adaptations in broader evolutionary perspective, we will investigate adaptations in diverse non-human species (e.g., mice, Drosophila, stickleback fish) where the genetic and genomic bases of adaptation are often known more completely. Lastly, we will consider how artificial selection compares with adaptation, using dog domestication as an example, and how climate change impacts the genetic basis of phenotypic traits.

Recommended Prep: REQUIRED prerequisites: An A or B grade in Life Sciences 1b
Requirements: Prerequisite: Life Sciences 1b with an A or B grade

Human Evolutionary Biology 2390

Genes, Mind, and Culture (213600)

Joseph Henrich

2020 Fall (4 Credits) Schedule: MWF 1030 AM - 1145 AM

Instructor Permissions: None Enrollment Cap: n/a

Unlike other species, humans are heavily reliant on learning from others to acquire many important aspects of their behavior, and this cultural transmission has created a second system of inheritance that has driven much of our species' genetic evolution. In addition to having shaped our species' anatomy and physiology, cultural evolution has important implications for understanding human nature, and for how to tackle basic problems in psychology, economics and anthropology. The first third of this course will develop the basic principles and lines of inquiry while the remainder will apply, hone and refine them by exploring economic development, the history of modern institutions, and global inequality.

Human Evolutionary Biology 2490

Major Issues in Human Evolution (206978)

Daniel Green

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: n/a
This course focuses on what happened in human evolution, why, when, and where, integrating paleontology, archaeology, behavioral ecology of apes and humans, developmental biology, and genetics and genomics.

Course Notes: This is an upper-level course for graduate students in Human Evolutionary Biology, taken while normally auditing Gen Ed 1027. Permission of the instructor is required.

Recommended Prep: Requirement: A previous course in human evolution and/or auditing GenEd 1027.

### Human Evolutionary Biology 3200

**Graduate Seminar in Human Evolutionary Biology (126919)**

*Rachel Carmody*

2020 Fall (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** n/a  

Proseminar for Human Evolutionary Biology graduate students. Discussion of adaptations and the process of adaptation using examples from various areas of human evolutionary biology.

**Course Notes:** Required for first year graduate students in Human Evolutionary Biology.

**Requirements:** Course open to Graduate Students Only

### Human Evolutionary Biology 3300

**Teaching Fellowship (212556)**

*Joseph Henrich*

2021 Spring (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a  

This course reflects time that a graduate student affiliated with Human Evolutionary Biology spends on teaching effort when the student serves as Teaching Fellow for a Faculty of Arts and Sciences course.

### Human Evolutionary Biology 3300

**Teaching Fellowship (212556)**

*Erin Hecht*
This course reflects time that a graduate student affiliated with Human Evolutionary Biology spends on teaching effort when the student serves as Teaching Fellow for a Faculty of Arts and Sciences course.

Humanities
Subject: Humanities

Humanities 10A
A Humanities Colloquium: From Homer to Valeria Luiselli (110440)

Stephen Greenblatt
David Atherton
Glenda Carpio
Jay Harris
Deidre Lynch
Mark Schiefsky

2020 Fall (4 Credits) Schedule: T 1030 AM - 1145 AM
Instructor Permissions: Instructor Enrollment Cap: 90

2,500 years of essential works, taught by six professors. Humanities 10a includes works by Homer, Plato, Sappho, Sophocles, Augustine, Murasaki, Shakespeare, Saikaku, Equiano, Mary Shelley, Dickinson, Walcott, Morrison and Luiselli. One 75-minute lecture plus a 75-minute discussion seminar led by the professors every week. Students will receive instruction in critical writing one hour a week, in writing labs and individual conferences. Students also have opportunities to participate online in a range of cultural experiences, ranging from plays and musical events to museum and library collections.

Course Notes: The course is open only to freshmen. Students who complete Humanities 10a meet the Harvard College Curriculum divisional distribution requirement for Arts & Humanities. Students who take both Humanities 10a and Humanities 10b fulfill the College Writing requirement. This is the only course outside of Expository Writing that satisfies the College Writing requirement. No auditors. The course may not be taken Pass/Fail.

Humanities 10B
A Humanities Colloquium: From James Joyce to Homer (110441)

Stephen Greenblatt

2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: 90

2,500 years of essential works, taught by six professors. Humanities 10b is open only to students who completed Humanities 10a in Fall 2019. Humanities 10b includes works by Joyce, Du Bois, Alain Locke, Mary Shelley, Schiller, Molière, Montaigne, More, Dante, Apuleius, Sophocles, and Homer. One 75-minute lecture plus a 75-minute discussion seminar led by the professors every week. Students continue to receive
instruction in critical writing one hour a week, in writing labs and individual conferences. Students also have opportunities to visit cultural venues and attend musical and theatrical events in Cambridge or Boston.

Course Notes: The course is open only to freshmen. Students who complete Humanities 10a meet the Harvard College Curriculum divisional distribution requirement for Arts & Humanities. Students who take both Humanities 10a and Humanities 10b fulfill the College Writing requirement. This is the only course outside of Expository Writing that satisfies the College Writing requirement. Humanities 20

A Colloquium in the Visual Arts (122550)

Yukio Lippit
Ewa Lajer-Burcharth
Joseph Koerner
Jennifer L. Roberts
David Roxburgh
Sarah Lewis

2020 Fall (4 Credits) Schedule: M 1200 PM - 0115 PM

Instructor Permissions: Instructor Enrollment Cap: 72

An introduction to major works of art and architecture from around the world, co-taught by a team of six professors. Subjects include Frederick Douglass and Photography, Hokusai, the Parthenon and Persepolis, Dürer, women artists, Zen Buddhist Art, Muybridge, Beckmann, the EJI Memorial to Peace and Justice, Mughal Painting, Manet, and Hooke. Consists of one 75-minute lecture plus a 75-minute discussion seminar led by the professors every week. Students will also participate in weekly looking labs and special lectures, workshops and screenings outside the class.

Note: The course is now open to all undergraduate students. Students who complete Humanities 20 meet the General Education distribution requirement for Arts & Humanities. No auditors are allowed, and the course may not be taken Pass/Fail. Enrollment is limited to 72.

Class Notes: The course is now open to all undergraduates. An application is no longer necessary to enroll in this course. Students who complete Humanities 20 meet the Harvard College Curriculum distribution requirement for Arts & Humanities. No auditors are allowed, and the course may not be taken Pass/Fail. Enrollment is limited to 72.
Humanities 90

Making It: A Sophomore Seminar in the Humanities (216637)

Robin Kelsey
Suzannah Clark

2020 Fall (4 Credits)  Schedule:  M 0300 PM - 0500 PM

Instructor Permissions:  Instructor  Enrollment Cap:  12

The Sophomore Seminar in the Humanities is a new course for sophomores, regardless of intended Concentration, who wish to deepen their engagement in the humanities. Each week in the seminar, guided by a distinguished guest, we will focus on a particular creative form – the novel, for example – with the aim of refining our powers of observation, interpretation, and articulation. In this way, we will learn new ways to approach the meaning of poems, documents, paintings, photographs, films, arguments, and songs. If successful, the course will not only give us insight into these creative forms, it will also enhance our relationship to the world.

Course Notes:  The course is designed for sophomores, who will receive preference through an application process. However, students from all class years are welcome to apply. Applications are due the end of Shopping Week. For more information, visit the course website. Students who complete Humanities 90 meet the Harvard College Curriculum divisional distribution for Arts & Humanities. No auditors are allowed, and the course may not be taken Pass/Fail. Enrollment is limited to 12.

One two-hour guest lecture, one 75-minute seminar led by the professors, and one one-hour section every week.

Linguistics 73C
Beginning ASL III (205111)
Andrew Bottoms
2020 Fall (4 Credits) Schedule: TR 1200 PM - 0115 PM
Instructor Permissions: Instructor Enrollment Cap: n/a
ASL III is designed for students who have completed ASL levels I and II. Students come to ASL III with an understanding of the fundamentals of ASL comprehension and production. These foundational courses (ASL I and II) introduce students to the language using a natural acquisition approach without explicit focus on grammatical rules. ASL III has an increased focus on the appropriate ways to converse with members of the Deaf community. In this class, students will learn how to tell stories that adhere to the pragmatic and linguistic standards of the Deaf community with a focus on stylistically appropriate production. In this class, students will learn how to engage with members of the Deaf community in respectful and culturally appropriate ways. In addition to fostering language development, we will discuss the history and culture of the Deaf community.

Course Notes: This course is limited to 15 students.

Linguistics 73D

Beginning ASL IV (205124)

Andrew Bottoms

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: n/a

ASL IV course will build on the foundation set in the first three levels of ASL and will focus on expressive language at a more advanced level. Students will have an opportunity to play with the language and explore different literary genres including: classifier stories, narratives of personal experience, visual vernacular and ASL poetry. Given that language learning doesn’t happen in isolation, we will continue our exploration of Deaf culture and norms in order to develop a deeper understanding of the Deaf community. Growing out of this discussion, students will learn what it means to work as an ally to the Deaf community and avoid oppressive behavior. Other issues to be discussed include recognizing audism in oneself and others and how to appropriately respond.

Course Notes: This course is limited to 15 students.

Language, Structure, and Cognition (122514)

Kathryn Davidson

2020 Fall (4 Credits) Schedule: M 0130 PM - 0245 PM

Instructor Permissions: None Enrollment Cap: n/a
What do the world’s almost 7,000 languages have in common? Why do they show recurrent commonalities and principled differences? What do they reveal about the human ability for speaking and thinking? How do languages develop? How do they die? This course addresses these and related questions while introducing the languages of the world; their distribution, recurrent structural properties, and genetic classification; processes of language contact; and the relationship between language and the brain.

Advanced ASL Tutorial II (211196)

*Kathryn Davidson*

2021 Spring (4 Credits)  
**Schedule:** TBD

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 30

ASL VI is a small group instruction that applies knowledge of advanced American Sign Language (ASL) grammar and vocabulary that focuses on the use of ASL discourse in formal as well as informal settings. This course additionally develops complex constructs and an understanding and production of lengthier narratives. Current cultural topics and attitudes regarding the Deaf community will also be explored. Hours to be arranged.

**Class Notes:** The course instructor is Emily Glenn Smith.

Linguistics 101
The Science of Language: An Introduction (110785)
Kevin Ryan
2021 Spring (4 Credits) Schedule: TBD
This course is an introduction to the study of linguistics as a science. It introduces several components of grammar (morphology, syntax, phonology, phonetics, and semantics) and surveys methods, findings and theories of linguistic research on the sound system and the structures of human language.

**Linguistics 102**

Sentence Structure (121089)

*C.-T. James Huang*

2020 Fall (4 Credits)  
**Schedule:** TR 0130 PM - 0245 PM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

What determines how the words in a sentence are put together in a given language? This course introduces the field of syntax, and the study of order and structure among words. Students will learn to construct and evaluate syntactic analyses and argumentation and will be exposed to variation and universals in the syntactic patterns found in natural languages. The course will also provide an introductory survey of syntactic phenomena, including question formation, the passive, anaphora, and agreement.

Word Structure (125790)

*Jonathan Bobaljik*

2020 Fall (4 Credits)  
**Schedule:** MW 1200 PM - 0115 PM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

This course investigates the nature and structure of words through the lens of contemporary morphological theory. What's in a word? Topics include the place of word formation in relation to phonological and syntactic phenomena, morphological processes, and the nature of the lexicon. Emphasis on the analysis of morphological phenomena in a range of typologically diverse languages.

**course requirement:** LING 83 or LING 101

Linguistics 105

Sounds of Language (111954)

Kevin Ryan

2020 Fall (4 Credits)  Schedule: TR 1200 PM - 0115 PM
Instructor Permissions: None  Enrollment Cap: n/a

What are the sounds of the world languages, and how are they organized to make words and sentences? Why are some sounds hard to hear or make? Is there a `universal inventory' of sounds? This class introduces students to the sounds of the world's languages, and provides tools for studying them systematically. We will study the setup to transfer thoughts from one brain to another.

Linguistics 106

Knowledge of Meaning (117788)

Kathryn Davidson

2021 Spring (4 Credits)  Schedule: TBD
Instructor Permissions: None  Enrollment Cap: n/a

This course is an introduction to the field of natural language semantics, which is a branch of linguistics concerned with meaning. What does it mean to know the meaning of a sentence? How do different parts of a sentence compose to form a sentence meaning? We will start by looking at sentence-level meanings and relations between them. Then, we will investigate how the meanings of sentence-internal elements (like verbs, subjects, and adjectives) are composed to form sentence meanings. During the process, we will cover some formal tools that allow us to talk about language in a precise way: set theory, propositional logic, predicate logic, and lambda notation. We will consider how the formal tools apply (and not apply) to natural languages and discuss how we can achieve a more comprehensive understanding of meaning.

Syntactic Theory I (114153)

C.-T. James Huang

2020 Fall (4 Credits)  
Schedule: W 0945 AM - 1145 AM

Instructor Permissions: None  
Enrollment Cap: n/a

This course provides an intensive introduction to generative syntactic theory. Emphasis on syntactic argumentation. Topics center on foundational problems in the theory of syntax, including phrase structure of nominals and clauses, varieties of movement, locality, argument structure, ellipsis case agreement, and the syntax-semantics interface.

Recommended Prep: Linguistics 102, equivalent, or permission of the instructor.

Linguistics 115
Phonological Theory I (123439)
Kevin Ryan
2020 Fall (4 Credits) Schedule: R 0900 AM - 1100 AM
Instructor Permissions: None Enrollment Cap: n/a
This course is an intensive introduction to phonological theory and experimental work in phonology. This includes rule-based and constraint-based approaches, the typology of phonological processes (vowel and consonant harmony, assimilation and dissimilation, lenition and fortition, etc.), and phonological acquisition. Experimental approaches will deal with gradience, exceptionality, and productivity with an introduction to the quantitative methodologies that these phenomena require.
Recommended Prep: Linguistics 105, equivalent, or permission of the instructor

Reading or Special Topics Course (124075)

Jonathan Bobaljik

2020 Fall (4 Credits) Schedule: TBD
Instructor Permissions: Instructor Enrollment Cap: n/a

Reading or Special Topics courses by individual arrangement with a faculty member. These courses examine material and skills not covered in regular course offerings, normally tailored to graduate students' individual curricular needs. These courses may involve hands-on work with special collections, as well as laboratory and/or experimental work with the department's relevant facilities, including the Meaning & Modality Lab and the Phonetics Lab, as appropriate.

In his seminal work from 1945, How to Solve It, George Polya introduced principles of mathematical problem solving that are widely applicable to problems in science and engineering. This year-long class focuses on building a powerful and portable problem-solving and modeling tool kit while bridging the divide between mathematics and science courses. The second semester will be organized around projects in areas of student interest. Both Math ESPA and Math ESPB must be taken in the same academic year to receive credit.

Mathematics MA

Introduction to Functions and Calculus I (111161)

Brendan Kelly

2020 Fall (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

The study of functions and their rates of change. Fundamental ideas of calculus are introduced early and used to provide a framework for the study of mathematical modeling involving algebraic, exponential, and logarithmic functions. Thorough understanding of differential calculus promoted by year long reinforcement. Applications to biology and economics emphasized according to the interests of our students.

Course Notes: This is a lecture course taught in small sections. This course, when taken together with Mathematics Mb, can be followed by Mathematics 1b. Mathematics Ma and Mb together cover all the material in Mathematics 1a (and more).

Class Notes: Fall Section Times: MWF 9:00, MWF 10:30, MWF 12, MWF 1:30, and MWF 4:30 with sufficient enrollment.

Reshma Menon, Hakim Walker, Harini Chandramouli

Students must enroll in a section by August 26th. Instructions will be found under Announcements on the Course Website.
If none of the above class times fall between 7:30 am and 10:15 pm in your time zone we will try to accommodate if we have the resources.

Introduction to Functions and Calculus II (113464)

*Emily Braley*

2021 Spring (4 Credits)  Schedule: TBD
Instructor Permissions: None  Enrollment Cap: n/a

Continued investigation of functions and differential calculus through modeling; an introduction to integration with applications; an introduction to differential equations. Solid preparation for Mathematics 1b.

Course Notes: This is a lecture course taught in small sections. In addition, participation in two one-hour workshops is required each week. This course, when taken together with Mathematics Ma, can be followed by Mathematics 1b. Mathematics Ma and Mathematics Mb together cover all the material in Mathematics 1a (and more).

Class Notes: Spring Section Times: MWF 9:00, MWF 10:30, MWF 12, MWF 1:30, and MWF 3:00 with sufficient enrollment.

Eriko Hironaka, Hakim Walker, Harini Chandramouli

Requirements: Prerequisite: Mathematics MA

Mathematics 1A

Introduction to Calculus (123680)

*Emily Braley*

2020 Fall (4 Credits)  Schedule: TBD
Instructor Permissions: None  Enrollment Cap: n/a

The development of calculus by Newton and Leibniz ranks among the greatest achievements of the past
millennium. This course will help you see why by introducing: how differential calculus treats rates of change; how integral calculus treats accumulation; and how the fundamental theorem of calculus links the two. These ideas will be applied to problems from many other disciplines.

Course Notes: In the fall, Math 1a is taught in small sections. In the spring, Math 1a is taught in a larger lecture format. Mathematics Ma and Mb together cover all of the material in Mathematics 1a (and more).

Class Notes: Fall Section Times: MWF 9:00 (with sufficient enrollment), MWF 10:30, MWF 12:00, MWF 1:30, and MWF 3:00 (with sufficient enrollment).

Eriko Hironaka, Oliver Knill, Tyler Bongers
Students must enroll in a section by August 26th. Instructions will be found under Announcements on the Course Website.

If none of the above class times fall between 7:30 am and 10:15 pm in your time zone we will try to accommodate if we have the resources.

Recommended Prep: A solid background in precalculus.

Speaking the language of modern mathematics requires fluency with the topics of this course: infinite series, integration, and differential equations. Model practical situations using integrals and differential equations. Learn how to represent interesting functions using series and find qualitative, numerical, and analytic ways of studying differential equations. Develop both conceptual understanding and the ability to apply it.

Course Notes: This course is taught in small sections.

Class Notes: Fall Section Times: MWF 9:00, MWF 10:30, MWF 12:00, MWF 1:30, and MWF 3:00 with sufficient enrollment.

Voula Collins, Reshma Menon, Harini Chandramouli

Students must enroll in a section by August 26th. Instructions will be found under Announcements on the Course Website.

If none of the above class times fall between 7:30 am and 10:15 pm in your time zone we will try to accommodate if we have the resources.

Recommended Prep: Mathematics 1a or Ma and Mb; or 5 on the AB advanced placement test; or an equivalent background in mathematics.

Mathematics 18A

Multivariable Calculus for Social Sciences (125396)

Drew Zemke

2020 Fall (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

Focus on concepts and techniques of multivariable calculus most useful to those studying the social sciences, particularly economics: functions of several variables; partial derivatives; linear approximation; multiple integrals; directional derivatives and the gradient; constrained and unconstrained optimization, including the method of Lagrange multipliers. Covers topics from Mathematics 21a most useful to social sciences.

Course Notes: Mathematics 21b can be taken before or after Mathematics 18. Examples draw primarily from economics and the social sciences, though Mathematics 18 may be useful to students in certain natural sciences. Students whose main interests lie in the physical sciences, mathematics, or engineering should consider Math 21a or Applied Math 22a.

Class Notes: Fall Section times: MWF 10:30 (with sufficient enrollment) and MWF 1:30.

Students must enroll in a section by August 26th. Instructions will be found under Announcements on the Course Website.

Recommended Prep: Mathematics 1b or equivalent, or a 5 on the BC Advanced Placement Examination in Mathematics.

Requirements: Anti-Requisite: Not to be taken in addition to Mathematics 21a or Applied Mathematics 22a

Mathematics 18B/19B

Linear Algebra, Probability, and Statistics (213535)

Brendan Kelly

2021 Spring (4 Credits) Schedule: MWF 0130 PM - 0245 PM
Instructor Permissions: None Enrollment Cap: n/a

Probability, statistics and linear algebra with applications to life sciences, chemistry, environmental sciences, economics and social sciences. Students will learn to use computing software to perform relevant calculations on data sets coming from these areas of study. Linear algebra includes matrices, eigenvalues, eigenvectors, determinants, and applications to probability, statistics, dynamical systems. Basic probability and statistics are introduced, as are standard models, techniques, and their uses including the central limit theorem, Markov chains, curve fitting, regression, and pattern analysis.

Mathematics 19A

Modeling and Differential Equations for the Life Sciences (110596)

John Cain

2020 Fall (4 Credits) Schedule: MWF 1030 AM - 1145 AM
Instructor Permissions: None Enrollment Cap: n/a

Considers the construction and analysis of mathematical models that arise in the life sciences, ecology and environmental life science. Introduces mathematics that include multivariable calculus, differential equations in one or more variables, vectors, matrices, and linear and non-linear dynamical systems. Taught via examples from current literature (both good and bad).

Course Notes: This course is recommended over Math 21a for those planning to concentrate in the life sciences and ESPP. Can be taken with or without Mathematics 21a,b. Students with interests in the social sciences and economics might consider Mathematics 18. This course can be taken before or after Mathematics 18.

Recommended Prep: A course in one variable calculus preferably at the level of Mathematics 1b.

Mathematics 21A

Multivariable Calculus (119196)

Matthew Demers

2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a

To see how calculus applies in practical situations described by more than one variable, we study: Vectors, lines, planes, parameterization of curves and surfaces, partial derivatives, directional derivatives and the gradient, optimization and critical point analysis, including constrained optimization and the Method of Lagrange Multipliers, integration over curves, surfaces and solid regions using Cartesian, polar, cylindrical, and spherical coordinates, divergence and curl of vector fields, and the Green's, Stokes's, and Divergence Theorems.

Course Notes: This course is taught in small sections. May not be taken for credit by students who have passed Applied Mathematics 22a.

Class Notes: Spring Section Times: MWF 9:00, MWF 10:30, MWF 12, MWF 1:30, and MWF 3:00 with sufficient enrollment
David Freund, Benjamin Gammage

Recommended Prep: Mathematics 1b or an equivalent background in mathematics.
Requirements: Anti-requisite: Not to be taken in addition to AM 22b

Mathematics 21B

Linear Algebra and Differential Equations (110989)

David Freund

2020 Fall (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

Matrices provide the algebraic structure for solving myriad problems across the sciences. We study matrices and related topics such as linear transformations and linear spaces, determinants, eigenvalues, and eigenvectors. Applications include dynamical systems, ordinary and partial differential equations, and an introduction to Fourier series.

Course Notes: This is a lecture taught in small sections. May not be taken by students who have passed Applied Mathematics 21b.

Class Notes: Fall Section Times: MWF 9:00, MWF 10:30, MWF 12:00, MWF 1:30.

Jill Guerra

Students must enroll in a section by August 26th. Instructions will be found under Announcements on the Course Website.

If none of the above class times fall between 7:30 am and 10:15 pm in your time zone we will try to accommodate if we have the resources.

Recommended Prep: Mathematics 1b or an equivalent background in mathematics. Mathematics 21a is commonly taken before Mathematics 21b, but is not a prerequisite, although familiarity with partial derivatives is useful.

Requirements: Anti-requisite: Not to be taken in addition to AM 22a

Mathematics 22A

Vector Calculus and Linear Algebra I (207485)

Dusty Grundmeier

2020 Fall (4 Credits)  
Instructor Permissions: None  
Schedule: MWF 1200 PM - 0115 PM  
Enrollment Cap: n/a

This course covers multivariable calculus and linear algebra for students interested in mathematical sciences. It covers the same topics as Mathematics 21, but does so with more rigor. Students are taught techniques of proof and mathematical reasoning. The workload and content is comparable with the Mathematics 21 sequence. But unlike the latter, the linear algebra and calculus are more interlinked.
**Mathematics 22B**

Vector Calculus and Linear Algebra II (207486)

*Dusty Grundmeier*

2021 Spring (4 Credits)  
**Schedule:** MWF 1200 PM - 0115 PM

**Mathematics 23A**

Linear Algebra and Real Analysis I (111695)

*Paul Bamberg*

2020 Fall (4 Credits)  
**Schedule:** R 0300 PM - 0545 PM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** 60  

Linear algebra: vectors, linear transformations and matrices, scalar and vector products, basis and dimension, eigenvectors and eigenvalues, including an introduction to the R scripting language. Single-variable real analysis: sequences and series, limits and continuity, derivatives, inverse functions, power series and Taylor series. Multivariable real analysis and calculus: topology of Euclidean space, limits, continuity, and differentiation in n dimensions, inverse and implicit functions, manifolds, Lagrange multipliers, path integrals, div, grad, and curl. Emphasis on topics that are applicable to fields such as physics, economics, and computer science, but students are also expected to learn how to prove key results.

**Course Notes:**  
Students are expected to watch videos of the lectures from Fall 2015 before attending class. Weekly two-hour classes will consist of a one-hour seminar in which students present key definitions and proofs and a one-hour activity-based session in which students work in small groups to solve problems. Students are expected to continue in either Mathematics 23b (recommended for students who are thinking of concentrating in mathematics, the physical sciences, or engineering) or Mathematics 23c (recommended for students who are not sure of their concentration, or who are thinking about a concentration in the social sciences, economics, computer science, life sciences or data science). Either alternative will provide a solid foundation for a concentration in mathematics or any field that uses mathematics.
Class Notes: This section assumes a background in sequences and series, covers applications of linear algebra and calculus to data analysis, teaches the R scripting language, has required programming assignments in R, and meets the QRD.

Recommended Prep: Mathematics 1b or a grade of 4 or 5 on the Calculus BC Advanced Placement Examination, plus an interest both in proving mathematical results and in using them. No background in linear algebra, real analysis, or multivariable calculus is assumed.

Mathematics 23A  Section: 002  
Linear Algebra and Real Analysis I (111695)

Paul Bamberg

2020 Fall (4 Credits)  Schedule:  F 1200 PM - 0245 PM

Instructor Permissions:  Instructor  Enrollment Cap:  60

Linear algebra: vectors, linear transformations and matrices, scalar and vector products, basis and dimension, eigenvectors and eigenvalues, including an introduction to the R scripting language. Single-variable real analysis: sequences and series, limits and continuity, derivatives, inverse functions, power series and Taylor series. Multivariable real analysis and calculus: topology of Euclidean space, limits, continuity, and differentiation in n dimensions, inverse and implicit functions, manifolds, Lagrange multipliers, path integrals, div, grad, and curl. Emphasis on topics that are applicable to fields such as physics, economics, and computer science, but students are also expected to learn how to prove key results.

Course Notes: Students are expected to watch videos of the lectures from Fall 2015 before attending class. Weekly two-hour classes will consist of a one-hour seminar in which students present key definitions and proofs and a one-hour activity-based session in which students work in small groups to solve problems. Students are expected to continue in either Mathematics 23b (recommended for students who are thinking of concentrating in mathematics, the physical sciences, or engineering) or Mathematics 23c (recommended for students who are not sure of their concentration, or who are thinking about a concentration in the social sciences, economics, computer science, life sciences or data science). Either alternative will provide a solid foundation for a concentration in mathematics or any field that uses mathematics.

Class Notes: This section assumes no background in sequences and series, covers single-variable real analysis in detail, has no programming assignments, and does not meet the QRD.

Recommended Prep: Mathematics 1b or a grade of 4 or 5 on the Calculus BC Advanced Placement Examination, plus an interest both in proving mathematical results and in using them. No background in linear algebra, real analysis, or multivariable calculus is assumed.
Mathematics 23B

Linear Algebra and Real Analysis II (145010)

Paul Bamberg

2021 Spring (4 Credits)  Schedule:  F 1200 PM - 0245 PM

Instructor Permissions:  None  Enrollment Cap:  n/a

A rigorous, integrated treatment of linear algebra and multivariable calculus. Topics: Riemann and Lebesgue integration, determinants, change of variables, volume of manifolds, differential forms, and exterior derivative. Stokes’s theorem is presented both in the language of vector analysis (div, grad, and curl) and in the language of differential forms.

Course Notes:  Mathematics 23b is a sequel to Mathematics 23a, recommended for students who are thinking of concentrating in mathematics, the physical sciences, or engineering. Students are expected to watch videos of the lectures from spring 2016 before attending class. Weekly two-hour classes will consist of a one-hour seminar in which students present key definitions and proofs and a one-hour activity-based session in which students work in small groups to solve problems.

Recommended Prep:  Mathematics 23a.

Requirements:  Prerequisite: MATH 23A OR (MATH 21A AND MATH 21B) AND (Not to be taken in addition to MATH 23C)

Additional Course Attributes:

Mathematics 23C

Mathematics for Computation, Statistics, and Data Science (205386)

Paul Bamberg

2021 Spring (4 Credits)  Schedule:  TR 0130 PM - 0245 PM

Instructor Permissions:  None  Enrollment Cap:  n/a

Proof strategies and logic. Sets, countability, sigma fields, and axiomatic foundations of probability. Summation of series and evaluation of multiple integrals, with emphasis on calculation of expectation and variance. Abstract vector spaces and inner product spaces, with applications to analysis of large datasets. Key functions and theorems of mathematical statistics. A brief introduction to classical vector calculus as used in electromagnetic theory. Students will learn to use some of the statistical and graphical display tools in the R scription language.
Course Notes: This course is a sequel to Mathematics 23a, recommended for students who are not sure of their concentration or who are thinking about a concentration in the social sciences, economics, computer science, life sciences or data science. Graduate students wishing to take this course for credit should speak with Dr. Bamberg to arrange enrollment in Mathematics 370 instead.

Recommended Prep: Mathematics 23a or Mathematics 21a and 21b. The latter option is for seniors who are preparing for graduate programs in statistics, computer science, or data science.

Requirements: Prerequisite: MATH 23A OR (MATH 21A AND MATH 21B) AND (Not to be taken in addition to MATH 23B)

Mathematics 55A

Studies in Algebra and Group Theory (113627)

Denis Auroux

2020 Fall (4 Credits) Schedule: MWF 1030 AM - 1145 AM

Instructor Permissions: Instructor Enrollment Cap: n/a

A rigorous introduction to abstract algebra, including group theory and linear algebra. This course covers the equivalent of Mathematics 25a and Mathematics 122, and prepares students for Mathematics 123 and other advanced courses in number theory and algebra. (A course in analysis such as Mathematics 25b or 55b is recommended for Spring semester.)

Course Notes: Mathematics 55a is an intensive course for students who are comfortable with abstract mathematics. (Students without this background will gain it and learn the material from Math 55a,b in other courses by continuing into the Mathematics Concentration as sophomores.) Students can switch between Mathematics 55a and either Mathematics 25a, 23a, 22a, 21a during the first three weeks without penalty.

Live lectures will take place Mondays, Wednesdays, and Fridays, 10:30-11:45am, US Eastern time. Attendance is recommended, but not mandatory. The instructor will offer other opportunities for interaction with students who cannot attend the live lecture.

Recommended Prep: Familiarity with proofs and abstract reasoning; and commitment to a fast moving course.

Studies in Real and Complex analysis (112871)

Denis Auroux
2021 Spring (4 Credits)  Schedule:  MWF 1030 AM - 1145 AM
Instructor Permissions:  Instructor  Enrollment Cap:  n/a

A rigorous introduction to real and complex analysis. This course covers the equivalent of Mathematics 25b and Mathematics 113, and prepares students for Mathematics 114 and other advanced courses in analysis.

Course Notes:  Mathematics 55b is an intensive course for students having significant experience with abstract mathematics.

Requirements:  Prerequisite: Mathematics 55A

Mathematics  60R

Reading Course for Senior Honors Candidates (216307)

Cliff Taubes

2021 Spring (4 Credits)  Schedule:  TBD
Instructor Permissions:  None  Enrollment Cap:  n/a

Mathematics concentrators in their final two undergraduate semesters can take this course to work individually on their senior thesis.

Course Notes:  Limited to candidates in Mathematics who obtain the permission of both the faculty member under whom they want to work and the Director of Undergraduate Studies. May not count for concentration in Mathematics without special permission from the Director of Undergraduate Studies. Graded sat/ unsat only.

Additional Course Attributes:

Mathematics 101
Sets, Groups and Topology (122943)

Ana Balibanu

2020 Fall (4 Credits)  Schedule:  MW 1200 PM - 0115 PM
Instructor Permissions:  None  Enrollment Cap:  n/a

An introduction to rigorous mathematics, axioms, and proofs, via topics including set theory, symmetry groups, and low-dimensional topology.

Course Notes:  Familiarity with algebra, geometry and/or calculus is desirable.
Students who have already taken Mathematics 22a,b, 23a,b, 25a,b or 55a,b should not take this course for credit. This course given fall term and repeated spring term.

Recommended Prep: An interest in mathematical reasoning. Acquaintance with algebra, geometry and/or calculus is desirable. Students who have already taken Math 25a,b or 55a,b should not take this course for credit.

Requirements: Anti-Req: Not to be taken in addition to Mathematics 23a,b or 25a,b or 55a,b.

### Mathematics 112

Introductory Real Analysis (109817)

Christian Brenneck

2021 Spring (4 Credits)  

Schedule: MW 0900 AM - 1015 AM

Instructor Permissions: None  

Enrollment Cap: n/a
An introduction to mathematical analysis and the theory behind calculus. An emphasis on learning to understand and construct proofs. Covers limits and continuity in metric spaces, uniform convergence and spaces of functions, the Riemann integral.

Recommended Prep: Mathematics 19a,b or 21a,b and either an ability to write proofs or concurrent enrollment in Mathematics 101 or 102; or an equivalent background in mathematics.

Requirements: Anti-Req: Not to be taken in addition to Mathematics 23a,b or 25a,b or 55a,b.

**Mathematics 113**

Complex Analysis (113608)

*Horng-Tzer Yau*

2021 Spring (4 Credits)  
Schedule: TR 0900 AM - 1015 AM

Instructor Permissions: None  
Enrollment Cap: n/a

Analytic functions of one complex variable: power series expansions, contour integrals, Cauchy's theorem, Laurent series and the residue theorem. Some applications to real analysis, including the evaluation of indefinite integrals. An introduction to some special functions.

Recommended Prep: Not recommended for most students who took Mathematics 55a and/or Mathematics 55b. Talk to the Director of Undergraduate Studies in Mathematics if you took Mathematics 55a and/or 55b and wish to take this course.

Additional Course Attributes:

**Mathematics 114**

Analysis of Function Spaces, Measure and Integration (123227)

*Christian Brennecke*

2020 Fall (4 Credits)  
Schedule: MW 1030 AM - 1145 AM

Instructor Permissions: None  
Enrollment Cap: n/a

Lebesgue measure and integration; general topology; introduction to $L^p$ spaces, Banach and Hilbert spaces, and duality.

Recommended Prep: Mathematics 22a,b, 23a,b or 25a,b or 55a,b or 112; or an equivalent background in mathematics.
Mathematics 116

Real Analysis, Convexity, and Optimization (118302)

Paul Bamberg

2020 Fall (4 Credits)  Schedule: TR 1030 AM - 1145 AM

Instructor Permissions: None  Enrollment Cap: n/a

Develops the theory of convex sets, normed infinite-dimensional vector spaces, and convex functionals and applies it as a unifying principle to a variety of optimization problems such as resource allocation, production planning, and optimal control. Topics include Hilbert space, dual spaces, the Hahn-Banach theorem, the Riesz representation theorem, calculus of variations, and Fenchel duality. Students will be expected to understand and come up with proofs of theorems in real and functional analysis.

Recommended Prep: Mathematics 22a,b, 23a,b or 25a,b or 55a,b; or Mathematics 21a,b plus at least one other more advanced course in mathematics; or an equivalent background in mathematics.

Mathematics 117

Probability and Random Processes with Economic Applications (127947)

Paul Bamberg

2021 Spring (4 Credits)  Schedule: TR 1030 AM - 1145 AM

Instructor Permissions: None  Enrollment Cap: n/a

A self-contained treatment of the theory of probability and random processes with specific application to the theory of option pricing. Topics: axioms for probability, calculation of expectation by means of Lebesgue integration, conditional probability and conditional expectation, martingales, random walks and Wiener processes, and the Black-Scholes formula for option pricing. Students will work in small groups to investigate applications of the theory and to prove key results.
Mathematics 118R
Dynamical Systems (118429)
Laura DeMarco
2020 Fall (4 Credits)     Schedule:     MW 0130 PM - 0245 PM
Instructor Permissions: None     Enrollment Cap: n/a

Introduction to dynamical systems theory with a view toward applications. Topics include existence and uniqueness theorems for flows, qualitative study of equilibria and attractors, iterated maps, and bifurcation theory.

Recommended Prep: Mathematics 19a,b or 21a,b or Math 22a,b,or Math 23a,b or Math 25a,b or Math 55a,b; or an equivalent background in mathematics.

Additional Course Attributes:

Mathematics 121
Linear Algebra and Applications (120228)
Dylan Wilson
2020 Fall (4 Credits)     Schedule:     MW 1200 PM - 0115 PM
Instructor Permissions: None     Enrollment Cap: n/a

Real and complex vector spaces, linear transformations, determinants, inner products, dual spaces, and eigenvalue problems. Applications to some or all of the following: Geometry, systems of linear differential equations, optimization, and Markov processes. This course emphasizes learning to understand and write rigorous mathematics.

Recommended Prep: Mathematics 19b or 21b or an equivalent background in mathematics.

Requirements:      Anti-req: Not to be taken in addition to Mathematics 22b, 23a or 25a or 55a.

Additional Course Attributes:

<table>
<thead>
<tr>

</tbody>
</table>

Mathematics 122
Algebra I: Theory of Groups and Vector Spaces (122603)
Peter Kronheimer
Niki Myrto Mavraki
2020 Fall (4 Credits)     Schedule:     TBD
The theory of groups and group actions, rings, ideals and factorization.

Recommended Prep: Not recommended for most students who took Mathematics 55a and/or Mathematics 55b. Talk to the Director of Undergraduate Studies in Mathematics if you took Mathematics 55a and/or Mathematics 55b and wish to take this course.

### Mathematics 123

Algebra II: Theory of Rings and Fields (116503)

*Mark Kisin*

2021 Spring (4 Credits)  
**Schedule:** TR 0300 PM - 0415 PM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Rings and modules. Polynomial rings. Field extensions and the basic theorems of Galois theory. Structure theorems for modules.

**Requirements:**  
Prerequisite: Mathematics 122 or Mathematics 55a

### Additional Course Attributes:

### Mathematics 124

Number Theory (111533)

*Melanie Wood*

2021 Spring (4 Credits)  
**Schedule:** MW 1200 PM - 0115 PM

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Factorization and the primes; congruences; quadratic residues and reciprocity; continued fractions and approximations; Pell's equation; selected Diophantine equations; theory of integral quadratic forms. Also, selected applications to coding, introduction to elliptic curves and introduction to zeta functions if time permits.

**Recommended Prep:** Mathematics 101 or 122 or 25a or 23a; or 55a which can be taken concurrently; or an equivalent experience and comfort level with abstract mathematics.
Mathematics 129

Number Fields (115734)

*Dennis Gaitsgory*

2021 Spring (4 Credits)  
Schedule: TR 1200 PM - 0115 PM

Instructor Permissions: None  
Enrollment Cap: n/a

Algebraic number theory: number fields, unique factorization of ideals, finiteness of class group, structure of unit group, Frobenius elements, local fields, ramification, weak approximation, adeles, and ideles.

Recommended Prep: Knowledge of the material in Mathematics 123.

Requirements: Prerequisite: Mathematics 123

Mathematics 130

Classical Geometry (123211)

*Man-Wai Cheung*

2021 Spring (4 Credits)  
Schedule: TR 0900 AM - 1015 AM

Instructor Permissions: None  
Enrollment Cap: n/a

Presents several classical geometries, these being the affine, projective, Euclidean, spherical and hyperbolic geometries. They are viewed from many different perspectives, some historical and some very topical. Emphasis on reading and writing proofs.

Recommended Prep: Mathematics 19a,b or 21a,b or 22a,b or 23a or 25a or 55a which may be taken concurrently; or an equivalent background in mathematics.
First, an introduction to abstract topological spaces, their properties (compactness, connectedness, metrizability) and their corresponding continuous functions and mappings. Then, an introduction to algebraic topology including homotopy theory, fundamental groups and covering spaces. (See the course website for plans to accommodate diverse time zones of students in this course.)

Recommended Prep: Some acquaintance with metric space topology as taught in Mathematics 22a,b, 23a,b, 25a,b, 55a,b, 101, 102, or 112; and with groups as taught in Mathematics 101, 122 or 55a.

Mathematics 136

Differential Geometry (111133)

Christopher Gerig

2020 Fall (4 Credits) Schedule: WF 0900 AM - 1015 AM

Instructor Permissions: None Enrollment Cap: n/a

The course is an introduction to Riemannian geometry with the focus (for the most part) being the Riemannian geometry of curves and surfaces in space where the fundamental notions can be visualized.

Recommended Prep: Mathematics 19a,b or 21a,b or 22a,b or 23a or 25a or 55a (may be taken concurrently); or an equivalent background in mathematics.
Mathematics 137

Algebraic Geometry (116452)

Fabian Gundlach

2021 Spring (4 Credits)

Schedule: WF 0130 PM - 0245 PM

Instructor Permissions: None

Enrollment Cap: n/a

Affine and projective spaces, plane curves, Bezout’s theorem, singularities and genus of a plane curve, Riemann-Roch theorem.

Recommended Prep: Knowledge of the material in Mathematics 123.

Requirements: Prerequisite: Mathematics 123

Mathematics 145B

Set Theory II (156120)

Assaf Shani

2020 Fall (4 Credits)

Schedule: TR 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap: n/a

An introduction to large cardinals and their inner models, with special emphasis on Woodin’s recent advances toward finding an ultimate version of Godel’s L. Topics include: Weak extender models, the HOD Dichotomy Theorem, and the HOD Conjecture. (After the first lecture, the course will arrange meeting times to accommodate all students.)

Requirements: Prerequisite: Mathematics 145A

Mathematics 152

Discrete Mathematics (116191)
An introduction to finite groups, finite fields, finite geometry, finite topology, combinatorics, graph theory, and (for section 2 only) elementary algebraic topology. A recurring theme of the course is the symmetry group of the regular icosahedron. Elementary category theory will be introduced as a unifying principle. Taught in a seminar format: students will gain experience in presenting proofs at the blackboard.

Course Notes: Covers material used in Computer Science 121 and Computer Science 124. Enrollment limited to 16.

Recommended Prep: For section 1: Mathematics 19b or 21b. Previous experience with proofs is not required. For section 2: Mathematics 23a or 25a or an equivalent background in mathematics that includes experience with proofs.

Requirements: Not to be taken in addition to Computer Science 20, Mathematics 55a/b or Mathematics 122.

Mathematics 154

Probability Theory (113811)

Cesar Cuerva

An introduction to probability theory. Discrete and continuous random variables; distribution and density functions for one and two random variables; conditional probability. Generating functions, weak and strong laws of large numbers, and the central limit theorem. Geometrical probability, random walks, and Markov processes.

Recommended Prep: A previous mathematics course at the level of Mathematics 19ab, 21ab, or a higher number. For students from 19ab or 21ab, previous or concurrent enrollment in Math 101 or 102 or 112 may be helpful. Freshmen who did well in Math 22a, 23a, 25a or 55a fall term are also welcome to take the course.

Mathematics 155R Section: 01
Combinatorics (116196)

Piotr Pstragowski

2020 Fall (4 Credits) Schedule: WF 0300 PM - 0415 PM
Instructor Permissions: None Enrollment Cap: n/a

An introduction to counting techniques and other methods in finite mathematics. Possible topics include: the inclusion-exclusion principle and Mobius inversion, graph theory, generating functions, Ramsey's theorem and its variants, probabilistic methods.

Recommended Prep: Prerequisites: familiarity with proofs. A previous mathematics course at the level of Mathematics 23ab, 25ab, 55ab, 101, 102, or 112 would be enough.

Mathematics 157
Mathematics in the World (159763)

Joseph D. Harris

2021 Spring (4 Credits) Schedule: TR 0130 PM - 0245 PM
Instructor Permissions: None Enrollment Cap: n/a

An interactive introduction to problem solving with an emphasis on subjects with comprehensive applications. Each class will be focused around a group of questions with a common topic: logic, information, number theory, probability, and algorithms.

Recommended Prep: Mathematics 19b or 21b or 22a,b or 23a; or an equivalent background in mathematics. More importantly, students should have a broad mathematical curiosity and be eager to brainstorm during in-class problem solving sessions.

Additional Course Attributes:

Mathematics 163
Derived Categories in Geometry and Algebra (215941)

Elden Elmanto

2021 Spring (4 Credits) Schedule: TR 0900 AM - 1015 AM
Instructor Permissions: None Enrollment Cap: n/a
Derived categories is the right framework to view derived functors. (Ext, Tor, higher direct images, cohomology, etc.) in geometry and algebra. We will read “modern classics” in this theory, from Mukai's construction of non-isomorphic varieties with equivalent derived categories, the work of the Moscow school on semiorthogonal decompositions and exception collections, Kontsevich's formation of "homological mirror symmetry" and the more recent notion of derived algebraic geometry. Participants will give talks with prior consultation with the instructor on top of an additional practice talk with the group.

**Recommended Prep:** A first course in algebraic geometry and algebraic topology.

### Mathematics 213A

**Advanced Complex Analysis (110880)**

*Yum-Tong Siu*

2020 Fall (4 Credits)  
**Schedule:** TR 0300 PM - 0415 PM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Fundamentals of complex analysis, and further topics such as elliptic functions, canonical products, conformal mappings, the zeta function and prime number theorem, and Nevanlinna theory.

**Prerequisites:** Basic complex analysis, topology of covering spaces, differential forms.

**Recommended Prep:** Basic complex analysis, topology of covering spaces, differential forms.
MATHEMATICS 213BR Section: LEC
Riemann Surfaces (111824)

Yum-Tong Siu

2021 Spring (4 Credits)  Schedule:  TR 0300 PM - 0415 PM
Instructor Permissions:  None  Enrollment Cap:  n/a

Fundamentals of algebraic curves as complex manifolds of dimension one. Topics may include branched coverings, sheaves and cohomology, potential theory, uniformization and moduli.

Recommended Prep: Knowledge of the material in Mathematics 213a.

MATHEMATICS 221

Commutative Algebra (123232)

Mihnea Popa

2020 Fall (4 Credits)  Schedule:  WF 1030 AM - 1145 AM
Instructor Permissions:  None  Enrollment Cap:  n/a

A graduate level course in commutative algebra. Topics may include, but are not limited to, Hilbert's Basis Theorem and Nullstellensatz, ideals, spectra, localization, primary decomposition, Artin-Rees Lemma, flat families and Tor, completions of rings, Noether Normalization, systems of parameters, DVRs, dimension theory, Hilbert-Samuel polynomials, depth, Cohen-Macaulay and regular rings, homological methods.

Recommended Prep: Mathematics 123.

MATHEMATICS 222

Lie Groups and Lie Algebras (123238)

Mark Shusterman
Lie theory, including the classification of semi-simple Lie algebras and/or compact Lie groups and their representations.

Recommended Prep: Knowledge of the material in Mathematics 114, 123 and 132.

Attribute | Value(s) |
--- | --- |
All: Cross Reg Availability | Available for Harvard Cross Registration |
FAS: Course Level | Primarily for Graduate Students |
FAS Divisional Distribution | Science & Engineering & Applied Science |

Mathematics 223A Section: LECT
Algebraic Number Theory (123239)
Fabian Gundlach
2020 Fall (4 Credits)
Instructor Permissions: None
Enrollment Cap: n/a
A graduate introduction to algebraic number theory. Topics: the structure of ideal class groups, groups of units, a study of zeta functions and L-functions, local fields, Galois cohomology, local class field theory, and local duality.

Recommended Prep: Knowledge of the material in Mathematics 129.

Attribute | Value(s) |

Introduction to Analytic Number Theory (123242)

Noam D. Elkies

2021 Spring (4 Credits)  Schedule: TR 1030 AM - 1145 AM
Instructor Permissions: None  Enrollment Cap: n/a

Fundamental methods, results, and problems of analytic number theory. Riemann zeta function and the Prime Number Theorem; Dirichlet's theorem on primes in arithmetic progressions; lower bounds on discriminants from functional equations; sieve methods, analytic estimates on exponential sums, and their applications.

Recommended Prep: Knowledge of the material in Mathematics 113 and 123.

Finite Height Chromatic Homotopy Theory (215943)

Piotr Pstragowski

2021 Spring (4 Credits) Schedule: WF 0300 PM - 0415 PM
Instructor Permissions: None Enrollment Cap: n/a

In chromatic homotopy theory, one explores the link between the arithmetic of formal groups and the stable homotopy theory; we will focus on those aspects of this relationship which are visible at finite height. We will begin with the local structure of the moduli of formal groups and discuss how it is reflected and the topological side through the Lubin-Tate spectrum, then describe the current state of knowledge on several open questions on the subject, such as the vanishing and the splitting conjectures. Further topics will depend on the interests of the participants.

Mathematics 263Y

Analytic Methods in Geometry (215992)

Shing-Tung Yau

2020 Fall (4 Credits) Schedule: TR 0900 AM - 1015 AM
Instructor Permissions: None Enrollment Cap: n/a

A discussion of ideas of nonlinear partial differential equations and geometric analysis, including their applications to algebraic geometry and general relativity. Construction of metrics and gauge field on complex manifolds will be discussed.
Free Probability theory was introduced by Voiculescu almost forty years ago in the context of operator algebras. Since then, the theory has found connections to a wide range of areas of mathematics. We will study the general theory and its links to random matrices and representation theory. Specifically, we first discuss general aspects of the probability theory, including combinatorial (free cumulants, non-crossing partitions) and analytical (R-transform, subordination, central limit theorem). Then we apply it to the study of large random matrices. Finally, we discuss application to the representation theory of large groups (symmetric and unitary groups of growing rank).

As we vary over number fields, what distribution of class groups do we see? More generally, as we vary over number fields, how many (and how large) unramified extensions do the number fields have? Starting with the case of quadratic fields, we will learn about what was classically known about class groups of quadratic fields, and the conjectures of Cohen and Lenstra on their distribution, including many different motivations for the conjectures. We will learn about the relationship between class group distributions and counting number fields, and learn about the heuristics on counting number fields. We will learn about probability distributions on abelian groups that arise in these conjectures, and how they are determined by their moments. We will then learn what is known about how this picture generalizes to arbitrary number fields. We will then learn about two major recent research directions in this area: (1) Bounding class groups of number fields, and (2) Applications of topological component counting to class groups of function fields.

The lectures will reference many recent papers and also include a significant amount of material that is considered "known by experts" but is not in the literature. There will be weekly problem sets to give students a chance to work with the concepts introduced. Project ideas relating to the course topics will be suggested, and a final project will be required of undergraduates, which can include any blend of exposition, original computations, and computer programming. Some project topics could lead to original research by graduate students beyond the course.
Students in this class should have a strong, general undergraduate level math background plus familiarity with algebraic number theory and aspects of class field theory and algebraic geometry. People with questions about whether their math background prepares them for this class should contact Professor Wood.

Mathematics 275
Ergodic Theory, Geometry and Dynamics (216468)

Curtis McMullen

2020 Fall (4 Credits)  Schedule: TR 1200 PM - 0115 PM
Instructor Permissions: None  Enrollment Cap: n/a

A survey of fundamental results and current research. Topics may include: Ergodic theory and unitary operators; hyperbolic manifolds; geodesic and horocycle flows; Mostow rigidity; Kazhdan's property T; expanding graphs; martingales, random walks and Furstenberg's theorem; unipotent flows and Ratner rigidity; planes in 3-manifolds and moduli spaces.

Mathematics 282X

Topics in Invariant Descriptive Set Theory (215950)

Assaf Shani

2021 Spring (4 Credits) Schedule: WF 0300 PM - 0415 PM
Instructor Permissions: None Enrollment Cap: n/a

A problem in mathematics is classifying objects up to some notion of isomorphism. Famous examples include: the classification of compact orientable surfaces up to homeomorphism by their genus and classification of Bernoulli shifts up to isomorphism by their entropy. Descriptive set theory allows for a precise study of the complexity of various classification problems and the possible invariants which they admit. Topics: Polish groups and their actions on Polish spaces, definable equivalence relations, classifications problems and invariants, and interactions between these topics and forcing. For example, we will develop Hjorth’s theory of turbulence, which provides a method for showing that certain isomorphism problems cannot be classified by any “reasonable invariants”, and give an equivalent condition in terms of forcing, recently introduced by Larson-Zapletal. The topics will be flexible depending on students’ interests.

Birational Geometry of Algebraic Varieties (215980)

Dori Bejleri

2020 Fall (4 Credits) Schedule: MW 1200 PM - 0115 PM

Instructor Permissions: None Enrollment Cap: n/a

The classification of algebraic varieties up to birational equivalence is one of the major questions of higher dimensional algebraic geometry. This course will serve as an introduction to the subject, focusing on the minimal model program (MMP). The MMP is the part of the classification program which attempts to describe the "simplest" representatives within a given birational equivalence class. If time permits, we will discuss applications of the MMP to moduli of higher dimensional varieties.

Genetics 201

Principles of Genetics (113752)

Fred Winston
Maxwell Heiman
Thomas Bernhardt
Steven McCarroll
Jenna Galloway
Stephanie Mohr

2020 Fall (4 Credits)  Schedule:  TBD
Instructor Permissions:  None  Enrollment Cap:  n/a

An in-depth survey of genetics, beginning with basic principles and extending to modern approaches and special topics. We will draw on examples from various systems, including bacteria, yeast, Drosophila, C. elegans, zebrafish, mouse, and human.

Course Notes:  Intended for first-year graduate students. Offered jointly with the Medical School as GN 701.0.

Class Notes:  This course will be taught online in 2020. Lectures, problems sets, and exams will be posted at the course website during the semester, between Sept 2 - Dec 10. The first lecture with an introduction to the course will be posted at the course web site on Wed., Sept 2.

Additional Course Attributes:

Genetics 216

Advanced Topics in Gene Expression (111358)

Fred Winston
Robert Kingston
Stephen Buratowski

2021 Spring (4 Credits)  Schedule:  TBD
Instructor Permissions:  Instructor  Enrollment Cap:  16

This course covers different topics in gene regulation, covering genetic, genomic, biochemical, and molecular approaches. A small number of topics are discussed in depth, using the primary literature. Topics range from prokaryotic transcription to eukaryotic development.

Course Notes:  BCMP 310QC has merged with Genetics 216. Offered jointly with the
Medical School as GN 703.0.

**Class Notes:**
Classes will be held Jan 28 - May 5, in TMEC 130.

**Recommended Prep:**
BCMP 200 and Genetics 201. All students taking Genetics 216 should read and be prepared to discuss the papers for the first meeting. The readings can be downloaded from the course website.

**Genetics 228**

Genetics in Medicine - From Bench to Bedside (121745)

*David Sweetser*

2021 Spring (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:**  
**Enrollment Cap:** 40

Focus on translational medicine: the application of basic genetic discoveries to human disease. Each three-hour class will focus on a specific genetic disorder and the approaches currently used to speed the transfer of knowledge from the laboratory to the clinic. Each class will include a clinical discussion, a patient presentation if appropriate, followed by lectures, a detailed discussion of recent laboratory findings and a student led journal club. Lecturers will highlight current molecular, technological, bioinformatic and statistical approaches that are being used to advance the study of human disease. There is no exam. Students will present one paper per session in a journal club style. Attendance and active participation for the duration of all class meetings is required. If you are unable to attend class, or cannot be present for the entire session you are expected to contact the course instructor. Two incomplete or missed sessions will result in a failing grade.

Please do not sign up if you know you will have to miss 2 or more sessions. For more information visit https://ecor.mgh.harvard.edu/Default.aspx?node_id=375

**Course Notes:**
Course will be held at MGH (transportation provided to MGH). Offered jointly with the Medical School as GN 711.0. Dental students should cross register for Genetics 228 on my.harvard to receive updated assignments and readings.

**Recommended Prep:**
Genetics 201 or equivalent.

**Genetics 300**

Advanced Topics in Genetics (108152)
Rosalind Segal

2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a

A series of reading and discussion seminars, each running for a half term (seven weeks). Different topics are covered each term.

Course Notes: Two seminars, which can be taken in different terms, are required for credit. Non-DMS students must get permission from the Division of Medical Sciences before registering for this course. Please contact us at 432-0162 or visit the DMS Office at T-MEC 435, 260 Longwood Avenue, Boston.

Teaching 101: Bringing Effective Teaching Practices to your Classroom (127555)

Gavin Porter  

Deepali Ravel

2021 Spring (2 Credits)  

Schedule: TBD

Instructor Permissions: Instructor  

Enrollment Cap: 12

A course to develop the skills of effective teaching. Primary focus is hands-on experience with objective-oriented lesson planning and execution, with emphasis on active learning techniques and how they can be applied in both large and small enrollment classes.

Class Notes: Classes will be held in TMEC 330, Feb 12 - Apr 15. Please note that on Wed, Mar 25, class is scheduled 10am - 3pm, in TMEC 328.

Instructor Permissions: Instructor Enrollment Cap: 15

The goal of this course is to apply a number of genomic tools over the course of a semester-long guided research project, learn how to utilize the complimentary statistical tools for analysis, and to discuss the strategies and final data presentation from published papers. Using example sequence datasets, students will analyze differential gene expression and changes. The class will explore the featured tool, related statistical methods together in an interactive manner followed by a discussion of the tools/stats as seen in
published work. After taking this class students will be able to apply each online tool to their own research and will be able to identify and use new genomic resources to address future research directions.

Course Notes: Students will need to bring a laptop to class each day.
Class Notes: Classes meet Feb 4 - Apr 9, in TMEC 445.
Recommended Prep: Genetics 201 or with permission from the instructor.

Advanced Experimental Methods: Experimental Approaches in Genetic Analysis (125362)

*Fred Winston*

2021 Spring (2 Credits)  

**Schedule:** TBD  

**Instructor Permissions:** Instructor  

**Enrollment Cap:** 8

The goal of this course is to provide a survey of major topics and themes in genetics and genetic analysis in conjunction with exposure to a variety of experimental techniques, technologies, and model systems. Building on fundamental principles learned in Genetics 201, students will gain knowledge and hands-on experience in using genetic approaches to address biologically relevant questions in a variety of experimental systems, such as Drosophila, yeast, C. elegans, and humans. The course will combine lectures and hands-on laboratory activities emphasizing experimental methods, hypothesis generation and testing, and data analysis.

Students will be graded on a pass/fail basis. In order to earn a passing grade and receive credit for this course, students must attend and arrive prepared for every course session. Students must also complete daily evaluations of course activities and a final overall course evaluation.

**Course Notes:** This is an intensive January course. Priority will be given to first year graduate students. Students must first contact the faculty for enrollment approval prior to registration for the course. Meeting Dates/Times: Approximately 8:30am - 6:00pm each day for 8 days.

**Class Notes:** 2020 Schedule  

- Tuesday, Jan 14th: Greer lab – Introduction to C. elegans  
- Wednesday, Jan 15th: Wu lab – Introduction to Drosophila  
- Thursday, Jan 16th: Winston lab – Introduction to Yeast  
- Saturday, Jan 18th: Morton lab – Human Cytogenetics  
- Sunday, Jan 19th: Warman lab – Mouse and Human genetics  
- Tuesday, Jan 21st: Kostic lab – Bacterial Genetics  
- Wednesday, Jan 22nd: Harris Lab – Introduction to Zebrafish  
- Friday, Jan 24th: Sinclair Lab – Introduction to Mouse Genetics

**Recommended Prep:** Students must also enroll in or have taken Genetics 201, or obtain permission from the instructor.

Subject: Immunology
# Immunology 201

Advanced Topics in Immunology (148547)

*Thorsten Mempel*

*Shiv Pillai*

2020 Fall (4 Credits)  
**Schedule:** TR 1230 PM - 0245 PM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** 50  

This course provides an intensive and in-depth examination of a selection of fundamental concepts in immunology. It takes advantage of the unique expertise of members of our Immunology faculty to illustrate how these concepts have been established and continue to be developed based on seminal work in the field including contributions from their own laboratories.

**Course Notes:** Intended for students who have had prior exposure to immunology on the undergraduate level. In the absence of such exposure, students must obtain the permission of the Course Director. Offered jointly with the Medical School as IM 702.0.

**Class Notes:** Meeting Dates Sept 3 - Dec 3

**Recommended Prep:** A background in genetics and biochemistry strongly recommended.

# Immunology 202

Immune and Inflammatory Diseases (148503)

*Filip Swirski*

*Mikael Pittet*

2021 Spring (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a  

IMM202 builds on IMM201 and explores fundamental principles of immunology in the context of immune and inflammatory diseases. Through a series of lectures and discussion, students will survey a broad range of diseases in which the immune system is essential. Topics will include not only diseases that mobilize classical immunity but also conditions to which we now know the immune systems contributes. Students will use oral and written exercises to learn how to evaluate and synthesize major concepts and tools germane to immunology's relationship to bioscience.

**Course Notes:** Offered jointly with the Medical School as IM 712.0.

**Class Notes:** Classes will be held Jan 28 - May 7, in Modell 100A.

**Recommended Prep:** Immunology 201 or its equivalent.

Bruce Walker
Facundo Batista
Michael Birnbaum
Galit Alter
Alejandro Balazs
Douglas Kwon

2021 Spring (4 Credits)  Schedule:  TBD

Instructor Permissions:  Instructor  Enrollment Cap:  20

Semester long course, intended for graduate students at Harvard and MIT, jointly taught by Harvard and MIT faculty members at the Ragon Institute of MGH, MIT, and Harvard.

Class Notes: Lectures will be held at the Ragon Institute auditorium on Tuesdays (2:30 - 3:30pm) and are open to auditors. Discussion sections will be held on Thursdays (3 - 4pm) with limited enrollment. Classes begin on Tue, Feb 4.

Recommended Prep: Students should have completed or be concurrently enrolled in a basic immunology course.

Neuro-Immunology in Development, Regeneration and Disease (130342)

*Isaac Chiu*

*Beth Stevens*

*Michael Carroll*

*Jun Huh*

2021 Spring (2 Credits)  

Schedule: TBD  

Instructor Permissions: None  

Enrollment Cap: n/a  

It is increasingly clear that the nervous system and immune system share parallel molecular pathways, and communication between neurons and immune cells play significant roles in homeostasis and disease. This course will investigate current topics in neuro-immunology: CNS development, chronic pain, neuro-degeneration, aging, axon regeneration, auto-immunity and infection. We will focus our discussions on molecular mechanisms shared by the immune and nervous systems and the molecular cross-talk between these two systems.

Course Notes: Each class will cover a specific topic in neuro-immunology. Students should be prepared to lead discussions on pre-selected papers for each session.

Class Notes: Classes will be held Mar 18 - May 6, in TMEC 330.

Cancer Immunology (130614)

*Kai Wucherpfennig*

*Cathy Wu*

*Stephanie Dougan*

*Philip Kranzusch*

*Judith Agudo*

2020 Fall (2 Credits)  

Schedule: TBD  

Instructor Permissions: Instructor  

Enrollment Cap: 20  

There have been many exciting recent developments in the cancer immunology field, and multiple therapeutic approaches have shown efficacy against diverse types of cancer. This course will emphasize new mechanistic insights, specifically on the following topics: Mechanisms of spontaneous protective anti-tumor immunity; Key effector cell populations of anti-tumor immunity; Innate immune pathways in tumor immunity; Inflammation and tumor microenvironment; Immunosuppressive mechanisms in tumor immunity; Targeting of inhibitory receptors; Cancer vaccines.

Course Notes: Must be PhD student at Harvard or postdoctoral fellow.

Immunology 312QC
Applied Statistics and High Throughput Data Analysis for Immunologists (215744)

Meromit Singer
Alos Diallo

2021 Spring (2 Credits)  Schedule: TBD
Instructor Permissions: Instructor  Enrollment Cap: 50

This course will provide a friendly, fun, and exciting entry point for students who wish to build confidence in data analysis and the application of statistical tools and packages. Lecture topics will include fundamentals of statistical analysis (e.g., hypothesis testing, inferring the mean, experiment design), modeling, and classification.

Course Notes: There is an additional workshop component being offered as IMMUN 313QC primarily for first-year Immunology PhD students. Workshops may be open to other graduate students with prior instructor consent.

Class Notes: Course dates: Jan 31 - Mar 13. Lectures will be held on Fridays in
Modell 100A. IMMUN 313QC workshops will be held on Mondays in Modell 259.

Strategies to Achieve Durable Anti-Microbial Host Defense (211216)

*Wayne Marasco*

*Quan Zhu*

2021 Spring (2 Credits) Schedule: TBD
Instructor Permissions: Instructor Enrollment Cap: 15

Achieving long term immunity in humans to emerging viral pathogens is an important component of global health for which there are broad socioeconomic and geopolitical implications. Yet this effort has been thwarted because of genetic variability of circulating strains and ease of undergoing antibody neutralization escape. In addition, zoonotic transfer of viruses to humans can lead to emergence of new viruses into the human population that can lead to pandemics in the absence of anti-viral herd immunity. This course will primarily focus on broadly neutralizing and protective anti-viral antibody responses and how critical epitope selection on viral glycoproteins that can help to achieve long-term immunity. We will examine through classical and contemporary readings several principles that can be used to design vaccines and anti-viral antibodies to target the virus's Achilles heel. Critical teachings in this class will include studying how immunoediting of viruses can drive neutralization escape and zoonotic transfer across species. We will discuss the molecular characteristics of bone marrow derived long-lived plasma cells. We will also discuss how to interrogate the broadly neutralizing antibody response to natural infection and vaccines using modern molecular techniques such as NGS and Ab RepSeq. There is also much effort in the field to engineer broadly neutralizing antibodies for passive immunotherapy as prophylactic, preemptive and therapeutic agents. These treatments include therapeutic antibody gene transfer and bi-and trispecific anti-viral monoclonal antibodies. Numerous viruses will be discussed including HIV and emerging influenza, coronaviruses, flaviviruses, alpha viruses, Ebola and others. We will touch on intracellular microbial pathogens. The course will be structured with 20-30 min didactic lectures by Dr. Marasco and other lecturers followed by discussion of 3-5 published papers on the assigned topic of the day.

Course Notes:

There has been explosive growth of our understanding of host defense against microbial infections. However, our immune responses are not always protective and in fact, can promote microbial evolution. The most dramatic examples of this comes from the study of RNA viruses where immune editing by the viruses results in neutralization escape which is commonly seen. Is this different from what cancer cells do? This course will be primarily immunology based but will provide a strong understanding of how to select the viral proteins that can be targeted to block virus attachment, uncoating and egress. We will focus on how we can establish durable antiviral immunity through active and passive immunization. We will get the pulse of the class and see what directions and topics we want to cover and some of the course readings can be tailored to this interest.
Class Notes: Classes will be held Jan 28 - Mar 31, in Modell 100A.

Recommended Prep: Background in immunology and virology is strongly recommended. Must be a PhD student at Harvard or postdoctoral fellow; otherwise, course director permission is required prior to enrollment.

Microbiology 202
Mechanisms of Bacterial Pathogenesis and Host Immune Response (126269)
This course focuses on molecular mechanisms of bacterial pathogenesis and the host response to infection. The class consists of lectures and group discussions emphasizing themes of pathogenesis, methods, results, and interpretations of classic and contemporary literature. Subjects including bacterial secretion systems, mechanisms of entry into host cells, biofilm formation, and motility are viewed primarily from the pathogen's perspective, whereas topics including inflammasome activation, TLR signaling, and adaptive immune responses provide a host-centric view. Additional sessions are spent examining current methods of antibiotic discovery and vaccine development. The course also introduces students to the wide diversity of pathogenic bacteria. Organisms discussed include pathogenic E. coli, Shigella species, Vibrio cholerae, Listeria monocytogenes, Chlamydia trachomatis, Pseudomonas aeruginosa and Staphylococcus aureus, as well as a discussion of the challenges presented by currently unculturable species. Where relevant, connections will also be made with pathogenesis and immune responses to viruses, parasites, and fungi.

Course Notes: Designed to complement Microbiology 201; however, students who have not taken Microbiology 201 previously are welcome. Designed for graduate students in their first year or beyond, however undergraduates with specific interest in the field may also enroll.

Class Notes: The Fall 2020 version of this course will include synchronous, online lectures and paper discussions as well as asynchronous paper reading and problem set assignments. Interested students with questions about accessibility and/or time zone conflicts should contact the course director as soon as possible.

MICRO202 was previously listed as MICRO214; course evaluations for the current version of this class can be accessed under the course number MICRO214

Meeting Dates Sept 3 - Dec 3, 2020
Curriculum Fellow Deepali Ravel, deepali_ravel@hms.harvard.edu
The mechanisms of bacterial, mycoplasmal, fungal, and viral pathogenesis are covered. Topics are selected for intrinsic interest and cover the spectrum of pathophysiologic mechanisms of the infectious process. Emphasis on pathogenesis at the molecular level.

Course Notes: Offered jointly with the Medical School as HT 040.

Class Notes: Meeting Dates: Sept 8 - Dec 12, 2020.

Recommended Prep: A background course in molecular biology is strongly encouraged.

Microbiology 210

Microbial Sciences: Chemistry, Ecology, and Evolution (125823)

Michael Gilmore

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: 20

This is an interdisciplinary graduate-level and advanced undergraduate-level course in which students explore topics in molecular microbiology, microbial diversity, and microbially-mediated geochemistry in depth. This course will be taught by faculty from the Microbial Sciences Initiative. Topics include the origins of life, biogeochemical cycles, microbial diversity, and ecology.

Course Notes: Also offered as Organismic and Evolutionary Biology 290.

Recommended Prep: For graduate and advanced undergraduate students, Life Sciences 1a and 1b or their equivalent are required, or permission of instructor. MCB 52 or equivalent is recommended.

Social Issues in Biology (122708)

Jonathan Beckwith
Stephen Lory
Richard Born
David Glass

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: 18
This discussion course covers historical and contemporary readings about controversial issues related to biology and social responsibility of scientists. The topics are selected from amongst the following: Eugenics: past, present and future; Reproducibility, probability and truth in science; Pros and cons of DNA use in forensics; Social activism in science; Women and minorities in science; Biology of sex and gender; History and public perception of vaccinations; Animals in research; Science communication to the public (s); Controversies in biology and medicine re: issues of race, ethnicity and gender; How science is taught. The course can provide future scientists with a background in anticipating and considering present and future ethical and social implications of biology.

Course Notes: Offered jointly with the Medical School as MG 722.0.

Class Notes: Meeting dates are Jan 30 - Apr 23.

Recommended Prep: Some background in genetics.

Introduction to Infectious Disease Research: Infectious Diseases Consortium Boot Camp (109380)

*Eric J. Rubin*

*Deepali Ravel*

2021 Spring (2 Credits)  
**Schedule:** TBD

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 15

This January boot camp course provides a fun, informative introduction to the breadth of infectious disease research carried out at Harvard and beyond. The course will focus on several aspects of infectious diseases:

Underlying biology of infectious diseases and the diverse pathogens that cause them;

Modern approaches to studying infectious diseases, including experimental biology, epidemiology, bioinformatics, and clinical microbiology;

Modern approaches to developing new interventions, including drugs, vaccines, diagnostics, and public health measures.

Course goals will be accomplished through a mix of lectures, discussions, and reading combined with lab visits and hands-on workshops. In addition, students will have the chance to meet faculty, students, and fellows in infectious disease roles across Harvard.

**Course Notes:** This is an intensive January course. While most participants in this course come from biology graduate programs at HMS/HSPH, students from other programs or schools are welcome to register.

**Class Notes:** This course will run from Jan 13 - 17. First meeting location: TMEC 333.

Microbiology  305

Molecular Determinants of Intracellular Bacterial Pathogenesis (112844)

*Darren Higgins*

2021 Spring (4 Credits)  
**Schedule:** TBD

The Human Microbiome: Comprehensive experimental design and methodologies (207117)

*Aleksandar Kostic*  
*Abigail Devlin*

2021 Spring (2 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** 15

This is a comprehensive introduction to the study of human microbial communities and their functions relevant to human physiology. Topics covered include metagenomics, mechanistic interactions of the microbiome with metabolism, the immune system, and the gut-brain axis. Rather than lectures, this course is primarily a critical discussion of the literature.

**Class Notes:**  
Classes will meet Jan 27 - Mar 11, Folin Wu Room, C Building, HMS Longwood Campus.

Biolog Chem & Molecular Pharm  200

Principles of Molecular Biology (116477)

Joseph John Loparo
Karen Adelman
Stirling Churchman
Frank Slack
Alan Brown
Johannes Walter

2020 Fall (4 Credits)     Schedule:     MWF 1230 PM - 0129 PM
Instructor Permissions:     None     Enrollment Cap:     n/a

Principles of Molecular Biology is a course organized around the Central Dogma of Biology with presentations covering fundamental aspects of DNA and RNA structure, their function and their interactions with proteins. The course opens with a discussion of the physical and chemical properties that drive the interactions of proteins with nucleic acids. This is used as a basis for understanding the material presented in the subsequent five modules, which cover DNA replication, DNA repair, gene regulation, transcription, RNA processing and translation. Throughout this course an emphasis will be placed on how the structure of small molecular machines (proteins) define their function in the processes and pathways that are introduced.

Course Notes:     Offered jointly with the Medical School as BP 723.0.
Class Notes:     Meeting Dates: September 2 through December 7, 2020.
Curriculum Fellow: Madhvi Venkatesh, madhvi_venkatesh@hms.harvard.edu

Recommended Prep:     Intended primarily for graduate students familiar with basic molecular biology or with strong biology/chemistry background.

Biophysical and Biochemical Mechanisms of Protein Function (204396)

*Andrew Kruse*
Biophysical and Biochemical Mechanisms of Protein Function focuses on the molecular mechanisms that underlie essential biochemical processes such as signal transduction. Major topics include biochemical thermodynamics and conformational equilibria, protein structure and folding, receptor pharmacology, allostery, and enzymatic mechanisms of signaling. The course includes both content lectures and research frontiers seminars focused on current research in biochemistry with an emphasis on signal transduction in therapeutically relevant pathways.

Class Notes: Classes will run from Jan 28 - Apr 30. First meeting location: TMEC 246 (Walter Amphitheater).

Recommended Prep: A foundational biochemistry course

Translational Pharmacology: The Science of Therapeutic Development (127474)

Catherine Dubreuil
Donald Coen
David Golan

2021 Spring (2 Credits)  Schedule: TBD

Instructor Permissions: Instructor  Enrollment Cap: 56

This intensive course, held during three weeks in January (14 class days), covers principles of pharmacology and their translation into new drug development. Students participate in project groups, composed primarily of graduate students and postgraduate MD fellows, to propose a drug development strategy from target choice through clinical trials. Most mornings include lectures, panel discussions, and/or case studies presented by Harvard faculty and faculty from the pharmaceutical and biotechnology industries; most afternoons are either unscheduled or provide scheduled time to work on the group project. Evaluation is based on written and oral presentations of the group project and on class participation. Enrollment may be limited.

Class Notes: This course runs from Jan 6 - 24. First meeting location: Modell 100A.

Biolog Chem & Molecular Pharm 305QC

Seminars in Molecular Mechanistic Biology (207006)

Madhvi Venkatesh

2021 Spring (2 Credits)  Schedule: TBD

Instructor Permissions: Instructor  Enrollment Cap: 30

Seminars in Molecular Mechanistic Biology is a series of student work-in-progress talks that meets approximately once a month during the academic year. Students who are presenting will receive feedback...
from both the faculty and the other students in the Molecular Mechanistic Biology (MMB) program. The peer-to-peer structure of this course (which is only open to students in MMB) should build community and a sense of belonging to the program. It will also help students develop a deeper understanding of the study of molecular mechanisms outside of their own labs and build relationships with faculty.

Course Notes: Registration for this class is limited to students who are a part of the Molecular Mechanistic Biology program. Students should contact Madhvi Venkatesh (madhvi_venkatesh@hms.harvard.edu) regarding enrollment.

Class Notes: Sessions are scheduled Feb 10 - May 11. Students will be contacted directly with a room.

**Neurobiology - Graduate 209**

The Neurobiology of Disease (116455)

*Edward Kravitz*  
*Patricia Musolino*  
*Beth Stevens*

2021 Spring (4 Credits)  
Schedule: TBD
This highly rated course covers a major disease or disorder of the nervous system each week, including Alzheimer’s, Huntington’s and Parkinson’s Diseases, Mood and Autism Spectrum disorder and others. The course is taught at the Harvard Medical School on Monday (6-8:30 PM) and Wednesday (7-9:30 PM) evenings. The Monday sessions involve patient presentations and “core” lectures describing clinical progression, pathology, and basic science underlying a major disease or disorder. On Wednesdays, students present material from original literature sources, and there is general discussion.

Course Notes: Given in alternate years. Offered jointly with the Medical School as NB 713.0. For advanced undergraduate, graduate students, MD and MD/PhD students.

Class Notes: First class meeting will be held on Mon, Jan 27, in TMEC 250. Enrollment limit has been increased to 40.

Recommended Prep: Introductory neurobiology, biochemistry, and genetics/molecular biology recommended.

**Neurobiology - Graduate 212**

Mathematical Tools for Neuroscience (216813)

*Eleanor Batty*

*John Assad*

*Lucy Lai*

*Alex Chen*

2020 Fall (4 Credits) Schedule: TR 0300 PM - 0429 PM

Instructor Permissions: Instructor Enrollment Cap: 30

This course aims to equip graduate students with the fundamental skills in quantitative modeling necessary for neuroscience research and to serve as a solid foundation for further computational neuroscience classes. The course is aimed at second- or third-year students in the Neuroscience PhD program, and is open to other graduate students in the biosciences. This course will cover the basics of linear algebra, differential equations, probability/statistics, and machine learning (focusing on areas applicable to neuroscience). You will not need any math experience beyond high school calculus. Some amount of coding in Python is necessary for this class. This course will be a flipped classroom course with prerecorded lectures and students working together on problem sets & programming exercises during class time.

Class Notes: Meeting Dates Sept 8, 2020- Dec 10, 2020

Recommended Prep: There will be some programming exercises in Python so some coding experience will be necessary (email instructor for advice on how to prepare).

2020 Fall (4 Credits)  Schedule: TR 1030 AM - 1229 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

This course will endow students with the broad conceptual fluency in the discipline of neuroscience required to relate genes to circuit function, metabolism to neurological disease, and cell biology to neural computations. Through a combination of lectures and in-class activities, students will learn to design, quantitatively analyze, and interpret experiments that address a variety of questions spanning molecular to systems neuroscience. During the first semester, students will think critically about the fundamental units of the nervous system within the context of cellular function, electrical conduction, and chemical signaling. The second half of the course builds upon this foundation to focus on broadly defined "networks of neural function" as related to coordinated neural activity, the concerted execution of genetic programs, and anatomically defined structural networks. The course culminates with students writing a grant proposal in the style of the NIH NRSA.

Part one of a two part series. The curriculum for this course builds throughout the academic year. Students are strongly encouraged to enroll in both the fall and spring course within the same academic year.

Course Notes: Please note that Program in Neuroscience (PiN) students must take both semesters to fulfill the requirement. Non-PiN students may enroll in just the fall semester with the instructor's approval

Class Notes: Meeting Dates: September 8 through December 15, 2020.

Neurobiology - Graduate 230

Visual Recognition: Computational and biophysical perspective (107755)

Gabriel Kreiman

2020 Fall (4 Credits)  Schedule:  0300 PM - 0459 PM
Instructor Permissions:  Instructor  Enrollment Cap:  50

How does cerebral cortex store information, compute and learn? How can we build prosthetic devices to fix or augment brain function? How can we build biologically inspired artificial intelligence? This course will examine these questions in the context of visual cognition. Topics: architecture of visual cortex, neurophysiology, visual consciousness, computational neuroscience, models of pattern recognition and computer vision, artificial intelligence, brain-machine interfaces.

Course Notes:  Course website: http://klab.tch.harvard.edu/academia/classes/hms_neuro300_vision/hms_neuro300_vision.html
Neurobiology 230, Visual Recognition, brain-machine interfaces and artificial intelligence

Neuro 230 cannot be taken if Neuro 130 has been taken. Neuro 230 cannot be taken concurrently with Neuro 130.

Class Notes:  Meeting Dates Sept 9 - Nov. 30, 2020
Recommended Prep:  Life Sciences 1a (or Life and Physical Sciences A) and Life Sciences 1b (or equivalent). Recommended: Math (Maa/Mab, Math 1A,1B, Math 19 a or equivalent). Physical Sciences 1. MCB 80.

This course will be held in Biolabs 2062.

Requirements:  Anti-Req: Cannot be taken for credit if NEURO 130 already complete.

Neurobiology - Graduate 240

Biological and Artificial Intelligence (213361)

Gabriel Kreiman

2021 Spring (4 Credits)  Schedule:  TBD
Instructor Permissions:  None  Enrollment Cap:  n/a

This course provides a foundational overview of the fundamental ideas in computational neuroscience and the study of Biological Intelligence. At the same time, the course will connect the study of brains to the blossoming and rapid development of ideas in Artificial Intelligence. Topics covered include the biophysics of computation, neural networks, machine learning, Bayesian models, theory of learning, deep convolutional networks, generative adversarial networks, neural coding, control and dynamics of neural activity, applications to brain-machine interfaces, connectomics, among others.
Course Notes: Jointly offered with the Faculty of Arts & Sciences as NEURO 140.
Recommended Prep: Basic knowledge of multivariate calculus, differential equations, linear algebra, elementary probability theory, basic computer programming skills

Quantitative Methods for Biologists (107877)

Michael Springer
Richard Born

2020 Fall (2 Credits)  
Schedule: TBD
Instructor Permissions: Instructor  
Enrollment Cap: n/a

The goal of this virtual camp is to introduce you to programming in the MATLAB environment and to show you the power this provides for analyzing data and for gaining intuition about the behavior of complex systems through the use of numerical simulations. Some of you, upon encountering in the previous sentence words like "programming" and "numerical simulations," will feel the cold hand of fear grip your stomach, because you have never done any programming and, in fact, have tried to avoid math as much as possible. If so, YOU ARE PRECISELY THE PERSON WE HAD IN MIND as we were planning the course. We are aiming to help you break through this barrier of darkness and fear into the radiant sunshine of quantitative enlightenment. The true beauty of MATLAB, as we will personally demonstrate, is that it allows
people who are not mathematically adept (e.g. some of the instructors of this course) to use powerful numerical methods and visualization tools to gain an understanding of concepts that are very difficult to grasp analytically.

Class Notes: This course has two components: 1) an asynchronous component during which students will work at their own pace, viewing prerecorded mini-lectures and answering questions through an edX course and 2) a synchronous component that will consist of Zoom meetings with live mini-reviews and coding exercises that will be done in small break-out groups of 3-4 students.

Meeting Dates: Aug 10-21. MWF, 12:00pm-5:00pm (one hour break from 2pm-3pm), T/Th, TBD (drop-in/homework) all course times are Eastern Standard

Sign up here: https://hms.az1.qualtrics.com/jfe/form/SV_6W18Qau6zVDm3Hf

Please put this course on your fall term study card if you wish to receive credit for it. Email jennie_epp@hms.harvard.edu, with enquiries.

Thinking about data: probability and statistics for the life sciences (205051)

Richard Born
Brian Healy

2020 Fall (2 Credits) Schedule: W 0500 PM - 0659 PM
Instructor Permissions: Instructor Enrollment Cap: 100

Probability & statistics taught with an emphasis on using simulations and re-sampling methods to both analyze data and understand core statistical concepts. Prior to class, students will view online lectures from Dr. Brian Healy's biostatistics course. In class, we will focus on MATLAB coding exercises to practice
different approaches to analyzing real data sets, with an emphasis on resampling methods.

**Course Notes:** This course will use a flipped design in which students will view video lectures from Dr. Brian Healy’s Biostatistics Certificate Course (offered through Catalyst) prior to in-class programming exercises.

**Class Notes:** Course will start on September 2, 2020 and run through October 21, 2020.

**Recommended Prep:** Students are required to take Neurobiology 306QC as a pre-requisite for this course.

Cortical Neurodevelopment and Disease (214583)
Corey Harwell
Gordon Fishell

2021 Spring (2 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a

This course considers the production and assembly of the diverse circuits of the cerebral cortex. Topics include: neurogenesis, cell lineage and fate determination, neuronal migration, axon guidance, synapse formation and stabilization, and the human neurodevelopmental disorders that arise when these processes are disrupted.

Class Notes: Classes will be held Feb 5 - Mar 27, in Armenise 330. (No classes weeks of Feb 17 and Mar 16.)

Additional Course Attributes:

Mathematical Tools for Neuroscience (214612)

*John Assad*

*Lucy Lai*

*Alex Chen*

2021 Spring (2 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** 25

Numerical data analysis has become a nearly indispensable tool in modern neuroscience. This course aims to equip graduate students with the fundamental mathematical skills in quantitative modeling and data analysis necessary for neuroscience research. The course is aimed at first- or second-year students in the Neuroscience PhD program, and is open to other graduate students in the biosciences. This pilot course serves as a crash course to the basics of linear algebra, differential equations, and basic probability and statistics from a mathematical perspective. Each mathematical concept will be illustrated via applications to neural datasets.

Our goal is to make this fun, approachable, and applicable. We would like to build *mathematical intuition* for these essential topics. You will not need any math experience beyond high school calculus. Some amount of coding is necessary for this class; if you are rusty, this will be a chance to brush up your Matlab skills.

**Course Notes:** January intensive.

**Class Notes:** Classes will be held in Goldenson 122 from Jan 6 - 31.

---

**Neurobiology - Graduate 315**

Molecular mechanisms of Proliferation and Survival in Neural development (110615)

Human Neuroanatomy and Neuropathology (205296)
Matthew Frosch
Jean Augustinack
2020 Fall (2 Credits) Schedule: MWF 1000 AM - 1159 AM
Instructor Permissions: Instructor Enrollment Cap: 20

This course will cover human neuroanatomy in depth, with an emphasis on the functional implications of structure and medical implications of lesions. Teaching occurs through lectures, small group sessions, brain dissection and homework assignments.

Course Notes: Restricted to Graduate Students only. This course is offered as part of NB200/HT130. Students may not co-register for both courses.

Class Notes: For the fall semester 2020, this course will be taught on-line with both asynchronous content and synchronous sessions held via Zoom. Course material as well as Zoom access will be through the HMS Canvas site.
Course will begin on September 28 - October 30, 2020.

Comparative Neuroanatomy (207086)

Wei-Chung Lee  
Taralyn Tan

2021 Spring (2 Credits)  
Schedule: TBD  
Instructor Permissions: Instructor  
Enrollment Cap: 25

Neuroscientists employ diverse model systems and experimental approaches to study nervous system structure and function. Through a combination of lectures, hands-on activities and paper discussions, this quarter course will introduce students to principles of nervous system organization and will provide a conceptual understanding of the spatial and functional relationships among components of the nervous system. Modern experimental methods and online resources to study neural circuit structure and function across model organisms will also be highlighted.

Class Notes: Classes will be held in TMEC 332, Feb 18 - Apr 9.

Careers in Neuroscience (207084)

David Ginty

2021 Spring (2 Credits)  Schedule:  TBD

Instructor Permissions:  Instructor  Enrollment Cap:  25

This course is intended to provide PiN PhD candidates with a structured introduction to career skills that enable success after the completion of the PhD, and is directed to those considering both academic and non-academic paths. There will be ten sessions in total, and each session will feature one or more invited discussion leaders who can relate the merits and challenges of particular career paths and the skills required to be successful.

Course Notes:  Course is offered every 2 years.

Class Notes:  The course meets in WAB 236 from 5:30 to 7:00pm, beginning January 30, and continues every other Thursday, though meeting dates may change subject to speaker availability. Dinner is provided.

Neurobiology - Graduate  339L

Cell-extracellular matrix interaction in brain development and malformation (203215)

Xianhua Piao

2021 Spring (4 Credits)

Instructor Permissions:  Instructor  
Enrollment Cap:  30
### Neurobiology - Graduate  339L

Cell-extracellular matrix interaction in brain development and malformation (203215)

**Xianhua Piao**

2020 Fall (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

### Neurobiology - Graduate  341

Cognition and Cognitive Disorders; the Role of Translational Regulation (123142)

**Raymond Kelleher**

2021 Spring (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a
Neurobiology - Graduate 342
Neurophysiology of Visual Cortex and LGN (111946)
R. Reid
2020 Fall (4 Credits)  Schedule:  TBD

*Trudy Van Houten*

*Mohini Lutchman*

*Sabine Hildebrandt*

2020 Fall (4 Credits)  
**Schedule:** MWF 0200 PM - 0459 PM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** 48

Lectures, small group cases, and live-streamed prosections provide a thorough exploration of the gross structure and function of the human body. Fundamental principles of embryology and bioengineering promote analytical approaches to understanding the body's design.

**Course Notes:** Open to qualified graduate students with permission of the course director. The course has a minimum enrollment of 30. This course requires rental of a locker for a fee. Offered jointly with the Medical School as HT010.

**Class Notes:** Meeting Dates Sept 9 - Dec 11, 2020

This course is a required course for all DMS students and all who receive support from NIH training grants. The goal of this course is to inform students about the appropriate conduct of research and the many ethical and social problems that they may encounter during their research career in graduate school. The course consists of three lectures for the entire class and five highly interactive sessions with a small group of fellow students moderated by a faculty member. Some of the issues that will be discussed in this course include appropriate methods of collecting laboratory data, interactions with members of the laboratory and the mentor and issues dealing with research misconduct.

Course Notes: All current G2 students must register for this course on their Fall Semester study cards. Specific enrollment instructions will be sent to current G2s and other eligible students in the upcoming weeks. Please contact dms_courses@hms.harvard.edu for enrollment inquiries.

Class Notes: The dates and topics for the three lectures are

- **Lecture One**: Research Integrity: It's a Matter of Public Trust, Gretchen Brodnicki, J.D., HMS Dean for Faculty and Research Integrity
  Date/Time: Tuesday, September 29, 2020, at 3:00-4:30 p.m. EDT

- **Lecture Two**: Conflict Resolution Skills for the Researcher, Melissa Brodrick, Ombudsperson, Harvard Medical School
  Date/Time: Tuesday, October 20, 2020, at 3:00-4:30 p.m. EDT

- **Lecture Three**: Inclusive Excellence in Research: Creation of a Vibrant, Scientific Global Community, Kathy Takayama, Ph.D., Visiting Fellow, Amherst CTL
  Date/Time: Tuesday, November 17, 2020, at 3:00-4:30 p.m. EDT

Conduct of Science Refresher (109073)

Kristin White
This course is a required course for all DMS students and all who receive support from NIH training grants. The goal of this course is to inform students about the appropriate conduct of research and the many ethical and social problems that they may encounter during their research career in graduate school. The course consists of three lectures for the entire class and five highly interactive sessions with a small group of fellow students moderated by a faculty member. Some of the issues that will be discussed in this course include appropriate methods of collecting laboratory data, interactions with members of the laboratory and the mentor and issues dealing with research misconduct. All current G6 students must register for this course on their Fall Semester study cards. G6 students are required to attend at least two out of the three didactic sessions. Specific enrollment instructions will be sent to current G6s and other eligible students in the upcoming weeks. Please contact dms_courses@hms.harvard.edu for enrollment inquiries. Restricted to GSAS graduate students on the Longwood campus.

Class Notes: The dates and topics for the three lectures are

Lecture One: Research Integrity: It’s a Matter of Public Trust, Gretchen Brodnicki, J.D., HMS Dean for Faculty and Research Integrity
Date/Time: Tuesday, September 29, 2020, at 3:00-4:30 p.m. EDT

Lecture Two: Conflict Resolution Skills for the Researcher, Melissa Brodrick, Ombudsperson, Harvard Medical School
Date/Time: Tuesday, October 20, 2020, at 3:00-4:30 p.m. EDT

Lecture Three: Inclusive Excellence in Research: Creation of a Vibrant, Scientific Global Community, Kathy Takayama, Ph.D., Visiting Fellow, Amherst CTL
Date/Time: Tuesday, November 17, 2020, at 3:00-4:30 p.m. EDT

Medical Sciences 312QC
Graduate TA Training in the Biomedical Sciences (207116)

Bradley Coleman
Taralyn Tan

2021 Spring (2 Credits) Schedule: TBD
Instructor Permissions: Instructor Enrollment Cap: 50

MED-SCI 312QC is designed to be an 'on the ground' training for Longwood-based teaching assistants. The course instructs graduate student teaching assistants in the pedagogy and course management skills.
required to be an effective TA. The course begins with three two-hour class sessions that focus on the basics of evidence-based teaching practice and practical strategies for working with students. As the semester progresses, students use their work as TAs as the basis for continued instruction and reflection on teaching best practices and the challenges of their application in real-world settings.

Course Notes: Open to any HILS graduate student serving as a Teaching Assistant, pending approval of the Curriculum Fellow working in their course (or by special arrangement approved by the Director of the Curriculum Fellows Program). All students interested in registering for MED-SCI 312QC should also register for the Graduate TA Training in the Biomedical Sciences nanocourse. Any interested student may attend the first three sessions of MED-SCI 312QC and receive nanocourse credit, regardless of whether they are a current TA.

In this course, Ph.D. Pathfinder, students will learn about the many career paths available to people with advanced degrees in biomedical research including academia, biotech, patent law, science writing/publishing, consulting/business, education, and science policy/regulation. Students will also learn how to find opportunities on and off campus to take the next step in their career plans.

A Ph.D. education provides students with fundamental knowledge about the principles and practice of the scientific method and promotes development of problem-solving skills in ways that are quite useful for many different professions. Students will have the opportunity to learn from experienced professionals representing each of these paths, to learn about strategies for career development, curriculum enrichment, and networking opportunities that will make them competitive for their career of choice.

The course is open to all Ph.D. students interested in learning about the range of career options available to biomedical Ph.D.s. The course includes talks, didactic sessions, workshops and networking events to promote interactions between students and invited speakers. There will be a special emphasis on helping students with their own skill self-assessment to assist in career and professional development. After each session there will be a small networking reception for both the students and lecturers.

Course Notes: Students are required to attend all five sessions for course credit.

Class Notes: Meeting Dates October 19-23, 2020.M-F 5:00pm - 7:00pm

Internships (203031)
Internships are considered an integral part of a student's educational experience and should be viewed as a path toward a student's career development. As such, approved internships can receive academic credit via this course number.

Course Notes: Ordinarily, each student will be limited to one internship during his/her PhD career. The internship must be discussed with the PI and DAC committee (or, program advisor, where applicable) prior to approval. Not all students may be eligible for internships, due to program requirements, academic standing or advisor input.

2020 Fall (4 Credits)  Schedule:  TR 1200 PM - 0130 PM
Instructor Permissions:  Instructor  Enrollment Cap:  63
This is a graduate level course in which students examine both fundamental and novel concepts and methodologies in cell biology with expert faculty from the field. Through a combination of weekly asynchronous lectures on content and methodology, and weekly synchronous problem-solving and paper discussion sections, students will explore a broad range of topics including: the molecular basis of cellular organization, subcellular compartmentalization, protein trafficking, chromosome organization and epigenetics, regulated ubiquitin-proteasome pathways, cell cycle regulation, signal transduction, and more.

By the end of this course, students should be able to:

- Evaluate primary scientific literature from a broad range of topics in cell biology;
- Identify current questions in cell biology and the co-evolving methodologies used to address those questions;
- Design appropriate experimental approaches to address hypotheses related to cell biology.

Course Notes: Methodological focus on current approaches in cell biology including quantitative tools. Emphasis on experimental design. Offered jointly with the Medical School as CB 713.0.

Class Notes: Meeting Dates: Sept 2, Dec 10, 2020
Curriculum Fellow, Saoirse McSharry saoirse_mcsharry@hms.harvard.edu

Recommended Prep: Basic knowledge in biochemistry, genetics, and cell biology.

Cell Biology 207
Development, Stem Cells and Regeneration (111215)

2021 Spring (4 Credits) Schedule: TBD
TBD

Instructor Permissions: Instructor Enrollment Cap: 12

This course is evenly divided between lectures and conference sessions which cover the principles that guide vertebrate development and stem cell maintenance in various renewing tissues; in addition, we discuss how these principals can be leveraged to generate cells/tissues for regenerative biology or disease modeling in vitro. Specific topics include a molecular dissection of the signaling pathways, gene regulatory networks, and epigenetic mechanisms that control primary axis formation and regional specification, establishment of cell fate, homeotic genes and patterning, cell migration and cell-cell signalling, organoid models of nervous system development and their application, axon development and regeneration, neuromuscular development and mechanistic insights for human birth defects, skeletal muscle stem cells in aging and disease, morphogenesis of branched tubular systems, vasculogenesis, biomechanical regulation of developmental processes, limb development and regeneration, stem cell maintenance in various renewing tissues, germ cells and pluripotency, and directed differentiation of ES and iPS cells for regeneration and disease modeling. We will discuss how state of the art technologies in iPS organoids, cell lineage labeling, genetic manipulation, and genome wide epigenomic/transcriptomic analyses can be employed to study organ development, stem cells and regeneration.
Students employ the knowledge gained by lectures and conference sessions to identify two interesting new research goals in either vertebrate development, stem cell, or regenerative biology and present research proposals to achieve these goals. Thus, a goal of this course is for students to learn how to synthesize the literature to come up with their own novel research ideas, and develop a strategy to investigate their hypotheses.

Course Notes: Offered jointly with the Medical School as CB 710.0. Includes lectures and conference sessions in which original literature is discussed in depth. There is no exam. Each student presents two short research proposals for group discussion.

Class Notes: This course will run from Mon, Jan 27 - Wed, May 13. First meeting location: Warren Alpert 563. Subsequent lectures: Armenise 506.

Recommended Prep: Introductory courses in both Cell and Molecular Biology.

History and Philosophy of Experimentation in Biology (156733)

David Glass
Janet Browne
Ned Hall

2020 Fall (4 Credits) Schedule: M 0630 PM - 0829 PM

Instructor Permissions: Instructor Enrollment Cap: 30

How did developments in philosophy of science, technology, and statistics relate to practices in biology over time? We will trace the influence of particular philosophical arguments concerning science that have developed over the last 500 years, following the development of distinct types of "Scientific Method" in biology. The course will offer a foundation for exploring how today's dominant scientific method relates to scientific research, medicine, and society's popular understanding of science, and may help give perspective as to how modern practices of scientific method have come to be. Learning of alternate approaches to science and scientific epistemology might be of particular importance now, given current controversies relating to the reproducibility of many published findings.

Class Notes: Meeting Dates: Sept 7 - Nov 30, 2020

Cell Biology  300

Advanced Topics in Cell, Molecular, and Developmental Biology (116986)

Rosalind Segal

2020 Fall (4 Credits)  Schedule: TBD
Instructor Permissions: None  Enrollment Cap: n/a

A series of reading and discussion seminars, each running for a half term (seven weeks). Different topics are covered each term.

Course Notes: Two seminars, which can be taken in different terms, are required for credit. Non-DMS students must get permission from the Division of Medical Sciences before registering for this course. Please contact us at 617-432-0162 or visit the DMS Office at T-MEC 435, 260 Longwood Avenue, Boston.

The Epidemiology and Molecular Pathology of Cancer (127478)

*Massimo Loda*

*Kathryn Penney*

2021 Spring (2 Credits)  

**Schedule:** TBD

**Instructor Permissions:** Instructor  

**Enrollment Cap:** 10

This January course will provide students with an in-depth introduction to the epidemiology and molecular pathology of cancer. We will explore multiple types of cancer, including breast, colon, lung, prostate and brain, through a series of lectures and hands-on practice tutorials. These tutorials will include training in molecular pathology techniques, state of the art image analysis of human biomarkers, tissue processing, immunohistochemistry, and tumor histology. In addition, the epidemiology, genetics, and relevant signal transduction pathways of cancer will be highlighted.

**Course Notes:** Lunch is provided.

**Class Notes:** This course will run from Jan 6 - 15. First meeting location: TMEC 302 (Holmes lab).
Cell Biology  304QC

Introduction to Human Gross Anatomy for Graduate Students and other Researchers (127989)

Gerald Greenhouse
Everett Anderson
Mohini Lutchman

2021 Spring (2 Credits)  Schedule:  TBD
Instructor Permissions:  Instructor  Enrollment Cap:  24

Lectures, laboratory dissections, and prosections will provide students an opportunity to explore the gross structure and function of the human body. The course will provide a foundation for the student to acquire practical skills in recognizing, dissecting, and differentiating key anatomical structures. Structure/function relationships will be emphasized and some foundation will be provided for understanding the anatomic basis of diseases. Histological considerations will be discussed where appropriate. Each of the 15 sessions will include a lecture, 3 hours of dissection, and an evening guest lecturer on clinical or research aspects related to the dissections (supper provided).

Course Notes: Open to graduate and undergraduate students, postdoctoral fellows, and research assistants. Students must sign up during the Spring semester sign up period.

Class Notes: Classes will be held Jun 15 - Jul 22, in TMEC 447.

Cell Biology  306QC
Teaching 100: The Theory and Science of Teaching (107400)
Bradley Coleman
2020 Fall (2 Credits) Schedule: R 0800 AM - 0929 AM
Instructor Permissions: Instructor Enrollment Cap: 20

For many graduate students and medical educators, teaching will be part of their career, whether as mentoring, formal classroom teaching, or teaching in the hospital. In addition, the theory and research evidence accumulating in the disciplines of cognitive psychology, neuroscience, and from STEM classrooms, has turned the question of "How do we best teach science?" into its own scientific discipline. The Theory and Science of Teaching focuses on understanding why certain teaching methods are effective by examining the scientific research and theoretical frameworks that support these methods. We will read and discuss foundational educational and cognitive psychology texts and primary literature, and then develop course materials that allow us to put these ideas into practice.

Course Notes: The course has been designed as a companion to Genetics 302qc: Teaching 101, but neither course is a prerequisite of the other.

Class Notes:
Each week class will meet from 8:00-9:30AM for a synchronous Zoom session. This will be complemented with substantial required asynchronous learning. These two components will combine to meet the course objectives are equally important to students' learning.

Class begins September 14th with a series of asynchronous introductory activities. The first synchronous class meeting is September 24th and these run through November 19th. There is no class on October 15th.

Recommended Prep: Make It Stick, by Brown, Roediger and McDaniel is required pre-reading and should be completed before the first day of class. A required asynchronous 'module 0' will be released on Canvas September 14th.

2021 Spring (2 Credits)  
Schedule: TBD
Instructor Permissions: Instructor
Enrollment Cap: 16

This laboratory course is designed to provide a survey of major topics and contemporary research in developmental, stem cell, and regenerative biology. Students will rotate in the laboratories of DRB faculty across the Harvard campuses and affiliated hospitals. Students engage with faculty and gain hands on experience in a variety of model systems, experimental techniques and research areas. Each day of the course will consist of a lecture followed by hands-on laboratory activities and interactive discussions. The course will culminate in short, informal student-led (five minutes, five slides) brainstorming sessions inspired by a lab session of their choosing.
Course Notes: This is an intensive January course. Open to first-year and second-year BBS students [HDRB undergraduates with approval of the course director]. Not repeatable for credit.

Class Notes: This course runs from Jan 6 - 17. Course meeting and introductory dinner only on Jan 6; presentations only on Jan 17; optional DRB welcome party on Jan 16. There will be one lecture on Sat, Jan 11. Various locations. Contact Trista North for updated course syllabus.

Subject: Virology

Virology 200

Introduction to Virology (116413)

Jonathan Abraham
Philip Kranzusch

2020 Fall (4 Credits) Schedule: MW 0130 PM - 0345 PM

Instructor Permissions: Instructor Enrollment Cap: 20

Introduction to virology. The lecture component reviews the basic principles of virology and introduces the major groups of human viruses. Weekly discussion groups critically analyze selected papers from the literature.

Course Notes: There will be mid-term and final projects consisting of proposals based on laboratory rotations. Offered jointly with the Medical School as MG 705.0. http://www.courses.fas.harvard.edu/6075

Class Notes: Meeting dates: Sept 9 - Dec 14, 2020

Recommended Prep: Pre-Requisite: Current Virology PhD student, or upon special consent

Virology 201

Virology (110546)

Benjamin Gewurz
Joseph G. Sodroski
Sun Hur
The course focuses on the following areas of virology: (i) epigenetic regulation, (ii) RNA virus replication mechanisms, (iii) innate responses to viral infection, (iv) inhibition of viral infection. The course will comprise lectures as well as reviewing literature that describes fundamental breakthroughs relevant to these areas. Within those areas, the class will read and discuss papers dealing with virus structure, replication, pathogenesis, evolution, emerging viruses, chronic infection, innate and adaptive immunity, anti-viral drugs/vaccines. Special emphasis will be placed on preparing students to critically evaluate the literature, formulate hypotheses and design experiments.

Course Notes: Course format will be lectures, literature-based critical reading and discussion. Prepare and defend a written research proposal. Offered jointly with the Medical School as MG 723.0.

Class Notes: Classes will meet Jan 27 - May 6, in TMEC 321.

Recommended Prep: Graduate standing and permission required.

Virology 202

Proposal Writing (117649)

Kate Jeffrey
Daniel Lingwood
Alejandro Balazs
Todd Allen

Students will write, present, and evaluate research proposals in the areas of virus replication, viral pathogenesis and treatment and prevention of viral infections.

Course Notes: Offered jointly with the Medical School as MG 724.0.

Class Notes: Meeting Dates Sept 4 - Oct 30, 2020. First class meets Sept 4, 2020 4:00pm - 6:00pm

Recommended Prep: General background in biochemistry and virology.

Virology 339

Mechanisms of HIV Protein Degradation, Epitope Processing and Presentation to Virus-specific CD8 T c (125855)

Sylvie Le Gall

2020 Fall (4 Credits)

Instructor Permissions: None

Schedule: TBD

Enrollment Cap: n/a
### Virology 339

Mechanisms of HIV Protein Degradation, Epitope Processing and Presentation to Virus-specific CD8 T cells (125855)

*Sylvie Le Gall*

2021 Spring (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

### Virology 347

Reovirus Structure, Assembly, and Particle Functions in Entry and RNA Synthesis (115350)

*Max Nibert*

2020 Fall (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a
Virology 348
Immunopathogenesis of HIV-1 and the Development of HIV-1 Vaccine Strategies (123149)

Dan Barouch
2020 Fall (4 Credits)

Schedule: TBD
Instructor Permissions: None
Enrollment Cap: n/a

**Subject: Speech & Hearing Sciences**

Speech & Hearing Sciences 200  
Introduction to Sound, Speech, and Hearing (108212)  
Satrajit Ghosh
Speech and hearing are fundamental to our ability to communicate, yet in the US alone millions of people suffer from some form of speech or hearing impairment. As engineers and scientists, it is important to understand the underlying principles of speech and hearing. The goals of this course are to introduce students to the acoustics, anatomy, physiology, and mechanics related to speech and hearing and to build a foundational understanding of one of the most complex, interdisciplinary, and fascinating areas of bioengineering. Particular attention will be paid to how humans generate and perceive speech. Topics include acoustic theory of speech production, basic digital speech processing, control mechanisms of speech production and basic elements of speech and voice perception. These fundamental topics will be explored through applications and challenges involving acoustics, speech recognition, and speech disorders, which are especially relevant given the ubiquity of recording and playback devices such as smartphones and home assistants. On the hearing side, topics include acoustics and mechanics of the outer ear, middle ear, and cochlea, how pathologies affect their function, and methods for clinical diagnosis. Surgical treatments and medical devices such as hearing aids, bone conduction devices, and implants will also be covered.

Course Notes: This course is taught as course in consort with HST.714J at the Massachusetts Institute of Technology.

Class Notes: First Meeting Date Sept 2, 2020

Course Website  https://goo.gl/rhNqY4

Recommended Prep: Mathematical methods in science (Applied Mathematics 21a or Mathematics 21a) or equivalent. Calculus and introductory physics. Rigid body mechanics (Physics 11A), or Electrical circuits (Engineering Science 154) or permission of the instructor.

Speech & Hearing Sciences  201

Biology of the Inner Ear (108213)

M. Liberman

2020 Fall (4 Credits)  

Schedule:  

TR 0900 AM - 1015 AM
M 0100 PM - 0229 PM

Instructor Permissions:  Instructor  

Enrollment Cap:  12

Normal biology, biophysics, physiology and morphology of the inner ear, its sensory innervation and efferent control systems, and the mechanisms underlying sensorineural hearing loss and balance disorders. Material is presented through lectures, laboratory exercises and discussions of the primary literature.

Class Notes:  First Meeting Date Sept 3, 2020
Recommended Prep: Introductory neurobiology recommended.
Lecture notes will be available online.

Speech & Hearing Sciences 202

Clinical Aspects of Speech and Hearing (108217)

Konstantina Stankovic

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

Clinical approach to speech and hearing disorders as practiced by physicians, audiologists, speech clinicians, and rehabilitation specialists. Includes observation of patient care in clinic and operating rooms, as well as lectures, discussion groups, and laboratory experience in audiological and vestibular testing.

Course Notes: Offered jointly with HST 724 at MIT. Classes to be held at Massachusetts Eye and Ear (MEE).

Class Notes: Class meeting times may change according to physician OR and clinic schedules. First class meeting will be held on Fri, Jan 31, at Eaton-Peabody Laboratories, Mass Eye & Ear, 4th floor.

Recommended Prep: Anatomy of Speech and Hearing, Acoustics of Speech and Hearing, or permission of the course director

Speech & Hearing Sciences 203

Anatomy of Speech and Hearing (108218)

Barbara Fullerton
James Heaton
James Kobler

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: 12

This course covers anatomy of the head and neck, with cadaver dissection, stressing structures important in speech and hearing. Lecture topics also include basic neuroanatomy, imaging, surgery, and cancer of head and neck.

Course Notes: This an intensive January Course. Offered jointly with MIT as HST 718.
Classes to be held at the Harvard Medical School campus.

Class Notes: Class sessions will be held Jan 6 - 31, in TMEC 209.

Recommended Prep: Introductory biology or equivalent and director permission, if not SHBT student.

Speech & Hearing Sciences 205
Audition: Neural Mechanisms, Perception and Cognition (108224)

Daniel Polley
Bertrand Delgutte
M. Brown
Joshua McDermott

2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: Instructor Enrollment Cap: 20

Neural structures and mechanisms mediating the detection, localization and recognition of sounds. General principles are conveyed by theme discussions of auditory masking, sound localization, musical pitch, cochlear implants, cortical plasticity and auditory scene analysis.

Course Notes: Offered jointly with MIT HST.723.
Class Notes: Classes will be held at Mass Eye & Ear, 4th floor conf room, and MIT Bldg 46, Rm 5193. First class meeting at Mass Eye & Ear.

Recommended Prep: Neurobiology 200 or permission of the instructor.

Speech & Hearing Sciences 300
Auditory neural coding laboratory (109006)

Bertrand Delgutte

2020 Fall (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a

Research projects on the neural coding of sound and the neural basis of auditory perception, with emphasis on the mechanisms for listening in adverse environments comprising reverberation and competing sound sources.
Speech & Hearing Sciences  300
Auditory neural coding laboratory (109006)

_Bertrand Delgutte_

Speech & Hearing Sciences 360
Mechano-acoustics of sound transmission to the inner ear (204045)
Hideko Nakajima
2021 Spring (4 Credits)  Schedule:  TBD
This course provides a comprehensive overview of human pathology with emphasis on mechanisms of disease and modern diagnostic technologies. Topics include (1) general mechanisms of disease (inflammation, infection, immune injury, host response to foreign materials, transplantation, genetic disorders and neoplasia), (2) pathology of major organ systems, and (3) review of diagnostic tools from invasive surgical pathology to non-invasive techniques such as diagnostic imaging and molecular pathology. The objectives of this course are achieved through a set of integrated lectures and laboratories, as well as a student-driven term project leading to a formal presentation on a medical, socioeconomic, or technological issue in human pathology.

Course Notes: Enrollment may be limited. Jointly offered with HMS as HT035.0

Class Notes: Classes meet Feb 4 - May 14. First meeting location: Cannon Room, Building C.

Recommended Prep: General biology.

Additional Course Attributes:

**Human Bio & Translational Med 235**

Principles of Human Disease: Physiology and Pathology (109394)

*Connie Cepko*

2020 Fall (4 Credits) Schedule: MWF 0900 AM - 1029 AM

Instructor Permissions: None Enrollment Cap: n/a
This course covers the normal physiology and pathophysiology of selected organs, through lectures, readings, tutorials based on clinical cases, and patient presentations. Human biology is emphasized, with some examples also drawn from model organisms. Recent therapeutic approaches, including RNAi, gene therapy, and genome editing will be covered.

Course Notes: Course enrollment is open to graduate students from any program as well as undergraduates.

Class Notes: The first class will be held on September 2

Recommended Prep: Knowledge of introductory biochemistry, molecular biology, and cell biology required (MCB52 and MCB54 or equivalent and one year of organic chemistry for undergraduates is recommended).

Human Bio & Translational Med 301QC

Case Studies in Human Biology and Translational Medicine (127520)

Marc Bonaca

2021 Spring (2 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: n/a

Two-week course that is required of and restricted to first-year LHB students. Each week of the course focuses on a different "case study" in translational medicine.

Course Notes: This is an intensive January term course. Restricted to Leder students only.

Class Notes: This course is scheduled to run from Jan 6 - 17. First meeting location: Countway 403.

Human Bio & Translational Med 302QC

Imaging and Microscopy Methods in Biology and Medicine (107418)

Lev Perelman

2020 Fall (2 Credits) Schedule: T 0300 PM - 0459 PM

Instructor Permissions: Instructor Enrollment Cap: 15

Introduce modern imaging modalities used in biology and medicine with emphasis on modalities frequently employed in cellular and molecular biology. Overview of basic principles of light and electron microscopy and modern advanced light microscopy techniques such as confocal, light sheet, STED, multi-photon, super-resolution, and chromatin-sensitive CLASS. Discuss modality-specific molecular probes and genetic targeting in microscopy which includes optogenetics and CRISPR-based photoactivatable transcription systems.

Class Notes: Classes will begin on September 29, 2020, and run through December 1, 2020.

Molecular Bases of Eye Disease (127483)

Darlene Dartt
Magali Saint-Geniez
2021 Spring (2 Credits)
Instructor Permissions: None
Enrollment Cap: n/a

Schedule: TBD

This course provides an overview of the pathogenic process of prevalent ocular diseases. The goals of the course are: (i) to explore the structural and functional aspects of the eye relevant to understanding the pathology, (ii) to review the manifestations of the disease and its effects on vision, (iii) to discuss current views and research in the pathophysiology, and strategies for therapeutic intervention. For most sessions, the basic science and clinical topics will be presented by two faculty lecturers.

Class Notes: Classes will be held Jan 27 - May 18, in the Schepens Eye Research Institute 2nd Floor Conference Room.

2021 Spring (2 Credits) Schedule: TBD
Instructor Permissions: Instructor Enrollment Cap: 16

This course will be a series of workshops in which the design and analysis of experiments conducted within vision and eye research will be considered. At each session, a faculty member will provide and introduce data from a real study that they have conducted as an example. Issues around experimental design will be discussed. Then, using the participant's own software on their computer, we will work through analyses of that data, guided by two faculty members. Thus, participants will handle real data and address real experimental design and data issues.

Course Notes: Participants must bring a laptop computer with a statistical analysis package with which they are familiar. Data will be available for...
Class Notes: Classes meet every two weeks Feb 5 - Apr 28. 2W Common Room, Schepens Eye Research Institute, 20 Staniford Street, Boston.

Biological & Biomedical Sci 230
Qualitative and Quantitative Analysis of the Biological Literature (108994)
Eric Greer  
Joseph Italiano  
Naama Kanarek  
Scott Kennedy
BBS 230 is an integrated literature analysis course comprised of two related components: (1) intensive paper discussion on Thursdays and (2) workshops to assess individual student skills in critically evaluating the scientific literature on Tuesdays.

Course Notes: This course is required for first year BBS and second year BIG students, and is open only to BBS and second year BIG students.

Embedded Teaching Practicum (for Graduate Teaching Assistants) (127207)

Ronald Heustis

Madhvi Venkatesh

2020 Fall (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: 60
The Embedded Teaching Practicum serves to enhance the teaching experience for TAs and the learning experience for enrollees in the core BBS courses. While TAs serve different functions and experience teaching from different perspectives in each of our core courses, they collectively serve a vital role in helping with the delivery of a contemporary, high-quality and accessible education to HMS graduate students. The embedded teaching practicum provides practice-based training in curriculum design, developing learning objectives, assessment development and DBER; facilitating a group discussion; professionalism in the classroom; and preparation for teaching throughout and beyond time in graduate school. Teaching assistants are provided training and experience in the development of an early-career teaching philosophy.

Class Notes: This course runs from August 18, 2020 - December 10, 2020. Time varies by date; details of date and time to be shared by instructors. TAs should contact Jason Heustis, ronald_heustis@hms.harvard.edu. Required Course for TAs working in BCMP 200. Open to TAs serving in other BBS core classes. Registration for this class is limited to students serving as Teaching Assistants for BBS core. Class meetings will be scheduled during daytime and evening hours, and will be communicated by the instructor. TAs are required to participate in all synchronous and asynchronous components of the course in which they are serving as a TA.

Biological & Biomedical Sci 302QC

Using Python for Research (215411)

David Van Vactor

2021 Spring (2 Credits) Schedule: TBD
Instructor Permissions: Instructor Enrollment Cap: 20

This intensive Bootcamp is based on HarvardX’s course of the same title. In this course, after first going over the basics of Python 3, we learn about tools commonly used in research settings. No prior knowledge of Python and/or programming is required.

Course meetings will be held on Mondays, Wednesdays and Fridays. However students are required to use the intervening days for independent study in order to watch approximately 2-3 hours of Harvard X video content and complete the associated ‘check your understanding’ questions. This is considered a core component of the course and is not optional.

In-class time will be wholly dependent on the online content. Using a combination of a guided introduction and more independent in-depth exploration, students will practice Python skills with various case studies chosen for their scientific breadth and their coverage of different Python features, including modules for Machine Learning applications in research.

Class Notes: Classes meet MWF, 1:00pm - 5:00pm, Jan 17 - Feb 3. On the days
where we do not meet in class, students will be expected to watch videos online in preparation for the following class session. The first class session on Fri, Jan 17, will only be 3 hours long. The course ends on Mon, Feb 3, to account for Jan 20 being a holiday.
First meeting location: TMEC 446.

**Biological & Biomedical Sci 311**

Meromit Singer lab (215771)

*Meromit Singer*
The Singer group focuses on elucidating gene networks that regulate T cell function in cancer and autoimmunity, as well as the mechanisms by which bi-directional interactions take place between the T cells and their environment.

We use statistics, machine learning and algorithmic design to analyze high-throughput data generated in our lab (e.g. single-cell RNA-Seq) and model T cell regulation and function in tissue. We follow up on our predictions with in vivo perturbations (e.g. with CRISPR-Cas9) to validate and improve our models.

Critical Thinking and Research Proposal Writing (156089)

Rosalyn Adam
John Clohessy
Matthew Harris

2020 Fall (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

A group tutorial systematically guiding students in the writing of original, hypothesis-driven research proposals from initial topic selection through completion of a final draft.

Course Notes: This course is open to second year BBS students. Others need permission of the instructor. Dates, times, and locations for Sessions 3 and 4 will be determined by the faculty running the tutorial sessions. Students will be able to sign up for their specific group on a first-come, first-served basis until the group limit (5 students) is reached. The BBS office will coordinate this process. Group assignments will be posted on the course website.

Class Notes: Session 1 (Lecture) will be on September 10, 2020, from 2:00 - 4:00pm. Session 2 (Lecture) will be on October 1, 2020, from 2:00 - 4:00pm.

Students who have joined a lab will be offered a section which run from October - December
Students who have not yet joined a lab will be offered a section which run from November - January

Recommended Prep: Check course website for downloadable material at https://canvas.

Biomedical Informatics 201
Concepts in genome analysis (208016)
Shamil Sunyaev
Michael Baym
Cheng-Zhong Zhang
Heng Li
2020 Fall (4 Credits) Schedule: MW 0230 PM - 0359 PM
Instructor Permissions: None Enrollment Cap: n/a
This course focuses on quantitative aspects of genetics and genomics, including computational and statistical methods of genomic analysis. We will introduce basic concepts and discuss recent progress in population and evolutionary genetics and cover principles of statistical genetics of Mendelian and complex traits. We will then introduce current genomic technologies and key algorithms in computational biology and bioinformatics. We will discuss applications of these algorithms to genome annotation and analysis of epigenomics, cancer genomics and metagenomics data. Proficiency in programming and basic knowledge of genetics and statistics will be assumed.

Biomedical Informatics 313QC
Computing Skills for Biomedical Sciences (208164)
Nils Gehlenborg
Theodore Feldman
2020 Fall (2 Credits) Schedule: TR 0800 AM - 0829 AM
Instructor Permissions: Instructor Enrollment Cap: 4
This course will prepare students for advanced graduate level classes that require practical programming and data analysis skills through active learning methods. The main focus of this course is to familiarize students with the R programming language. Additionally, students will learn about the command line on Linux-based systems, high-performance computing environments, and fundamental data analysis approaches. The skills taught in this course will enable students to design and implement programs for reproducible data analysis, manage file-based datasets, apply basic statistical, algorithmic, and visual approaches for data interpretation, and execute analyses on a compute cluster.

Course Notes: Cross listed with HMS as BMI 713. BMIF 313qc is graded SAT/UNSAT. If a letter grade is preferred, students can cross-register through my.harvard for BMI 713.

Class Notes: Classes will run from September 3 - October 17, 2020
Section 1, Tu/Th, 8:00 AM - 8:30 AM
Section 2, Tu/Th, 2:00 PM - 2:30 PM
All classes will be held via Zoom and in addition to the synchronous instruction during the above times, the course will be using various asynchronous learning approaches for a total of 3 hours per week.
Biomedical Informatics 313QC Section: 002

Biomedical Informatics 315QC

Computational Statistics for Biomedical Sciences (208256)

Nils Gehlenborg

2020 Fall (2 Credits) Schedule: TR 0800 AM - 0829 AM

Instructor Permissions: Instructor Enrollment Cap: 26

This course will provide a practical introduction to statistical analysis of biological and biomedical data. Basic techniques will be covered, including descriptive statistics, elements of probability, hypothesis testing, nonparametric methods, correlation analysis, and linear regression. Emphasis will be on how to choose appropriate statistical tests, how to assess statistical significance, and how to avoid common mistakes in analysis of large datasets. This course is geared toward graduate students in the biological sciences, but others are welcomed as auditors if space permits. No previous knowledge in statistics is required, but some proficiency in R will be assumed.

Course Notes: This course is geared toward graduate students in the biological sciences, but others are welcomed as auditors if space permits. No previous knowledge in statistics is required, but some proficiency in R.

Medieval Studies 109
Poverty, Wealth, and Religion in the Middle Ages (203670)
Brian FitzGerald
2020 Fall (4 Credits)  Schedule: MW 0130 PM - 0245 PM
Instructor Permissions: None  Enrollment Cap: n/a

This seminar considers the ethical, political, and spiritual questions arising from the existence of wealth and poverty, the rich and the poor, in medieval European culture. What was the relationship between Christian charity and economic activity in the Middle Ages? How did the religious values of a simple, austere life inform or conflict with changes in both Church and society? Drawing on saints’ lives, theological treatises, art and architecture, and the work of authors such as Augustine, Aquinas, Thomas More, and Martin Luther, the course will examine how the interaction of spiritual ideals and material realities shaped cultural developments and affected beliefs and practices from late antiquity to the Protestant Reformation.

Medieval Studies 111
Sex, Love, and Marriage in the Middle Ages (205890)
Sean Gilsdorf
2020 Fall (4 Credits)  Schedule: TR 0130 PM - 0245 PM
Instructor Permissions: None  Enrollment Cap: n/a

This class explores the relationships of passion, love, and obligation that bound men and women over the course of nearly two millennia, from Rome in the first century B.C.E. to sixteenth-century Italy. In particular, it focuses on how those relationships were organized legally and institutionally, on the social roles created by such relationships, and on the connection (or lack thereof) between marriage, love, and sexual passion. Although marriage in the West long was viewed as an exclusively heterosexual estate, the course also considers how homosocial and homosexual desires have affected it throughout history.

Medieval Studies  117

English Legal History, 600-1600 (142694)

Elizabeth Kamali

2021 Spring (4 Credits) Schedule: MT 1030 AM - 1150 AM
Instructor Permissions: None Enrollment Cap: n/a

An introduction to the legal and constitutional history of England from the Anglo Saxons to the end of the Tudor period, essentially 600 – 1600, including the development of private (e.g., contract, torts, property) and public law (e.g., criminal and constitutional law). No previous background in English legal history is assumed.

Course Notes: Meets together with HLS 2165.

At Cross Purposes: The Crusades in Material Culture (109230)

Evridiki Georganteli

2020 Fall (4 Credits) Schedule: W 0900 AM - 1145 AM
Instructor Permissions: Instructor Enrollment Cap: 15

Crusading expeditions in the Holy Land, Spain and Eastern Europe from 1096 until the end of the Middle Ages shaped the political, socio-economic and cultural map of Europe and the Middle East. This course explores the multifaceted encounters between crusaders, Byzantines, Jews, Armenians and Muslims through the material traces they left behind: architecture, Byzantine objects dispersed across Western Europe, coins, sculptures, frescoes, and manuscripts from the East and the West.

Creativity Research: Eccentrics, Geniuses, and Harvard Students (128215)

Shelley Carson

2020 Fall (4 Credits)  Schedule:  T 0300 PM - 0500 PM  
Instructor Permissions:  Instructor  Enrollment Cap:  15

Examines human creativity from three perspectives: a) empirical research sources, b) case studies of eminent creative achievers, and c) ourselves as creative subjects. Topics include the definition and measurement of creativity, the creative process, the neuroscience of creativity, the creative personality, the role of family life and culture in creativity, the relationship of creativity to IQ, gender differences, and the relationship of creativity to psychopathology. The course format will consist of a combination of lectures, student presentations, and discussion. Students will write a final paper on the topic of their choice related to creativity.

Class Notes:  Course inquiries to Dr. Carson at shcarson@live.com. Preference to juniors in MBB tracks or MBB secondary field. Admission to this course is via lottery. Link to lottery form will be available at https://mbb.harvard.edu/seminars by 9 a.m. (Eastern U.S. Daylight Time/EDT) on Friday 21 August. Lottery deadline is 11:59 p.m. (Eastern U.S. Daylight Time/EDT) the same day.

William Milberg

2021 Spring (4 Credits)  
**Schedule:** TBD
**Instructor Permissions:** Instructor  
**Enrollment Cap:** 14

Seeks to reconcile the complicated and messy problems of patients with brain disease with the concise analysis of precisely defined cognitive functions in normal subjects. Students will learn to overlap cognitive functions on to the brain in disease - at the gross dissection and imaging levels - and to understand some of the complex interactions of individual cognitive operations in disease. Includes dissection of a human brain, mapping on to imaging, dissection of multi-dimensional clinical disorders into their component functional parts.

**Class Notes:** 
To be admitted to this course, attend first class meeting and complete MBB Seminar Lottery (instructions at https://mbb.harvard.edu/seminars). Enrollment priority to MBB track juniors and MBB secondary field juniors.

Mind, Brain & Behavior  980M
Functional Neuroimaging of Psychiatric Disorders: Insights into the Human Brain-Mind (160759)

David Silbersweig

2021 Spring (4 Credits)  
**Schedule:** TBD
**Instructor Permissions:** Instructor  
**Enrollment Cap:** 15

Functional brain imaging has revolutionized the study of systems-level behavioral neuroscience and psychiatric disorders, through the ability to localize and characterize distributed brain activity directly associated with perception, cognition, emotion and behavior in disorders where there are not gross brain lesions. This seminar will introduce students to translational neuroimaging methods at the interface of neuroscience, psychology and medicine. It will cover recent and ongoing advances in our understanding of fronto-limbic-subcortical brain circuitry across the range of psychiatric disorders (e.g. mood disorders, anxiety disorders, psychotic disorders, personality disorders, addictions). It will discuss new, emerging biological (as opposed to descriptive) taxonomies and conceptualizations of mental illness and its treatment. It will explore the implications of such knowledge for issues such as consciousness, meaning, free will, emotion, resilience, and religiosity. It will incorporate clinical observations, scientific data and
readings, and examine future directions in brain-mind medicine.

Class Notes: To be admitted to this course, attend first class meeting and complete MBB Seminar Lottery (instructions at https://mbb.harvard.edu/seminars). Enrollment priority to MBB track juniors and MBB secondary field juniors.

Mind, Brain & Behavior 980N Section: 1

Neuroaesthetics (161267)

Nancy Etcoff

2020 Fall (4 Credits)  Schedule: R 1200 PM - 0200 PM

Instructor Permissions: Instructor  Enrollment Cap: 15

Focuses on neuroaesthetics, an emerging field offering a scientific perspective on the nature of art and the ways that art reveals human nature. Integrates findings from neuroscience, psychology, evolutionary biology, philosophy, and scholarship in the arts and humanities. Begins with a brief history of ideas on aesthetics, art, beauty, and pleasure. Considers the neural underpinnings of response to art in the brain’s reward system and default network. Among the questions considered: Why are people drawn to art that is neither conventionally beautiful nor entirely pleasurable? Is art a vehicle for simulating experiences and understanding other minds? What does it mean to “enjoy” sad music or chills and thrills in response to fiction or film? Can art promote well-being? The course will focus on visual art, fiction, film, and to a lesser extent, music, and on our response to art rather than its creation. The course will include a semester long gallery classroom at the Harvard Art Museum with original works of art from the museum’s collections that will serve as primary source materials for study and as subjects of assignments.

Class Notes: Preference to juniors in MBB tracks or MBB secondary field. Admission to this course is via lottery. Link to lottery form will be available at https://mbb.harvard.edu/seminars by 9 a.m. (Eastern U.S. Daylight Time/EDT) on Friday 21 August. Lottery deadline is 11:59 p.m. (Eastern U.S. Daylight Time/EDT) the same day.

Mind, Brain & Behavior 980P Section: 1

The Role of Music in Health and Education (205158)

Lisa Wong

2020 Fall (4 Credits)  Schedule: R 0300 PM - 0500 PM

Instructor Permissions: Instructor  Enrollment Cap: 18
Music shapes the course of human history at both a micro and macro scale; The "universal language" has the power to connect people who share no other common ground. Its power to bind people together is intuitively understood, but only through recent neuroimaging advances over the past few decades have scientists been able to move past intuition to reveal its impact on the brain. In this course, we will examine the exciting progress of the fields of music, science, and social science, through a variety of lenses, and meet some of the experts in the field. Who are the key investigators and practitioners in today’s emerging music/brain landscape? What are the latest discoveries about how music affects the brain? How does how we hear and listen impact our perception of music? Who are some of the key influencers in music and social change? This course invites students to deepen their relationship with music, exploring different aspects of the art form through the lens of neuroscience, education, medicine, music therapy, public health and social justice. By the end of this course, the learner will (1) understand the effect of music on the developing brain; (2) understand the mechanism of hearing music; (3) consider the pathophysiology of disordered movement and hearing and how music can be used therapeutically; and (4) understand how other disciplines can add to their knowledge of the therapeutic uses of music. Given the transdisciplinary nature of the work, students will be introduced to literature from different disciplines and use these resources to explore their own individual interests in music.

Course Notes: Preference to juniors in MBB tracks or MBB secondary field.

Mind, Brain & Behavior 980R Section: 1

Psychopath and Psychopathy: Psychological, Neuroscientific, Legal, and Policy Issues (207090)

Ellsworth Fersch

2020 Fall (4 Credits) Schedule: W 0300 PM - 0500 PM

Instructor Permissions: Instructor Enrollment Cap: 18

Psychopathy is often used to describe individuals who act in criminal even non-criminal predatory or conscience-less fashion. It is not, however, an official term in the Diagnostic and Statistical Manual of Mental Disorders, though antisocial personality disorder has in the past been described as encompassing psychopathy and sociopathy. Psychopathy was explored by Cleckley in his 1944 book The Mask of Sanity: and by Robert Hare in his 1999 book Without Conscience, and in his 2003 revision of his Psychopathy Check-list. My psychology department seminar on Psychopaths and Psychopathy a decade ago focused on behavioral research and case studies up to that time. By that time the American Psychiatric Association had issued a statement that psychopaths and those with antisocial personality disorder were not, for heuristic reasons, eligible for the insanity defense. Also, at that time, the determination that a convicted killer was a psychopath was often a strong indicator that the death penalty was warranted. Since then neuroscience research has increasingly explored brain structure and brain function in relation to the disorder causing some professionals to reevaluate the applicability of former positions on insanity and other defenses. Related research has further examined social and philosophical factors, and further
operationalized behavioral considerations. In this interdisciplinary discussion-based seminar, students from any of a number of concentrations will examine and discuss that newer research in the context of previous research, and will write and present a briefer case study as well as a longer paper about a topic of their choosing.

Class Notes: Course inquiries to Dr. Fersch at fersch@fas.harvard.edu. Preference to juniors in MBB tracks or MBB secondary field. Admission to this course is via lottery. Link to lottery form will be available at https://mbb.harvard.edu/seminars by 9 a.m. (Eastern U.S. Daylight Time/EDT) on Friday 21 August. Mind, Brain & Behavior 980S

Cognitive Neuroscience of Meditation (207091)

Sara Lazar

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: 15

Buddhist philosophy describes a model of how the mind works, as well as a method, mindfulness meditation, that can be used as a tool to transform consciousness and reduce mental distress. Neuroscientists have begun to study the impact of meditation on brain structure and function, often using Buddhist philosophy to guide their hypotheses. We will review and discuss how the science relates to Buddhist philosophy, using the four foundations of mindfulness as the primary framework. We will also compare and contrast the Buddhist model with modern scientific models of how conscious experience is created in the brain, in order to gain a more nuanced understanding of consciousness that integrates philosophy, neuroscience, and personal experience. No prior knowledge of Buddhism is required. The course will be a mixture of lecture, discussion of two primary scientific articles that are assigned each week, and formal powerpoint presentations by students. Students will write a final paper on a topic of their choice that is relevant to the themes of the course.

Class Notes: To be admitted to this course, attend first class meeting and complete MBB Seminar Lottery (instructions at https://mbb.harvard.edu/seminars). Enrollment priority to MBB track juniors and MBB secondary field juniors.

Mind, Brain & Behavior 980V Section: 1

The Functional and Structural Human Brain Connectome (215757)
Studies of functional connectivity (FC) of the human brain using functional magnetic resonance imaging (FMRI) data collected during wakeful rest have revolutionized our understanding of the brain's organization at the network level. Consistent with networks observed at rest, in vivo FMRI studies of brain activity during performance of tasks also reveal that large-scale brain networks that are engaged during task performance are the same as those that are "active" at rest. More recently, structural MRI has revealed gray matter structural covariance networks and advances in diffusion MRI have made it possible to study the white matter structural connectome via in vivo fiber tracking. In this course, we will learn the basics of MRI methods used for connectomics research, including structural, diffusion, and functional MRI, and how each of these techniques are used to study the structural and functional connectome of the human brain. Key methodological and interpretational issues for each technique will be discussed, including comparative neuroanatomy research that aims to integrate MRI connectomic measures with findings from translational studies using tracer injections to gain an understanding of the mechanisms underpinning MRI measures of connectivity. We will then discuss some of the brain networks that have been reported in the literature using these methods, and the links between structural and functional connectomes, with a focus on networks implicated in psychopathology and addiction. Last, we will discuss open access resources for connectomics research, including CoCoMac, the Healthy Adult Connectome Project, Lifespan and Disease Connectome Projects, and the CONNECT Project.

Course Notes: To be admitted to this course, attend first class meeting and complete MBB Seminar Lottery (instructions at https://mbb.harvard.edu/seminars). Enrollment priority to MBB track juniors and MBB secondary field juniors.

Molecular and Cellular Biology
Subject: Molecular & Cellular Biology

**Molecular & Cellular Biology 60**

Cellular Biology and Molecular Medicine (110424)

*Dominic Mao*

*Vladimir Denic*

*Michel Becuwe*

2020 Fall (4 Credits)  
**Schedule:** W 0900 AM - 1030 AM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

MCB 60 provides an introduction to the principles of molecular and cellular biology and their connections to biomedicine. The course explores how medical syndromes provide insights into biological processes and how biological mechanisms underlie human disease and physiology. Topics range from DNA repair, protein folding and vesicle transport to metabolism, cell migration, and cancer. Content for lecture topics comprising of reading and viewing material will be released weekly followed by mandatory, interactive live sessions with the instructors. Weekly sections will combine a laboratory that focuses on experimental design and data analysis, primary literature reading, and review of lecture materials.

**Class Notes:**
- About three 15-min lecture videos and reading material will be posted every week ahead of live discussion sessions with the instructors. Multiple watch parties of the lecture videos with peers and course staff will be available.
- Two, duplicate 90-minute live discussion sessions with instructors per week. Students are required to attend one of the two sessions.
- One 90-min live section that combines lab, lecture review, and paper discussion is required.
- Schedules of all live sessions TBA, after students are polled for availability.

**Recommended Prep:** LS 1b recommended.

**Requirements:** Prerequisite: LPS A OR LS 1a OR LS 50A AND LS 50B

**Molecular & Cellular Biology 63**

Biochemistry and Molecular Medicine (110450)

*Alain Viel*

*Jessica Liu*

2020 Fall (4 Credits)  
**Schedule:** R 0130 PM - 0245 PM
The course integrates an introduction to the structure of macromolecules and a biochemical approach to cellular function. Topics addressing protein function will include enzyme kinetics, the characterization of major metabolic pathways and their interconnection into tightly regulated networks, and the manipulation of enzymes and pathways with mutations or drugs. An exploration of simple cells (red blood cells) to more complex tissues (muscle and liver) is used as a framework to discuss the progression in metabolic complexity. Students will also develop problem solving and analytical skills that are more generally applicable to the life sciences.

Class Notes: Live Lecture will be each Thursday from 1:30 - 2:45. Live Discussion Sections are planned for Tuesday throughout the day.

Requirements: Prerequisite: LS 1a OR LPS A OR LIFESCI 50A/B

Cell Biology in the World (110451)

Robert Lue
Jessica Liu

2021 Spring (4 Credits) Schedule: MW 0300 PM - 0415 PM

Instructor Permissions: None Enrollment Cap: n/a

This course teaches fundamental concepts in cell biology in the context of individual life histories drawn from different parts of the world. Each life case focuses on key aspects of human development, growth, aging and disease while providing a nuanced view of the interplay between the life sciences, geography and culture. For example, a comparative discussion of aging in the United States and Japan is used to explore diet, cellular metabolism and its relationship to protein damage and turnover, while the Human Immunodeficiency Virus and AIDS in South Asia is used to explore mucosal immunity and the basis for estimating relative infection risk. Each case delves into the cell biology of major biological events across the life history of the human

Physical Biochemistry: Understanding Macromolecular Machines (114796)

Monique Brewster
Maxim Prigozhin

2021 Spring (4 Credits) Schedule: MWF 1030 AM - 1145 AM
The course aims to develop fundamental concepts of biochemistry as they apply to macromolecules, including protein and nucleic acid structure, thermodynamics and kinetics, ligand interactions and chemical equilibria. The course will also emphasize how these concepts are used in studies of the structure and function of biological molecules, including examples from metabolism. In the weekly section, students will undertake a discovery-based laboratory research project in which they will apply these concepts toward understanding the structure and function of the ATPase domain from the ABC transporter associated with antigen processing (TAP).

Requirements:
Prerequisite: (LPS A OR LS 1a) AND (CHEM 20 OR CHEM 17)

Cell Biology Through the Microscope (109851)

Ethan Garner
Jeff W. Lichtman
Michel Becuwe

2021 Spring (4 Credits) Schedule: TR 0130 PM - 0245 PM

Instructor Permissions: Instructor Enrollment Cap: 24

MCB 68 explores three fundamental fields of eukaryotic cell biology: chromosome segregation, cell motility, and neuroscience. Each topic is approached from a historic and technical perspective. Students will discover these systems as the scientific field did, learning how each successive advance in microscopy revealed new biological details. Students will come away with a theoretical and hands-on understanding of microscopy as well as a grasp of the biological findings each technology revealed.

Recommended Prep: An additional introductory course in biology (e.g., MCB 60, MCB 80 or SCRB10) is recommended but not required. The course design, level, and content is best suited for students in their sophomore year

Requirements: Prerequisite: LS 1a OR LPS A

Molecular & Cellular Biology  80

Neurobiology of Behavior (117711)

Jeff W. Lichtman
Kathleen Quast

2020 Fall (4 Credits) Schedule: F 1030 AM - 1145 AM
An introduction to the ways in which the brain controls mental activities. The course covers the cells and signals that process and transmit information, and the ways in which neurons form circuits that change with experience. Topics include the neurobiology of perception, learning, memory, emotion, and neurologic disorders. This year we are combining interactive, didactic videos with "live" Friday sessions, group projects, and small discussion sections.

Course Notes: The course is open to students with little formal training in biology.
Requirements: Anti-Requisite: Cannot be taken for credit if MCB 81 or NEURO 80 already complete.

**Molecular & Cellular Biology 100**

Experimental Research in Molecular and Cellular Biology (160364)

*Alain Viel*
A laboratory course that immerses students in a dynamic project-based research environment. Participate in experimental projects directly linked with ongoing faculty research. Students select a project from the following research tracks: neurobiology, microbial sciences, cell biology, and synthetic biology. New projects, including some in other research fields, are offered every term. In a highly collaborative atmosphere, students form a fully-functional and diverse research group based on the sharing of ideas and progress reports between projects. The spring microbiology project is part of the "genomes to Biomes" series. This course cannot be taken concurrently with LifeSci 100

Recommended Prep: LPS A or LS 1a or permission of the instructor. Students interested in a neurobiology project will need MCB 80 or permission of the instructor.

Mathematics in Biology (117342)

Elena Rivas

2020 Fall (4 Credits)  Schedule: MWF 1030 AM - 1145 AM

Instructor Permissions: Instructor  Enrollment Cap: n/a

MCB111 is meant for biologists who want to learn mathematical principles relevant to current biological research, as well as for mathematically oriented students who want to explore applications in biology. The course theme is mathematical modeling of biological processes, with a special emphasis on probabilistic models and inference. More than half of the course covers topics on information theory, Bayesian inference, statistics, probabilistic modeling, and neural networks. The last section of the course covers dynamical systems in biology, including random walks, feedback control, and molecular population dynamics. Each week-long unit is devoted to one specific topic, and is based in one or more scientific papers selected from the recent literature. The best way to learn in this course is through the homework. They are very hands-on, and usually require coding to implement some mathematical concept through a particular biological example. For instance, one unit is devoted to maximum likelihood methods in the context of Quantitative Trait Loci analysis; another unit explores probabilistic models in the context of inferring ancestry and recombination breakpoints from genomic reads in fly populations. More information about the course can be found at mcb111.org.

Recommended Prep: Mathematics 19 or higher.

Molecular & Cellular Biology 112

Biological Data Analysis (203081)
Biology has become a computational science, requiring analysis of large data sets from genomics, imaging, and other technologies. This course teaches computational methods in biological data analysis, using an empirical and experimental framework suited to the complexities of biological data, emphasizing computational control experiments. The course is primarily aimed at biologists learning computational methods, but is also suited for computational statistical scientists learning about biological data.

Molecular & Cellular Biology 115

Cellular Basis of Neuronal Function (114789)

Ryan W. Draft
Kathleen Quast

2021 Spring (4 Credits) Schedule: TR 1030 AM - 1145 AM
Instructor Permissions: Instructor Enrollment Cap: 20

The essential function of a neuron is to processes complex signals derived from the external world. In doing so, neurons employ diverse mechanisms that respond to chemical and electrical signals with incredible sensitivity and plasticity. In this course, we will study these electrical, molecular, and cellular processes using biophysical and biological approaches. Specifically, we will explore topics on excitable membranes, neurotransmission, ion channels, dendritic integration, intracellular signaling, and synaptic plasticity in the context of real cells and brain circuits. Additionally, there will be a hands-on laboratory section for students to learn to collect and analyze data from common electrophysiological methods (patch clamping and extracellular recording in cultured cells and brain slices).

Laboratory section (2 hours) will be scheduled ad hoc after enrollment on either Thursdays, Fridays, or Mondays.

Class Notes: MCB 115 is also offered as NEURO 115. Students may not enroll in both.

Requirements: Pre-requisite: MCB/NEURO 80 or Instructor Approval. Anti-requisite: Cannot be taken for credit if NEURO 115 is already complete

Additional Course Attributes:

**Molecular & Cellular Biology 125**

Molecular Basis of Behavior (159655)

*Catherine Dulac*

2021 Spring (4 Credits)  
**Schedule:** TR 0130 PM - 0245 PM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

Modern molecular genetic approaches are teaching us a great deal on how the brain controls behaviors. This course will cover newly developed experimental strategies of molecular neuroscience, and how they have helped uncover the nature and identity of behavior circuit components. How genes and molecules affect behaviors will be investigated through key examples of mammalian behaviors with an emphasis on instinctive and social behaviors, their expression, development, and associated mental disorders.

**Class Notes:**  
MCB 125 is also offered as NEURO 125. Students may not enroll in both.

**Requirements:**  
Anti-Req: Students who have taken NEURO 125 cannot take this course for credit.

**Additional Course Attributes:**

The Brain: Development, Plasticity and Decline (124817)

*Sam Kunes*

2020 Fall (4 Credits)  
**Schedule:** MWF 1030 AM - 1145 AM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** 12

A lecture and discussion course on how the brain develops, employs plasticity to adapt to its environment and undergoes functional decline with aging. Topics include the birth, death and identity of neurons, axon guidance and synaptic specificity, adult neurogenesis, developmental disorders of synaptic function and memory, including autism and Alzheimer's Disease. We explore how the brain loses function with aging. Course assignments emphasize critical evaluation of the primary literature, experimental design and scientific writing.

**Requirements:** Anti-Requisite: Cannot be taken for credit if NEURO 129 already complete.

Computational Neuroscience (117859)
Haim Sompolinsky
2021 Spring (4 Credits)  Schedule:  MW 0300 PM - 0415 PM
Instructor Permissions:  None  Enrollment Cap:  n/a

Follows trends in modern brain theory, focusing on local neuronal circuits as basic computational modules. Explores the relation between network architecture, dynamics, and function. Introduces tools from information theory, statistical inference, and the learning theory for the study of experience-dependent neural codes. Specific topics: computational principles of early sensory systems; adaptation and gain control in vision, dynamics of recurrent networks; feature selectivity in cortical circuits; memory; learning and synaptic plasticity; noise and chaos in neuronal systems.

Recommended Prep:  Basic knowledge of multivariate calculus, differential equations, linear algebra, and elementary probability theory.

Requirements:  Anti-Requisite: Cannot be taken for credit if NEURO 131 already complete.

Molecular & Cellular Biology 133

Unique Cells and Organisms (212828)

Nicholas Bellono

2020 Fall (4 Credits)  Schedule:  TR 1200 PM - 0115 PM
Instructor Permissions:  Instructor  Enrollment Cap:  15

This course focuses on how specialized molecular physiology gives rise to unique features across interesting organelles, cells and creatures. Guest lecturers and instructors will emphasize primary literature and scientific writing to strengthen students' skills in critical thinking, interpretation of data, and experimental design. Students will design a research project based on their selection of a model organism, carry out and analyze an initial experiment, and plan future directions. Students will end their semester by developing a research proposal and presentation based on their own curiosity in an interesting biological question emerging from their initial experiments.

Class Notes:  Students are required to attend each lecture (virtually). At the first class meeting, students and instructors will agree on a mutually desired time for the remaining lectures based on time-zones and availability.

Recommended Prep:  MCB/NEURO 80, or equivalent introductory Neuro course is most optimal for preparation.

Requirements:  Prerequisite: MCB 60 OR MCB 80 OR NEURO 80 OR SCRB 10

Additional Course Attributes:

The visual system fascinates biologists, in part because humans are such visual animals. This also makes loss of vision a pressing concern: many Americans regard blindness as the worst ailment they could get, fearing it more than Alzheimer’s or AIDS. For these reasons, as well as because of its relative accessibility, the visual system is a favored model for studying fundamental aspects of neurobiology, as well as for testing novel therapeutic approaches, such as gene therapy. This course will cover key topics in the structure, function and development of the mammalian visual system, and then use them as a basis for considering causes of blindness and potential cures.

Class Notes: MCB 143 is also offered as NEURO 143. Students may not enroll in both.

Recommended Prep: MCB 80 or NEURO 80 is recommended.

Requirements: Prerequisite: MCB/NEURO 80 or Instructor Approval. Anti-requisite: Cannot be taken for credit if NEURO 143 is already complete.
Molecular & Cellular Biology 146

Experience-Based Brain Development: Causes and Consequences (123272)

Takao Hensch

2021 Spring (4 Credits) Schedule: TR 0300 PM - 0415 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

At no time in life does the surrounding environment so potently shape brain function as in infancy and early childhood. This course integrates molecular/cellular biology with systems neuroscience to explore biological mechanisms underlying critical periods in brain development. Understanding how neuronal circuits are sculpted by experience will motivate further consideration of the social impact on therapy, education, policy, and ethics.

Requirements: Prerequisite: (LPS A OR LS 1a) AND MCB 80, and cannot be taken for credit if NEURO 146 already complete.

Molecular & Cellular Biology 148

The Neurobiology of Pain (159880)

Ryan W. Draft

2020 Fall (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: 24

This course will explore the neurobiological systems and mechanisms underlying both acute and chronic pain. Topics will include nociceptive/sensory systems, molecular basis and modulation of pain, neuroanatomy of peripheral and central pain circuits, pain pathologies, pharmacological and non pharmacological treatments. The emphasis will be on understanding basic neurobiological concepts underlying pain systems and reading/discussing the primary scientific research in the field.

Class Notes: Course time will be agreed upon by the enrolled students and instructor during shopping period.

Requirements: Pre-requisite: MCB/NEURO 80 or Instructor Approval. Anti-requisite: Cannot be taken for credit if NEURO 148 is already complete.

Molecular & Cellular Biology 165
Interplay between Viruses and their Hosts (156010)
Victoria D’Souza
2021 Spring (4 Credits) Schedule: TR 0900 AM - 1015 AM
Instructor Permissions: None Enrollment Cap: n/a
This course provides a foray into virology, advanced cell biology, biochemistry and structural biology topics through the lens of viruses as they invade their hosts. To demonstrate concepts, a particular emphasis is placed on the human immunodeficiency virus (HIV), which provides well-studied examples of intricate virus-host interactions that occur throughout its complex life cycle.
Requirements: Prerequisite: MCB 60 OR (MCB 52 AND MCB 54)
Additional Course Attributes:

Molecular and Cellular Immunology (111720)
Shiv Pillai
2020 Fall (4 Credits) Schedule: TR 1030 AM - 1145 AM
Instructor Permissions: None Enrollment Cap: n/a
The immune system is the frontier at which molecular biology, cell biology, and genetics intersect with the pathogenesis of disease. This year the entire course will be taught through the lens of COVID19, examining the underlying scientific bases of pathogenesis, protection, treatment and prevention. The course examines in depth the cellular and molecular mechanisms involved in the development and function of the immune system and also analyzes the immunological basis of human diseases in general. Apart from COVID19, we will discuss AIDS, autoimmunity, allergic disorders, primary immunodeficiency syndromes, transplantation, and cancer
Recommended Prep: Genetics and cell biology strongly recommended.
Requirements: Prerequisite: LPS A OR LS 1a

Brain Invaders: Building and Breaking Barriers in the Nervous System (109636)
Laura M. Magnotti
2021 Spring (4 Credits) Schedule: MW 0130 PM - 0245 PM
The brain has evolved a unique but very effective system to protect itself from invaders. In this course, we will explore the specific defenses that the nervous system uses to protect itself. We will also examine how some pathogens evade or breach those defenses and the impact of those invasions. Finally, we will explore how scientists have been able to translate their understanding of these pathogenic mechanisms into technologies for research and therapeutic applications.

Class Notes: MCB 170 is also offered as NEURO 170. Students may not enroll in both.

Requirements: Pre-requisite: (LPS A OR LS1a) AND MCB/NEURO 80 or Instructor Approval. Anti-requisite: Cannot be taken for credit if NEURO 170 is already complete

### Molecular & Cellular Biology  176

Biochemistry of Membranes (112742)

*Guido Guidotti*

2020 Fall (4 Credits)  **Schedule:** MW 0300 PM - 0545 PM

**Instructor Permissions:** Instructor  **Enrollment Cap:** 25

A course on the properties of biological membranes, essential elements for cell individuality, communication between cells, and energy transduction. Topics include: membrane structure; membrane protein synthesis, insertion in the bilayer and targeting; transporters, pumps and channels; electron transport, H+ gradients and ATP synthesis; membrane receptors, G proteins and signal transduction; membrane fusion.

**Recommended Prep:** MCB 60 or MCB 52 and MCB 54 are recommended but not required.

### Molecular & Cellular Biology  186

Sleep and Circadian Clocks: from Biology to Public Health (112001)

*Charles Czeisler*

*Frank Scheer*

*Shadab Rahman*

*Melissa St Hilaire*
The impact of the brain’s circadian clock on sleep becomes evident when we travel across time zones or shift our sleep on weekends. How does this clock work? How does light from a tablet or smartphone affect our biology? What is the best time for sleep? What about naps? This course will explore the neurobiology of the brain’s circadian clock that regulates the timing and structure of sleep, its interaction with the periodic environment, and the consequences of circadian disruption in our 24/7 society on health, performance and safety.

Chromosomes (114864)

Nancy Kleckner

2021 Spring (4 Credits) Schedule: TR 1200 PM - 0245 PM

Instructor Permissions: None Enrollment Cap: n/a

Chromosome morphogenesis in prokaryotic and eukaryotic organisms. Topics will include chromosome structure, interactions between chromosomes (sisters and homologs), DNA recombination and repair, topoisomerases, transposable elements and site-specific recombination, epigenetic inheritance. Genetic, cytological, and biochemical approaches will be integrated. Lecture, reading, and discussion of classical and current literature and consideration of future experimental directions.

Class Notes: Course Time: Class Meetings will be from 1:00 pm - 2:30 pm each Tuesday and Thursday.

Requirements: Prerequisite: LS 1b AND MCB 60

Advanced Mathematical Techniques for Modern Biology (127011)

Sharad Ramanathan

2020 Fall (4 Credits) Schedule: TR 0130 PM - 0245 PM

Instructor Permissions: Instructor Enrollment Cap: 20

How do we find biologically meaningful patterns in a large amount of data? How do animals learn to use patterns in the environment to infer information despite the ignorance of the underlying laws? The course will introduce Bayesian analysis, maximum entropy principles, hidden markov models and pattern theory in
order to study DNA sequence, gene expression and neural spike train data. The relevant biological background will be covered in depth.

**Recommended Prep:** A strong background in calculus, linear algebra, fourier analysis, complex analysis at the advanced undergraduate level and an introductory knowledge of probability theory is required. Knowledge of statistical mechanics and comfort with programming will be useful.

Talking about Science (121320)

*Michael Greenberg*

*Jeff W. Lichtman*

*Richard Losick*

2021 Spring (4 Credits)  
**Schedule:** M 0430 PM - 0545 PM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 30

Teaches advanced students how to give a good research talk while exposing them to seminal scientific discoveries. Emphasis will be on speaking style, lecture organization, and use of video projection tools.

**Course Notes:** In addition to lecture material from the instructor, students will present experiments from Nobel Prize-winning work. The presentations will be critiqued in class by the participants. Open to second year graduate students or with permission of the instructor.

**Class Notes:** Course time is officially 4:30 - 7:15 pm, and will be held on the Longwood Campus, Warren Alpert Building Rm 236.

Cellular Biology, Neurobiology and Developmental Biology (124900)

*Amanda Whipple*

*Joshua Sanes*

*Bence Olveczky*

2020 Fall (4 Credits)  

**Schedule:** TR 0130 PM - 0330 PM  

**Instructor Permissions:** Instructor  

**Enrollment Cap:** 15

The biology of the individual cell lies at the heart of multi-cellular phenomena such as development and neural function. This course will emphasize critical evaluation of the primary literature, experimental design and scientific writing.

**Course Notes:** Required for first year graduate students in the Molecules, Cells and Organisms (MCO) Program, but open to graduates of all programs.
Molecular & Cellular Biology 293

Biochemistry, Chemical and Structural Biology (124901)

Doeke Hekstra
Daniel Needleman

2020 Fall (4 Credits) Schedule: MWF 0130 PM - 0245 PM

Instructor Permissions: Instructor Enrollment Cap: 15

This course will introduce basic principles in general, organic and physical chemistry, including kinetics and thermodynamics, as well as macromolecular structure. Concepts will be illustrated with examples taken from the visual system.

Course Notes: Required for first year graduate students in the Molecules, Cells and Organisms (MCO) Training Program.

Molecular & Cellular Biology 294

Interesting Questions in Physical Biology (122422)

Nancy Kleckner

2020 Fall (4 Credits) Schedule: TR 1200 PM - 0245 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

Physical biology can be defined as a discipline that seeks to understand biological processes through the lens of physics and engineering. Faculty and students will unite to review current research with the aim of identifying and pondering interesting emerging questions in this area. Combination of lecture and discussion format. Comprises a series of two-week modules, most of which are given by a one or a pair of faculty drawn from MCB, Physics and SEAS.

Course Notes: Intended primarily for first year graduate students in the EPB PhD track of the MCO program but available to other graduate students and advanced undergraduates as space permits.

Molecular & Cellular Biology 350
Scientific Integrity (156950)
Naoshige Uchida
Polina Kehayova
2020 Fall (2 Credits)  Schedule: TBD
Instructor Permissions: Instructor  Enrollment Cap: n/a

MCB 350 is a discussion forum on scientific integrity using case studies to examine basic ethical and regulatory requirements for conducting research, and fulfills the National Institutes of Health (NIH) and National Science Foundation (NSF) requirements for formal Responsible Conduct of Research (RCR) instruction. Students are required to complete a pre-course assignment, attend all lectures including the final lecture in February, participate in class discussions, and complete a final course evaluation. A certificate will be issued upon successful completion of the course.

Course Notes: According to NIH Guidelines, students are required to take a Scientific Integrity Refresher Course every four years (*MCB 351).

Additional Course Attributes:

Molecular & Cellular Biology 351
Scientific Integrity Refresher (156951)
Sam Kunes
Polina Kehayova
2021 Spring (2 Credits)  Schedule: TBD
Instructor Permissions: Instructor  Enrollment Cap: n/a

MCB 351 is a refresher course in the Responsible Conduct of Research which must be completed by graduate students in the MCO PhD program every 4 years, and fulfills the National Institutes of Health (NIH) and National Science Foundation (NSF) requirements for formal Responsible Conduct of Research (RCR) instruction.

Molecular & Cellular Biology 352
Microscopy (156952)
Jeff W. Lichtman
Douglas Richardson
2021 Spring (2 Credits)  Schedule: TBD
This course presents the fundamental concepts that underlie modern light microscopy in a rigorous but
non-mathematical way for biological applications. The students will learn about the four major frameworks
for light (ray optics, wave optics, electromagnetism, and quantum optics). The ways lenses work, the theory
of resolution, and the optical design of the compound microscope will be described. The course will also
describe the photo-physical principles that underlie fluorescence and genetically encoded fluorescent
proteins, and light detector and imaging strategies. Scanning (confocal and 2P), light sheet and super-
resolution microcopies will also be described. We will end with a tour of the Harvard Center of Biological
Imaging.

Molecular & Cellular Biology 353

Building Your Own Microscope (160485)

Venkatesh Murthy

2021 Spring (2 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: n/a

Microscopes of various sorts are used by most biologists, who typically buy these off the shelf. With a little
knowledge, however, most biologists can build their own microscopes to do many of the things that the
commercial ones do. In this quarter course, you will learn to build an epifluorescence microscope and to
acquire images using a computer.

Molecular & Cellular Biology 354

Introduction to Model Organisms (160493)

Craig Hunter

2021 Spring (2 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: n/a

Model organisms are embedded in our scientific culture, from text books on the discovery of genetic
material, to mod-encode genome projects. This quarter course is a means to formally introduce an
enormously successful experimental scientific approach that has revealed uncountable new biological
mechanisms for the last 70 years. Students in this class will engage in hands-on learning exercises to
become familiar with commonly used model organisms. They will learn about the genesis of each model
system and compare and contrast the features and available experimental approaches that govern whether
a particular organism is an appropriate model for different biological phenomena.
Molecular & Cellular Biology 355
Visualizing, Analyzing and Presenting Macromolecular Structures with PyMOL (160523)

*Rachelle Gaudet*

2021 Spring (2 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: n/a

PyMOL is one of the most popular software programs to display and explore high-resolution structures of macromolecules. It is readily used to create publication-quality figures, and movies and animations of structural information. In this course, you will learn the basics of PyMOL and be able to display, explore and present three-dimensional structures of macromolecules. With this basic training, you will be able to generate high-quality images and simple movies, and have the resources to learn more on your own to generate more complex displays.

Molecular & Cellular Biology 356
Practical Introduction to Robotics (160558)

*Benjamin de Bivort*

2021 Spring (2 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: 20

Automation and robotics have revolutionized molecular biology. Liquid handling robots are already facilitating the "omics" revolution in genome sequencing, proteomics and high throughput screening. Now, neuroscience and microscopy are adopting robotics for throughput and experiments requiring precision and repeatability, like targeted microelectrode placement. In this nano course, students will learn 1) basic principles of practical robotics including the interaction of software and hardware, 2) the roles of drivers, control cards, microcontrollers and sensor electronics, and 3) practical engineering skills including basic soldering, measurement of voltage, conductivity, polarity and resistance. Students will explore the challenges of translating conceptual operational algorithms into physical implementations.

Course Notes: To enroll, students must be apart of a Life Science Graduate Program, or permission of the instructor.
Molecular & Cellular Biology 358
Mass Spectrometry (212804)
Christina Woo
2021 Spring (2 Credits) Schedule: TBD
Instructor Permissions: Instructor Enrollment Cap: 30
This course will provide an introduction to shotgun proteomics: from sample preparation, the processes within mass spectrometer, and how to analyze the data obtained from this technique.

Life Sciences 1A
An Integrated Introduction to the Life Sciences: Chemistry, Molecular Biology, and Cell Biology (121189)
Daniel Kahne
Monique Brewster
Sien Verschave
Rachelle Gaudet
2020 Fall (4 Credits)  Schedule:  T 0130 PM - 0245 PM
Instructor Permissions:  None  Enrollment Cap:  n/a
What are the fundamental features of living systems? What are the molecules imparting them and how do their chemical properties explain their biological roles? The answers form a basis for understanding the molecules of life, the cell, diseases, and medicines. In contrast with traditional presentations of relevant scientific disciplines in separate courses, we take an integrated approach, presenting chemistry, molecular biology, biochemistry, and cell biology framed within central problems such as the biology of HIV and cancer.
Course Notes: For more information about the assignment process, please see the course website in the fall. This course, in combination with Life Sciences 1b, constitutes an integrated introduction to the Life Sciences.

Class Notes: Please sign up for ONE of the two lecture components.

The first lecture for all students will be held live on Thursday, September 3rd at either 1:30 pm, or 7:30 pm. All other Thursdays will be for optional instructor office hours.

An Integrated Introduction to the Life Sciences: Genetics, Genomics, and Evolution (121191)

Hopi Hoekstra
Andrew Berry
Pardis Sabeti
Annie Park
Nava Gharaei

2021 Spring (4 Credits) Schedule: TR 0130 PM - 0245 PM
Instructor Permissions: None Enrollment Cap: n/a

How are observable characteristics of organisms influenced by genetics? How do genomes change over time to produce the differences we see among species? This course takes an integrated approach, showing how genetics and evolution are intimately related, together explaining the patterns of genetic variation we see in nature, and how genomics can be used to analyze variation. In covering Mendelian genetics, quantitative genetics, and population genetics, this course will emphasize developments involving our own species.

Course Notes: This course, in combination with Life Sciences 1a, constitutes an integrated introduction to the Life Sciences.

Life Sciences 50A

Integrated Science (159706)

Andrew Murray
Michael Desai
Aravinthan Samuel
Benjamin de Bivort
Emma Nagy
Cara Weisman

2020 Fall (8 Credits) Schedule: MTWRF 1030 AM - 1145 AM
Instructor Permissions: Instructor Enrollment Cap: 30

This is an intensive two-semester, double course that introduces the natural sciences as an integrated whole to students who have a very strong interest in science. Our goal is to teach students how to solve scientific problems by drawing methods and concepts from biology, chemistry, physics, and mathematics. The course uses examples from biology as an integrating theme, principles from physics and mathematics to reduce complex problems to simpler forms, and computer simulation to allow students to develop their intuition about the behavior of the dynamical systems that control the physical and biological universe. The course includes bootcamps to introduce students to biological experiments and the computer language, Python. Each semester will include a project lab, in which students will work in small teams to do original research on unsolved biological problems.

Life Sciences  100

Experimental Research in the Life Sciences (119061)

Alain Viel

2020 Fall (4 Credits) Schedule: R 0300 PM - 0545 PM

Instructor Permissions: Instructor Enrollment Cap: n/a
A laboratory course that immerses students in a dynamic project-based research environment. Participate in experimental projects directly linked with ongoing faculty research. Students select a project from the following research tracks: neurobiology, microbial sciences, cell biology, and synthetic biology. New projects, including some in other research fields, are offered every term. In a highly collaborative atmosphere, students form a fully-functional and diverse research group based on the sharing of ideas and progress reports between projects. The spring microbiology project is part of the "genomes to Biomes" series.

Course Notes: Location of the first meeting will be announced on the course website. Open to freshmen, sophomores, juniors, and seniors, regardless of concentration, and suitable for students either with or without extensive laboratory experience. The course may only be repeated once and the second enrollment must be approved by the instructor.

Recommended Prep: Students interested in a neurobiology project will need MCB 80 or permission of the instructor. Please also note that students cannot take MCB 100 and LS 100 at the same time.

Requirements: Prerequisite: LPS A OR LS 1a

**Music 1**

Introduction to Western Music, from Bach to Beyoncé (114594)

*Michael Uy*

2021 Spring (4 Credits)  
**Schedule:** TBD
Instructor Permissions: Instructor  Enrollment Cap: 125

This course introduces you to a variety of art music repertories, and a range of ways to think, talk, and write about them. While we explore some of the great "classics" of the Western musical canon, including works by male composers such as Bach, Beethoven, and Stravinsky, we also discover the critical roles played by renowned female performers, patrons, and writers, as well as the significant impacts made by artists of color, such as Pulitzer-prize winner Kendrick Lamar, and Beyoncé. Ending in the present day, we investigate what music means in a global context, and a world increasingly shaped by new technologies and digital networks. During the semester, you will build a robust vocabulary for analyzing music and articulating a response to it. You will gain an understanding of social, political, and cultural histories of music, and deepen your awareness of the role of musical traditions in your life. Finally, you will possess a strong command over a substantial repertory. No prior knowledge of music history or musical notation is necessary, and you will be graded on the improvements you make in engaging with the material. By the end of class, you will be equipped to embark on a lifetime of informed listening.

Music  2
Foundations of Tonal Music I (118594)

Joseph Jakubowski

2021 Spring (4 Credits)  Schedule: TBD

Instructor Permissions: Instructor  Enrollment Cap: 108

Seeks to develop a greater understanding of music, musical analysis, and critical listening. We will study some of the organizing principles of musical works (from a range of styles) by means of composition projects, score analysis, and aural skills. While reading knowledge of simple musical notation is helpful, there will be at least one section for students with no previous experience. Additional sections required on Mondays and Fridays, 10:30 - 11:45 am

Course Notes: Open to all students.

Music  4
Introduction to Composition (111353)

Yvette Jackson

2020 Fall (4 Credits)  Schedule: M 1245 PM - 0245 PM

Instructor Permissions: Instructor  Enrollment Cap: 14

Open to students with little or no prior experience in composition. Explores ways of thinking about and
organizing basic compositional elements such as melody, harmony, rhythm and instrumental color, as well as developing skills of score preparation and analytical listening. The primary focus of the course is a series of short compositional exercises, culminating in a somewhat longer final project. Workshop performances of students’ music take place throughout the term.

Recommended Prep: Some prior experience in music theory or permission of the instructor.

Music 14A
Harvard-Radcliffe Collegium Musicum (110114)

Andrew Clark

2020 Fall (2 Credits)  Schedule: T 0645 PM - 0845 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

Choral music finds itself in a state of upheaval as current health risks render communal singing impossible. This semester, the Harvard-Radcliffe Collegium Musicum will creatively adapt its work to sustain our values of joy, care and well-being, empowerment, and musical excellence during our physically-distant time. The confluence of the COVID-19 pandemic and social unrest inspires us to invoke the best of the mixed-choir tradition and compels our community to reimagine choral practice in a COVID and post-COVID era.

Our rehearsals will balance a familiar choral experience with music-making rooted in authentic, student-driven artistic expression. This year, we will uphold the Collegium tradition of performing large-scale works such as Handel’s Messiah with the Harvard Baroque Chamber Orchestra. We will also draw upon the creativity of our members to develop small- and large-group projects that promote individual agency and make use of new technologies. Collegium members are given a unique opportunity to develop experience in arts administration, concert production, marketing, tour planning, and other facets of non-profit leadership. Students may optionally explore enrichment in the areas of individualized vocal study, choral composition, advanced ear-training and sight singing, and choral repertoire. In partnership with Harvard’s Mindich Program for Engaged Scholarship, Collegium will also design and implement projects that engage with public schools, nursing homes, and hospitals severely impacted by the COVID-19 crisis.

Our collective work will culminate in a multimedia performance, an act and artifact of this pivotal moment in time.

Course Notes: Course Notes: Audition required. For audition and further information, visit www.singatharvard.com. The course is graded SAT/UNSAT based on attendance and participation. This course may be taken repeatedly, but to receive credit the course must be taken in the Fall and Spring semesters consecutively. A maximum of four semesters (two years) may be counted as credit towards the degree.

Music 14B

Harvard-Radcliffe Collegium Musicum (160655)

Andrew Clark

2021 Spring (2 Credits)  Schedule:  TBD
Instructor Permissions:  None  Enrollment Cap:  60

Harvard-Radcliffe Collegium Musicum (SATB choir). Harvard’s nationally acclaimed mixed choir, Collegium, performs a dynamic and innovative repertoire from classical masterpieces to new compositions by renowned, emerging, and student composers. Through collaborative projects, tours, and community engagement, the ensemble fosters a passionate community of student musicians. Collegium frequently partners with the other Harvard Choruses—the Glee Club, and the Radcliffe Choral Society—to perform large-scale works. Students must complete both parts of this course (parts A and B) within the same academic year in order to receive credit.

Course Notes:  Audition required. For audition and further information, visit www.singatharvard.com

Music 15A

Harvard Glee Club (110115)

Andrew Clark

2020 Fall (2 Credits)  Schedule:  MW 0430 PM - 0530 PM
Instructor Permissions:  Instructor  Enrollment Cap:  n/a

How did choral communities navigate moments of societal crisis and calamity in the past? How might we invoke the lessons and wisdom of history to find inspiration to fortify us during this challenging moment? Since its founding in 1858, the Harvard Glee Club has endured through world wars, pandemics, and social turmoil. Rooted in its core virtues of glee, good humor, unity, and joy, the 2020-2021 Harvard Glee Club will
aspire to build its own legacy of resilience and ingenuity.

The Glee Club is a tenor and bass ensemble performing music written in the male chorus tradition. Through excellence in performance, student-management, education, community, tradition, and philanthropy, the Glee Club offers a unique musical experience for all members. This year, we will study and sing timeless and timely choral works from a variety of eras and cultures, including revered pieces that the group performed often during similar moments of crisis in the past. We will learn from composers and poets who created works in response to isolation and catastrophe and reflect on their relevance today in both full-ensemble and small-group projects. Enrichment in the areas of individualized vocal study, choral composition, advanced ear-training and sight singing, and choral repertoire may be explored optionally as students desire. Glee Club members will also design and implement community engagement projects guided by Harvard’s Mindich Program for Engaged Scholarship, including collaborations with the Ashmont Boy Choir in Dorchester.

The semester will culminate in a multimedia presentation of our collective work as both an act and artifact of this pivotal moment in time.

Course Notes: Audition required. The group is open to tenor and bass singers; we welcome, value, and support students of all gender identities. For audition and further information, visit www.singatharvard.com The course is graded SAT/UNSAT based on attendance and participation. This course may be taken repeatedly, but to receive credit the course must be taken in the Fall and Spring semesters consecutively. A maximum of four semesters (two years) may be counted as credit towards the degree.

Harvard Glee Club (160660)

Andrew Clark

2021 Spring (2 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: 60

Harvard Glee Club (TTBB Choir). Founded in 1858, the Glee Club is a tenor-bass choral ensemble, performing music from the male choral tradition, an open to any student at Harvard University. The Glee Club collaborates with arts groups on campus and at other universities, and across the world on annual tours. Through excellence in performance, education, community-building, tradition, and philanthropy, the Glee Club offers a unique musical experience for all members. Students have numerous opportunities to
take on administrative and musical leadership roles within the ensemble. The Glee Club frequently collaborates with the Harvard-Radcliffe Collegium Musicum and the Radcliffe Choral Society, as well as the Harvard-Radcliffe Orchestra, to perform large-scale works. Students must complete both parts of this course (parts A and B) within the same academic year in order to receive credit.

**Course Notes:**
Audition required. For audition and further information, visit www.singatharvard.com

The course is graded SAT/UNSAT based on attendance and participation. This course may be taken repeatedly, but to receive credit the course must be taken in the Fall and Spring semesters consecutively. A maximum of four semesters (two years) may be counted as credit towards the degree.

Radcliffe Choral Society (110128)

*Andrew Clark*

2020 Fall (2 Credits)  
**Schedule:**  
M 0645 PM - 0845 PM

**Instructor Permissions:**  
Instructor  
Enrollment Cap: n/a

Founded in 1899, the Radcliffe Choral Society is Harvard's oldest women's organization and one of the country's preeminent collegiate treble choruses. As we confront the limitations and opportunities of a virtual semester, how might we continue to honor our rich history and further the group’s legacy? How do we synthesize and relate knowledge and personal experiences to make meaningful art during this time?

The Radcliffe Choral Society promotes excellence in women’s choral music and celebrates the extraordinary community formed through its music-making. During this time of virtual learning, we will continue to foster the appreciation and enjoyment of women's choral music through the commissioning of new works for women's voices and exploring music from Medieval chant and Renaissance polyphony to Romantic part songs and folk music from around the globe. Students are given a unique opportunity to develop experience in arts administration, concert production, marketing, tour planning, and other facets of non-profit leadership. The course offers voluntary opportunities for singers to cultivate their musicianship in the areas of individualized vocal study, choral composition, advanced ear-training and sight singing, and choral repertoire.

RCS members, in partnership with Harvard’s Mindich Program for Engaged Scholarship, will design and implement its annual Rising Voices Treble Choral Festival, as an online conference in the Spring of 2021, collaborating with peer treble choruses and distinguished guests. The festival will investigate the intersections between social justice, feminism, and art-making in response to the pandemics of COVID-19 and racial violence in America. The fall 2020 semester will culminate in a multimedia presentation of our collective work as both an act and artifact of this pivotal moment in time.

**Course Notes:**
Audition required. The group is open to soprano and alto singers; we welcome, value, and support students of all gender identities. For audition and further information, visit www.singatharvard.com

Music  16B

Radcliffe Choral Society (160661)

2021 Spring (2 Credits)  Schedule:  TBD

Instructor Permissions:  None  Enrollment Cap:  60

The Radcliffe Choral Society, founded in 1899, is a treble (soprano-alto) choral ensemble of about 40-50 members, open to any student at Harvard University. The ensemble performs a distinctive repertoire spanning nine centuries of choral literature: sacred and secular, a cappella and accompanied, and choral-orchestral works. Featuring a student led a cappella group, 'Cliffe Notes, RCS aims to foster the appreciation and celebration of women’s choral music through the commission of new works for soprano and alto voices, high-caliber performances, music festivals as well as annual domestic and international travel. The choir strives to honor its history and further its legacy of excellence in treble choral music and an extraordinary community formed through music-making. RCS frequently collaborates with the Harvard-Radcliffe Collegium Musicum and the Glee Club, as well as the Harvard-Radcliffe Orchestra, to perform large-scale works. Students must complete both parts of this course (parts A and B) within the same academic year in order to receive credit.

Music 18B

Harvard Jazz Band (206967)

Yosvany Terry

2021 Spring (2 Credits) Schedule: TBD TBD

Instructor Permissions: None Enrollment Cap: 30

The Harvard Jazz Band was created in 1971 by Director of Bands Tom Everett when he first arrived at the University. Passionate that exposure to this unique American art form be part of students' education, he created a rag-tag jazz band of primarily Harvard [marching] Band recruits. Since its inception, the Harvard Jazz band has served as the vehicle for students across disciplines to study and learn the jazz canon. Over the years, the Jazz Band has focused on the literature of Duke Ellington and complete retrospective concerts of the music of Charles Mingus, Charlie Parker, Gerry Mulligan, Lee Konitz, Benny Carter, Buck Clayton, Clark Terry, J. J. Johnson, and Julius Hemphill. Other literature has ranged from the classic arrangements of Count Basie and Fletcher Henderson to the modern jazz of Gil Evans and Charles Mingus, the contemporary ensemble improvisations of Barry Guy and Lester Bowie, and the jazz-rock of Michael Gibbs, Russ Gershon Harvard '81, Rufus Reid, George Cables and Cassandra Wilson. In 2015, Yosvany Terry was appointed Director of Jazz Bands. Under his direction, the Harvard Jazz Band continues this tradition of focusing on a program of study that provides students with a grounding in a wide range of iconic and new literature. Students are required to take both parts of the course within the same academic year. The curriculum builds throughout the year.

Requirements: Pre-requisite: MUSIC 18A

Music 26

The Music of Women Creators (216083)

Anne Shreffler

2020 Fall (4 Credits) Schedule: TR 1200 PM - 0115 PM

Instructor Permissions: Instructor Enrollment Cap: 25

In spite of significant gains in gender equality over the last half century, women creators remain dramatically underrepresented in the music world, in all genres of music and in all categories of musical production: as composers, improvisors, producers, conductors, and even as performers.
The course is intended to celebrate and acknowledge the contributions of women creators to the history of music. We will focus on a selection of contributions of female and non-binary musicians who have composed, improvised, or collaboratively created music in the 20th and 21st centuries. We will listen closely to their music, asking questions such as: what were the historical, institutional, cultural and educational factors that supported or hindered their work? How do they define their gender identities, gender roles, and sexual orientation, and to what extent do these relate to their work? How does these identities function intersectionally with others, such as racial, class, national, and transnational identities? How has their work been received? What structures have historically enabled inclusion into the musical canon and exclusion from it?

We will also talk about activism: how to “move the needle” and work towards great representation of women's music in different genres today. A class visit to the Schlesinger Library will help us to unlock the potential in women’s archives.

We will consider a wide range of women creators from the early 20th century to the present, with examples from classical, jazz, and popular music. The syllabus will focus on five to seven case studies, examining women creators within a particular cultural and political network. A sample list could include: Florence Price, Ruth Crawford Seeger, Elisabeth Lutyens, Nina Simone, Pauline Oliveros, Meredith Monk, Younghi Pagh-Paan, Carla Bley, Irène Schweizer, Mary Lou Williams, Laurie Anderson, Tanya Leon, Chaya Czernowin, Björk, Nkeiru Okoye, Okkyung Lee, Reena Esmail, Nicole Mitchell, Maria Schneider, Caroline Shaw, Du Yun, and Alex Temple.

Goals:

• To recognize women’s experiences and contributions in music of the 20th and 21st centuries
• To listen to a lot of good music
• To gain a basic understanding of gender theory and feminism
• To learn about how using a gender lens changes how we think of music and music history

Course Notes: This course is open to anyone interested in questions of music and gender - music concentrators, joint concentrators, those studying music as a secondary field, students in dual degree programs with Berklee and NEC. Students from other departments who have some background in music (any style or genre) are welcome. Basic musical literacy will be helpful, but knowledge of music theory is not required (there are no pre-requisites).

Music  51A

Theory Ia (125212)

Joseph Jakubowski

2020 Fall (4 Credits)  

Schedule: R 0945 AM - 1145 AM

Instructor Permissions: Instructor  

Enrollment Cap: n/a
Harmony is just one of many powerful tools that can be enacted in order to understand, hear, perform, and create music. Alongside this parameter of music is rhythm, meter, phrase, voicing, orchestration, ensemble, text, counterpoint, and many other modes of engagement. The 51 sequence in the Music Department explores, through elements and parameters of music theory and musicianship, what makes music compelling to us as listeners, performers, and composers. Students will explore concepts of music theory through direct engagement with existing repertoire, unfolding the foundations of tonal music from melody and harmony to rhythm and meter and from expectation and implication to style and genre. The course returns to a few core questions throughout: How is tonal music constructed? How do its systems generate expectations, associations, and styles? What is the relationship of structure and meaning to theories and associations? How do aspects of pitch, rhythm, meter, timbre, etc., combine in a complete musical work, and how does music theory present a composite analysis of such a work? Why would we want to examine music in this way and what can it teach us about writing, performing, listening, and talking about music?

Course Notes: For this course a placement exam is required, which is offered the Friday (August 30) before classes begin. Please see the Canvas course website for M51a for more information. Music 51a is highly encouraged for concentrators, especially those who wish to take additional and more advanced theory courses in the department. Students interested in theory are encouraged to take the placement exam in their freshman year. Dual degree students are likewise encouraged to take Music 51a and Music 51b.

Class Notes: Placement tests will be offered on a dedicated Canvas site. Please email the course head to be added to this Canvas site. The test must be completed by Friday, August 21st, to give us time to grade them and make a recommendation by the registration deadline.

The results of this test will help us recommend whether you should take this course, the preparatory Music 2 (offered in Spring), or jump to the more advanced second semester (51B; this option is rare).

If a rising freshman or sophomore has taken the AP Theory test (and scored a 5), they can automatically register for 51A without sitting for the placement exam in August/September. AP scores and Placement Test scores hold for two years; if you are a junior or senior, or would like to try and place out of 51A and/or 51B, you must take the test.

There are a total of two section meetings for this course. Section I will likely meet on Mondays at 3:00 - 4:00 pm or 4:00 - 5:00 pm. The second section will be scheduled when the course roster is confirmed.

Recommended Prep: Basic theory and ear-training skills, ability to read music, Music 2, or equivalent experience.

Music 51B

Theory lb (125213)

Robert Morrison

2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: Instructor Enrollment Cap: 30

Description: Continuation of the principles in Music 51a. The 51 sequence in the Music Department explores, through elements and parameters of music theory and musicianship, what makes music compelling to us as listeners, performers, and composers. Students will explore concepts of music theory through direct engagement with existing repertoire, ranging from Gesualdo to Britten to Verdi to Mozart and Vaughan Williams among many others. The course unfolds the foundations of tonal music, including line, harmony, counterpoint, rhythm, text, motive, and timbre. This course engages advanced topics in theory and analysis, zooming out the discussion to engage with how music develops across delineations of historical eras, genres, and styles.

Course Notes: You must either place directly into Music 51b via the August placement test or pass 51a in order to register for this course. If more than two semesters have passed since completing 51a, you will need permission from the Instructor to register for the course; this may include a quick refresher test. This course, when taken for a letter grade, meets the Distribution Requirement for Arts and Humanities.

Class Notes: Sections will likely be on Mondays at 3:00 or 5:00 pm.

Recommended Prep: Music 51a or equivalent.

Music 97L

Critical Listening (204967)

Kay Shelemay

2020 Fall (4 Credits)  Schedule: MWF 1030 AM - 1145 AM
Instructor Permissions: Instructor  Enrollment Cap: 25

This course will explore musical perception as shaped by physiological, social, and cultural processes of everyday life. We will address the complex relationship between speech and music and the challenge of using one to communicate about the other. Through listening to a wide range of musical styles elucidated by written and audio-visual resources, we will contrast and compare music's meanings through rapidly changing times and in different locales.

Course Notes: Music 97L and Music 97T are required for the Music concentration. Students from other departments are welcome to attend with permission of instructor.

Critical Thinking (204975)  
*Carolyn Abbate*  
2021 Spring (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** 25  
Performing music, listening to music, composing music, playing music – these are all familiar activities. By comparison, thinking about music is far less mainstream, sounds stuffy, and does not really seem to offer as much pleasure, as pastimes go. Music 97T is here to prove those assumptions wrong. We will explore music philosophy (which has grappled with sounds ranging from Ancient Greek modes to hip-hop), and which asks basic questions like, does music have an ethics, can experiencing music change how we see the world? Or, can music even be grasped in words? We will take an objective look at the way academic disciplines box music of every and all kinds in, but can also expand our horizons about music's workings and its social roles and realities. And we'll explore "vernacular thinking," which is the conviction that thinking about music may not take place in words, or take forms conventionally understood as philosophy or analysis, and may come from people outside our intellectual boxes.

How Music Speaks (216219)

Federico Cortese

Yosvany Terry

2020 Fall (4 Credits)

Schedule: T 0300 PM - 0500 PM

Instructor Permissions: None

Enrollment Cap: n/a

This course explores some aspects that have made music uniquely relevant for centuries in a variety of cultures and societies, with a particular focus on Western, Latin American, African and African Diaspora music. The way we experience music may vary in different places or cultures according to its traditional functions, its meaning and our own personal relationship with it. There are, however, continuous exchanges, mutual enrichments and common traits. Students will become familiar with a selected repertoire from Europe, the Americas North and South and the Caribbean gaining insight and practical experience with music form, and rhythmic and melodic patterns by studying the recordings and looking at the score of key compositions.

The repertoire will range from George Bizet to Alberto Ginastera, from Mozart to Ligeti, Bartok to De Falla, from Manuel Saumell to Alejandro G. Caturla, from Jelly Roll Morton to Egberto Gismonti, just to name a few. This course is a non-exhaustive survey of classical, popular and indigenous musical traditions from
around the world. Our goal is to expand the horizons and the awareness of listeners and performers alike, while redefining what we think of music. In this process, we aim to stimulate a fresh approach to our own diverse musical traditions.

Recommended Prep: There are no pre-requisites for this course but some knowledge of music and or instruments is helpful.

Foundations of Modern Jazz: Topics (138072)

Yosvany Terry

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: 25

The Jazz Messengers were more than just a musical group; they were one of the greatest institutions in modern jazz, paving the way for several generations of musicians to develop new and original approaches to composition and improvisation. This course will introduce students to the Jazz Messengers and the concept of hard bop as a necessary evolutionary step after Be-Bop in modern jazz, created by artists searching for new musical expressions. Students will be made familiar with the Jazz Messengers’ repertoire, gaining insight and practical experience by first playing and memorizing their songs, and, afterwards, transcribing and studying the recordings of key compositions. Additionally, students will gain proficiency in performing compositions by some of the Messengers’ most prolific alumnae, including pianist Horace Silver, saxophonist Wayne Shorter, pianist Cedar Walton, saxophonist Benny Golson, and trumpeter Freddie Hubbard. Finally, students will select, rehearse, and perform some of the class material in an end-of-semester concert.

Topic: Art Blakey’s Jazz Messengers

Music Theory & Interpretation (114188)
Suzannah Clark
2020 Fall (4 Credits) Schedule: R 0945 AM - 1145 AM
Instructor Permissions: None Enrollment Cap: n/a
This course focuses on how analyzing music through the lens of different music-theoretical models brings out different—and sometimes contradictory—interpretations. Students will be introduced to a range of advanced modern-day theoretical models. Armed with these theoretical perspectives, the emphasis of the course will be on exploring how our musical analyses influence the way we listen to performances and recordings, and how we might imagine the music ought to go if we were to perform it ourselves. Our repertoire will include songs by Schubert, Schumann, and Liszt and instrumental music by Haydn, Mozart, Schubert, Schumann, and Brahms. Some of these composers also read theory treatises written by their contemporaries, and thus we shall also consider how a historical appreciation of music theory can foster new ways of understanding, hearing, and performing some of the most famous musical works of the eighteenth and nineteenth centuries.

For students interested in performing, there will be opportunities to apply these concepts to pieces you already know, are learning in other music courses, or wish to get to know. Writing assignments will develop techniques in music journalism, concert and recording reviews, program notes, and academic writing.

Class Notes: Prerequisite: Music 51 or permission of the instructor.
Recommended Prep: Music 51 or equivalent.

Music 160R

Composition Proseminar: Composing Theatre (119811)

Yvette Jackson

2020 Fall (4 Credits) Schedule: R 0300 PM - 0500 PM

Instructor Permissions: Instructor Enrollment Cap: 12

Radio Opera. This semester the course focuses on a form of composed theatre known as radio opera. We begin with an historical survey examining Clément Ader's 1881 Théâtrophone invention, which transmitted live performances into the homes of subscribers, and the 1939 broadcast of Gian Carlo Menotti's The Old Maid and the Thief, the "first" opera to be commissioned specifically for radio. We build upon this foundation by analyzing contemporary practices of radio opera which stray from its historical predecessors, influenced by radio drama, Fluxus, and other experimental movements; they often bear no resemblance to traditional opera nor are they limited to radio as a means of performance. An introduction to digital audio workstations (DAW) and audiovisual streaming systems will help students develop skills essential for engaging technologies that assist in the creation and distribution of fixed media and live performance. Throughout the semester, students will compose short original radio operas that will result in a final composition project and public class concert. Students with experience in different genres of music and performance are encouraged to enroll.

Recommended Prep: One course in music theory, composition, or consent of the instructor.

Music 161R
Advanced Composition (119812)
Chaya Czernowin
2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: Instructor Enrollment Cap: 15
In this course, students will challenge modes of composition and methods of creation through a series of projects, listening, and score study. Creative projects will encourage students to zero in on harmonic language, rhythm, pitch, text, texture, and orchestration through exploration and experimentation. The class offers space for students to create within their own aesthetic preferences, while also challenging them to grow by trying out new approaches and techniques. The majority of meetings will be set for regularly scheduled lectures and sections, except for approximately four weeks where each student will have an individual session of 30 minutes each. The final project will be a TBD trio; these musicians will come to our class once during the semester to workshop works-in-progress, and return at the end of the course for a final concert.

Recommended Prep: One course in theory/composition or permission of the instructor.

Music 170R
Songwriting Workshop (206929)
Esperanza Spalding

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: 12

This course will approach songwriting from two directions: analytical study of the methods of successful songwriters throughout the past 50 years together with students performing and critiquing their own original compositions. Throughout the course, we will address specific aspects of successful songwriting, including lyric development, song form, melody, harmonic progression, poetic imagery, story telling and presentation. The physical classroom will be designed to provide the experience of live performance in a club-like setting. In each unit, students will investigate a distinct songwriting style; compose an original work within that form; and perform it for peer review, including their own thoughtful analysis. The final for this course will be a showcase style performance of the students' own compositions. Any undergraduate or GSAS student who would like to increase their skill in songwriting is encouraged to apply. Those who wish to be considered must submit a questionnaire between August 8 and August 19, 2019 with a digital recording or link(s) of a video of themselves performing two (2) of their original compositions. Audio and video examples should be at least two minutes, and no more than six minutes in length. Fill out this google form.

Course Notes: Any undergraduate or GSAS student who would like to increase their skill in songwriting is encouraged to apply. Creative Music: Composer-Pianists (121897)

Vijay Iyer

2020 Fall (4 Credits) Schedule: W 0630 PM - 0900 PM

Instructor Permissions: Instructor Enrollment Cap: 12

This new course focuses on the work of innovative composer-pianists. The six artists surveyed in fall 2020 will include Lil Hardin Armstrong, Hazel Scott, Mary Lou Williams, Nina Simone, Alice Coltrane-Turiyasangitananda, and Geri Allen. Through listening, reading, transcription, analysis, and performance, we will cultivate a detailed appreciation for this legacy of Black women's musical inventions of the twentieth century.

Course Notes: This course is ideally suited for pianists with some background in improvisation or composition, but others may apply. Permission of the instructor is required.

Special Topics (108982)

Federico Cortese

2021 Spring (4 Credits)  Schedule: TBD

Instructor Permissions: Instructor  Enrollment Cap: 20

Singing Love and Horror Stories: Opera and Greek Mythology. This course explores the centrality of Greek and Roman mythology in Western opera. We will engage with a broad range of myths to see how they not only informed and transformed opera, from its beginnings in ca. 1600 to the 20th century, but truly shaped opera as a new musical language. Our central interest will be the complex, and yet fascinating, tension between feelings of love and hate—toward a partner or a family member. Myths we will focus on include: Orpheus, Apollo and Daphne, Psyche, Hercules, Oedipus, Electra, Iphigenia in Aulis, and Dido and Aeneas. Composers include Monteverdi, Cavalli, Lully, Purcell, Handel, Gluck, Vivaldi, Rameau, Berlioz, Strauss, Stravinsky, and Enesco.

Course Notes: This class is open to performers - instrumentalists and vocalists.

Class Notes: A separate meeting time for coaching will be arranged.

Music 176A

Music and Dis/ability I (160644)

2021 Spring (4 Credits)  Schedule:

Instructor Permissions: Instructor  Enrollment Cap: 12

Through field work, readings, discussions, and presentations, this course will explore topics related to disability in music history, music theory, and performance studies, and examine recent developments in neuroscience, music therapy, and music education. Defining disability as a cultural construction rather than as a medical pathology, the course will also consider the practice of music as a vehicle of empowerment, reflecting on music’s generative role in shaping communities and advancing social justice and human rights. Students will partner with inclusive and democratic community music projects and nonprofit organizations.

Course Notes: Students from other departments are welcome. This course can be used to fulfill secondary field credit in Ethnicity, Migration, Rights.
Music 179R

Advanced Electronic Music (203252)

Hans Tutschku

2020 Fall (4 Credits)   Schedule: T 1200 PM - 0230 PM
Instructor Permissions: Instructor   Enrollment Cap: 10

Improvisation with Live-Electronics. This course is aimed towards improvising musicians and composers working with electronics. We will explore different existing improvisation strategies from the 20th century and develop new pieces. Composers and interpreters alike will contribute to the concepts from solo to small ensemble works. Section time will be used to further our tools for live sound processing in Max/MSP.

Class Notes: Section scheduled for Thursday 3:00 - 5:30 pm

Recommended Prep: Prerequisites for interpreters: Interest or experience in improvisation. For composers: previous course at HUSEAC or permission by instructor.

Music 189R

Chamber Music Performance (153042)

Jessica Bodner
Daniel Chong
Kee-Hyun Kim
Ken Hamao

2021 Spring (4 Credits)   Schedule: TBD
Instructor Permissions: Instructor   Enrollment Cap: n/a

Through auditions, students will be divided into chamber music ensembles by the Parker Quartet, and have weekly group meetings with members of the Parker Quartet and pianist Katherine Chi, as well as a number of individual lessons. Instrumentalists and vocalists are welcome to audition; however, no duos or vocal ensembles are allowed. The course will cover various aspects of chamber music -- such as score study, rehearsal techniques, historical context, interpretation, intonation, and balance -- while students work towards group recording projects throughout the semester. The course will culminate in final public performances, to be held sometime during Reading Period; all students are required to be available.

Students who do not meet the requirements in the Course Notes below may take the course for Pass/Fail credit. Please check audition dates and other mandatory meetings/classes on the Canvas Music 189R home
ALL students must fill out the questionnaire and submit this through Canvas. Students who are currently in the NEC/Harvard dual program or have been a past winner of the Parker Quartet Guest Award do not need to audition, but need to submit a questionnaire to be considered. Any other students who have enrolled in the course in past school years are required to re-audition. Students intending to enroll in both Harvard-Radcliffe Orchestra and Music 189R must audition for each course separately. While students may request to be placed with certain peers, final group assignments will ultimately be at the discretion of the instructors. This course is offered for letter-grade credit only when students are involved in one or more of the following: a Concentrator in Music; enrollment in a Department of Music course concurrently or in a previous semester (other than 189R); a member of a faculty-led music ensemble in the same semester; a student of the NEC/Harvard dual program. Students who do not meet one of these requirements may take the course for Pass/Fail credit, which must be done by petition after the first week of class. Limited capacity, at the discretion of the instructors.

Additionally, students who are currently in the NEC/Harvard dual program, were enrolled in Music 189R in Fall 2019, or have been a past winner of the Parker Quartet Guest Award do not need to re-audition for the Spring 2020 semester. However, ALL students must fill out the questionnaire and submit this through Canvas: https://canvas.harvard.edu/courses/67376/assignments/329053. Any other students who have enrolled in the course in past school years are required to re-audition. Students intending to enroll in both Harvard-Radcliffe Orchestra and Music 189R must audition for each course separately. Music 193R

Topics in Music from 1800 to the Present: Proseminar (113383)

Loren Kajikawa

2020 Fall (4 Credits)

Instructor Permissions: Instructor Enrollment Cap: n/a

Schedule: F 1200 PM - 0200 PM

This year marks the twenty-sixth anniversary of Tricia Rose's groundbreaking book *Black Noise: Rap Music and Black Culture in Contemporary America*. Although Rose's monograph is widely regarded as the "Big Bang" that set hip hop studies in motion, it is also somewhat of an outlier. Written before rap was an accepted topic of academic study, Black Noise shouldered the burden of contextualizing rap historically, musically, and culturally, while simultaneously addressing its powerful expressions of Blackness in the midst of the Culture Wars. *Black Noise*’s level of interdisciplinary engagement and political awareness make it one of the best book’s written about rap and one that continues to serve a generative role for scholars. In fact, Rose’s book, which 1) sought to explore the relationship between hip hop and the urban environment from which it came, 2) theorize rap’s musical and technological interventions, 3) examine rap’s racial politics, institutional critiques, and media responses, and 4) highlight rap’s sexual politics, particularly female rappers' critiques of male hegemony, remains entirely relevant to our current moment.

This seminar returns to Rose’s original text in order to trace the relationship between *Black Noise* and subsequent writing about hip hop, especially work engaging current issues and ongoing debates in the field. Reading the original text of *Black Noise* and using each of its chapters as an organizing framework, this course introduces students to a wide variety of work on hip hop and rap, focusing primarily on written scholarship but also on podcasts, videos, and music as ways of knowing. The goals of this seminar are threefold: first, to familiarize students with key topics and debates through readings that span the last three decades and represent a wide variety of methodologies; second, to critically assess the relationship between hip hop culture and the academy in order to understand how the institutionalization of hip hop has shaped writing and research; and third, to give students the opportunity to develop their own relationship to the field by conducting their own research on a topic of interest.

**Topic:** Hip-Hop Studies

**Course Notes:** Note: open to graduate students with permission of instructor.

**Class Notes:** Open to graduate students with instructor's permission.

Music 201A
Current Methods in Historical Musicology (118075)
Anne Shreffler
2020 Fall (4 Credits) Schedule: W 1245 PM - 0245 PM
Instructor Permissions: Instructor Enrollment Cap: 20
This course is an introduction to the discipline of musicology, its academic discourse, recent and historical debates, and its place in the academy. Our questions will include: How did this field with Germanic roots become an international discipline, and how do the different national traditions interact today? What are the assumptions (and biases) upon which it is built? How has it drawn upon research strategies in related disciplines? What is its relevance in today’s world, whether in the academy, in the diverse worlds of musical performance, or to a broad public?
We will focus on the relationship between musicology and history, emphasizing “hands-on” researching, reading, and writing. Our main goal is to do actual history with primary source material from the rich archival resources at Harvard, or from digital collections of primary material. We will use these to ask questions about the relationship between material culture and the history of ideas. Each of you will choose a collection for your final project, which can be about any musical tradition or period of music history, before yesterday (believe me, whatever your interests, Harvard probably has relevant primary material!) I encourage you to use this course to explore topics new to you.
There will be three simultaneous threads to the course:

- Readings on historiography and canon building.
- History of the discipline: every week, we will read and discuss one “classic” article in musicology.
• Your final project, which you will develop on your own and in collaboration over the whole semester.

Course Notes: Graduate students only. May be taken independently by students from other departments with permission of instructor.

Ethnomusicology: Seminar (115680)

Ingrid Monson

2020 Fall (4 Credits) Schedule: W 0945 AM - 1145 AM

Instructor Permissions: Instructor Enrollment Cap: 15

*Music, Emotion and Social Justice.* The course explores connections between Black American Musics (BAM) and themes of social justice and liberation historically, theoretically, and in our current historical moment. The power of music to inspire activism, assuage grief, manage fear, create spiritual connection, celebrate victory, and find joy has been an especially strong theme of African American music and history. We begin with reading what African American writers (DuBois, J.W. Johnson, Ellison, Baraka and more) have had to say about music and its connections to African American life and the struggle for racial justice. We then examine how sounds, rhythms, timbral inflections, voice, acquire affective, associational, and symbolic meanings over time. Recent theories of emotion, affect, and embodiment when placed in dialogue with Michael Silverstein's metapragmatic conception of anthropological semiotics offer rich
possibilities for developing a theory of relational listening that bridges sensory and meaning-based approaches to the relationship between music and politics. To this must be added a sociological understanding of systemic racism. The final segment asks students to look closely at how music has been deployed in the movement arising from the murder of George Floyd and the reality of COVID-19's disparate impact on African Americans and other Non-Black People of Color. What new meanings, associations, and anthems have arisen? What has remained the same? How are new connections between music and social being formed?

Class Notes: Open to undergraduates with permission of instructor.

Music 217R

19th Century Music (111385)
This graduate seminar is centered on Richard Wagner’s Der Ring des Nibelungen, written between 1848 and 1874, a tetralogy that aspired to world-building in operatic form. It took Wagner six years to write four libretti, then twenty years to write the music for four operas, whose runtime is sixteen to seventeen hours over four nights. Performances involve a dozen alpha opera singers, an orchestra of over a hundred (with quadruple brass scoring and several newly-invented instruments). The Ring has been demolished by philosophers and deconstructed by directors, amplified by crazed devotees. So why the Ring in fall 2020? Given the anticipated long-term closure of opera houses worldwide, as well as ongoing prohibitions against singing in public, given the immense financial resources necessary to perform a behemoth like the Ring, it will not return soon. Yet although the Ring is one hundred forty-five years old, originating in a long-distant European past whose culture now appears estranging or incommensurable, it is far from being a relic or artifact. The work brings exquisite pressure to bear on the idea that music bears moral or ethical burdens, that music acquires social meanings, and that its sensory force is not unambiguous. Is the cumulative effect of the musical sound to drown out thought and skepticism? What part do staging and production play in sculpting your interpretation of these issues?

The Ring offers a narrative and an acoustic flight into lost time, which is not insignificant. Yet it also offers an elaborate and rich multimedia experience through which existence in the here-and-now can be read. Race and racism, power, gender, capitalism, cultural pessimism, eschatology: only a sample of the territory that is traversed. Thus, while the Ring is the center for the seminar, we will also be considering myth and folklore, media theory, ecocriticism, and semiotics. What we will be doing is exploring how to navigate, as thinkers, between escape and encounter, consolation and resistance.

Course Notes: Permission of instructor required.

Topics in Music Theory (116618)
Robert Morrison
2020 Fall (4 Credits)  Schedule:  TBD
Instructor Permissions:  Instructor  Enrollment Cap:  20
Timbre at the Crossroads. This seminar explores how the idea of timbre is constructed across diverse disciplinary frames, investigating its associated materialities, sonic effects, and cultural techniques. We will look at the big picture, considering 18th-century organological treatises alongside 21st-century software for computer-assisted orchestration, while we also attend to the micro-temporal aspects of timbre as a multi-dimensional psychoacoustic phenomenon and expressive musical element. Throughout, we will couch specific approaches to timbre in terms of larger historical debates over the nature of sound and auditory perception, examining how this knowledge is entangled with a wide range of epistemic instruments and sonic practices. There will be a special emphasis on acquiring practical skills and hands-on experience with spectrograms and other digital tools, which we will use to analytically and creatively engage timbre in
all of its microsonic details. Graduate students from all departments are welcome to join as we approach the question of timbre with an interdisciplinary mindset.

Course Notes: Open to undergraduates with permission of instructor.

Musicology Special Topics (160693)

*Braxton Shelley*

2020 Fall (4 Credits)  

Schedule: M 0300 PM - 0500 PM  

Instructor Permissions: None  

Enrollment Cap: n/a

How are contemporary expressive cultures shaped by the virtual venues in which they circulate—Twitter, Instagram, TikTok, YouTube, WhatsApp, and Facebook, among many others? What force sustains the constant flurry of images and videos, hashtags and challenges? In pursuit of these questions, this seminar grapples with the musicality of internet culture, attending to the ever-expanding virtual archive of memes, GIFs, and other digital media. Our examination of the production, modification, and distribution of these contagious, and frequently-humorous, items will advance two queries: 1) What modes of creativity do these digital artifacts reveal? 2) What ways of listening do these potentially-viral objects solicit? Drawing together resources from musicology, ethnomusicology, music theory, media studies, visual culture, and philosophy, we will evaluate antiphony as a rubric for digital culture. Can the phrase “digital antiphony” elucidate the emphatically intertextual and intermusical product and process of meme culture, the rich, emergent conversation that simultaneously materializes and refigures social categories of race and gender, concepts of belief and authorship? If antiphony is the logic of contemporary internet culture, then the meme is its animating force. With its generative interpenetration of call and response, the meme evidences a distinctly
digital preoccupation with form, offering one sense of what it means to be musical in the 21st century.

Colloquium on Teaching Pedagogy (125863)

Richard Wolf

2020 Fall (2 Credits)  Schedule: W 1245 PM - 0245 PM

Instructor Permissions: None  Enrollment Cap: n/a

This course serves as an introduction to teaching at Harvard and beyond. It constitutes a forum for studying learning, designing instruction, practicing teaching, and communicating about successes and challenges in your classroom. This course is exclusively for third-year graduate students in music

Course Notes: Required of all third year music department graduate students. This course must be taken Sat/Unsat. Students must complete both parts of this course (parts A and B) within the same academic year in order to receive credit.

Creative Practice & Critical Inquiry Seminar (156122)

Vijay Iyer

2020 Fall (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** 12

This is a forum primarily intended for graduate students in Creative Practice and Critical Inquiry, but others may join with permission of the instructor. CPCI students and some faculty will present and discuss their creative projects throughout the semester. We will also host a handful of virtual visits from guest artists.
Music 284R

Sounding Identity (000284)

Yvette Jackson

2021 Spring (4 Credits)  

Schedule: TBD

Instructor Permissions: Instructor  
Enrollment Cap: 15

This interdisciplinary seminar addresses multiple histories of politics and aesthetics within the context of sound and music technologies as mediators of intersectional identity. Creative practice will serve as a method of critical inquiry into race, class, dis/ability, gender identity, and sexual orientation in concert, recordings, and other outputs. Readings in sound studies, analysis of music and film, and workshops led by special guests prepare students to disseminate ideas about culture, art, and technology through performance, podcast, narrative soundscape composition, documentary, and writing. This is an introductory course open to students from all disciplines.

Course Notes: Undergraduates may enroll with permission of instructor.

Music 291R Section: SEM

Music and Migration (000291)

Kay Shelemay

Kate van Orden

2021 Spring (4 Credits)  

Schedule: TBD

Instructor Permissions: Instructor  
Enrollment Cap: n/a

Mediterranean Mobilities, Past and Present. This course will provide insight into music's powerful role in human mobility, seeking to break down barriers between historical and ethnographic methods in a study of musical border crossing. The course will focus on migration in and from the eastern and central Mediterranean with particular attention to regions part of and/or influenced by the Ottoman Empire, which incorporated a confluence of Jewish, Christian, and Muslim worlds. Today modern Turkey and surrounding areas are sites of a massive refugee crisis. The course will include fieldtrips to the Armenian Museum and Library in Watertown, MA and to the Avedis Zildjian Cymbal Factory in Norwell, MA. There are no prerequisites for the course and we hope to have an interdisciplinary enrollment. Undergraduates can take the course by permission; it fulfills the secondary concentration in Ethnicity, Migration, Rights [EMR]. A final research project/paper is required on a topic related to music and migration approved by the instructors; the topic is not restricted to the Mediterranean region.

Course Notes: Undergraduates can take the course by permission; it fulfills the
secondary concentration in Ethnicity, Migration, Rights [EMR].

**Recommended Prep:** There are no prerequisites for the course and we hope to have an interdisciplinary enrollment.

Modern Middle East  100
The Modern Middle East, Real and Imagined: An Introduction (107349)

Malika Zeghal
2021 Spring (4 Credits) Schedule: M 1200 PM - 0245 PM
Instructor Permissions: Instructor Enrollment Cap: n/a

An introduction to Middle Eastern Studies focusing on the modern period (19th and 20th centuries). Lectures will be broadly sequenced according to historical chronology but will be thematically organized. They will provide some historical context for each topic examined, as well as present specific examples through primary sources, visual sources, and numerical data when relevant. This course is designed to
give students an overall good grasp of the history of the modern Middle East and of some of the major themes in modern Middle Eastern Studies. Students will critically engage with some of the most important topics that resonate in that area of the world. We will cover topics such as reformism, economic development, colonialism and nationalism, authoritarianism and democratization, sectarianism, culture, gender, literature and the arts, as well as the role of religion in politics. Most of these topics, in one way or another, will speak to the construction of nation-states in the Middle East and to the challenges they have been confronting. This is not a survey course. In particular, it will not be exhaustive in its coverage of the region in space or time, and in its coverage of topics. Students in search of a specific topic, country, or period are strongly encouraged to take a look at the syllabus prior to enrolling to make sure their specific interests will be covered. Assigned readings will consist of primary and secondary sources. Students will be exposed to first-hand accounts by protagonists in the history of the Middle East (primary sources) as well as to the diversity of approaches that the scholarly literature (secondary sources) has taken across disciplines, e.g. anthropological studies, quantitative analysis, philology and textual studies. The larger aim of the course is to develop students' critical thinking in dealing with the history, cultures, politics, and political economies of the contemporary Middle East.

Required for all NELC concentrators in The Modern Middle East. Other students must request instructor's permission before enrolling. There are no prerequisites for this course.

Course Notes: A required course for undergraduates pursuing a secondary field in Modern Middle Eastern Studies.

Modern Middle East  200A

Approaches to Middle Eastern Studies: Seminar: Middle Eastern Lives (117327)

William Granara

2020 Fall (4 Credits)  

Schedule: M 0300 PM - 0500 PM

Instructor Permissions: Instructor

Enrollment Cap: 15

Middle Eastern Lives: Narratives of the Self in Middle Eastern Studies.

The seminar aims to study the lives of individuals who shaped the modern Middle East. Emphasis will be placed of major political and cultural figures who played a key role in the making of the nation-state and national identity formation. Figures include: Herzl, Ataturk, Muhammad Abdu, Nasser, N. Sadawi, and S. Ebadi, etc. Course will include discussion on self-narrative genres such as [auto]biographies, memoirs, and diaries/journals.

Course Notes: Required for students pursuing the AM in Middle Eastern Studies. Open to graduate students and upper-level undergraduates concentrating in the Modern Middle East.

Enrollment: limited to 15

Near Eastern Civilizations  101

Historical Background to the Contemporary Middle East: Religion, Literature and Politics (110914)
Gojko Barjamovic

2021 Spring (4 Credits)  
**Schedule:**  
TR 1200 PM - 0115 PM

**Instructor Permissions:**  Instructor  
**Enrollment Cap:**  n/a

What defines the Middle East? What long-term historical and cultural developments can we trace in the region? How do these affect contemporary global order and policy? This team-taught course in the NELC department will address these three fundamental questions of great present relevance by introducing students to the ancient and modern peoples, languages, cultures, and societies of Western Asia and North Africa. The study of this diverse region is uniquely aided by a deep-time perspective afforded by thousands of years of vibrant art, writing and cultural artefacts. Relying on the classic expertise integral to area studies, the course brings together faculty from a variety of disciplines – from history and archaeology to literature and philology, and from sociology and economy to the political sciences – in a common endeavour to explore the rich cultural complex of the region through four key topics: history, religion, literature and politics.

**Course Notes:**  
Formerly NEC 97r, this course satisfies the NELC Sophomore Tutorial requirements.

Near Eastern Civilizations 299A

NELC Doctoral Colloquium: Research, Resources and Pedagogy (203473)

Justine Landau

2020 Fall (2 Credits)  
**Schedule:**  
TBD

**Instructor Permissions:**  Instructor  
**Enrollment Cap:**  30

This practical colloquium addresses major issues of research and teaching competence. Designed to introduce G-1 students to the Ph.D. requirements, to methodological issues and examples of ongoing scholarship in NELC, it further offers opportunity for reflection on the art of teaching (leading discussion sections, designing syllabi, giving lectures, etc.). Questions covered will include: How to choose coursework? How to prepare for qualifying and general exams? What are the challenges of language training? How does one prepare and write a prospectus? How to use the library resources most efficiently? What type of investment does recourse to digital and quantitative methodology require? How best to prepare for professional life after the Ph.D., both inside and outside of academia? In addition, NELC faculty will informally present their respective fields (main issues and methods), in broad strokes through their current research, and advanced Ph.D. students will present their prospectus for discussion and feedback before submitting it to the faculty.

NELC Doctoral Colloquium: Research, Resources and Pedagogy (204053)

Justine Landau

2021 Spring (2 Credits)  Schedule: TBD
Instructor Permissions: Instructor  Enrollment Cap: 30

This practical colloquium addresses major issues of research and teaching competence. Designed to introduce G-3 students to the Ph.D. requirements, to methodological issues and examples of ongoing scholarship in NELC, it further offers opportunity for reflection on the art of teaching (leading discussion sections, designing syllabi, giving lectures, etc.). Questions covered will include: How to choose coursework? How to prepare for qualifying and general exams? What are the challenges of language training? How does one prepare and write a prospectus? How to use the library resources most efficiently? What type of investment does recourse to digital and quantitative methodology require? How best to prepare for professional life after the Ph.D., both inside and outside of academia? In addition, NELC faculty will informally present their respective fields (main issues and methods), in broad strokes through their current research, and advanced Ph.D. students will present their prospectus for discussion and feedback before submitting it to the faculty.

Subject: Arabic

Arabic  AA
Elementary Arabic I (116746)

Muhammad Habib
2020 Fall (4 Credits)  Schedule: MTWRF 0130 PM - 0230 PM
Instructor Permissions: Instructor  Enrollment Cap: 12
Introduces students to the phonology and script of classical/modern standard Arabic and covers the basic morphology and syntax of the written language. Emphasis on the development of the four skills (reading, speaking, listening, and writing). Samples of modern (contemporary) and classical styles of writing introduced into basic syllabus, and audio-visual material from the contemporary Arabic media. Required textbooks: (1) Alif Baa (with multimedia), 3rd edition. (2) Al-Kitaab fii Ta'allum al-'Arabiyya:, Part I, 3rd edition. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Course Notes: Offered jointly with the Divinity School as 4345A. Each section is limited to 12 enrollment.

Not open to auditors. Cannot be taken pass/fail. Arabic AA/AB is an indivisible year-long course. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Subject: Ancient Near East

Ancient Near East  102

Introduction to Mesopotamian Religion (114298)

Piotr Steinkeller

2020 Fall (4 Credits)  Schedule:  MW 1030 AM - 1145 AM
Instructor Permissions:  None  Enrollment Cap:  n/a

A survey of the history and major concerns of ancient Mesopotamian religion from prehistoric times down to the reign of Alexander the Great. Among the topics treated are the key figures of the Sumero-Babylonian pantheon, the major mythological compositions (read in translation), personal religion, cosmogonies and theogonies, magic and divination, Mesopotamian temples, and cult and ritual. The course makes rich use of ancient iconography.

Course Notes:  Offered jointly with the Divinity School as 3661.

Class Notes:  Class time will be determined according to enrolled students’ availability.

Additional Course Attributes:

This course will present an overview of literature from ancient Mesopotamia, the world's earliest civilization and the birthplace of the first writing system. We will be exploring themes of creation and origins, myths and epics, death and the afterlife, religion, lamentation, humor, and more, as a way to understand some of the fundamental aspects of Mesopotamian society. Comparative texts from other regions or time periods will be brought in to add richness and depth to our discussions. Class sessions are structured heavily around weekly readings and discussions. All texts will be read in translation so no knowledge of Akkadian or Sumerian is required.

Critical Readings on Ancient History (205397)

Gojko Barjamovic

2021 Spring (4 Credits)  Schedule:  R 0300 PM - 0600 PM
Instructor Permissions:  Instructor  Enrollment Cap:  n/a

A weekly seminar for graduate students (advanced undergraduates can apply) in which we read and discuss a selection of old and new key monographs (and a few key articles) relevant to the field of Ancient Studies. The seminar targets students in Assyriology, Classics, Divinity, Egyptology, Hebrew Bible and Religion, but others might also find it interesting and relevant. We rehearse skills in critical reading, writing scholarly reviews, debating, and (of course) engage with a massive amount of relevant literature that we would not otherwise find the time to read.

Subject: Modern Hebrew

Modern Hebrew  BA
Elementary Modern Hebrew I (114218)

Irit Aharony
2020 Fall (4 Credits)  Schedule: TBD
Instructor Permissions: Instructor  Enrollment Cap: 12

The course introduces students to the phonology and script as well as the fundamentals of morphology and syntax of Modern Hebrew. Emphasis is placed on developing reading, speaking, comprehension and writing skills, while introducing students to various aspects of contemporary Israeli society and culture. This is an indivisible course. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Course Notes: Offered jointly with the Divinity School as 4015A. Not open to auditors. Cannot be taken pass/fail. Modern Hebrew BA/BB is an indivisible year-long course. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive
credit. In specific cases the instructor will consider approval of enrollment in MOD-HEB BB and MOD-HEB 120A as fulfillment of the one-year language requirement, depending on the student’s proficiency level.

Class Notes: Class time will be determined according to enrolled students’ availability. Course meets 5 hours a week plus 1 hour of conversation section.

**Subject: Islamic Civilizations**

**Islamic Civilizations 110**

**Major Works of Islamic Civilizations (214543)**  
*Khaled El-Rouayheb*

2021 Spring (4 Credits)  
**Schedule:** TBD

**Instructor Permissions:** None  
**Enrollment Cap:** n/a

This course offers a reading of a number of major works of Islamic Civilization, for example from the universal chronicle of al-Tabari (d. 923), the forty hadith of al-Nawawi (d. 1277), a work on the lives of the Shi'i Imams by al-Shaykh al-Mufid (d. 1044), the autobiography of al-Ghazali (d. 1111), the Gulistan by Sa'di (d. 1291), the famous Introduction to History by Ibn Khaldun (d. 1406), a manual on Sufism by Aisha al-Ba' uniyya (d. 1516), and the description of Paris by al-Tahtawi (d. 1873). The course aims to give students an exposure to different, co-existing cultural traditions within Islamic civilization, including chronicles and hagiographies, Islamic creeds, Sufism, belles-lettres, popular folktales and travelogues.
Islamic Civilizations 146
Al-Ghazali’s Thought and Legacy (123196)
Mariam Sheibani
2021 Spring (4 Credits)
Schedule: TBD
Instructor Permissions: None
Enrollment Cap: n/a
Abū Ḍāmid al-Ghazālī (d. 505/1111) is known as "The Proof of Islam" and is widely considered to be the most influential philosopher, theologian, and mystic in Sunni Islam. This course will serve as an inquiry into al-Ghazālī’s synthetic understanding and approach to Islam and its legal, theological, cosmological, ethical, spiritual, political, sociological, and metaphysical dimensions. To this end, we will study al-Ghazālī’s writings focusing on the following areas: epistemology, scriptural hermeneutics, classification of knowledge, the Divine names and attributes, prophetology, the Qur’ān, religious psychology, political and social dimensions of religion and religious practice, and heresiography. The course teaches a method of close textual reading, and proposes an interpretation of al-Ghazālī’s methods that spans his corpus and his diverse writings across disciplines. Additionally, the course will study the reception al-Ghazālī and his works in the later Islamic tradition.
Prerequisite: Three years of Arabic or equivalent. Many of the texts we will be studying are also available in English translation, so students without the Arabic prerequisite should contact the instructor. Jointly offered in Harvard Divinity School as HDS 3169.

Islamic Civilizations 163
Introduction to Islamic Mystical Traditions (216321)
Ali Asani
2020 Fall (4 Credits)
Schedule: T 1200 PM - 0200 PM
Instructor Permissions: None
Enrollment Cap: n/a
This course offers an introductory survey of mystical traditions of Islam, popularly labelled as "Sufism." It explores the fundamental concepts, practices, and institutions associated with these traditions, their historical development and their influence on the devotional, cultural and social lives of Muslim communities through the centuries. Through case studies drawn from the Middle East, South Asia, West Africa and North America, the course examines ways in which these traditions have developed and promoted alternative perspectives on what it means to be Muslim, challenging in recent times sectarian, legalistic and politicized understandings of Islam such as Wahhabi, Islamism and jihadism. The course assumes no prior knowledge of Islam.
Islamic Civilizations 165

Sufi Masters of Persian Poetry: 'Attâr, Rumi, Hâfez (203470)

Justine Landau

2020 Fall (4 Credits) Schedule: W 0300 PM - 0500 PM

Instructor Permissions: None Enrollment Cap: n/a

This course offers an overview of the development of classical Persian Sufi poetry through the works of three major Persian poets from the 12th (Farid al-Din 'Attâr of Nishapur), 13th (Mowlânâ Jalâl al-Din Rumi) and 14th century (Hâfez of Shiraz). Students will become acquainted with the key notions and beliefs at work in pre-modern Persian Sufism, and with the variety of forms, images and rhythms designed to convey their subtleties to the heart, as much as to the mind of the listener.

Course Notes: Offered jointly with the Divinity School as 3026. Knowledge of Persian not required. Lectures and readings will be in English, and a separate section will be arranged for students with adequate reading knowledge of Persian.

Class Notes: Class time will be determined according to enrolled students’ availability.

Islamic Civilizations 170

Islam, Modernity and Politics (109243)

Ousmane Oumar Kane

2020 Fall (4 Credits) Schedule: R 0300 PM - 0500 PM

Instructor Permissions: Instructor Enrollment Cap: 18

The aim of this seminar is to study the evolution of Islamic thought and political practices in Muslim societies from the 19th to the early 21st centuries. Attention will be devoted to the patterns of interaction between the Muslim World and the West because it is our assumption that these patterns contribute to influence ideological formations and modes of religious/political mobilizations in the Muslim World. By the end of the eighteenth century, much of the Muslim World was in "decline" whereas European imperial powers, mainly France and Great Britain, were on the rise. The course will explore the response of Muslim societies and intellectuals to the rise of European prominence. The major 19th century reformist movements that appeared in the Muslim World will be discussed, ranging from movements advocating mild
reform to those rejecting all influence of "Western civilization" and advocating a return to the Tradition of Muhammad. In the twentieth century, virtually all the Muslim World came under European colonial domination. During colonial rule and after, the Muslim world experienced major transformations which affected the nature and administration of law, politics and society. It is in this context, that the new Islamic revival that some have called "Islamism" was articulated as an alternative to Westernization. The course will address the rise of contemporary "Islamism," as an alternative to Western domination and modernization/Westernization. The major theorists of political Islam as well as the different trajectories of "Islamism" in diverse Muslim societies will be covered. The impact of political Islam in the West will also be addressed. The final part of the course will assess the trajectories of political Islam and address the ongoing debates on post-Islamism, secularism and modernity.

Course Notes: Offered jointly with the Divinity School as 3368.

Islamic Civilizations 178

Being Muslim in South Asia: Religion, Culture and Identity (111918)

Ali Asani

2020 Fall (4 Credits) Schedule: W 1245 PM - 0245 PM

Instructor Permissions: None Enrollment Cap: n/a

South Asia is home to the largest population of Muslims in the world. And yet, within South Asia, Muslims are a minority. What is Islam and what does it mean to be Muslim in South Asia? After briefly examining the historical development of Islamic institutions in the subcontinent, this course will focus on how ideas about Islam are shaped by evolving literary, linguistic, social and political landscapes. Special attention will be given to the effects of colonial and nationalist ideologies on Muslim experiences in India, Pakistan, and Bangladesh, as well as the disputed territory of Kashmir. We will also explore the impact of reform and revivalist movements and state-enforced policies of "Islamization" and "Hinduization" on women and minorities. The course is appropriate for those who want a bird's eye view of the Islamic tradition in South Asia, as well as those interested in exploring issues facing contemporary Muslim societies beyond the Middle East. Jointly offered as Religion 1820 and HDS 3625.

Course Notes: Offered jointly with Divinity School as 3625.

Islamic Civilizations 184

Muslim Devotional Literatures in South Asia: Qawwalis, Sufiana Kalam (Sufi Poetry) and the Ginans (161217)

Ali Asani

2021 Spring (4 Credits) Schedule: W 1245 PM - 0245 PM
This course explores traditions of Islamic spirituality in South Asia through the lens of three genres: the qawwals, concerts of mystical poetry; sufiana kalam, Sufi romantic epics and folk poems; and the ginans, hymns of esoteric wisdom recited by the Satpanthi Ismailis. Since these genres represent examples of language, symbols and styles of worship shared across Islamic and non-Islamic denominational boundaries, we will also examine their relationships with other Indic traditions of devotion, particularly those associated with the so-called sant and Hindu bhakti movements. Special emphasis will be given to the impact of contemporary political ideologies, globalization and the revolution in media technology on the form and function of these genres and their relationship with contemporary communities of faith in South Asia and beyond.

Course Notes: Offered jointly with the Divinity School as 3375

Islamic Institutions - Middle East & Beyond: Modern Transformations & Debates (19th-21st centuries) (211155)

Malika Zeghal

2021 Spring (4 Credits) Schedule: M 0300 PM - 0545 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

This graduate seminar explores the transformation of Islamic institutions in the modern period, such as religious endowments (Awqaf), sharia courts, and Islamic education. We will engage with the historiography of these institutions and with primary sources in Arabic that will help us open new paths for research.

Recommended Prep: Arabic reading proficiency preferable.

Subject: Yiddish

**Yiddish AA**

Elementary Yiddish I (114058)

*Sara Feldman*

2020 Fall (4 Credits)  
**Schedule:** MTWRF 1030 AM - 1130 AM

**Instructor Permissions:** Instructor  
**Enrollment Cap:** 12

Introduction to Yiddish language, literature, and culture. In the course of the year, students will acquire a thorough grounding in Yiddish grammar and will develop strong foundational reading, writing, speaking, and comprehension skills. The course will introduce students to the 1000-year history of Yiddish culture in Eastern Europe, the United States, and around the world. Students will learn about the past and present of this culture through exposure to Yiddish literature, music, theater, film, radio, oral history, and the Yiddish internet—an introduction to the dynamic world of Yiddish culture and scholarship that exists today. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

**Course Notes:** For students with little or no knowledge of Yiddish. Additional sections at different times may be added as needed. Contact instructor if you have a scheduling conflict. Yiddish AA/AB is an indivisible year-long course. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

**Class Notes:** Class time may be adjusted to take into account enrolled students' availability.

**Recommended Prep:** No prerequisites; knowledge of Yiddish not assumed.

Yiddish BA

Intermediate Yiddish I (119874)

Sara Feldman

2020 Fall (4 Credits)  Schedule: TBD

Instructor Permissions: Instructor  Enrollment Cap: 12

Building on the skills gained in Yiddish AA/AB, students will further develop their Yiddish reading, writing, speaking, and oral comprehension skills. Focus will be on working with a wide variety of textual and cultural materials spanning the Yiddish-speaking world in the modern era. Course materials include selections from Yiddish fiction, poetry, drama, film, music, the press, and historical documents. Students will become familiar with the language’s dialects, writing conventions, and historical development. Course activities will introduce students to the latest developments in online Yiddish publishing and digital humanities scholarship.

Course Notes: Additional sections at different times may be added as needed. Contact instructor if you have a scheduling conflict.

Class Notes: Class time will be determined according to enrolled students' availability.

Recommended Prep: Yiddish AA/AB sequence, or equivalent.

Advanced Yiddish I (123432)

*Sara Feldman*

2020 Fall (4 Credits)  

**Schedule:** TBD  

**Instructor Permissions:** Instructor  

**Enrollment Cap:** 12

Building on the skills gained in Yiddish BA/BB, the emphasis of this course is on gaining ease in reading, speaking, writing, and listening comprehension. Students will be guided in exploring their individual areas of interest in Yiddish culture, and will be encouraged to begin producing their own research, creative projects, and translations; taking part in the latest developments in online Yiddish publishing and digital humanities scholarship. Continued exposure to a wide variety of textual and cultural materials, including literature, journalism, folklore, music, film, and theater; with a special focus on the diversity of Yiddish in terms of dialects, vocabulary, historical development, and writing conventions. Ample use of audiovisual and digital materials.

**Course Notes:** Additional sections at different times may be added as needed. Contact instructor if you have a scheduling conflict.

**Class Notes:** Class time will be determined according to enrolled students' availability.

Yiddish  107
The Politics of Yiddish (207574)

Saul Zaritt

2020 Fall (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

A bastardized German, a jargon, a woman’s vernacular, an old world language, a dying and ghostly tongue, a Hasidic language, a queer language, a radical language—these are just a few of the ways that Yiddish has been labeled over its one-thousand-year history. This course will trace the shifting politics attached to Yiddish from its early modern beginnings as a language of translation between Jewish and non-Jewish cultures to its postwar vacillation between a language of mourning and nostalgia, Jewish American humor,
Hasidic isolation, and contemporary Jewish radicalism. Through poetry, fiction, essays, and film, we will discuss what it might mean to discover “the secret” language of the Jews” at the origins of Jewish socialism and at the foundations of diaspora nationalism. All texts will be read in translation.

Class Notes: Course timing will be determined in consultation with those enrolled in the course.

The Yiddish Short Story: Folk Tales, Monologues, and Post-Apocalyptic Parables (203377)

Saul Zaritt

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

Who are the storytellers of Yiddish literature? Where did their stories come from? Why did the short story become the central genre of modern Jewish literary culture? This course explores the genealogy of the Yiddish short story from the hasidic folk tale to the modernist sketch, from the monologues of Sholem Aleichem and Isaac Bashevis Singer to the haunting narratives of David Bergelson and Der Nister. Stretching from the nineteenth century to the present, we follow the short story in its comparative contexts from Eastern Europe to Western Europe, Palestine/Israel, and the US.

Course Notes: All texts will be taught in translation; optional reading section for those with Yiddish knowledge.

Yiddish  166

Jews, Humor, and the Politics of Laughter (214613)

Saul Zaritt

2021 Spring (4 Credits) Schedule: TBD

Instructor Permissions: None Enrollment Cap: n/a

By mistake some thieves found their way into Hershele’s house late at night while he was sleeping. They searched and searched but found nothing. Meanwhile, Hershele heard their rummaging and slowly crept up behind one of the thieves. He grabbed him by the arm and the thief, naturally, tried to run away. Hershele held him close, whispering, "Be still. Maybe together we'll actually find something." Beginning with jokes like this one, this course will examine the question of Jewish humor, exploring the concept of therapeutic
joking, the politics of self-deprecation, and strategies of masking social critique behind a well-timed joke. Rather than reach some essential definition, we will instead investigate literature, stand-up comedy, film, and television of the twentieth and twenty-first century in order to 1) think together about the theory, mechanics, and techniques of comedy and humor and 2) ask how and when a text or performance gets labeled Jewish, by whom and for what purposes. Texts, films, and performers include: Freud, Kafka, Sholem Aleichem, the Marx Brothers, Belle Barth, Mel Brooks, Joan Rivers, Larry David, Sarah Silverman, Broad City, and Rachel Bloom.

Jewish Studies 166
Jew Theory (215968)
Saul Zaritt
2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a
This seminar will discuss the possibility of "Jew theory" as a method for theorizing the modern. Beginning with a survey of the history of Jewish studies and its place in the academy, the course will then examine how the figure of the Jew, as symbol and stereotype, enters the work of important thinkers of the nineteenth, twentieth, and twenty-first century—from Marx to Slezkin, from Rosezweig to Blanchot, Derrida, and Agamben. In parallel we explore the potential of new modes of "Jewish cultural studies" emerging over the last decades in Jewish studies.

Jewish Studies 178
Writing Jewish Modernity (215967)
Saul Zaritt
This course will trace the ways in which Jewish writers, in multiple languages, responded to the challenges and opportunities of modernity: emancipation, acculturation, nationalism, antisemitism, industrialization and urbanization, migration and war, and the Holocaust. We will explore the creation of radically new modes of Jewish cultural expression and interrogate the simultaneous attempts to invent a unified Jewish literary tradition. We will read texts (in translation) by such writers as Franz Kafka, Sholem Aleichem, Isaac Babel, Devora Baron, S.Y. Agnon, Delmore Schwartz, and others.

Jewish Studies  186

Comparative Love: The Song of Songs in Western Tradition (216646)

David Stern

2020 Fall (4 Credits) Schedule: W 0300 PM - 0500 PM

Instructor Permissions: None Enrollment Cap: n/a

The Song of Songs is, arguably, the greatest love poem in Western literature, but the nature of the love depicted in its verses has been disputed since the time the poem was committed to writing until today. Virtually every type of interpretation has been applied to the poem, from literalist to Jewish and Christian allegorical readings, philosophical and mystical exegeses, and nationalist and political interpretations, not to mention the innumerable implicit meanings underlying the many poems and prose works that have imaginatively recreated the Song through allusion and intertextuality. This course will trace the interpretive career of this unique poem, and in the process explore such basic literary questions as the relation between literalism and allegoresis, the exploitation of literature by religion and other ideologies and its consequences, eros and gender as principles of desire, and the role of influence and appropriation in the history of the poem’s interpretation. Readings will include, in addition to the Song itself and select modern scholarship about it, selections from the Old Greek translation, classical Jewish interpretation (midrash and Targum), Origen, medieval Jewish commentaries and secular love poetry, Bernard of Clairveaux and other medieval Christian exegetes, the Zohar and Christian mystics, S.Y. Agnon, and Toni Morrison. All readings will be in translation. No previous knowledge of love required.

Hebrew 113
Halakhah and Aggadah (Law and Lore) in Classical Judaism (216075)

David Stern
2020 Fall (4 Credits)  Schedule: T 0600 PM - 0845 PM
Instructor Permissions: None  Enrollment Cap: n/a

Halakhah and Aggadah are typically considered the two main categories of classical Jewish thought and literature. Usually, but inadequately, translated as "law" and "lore," the two categories have been understood in the course of Jewish history in various ways: as the prescriptive vs. the descriptive; as law vs. narrative; as the letter of the law vs. its animating spirit; as the serious vs. the playful sides of Judaism, or the rigorous vs. the comforting and consoling. Sometimes the two have been seen as rivals (with Aggadah usually treated as the less important), at other times as complimentary. This course will explore the two categories, their complicated relationship, and their intertwined existence, by studying their presence in a variety of classical Jewish texts from the Rabbinic period: Mishnah, Midrash Halakhah (Sifra) and Midrash Aggadah (Vayikra Rabba), the Palestinian and Babylonian Talmudim, and (if time permits) the medieval Jewish works, the Midrash on the Ten Commandments and the Story of the Jerusalemite. Our study of these texts will be framed by readings from Rabbinic, medieval, modern, and contemporaneous conceptualizations of Halakhah and Aggadah. Readings of primary sources will be in the original language, and students should have at least two years of Hebrew language study. Provisions will be made for different levels of language skills. No previous experience studying Rabbinic literature is required, and for students who have not previously studied Rabbinic texts, this course will also serve as an introduction to their modern critical study.
**Class Notes:** Class time will be determined according to enrolled students' availability.

**Recommended Prep:** At least 2 years of Hebrew language study.

**Hebrew 131**

The Jewish Library: Four Jewish Classics (214616)

*David Stern*

2021 Spring (4 Credits) Schedule: TBD

**Instructor Permissions:** None Enrollment Cap: n/a

Judaism is a famously text-centric religious culture, founded not only on a single book, the Hebrew Bible, but profoundly involved in the study and ritual use of other classic texts like the Babylonian Talmud, the Prayerbook, Biblical commentaries like that of Rashi, and the Passover Haggadah. This course will study the development of these four books and their transformation from texts into books with distinct physical and material features. In the case of each book, the text will be studied historically—"excavated" for its sources and roots, and its subsequent development over the centuries—and holistically, as a canonical document in Jewish tradition. Class time will be devoted primarily to learning to read the primary sources in translation; supplementary secondary readings will provide historical and cultural context. The seminar will also include regular visits to Houghton Library to look at manuscripts, early printed editions, and facsimiles of these books in order to study the changing shapes these books have taken as a key to understanding how they were studied and used, and to consider the relationship of materiality to textuality.

While each book will raise its own set of issues, we will repeatedly deal with three basic questions: What makes a "Jewish" text? How do these books represent different aspects of Jewish identity? What can these books tell us about the canonical books of other religious traditions? No previous background in either Judaism or Jewish history is required. All readings in English translation. While this course is not a formal introduction to Judaism, it does aim to introduce students to Judaism and Jewish culture from inside its classic texts.

**Hebrew 167**

Prayer and Prayerbook (Tefillah and Siddur) (214617)

*David Stern*

2021 Spring (4 Credits) Schedule: TBD

**Instructor Permissions:** None Enrollment Cap: n/a

The institution of organized prayer—Tefillah be-Tzibbur—is one of the most complex phenomena in
Judaism because it has served historically not only as a medium for worshipping God but also for expressing communal religious identity. In the first half of this course, we will study the development of prayer from the Bible until the medieval period through reading primary sources—select passages from the Bible, Talmud and midrash, Geonic literature and other rabbinic texts—as well as secondary works for historical and literary background. We will also trace the development of piyyut, Hebrew liturgical poetry, and what it can tell us about the character of Jewish prayer. In the second part of the course, we will study the history of the prayerbook as a physical, material object from the early medieval period into the modern. Special attention will be paid to the great illustrated Ashkenazi and Italian mahzorim (holiday prayerbooks) and siddurim, and to the place of the visual imagination in Jewish religious culture. One class will also be devoted to the development of the synagogue and sacred space. The course will also include visits to Houghton Library to view original editions and rare facsimiles of manuscripts. While the class itself will be conducted in English, all primary sources will be read in Hebrew. Students should be able to read unpointed Hebrew texts.

Hebrew 255

The Passover Haggadah (210972)

David Stern

2021 Spring (4 Credits)  
Instructor Permissions: None  
Enrollment Cap: n/a

The Passover Haggadah is the Jewish book of redemption par excellence. As the script for the seder (the ritual banquet on the first night(s) of Passover), the Haggadah has changed and developed as the Jews have moved from one diasporic center to another from Late Antiquity until the present day. In this course we will study the history and development of both the seder and the Haggadah— as a ritual, as a text, and as a physical book. Readings will be drawn from the Bible, Mishnah, the Jerusalem and Babylonian Talmuds, the New Testament and early Christian writers, medieval Haggadah manuscripts and early printed editions, as well as more recent versions of the Haggadah from both Israel and America (including non-traditional haggadot). We will deal extensively with the tradition of Haggadah illustration, and will utilize Harvard's extensive collection of Haggadot in both Widener and Houghton Library. The focus of the course will be on the reading and analysis of primary sources. No previous experience with Passover is required, but students should have at least two years of Hebrew (Biblical or modern) and be prepared to read texts in Hebrew. Any student with questions about their Hebrew competence should contact Professor Stern.

Course Notes: Offered jointly with the Divinity School as HDS 1641.

Recommended Prep: Two years of Hebrew.

The Book of Proverbs: Seminar (215969)

Jon Levenson

2020 Fall (4 Credits)  Schedule: R 0300 PM - 0459 PM
Instructor Permissions: None  Enrollment Cap: n/a

A critical discussion of the Book of Proverbs in its entirety and a close reading of (at least) major sections of it in Hebrew. Among the topics considered are questions of worldview, literary design, poetic technique, ancient Near Eastern antecedents and parallels, and the relationship of the theologies in Proverbs to those of other currents in ancient Israel. Prerequisites: an introductory course in the critical study of the Hebrew Bible and a very solid command of Hebrew grammar (any period).

Course Notes: Jointly offered in the Divinity School as HDS XXXX

Persian  BA

Intermediate Persian I (111324)

Sheida Dayani
2020 Fall (4 Credits) Schedule: MTWF 0900 AM - 1000 AM
Instructor Permissions: Instructor Enrollment Cap: 12

A thorough review and continuation of modern Persian grammar with an emphasis on reading, writing, speaking, and listening comprehension. Includes an introduction to classical prosody. Course materials draw from both classical and modern poetry and prose.

Course Notes: Not open to auditors. Cannot be taken pass/fail.

Recommended Prep: Persian AA/AB sequence, or the equivalent.
**Persian BB**

Intermediate Persian II (113367)

_Sheida Dayani_

2021 Spring (4 Credits)  
Schedule: TBD

Instructor Permissions: None  
Enrollment Cap: n/a

Continuation of Persian Ba.

Course Notes: Not open to auditors. Cannot be taken pass/fail.

**Persian 130AR**

Introduction to Modern Persian Literature (109546)

_Sheida Dayani_

2020 Fall (4 Credits)  
Schedule: MW 1200 PM - 0115 PM

Instructor Permissions: Instructor  
Enrollment Cap: 12

This course is a survey of Persian literature in Persian with a focus on the 19th and the 20th centuries. We begin with methods of reading literary Persian texts and continue to classical poetry, folk literature, travelogues, letters, political satire, drama, fiction, and modern poetry. There is occasional incorporation of film depending on interest. Knowledge of Persian is required. Students must have successfully completed Intermediate Persian BB at Harvard or passed the placement test for the equivalent. Instructor’s permission is required if former Persian studies are outside Harvard.

Course Notes: Formerly Persian 131r and Persian 132r.

Recommended Prep: Persian BA/BB sequence, or equivalent, or permission of the instructor.

Literary and Historical Texts in Persian (109547)

Sheida Dayani

2021 Spring (4 Credits)                  Schedule:       TBD
Instructor Permissions:   None          Enrollment Cap: n/a

This course explores classical and modern Persian literature for literary texts with historical significance and historical texts with literary value. Genres include travelogues, journals, classical and modern poetry, essays, satire, fiction, plays, letters, court documents, film, music, and other audio-visual material. Students are expected to reflect on the weekly readings with one-page response papers in Persian, plus a midterm paper and a final paper. Class is conducted in Persian.

Course Notes: Formerly Persian 131r and Persian 132r.

Recommended Prep: Persian 130AR or permission of the instructor.

Persian 152

Literary and Visual Narrative in the Persian Epic Tradition (107672)

Justine Landau

2021 Spring (4 Credits)                  Schedule:       TBD
Instructor Permissions:   None          Enrollment Cap: n/a

Foundational to Iranian cultural identity and a masterpiece of world literature, the Shahnameh of Abolqasem Ferdowsi (ca. 940 – 1019) can be said to epitomize the essential features of Persian epic, much like Homer’s Iliad and Odyssey for Greek. With its unique combination of mythical, heroic and historical components, the Persian Book of Kings is also one of the most widely illustrated narratives in the Islamicate arts of the book. Alongside the reading of the Shahnameh in Dick Davis’ authoritative English translation, students will become acquainted with the great Persian epic as a living tradition of telling and retelling in written, visual and oral form. Topics include the elements of marvel, romance and ethics characteristic of the epic genre, and the relationship between the text of the poem and its manuscript illustrations.

Recommended Prep: Knowledge of Persian not required. Lectures and readings will be in English, and a separate section will be arranged for students with adequate reading knowledge of Persian.

Classical Persian Literature Seminar: Poetics and Rhetoric (159760)
Justine Landau
2021 Spring (4 Credits) Schedule: W 0300 PM - 0545 PM
Instructor Permissions: None Enrollment Cap: n/a
This course explores the development of Persian literary theory from the 11th century onwards, with readings from the major authors who shaped the technical, didactic and philosophical trends in classical literary scholarship. Students will become acquainted with the tools and concepts of literary analysis developed in pre-modern Iran and exert their skills through the practice of close reading and discussion of select literary material. Authors include: Râduyâni, Keykâvus, Nezâmi 'Arûzi, Shams-e Qeys-e Râzi, Nasir al-Din Tusi, Jâmi, Hoseyn Vâ'ê-e Kâshefi and more.
Recommended Prep: Three years of Persian or equivalent.

Persian 252
Between Fiction and Science: The Form(s) of Knowledge in the Premodern Persianate World (215728)
Justine Landau
2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: Instructor Enrollment Cap: n/a
This seminar explores the porous boundaries between fiction and science in premodern Persian literature, with readings selected from major prose and poetic texts from the 10th to the 16th century. Students will engage in the close reading of chosen passages spanning across genres, from works on logic and ethics to histories and travelogues, and from treatises on rhyme and agriculture to narrative verse, and manuals of Sufism. Discussed in conversation with relevant secondary literature, these texts invite us to interrogate the diversity of forms and strategies involved in the transmission of knowledge, at the intersection of belles-lettres and discourses of truth. Authors will include: Avicenna, Ferdowsi, Hojviri, Beyhaqi, Nâser Khosrow, Nezâmi Ganjavi, Nasir al-Din Tusi, Qâsem b. Yusof Abunasri and others, to be agreed upon depending on student interest.
Recommended Prep: Prerequisites: Three years of Persian or equivalent.

Subject: Akkadian

Akkadian  AA
Introductory Akkadian I (114320)

Gojko Barjamovic

2020 Fall (4 Credits)  Schedule:  MW 1200 PM - 0115 PM
Instructor Permissions:  None  Enrollment Cap:  n/a

An introduction to the Semitic language of Akkadian, primarily through the Old Babylonian dialect and cuneiform writing system as used during the time of Hammurabi (c. 1750 BCE). Students learn the fundamentals of grammar and the writing system, as well as the most common cuneiform signs in official and cursive script. Readings span a variety of genres, including private letters, judicial documents, literary and religious texts, divinatory compendia, legal code, and royal inscriptions. The course also briefly introduces students to examples of texts from other periods and dialects of the Akkadian language for cultural and comparative purposes. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.
Course Notes: Akkadian AA/AB is an indivisible year-long course. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

### Akkadian 144

Akkadian Divination Texts (107741)

*Piotr Steinkeller*

2020 Fall (4 Credits)  **Schedule:**  W 1245 PM - 0245 PM

**Instructor Permissions:**  None  **Enrollment Cap:**  n/a

The course offers a survey of Babylonian divination literature and the
manifold divinatory techniques used in ancient Mesopotamia. While its focus will be the Old Babylonian and selected later sources dealing with extispicy (prediction from the entrails of animals), we will also read a number of sources concerned with other forms of divination, such as augury (the observed behavior of birds), celestial omens, and dream interpretation. The course will also consider the "scientific" dimension of divination and its relationship to other Babylonian "sciences."

Class Notes: Class time will be determined according to enrolled students' availability.

Akkadian 147
Wisdom Literature (123500)

Peter Machinist
2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a
A close reading in Akkadian of several of the major texts on wisdom, like the Ludlul bel nemeqi and the Dialogue on Pessimism, in the context of a broader discussion of wisdom and scholarly literature in Mesopotamia and elsewhere in the ancient Near East, including the Hebrew Bible.

Recommended Prep: One year of Akkadian

Akkadian 148
Old Babylonian Letters of Mari (119450)

Laura Hawkins
2021 Spring (4 Credits) Schedule: F 1200 PM - 0300 PM
Instructor Permissions: None Enrollment Cap: n/a
Recommended Prep: Akkadian A.
Akkadian 156

Neo-Babylonian Inscriptions (123205)

Gojko Barjamovic

2020 Fall (4 Credits)

Schedule: T 1200 PM - 0230 PM

Instructor Permissions: None

Enrollment Cap: n/a

The course provides a broad overview of the late Babylonian dialects of the Akkadian language and key resources for studying them. Readings in all genres are represented, including private and state letters, laws, legal and administrative records, literature, historiography, royal and display inscriptions, science, magical and religious texts.

Recommended Prep: Akkadian grammar, basic vocabulary, knowledge of cuneiform script.

Akkadian 157

Introduction to Old Assyrian Language and History (110013)

Gojko Barjamovic

2021 Spring (4 Credits)

Schedule: TBD

Instructor Permissions: None

Enrollment Cap: n/a

The course provides an overview of the Old Assyrian dialect of the Akkadian language as well as the political, social and economic history of Northern Mesopotamia and Anatolia in the early 2nd millennium BC. We read texts from a wide variety of genres, including private and state letters, legal and administrative records, loans and quittances, caravan texts, commercial records, partnership contracts, family and state law, political treaties, literature, magic, religion, and royal inscriptions. The course integrates the textual record with an overview of Assyrian and Central Anatolian history, visual and material culture during the period in question. The goal of the course is to deepen your understanding of both the Old Assyrian language and its historical context. Course readings combine standard introductions, thematic and core studies in the field.

Class Notes: This class will be held primarily in the Harvard Semitic Museum.
Akkadian 158

Middle and Neo-Assyrian (203409)

Gojko Barjamovic

2021 Spring (4 Credits)

Akkadian 159

Middle Babylonian Language and History (211067)

Gojko Barjamovic

2021 Spring (4 Credits)  
Instructor Permissions: None  
Enrollment Cap: n/a

Schedule: TBD

The course provides a broad overview of the Middle Babylonian dialect and script of the Akkadian language, as well as the political and social history of Southern Mesopotamia in the second half of the 2nd millennium BC that those texts relate to. We read from a wide variety of genres, including private and state letters, laws, legal and administrative records, literature, historiography science, magic, religion, and royal and display inscriptions. The goal of the course is to deepen your understanding of both the Babylonian language of the Late Bronze Age and its historical context. Course readings combine standard introductions, thematic and core studies in the field.  We make full use of relevant inventory in the HSM collection. During the semester, three guests who specialize in the period will join us to lecture us to their work.

Class Notes: This course will be held primarily in the Harvard Semitic Museum.

**Syriac AA**

Elementary Syriac I (216669)

*Ute Possekel*

2020 Fall (4 Credits) **Schedule:** MWF 1030 AM - 1129 AM  
**Instructor Permissions:** Instructor  
**Enrollment Cap:** 9

Syriac is the Aramaic dialect that became the principal language of Near Eastern Christians in antiquity. It was widely spoken and written in Mesopotamia, Persia, and beyond, and a vast corpus of Syriac Christian literature survives. This full-year course offers a thorough introduction to Classical Syriac. Readings will include passages from the New Testament and early Christian literature. The course will also introduce important themes and figures from the Syriac tradition. Syllabus and instructional techniques have been updated to optimize the online learning experience.

This is an indivisible year-long course. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit. Limited enrollment course.

**Egyptian 174**

Gender and Ritual in Ancient Egyptian Funerary Practices (217403)

*Mariam Ayad*

2020 Fall (4 Credits)  

**Schedule:** M 1200 PM - 0159 PM

**Instructor Permissions:** Instructor  

**Enrollment Cap:** 12

Ancient Egyptian men and women constructed enduring mortuary monuments, compiled funerary texts, and created elaborate myths & intricate rituals to deal with death. This course explores how women feature in ancient Egyptian conceptions of death, salvation, and the afterlife and whether the Egyptians conceived of gendered pathways to the afterlife.

**Egyptian 200**

Egyptian Text Reading (160234)

*Peter Manuelian*

2021 Spring (4 Credits)  

**Schedule:** TBD

**Instructor Permissions:** Instructor  

**Enrollment Cap:** 5

Graduate level course in the reading of primary Egyptian texts. This semester features readings in Middle Egyptian historical texts.

**Course Notes:** Undergraduates may enroll only by permission of the instructor.

**Recommended Prep:** Middle Egyptian.
Egyptian  300
Egyptian Text-Reading (205970)

Peter Manuelian

2020 Fall (4 Credits)  Schedule:  TBD
Instructor Permissions:  Instructor  Enrollment Cap:  30

This focuses on diverse topics in Egyptology, from text-reading to individual research projects. The topics may change from year to year, and students may take several iterations of the same course. Students meet with the instructor on a regular basis, and either read texts throughout the semester, or produce a final project or paper at the end of the course.

Course Notes:  Reading course

Subject: Sumerian

Sumerian   AA

Introductory Sumerian I (115449)

Piotr Steinkeller

2020 Fall (4 Credits)  Schedule:  MW 0300 PM - 0415 PM
Instructor Permissions:  None  Enrollment Cap:  n/a

The course provides an introduction to the Sumerian language, a language isolate spoken in ancient Mesopotamia and probably the world’s first written language. Although several aspects of Sumerian remain debatable, students learn the fundamentals of the grammar and writing system as well as the most common cuneiform signs in a variety of lapidary and cursive contexts. Many of the texts that are covered are a variety of dedicatory inscriptions from the time of Gudea (ca. mid-twenty-second century BCE) and the subsequent Ur III dynasty (ca. twenty-first century BCE), but other genres and time periods are sampled as well. This study of the Sumerian language also includes some background on the culture and history of the Sumerians.

Course Notes:  Sumerian AA/AB is an indivisible year-long course. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Sumerian  AB

Introductory Sumerian II (159864)

*Piotr Steinkeller*

2021 Spring (4 Credits)                      Schedule:  MW 1030 AM - 1145 AM

Instructor Permissions:  None                Enrollment Cap:  n/a

The Spring semester focuses heavily on reading more difficult texts, including lengthy portions of the Gudea cylinders. Students are introduced to other genres as well, including economic texts, incantations, legal texts (such as a law code or a court case), letters, and literary works. This exposure to more difficult texts highlights many of the debatable and challenging features about Sumerian while also providing important insights into the history and culture of the Sumerians. Students also strengthen their familiarity with the cuneiform system, enabling further study in Sumerian as well as in Akkadian and other cuneiform-based languages.

Course Notes:  Sumerian AA/AB is an indivisible year-long course. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Requirements:  Pre-requisite: SUMERIAN AA

Neuroscience
Subject: Neuroscience - Undergraduate

Neuroscience - Undergraduate  57
Animal Behavior (207534)
Bence Olveczky
Naomi Pierce
2021 Spring (4 Credits)  Schedule: TR 1030 AM - 1145 AM
Instructor Permissions: None  Enrollment Cap: n/a
A review of the behavior of animals under natural conditions, with emphasis on both mechanistic and evolutionary approaches. Topics include classical ethology; behavioral endocrinology; behavioral genetics; learning and memory; communication; orientation, migration and biological rhythms; optimal foraging; evolutionary stable strategies; sexual selection; parental investment and mating systems; selfishness, altruism, and reciprocity; and sociality in vertebrates and invertebrates.
Class Notes: Neuro 57 is also offered as OEB 57. Students may not enroll in both.
Requirements: Anti-Requisite: Cannot be taken for credit if OEB 57 already complete.

Neuroscience - Undergraduate  80
Neurobiology of Behavior (207476)
Jeff W. Lichtman
Kathleen Quast
2020 Fall (4 Credits)  Schedule: F 1030 AM - 1145 AM
Instructor Permissions: None  Enrollment Cap: n/a
An introduction to the ways in which the brain controls mental activities. The course covers the cells and signals that process and transmit information, and the ways in which neurons form circuits that change with experience. Topics include the neurobiology of perception, learning, memory, emotion, and neurologic disorders. This year we are combining interactive, didactic videos with "live" Friday sessions, group projects, and small discussion sections.
Requirements: Anti-Requisite: Cannot be taken for credit if MCB 80 already complete.

Laboratory Research (122846)

Ryan W. Draft
Laura M. Magnotti

2020 Fall (4 Credits)  Schedule:  TBD

Instructor Permissions:  Instructor  Enrollment Cap:  n/a

This course is taken to obtain credit for independent laboratory research during the 6th, 7th, or 8th semester. Research work should be directed by a member of the Neuroscience Standing Committee or an appropriate Harvard affiliated faculty member in another department or institution. All students must submit registration materials for Neuro 91 at the time of enrollment. See the Neuroscience website for details.

Neuroscience - Undergraduate  101FA
Synaptic and Non-Synaptic Plasticity: How the Brain Learns (203851)

2020 Fall (2 Credits)  
**Schedule:**  T 0730 PM - 0845 PM  
**Instructor Permissions:**  Instructor  
**Enrollment Cap:**  15

The course will start with a brief introduction aimed at reviewing general neurophysiological concepts on neurons, synapses, plasticity, as well as experimental techniques. We will then spend the major part of the year studying three main aspects of learning and its underlying plastic mechanisms: developmental, non-synaptic and sensory plasticity. The final weeks of the course will be devoted to developing a research proposal building upon knowledge acquired throughout the year.

**Requirements:**  Prerequisite: (LPS A OR LS 1A ) AND (MCB 80 OR MCB 81)

Sex and the Brain (205099)

2020 Fall (2 Credits) Schedule: W 0600 PM - 0715 PM
Instructor Permissions: Instructor Enrollment Cap: 12

Animals exhibit many innate, sex-specific behaviors that provide useful models to study the underlying neural circuits, and sex differences in the nervous system also have important implications for human health. Through discussions, activities, and lectures, this course introduces students to various aspects of sexually dimorphic neural circuits across model organisms, while emphasizing critical thinking and effective science communication.

Maps of the Brain - How the Brain Organizes the World (207610)

2020 Fall (2 Credits) Schedule: R 0430 PM - 0545 PM

Instructor Permissions: Instructor Enrollment Cap: 12

Neurons close to each other in the brain often get activated by parts of the world that are also close to each other: connected body parts, similar sounds, words with related meaning. This organized pattern of activity gives rise to brain maps of our surroundings. In this course, we will explore how the brain creates, uses, and updates such maps to make sense of the world around us.

Each week, we will take a look at neuronal circuits in different parts of the brain (eg, somatosensory cortex, olfactory system, hippocampus) to see how scientists discover new neuronal maps, how these maps function and develop, and how they evolve with experience.

Requirements: Prerequisite: (LIFESCI 1A OR LPS A) AND (MCB 80 OR NEURO 80)

Neuroscience - Undergraduate 101LA

The Neurobiology of Sleep and its Role in Mental Health (207615)

2020 Fall (2 Credits) Schedule: M 0430 PM - 0545 PM
Instructor Permissions: Instructor Enrollment Cap: 12

The scientific study of sleep is both highly interdisciplinary and among the most unifying of topics in psychology and the neurosciences. In the past several decades, exciting new discoveries on the neurobiology of sleep have been facilitated by technologies such as functional neuroimaging and molecular genetics. Sleep science exemplifies the translational approach in biomedical science whereby investigators in human and animal research work together to continually advance the field of sleep medicine. Scientific findings increasingly point to the importance of sleep for mental health and optimum performance, as well as to sleep disruption as both a result and potential cause of mental illness. In psychiatric neuroscience, sleep is an area in which many fundamental questions remain unanswered due to the unique challenges of studying human sleep.

Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Requirements: Prerequisite: (LPS A OR LS 1A ) AND (MCB 80 OR MCB 81)

Pleasure, Pain and Everything Between: How Touch Encodes the World Around Us (216045)

2020 Fall (2 Credits) Schedule: T 0600 PM - 0715 PM

Instructor Permissions: Instructor Enrollment Cap: 15

We rely on our sense of touch for essential tasks and behaviors, including feeding, object recognition, avoiding physical harm, mating behaviors, and child rearing. This course covers the neural components and circuitry that underlie our sense of touch. From skin to the cortex, we will explore touch and its role in development, diseases, and most importantly, in our everyday life.

Systems Neuroscience (207528)

Florian Engert

2021 Spring (4 Credits)  Schedule:  MW 0300 PM - 0415 PM
Instructor Permissions:  Instructor  Enrollment Cap:  99

The neuronal basis of sensory processing and animal behavior will be explored in many different model systems as diverse as honeybees, weakly electric fish, and humans. Special emphasis is placed on the role of activity dependent modulation of neuronal connections in the context of learning, memory, and development of the nervous system.

Class Notes:  Neuro 105 is also offered as MCB 105. Students may not enroll in both.

Requirements:  Pre-requisite: MCB/NEURO 80 or Instructor Approval.
Anti-requisite: Cannot be taken for credit if MCB 105 is already complete

Cellular Basis of Neuronal Function (207530)

Ryan W. Draft  
Kathleen Quast

2021 Spring (4 Credits)  Schedule:  TR 1030 AM - 1145 AM
Instructor Permissions:  Instructor  Enrollment Cap:  20

The essential function of a neuron is to processes complex signals derived from the external world. In doing so, neurons employ diverse mechanisms that respond to chemical and electrical signals with incredible sensitivity and plasticity. In this course, we will study these electrical, molecular, and cellular processes using biophysical and biological approaches. Specifically, we will explore topics on excitable membranes, neurotransmission, ion channels, dendritic integration, intracellular signaling, and synaptic plasticity in the context of real cells and brain circuits. Additionally, there will be a hands-on laboratory section for students to learn to collect and analyze data from common electrophysiological methods (patch clamping and extracellular recording in cultured cells and brain slices).

Laboratory section (2 hours) will be scheduled ad hoc after enrollment on either Thursdays, Fridays, or Mondays.
Neuroscience - Undergraduate  125

Molecular Basis of Behavior (207533)

Catherine Dulac

2021 Spring (4 Credits) Schedule: TR 0130 PM - 0245 PM

Instructor Permissions: None Enrollment Cap: n/a

Modern molecular genetic approaches are teaching us a great deal on how the brain controls behaviors. This course will cover newly developed experimental strategies of molecular neuroscience, and how they have helped uncover the nature and identity of behavior circuit components. How genes and molecules affect behaviors will be investigated through key examples of mammalian behaviors with an emphasis on instinctive and social behaviors, their expression, development, and associated mental disorders.

Requirements: Anti-Requisite: Students who have taken MCB 125 cannot take this course for credit.

Class Notes: Neuro 125 is also offered as MCB 125. Students may not enroll in both.

Neuroscience - Undergraduate  129

The Brain: Development, Plasticity and Decline (212829)

Sam Kunes

2020 Fall (4 Credits) Schedule: MWF 1030 AM - 1145 AM

Instructor Permissions: Instructor Enrollment Cap: 12

A lecture and discussion course on how the brain develops, employs plasticity to adapt to its environment and undergoes functional decline with aging. Topics include the birth, death and identity of neurons, axon guidance and synaptic specificity, adult neurogenesis, developmental disorders of synaptic function and memory, including autism and Alzheimer's Disease. We explore how the brain loses function with aging. Course assignments emphasize critical evaluation of the primary literature, experimental design and scientific writing.

Requirements: Anti-Requisite: Cannot be taken for credit if MCB 129 already complete.
Neuroscience - Undergraduate 130

Visual Recognition: Computational and Biophysical Perspective (160750)

Gabriel Kreiman

2020 Fall (4 Credits)            Schedule: M 0300 PM - 0545 PM
Instructor Permissions: Instructor Enrollment Cap: 50

Examines how neuronal circuits represent information and how those circuits are implemented in artificial intelligence algorithms. Topics: architecture of visual cortex, neurophysiology, visual consciousness, computational neuroscience, models of pattern recognition and computer vision.

Course Notes: Course website: <a href="http://klab.tch.harvard.edu/academia/classes/hms_neuro300_vision/hms_neuro300_vision.html">Neurobiology 230, Visual Recognition</a>

Neuro 130 cannot be taken if Neuro 230 has been taken. Neuro 130 cannot be taken concurrently with Neuro 230.

Recommended Prep: Math (Maa/Mab, Math 1A,1B, Math 19 a or equivalent). Physical Sciences 1. MCB 80.

Requirements: Prerequisite: ((LifeSci 1A OR LPS A) AND (LifeSci 1B)) AND may not be taken at the same time with NEURO 230

Neuroscience - Undergraduate 131

Computational Neuroscience (207731)

Haim Sompolinsky

2021 Spring (4 Credits)            Schedule: MW 0300 PM - 0415 PM
Instructor Permissions: None Enrollment Cap: n/a

Follows trends in modern brain theory, focusing on local neuronal circuits as basic computational modules. Explores the relation between network architecture, dynamics, and function. Introduces tools from information theory, statistical inference, and the learning theory for the study of experience-dependent neural codes. Specific topics: computational principles of early sensory systems; adaptation and gain control in vision, dynamics of recurrent networks; feature selectivity in cortical circuits; memory; learning and synaptic plasticity; noise and chaos in neuronal systems.

Recommended Prep: Basic knowledge of multivariate calculus, differential equations, linear
Neuroscience - Undergraduate 140

Biological and Artificial Intelligence (207645)

Gabriel Kreiman

2021 Spring (4 Credits)

Schedule: MW 0300 PM - 0415 PM

Instructor Permissions: None

Enrollment Cap: n/a

This course provides a foundational overview of the fundamental ideas in computational neuroscience and the study of Biological Intelligence. At the same time, the course will connect the study of brains to the blossoming and rapid development of ideas in Artificial Intelligence. Topics covered include the biophysics of computation, neural networks, machine learning, Bayesian models, theory of learning, deep convolutional networks, generative adversarial networks, neural coding, control and dynamics of neural activity, applications to brain-machine interfaces, connectomics, among others.

Recommended Prep: Basic knowledge of multivariate calculus, differential equations, linear algebra, and elementary probability theory

Neuroscience - Undergraduate 141

The Physics of Sensory Systems in Biology (207730)

Aravinthan Samuel

2020 Fall (4 Credits)

Schedule: TR 0900 AM - 1015 AM

Instructor Permissions: Instructor

Enrollment Cap: 30

Living organisms use sensory systems to inform themselves of the sights, sounds, and smells of their surrounding environments. Sensory systems are physical measuring devices, and are therefore subject to certain limits imposed by physics. Here we will consider the physics of sensory measurement and perception, and study ways that biological systems have solved their underlying physical problems. We will discuss specific cases in vision, olfaction, and hearing from a physicist's point of view.

Class Notes: The scheduled class meetings (Tu, Th 9-10:15 EST) will be discussions of the material presented in the pre-recorded lectures and reading assignments. If any students are unable to attend at 9 AM (e.g., because of time zone), Prof. Samuel will hold a second class meeting.
later on Tuesdays and Thursdays (which will be regularly scheduled based on a student poll at the start of class). Attendance at either the 9 AM or later meeting is mandatory. Students are free to join both. All zoom meetings will be recorded and made available on the website. Class participation is expected either live during these class meetings or through online discussions on Slack.

Requirements: Prerequisite: MATH 21A and MATH 21B and cannot be taken for credit if PHYSICS 141 already complete.

Neuroscience - Undergraduate 143

Neurobiology of Vision and Blindness (207773)

Joshua Sanes

2021 Spring (4 Credits) Schedule: TR 0130 PM - 0245 PM

Instructor Permissions: Instructor Enrollment Cap: 20

Vision system fascinates biologists, in part because we are such visual animals. In fact, Americans regard blindness as the worst ailment they could get, fearing it more than Alzheimer’s or AIDS. For these reasons, as well as because of its relative accessibility, the visual system is a favored model for studying neural circuitry, as well as for testing novel therapeutic approaches, such as gene therapy. This course will cover key topics in visual development, structure and function, and then use them as a basis for considering causes of blindness and potential cures.

Class Notes: Neuro 143 is also offered as MCB 143. Students may not enroll in both.

Recommended Prep: MCB 80 or NEURO 80 is recommended.

Requirements: Pre-requisite: MCB/NEURO 80 or Instructor Approval. Anti-requisite: Cannot be taken for credit if MCB 143 is already complete.

Neuroscience - Undergraduate 145

Neurobiology of Perception and Decision Making (212830)

Naoshige Uchida

2020 Fall (4 Credits) Schedule: TR 1030 AM - 1145 AM

Instructor Permissions: Instructor Enrollment Cap: 30
One of the current goals of neuroscience is to understand neuronal circuits underlying perception and behavior. Recent advances in neuroscience have allowed us to glimpse neuronal processes that link perception and decision making. How is sensory information processed in the brain? How does an animal choose its action? How does an animal learn from ever-changing environments and adjust their behavior? The course will examine neurophysiological studies in perception and decision-making.

Requirements:  Anti-Requisite: Cannot be taken for credit if MCB 145 already complete.

Neuroscience - Undergraduate 146

Experience-Based Brain Development: Causes and Consequences (212831)

Takao Hensch

2021 Spring (4 Credits)  Schedule:  TR 0300 PM - 0415 PM

Instructor Permissions:  Instructor  Enrollment Cap:  n/a

At no time in life does the surrounding environment so potently shape brain function as in infancy and early childhood. This course integrates molecular/cellular biology with systems neuroscience to explore biological mechanisms underlying critical periods in brain development. Understanding how neuronal circuits are sculpted by experience will motivate further consideration of the social impact on therapy, education, policy, and ethics.

Requirements:  Anti-Requisite: Cannot be taken for credit if MCB 146 already complete.

Neuroscience - Undergraduate 148

The Neurobiology of Pain (207607)

Ryan W. Draft

2020 Fall (4 Credits)  Schedule:  TBD

Instructor Permissions:  Instructor  Enrollment Cap:  24

This course will explore the neurobiological systems and mechanisms underlying both acute and chronic pain. Topics will include nociceptive/sensory systems, molecular basis and modulation of pain, neuroanatomy of peripheral and central pain circuits, pain pathologies, pharmacological and non pharmacological treatments. The emphasis will be on understanding basic neurobiological concepts underlying pain systems and reading/discussing the primary scientific research in the field.

Class Notes:  Course time will be agreed upon by the enrolled students and
Neuroscience - Undergraduate 170

Brain Invaders: Building and Breaking Barriers in the Nervous System (207770)

Laura M. Magnotti

2021 Spring (4 Credits)  
Schedule: MW 0130 PM - 0245 PM

Instructor Permissions: Instructor  
Enrollment Cap: 16

The brain has evolved a unique but very effective system to protect itself from invaders. In this course, we will explore the specific defenses that the nervous system uses to protect itself. We will also examine how some pathogens evade or breach those defenses and the impact of those invasions. Finally, we will explore how scientists have been able to translate their understanding of these pathogenic mechanisms into technologies for research and therapeutic applications.

Class Notes: Neuro 170 is also offered as MCB 170. Students may not enroll in both.

Requirements:  
Prerequisite: (LPS A OR LS 1a) AND MCB/NEURO 80 or Instructor Approval.  
Anti-requisite: Cannot be taken for credit if MCB 170 is already complete

Neuroscience - Undergraduate 1202

Modern Neuroanatomy (212832)

Randy Buckner

2021 Spring (4 Credits)  
Schedule: TBD

Instructor Permissions: Instructor  
Enrollment Cap: 30

How does the global architecture and local organization of brain systems support behavioral and cognitive functions? In this class, classical and newer neuroanatomical discoveries will be discussed that cover what defines brain areas; how areas are organized into parallel, distributed circuits; how distinct areas and systems are organized; and how anatomical form relates to function. Anatomy in the human brain and from model systems (worm, mouse, barn owl, and monkey) will be used to illustrate principles. Newer
techniques and analytical approaches will be discussed including micro-scale and macro-scale connectomics. The goal of this class is to survey examples of how emerging understanding of neuroanatomy provides insight into function. Each class will consist of lecture and discussion.

Class Notes: Neuro 1202 is also offered as PSY 1202. Students may not enroll in both.

Requirements: Anti-Requisite: Cannot be taken for credit if PSY 1202 already complete.

Neuroscience - Undergraduate 1401

Computational Cognitive Neuroscience: Building Models of the Brain (207732)

Samuel Gershman

2021 Spring (4 Credits) Schedule: MW 1200 PM - 0115 PM

Instructor Permissions: Instructor Enrollment Cap: 48

"What I cannot create, I do not understand." This course applies Richard Feynman’s dictum to the brain, by teaching students how to simulate brain function with computer programs. Special emphasis will be placed on how neurobiological mechanisms give rise to cognitive processes like learning, memory, attention, decision-making, and object perception. Students will learn how to understand experimental data through the lens of computational models, and ultimately how to build their own models.

Class Notes: Neuro 1401 is also offered as PSY 1401. Students may not enroll in both.

Recommended Prep: Students be comfortable with a numerical programming language (e.g., Python, Matlab, R). Psychology concentrators should have taken Science of Living Systems 20 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 14, PSY 15, PSY 16, PSY 18, Science of Living Systems 15, MCB 80 or MCB 81 before enrolling in this course; or permission of instructor.

Requirements: Anti-Requisite: Cannot be taken for credit if PSY 1401 already complete.

Independent Study

Independent Study (150200)

Soha Bayoumi

2020 Fall (4 Credits)

Schedule: TBD

Instructor Permissions: Instructor

Enrollment Cap: n/a

Independent Study is designed to provide credit for field research, academic study not available in regular course work, or practice or performance in the arts. What distinguishes a suitable project is the application of analytical skills to the object of Independent Study. Any sophomore, junior, or senior whose previous record is satisfactory may petition to undertake Independent Study for non-letter-graded credit. Students may access the petition for Independent Study on the Office of Undergraduate Education website.

Course Notes: A student may petition to take up to a total of four, four-credit courses of Independent Study. Independent Study courses are subject to the same rules for dropping and withdrawing as any other course. The petition requires the signatures of a qualified adviser and the student's resident dean, as well as an outline of the student's proposed project. It must be submitted to the Allston Burr Resident Dean for approval, ordinarily in the first week of the term.

Independent Study  1  Section: 009

Independent Study (150200)

Monique Roy

2021 Spring (4 Credits)  Schedule:  TBD

Instructor Permissions:  Instructor  Enrollment Cap:  n/a

Independent Study is designed to provide credit for field research, academic study not available in regular course work, or practice or performance in the arts. What distinguishes a suitable project is the application of analytical skills to the object of Independent Study. Any sophomore, junior, or senior whose previous record is satisfactory may petition to undertake Independent Study for non-letter-graded credit. Students may access the petition for Independent Study on the Office of Undergraduate Education website.

Course Notes:  A student may petition to take up to a total of four, four-credit courses of Independent Study. Independent Study courses are subject to the same rules for dropping and withdrawing as any other course. The petition requires the signatures of a qualified adviser and the student's resident dean, as well as an outline of the student's proposed project. It must be submitted to the Allston Burr Resident Dean for approval, ordinarily in the first week of the term.

Organismic and Evolutionary Biology
Subject: Organismic & Evolutionary Biol

Organismic & Evolutionary Biol   10

Foundations of Biological Diversity (144594)

Brian Farrell
Collin Johnson
Elena Kramer
Ann Pearson
Mansi Srivastava

2020 Fall (4 Credits)  Schedule:  TR 0900 AM - 1000 AM
Instructor Permissions:  None  Enrollment Cap:  n/a

An integrated approach to the diversity of life, emphasizing how chemical, physical, genetic, ecological and geologic processes contribute to the origin and maintenance of biological diversity. Topics to be covered include the evolution of metabolic pathways, multicellularity and structural complexity; causes and consequences of differences in diversity over space and time; the role of species interactions (including symbioses) as an evolutionary force; and the evolution of humans and their impact on the environment.

Class Notes:
- Two 60-minute synchronous meetings per week, 001 and 002. Students should register for the one they foresee attending most regularly.
- Two 45-minute asynchronous lectures (pre-recorded videos) per week are required to be watched before the synchronous meetings.
- One 90-minute lab/section per week is required.

Recommended Prep: Knowledge of introductory molecular, cellular biology, and genetics is recommended.

Additional Course Attributes:

Genetics and Genomics (130236)

Daniel Hartl
Robin Hopkins

2020 Fall (4 Credits) Schedule: TR 1030 AM - 1145 AM

Instructor Permissions: Instructor Enrollment Cap: n/a

Fundamental concepts in genetics and genomics forming a critical foundation for biology approached from two perspectives: (1) as a body of knowledge pertaining to genetic transmission, function, mutation, and evolution in eukaryotes and prokaryotes; and (2) as an experimental approach providing a toolkit for the study of biological processes such as development and behavior. Topics include structure, function, transmission, linkage, mutation, and manipulation of genes; genetic approaches in experimental studies of biological processes; and analysis of genomes in individuals and populations. Related ethical issues also discussed include genetically modified organisms, gene therapy, genetic testing, personalized medicine, and genetic privacy.

Organismic & Evolutionary Biol   54

Biology of the Fungi (148250)

Donald Pfister

2020 Fall (4 Credits)  Schedule:  TR 0130 PM - 0245 PM
Instructor Permissions:  None  Enrollment Cap:  n/a

This course explores the fascinating diversity of the kingdom fungi, including evolution, ecology and
morphology. All of the major groups of fungi, from smuts to molds, will be included. Students use a variety of techniques to learn about these organisms and their activities.

Class Notes:
- Tuesday lectures will be followed by a lab/discussion session.
- Because we are working away from the lab the course has been modified to allow for the study of fungi wherever you may be. We will provide a laboratory kit for you to use at home. This will not be the same as working in the lab at Harvard but it is intended to offer you the chance to experiment and observe what is around you. You will attempt to grow some fungi. You will learn about identification and most of all you will realize that the organisms in the kingdom Fungi are all around us and perform many functions in the ecosystem and in our lives. They cause diseases of plants and animals but they also are critical to plant growth, they cycle nutrients to support ecosystem health, they are critical to industrial processes and to the activities in our kitchens. Fungi are highly complex in their morphology and this contributes to their beauty and fascination. I hope you will join us in studying fungi at home. Throughout the course we will have special guest presentations to bring these topics into focus, for example, the biology of sourdough and of making ginger beer. We will support you in this endeavor by having weekly sessions to discuss and observe together.

Recommended Prep: Life Sciences 1a and 1b or permission of instructor. Lab section will be held on Tuesdays from 2:30pm-4:00pm during Fall 2016.

Organismic & Evolutionary Biol 56

Geobiology and the History of Life (130331)

Andrew Knoll  
David Johnston

2021 Spring (4 Credits)  

Schedule:  
MW 1030 AM - 1145 AM

Instructor Permissions:  
None

Enrollment Cap:  
n/a

Within our solar system, Earth is distinguished as the planet with life. Life was born of planetary processes, has been sustained for some four billion years by planetary processes, and through time has emerged as a set of planetary processes that is important in its own right. In this course we will investigate the ways that Earth and life interact, focusing in particular on the biogeochemical cycles of major elements. This will provide a framework for interpreting the history of life reconstructed from fossils and phylogeny.

Course Notes:  
OEB 56 is also offered as EPS 56. Students may not take both OEB 56 and EPS 56 for credit.

Recommended Prep:  
EPS 21, 22, or Life Sciences 1b; or permission of instructor.

Organismic & Evolutionary Biol 57

Animal Behavior (131446)

Bence Olveczky  
Naomi Pierce

2021 Spring (4 Credits)  

Schedule:  
TR 1030 AM - 1145 AM

Instructor Permissions:  
None

Enrollment Cap:  
n/a

A review of the behavior of animals under natural conditions, with emphasis on both mechanistic and evolutionary approaches. Topics include classical ethology; behavioral endocrinology; behavioral genetics; learning and memory; communication; orientation, migration and biological rhythms; optimal foraging; evolutionary stable strategies; sexual selection; parental investment and mating systems; selfishness, altruism, and reciprocity; and sociality in vertebrates and invertebrates.

Requirements:  
Anti-Requisite: Cannot be taken for credit if NEURO 57 already complete.

Organismic & Evolutionary Biol 99R

Supervised Research (144581)

Gonzalo Giribet

2020 Fall (4 Credits) Schedule: TBD

Instructor Permissions: Instructor Enrollment Cap: n/a

Course taken in one or more semesters to obtain credit for independent research, including research toward a senior thesis. Work should be directed by an OEB faculty member or have an OEB faculty sponsor. All students must submit registration materials for OEB 99r at the time of enrollment.

Course Notes: Laboratory safety session required.

Organismic & Evolutionary Biol 104
The Mouse in Science and Society (161184)
Kathleen Pritchett-Corning
2021 Spring (4 Credits)
Schedule: MW 0900 AM - 1015 AM
Instructor Permissions: Instructor
Enrollment Cap: 18

Mice remain the most popular vertebrates used in biomedical R&D today, with tens of millions of lab mice produced annually in the United States alone. At the same time, mice are commonly studied for their own characteristics that continue to enhance our knowledge about innate mammalian behavior, predator-prey dynamics in changing ecosystems, and reservoir hosts for emerging diseases, to name a few. This course intends to provide a strong foundation in mouse biology, both basic and applied, as well as exposure to cultural and political aspects of the current impact of mice (real or fictitious) on contemporary societal values. Instructors: Kathleen Pritchett-Corning.

Conservation Ecology and Practice (208260)
David Foster
2021 Spring (4 Credits)
Schedule: TR 1030 AM - 1145 AM
Instructor Permissions: Instructor
Enrollment Cap: n/a

The conservation of land and waters has become a major tool in determining the patterns of land use, conserving biodiversity, combating global change, and ensuring that the benefits of nature are secured for society. With a focus on the U.S., this course will examine the history and changes in conservation rationale and approach, the ecological theory and research that helps guide conservation planning and execution, and the policies, finances, and practice that enable land conservation to be a powerful agent of landscape change. Field trips will focus on case studies and discussions with practitioners engaged in New England conservation from Boston to extremely rural landscapes.

Deep Sea Biology (145140)
Peter Girguis
2020 Fall (4 Credits) Schedule: TR 1030 AM - 1145 AM
Instructor Permissions: Instructor Enrollment Cap: 45
The oceans contain 97% of Earth’s water, and host the most disparate ecosystems on the planet. This course provides an introduction to deep ocean habitats, macrofauna and microorganisms. Emphasis is placed on the physiological adaptations of organisms to their environment, as well as the role of microbes in mediating oceanic biogeochemical cycles.
Organismic & Evolutionary Biol  125

Molecular Ecology and Evolution (144180)

Scott Edwards

2020 Fall (4 Credits)  

Schedule: TR 1200 PM - 0115 PM

Instructor Permissions: None  

Enrollment Cap: n/a

A survey of theory and applications of DNA technologies to the study of evolutionary, ecological and behavioral processes in natural populations. Topics to be covered will span a variety of hierarchical levels, timescales, and taxonomic groups, and will include the evolution of genes, genomes and proteins; the neutral theory of molecular evolution and molecular clocks; population genomics and phylogenetic principles of speciation and phylogeography; metagenomics of microbial communities; relatedness and behavioral ecology; molecular ecology of infectious disease; and conservation genetics.

Course Notes: Weekly computer laboratories will introduce the use of the internet and computational software in DNA sequence alignment and phylogenetic and population genetic analysis.

Recommended Prep: Life Sciences 1b, OEB 10, OEB 53 or MCB 52.

Organismic & Evolutionary Biol  128

From Darwin to Derrida: The Evolution of Meaning and Purpose (216473)

David Haig

2020 Fall (4 Credits)  

Schedule: M 0300 PM - 0500 PM

Instructor Permissions: Instructor  

Enrollment Cap: 12

The seminar will read my recent book (of the same name as the course) intended for a general educated readership. The seminar would be suitable both for science students and for non-science students who wish to learn some evolutionary biology. Natural selection is a purposeless process that has evolved purposive creatures. The key innovation in the evolution of life was the origin of a textual record of past choices of natural selection contained within genetic sequences. The information in genes comes from the environment that selects. The textual record evolves as organisms are judged by the performance of the text in environmental context.

Class Notes: This semester-long course will be offered each semester in 2020-2021. It cannot be repeated for credit.

Biology of Fishes (140830)

George Lauder

2021 Spring (4 Credits) Schedule: MW 1200 PM - 0115 PM

Instructor Permissions: Instructor Enrollment Cap: n/a

Fishes inhabit diverse aquatic environments including deep seas, intertidal zones, coral reefs, polar waters, the vast Amazonian basin, and great East African lakes. A single fish species may occupy diverse environments through extraordinary long distance horizontal and vertical migrations. To explore this unparalleled diversity, the course emphasizes bridging traditional academic boundaries with integrative analyses of the biology underlying rapid evolutionary radiations and stasis.

Experimental Design and Statistics for Ecology provides a practical "how to" introduction to conducting ecological research. Students gain hands-on experience forming testable questions and hypotheses, designing experiments to test these questions, implementing experimental designs, taking and managing data, and conducting an array of statistical analyses in R statistical software.

Course Notes: This course is geared toward senior undergrads and early graduate students.

Class Notes: Instructor: Professor Benton Taylor

Recommended Prep: OEB 55

---

Biogeography aims to explain distributions of organisms through historical and ecological factors. This course will focus on the history of biogeographic research, developments in the area of historical biogeography, and on ecological processes that affect distributions of whole clades. Topics include plate tectonics and earth history, vicariance and dispersal, areas of endemism, phylogenetic niche conservatism, latitudinal gradients in species richness, and the theory of island biogeography. Software for biogeographical analysis will be discussed and evaluated.

Recommended Prep: Two following courses: Life Sciences 1b, OEB 10, OEB 51, OEB 52, OEB 53, OEB 54, OEB 55, OEB 181, or permission of the instructor. There will also be a lab component in addition to the lecture component of the course.
Organismic & Evolutionary Biol 145

Genes and Behavior (145857)

Yun Zhang

2020 Fall (4 Credits) Schedule: MR -

Instructor Permissions: Instructor Enrollment Cap: n/a

Behavior is inheritable and regulated by genes. This lecture course explores causal links between genes and behavioral traits, aiming to provide mechanistic understanding of how gene products control and influence behavioral outputs. The course will start with discoveries of genes whose mutations contribute to neurological diseases and psychiatric disorders, followed by main research approaches used to investigate genetic basis of behavior and brain function. The class will then have in-depth lectures and discussion on genes that regulate several behavioral traits including olfaction, itch and pain, circadian rhythm, sexual behavior, sleep, learning and memory.

Class Notes: One lecture and one discussion session per week via Zoom. Meeting times will be based on the needs of students enrolled.

Recommended Prep: Life Sciences 1a or permission of the instructor

Exceptional Paleobiological Insights into Animal Evolution (215692)

Javier Ortega-Hernandez

2021 Spring (4 Credits) Schedule: MW 1200 PM - 0115 PM

Instructor Permissions: Instructor Enrollment Cap: 12

In this course we will explore the importance of soft-tissue preservation in the rock record through an overview of major exceptional fossiliferous sites around the world and throughout the Precambrian to Mid-Phanerozoic, with particular emphasis on the evolutionary history of invertebrate animals. Our aim is to produce a thorough understanding of the inherent biases of the fossil record, how exceptional deposits break with these limitations, and the contribution of exceptional paleontological data towards reconstructing the origin and early evolution of the major animal groups. In addition, the course offers an optional week-long field trip during spring break.

Biology of Insects (142688)
Naomi Pierce
2020 Fall (4 Credits)  Schedule:  WF 0130 PM - 0245 PM
Instructor Permissions:  Instructor  Enrollment Cap:  15

An introduction to the major groups of insects. The life history, morphology, physiology, and ecology of the main taxa are examined through a combination of lecture, lab, and field exercises. Topics include the phylogeny of terrestrial arthropods with a review of the extant orders, an analysis of abiotic and biotic factors regulating populations, including water balance, temperature, migration, parasitism, mutualism, sociality, insect/plant interactions, medical entomology, and the use of insects in biological control.

Class Notes: The lab and field exercises will be offered as part of the "remote" version of the course, but modified to accommodate students who are working in different locations.

Organismic & Evolutionary Biol  207
The Fishy Aspects of the Human Body (211177)
Stephanie Pierce
2021 Spring (4 Credits)  Schedule:  M 0300 PM - 0545 PM
Instructor Permissions:  None  Enrollment Cap:  n/a

Explore how the human body evolved through an analysis of the award-winning non-fiction book, Your Inner Fish: A Journey into the 3.5 Billion-Year History of the Human Body, by evolutionary biologist Neil Shubin. We will read and discuss each chapter in turn and discover how different parts of the human body can be traced back to creatures that lived eons ago. By the end of the course students will gain a better appreciation for how all life on Earth is interrelated and how our own bodies are a result of millions of years of evolutionary history.

Course Notes: Undergraduates are particularly encouraged to consider this course. It provides a basic foundation in anatomy that would be applicable for many concentrations and career paths, such as IB, HEB, MCB, and human and veterinary medicine.

Organismic & Evolutionary Biol  213
Evolutionary Convergence, Mass Extinctions, and the Shape of Life (213310)
Javier Ortega-Hernandez
2020 Fall (4 Credits)  Schedule:  R 0945 AM - 1145 AM
Understanding the origin of major animal groups and the composition of the biosphere represents a core objective of evolutionary biology. While molecular techniques allow us to reconstruct phylogenetic relationships between living animal phyla, as well as track the developmental mechanisms behind their morphology, extant diversity offers an incomplete view of the evolution of these organisms. We will examine how processes acting through deep time affect fundamental biodiversity patterns, including topics such as the origin of animals, the rapid diversification of major clades, and the impact of extinction. Our aim is to convey a sense of how evolutionary thinking has changed over the past few decades thanks to a combination of conceptual and technical advances, and to instill a sense of the importance of the animal fossil record as a source of data with a uniquely historical component among the biological sciences.

Recommended Prep: At least one of the following courses, or their equivalent, are encouraged: OEB 51, OEB 53, OEB 56, OEB 181.

Organismic & Evolutionary Biol 218

Ecosystem Restoration (215786)

David Moreno Mateos

2021 Spring (4 Credits) Schedule: F 0900 AM - 1200 PM

Instructor Permissions: Instructor Enrollment Cap: 5

Given the current speed of habitat and species loss caused by human development, the restoration of degraded ecosystem is one of the greatest challenges humankind is facing. For this reason, the United Nations declared 2021-2030 as the UN Decade of Ecosystem Restoration. This global effort will need from experts on ecosystem science, management and design to have a deep understanding of how ecosystems recover from human disturbance and how we can use this knowledge to increase the currently limited performance of restoration practice. This course is particularly suited for students with interests in nature conservation, the natural component of landscape architecture, or ecosystem management in a broad sense. In this course, we will create a multidirectional learning environment where we all will learn from the others to address real world restoration cases in all kinds of habitats, from forests to marine ecosystems. Students will have a particular real case assignment where the student will dig to the deepest possible level to increase biodiversity and ecosystem functionality through an understanding of the complexity that structures ecosystems. We will have key inputs from guest lectures coming from restoration companies with many years of experience restoring ecosystems worldwide. They will help us find targeted tools to support and design ecosystems both in urban and natural environments. We will increase our understanding of what nature is for humans and the Earth system and will increase our connection to it through field trips. In the fields trip, we will explore ecosystem complexity in New England's recovering forests (like the Harvard Forest) and discuss with managers the keys for restoration success and failure on the ground. Evaluations will be made through a combination of assignments, essays, and discussion participation. Basic previous knowledge on ecology is required. This course will arm students with one of the most important tools to work with and for nature in the coming decades.

Phylogenetics and Phylogeography in the Era of Genomics (143845)

*Scott Edwards*

2021 Spring (4 Credits)  
**Schedule:** W 0300 PM - 0545 PM  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

The course will review the recent literature on methods of analysis in phylogenomics and phylogeography, with particular attention to analysis of large-scale data sets; accommodating gene tree heterogeneity; adequacy of models at the level of DNA sequence evolution and demographic history; and estimation of critical parameters of population history, such as phylogenetic relationships, reticulate evolutionary histories, rates of gene flow and species boundaries. Beginning with introductory lectures on neutral theory and coalescent theory as background, later weekly sessions will consist of presentations led by students and by local experts, including hands-on sessions working with state-of-the-art software.

**Course Notes:** Participants should have an account on the FAS Research Computing Odyssey cluster prior to course beginning.

**Recommended Prep:** OEB 53, OEB 181, OEB 125 or equivalent, or permission of the instructor.
Organismic & Evolutionary Biol  277

Topics in Symbiosis: From Intracellular Symbioses to the Human Microbiome (146387)

Colleen Cavanaugh

2021 Spring (4 Credits)  Schedule:  W 0130 PM - 0400 PM

Instructor Permissions:  Instructor  Enrollment Cap:  12

Symbiosis between microbes and eukaryotes is a globally important phenomenon that has powerful effects on the physiology, ecology, and evolution of all living organisms and is a source of biological innovation. An outstanding example is that of mitochondria and chloroplasts, eukaryotic organelles arising from bacteria that became established within primitive single-cell organisms 1-2 billion years ago. Microbial symbioses expand the potential ecological niches and metabolic capabilities of the host-symbiont combinations, playing essential roles in ecosystem processes, evolution of new species, agriculture, and human health. Symbiosis has evolutionary potential in that the partnership can result in a "new organism", charging us to think about biodiversity on a different level.

Within the last decade, it has become evident that the human microbiome, collectively the communities of microorganisms that live on and in us, is intimately connected with human health and disease. With colonization at birth and developing throughout our lives, our microbiome plays a role in human nutrition and development, immunity and protection from pathogens, and is implicated in numerous diseases including obesity, inflammatory bowel disease, and mental disorders. These discoveries have prompted exciting new research areas focused on exploring the microbiome both in health and with the goal of eventually managing and curing related diseases.

This course will provide a broader understanding of microbial symbioses ranging from intimate associations (e.g., intracellular microbes) to the human microbiome in the context of ecology and evolution. The book I Contain Multitudes by Ed Yong will serve as backdrop for the course combined with critical review and discussion of current research. Discussions and presentations will draw heavily from the primary literature, focusing on recent discoveries in the field.

The course is open to graduate students and to interested upper-level undergraduates who have taken courses or conducted research in microbial sciences, and/or obtain permission from the instructor.

Recommended Prep:  Life Sciences 1a, 1b, OEB 10 or equivalent, course(s) in microbial science, or permission of instructor.

## Organismic & Evolutionary Biol 399

Topics in Organismic and Evolutionary Biology (148242)
Organismic & Evolutionary Biol 399

Topics in Organismic and Evolutionary Biology (148242)

Michael Desai
Scott Edwards

2020 Fall (4 Credits)  Schedule: W -

Instructor Permissions: Instructor  Enrollment Cap: 15

Presents the research interests and experiences of scientists in organismic and evolutionary biology. Specific topics treated vary from year to year.

Course Notes: Required of all first-year graduate students in Organismic and Evolutionary Biology.

Class Notes: Fall 2019 First Meeting Location: Museum of Comparative Zoology 101 from 5:30 PM - 7:30 PM: - Friday, April 5, 2019

Additional Course Attributes:

Subject: Life Sciences

Life Sciences 2

Evolutionary Human Physiology and Anatomy (123674)

Daniel Lieberman
George Lauder
Why is the human body the way that it is? This course explores human anatomy and physiology from an integrated framework, combining functional, comparative, and evolutionary perspectives on how organisms work. Major topics, which follow a life-course framework, include embryogenesis, metabolism and energetics, growth and development, movement and locomotion, food and digestion, stress and disease, and reproduction. Also considered is the relevance of human biology to contemporary issues in human health and biology.

Course Notes: This course includes a weekly 3-hour lab. This course may not be taken Pass/Fail.
Philosophy
Subject: Philosophy

Philosophy  3
The True and the Good (111175)
Bernhard Nickel

2020 Fall (4 Credits)  Schedule:  TBD
Instructor Permissions:  None  Enrollment Cap:  n/a

The basic outlook of value and perspective that each of us adopts as we make decisions large and small are more than mere opinion. They are commitments that are open to deeper understanding and critique. Philosophy is the pursuit of such understanding and critique, and this course will introduce you to the practice of philosophy. The course has a two-fold focus: we will look at some of the central figures and problems of the Western philosophical tradition, including Socrates, Plato, Descartes, Locke, Kant, and Mill. We'll also look at how contemporary writers have responded to this tradition, especially from a feminist and anti-racist perspective. These include Charles Mills, Helen Longino, bell hooks, and Paul Taylor. This course has no prerequisites. Students need not have taken or be enrolled in Expos before taking this course: the course will introduce you to the mechanics and practice of philosophical writing.

Course Notes:  In 2020-21, the course will have a hybrid structure. Lecture materials and recordings will be made available online for asynchronous study, and students will attend live classes in small groups for one hour twice a week with the instructors. To accommodate an appropriate variety of time zones, the meeting times of the live classes will be scheduled after students express interest in enrollment.

Philosophy  6
Ancient Ethics and Modern Morality (133181)
James Doyle

2021 Spring (4 Credits)  Schedule:  TBD
Instructor Permissions:  None  Enrollment Cap:  n/a

An historical introduction to ethics, from the Greeks to, roughly, now. We begin with the concept of virtue in Homer and trace its development through Socrates, Plato, Aristotle, the Stoics and Aquinas. In the modern period we look, in a somewhat skeptical spirit, at the rise of the 'moral' as a supposedly sui generis category of reasons, traits, obligations etc., as this is found in Hume, Kant, Mill and others.

Philosophy 11

Philosophy of Law (156186)

Emilio Mora

2021 Spring (4 Credits)  Schedule:  TBD
Instructor Permissions:  None  Enrollment Cap:  n/a

Is there a moral obligation to obey the law? What is the relation between law and morality? How should judges interpret the constitution? Does the practice of judicial review compromise democratic values? When and in what manner may the state interfere with the conduct of its citizens? We will discuss these and other questions in this survey course on the philosophy of law. Significant attention will be devoted to questions that lie at the intersection of legal and political philosophy. The final part of the course will be determined in consultation with course participants and will be devoted to philosophical puzzles arising in the law.

Philosophy 18

Human Ethics: A Brief History (141608)

Seth Robertson

2020 Fall (4 Credits)  Schedule:  TBD
Instructor Permissions:  None  Enrollment Cap:  n/a

Does might make right? Should a person focus on achieving immortality or on living a simple, happy mortal life? Is morality simply a matter of convention? Why be moral when being immoral could provide access to more wealth, fame, and power? What is the relationship between etiquette and morality? What do people owe a society that has failed in its obligations to its people? How can we identify and resist oppression, marginalization, and injustice? Human beings all over the world have been thinking about, discussing, and debating questions like these for thousands of years. This course aims to look at this history of ethics and moral philosophy from a genuinely inclusive perspective by focusing on ethical thought both from all over the world, with special emphasis on that of members of traditionally marginalized groups and from areas of the world that typically receive much less attention in academic philosophy and ethics.

Philosophy 20

Happiness (205077)
Susanna Rinard

2021 Spring (4 Credits)  Schedule:  TBD
Instructor Permissions:  Instructor  Enrollment Cap:  50

Should we pursue happiness, and if so, what is the best way to do it? This course will critically assess the answers to these questions given by thinkers from a wide variety of different places, cultures, and times, including Stoicism, Epicureanism, Buddhism, Daoism, and contemporary philosophy, psychology, and economics.

Existentialism in Literature and Film (109600)

Sean Kelly

2020 Fall (4 Credits)  Schedule:  TR 1200 PM - 0115 PM
Instructor Permissions:  Instructor  Enrollment Cap:  30

What is it to be a human being? How can human beings live meaningful lives? These questions will guide our discussion of theistic and atheistic existentialism and their manifestations in literature and film. Material will include philosophical texts from Pascal, Kierkegaard, Nietzsche, Sartre, Camus, Beauvoir, Fanon; literature from Dostoevsky, Beckett; films from Jean-Luc Godard, Alain Resnais, Carol Reed.

Philosophy 109
Early Chinese Ethics (213581)

Seth Robertson

2020 Fall (4 Credits)  
Schedule: TBD
Instructor Permissions: None  
Enrollment Cap: n/a

Early (Pre-Qin era) China was a hotbed of philosophical activity: scholars developed careful and fascinating ethical views in the context of serious philosophical debates between major schools of thought. This course focuses on some of these ethical debates between Confucian, Mohist, Daoist, and Legalist philosophers in early China. We'll read both classical texts such as the Analects of Confucius, Mengzi, Xunzi, Mozi, and Zhuangzi and important contemporary scholarship on these texts. Several moral questions will be of particular importance: What is the relationship between etiquette and morality? What are the most important virtues to acquire? Should we think of morality and moral development as something natural or artificial? Are we justified in caring more about some people (our closest friends and family) than others? We will have a special focus on three important interpretive themes for the course: (1) How can understanding the particular contours of the debates each scholar is engaged in help us understand their overall views? (2) How does each philosopher's view of human psychology and epistemology constrain, guide, and support their moral theorizing? (3) How can an understanding of early Chinese ethical thought, theory, and debate help enrich contemporary discussions in ethics and moral philosophy? No previous experience or coursework in Chinese philosophy is required for this course.

Philosophy 122
British Empiricism (114331)

*Jeffrey McDonough*

2021 Spring (4 Credits)  
**Schedule:** TBD  
**Instructor Permissions:** None  
**Enrollment Cap:** n/a

The seventeenth and eighteenth centuries were among the most exciting and revolutionary periods in the history of western philosophy. Among the most prominent philosophers working in that period, Locke, Berkeley and Hume have traditionally been grouped together under the label "British Empiricists" in virtue of their rejection of innate ideas and emphasis on experience as a source of knowledge. This undergraduate level course aims to provide an overview of the development of early modern empiricism while exploring in detail a number of central issues, arguments and controversies. Optional readings will place our three central figures in the larger context of philosophical developments in the early modern era. Topics will include the theory of ideas, the nature of body, personal identity, human agency, skepticism, and naturalism.

Fundamentals of Logic (111424)

W. Hugh Woodin

2021 Spring (4 Credits)  

Schedule: TBD

Instructor Permissions: None  

Enrollment Cap: n/a

Introduction to the principles of mathematical logic, from the fundamental notions (language, axioms, validity) to the fundamental results (completeness, compactness, Lowenheim-Skolem). Familiar structures from mathematics will be examined through the lens of formal logic. There will be additional selected topics from model theory as time permits.

Carnap and Quine (113545)

Warren Goldfarb

2020 Fall (4 Credits)  

Schedule: W 1200 PM - 0245 PM

Instructor Permissions: Instructor  

Enrollment Cap: 25

Rudolf Carnap (1891-1970) was the preeminent figure in the logical positivist movement, later known as logical empiricism. We investigate its leading themes: meaning and verification, the foundations of logic and mathematics, the logical analysis of empirical knowledge, and the role of philosophy in framing criteria for ontology and objectivity. We then turn to W. V. Quine (1908-2000), starting with his criticisms of Carnap and analyzing his development of a post-positivist naturalism, which reshapes the approach to all these issues.

Modal logic in the first instance is the study of the logical properties of modal words like 'must', 'may', 'necessarily', and 'possibly'. The standard way of explaining the meanings of modal idioms like 'necessarily' --in terms of "truth at a possible world"--has been taken over by many linguists as a tool to analyze meaning in natural language (so-called 'possible worlds semantics'). It has also been used to study the nature of provability in formal systems, to analyze programs in computer science, and to model temporal processes. The standard way of explaining the meanings of modal idioms like 'necessarily'--in terms of "truth at a possible world"--has been taken over by many linguists as a tool to analyze meaning in natural language (so-called 'possible worlds semantics').

This course is first and foremost a course in logic, but one that attends to modal logic's uses in philosophy and the study of language. One of the goals of the course is to introduce you to doing metatheory--proving things like completeness and soundness for logical systems. We also look in some detail some applications of modal logic and its semantics, discussing such things as: semantics for counterfactual conditions; such things as mutual knowledge and conversational context; the use of modal logic to model such things as computer programs and non-standard (e.g., intuitionistic) mathematical systems.

The course does not suppose that you know any logic. We do move pretty fast through elementary logic; you may find the course challenging unless you have taken and remember some of an elementary logic course like EMR17. Grades will be determined by: class attendance, four to six problem sets, a take home final. The primary text for the course is Hughes and Cresswell, Hughes and Cresswell, A New Introduction to Modal Logic (Routledge).

Class Notes: In addition to the lectures, students also have to sign up for a mandatory section with the Course Head on Thursdays, 1:30-2:30pm

Language is of two-fold philosophical interest: intrinsically, it is a complex tool that mediates our relationships with the natural world and with each other. It is also a nexus which reflects metaphysics, epistemology, ethics, and pretty much every other aspect of philosophy. This course will introduce students to theories of language that seek to shed light both on how language works, and what we can learn about other matters from a closer investigation of language. We'll read many of the classic discussions that have given rise to theories of meaning and whole fields, such as linguistics: Frege, Russell, Strawson, Grice, Kaplan, and Kripke, among others. We'll also look at how more recent writers
have applied the tools that philosophers of language of past generations have developed, with special
attention to feminist concerns. This course has no formal pre-requisites, but students should have taken at
least one philosophy course before enrolling in this course so that they have some experience reading and
writing philosophy.

Course Notes: In 2020-21, the course will have a hybrid structure. Lecture materials
will be made available online for asynchronous study, and students
will attend live classes in small groups for one hour twice a week with
the instructors. To accommodate an appropriate variety of time zones,
the meeting times of the live classes will be scheduled after students
express interest in enrollment.

will attend live classes in small groups for one hour twice a week with
the instructors. To accommodate an appropriate variety of time zones,
the meeting times of the live classes will be scheduled after students
express interest in enrollment.

**Philosophy  155**

Topics in Philosophy of Religion (121705)

Parimal Patil

2020 Fall (4 Credits) Schedule: MW 1030 AM - 1145 AM

Instructor Permissions: None Enrollment Cap: n/a

In this course, we will discuss the work of contemporary philosophers whose treatment of problems in
philosophy of language (Dummett), epistemology and metaphysics (Johnston), and mind (Strawson) have a
direct bearing on issues in the philosophy of religion.

Course Notes: Prerequisites: Previous course-work in Philosophy or permission of
the instructor.

Class Notes: For students who cannot attend the regularly scheduled class meeting
due to differences in timezone, recordings of the meetings will be
made available and the instructor will meet with these students
separately at a time to be determined.

Philosophy 156
Philosophy of Mind (113339)

Cheryl Chen

2021 Spring (4 Credits) Schedule: TBD
Instructor Permissions: None Enrollment Cap: n/a

An examination of the relation between the mind and the natural world. Topics include: the mind – body problem and proposed solutions to it, consciousness, and mental representation. Readings will consist mostly of influential papers from the latter half of the 20th Century.

Philosophy 157Z
Anscombe's Intention (205353)

James Doyle

2020 Fall (4 Credits) Schedule: W 0300 PM - 0530 PM
Instructor Permissions: Instructor Enrollment Cap: 8

A close reading of G. E. M. Anscombe's 94-page monograph Intention (1957), a founding text of modern philosophy of action. Prominent topics will include: what it means to classify (eg) a bodily movement as intentional, the nature of the relation (eg, is it causal?) between psychological states and the actions they are invoked to explain, philosophical difficulties generated by a broadly Cartesian conception of mind as a separate, sui generis realm of being, and the bearing of the analysis of our psychological idioms on our understanding of psychological phenomena. Other readings will include selections from Aristotle, Aquinas, Descartes, Wittgenstein and Davidson.

Class Notes: In a remote version of the Anscombe proseminar, I'd be nervous about taking on more than eight students. I would want to be providing detailed written responses every week to questions submitted to the 'Discussions' section of the Canvas site (this is something I already do to an extent but I would be beefing it up considerably). I might want to replace half of the seminar time (in the regular residential version) with, say, a half-hour one-on-one session with each student, and add a compulsory 75-minute discussion section for the whole class each week (attendance at these has been optional in the past). And I would want to offer two versions of the remaining 75-minute seminar at different times, to accommodate different time zones.

As human interactions, choices, and relationships are increasingly mediated by computing and information technologies, we find ourselves facing new variations of age-old philosophical questions. This course examines how certain technologies force us to engage with and sometimes rethink classic questions in moral and political philosophy. This course examines these issues from two popular perspectives in contemporary moral philosophy: the perspectives of Kantian ethics and of virtue ethics. On the technology side, we will examine: the widespread replacement of human decision-making with algorithms; how recommender systems shape information flow and user choice; the proliferation and uses of personal data; and the human impact of interface design. On the philosophy side, we consider philosophical questions such as: What does it mean for our technologies to respect the autonomy of persons? What does it mean for our technologies to respect and promote a moral community of equals? When might our technologies undermine or promote autonomous choice, preference, and action? How might our technologies undermine or promote moral relations? How can technology contribute to or impede human flourishing? What personal traits or skills are needed to interact healthily with technology? How do our everyday interactions with technology influence our lives and our values for better or worse? How can we be at our intellectual best despite widespread propaganda, fake news, disinformation campaigns, and epistemic filter bubbles and echo chambers?

Course Notes: This course, when taken for a letter grade, meets the Core area requirement for Moral Reasoning.

Philosophy 177

Educational Justice: Proseminar (203447)

Regina Schouten

2020 Fall (4 Credits)  Schedule: TBD  Instructor Permissions: Instructor  Enrollment Cap: 18

This course will explore the kinds of experiences children should have in schools and how those experiences should be distributed. We'll proceed by examining key topics pertaining to educational justice, including competing principles of justice in the distribution of education (egalitarian principles, sufficientarian principles, prioritarian principles, etc.); competing reform agendas; the justifiability and relative priority of different educational aims (education for citizenship, education for career preparation, education for social justice, etc.); the family and its role in educational inequality; and higher education access. In addition to the philosophical contributions to these conversations, we'll read enough of the relevant empirical literature to provide a working understanding of the structure and consequences of schooling in the US. Finally, we'll explore some case studies that look at specific choices that arise in real time for educational decision-makers. These case studies highlight the moral dimensions of decisions about discipline, charter schools, special education, and school districting.
Course Notes: The proseminar will be taught in two independent sections, Wednesdays 12pm-2:45pm and Thursdays 12pm-2:45pm. Students should indicate which time(s) they are available when submitting their application to enroll, and they will be assigned to one of the two sections as part of the enrollment process. Both sections are led by Professor Schouten.

Philosophy 177I

Historical Injustice: Proseminar (218177)

Emilio Mora

2020 Fall (4 Credits) Schedule: F 0300 PM - 0545 PM

Instructor Permissions: Instructor Enrollment Cap: 25

What is the moral and political significance of past injustice in the history of a political community? In a variety of national contexts, the redress of historical injustice has struck many as both a legitimate and urgent political cause. Others argue that, since both the original victims and perpetrators of historical injustices are dead, there are no persons who have valid claims against these historical episodes nor, at any rate, are there any individuals who can be rightly held responsible for injustices that predate their existence. This course examines the underlying philosophical questions that underpin and sustain these disagreements, focusing on the issues of ‘injury’, responsibility, and justice. In the first topic, we examine a number of accounts characterizing the nature, and defending the legitimacy, of historical injustice claimants as well as the main lines of objection to these claims. In the second topic we examine questions of responsibility. Which contemporary parties, if any, can be held responsible for the effects of historical injustice, and what is the basis and nature of their responsibility? In the final topic, we examine some of the questions and difficulties regarding the administration of a scheme of historical rectification, and we will seek to understand the relation of historical rectification to the project of social justice more generally. Would historical injustice claims be made redundant or otherwise be addressed by the implementation of an egalitarian scheme of distributive justice for all? Conversely, do historical injustices give rise to social and political complaints that must be specifically addressed by a scheme of historical rectification?
