First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 10am on Mon, August 11th. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11th at 12 Noon.

This seminar is recommended for students with a strong interest in mathematics, including some familiarity with proofs. It would be helpful to have some exposure to combinatorics (permutations, binomial coefficients) and linear algebra (matrix multiplication and determinants of n by n matrices).

Requires: Course open to First-Year Students Only

FAS Divisional Distribution: None

FYSEMR 51F

Understanding the Seemingly Impossible: A Revolution in Biology

M 0300 PM - 0500 PM

Craig Hunter

Course ID: 224553

2025 Fall (4 Credits)

Instructor Permission Required

Occasionally a scientific discovery is so unexpected that it is seemingly unexplainable. This seminar will revisit one such event, the discovery of RNA interference and how modern experimental molecular genetics cracked this "problem" and started a billion-dollar industry. Rare unexpected discoveries in biology, for example catalytic RNAs, instantly extend and broaden our understanding of the world, while the impact of other discoveries (split genes, hopping genes) are more gradual. However, some discoveries challenge firmly supported ideas. The initial description of RNA interference (RNAi) was seemingly magical—the introduction of a RNA molecule matching the sequence of any gene, results in the effective silencing (turning off) of the gene. Further, the silencing signal(s) were extremely potent and mobile, moving between cells, tissues, and generations. A series of seminal discoveries during an amazing four-year period revealed the previously unimagined process. We will read and talk about how these discoveries were made and how this unexpected new biology launched new therapeutic companies and is informing developing ideas about heritability, adaptation, and evolution.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 5 pm on Mon, August 11. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11 at 12 Noon.

Skin, Our Largest, Hottest, and Coolest Organ: From Cancer to Cosmetics

2025 Fall (4 Credits)

R 0900 AM - 1145 AM

*Instructor Permission Required**David Fisher*

Skin provides a protective barrier that is vital to survival of all multicellular organisms. Its physical properties have been exploited for centuries, from clothing to footballs, and yet skin is a vibrant and dynamic organ that responds to environmental signals in myriad ways. Skin protects humans from toxic exposures, but can also be an intrinsic source of dangerous diseases. While its defects only rarely kill humans, its imperfections can cause misery and discomfort, ranging from subtle annoyances to depression and loss of self-esteem. It is a source of immense pleasure or excruciating pain. This seminar will provide a series of exposures at an introductory level, to distinct topics in skin biology. They will exemplify the diverse and vibrant nature of cutaneous networks and signals, through the lens of commonly recognized topics such as tanning, hair, sweat, cancer, cosmetics, cancer, and infections. Please note: The seminar will begin at 9:30 and end at 11:45 AM.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 5 pm on Mon, August 11. If you are unsuccessful in the lottery, you may still join any seminar with open seats. Natural History Museums and the Anthropocene

2025 Fall (4 Credits)

W 1200 PM - 0245 PM

*Instructor Permission Required**Charles Davis*

Natural history museums are more than just buildings, they're treasure troves of stories, mysteries, and jaw-dropping discoveries that have shaped our entire understanding of life on Earth. Think Darwin, dinosaurs, and deep-sea wonders! But did you know that the real magic often happens *behind the scenes*, in collections rarely glimpsed by the public? In this seminar, you'll unlock access to Harvard's world-class Natural History Museums. Each week, you'll go behind the closed doors to explore how these institutions fuel scientific breakthroughs, steward millions of unique artifacts, and connect with a changing world in the digital age. You'll discover how museums are at the very center of today's most urgent scientific questions, from climate change to species conservation, and how technology is sparking a new revolution in museum science. You won't just read about it. You'll get your hands dirty! Explore the outdoors with fresh eyes, using innovative resources and field tools. Dive into Harvard's vast collections, meet museum staff, engage with these collections, and see how exhibits come to life. Your seminar experience builds toward a real-world capstone: working in teams to create your own museum exhibit. You'll weave together everything you've learned, curiosity, science, and creativity, into a showcase for the public.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 10am on Mon, August 11th. If you are unsuccessful in the lottery, you may still join any seminar with open seats. Changing Perspectives: the Science of Optics in the Visual Arts

2026 Spring (4 Credits)

R 1245 PM - 0245 PM

*Instructor Permission Required**Aravinthan Samuel*

Renaissance artists began to create stunningly realistic representations of their world. Paintings started to resemble photographs, suggesting that artists had solved technical problems that escaped their forebears. Our brains effortlessly deduce three-dimensional scenes from two-dimensional images. But faithfully transferring spatial information to a flat canvas -- a sense of depth, surface and shadow, geometrical accuracy -- is hard to do. We will discuss how artists from van Eyck to Vermeer to Ingres to modern artists might have used science to make art. We will ask how devices like pinhole cameras, mirrors, and lenses might help artists see more deeply and create images more faithfully. We will perform science experiments with our own hands to appreciate how

optical devices might be useful to artists. We will try to use devices to create our own artwork. We will use online platforms to look closely at masterpieces around the world, using Zoom to virtually travel to distant museums and meet with their curators. We will meet artists and scientists, in person and virtually, who think about art and optics from different perspectives. Our seminar is a synthesis of art history, art making, and science.

Course Note: No prior training in art or science. We will learn how to draw in our own workshop. We will learn the science of optics by trial and error, not with math or physics.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 10am on Mon, August 11th. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11th at 12 Noon.

No prior training in art or optics. We will learn how to draw in our own workshop with provided tools. We will learn optics with practical exercises, not with math or physics.

2025 Fall (4 Credits)

Tree

M 0300 PM - 0545 PM

Instructor Permission Required

William Friedman

Have you hugged a tree lately? How about grown one? Photographed one? Drawn one? Written about one?

Imagine a semester devoted to connecting two organisms: a person (you) and a tree (not you). Interacting with a single tree, you will explore its individual history, evolutionary history, life cycle, leaves, bark, roots, flowers, cones, and architecture. In an age of environmental destruction and outright murder of our biological brethren, there is something deeply troubling about humanity's relationship with nature. Technology has left us with mere facsimiles of nature - pixilated abstractions of biodiversity through satellite imagery, decoded strings of DNA - and we, as a species, have become fundamentally disconnected from actual nature and the magnificent organisms with which we share the earth. In this seminar, we will work to understand and give agency to trees as individual organisms, literally rooted in the ground, and evolutionarily rooted in deep time. Topics to be covered include the evolutionary origin of arborescence, human relationships with non-sentient organisms, the case for legal rights for natural objects, reading a twig, the unseen world of roots, and finding human meaning in the longevity in trees. Each student will also work with an individual tree in the living collections of the Arnold Arboretum of Harvard University and observe (see) this organism throughout the entire semester through the creation of images (photography, drawing), journaling, and other forms of representation. The goal of this freshman seminar will be to initiate a personal and lifelong connection with the "other," the vast and variant organisms with which we share the planet.

Course Note: The first class will be held on campus, TBD. The seminar will meet at the Arnold Arboretum of Harvard University from 3-6:30pm to allow for travel time. Required field trips to the Arnold Arboretum of Harvard University, the Museum of Comparative Zoology, and a local pigeon fancier will be included. Transportation will be provided at no cost to the student.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. 2025 Fall (4 Credits)

Life and Death Lessons from the Fossil Record

R 0945 AM - 1145 AM

Instructor Permission Required

Javier Ortega-Hernandez

The fossil record offers a unique perspective on the history of Life on Earth. Although palaeontology might remind us of grotesque bones, dusty museum cabinets, and quirky scientists who relish both of those things—or God forbid, Ross Geller from *Friends*—the knowledge derived from the fossil record affects our daily lives in ways that are not immediately apparent. From its natural history origins during the 19th century, paleontology has become a cornerstone of neo-Darwinian evolutionary thought, produced a detailed log of climate change, and sits at the center of a multi-billion-dollar business consumed by millions of people around the world, most likely yourself included. This seminar will explore the rich world of paleontology and its bearing on human activities. You will learn how cutting-edge scientific research informs our understanding of the main processes

that have influenced the evolution of Life on Earth for approximately four billion years, including episodes of global warming/cooling and mass extinction events. You will also gain insights into the socioeconomic impact of fossils, ranging from the seamless integration of charismatic extinct animals into culture and entertainment, to ethical and political quandaries resulting from the unregulated exploitation of these natural resources in conflict zones. Finally, we will explore how technological advances blur the lines between science fiction and reality, allowing us to visualize diminutive, fossilized animal-like embryos from 600 million years ago, to the potential (and controversial) applications of gene editing to resuscitate extinct species such as the woolly mammoth and Tasmanian tiger.

Course Note: This seminar will run for 2 hours only within the time block. Students will also have the opportunity to take a field trip to visit fossil localities in Upstate New York and West Massachusetts. There will be no cost to the students.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 10am on Mon, August 11th. If you are unsuccessful in the lottery, you may still join any seminar with open seats. Misinformation, Disinformation, and BS in Science Communication

2026 Spring (4 Credits)

W 0945 AM - 1145 PM

Instructor Permission Required

Daniel Hartl

It's a jungle out there. The world is awash in hucksters, tricksters, frauds, scammers, grifters, and thieves. And there's no shortage of easy marks, suckers, dupes, and fools. Classic cons like the pigeon drop and three-card monte aimed to heist a bundle from a few. The internet and cable TV have changed the game. Now the goal is to nick a bit from a crowd. You're one of the suckers, so are your friends, so am I, so is everybody. We don't notice we're being scammed because what is being stolen is not our money. What's being stolen is our attention and our time. We're all suckers for clickbait. What's wrong with clickbait is that it leads you down a rabbit hole of misinformation, disinformation, and conspiracy theories that have created and sustained widespread skepticism and mistrust of science and scientists resulting in covid-19 conspiracy theories, vaccine hesitancy, bogus drug treatments, climate change denial, anti-evolution, and so forth. Even the most educated and savvy consumer of information is easily misled in today's complex information ecosystem. This seminar is clickbait vaccine to boost your critical thinking. It is designed to help you identify and refute misinformation, disinformation, and BS rampant on the internet. It will help you recognize sensationalism when science is communicated in the press. It will familiarize you with the main logical fallacies that students and scientists themselves are prone to. As a framework for discussion, we use Bergstrom and West's book "Calling Bullshit" along with supplemental readings.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 10am on Mon, August 11th. If you are unsuccessful in the lottery, you may still join any seminar with open seats. The Quantum Revolution: from Computing to Time Crystals

2026 Spring (4 Credits)

M 0345 PM - 0545 PM

Instructor Permission Required

Norman Yao

Quantum mechanics is one of the most precisely tested theories in the history of science. Advances in the laboratory are ushering in a so-called "second quantum revolution", making it possible to assemble complex, quantum systems from individual atoms, ions, molecules and photons. But what are such systems actually good for? Participants will explore this question along three axes. In the first four weeks, we will examine whether entanglement – Einstein's famous "spooky action at a distance" – can enable more precise measurements than would normally be allowed in our classical world. In the next five weeks, we will cover the basic pillars of quantum computing; our focus will be on understanding the physical systems from which a quantum computer can be built, as well as the algorithms that it can run. Finally, in the last three weeks, we will investigate what happens when quantum systems are taken far away from thermal equilibrium. We will discover that this opens the door to entirely new phases of matter, including time crystals.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 10am on Mon, August 11th. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11th at 12 Noon.

High school level preparation in physics and mathematics at the level of the advanced placement curriculum; or having taken Physics 15a, 16, or 19 in the Fall.

Requires: Course open to First-Year Students Only

Learning How to Think Like a Scientist: An Introduction to Scientific Research

Course ID: 222554
2026 Spring (4 Credits)

W 0300 PM - 0545 PM

Instructor Permission Required

Sien Verschave, Daniel Kahne

Science courses are typically structured to teach core concepts about the physical world and the living systems in it. The concepts taught result from decades of scientific research. Research is a process of inquiry that seeks knowledge about important problems that are not understood. Experiencing the intellectual excitement and challenges of performing research can support your long-term career goals regardless of what those are, but how does someone go about creating new knowledge through research? Lab courses teach the mechanics of performing specific techniques, keeping a notebook, and interpreting data, yet they rarely address how new knowledge is generated. How does a scientist know what questions to ask? What makes a question worth spending time and resources on? How do scientists come up with strategies to address these impactful questions? All scientists start by critically evaluating a field, but what does that mean? How do you read a scientific article and analyze their methods and conclusions? How can primary literature effectively help frame the questions in need of answers? This seminar guides students into the world of scientific research and prepares them for a real-world research experience. Through different assignments students learn how scientists think and perform science, while developing critical thinking and reading skills that are especially useful in research. In addition, students get the opportunity to interact with several scientists about their research. Post-Seminar Summer Module: Students who successfully complete this course will have the opportunity to participate in Foundational Undergraduate Experiences in the Laboratory (FUEL), a research program held in the summer of 2026. Necessary supplies and accommodations will be provided to participants

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. Phases of Matter: Remarkable Changes of Properties By Varying Temperature and Pressure

Course ID: 222509

2026 Spring (4 Credits)

R 0345 PM - 0545 PM

Instructor Permission Required

Isaac Silvera

A gas of atoms or molecules will usually condense into a liquid phase, followed by a solid phase as temperature is lowered. Consider water: vapor, liquid, solid! The solid phase will generally have a crystalline structure (liquid is amorphous or has no long-range order). It can be an insulator, semiconductor, or metal; it can be magnetic or non-magnetic. In this seminar we shall discuss a number of remarkable phases of matter. Below a certain temperature a metal can become superconducting, flow of electrical current without resistance; helium liquifies and at lower temperature becomes a superfluid, fluid flow without dissipation. As temperature is lowered, magnetic moments on atoms in a solid align and one observes a ferromagnetic or antiferromagnetic phase. Not all materials have a solid phase: helium remains a liquid as temperature approaches absolute zero. But, applying pressure causes liquid helium to solidify. We shall discuss not only the materials but the techniques to create high and low temperature, high pressure, and high magnetic fields that affect the phases of matter and how they are studied. We will not carry out rigorous arguments for the behavior of matter, but rather rely on so-called "hand-waving" arguments.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 10am on Mon, August 11th. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11th at 12 Noon.

FYSEMR 52Z

Attention Deficit Hyperactivity Disorder (ADHD): Myths, Media and Meaning

Course ID: 224001

2025 Fall (4 Credits)

W 0300 PM - 0500 PM

Instructor Permission Required

Anne Arnett

This first-year seminar will dive into the science and fiction of attention deficit hyperactivity disorder (ADHD) through engagement with multiple sources, including research articles and reports, social media, news media, psychology guidelines, and clinical cases. We will use these multiple sources of information to explore the controversies about how and when ADHD is diagnosed, differences between males and females, biological and environmental causes of ADHD, rising rates of ADHD, and traditional and alternative treatments. We will approach these issues through a variety of student-led presentations, mock clinical interviews, written critiques, and class debates. Early in the semester, the class will take a trip to Dr. Arnett's laboratory at Boston Children's Hospital to see a demonstration of how electroencephalography (EEG) is used to measure brain activity in children with ADHD. Altogether, the goal of the seminar is to use the topic of ADHD, broadly, to practice reading and understanding scientific articles, think critically about media, work collaboratively with student peers, and learn how to generate scientific hypotheses.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 5 pm on Mon, August 11. If you are unsuccessful in the lottery, you may still join any seminar with open seats. Big Data, Tall Tales

2025 Fall (4 Credits)

R 0945 AM - 1145 AM

Instructor Permission Required

Andrea Foulkes

Students in this seminar will get their hands dirty playing with data as we explore how to be judicious consumers of it. The huge swaths of data now available allow us to tell stories, big and small, some true and some not so true. With an emphasis on news media representations, we will take a deep dive into thinking about how data are generated, what we can (and cannot) discern from data, and how we can wrangle it to create narratives. Students will learn how to visualize and summarize data using R, an open-source and freely available programming language. No prior experience working with data or programming is required. Emphasis will be on communicating with data. Seminars will emphasize discussions with a focus on public health applications. Students will reflect on seminar content through regular written assignments.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 5 pm on Mon, August 11. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11 at 12 Noon.

No prior experience working with data or programming is required.

FYSEMR 53G

Course ID: 224632

Literature of Spiritual Crisis

2025 Fall (4 Credits)

W 1245 PM - 0245 PM

Instructor Permission Required

Brian FitzGerald

Some of the most important questions of human existence have emerged out of moments of spiritual crisis: What purpose does suffering have? How does one find meaning in life? What if God or the divine is silent, absent, or uncaring? Literature and the arts have proven to be especially fruitful areas for people not only to explore these religious and philosophical questions but also to offer ways of finding consolation in the midst of crisis. In this seminar we will study a wide range of representations of spiritual crisis and consolation from ancient times up to the present, including works and authors such as The Book of Job, Boethius, Tolstoy, and Annie Dillard. We will consider how personal convictions and religious belief, including indifference and uncertainty, shape characters' responses to crises. In the process we will reflect on the possibilities and the limits of language and artistic expression both to give voice to the depths of spiritual crisis and to imagine the possibilities for consolation.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 5 pm on Mon, August 11. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11 at 12 Noon.

The Physics of Floating: A Collaborative Boat Building Experience

2026 Spring (4 Credits)

T 0900 AM - 1145 AM

Instructor Permission Required

Nathan Melenbrink

Have you ever wanted to learn how to transform a concept into a functional product using both traditional craftsmanship and advanced digital fabrication techniques? This seminar is designed as an experiential learning opportunity, where the act of working on a collaborative build project serves as a dynamic avenue to deeply understand core physics concepts. Students will be organized into small teams of 3-4 members, with each team taking on the challenge of fabricating a full-scale wooden boat from provided plans and instructions. By the end of the semester, students will demonstrate the seaworthiness of their vessels by ferrying their team members

across the Charles River. This hands-on project not only teaches students the principles of rapid prototyping and construction but also immerses them in the practical application of crucial physics concepts such as buoyancy, displacement, friction, and force vectors. Furthermore, participants will gain direct experience in a variety of shop skills, from the use of basic hand tools to advanced digital fabrication equipment, including laser cutters, CNC routers, and 3D printers. This seminar aims to equip students with real-world fabrication skills, fostering an environment where creativity and innovation are at the forefront. Beyond the technical skills and knowledge, the seminar places a strong emphasis on building confidence and enhancing team-building skills, critical components in the personal and professional development of students.

Course Note: Student teams will take on the challenge of fabricating a full-scale wooden boat from provided plans and instructions. By the end of the semester, students will demonstrate the seaworthiness of their vessels by ferrying their team members across the Charles River.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 10am on Mon, August 11th. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11th at 12 Noon.

Unlocking the Power of Immunology – From Fundamental Principles to Innovative Research Routes

Course ID: 224901
2026 Spring (4 Credits)

M 0300 PM - 0500 PM

Instructor Permission Required

Kazuki Nagashima

Immunology stands at the forefront of cutting-edge science, offering game-changing solutions like mRNA vaccines for COVID-19. In today's world, where global challenges demand innovative responses, researchers are eager to delve into the fundamentals of immunology. Yet, navigating the complexities of the field requires more than passive learning; it demands a deep understanding of the immune system and the ability to identify critical questions worth exploring. Welcome to our seminar, where we embark on a journey into the heart of immunology research. Through dynamic discussions and hands-on exercises, students will not only grasp the core principles of immunology but also learn the art of selecting impactful research questions. Our interactive approach fosters active engagement, empowering students to become thinkers and doers in the world of immunology. Join us as we unravel the mysteries of the immune system and ignite a passion for scientific inquiry that will shape the future of healthcare.

First-Year Seminars are available only to first-year students. Genuinely Hard Problems in Science

Course ID: 226309
2026 Spring (4 Credits)

W 0900 AM - 1115 AM

Instructor Permission Required

Jeff W. Lichtman, Logan McCarty

This seminar explores some of science's most significant unsolved challenges: Genuinely Hard Problems (GHPs) that have stumped researchers despite their best efforts. To solve these problems, technical execution is not enough—we need true conceptual breakthroughs. Examples include reconciling quantum mechanics with gravity or finding the biological mechanisms that cause mental illness. A key part of the seminar is identifying a GHP that deeply interests you. Each week will feature Harvard faculty whose research is related to these GHPs. Maybe it's the origin of life, dark matter and the structure of the universe, or cracking the code of human aging. They will make a pitch to serve as your academic mentor, and together, you'll plan an undergraduate curriculum focused on building the skills and knowledge you'd need to tackle your chosen GHP. You'll also study historical cases where seemingly impossible problems were solved, often by young researchers with fresh perspectives. By the end of the seminar, you'll have a clearer picture of the scientific landscape and where you might fit into it. We hope that some of you will embark on a tailored academic journey here at Harvard, aimed at equipping you to address some of science's most profound mysteries. No prior scientific expertise is required—just deep curiosity, openness to failure, and willingness to grapple with big ideas.

Course Note: This seminar will meet on Wednesday, 9:15-11:15AM.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 10am on Mon, August 11th. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11th at 12 Noon.

Against Tech?

M 0300 PM - 0545 PM

Eric Gurevitch

Course ID: 226576

2025 Fall (4 Credits)

Instructor Permission Required

Do machines make life easier or more difficult? Do new technologies create jobs or destroy them? Do we lose a part of our humanity when we interact with machines, or do machines help us to understand what it means to be human? What relation—if any—do technological improvements have with economic, political, and moral improvements? These questions occupy many of us living in contemporary America. They are also questions with long histories. We are not alone. In this first-year seminar, we will explore different ways people have raised fears and expressed anxieties over technology. The seminar will not take a stance on whether technology is good or bad. Rather, we will investigate how different people across history have confronted technology and questioned its value. The seminar will encourage students to see themselves as a part of a long history of both excitement and worry over machines and technological life. Along the way, we will explore how people affiliated with Harvard—from Henry David Thoreau to Jacob Bigelow to James Bryant Conant to Lawrence Summers—struggled with machines, technology, and the society around them.

Course Note: There will be a class trip to Walden Pond, Concord MA with no cost for the student.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 5 pm on Mon, August 11. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11 at 12 Noon.

Machine Ecology: Autonomous Robots for Environmental Restoration

T 0900 AM - 1145 AM

*Instructor Permission Required**Nathan Melenbrink*

Have you ever wondered how technology and innovation can tackle some of the world's most pressing environmental challenges? In collaboration with the Weathermakers—a pioneering team of scientists and ecologists dedicated to regreening the Sinai Peninsula—this seminar offers an exciting chance to engage directly in a real-world environmental initiative. Together, we will address the critical need for affordable, long-term water quality monitoring devices for Lake Bardawil, a vital lagoon ecosystem in the Sinai. Instead of relying on costly, off-the-shelf equipment, students will creatively leverage cutting-edge techniques in Computer Vision and Artificial Intelligence to develop novel, low-cost sensors capable of monitoring salinity, nitrates, nitrites, and other essential water properties. Throughout the semester, student teams will collaboratively explore vital design considerations, including sensor mobility (anchored vs. roaming), optimal solar panel and battery sizing, data communication protocols, and data acquisition methods. Participants will gain hands-on experience through prototyping and iterative design, using digital fabrication methods such as 3D printing, CAD design, and advanced electronics assembly. Students will rigorously test their buoyant sensor prototypes in the Charles River and nearby brackish environments analogous to Lake Bardawil, ensuring these devices can reliably operate in realistic conditions. This seminar provides an immersive experience blending technology, environmental science, teamwork, and innovation. It aims not only to build practical engineering and design skills but also encourages students to envision how their work can positively impact ecosystems worldwide.

Course Note: During J-Term: as part of this seminar, students will return to campus a week before the start of the spring term, Sat, Jan 17-Fri, 23, 2026. The students will submit their final sensor design to be produced in a small batch (i.e., dozens of units) during the term break. There will be no cost to students for supplies or living expenses.

They will install their newly manufactured sensors in various locations along the Massachusetts coast and evaluate their performance, clearing the way for a subsequent batch to be delivered to the Weathermakers, researchers working at Lake Bardawil, a vital lagoon ecosystem in the Sinai.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 10am on Mon, August 11th. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11th at 12 Noon.

The Life of an Iceberg

R 0300 PM - 0530 PM

*Instructor Permission Required**Fiamma Straneo*

Towering icebergs, adrift in the polar oceans, have long captured our imagination: from the ominous iceberg that sank the Titanic to idioms of a large, hidden part, "the tip of the iceberg". But are icebergs so mysterious? In this seminar we look at icebergs through the lenses of oceanographers, glaciologists, paleoclimatologists, artists and Arctic people. We will visit an ice and sediment core repository to explore what air bubbles trapped in glacial ice and debris carried by icebergs can teach us about past climates. We will analyze satellite images and tagged polar bear data to understand how icebergs fertilize the ocean and provide unique ecological habitats. We will learn how icebergs are an integral part of the life and culture of Arctic communities through their voices and art. Through hands-on projects, field trips, readings, videos and discussions we will use icebergs to explore connections in time, space, across ice sheets and oceans, from glaciers to Arctic ecosystems to learn how to describe a natural system as a whole instead of breaking it up in distinct physical, chemical, biological components. Note: After spring term 2026, [May 17-23 (Sat-Sun), 2026], students will have the opportunity to go on a trip to Iceland to view and study icebergs and glaciers. There will be no cost to students for supplies or living expenses.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 10am on Mon, August 11th. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11th at 12 Noon.

The Quantum Edge of Life

2025 Fall (4 Credits)

T 0945 AM - 1145 AM

Instructor Permission Required

Susanne Yelin

How much of life's complexity is forged by quantum phenomena that usually live in the rarefied world of physics labs? In this First-Year Seminar, we'll explore how coherence, superposition, entanglement, and other quantum effects might manifest in biological processes— from photosynthesis to avian navigation and perhaps even in the workings of the human brain. We'll begin with a high-level introduction to quantum mechanics before digging into lab-based evidence and theoretical models that propose (or refute) the presence of quantum coherence in warm, noisy environments. Along the way, we'll tackle big questions: Are enzymes really harnessing quantum tunneling to speed up chemical reactions? Could "quantum consciousness" be more than speculation? Through discussions and short readings from primary research, you'll assess how much of life's brilliance truly hinges on quantum physics — and how much belongs in the realm of classical biology. By the end, you'll have a new lens on how physics and biology intersect, and where the quantum world might end—or begin—inside living systems.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 10am on Mon, August 11th. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11th at 12 Noon.

Death: Its Nature and Significance

2026 Spring (4 Credits)

R 1200 PM - 0200 PM

Instructor Permission Required

Jeffrey Behrends

Here's a hard truth: You are going to die. That's nothing against you, of course. I'm going to die, too, and so is everyone else - it's just the way of things for creatures like us. Yet, despite the central role that death plays in our existence, it seems to remain deeply mysterious in a number of ways. It is difficult even to say precisely what death is—is it a mere biological phenomenon? If so, is there any sense to be made of the idea that I might continue to exist after my death, perhaps as a soul? Or is death instead final, in the sense that it causes me to cease existing altogether? Beyond these kinds of questions about death's nature, there are also questions about death's significance or value: Is death bad for the person who dies? If they go out of existence, how could it be bad - things can't be good or bad for us if we don't exist, it seems! Is it better to die at a certain age or time than some other? What should I think about my future death - should I fear it? Would it be better for us if we were immortal? In this class, we'll examine important philosophical work that responds to each of these questions, and more.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. Cartoons, Folklore, and Mythology

2025 Fall (4 Credits)

R 0300 PM - 0500 PM

Instructor Permission Required

Joseph Nagy

The creators of cinematic (and later TV) animation have perennially turned to traditional oral and literary tales about fantastic heroes, villains, tricksters, and settings for their story material. In the world of the animated "short" and feature-length film, myths, epics, legends, and folktales could come to life in a highly stylized, kinetic, and visually arresting way. Cartooning created a pathway for traditional stories to live on in the consciousness of twentieth-century viewers, and also for these old tales to be adapted to changing times. Hence animation offers not only an influential modern commentary on the folklore and mythology of the past but also a contemporary mythology of its own, deeply meaningful to adults and children alike. In this freshman seminar, students are invited to take what might be considered mere entertainment very seriously, closely reading texts of traditional stories in tandem with critically viewing animation that draws its inspiration from those stories. For a final assignment, each student will be called upon to choose some animation (a short or a clip from a feature-length

film) to share with the rest of the seminar, to provide some background for it, and to lead a discussion of the animation in light of what else we will have seen, learned, and said. While the instructor's contribution to the seminar will primarily focus on animation from 1900 to 1960, students when choosing which sample of animation to share will be welcome to present later or contemporary examples of the cartooning art—including perhaps even their own.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. Harvard's Greatest Hits: The Most Important, Rarest, and Most Valuable Books in Houghton Library

2025 Fall (4 Credits)

R 0300 PM - 0545 PM

Instructor Permission Required

David Stern

Have you ever fantasized of turning the pages of a Gutenberg Bible with your own fingers? Or a medieval illustrated Book of Hours? Or touching a papyrus fragment of Homer? Or a First Folio edition of Shakespeare? Or seeing close-up Copernicus' diagram of the heliocentric universe? The Houghton Library of Harvard University is one of the world's greatest repositories of ancient scrolls, papyrus codices, illuminated manuscripts on parchment and paper, early printed books, rare books published since the sixteenth century down until today, and stunning prints and other types of graphic art. In this freshman seminar, we will utilize Houghton's extraordinary holdings to study first-hand the history of the book in the West as a material artifact from its beginnings in the ancient Near East down to the present day. Each week we will focus upon a cluster of books. Before class, students will be asked to examine selected books in Houghton's Reading Room as well as online.

During class-time, we will study the books again as a group. Visiting experts will demonstrate how to unroll a papyrus codex, the technology involved in creating a codex and printing on a hand-pulled press, and the techniques modern conservators use to preserve manuscripts and books. You will emerge from this seminar with a heightened understanding of what a rich thing a book is, and so much more than just a text. And you will have seen and studied close-up some of the most visually spectacular and culturally significant books in all Western history.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 10am on Mon, August 11th. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11th at 12 Noon.

Course ID: 226613

Can Art Inspire Justice?

2026 Spring (4 Credits)

T 1200 PM - 0200 PM

Instructor Permission Required

Sarah Lewis

How do images—photographs, films, videos—create narratives that shape our definition of national belonging? Social media has changed how we ingest images. Protests, state violence, racially-motivated injustice, natural disasters, grief and loss and triumph are all played out in photos and videos in real time unlike anything we thought possible just a few decades ago. Recently, an Executive Order targeted sculptures and monuments to "restore" history. The seminar will wrestle with the question of how the foundational right of representation in a democracy, the right to be recognized justly, is indelibly tied to the work of visual representation in the public realm. The seminar is organized chronologically around case studies to explore the interplay between images and justice at inflection points in American history—emancipation, indigenous conflict, desegregation, Japanese internment, borderland conflict, the long Civil Rights movement, and more. We will consider what effective resistance looks like and how resistance has been documented and commemorated. The aim of this seminar is to develop rigorous skills of visual literacy and critical analysis foundational to being engaged global citizens, and to understand of the opportunities and challenges that technology is presenting to civic life. By the end of the seminar you should be able to argue how images have had persuasive efficacy in the context of social and racial justice movements, critically engage with and contextualize the narratives surrounding images posted online, and problematize our notion of the foundational right to representation in a democracy like the United States.

Course Note: There will be a class trip to Montgomery, Alabama in September/October 2025 that will be at no

cost to the students.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 10am on Mon, August 11th. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11th at 12 Noon.

FYSEMR 63E

Religion, Neuroscience, and the Human Mind

M 0300 PM - 0530 PM

David Lamberth

Course ID: 212784

2026 Spring (4 Credits)

Instructor Permission Required

More than 150 years after Darwin's epochal account of evolution, over 85% of the world's 7 billion people are still religious, and the percentage is growing. What does religion do for human beings? What does an evolutionary and biologically informed understanding of the mind and brain lead us to think about where religion fits in human life? Harvard's first psychologist, William James, engaged these questions in the late nineteenth century, bringing the cutting edge of empirical psychology to the philosophy of religion. Today these same questions animate the field of neuroscience, where researchers are showing how affectivity, emotions, and our evolutionary past come together to form the "self" philosophers have long thought to be primarily "rational." This seminar brings together the thought of James, writing at the turn of the twentieth century, with the work of contemporary neuroscientist Antonio Damasio to ask what kinds of beings we are, how our minds function, and what religion contributes to human individual and societal experience? The seminar takes up the philosophy of belief, affect, and emotion, and touches on the biology of the brain and homeostasis. We conclude by assessing contemporary views of religion from evolutionary psychology (Boyer, Atran) and cultural anthropology (Geertz, Luhmann, Asad) in light of James's and Damasio's models of the human mind.

Course Note: The seminar will run for only 2 hours within the time slot, Monday 3:30-5:30.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 5 pm on Mon, August 11. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11 at 12 Noon.

Course ID: 216104

2026 Spring (4 Credits)

Instructor Permission Required

This seminar explores narrative "voice" in a wide range of literary and cultural texts. Narrative voice is a lively dialogue between the author and the reader as they engage in the experience of determining the value and veracity of the narrative: whose story is it anyway? The writer creates the imaginative universe of character, plot, emotions and ideas—she seems to be holding all the cards; but it is the reader who rolls the dice as she draws on her human experience and moral values to question the principles and priorities of the storyteller. The game of narrative becomes deadly serious when storytelling confronts issues of colonialism, slavery, racial profiling and gender discrimination. Is the right to narrative restricted to those who have suffered the injustices of exclusion? What is my responsibility as a storyteller—or a reader—if I am a witness to violence, or an advocate against injustice, but my life-story is one of privilege, protection and security? What is the role of the politics of identity or cultural appropriation in determining whose story is it anyway? Throughout the seminar students will be encouraged to draw on their own histories, memories and literary experiences as they enter into the world of the prescribed readings. For the final assessment I hope students will choose critical and creative ways of telling their own stories, or the stories of others who have captured their imaginations. Seminar participants will be required to come to each class with two questions that pose issues or problems based on the texts that are important for them, and may prove to be significant for their colleagues. I will invite members of the group to pose their questions and start a discussion.

Vegetal Humanities: Paying Attention to Plants in Contemporary Art and Culture

2025 Fall (4 Credits)

W 1200 PM - 0245 PM

*Instructor Permission Required**Carrie Lambert-Beatty*

This class invites you to practice a new kind of plant-consciousness. Our guides will be contemporary artists and thinkers who are encouraging new relationships between human and vegetal life, or recalling very old ones. Suddenly, we have plant protagonists, gardens in galleries, and botany-based forms of philosophy, architecture, music and more. Following the lead of these culture-makers and their work, we will draw on the new science of plant communication and learning in this class; uncover plant-based histories and renew ancient understandings of human-plant relations. But plants themselves will also be primary sources, as each student follows a sequence of exercises to deepen understanding of a plant "interviewee"—one they'll grow at home from an unidentified seed. At the same time, we will ask critical questions: with climate crisis upon us, in a time of social inequity, poisonous politics, and mass dislocations, why this attraction to plants? Is the vegetal turn a diversion from tough human problems? Or is there reason to think a cultural change could, even now, change the fate of nature?

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 5 pm on Mon, August 11. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11 at 12 Noon.

No prior art or botanical knowledge is expected. However students with backgrounds in agriculture, ecology, horticulture, or botany are especially welcome.

Requires: Course open to First-Year Students Only

Looking for Clues. Ancient and Medieval Art @ Harvard

2025 Fall (4 Credits)

W 1200 PM - 0245 PM

*Instructor Permission Required**Evridiki Georganteli*

Objects are essential primary sources for the study of the past. They are imbued with tales of their makers, of societies in which they took shape, of customs and beliefs that lent them meaning, and of routes that facilitated their dissemination. In this interdisciplinary and highly interactive First-Year Seminar, participants will hone the art of looking through the close-up study and discussion of ancient and medieval ceramics, textiles, and metalwork from the world-class collections of the Harvard Art Museums, the Harvard Museum of the Ancient Near East, and the Boston Museum of Fine Arts. Art-making at the Harvard Ceramics Program will further help us associate these museum objects, detached from their geographical, historical, and archaeological context, with imagery, feelings, and the life of ancient and medieval craftsmen. Ceramics, textiles, and metalwork circulated throughout millennia along routes of trade, warfare, diplomacy, and pilgrimage, transcending linguistic, religious, and cultural borders. The materials and the techniques used in their creation reveal the economic resources, technological know-how, and political agendas of their makers. The reception, appreciation, life and afterlife of these objects shed light on the societies that consumed and treasured them. Looking for Clues. Ancient and Medieval Art @ Harvard is intended for students interested in Classics, History, Art History, Archaeology, Folklore and Mythology, Comparative Literature, Political Science, Economics, and the Study of World Religions. Handling sessions, group discussions, art-making, and a research paper on a choice object or a group of objects from the Harvard Collections offer students a sense of immediacy and appreciation of world cultures.

Course Note: The seminar will begin at 12:15pm in HAM, Art Study Center 4400. Seminar students will have opportunities to study actual objects in handling sessions at the museums.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. Fun With Writing... or, Writing for Weirdos

2026 Spring (4 Credits)

R 0345 PM - 0545 PM

*Instructor Permission Required**Phillip Howze*

Writing can be fun. Writing can be weird. By "writing", we don't only mean the act of putting pen to paper, or fingers to computer keys to type. Writing is the conscious act of choosing words or texts or images and composing them in such a way to create an intended effect. Yes, writing is a deliberate and emotional process... but not one which has to be necessarily painstaking. What if, first and foremost, writing was fun? This is the question we'll explore and enact while getting to know our fellow classmates in this generative, art-oriented freshman seminar. We'll read obscure yet celebrated writers whose work is distinctly wild, unconventional, compassionate, and opaque. In addition, each week we'll create both individually and together, engaging methods of writing across a variety of forms – from gaming and poetry to food and stage plays – to reacquaint ourselves with the weird joys of what it might mean to craft ourselves creatively, personally, politically, and collaboratively with one another. Come prepared to break the rules.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. Caravaggio and the Beginning of Modern Art

2025 Fall (4 Credits)

W 1200 PM - 0230 PM

*Instructor Permission Required**Peter Burgard*

Michelangelo Merisi da Caravaggio, known simply as Caravaggio, in a career of less than two decades at the turn of the 17th century, revolutionized the art of painting: 1) through his dynamic naturalism — the extraordinary plasticity of his figures, the psychological authenticity of their expression; 2) through his extreme exploitation of the deception inherent in naturalism; 3) through his chiaroscuro, a radical new use of light and dark in both harmony and tense conflict with one another; and 4) through a number of novel compositional methods that break the boundary between painted scene and viewers, thus involving the viewer in his works in a way no artist before him had. These artistic practices lend his figures and his canvases an unheard-of presence, bringing them to life for us. His art paved the path for countless artists central to Western and contemporary art, including Rubens, Vouet, Ribera, de la Tour, Bernini, Velázquez, Rembrandt, Vermeer, Goya, David, Turner, Delacroix, Courbet, Manet, Cézanne, Renoir, Gauguin, Sargent, Picasso, Hopper, Schiele, Dali, Scorsese, Jarman, Placido, Sherman, Fischnaller, Doig, Dalla Venezia, Collishaw, and O'Connor. In this seminar, besides working on how to analyze paintings, we will examine the majority of Caravaggio's oeuvre, from the early secular paintings through his revolution in religious painting, which reached its height in Rome between 1598 and 1606 and then took on other characteristics as he moved to Naples, then Malta, then Siracusa, then Messina, then back to Naples, before he died in 1610 at the age of 39. We will be primarily concerned with 1) the nature and art of his naturalism, 2) how he disturbs that naturalism even as he creates it, 3) how his naturalism itself becomes disturbing, and 4) how this disturbance, particularly in the religious paintings, takes on the quality of double entendre, as the eroticism that characterizes his work from early on develops into sometimes shockingly sexualized treatments of religious scenes and narratives, so that, rather than occupying a "middle ground between the sacred and the profane," as a seventeenth-century bishop said of his work, Caravaggio can be seen to have inflected the sacred with the profane, producing a frisson that — along with his brilliant, and dark, naturalism — makes him ever of current interest.

Course Note: The seminar will actually begin at 12:30pm.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 5 pm on Mon, August 11. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11 at 12 Noon.

There are no prerequisites and no experience in the study of art is required or assumed.

What is it Like to Not Be Human? Metamorphosis in Myth & Poetry

2025 Fall (4 Credits)

M 0300 PM - 0500 PM

*Instructor Permission Required**Daniel Carranza*

If trees could speak, what would they say? How does that annoying fly buzzing around perceive the room you both inhabit – perceive you? And what kind of traumatic shock could transform you into a mute tree? Or lead you to wake up and discover you have become an insect? In this seminar, we will explore how living things undergo metamorphosis in mythic narratives, poetry, and visual art. How does the Western mythic tradition from Ovid to Kafka imagine such jarring, even violent, self-transformations? In what ways do organisms already metamorphose in remarkable ways that defy observation? Do the environments of different species appear radically different to each? And how might we make sense of this interplay between radical transformation and obstinate persistence in natural and cultural 'environments' alike?

Course Note: The seminar will involve excursions that take advantage of 'on-site' resources in proximity to campus, e.g. observing glass flowers and rotting fruit at the Harvard Museum of Natural History and communing with categorized trees at the Arnold Arboretum.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026

First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 10am on Mon, August 11th. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11th at 12 Noon.

Stories of Gender and Justice

2025 Fall (4 Credits)

T 1245 PM - 0245 PM

*Instructor Permission Required**Karen Thornber*

With gender inequities and biases pervasive within and across cultures worldwide, and the global pandemics of gender-based violence and structural violence further intensified by the Covid-19 pandemic, how have individuals, groups, communities, and nations globally fought for (and against) gender justice? How have struggles against gender injustice intersected and conflicted with struggles against racial, ethnic, environmental, health, LGBTQIA+ and other forms of injustice? Gender justice, as is true of justice more broadly, is often discussed in the abstract, or as a matter of law, political history, protest movements, enfranchisement, and similar phenomena. Yet at its core, justice involves individuals and their experiences – both their suffering and their triumphs – experiences most directly accessed through stories. In this seminar we'll explore a range of stories and different forms of storytelling on gender justice, from novels and films to memoirs/personal histories, histories, and creative nonfiction. Some narratives with which we will engage are Margaret Atwood's *The Handmaid's Tale*, Ito Shiori's *Black Box: The Memoir that Sparked Japan's #MeToo Movement*, Audre Lorde's *The Cancer Journals*, Cho Nam-joo's *Kim Jiyoung, and Cherrie Moraga and Gloria Anzaldua's This Bridge Called My Back: Writings by Radical Women of Color*. Students will be encouraged to write their own stories on gender and justice.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026

First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. Deciding What (and Who) to Believe

2025 Fall (4 Credits)

W 1245 PM - 0245 PM

*Instructor Permission Required**Zoe Johnson King*

It's hard to know what to believe these days. Information – or perhaps misinformation – bombards us at all times, but assessing the reliability and trustworthiness of our sources is notoriously difficult. Sometimes it seems as though different groups of people inhabit different worlds, with precious little common ground on precisely the matters that they each take to be most important. These phenomena have not escaped the notice of contemporary epistemologists; that is, philosophers who are interested in investigating the nature of knowledge,

rationality, and justification. In this seminar we will read recent work on what one might call "applied" epistemology, touching on a broad range of contemporary social issues that are, at their core, epistemological issues. We begin by examining two questions in traditional epistemology that have recently skyrocketed to cultural prominence: the question of how to respond to disagreement with people who seem just as smart and well-informed as you are, and the question of whether pointing out factors that influence your beliefs but seem to have nothing to do with their truth should have a debunking effect. We will then use these concepts to explore a smorgasbord of hot topics in contemporary applied epistemology; topics covered include fake news, echo chambers, distrusting scientists, motivated reasoning, epistemic benefits that arise from marginalization, and responsibility for one's own and others' ignorance. Throughout, we place particular focus on distinguishing cases in which people believe badly from cases in which responsible believers are unwittingly and unfortunately led astray.

Course Note: There will be two special events associated with the seminar. First: we will have a special guest visit from Michael Rain, (<https://www.michaelra.in/>) who studies the flow of (mis)information through informal communication channels, such as WhatsApp, used by immigrant groups. Second: the seminar will culminate in a mini-conference at which students will present their own views on contemporary epistemological issues of their choosing.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. Who Do You Think You Are?: The Ethics of Identity

M 0945 AM - 1145 AM

Jay Harris

Course ID: 222523
2025 Fall (4 Credits)

Instructor Permission Required

Personal identity is, to say the least, a slippery concept. Yet insofar it constitutes who and what we are—whether it is explicitly acknowledged or not—identity has deep ethical and political implications, and "identity politics" is one of the most significant contemporary dimensions in political and social thought. This class, which is structured around Anthony Appiah's 2005 book *The Ethics of Identity*, delves into the ethical, social, and political questions around identity. Each section of the book will be complemented by readings that put the issue in a larger context. These texts include a few of the foundational philosophical works for contemporary debates around identity, contemporary philosophical analyses of the underlying issues, and critiques of the discussion of identity as understood by philosophers like Appiah. The purpose of the seminar is not to try to answer the questions, but to have a rich and open discussion of the issues, and help shape a richer and more nuanced private and public deliberation on identity and ethics beyond the classroom.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 10am on Mon, August 11th. If you are unsuccessful in the lottery, you may still join any seminar with open seats. Catholic Thought for Contemporary Challenges

M 1200 PM - 0245 PM

Karin Öberg

Course ID: 224496
2025 Fall (4 Credits)

Instructor Permission Required

Does God exist? If yes, what or who is God? Where does the Universe come from? Are we alone in the Universe? What is a good life? Are there universal human rights? Can wars be just? What makes a good leader? This seminar will use texts and art from the Catholic intellectual tradition to explore how Catholic thought can be applied to contemporary challenges, as well as areas where there may be tension between such thought and contemporary ideas. While the seminar addresses the thought from one particular religion, it does not assume any prior knowledge of Catholicism, much less religious belief. Rather, this seminar is for the curious, who are interested in engaging with the Catholic intellectual tradition, and exploring how its ideas interact with contemporary life. These ideas will be presented through a combination of original texts, more recent essays, art, music, architecture, and movies. Due to the wide range of texts and subjects covered, this seminar relies on several guest lecturers that have expert knowledge in particular aspects of Catholic thought.

Course Note: No prior knowledge of the Catholic tradition needed.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 5 pm on Mon, August 11. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11 at 12 Noon.

Detention, Deportation, and Due Process: A Look at the Inner Workings of the U.S. Immigration System

Course ID: 226238
2026 Spring (4 Credits)

R 0900 AM - 1130 AM

Instructor Permission Required

Philip Torrey

The public discourse on immigration is widespread and divisive. If you have ever wanted to know more about how our immigration system operates, then this seminar is for you. The goal of the seminar is to teach students in an interactive and welcoming environment the basic aspects of U.S. immigration policy. The seminar will cover the history of immigration policy, including immigration detention and the role that criminal law policies have played in shaping our current immigration system. The seminar also offers students interested in potentially attending law school the opportunity to work with a Harvard Law School faculty member and learn how immigration policy has been shaped by lawyers and other advocates.

Course Note: The seminar will meet at 9:30-11:30am.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 10am on Mon, August 11th. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11th at 12 Noon.

FYSEMR 66E

Animals in Religion and Mythology

Course ID: 224718
2026 Spring (4 Credits)

W 0300 PM - 0500 PM

Instructor Permission Required

Kimberley Patton

In the early 20th century, an Inuit elder said, "In the very earliest time, when both people and animals lived on earth, a person could become an animal if he wanted to and an animal could become a human being. Sometimes they were people and sometimes animals and there was no difference. All spoke the same language." What has happened since that "very earliest time"? Is that time closer today or further away? Together we will encounter some of the symbolism, ritual, and beliefs involving animals in world religions and mythologies. We will study the role of animals in "global" as well as Indigenous religions and sacred histories, as well as consider some relevant research in animal behavior, cognition, language, and consciousness. Some topics include the role of animals in sacred art and storytelling, the creation of the world and the apocalypse, magic, metamorphosis, prophecy, ethics, hunting, sacrifice, vegan and vegetarian eating, and fantastic creatures.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. The Individual and the Social

2026 Spring (4 Credits)

T 1245 PM - 0245 PM

Instructor Permission Required

Quyen Pham

How are we related to the groups that we are part of? How do we keep our individuality while sharing a common identity? What opportunities and challenges arise as people come together to form something greater than themselves? We will explore this special relation between the individual and the social, and its conceptual and practical implications for our life and society, through various philosophical perspectives on issues from metaphysics and epistemology to ethics and politics, while drawing insights from biology, psychology, sociology, economics, and more. Our investigation of the social will start small. What does it mean for two people to walk together, or to belong in a circle of friends? What does it take for a rock band or sports team to stay the same over time? How does a committee make a decision when members disagree? Can a company be responsible for something while none of its associates is? We will then turn to larger groups and bigger issues. Can we better explain our behaviors and experiences by thinking not just about our personal qualities, but our positions as members of particular classes, genders, or races? What kind of harm or wrong is done when people are placed into one category or fail to be placed into another, or when the world is designed for some kinds of people but not others? And how do answers to these questions help us make sense of current societal structures and work to change them for the better?

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. Paris

2026 Spring (0 Credits)

M 0945 AM - 1145 AM

Instructor Permission Required

Hannah Frydman

Paris is one of the most visited cities in the world, drawing millions of visitors annually. What are they drawn by? Images and imaginings of the city—in art, literature, music, film, journalism, architecture, city planning, and more—have built the reputation of Paris as a City of Light, City of Art, and City of Love. In this class, we will explore Paris as portrayed by a diverse range of artists, authors, planners, and creators from France, America, and France's former colonies, analyze the power of these depictions, and, together, build our own representations of this culturally and historically important city.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 5 pm on Mon, August 11. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11 at 12 Noon.

Fanfiction

2025 Fall (4 Credits)

T 0945 AM - 1145 AM

Instructor Permission Required

Anna Wilson

Fanfiction is one of the most popular forms of literature today, with fourteen million stories hosted on just the Archive of Our Own (one of the major digital fanfiction archives). Including unauthorized continuations and transformations of popular media texts, fanfiction is written primarily by young women and non-binary fans, and published online. We will dive into fanfiction's past and present, learning about the history of copyright, early print zine fandom, and fanfiction in the digital age. Through studying fanfiction, students will explore a variety of methods for studying culture, including literary analysis (how do fanfiction writers achieve certain effects? Does fanfiction have its own style?), platform analysis (how does Wattpad work differently from the Archive of Our Own, and how do these differences shape engagement and community?), and historical analysis (what did early fanzines look like? What can they tell us about the communities who produced them?). We will also explore fanfiction as a genre of creative response: in what ways can a story criticize, develop, or explain a piece of media that an essay cannot? Students will have the opportunity to choose their own final assignment, which can include doing research into fanfiction history, analyzing fanfiction, or writing a piece of fanfiction. Fandoms discussed may include: Sherlock, Harry Potter, The Untamed, Supernatural, Star Wars, Star Trek, Marvel, DC, Pride and Prejudice, The Lord of the Rings, Sherlock Holmes, ACOTAR. While there is no prerequired reading, familiarity with one or more of these popular media franchises is recommended.

Course Note: The syllabus will be a flexible document. On many weeks, we will be reading one or more short fanfiction stories, but those are not yet specified on the syllabus. Because of the unique nature of fanfiction, it is desirable that students all be familiar with the original sources of the stories, but these are often too extensive to require them as prior reading for the seminar. Therefore, the professor will select and assign fanfiction stories in consultation with students that are appropriate for the week's discussion, after polling the students on their interest and prior exposure to different popular culture texts. Students may have a role in nominating weekly readings. All selected fanfiction readings will be "short story" length – less than 10,000 words.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 10am on Mon, August 11th. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11th at 12 Noon.

Is Being Good Actually Good for the Body?

2025 Fall (4 Credits)

T 0300 PM - 0500 PM

Instructor Permission Required

Immaculata De Vivo

Did you know that kindness is good for your health? Did you know that happiness is contagious? Did you know that music lowers your cortisol levels? The science is in! This seminar will examine how the biology of prosocial behaviors shows how kindness and optimism improve overall well-being in profound and demonstrable ways. We will delve into a revolutionary approach to health, longevity, and quality of life and explain the scientific evidence that supports this work. The class will investigate five fundamental values of prosocial behaviors — kindness, optimism, forgiveness, gratitude, and happiness — and collectively engage in six essential strategies for cultivating these values—relationships, nutrition, physical activity, meditation, music, and nature. Along the way we will read the scientific data that reveals the impact such behavior has on biology, particularly on telomeres, the parts of DNA that serve as biomarkers of aging. While DNA is mostly immutable, telomeres are influenced by our choices. This seminar will discuss evidence that what is commonly ascribed to "spiritual" well-being has a clear and direct impact on physical health, helping to buffer premature aging and decrease the incidence of chronic disease.

Course Note: This is a Radcliffe First-Year Seminar and will include optional co-curricular activities related to the seminar topic. The seminar will be held at the Radcliffe Institute, Fay House, Sheerr Room, 10 Garden St.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 10am on Mon, August 11th. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11th at 12 Noon.

FYSEMR 66J

Making Monsters in the Atlantic World

T 1200 PM - 0245 PM

Cecile Fromont

Course ID: 226561
2026 Spring (4 Credits)

Instructor Permission Required

How and why are monsters made? What can visualizations of monsters tell us about how Otherness is constructed, contested, and critiqued? What do monsters tell us about human oppression, agency, and cross-cultural encounters? In this seminar, we will use historical analysis of visual and material culture through the charged site of the "monster" in the Atlantic World (Africa, Latin America, and Europe) to hone in sharper visual analysis skills, a critical awareness of the many-sided discourses on monstrosity, and a deeper understanding of Atlantic history. Our seminar will make robust use of Harvard's collections to observe, analyze, and discuss in person artworks, rare books, maps, in conjunction with the scholarly and theoretical approaches they have engendered over the centuries. Our intellectual journey will follow a diachronic and thematic trajectory with special attention paid to Atlantic Africa, Latin America, and the Iberian Peninsula from circa 1500 to today. The goal for the seminar is to interrogate how monsters create and disrupt social categories. As the perpetually constructed Other—that which exists outside of and breaks with culturally-defined norms—monsters and their depictions provide a uniquely appropriate site for investigating multiple perspectives on questions related to imagination, race, gender, violence, sexuality, and sanctity.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 5 pm on Mon, August 11. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11 at 12 Noon.

FYSEMR 66K

The Philosophy of Laughter

W 1245 PM - 0245 PM

Peter Gordon

Course ID: 226575
2025 Fall (4 Credits)

Instructor Permission Required

Stop me if you've heard this one before. In this seminar we will pursue one of the most puzzling features of human life: our capacity for laughter. What do we find humorous and why? Drawing upon multiple disciplines, from philosophy to neurology, and from psychoanalysis to sociology, we will explore multiple explanations for why we laugh and whether humor is distinctive to human beings. We will explore Rembrandt's laughter and Haydn's wit, the sacred "folly" as discussed by the humanist Erasmus, and the hostility of humor as theorized by Freud. Readings will include selections from various early modern and modern philosophers, with occasional appeals to historians of art, musicologists, sociologists, and scientists. If we are fortunate, we will also call upon the expertise of a chimpanzee.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 10am on Mon, August 11th. If you are unsuccessful in the lottery, you may still join any seminar with open seats. Seeing and Being Scene: Photography, Power, and Liberation in Africa

W 0300 PM - 0515 PM

Marius Kothor

Course ID: 226577
2025 Fall (4 Credits)

Instructor Permission Required

Our world is saturated with photographs. We are photographers, photographed people, and participants in the "event of photography." But what are photographs exactly? What does it mean to look at a photograph? How does the camera articulate, reflect, and (re)produce social relations and relations of power? In this seminar, we will consider the history of photography in Africa as a practice with both liberatory and oppressive potential. By the end of the semester, students will gain a deeper understanding of the social worlds photographs produce and how photographs both illustrate and constitute particular historical moments. Students will walk away from this seminar with a greater sense of what it means to see and be part of a photographic scene. We will use some of our seminar time to visit museums and archives to examine photographs in local collections. The seminar will

culminate in a final project in which students will work in groups to design and showcase a mini photographic exhibit on campus. The exhibit will be accompanied by a 10-page analytical essay.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 5 pm on Mon, August 11. If you are unsuccessful in the lottery, you may still join any seminar with open seats. FYSEMR 66M

Harvard Collects: Exploring History and Culture in Museums, Libraries, and Archives

T 1200 PM - 0245 PM

Chloe Chapin

Course ID: 226766
2026 Spring (4 Credits)

Instructor Permission Required

Harvard's libraries, museums, and archives are some of the oldest and largest in the world, with more than 2 million museum objects, 20 million books, 22 million specimens, and 400 million manuscript items. Why does Harvard have so many things? In this class, we will explore the history, culture, and purpose of Harvard through its collections. We will put our in-person examination of material objects in conversation with current thinking on relationships between humans, things, and places. In weekly field trips to Harvard museums, libraries, and archives, we will conduct in-person, (sometimes) hands-on examinations of first editions, extinct animals, revolutionary technology, art masterpieces, maps of ancient worlds, personal diaries, homework assignments from former Harvard students, and everyday objects that people around the world made, used, loved, and lost. In this class, you will be asked to create a proposal for your own museum exhibition, using objects and archival material to tell your own story. Short weekly assignments will help you build skills in archival research, object analysis, developing research questions, academic writing, and editing. By thinking through things, you will also develop strategies for asking questions about who and what have not been collected.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 10am on Mon, August 11th. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11th at 12 Noon.

FYSEMR 66N

Humans at Play

T 0945 AM - 1145 AM

Ekaterina Pirozhenko

Course ID: 226637
2025 Fall (4 Credits)

Instructor Permission Required

We will play with the word "play." What do we play (an instrument? a game?), who do we play (an enemy? a friend?), where do we play (at home, on stage, in the park?) What makes us winners and losers? This seminar will explore various approaches to games and humans at play. We will try to understand why and how people play; why we have fun while playing; why we prefer some games to others. Interdisciplinary in nature, the seminar will offer readings from areas of transactional analysis, psychology, mathematics, literary and cultural studies. By reading, analyzing, and playing with Souvik Mukherjee, Johan Huizinga, Miguel Sicart, Sigmund Freud, E.T.A. Hoffmann, Julie Wosk, Stefan Zweig, Eric Berne, and Yoko Tawada, we will make connections between games, play, national identity, gender, race, class, and intelligence, and will construct arguments about various scholarly and fictional written and cinematic texts

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. FYSEMR 66O

Ukraine: Culture, Power, War

Course ID: 226638
2025 Fall (4 Credits)

Bohdan Tokarskyi

Ukraine has captured the world's attention in recent years – but how much do you know about this country beyond the headlines of war? From Crimea to Chernobyl, from Gogol to Soviet dissidents, from Kyivan Rus to the Russo-Ukrainian war, this seminar explores the cultural history of Ukraine and the power of culture in resisting domination. Along the way, we will read banned poetry, explore rare archives, talk with scholars and artists, and watch films that bring Ukraine's past and present vividly to life. No background knowledge required—just curiosity and a willingness to ask how culture can become a form of resistance.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. Course ID: 226636

Jews in the Modern Middle East and North Africa, 1800-present

2025 Fall (4 Credits)

R 0945 AM - 1145 AM

Instructor Permission Required

Jessica Marglin

Not so long ago, nearly every corner of the Middle East and North Africa was home to thriving Jewish communities who spoke dialects of Arabic, Persian, and Spanish, among other languages; who professed their loyalty to Ottoman sultans, the beys of Tunis, or the sultans of Morocco; and who thought, dreamed, loved, and died according to the rhythms of Muslim-majority societies. Starting in the mid-twentieth century, Jews began leaving the Middle East and North Africa in increasingly large numbers—heading to the new state of Israel, to Europe, or to North and South America. Today, very few Jews live in the region outside of Israel/Palestine, though the memory of their presence remains vibrant in many places. The conflict in Israel/Palestine often casts more shade than light on the history of Jews from the Middle East and North Africa. Alongside the mass departure of Jews from this region, current politics can make enmity among Jews and Arabs (and/or Muslims) seem inevitable. This seminar encourages students to resist seeing the past through the lens of the present, and instead to consider how Jewish communities navigated the rapid pace of change in places where Jews had lived for centuries. Students engage with an array of primary sources, from novels to popular music. Rather than focusing on "the conflict," this seminar engages with a lesser-known dimension of both Jewish and Middle Eastern histories.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. The Search for Life in the Universe

2025 Fall (4 Credits)

R 0300 PM - 0500 PM

Instructor Permission Required

Andrew Vanderburg

For millennia, humans (perhaps including yourself) have looked up at the stars and wondered if any of them have planets like Earth, and if so, whether those planets might host life. Now, we know that planets are common outside the solar system, and for the first time in human history, we have the technological capability to search for life beyond Earth. But where should we look first? What kind of measurements should we make? And if we do find life, would we even recognize it? In this seminar, which requires only high school level knowledge of math and science, you will immerse yourself in the search for life beyond Earth. You will learn to use telescopes to observe the cosmos, dive into data from a NASA space telescope to spot planets outside the solar system, and learn to navigate and extract information from primary source documents. Over the course of the semester, you will gain an intuitive understanding of the techniques that could reveal its presence, and grapple with strategic questions about how to maximize the chance we can answer one of humanity's oldest questions: Are we alone?

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar.

You will be notified of lottery results for both fall and spring seminars at 10am on Mon, August 11th. If you are unsuccessful in the lottery, you may still join any seminar with open seats. 2025 Fall (4 Credits)

Morality, Leadership, and Gray-Area Decisions

T 0945 AM - 1145 AM

Instructor Permission Required

Joseph Badaracco

Everyone with serious responsibilities, at work and throughout their lives, faces gray area decisions. In organizations, these highly uncertain, high-stakes decisions are delegated upward, to men and women in leadership positions. They have to make final decisions on these problems, despite the gray, and these decisions test their competence and their humanity. This seminar offers a variety of important perspectives on gray-area problems and on ways to resolve them, responsibly and effectively. The seminar begins by examining gray area problems in various professions and lines of work. Subsequent sessions focus on three different ways of resolving gray area problems – in terms of accountability, character, and action. A typical session of the seminar will draw upon classic works of fiction, basic ideas in moral philosophy, and contemporary situations. These situations are typically described in short case studies involving men and women early in their careers, and they give students in the seminar the opportunity to grapple with these problems in personal terms – by discussing what they would do in these situations. From time to time, students will write short papers, which will be discussed in the seminar.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. Regulating Online Conduct: Speech, Privacy, and the Use and Sharing of Content

R 0900 AM - 1100 AM

Instructor Permission Required

Christopher Bavitz

In the course of a few short decades, the Internet has become integral to significant swaths of human experience. It has radically altered modes of interpersonal engagement, democratized access to tools of mass communication, and changed the role of gatekeepers that traditionally controlled access to music, video, and other media. Given the breadth of its impact, it is not surprising that the Internet has pushed the bounds of legal doctrines that govern speech, privacy, and the creation and exploitation of content. Mass-scale online distribution of copyrighted works tests the limits of legal doctrines developed in an era of physical copies. Age-old tensions between privacy and the right to free expression have been exacerbated in cases where one's right to speak bumps up against the desire of another to keep information private. And, the ability to share—and, thus, to consume—extraordinary amounts of personal data has impacted government (which collects and uses data for purposes of law enforcement) and private companies (which collect and use data for purposes of advertising and monetization). This seminar will provide an overview of legal doctrines that govern the online conduct of individuals and institutional actors. It will address the rights and responsibilities of the intermediaries that mediate many of our online activities – social networks, cloud-based storage services, email providers, and the like. Students will consider old and new legal frameworks and the ways in which the law informs strategic decisions for those that operate online. The seminar will address some of the most important and complex policy debates of our day—regarding the proper scope of intellectual property protection; the balance between a robust environment for online free expression and a desire to protect against harmful speech; and the ways in which the law addresses privacy vis-à-vis both government and private actors. Readings and in-class conversations will cover legal cases and case studies, offering students a high-level view of the technical, legal, and business landscape and allowing them to delve deeply into particularly difficult sets of problems concerning the regulation of online conduct.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. Law and Social Change: How Reform Movements Leverage the Law

2026 Spring (4 Credits)

T 0300 PM - 0500 PM

Instructor Permission Required

Tomiko Brown-Nagin

Legal realists and critical theorists have long argued that the law is a byproduct of society. "The life of the law has not been logic; it has been experience," Justice Oliver Wendell Holmes famously wrote. Focusing on the prospect of achieving racial justice through law, political science warned that law would never hover like a "protecting angel" over oppressed racial minorities. For it would always reflect the dominant social order and sympathy for outsiders should never be assumed. On the other hand, proponents of a Dynamic View of the U.S. Supreme Court argue that it has repeatedly been a catalyst of social change in the United States. Still others, asserting that the law is "everywhere," decenter the Court and focus on the myriad ways, direct and indirect, that law, broadly defined, can be a tool of change. This seminar defines law broadly; and it considers the idea of experience—including events and people external to the legal system—affecting the law and creating social change. It discusses how social movements—groups of citizens mobilized in support of a cause—deploy the Constitution and other types of rights talk to "frame" disputes and move forward their agendas. Seminar participants will discuss how movements crystallize grievances, mobilize supporters, demobilize antagonists, and attract bystander support by referencing constitutional rights and other ideas about law. It also considers the effectiveness of movements' legal strategies. The seminar considers these questions in relation to several well-known social reform movements—including abolitionism, the civil rights movement, the women's liberation movement, 20th century populism, MeToo, and Black Lives Matter—as points of departure for discussion.

Course Note: This is a Radcliffe First-Year Seminar and will include optional co-curricular activities related to the seminar topic. The seminar will be held at Radcliffe, Dean's Conference Rm, 2nd Fl, 10 Garden St.

First-Year Seminars are available only to first-year students. Americans at Work in the Age of Robots and Artificial Intelligence

2025 Fall (4 Credits)

W 0300 PM - 0500 PM

Instructor Permission Required

Benjamin Friedman

Where will the coming generation of Americans (say, today's 18-year-olds) find jobs? And will the jobs be worth having? People have worried about losing their jobs to technology at least since the Luddites 200 years ago. In the aggregate, they have been wrong. The automobile put lots of stable boys and saddle makers out of work, but it created vastly more jobs making cars, and fueling them and repairing them, and it opened the way for whole new industries like roadside motels and restaurants. With robots increasingly performing the tasks once done by blue-collar labor, however, and computers and artificial intelligence now eliminating the need for many workers once thought to be immune because of their cognitive skills, today's technological threat seems different. It is no longer just the unskilled and undereducated whose jobs are at risk. Moreover, the challenge may be especially acute in America, where wages are far higher than in many other countries and an ever greater share of what we consume and invest not only can be provided from overseas but often is. Does the next generation of Americans, then, face a genuine threat from advancing workplace technology? If so, what are the dangers – not just economic, but social, political, even moral – to the country as a whole? Most important, what can we do about it?

First-Year Seminars are available only to first-year students. Global Capitalism: Past, Present, Future

W 0600 PM - 0800 PM

Sophus Reinert

Course ID: 224631

2025 Fall (4 Credits)

Instructor Permission Required

Few forces have shaped the world over the past millennium more than capitalism has, yet few terms remain more elusive and more divisive. Today, less than half of young Americans view capitalism positively, and calls for alternatives are becoming ever more frequent. Why? And why have different forms of capitalism led to such unequal outcomes around the world? What is capitalism, really; what has it been, and what might it be? This seminar takes students on a journey to explore the past, present, and future of various forms of capitalisms, globally and beyond, introducing them to theories and frameworks to help make sense of the world in which they live, and where it might be headed. This seminar introduces students to the Socratic teaching method used in the Harvard Business School and is based on case studies covering the vast epic of capitalism. In addition to discussing the past, present, and future of global capitalism, the seminar will familiarize students with basic concepts of macroeconomics as well as tools, such as balance of payments analysis and national economic accounting to prepare them for lives of active global citizenship. The seminar will, at times, meet at Harvard Business School in order to make use of Baker Library's extraordinary collection of materials relating to the histories of business, capitalism, and political economy.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. Dilemmas in the World's Economy

W 0300 PM - 0500 PM

Elhanan Helpman

Course ID: 212698

2026 Spring (4 Credits)

Instructor Permission Required

Standards of living vary greatly across countries, they rise fast in some and slowly in other. Economic growth has historically been related to the expansion of international commerce as well as industrialization and institutional reforms. How does a country's well-being and growth depend on its trade partners? Is globalization in the form of international integration desirable? Do all income classes benefit from globalization? What role do trade policies play in shaping the benefits and costs of globalization? We will discuss the historical evidence on economic growth, the expansion of commerce, and the evolution of trade policies. We will also discuss the nature of these processes and the interdependence between them. Using this knowledge, we shall discuss the pros and cons of globalization and the tradeoffs faced by policy makers. These tradeoffs will be illustrated with contemporary policy debates concerning tariffs and free trade agreements. Finally, we will discuss the impact of globalization on inequality within countries and in the world economy.

Course Note: This seminar will meet for only 2 hours within the time block.

First-Year Seminars are available only to first-year students. Fat Talk and Thin Ideals: Culture, Social Norms and Weight

R 0945 AM - 1145 AM

Anne Becker

Course ID: 224572

2025 Fall (4 Credits)

Instructor Permission Required

In 1995, the Fiji Islands were one of the last places on the planet to receive broadcast television. Within just three years, body weight ideals had transformed from large to thin and purging had become as common in Fijian high school girls as in their Massachusetts counterparts. How can we understand what happened in Fiji? And,

likewise, how did heaviness in the U.S. migrate from signifying prestige to stigmatizing? In this seminar, we will examine the bio-social dimensions of disordered eating and being overweight as well as the volatility of weight ideals and their enduring moral salience. We will draw from anthropological and clinical perspectives to explore the rapidly shifting landscape of body shape ideals in the U.S. over the last century, the arrival of eating disorders in the Global South, the medicalization of obesity, and the emergence of pervasive weight stigma—as manifest in 'fat shaming' and even in policy interventions that have had unintended consequences. We will ask what the social structural determinants of obesity are, as well as how social adversities relating to the built environment, toxic food environment, climate change, and food deserts are embodied. We will examine variation in how the body is cultivated for self-presentation across diverse cultural contexts alongside evidence that the media have accelerated the globalization of thin ideals. We will conclude by considering both emerging threats inherent to pervasive social media platforms and digital photo-shopping as well as potential opportunities to reset social norms through social movements and policy.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 5 pm on Mon, August 11. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11 at 12 Noon.

Rituals and Living the Good Life

R 0945 AM - 1145 AM

Michael Norton

Course ID: 212785
2025 Fall (4 Credits)

Instructor Permission Required

Why do we knock on wood for good luck? Why do we put birthday candles on cakes? Why do some cultures use black at funerals while others use only white? Why do teams perform team cheers before games? This class will explore the psychology of rituals – those odd, seemingly meaningless behaviors that research shows influence our psychology in profound ways, making the mundane meaningful: dull morning routines can instead get us "ready for our day" and rote work meetings can instead improve team cohesion and performance. We will explore rituals in domains ranging from performance anxiety to team effectiveness, from enhancing consumption to improving health—in our daily lives, our work lives, and even when trying to cope with family during the holidays.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. A Whale Ship Was My Yale College and My Harvard

2025 Fall (4 Credits)

T 0945 AM - 1145 AM

Instructor Permission Required

Joyce Chaplin

How should we live in the world, both with each other and with everything in the natural world around us? It's a big question and Herman Melville wrote a big book about it, *Moby-Dick* (1851), from which this seminar takes its title and its focus. The novel tells a tale of humans who go to sea in a wooden ship, sailing to the literal ends of the earth in the deadly pursuit of whales, source of wealth but also vital beings in their own right. It's a story with serious consequences, especially when read in our time of environmental and climate emergency, the whale-ship in which we now all sail, at Harvard and beyond. But because *Moby-Dick* also makes the natural world beautiful and the connections among humans hopeful (even under cruel conditions), it gives us an especially powerful prism to consider today's most pressing problems. For J-Term-Wintersession: Students who successfully complete this class will be invited to join a short J-term special program (January 13-23, 2026), exploring New England's maritime and natural histories—at no cost! There will be no cost to students for supplies or living expenses.

Course Note: The seminar will include a trip to the USS Constitution and an opportunity to participate in a J-Term project at no cost to the student.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. Everyday I'm Hustlin': Pop Culture, Youth, and the African City

2025 Fall (4 Credits)

R 0945 AM - 1145 AM

Instructor Permission Required

Daniel Agbibo

Cities today face broad challenges ranging from public health emergencies (e.g. Covid-19), to anti-police brutality protests (e.g. #ICan'tBreathe), and unemployment. Stuck in a frustrating period of "waithood" or waiting for adulthood, urban youths in Africa are increasingly devising enterprising ways to improvise their livelihoods and assert their right to the city. One creative way in which youths are responding to everyday uncertainty and frustrations is through the power of pop culture, which includes creating new artistic, musical, performance, and fashion forms that extend across and beyond African cities. Consider, for example, the cross-cultural power and global appeal of Afrobeats. Notable American musicians, from Beyoncé to Pharrell Williams and Chris Brown, are fast integrating African pop music into their sounds as part of the upward trend of the "Afro-Cool" in the United States. This, of course, raises important questions about the boundaries between what is cultural appreciation and what is cultural appropriation. In this seminar, we ask: In the face of the contradictions of modern city life in Africa, in which people's opportunities and expectations are simultaneously broadened and constrained, how do young people fashion new ways of being and interacting with society? In what ways can crisis become opportunity? To address these questions, we will watch films, listen critically to music, analyze written texts, take virtual tours, and visualize fashion and popular art forms that shed new light on the "hustle economy" in urban Africa, its relationship with pop culture in American cities, and the innovative ways in which young people are making their voices heard in the city.

Movements

R 0900 AM - 1130 AM

*Instructor Permission Required**Tyler Giannini*

How do the seemingly most marginalized take on the most powerful corporations in the world and win? In this seminar, we will delve into this question and what drives community resistance and social movements in the face of frequently daunting odds. We will zero in on community resistance in its many forms when confronting abusive corporations and authoritarian governments often supporting them. Through case studies involving natural gas in Myanmar, gold mining in Papua New Guinea, and chocolate in West Africa, we will discuss both the harms communities experience and how communities can have a seat at the table to demand their rights and take on oppressive systems. We will also look at how North America is implicated in these cases and consider the power dynamics between communities, advocates, businesses, and states that span borders and different cultures. We will also look at ways that communities can build their own power through the solidarity economy and how advocates cannot only combat economic injustice but build their visions of economic justice for the future.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. T 0300 PM - 0500 PM

*Instructor Permission Required**Nancy Hill*

Debates about when adolescence ends and adulthood begins often lead to judgements about how long youth today are taking to reach adulthood and uncertainties about what it means to become an adult. The transition from adolescence to adulthood is often fraught with anxieties about realizing one's dreams, getting into college, succeeding in the job market, and finding a life partner. Have the definitions and markers of adulthood changed across generations? Should these conceptualizations change or adapt to the times? Are young people today trapped in an extended adolescence? Some experts and the popular press contend that young people today are coddled and more resistant to growing up than were those who came of age a generation or more ago. Conversely, other experts and many young adults today find that growing up is harder—harder to launch a career, burdened by student loan debt, harder to find a compatible life partner—in general, harder to achieve the life their parents have. Amid these debates, it is unclear what is meant by adulthood and whether it can or should be defined by the same markers as have been used in the past. Today's young adults are charting their own path...or are they? In this seminar, students will define and redefine adulthood based in multiple contexts, considering catalysts and impediments on the pathway to adulthood. Using a historical lens, we will examine and understand the contexts that elicit longer and shorter pathways to adulthood, including the role of the economic context, educational and occupational opportunities, gender, and the need to co-construct adulthood with others. Whereas societal factors are often considered contextual, this seminar focuses on societies as active agents in shaping adolescents' beliefs about adulthood and struggling with and sometimes against adolescents as they navigate their place as adults. This seminar takes a global lens and focuses on the ways in which the transition to adulthood is a dynamic and co-constructed concept and will aid students in developing an integrative understanding on societal needs and pressures and young adults' tools in navigating the path to adulthood.

Course Note: This is a Radcliffe First-Year Seminar and will include optional co-curricular activities related to the seminar topic. The seminar will be held at the Radcliffe Institute, Knafel 104, 18 Mason St.

First-Year Seminars are available only to first-year students. Across the world, massive street protests and growing disdain for politics not only suggest high citizen dissatisfaction with politicians' performance—from poor public services, high corruption, and increasing crime—but highlight the difficulty of holding politicians accountable to the voters who put them in office. Democracies are designed with certain mechanisms to generate political accountability. Re-elections are meant to give voters a tool to reward or punish incumbents for their behavior in office, government oversight agencies like auditing institutions are intended to police politicians from within, and so on. Despite this range of methods for keeping politicians accountable, why is there still so much corruption and impunity within government? Why don't politicians provide the policies and public services people seem to want? What are the barriers citizens and civil society face in engaging in politics? What can we learn from citizen efforts to reign in politicians even within authoritarian regimes? Most importantly, what policies could we implement to reduce impunity and strengthen accountability?

First-Year Seminars are available only to first-year students. FAS Divisional Distribution: None

In this class, we will explore the role of public schools and educators as catalysts for change in American social movements. How have schools—including teachers and students—been central to social change? When, why, and how have they been part of a larger social movement's strategy? What has the power of student activism been over time? How has education propelled (or hindered) progress? Our seminar will begin with a brief contextualizing unit on the purposes of public education in the American democracy. We will then analyze the role of education in three social movements over time: The struggle for racial justice, Immigrant resistance, The fight for gun control. All of these movements are as alive today as they have ever been. To better understand the role (s) that public education play[ed] in these movements, we will read books and articles, listen to and watch media, study social media, adventure to communities (virtually and in person!) and meet activists. In addition, seminar assignments will allow students to delve more deeply into the role of education in a social movement of their choice. These assignments are intended to help seminar students improve research, writing, networking, and presentation skills.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11th at 12 Noon.

What is the relationship between oil and empire? How has control over oil—the single most important commodity in the world—shaped the nature of power, politics, and environmental and social life in the twentieth century? How have different disciplines contributed to and at times undermined a critical understanding of oil politics? This interactive seminar will address these and other questions by examining the political, social, material, and cultural history of oil. Given the centrality of oil to modern life, control over this prized resource has resulted in a complex and often violent history. We will thus look at the ways in which the political economy of oil has shaped the rise and fall of empires, the fate of nation-states, the making of the economy, the nature of class, gender, and

racial discrimination, and the production of historical knowledge and the built urban environment. By moving between primary source documents and films, multi-disciplinary scholarly analyses, in-class discussions and debates, and written assignments, students will learn to be principal investigators and thereby sharpen their own critical interpretive abilities. This seminar on the global history of oil will address trends and processes from Ecuador, Mexico, the United States, and Venezuela to Nigeria, Indonesia, Iran, and Saudi Arabia.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. Socialism

2025 Fall (4 Credits)

T 1200 PM - 0215 PM

Instructor Permission Required

Stephen Marglin

Does socialism have a future? After the collapse of the Soviet Union, the embrace of the market by China, and the definitive turn of the Western European Left towards accommodation with the existing capitalist order, socialism was consigned to the dustbin of history. Only to rise from the dead: according to a 2022 Pew Research poll, more young Americans have a favorable view of socialism (44 percent) than of capitalism (40 percent). This seminar will address the future of socialism by interrogating its past. What is socialism? How has its meaning changed over time? Why did the reality of socialism, particularly in the Soviet Union, turn out so differently from its promise of abundance, harmony, and freedom? How does Marx's vision of history figure into the socialist project? What assumptions about human beings underlie the conviction that socialism would constitute progress? What are the assumptions that suggest that socialism would be destructive? Are smaller scale cooperative enterprises feasible alternatives to capitalism?

Course Note: Mtg Time Note: This seminar will meet 12:15-2:15pm.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. From Gods to Satire: Artistic Engagements With Political Power

2026 Spring (4 Credits)

T 0300 PM - 0530 PM

Instructor Permission Required

Shai Dromi

In this seminar, we will explore the fascinating ways in which art has been used to express, critique, and reflect upon political power. From depicting rulers as gods to using comedy to criticize leaders, we will delve into the visually striking ways societies have grappled with their political systems through art. We will meet at the Harvard Art Museums' Art Study Center, where we will take advantage of the Museums' vast collections. Each week, we will explore different artworks and analyze them in their national and political contexts. We will also read sociological literature that will help us make sense of these works and dive into the Harvard Art Museums' archives to gain a deeper understanding of their social and political contexts. We will see how the engagement between art and politics brings to light core aspects of national identity, belonging, memory, and resistance. The seminar will include visits to the Harvard Memorial Church and the Ethelbert Cooper Gallery of African & African American Art, which will help us gain a broader understanding of the cultural and political context of art. Through this seminar, students will discover the power of art in civic dynamics and gain a new perspective on the complex relationship between art, society, and politics.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. Unequal Origins: Pregnancy, Poverty and Child Health

R 0300 PM - 0500 PM

Margaret McConnell

Course ID: 224509
2025 Fall (4 Credits)

Instructor Permission Required

The US has worse pregnancy and child outcomes than any other high-income country in the world. Is this because we spend less providing direct income support to families than other high-income countries? This seminar will discuss the intersection between maternal and child health outcomes and poverty in the United States through a medical, economic, political, and historical lens. Assignments will ask students to become familiar with and attempt to navigate available supports for pregnant people and their children in the United States. Students will visit the Harvard art museum to observe how pregnancy and early childhood health and social supports for families with low incomes were conceptualized at the turn of the 20th century. Students will discuss elements of design and implementation of ongoing projects being conducted by Harvard faculty and collaborators to rollout and test direct cash support to pregnant or postpartum people.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. How Wars End: The Role of Negotiation

T 0300 PM - 0500 PM

Robert Mnookin

Course ID: 224717
2025 Fall (4 Credits)

Instructor Permission Required

This seminar will explore the role of negotiation in terminating wars. It is commonly thought that wars end after a decisive military battle produces a conclusive victory – one side surrenders and the other side emerges victorious. In fact, recent history suggests things are typically much more complicated: negotiations between the disputants commonly play a critical role in ending armed conflict. One only must consider Korea, Vietnam, Bosnia, Afghanistan, and Iraq. This seminar will initially introduce students to some core ideas relating to negotiation and bargaining theory. Through readings, we will then explore how several wars in fact evolved. We will ask why did the war begin, and did the disputants first attempt to avoid armed conflict through negotiations? To what extent, if any, did negotiations between the combatants end the fighting? We will see that while the expectations and aims of the combatants are typically deeply opposed at the beginning of a war, over time they often converge toward an agreement to stop fighting. In such cases, what produces this convergence? To what extent do factors far removed from the battlefield – economic, political, and social – contribute to the success of negotiations? In addition to readings, students will engage in a few negotiations related exercises and simulations in class.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. The Scientific Study of Wants and Well-Being

T 1200 PM - 0245 PM

Matthew Rabin

Course ID: 224710
2026 Spring (4 Credits)

Instructor Permission Required

This seminar explores what existing research tells us about the determinants of well-being, how it relates to the choices that people make, and how researchers (especially economists) go about quantifying wants and well-being in a way that permits their rigorous study. The seminar will begin with a presentation of the most basic approach within economics: Attempting to capture the notion of rational pursuit of our own well-being (or other goals people may have), economists translate the study of people into mathematical analysis by developing the

notion of a utility function. We will begin by presenting the basics of the economic approach. We will then illustrate some of what psychology teaches us about which human concerns are missing from the textbook economics account of people's goals. We will then explore about the important biases and failures humans make that can create systematic wedges between the choices we make and the actions that would maximize well-being. We'll discuss which of the psychological improvements we outline seem to matter for economic and social outcomes, and how these improvements can be translated into the mathematical language used in economics.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 10am on Mon, August 11th. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11th at 12 Noon.

No background in either Psychology or in Economics is assumed. (But hopefully the seminar will help participants who have taken or will take such courses in economics, psychology, policy, philosophy, or other social sciences bring new perspectives to those courses). Even though statistical standards must be intrinsic to any careful study of the issues explored here, no specific statistical background is assumed.

The seminar will use mathematics throughout, so that enrolled students need to establish that they have an appropriate background. No knowledge of advanced mathematics is assumed, so that the hope is that it will be as accessible as possible to as broad a range of first-year Harvard students as possible.

Crime and Justice in a Changing America

M 0300 PM - 0500 PM

Robert Sampson

Course ID: 224711

2025 Fall (4 Credits)

Instructor Permission Required

This seminar examines key changes in crime and the criminal justice system over the last half-century, including the dramatic rise in violence starting in the 1960s, mass incarceration starting in the mid-1970s, the unexpected crime decline in the 1990s, a policing crisis heightened by George Floyd's murder in 2020, and historic rises in gun violence during the pandemic era. We will explore these and other important changes in light of competing explanations of crime and punishment. Inequalities by neighborhood, race, class, and birth cohort will be emphasized, and strategies to promote safety while reforming the criminal justice system will be debated. The seminar will emphasize group discussion and learning experiences in the Greater Boston Area. In one session, we will engage with key leaders involved in promoting community and safety at Harvard and the larger Boston area. In another session, students will report on in-person visits to neighborhoods in the local area that engage the issues we are studying. And in another class, we will interact with a leader from the Transformational Prison Project seeking to promote safety, healing, and criminal justice reform.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 5 pm on Mon, August 11. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11 at 12 Noon.

Reading the History of Boston

M 0300 PM - 0545 PM

Jason Ur

Course ID: 224891

2026 Spring (4 Credits)

Instructor Permission Required

Why do Boston, Cambridge, and the towns in the Greater Boston region look the way they do? How did this urban landscape evolve, from the seasonal home of mobile Indigenous communities to a sprawling metropolis? There are clues everywhere, if you know how to look for them. This seminar introduces first-year Harvard College students to the deep history of the (now-) urban landscape in which they now find themselves. The geographic focus will be on Cambridge, but the seminar will consider greater Boston. We'll be thinking about Native impacts, initial European colonization, mortuary landscapes, the expansion of agriculture and animal husbandry, new forms of transportation like canals and railroads, the rise and decline of industry, and of course the origins and growth of Harvard College itself. We'll take the perspective of landscape archaeology, with an emphasis on the physical remains of the past four hundred years. What survives and what doesn't, and why? Most importantly, we'll experience these past landscapes firsthand, via trips throughout the region.

Course Note: Trips will be included at no cost to the student.. Students will get to know Greater Boston by getting out of the classroom and getting off campus.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 10am on Mon, August 11th. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11th at 12 Noon.

Antisemitism, Then and Now

M 0300 PM - 0500 PM

Derek Penslar

Course ID: 226360

2025 Fall (4 Credits)

Instructor Permission Required

Why do people hate each other? Why are some groups of people more likely to be hated than others? This seminar seeks to answer these questions through the study of the hatred of Jews, commonly known as antisemitism. Jews have lived throughout the world over thousands of years, and they have been hated for diverse and at times contradictory reasons – they are said to be too different or trying too hard to fit in; religious extremists or extremist secularists; rich capitalists or revolutionary socialists; having no nation or roots, or fanatically attached to the state of Israel. Are there aspects of antisemitism, or other forms of group hatred, that transcend these differences and have common bonds? Is antisemitism an illness, or a symptom of a variety of maladies? In this seminar, we will address these questions. We will do so by tracing Jew-hatred from antiquity to the present, in both Christian and Islamic lands. Our approach will be anchored in history, but we will draw upon insights from the humanities, such as theology and philosophy, and the social sciences, such as sociology and psychology. We will discuss religious and legal texts, political writings, polemics, and literature. We will also examine depictions of Jews in art and film. Through this course, we will learn how social pathologies like antisemitism grow out of basic human psychological needs, and how we can best address those needs without resorting to hatred of others.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. FYSEMR 73W

Shared Prosperity in a Fractured Global Economy

M 1245 PM - 0245 PM

Dani Rodrik

Course ID: 226509

2025 Fall (4 Credits)

Instructor Permission Required

Can we build a global economic order that promotes equity, poverty reduction, and climate sustainability, all at once? How do we alleviate the tensions between domestic equality and global equality? Can we restore the middle class in advanced countries while maintaining an open global economy? Can we achieve the climate transition without adverse effects on economic growth and poverty reduction in poor nations? We will explore these questions in the seminar and build towards practical policy solutions. The seminar begins with an exploration of basis statistics on economic and environmental performance. Then we will spend some time on the historical evolution of the world economy, tracing policies, institutional arrangements, and outcomes from the Industrial Revolution to the present. We will next examine the backlash to neoliberalism and evolving forms of populism. We will scrutinize alternative strategies for rebuilding the middle class in the advanced economies, fostering rapid poverty reduction in the developing world, and achieving the green transition. Finally, we will turn to the implications of these strategies for the overall global economic system.

Course Note: There will be a required trip to Lowell, MA to visit the Boott Cotton Mills Museum at no cost to the student.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. FYSEMR 73X

Economics and Religion

W 0300 PM - 0545 PM

Robert Barro

Course ID: 226560
2026 Spring (4 Credits)*Instructor Permission Required*

The social-science approach to religion seeks to explain how religions evolve, make us richer or poorer, and influence the daily lives of people around the world. A controversial, but useful, approach views organized religion as a market in which alternative religions and non-religion compete for customer business. This perspective helps to understand Adam Smith's idea that the vibrancy of religion is affected by state regulation and the presence of a state religion. We can also consider whether the role of religion tends systematically to decline with economic development, a phenomenon called "secularization." In addition, we can assess effects from regulations instituted by formal religions, such as Islam's prohibitions on corporate ownership and restrictions in the legal and financial areas. Building on these types of ideas, the economics of religion has become a broad and exciting field of research. One example of current research is my joint work that includes estimates of religious-service attendance for 66 countries going back to 1920. My co-authors and I are analyzing how this measure of religious participation reacted to Vatican II (for Catholics after 1965), to the ending of Communism in many countries in the early 1990s, and to the broad history of war and economic depression. The syllabus will organize these and other topics into 13 classes, 12 of which will be led by students. The items on the syllabus constitute serious substantive research but are accessible in their main ideas to first-year students without a lot of technical background. However, it will be useful for students to have some exposure to economics, such as taking Economics 10 in the fall term.

Course Note: This seminar will usually meet for only 2 hours.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. FYSEMR 73Y

Abortion in Controversy

T 0300 PM - 0500 PM

Stephen Sachs

Course ID: 226510
2025 Fall (4 Credits)*Instructor Permission Required*

Today the law of abortion in America is more in flux than it has been for decades. Educated citizens should have opportunities to study the issue in detail and to decide what they think. This seminar is designed to help first-year students discuss, in an academic setting, the difficult, important, and controversial questions raised by abortion. These include questions of ethics, policy, and law; of human personhood and futures of value; of autonomy and equality; of politics and history; and of unenumerated rights and judicial power. Many of these questions are both highly abstract and deeply personal. While they are the subject of intense and heartfelt commitment on both sides, this seminar is offered in the belief that they are also a proper subject for intellectual inquiry. Within each unit, the assigned readings are roughly balanced as to viewpoint: they take deeply conflicting positions, and each student will certainly disagree with some of them. Students are expected to participate fully in the discussions and to complete occasional short writing assignments in response to the readings.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 10am on Mon, August 11th. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11th at 12 Noon.

FAS Divisional Distribution: None

Aerial born radar (LIDAR) technology has recently been deployed for discovering, mapping, dating, and assigning ethnic affiliations to major sites and cities heretofore unknown to scholars in the jungles of Mexico, Guatemala, and Honduras. This seminar allows students to explore first-hand the revolutionary advances in the study of the origins of American civilizations at the Olmec ceremonial centers (dated 1300-600 B.C.), and view hundreds of major new towns and cities just discovered in the Maya jungle (dating from 600 B.C.- 9 00 A.D.). Lidar imagery from Professor Fash's well-known site of Copan and many others in Mexico and Guatemala will be analyzed by the students for evidence of hitherto unknown archaeological roads, ceremonial centers, towns, and cities. This technology has finally laid to rest the mistaken "conclusion" by earlier archaeologists that civilization and powerful cities "could never have arisen first in the tropical forest." Students will be discovering new features and sites with their own eyes, as we scrutinize and discuss the lidar imagery. That will include work in Harvard's Visualization Laboratory, where they'll get a chance to visit what most visitors to the site of Copan will never see: the archaeological tunnels beneath the Acropolis dug by Professor Fash, through Lidar videos made by Luke Hollis. They'll also analyze objects from the ancient cities during the seminar sessions, from the priceless collections of the Peabody Museum in class and on display in the 3rd and 4th floor galleries. There will also be a 'field trip' to Harvard's Dumbarton Oaks Research Library and Collection in Washington, D.C. to see some of the most beautiful works of Olmec and Maya art ever created. The new discoveries of both Lidar and the decipherment of the Olmec and Maya writing systems make this is a transformative time in this highly visible field that students can explore for themselves through a variety of means via this seminar. This seminar will allow students to "learn by doing," both with ceramics and other artifacts from the Peabody Museum's collections that we will be working with in the Mesoamerican Laboratory with Dr. Jenny Carballo, and also with digital images on-screen of Lidar imagery and videos, and prints of selected 3D site maps. The familiarity students will gain with ceramics and artifacts will mean they will have a wonderful time viewing the priceless collections of Olmec and Maya artworks at Dumbarton Oaks Research Library and Collections in Washington, D.C., in October 2025. Class trips will be no cost to the student.

Course Note: For J-Term-Wintersession: During the week of January 18-24, students who excel in the class will be invited to visit the beautiful Classic Maya site of Copan, Honduras, where I have been conducting research (including Lidar) for the past four decades. All class trips will be no cost to students for supplies or living expenses.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 5 pm on Mon, August 11. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11 at 12 Noon.

BREAKING: Coffee causes cancer! THIS JUST IN: Microplastics in our brains! Making sense of – and coping with – the often conflicting and seemingly ever-changing information we receive from various sources on health and medical topics can be hard. This seminar will give you the skills to make sense of health and medical information and this seminar will give you the skills to communicate health and medical information effectively to others using new and novel media. Whether you are interested in a career as a social media content creator on TikTok, a medical journalist for the New York Times, a surgeon at the Massachusetts General Hospital, or you are simply interested in being a better consumer of medical information, this seminar is for you. In this seminar, you will learn about how health information is developed for traditional (e.g., newspapers, television) and non-traditional (e.g., TikTok, YouTube) media outlets. You will visit a newsroom, meet health journalists, and learn how journalists craft health content for newspapers, television, and online publications. You will also meet the creator of the #1 podcast in the world and visit her studio in Boston. You will hear from YouTube-funded health content creators and learn their tricks for communicating health information that empowers their online communities. The seminar will also wrestle with the power structures that adjudicate which health topics are covered in the media and discuss the imperative of defending vulnerable populations and considering culture and literacy levels in health content creation.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar.

You will be notified of lottery results for both fall and spring seminars at 5 pm on Mon, August 11. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11 at 12 Noon.

FYSEMR 74D

What Do We Even Know?: Democratic Theory and Public Opinion in the (Mis)Information Age

M 0945 AM - 1145 AM

Course ID: 226750
2026 Spring (4 Credits)

Instructor Permission Required

Democracy is supposed to run on knowledge—citizens deliberating, reasoning, forming informed opinions about policies and leaders. This assumption shapes contemporary anxieties about political misinformation, conspiracy theories, and ideological polarization. But what if democracy has never really worked that way? Public opinion research has long challenged the idea that democracy functions through rational deliberation. Voters lack basic political knowledge, interpret facts through partisan lenses, and rely on intuition. At the same time, democracy has persisted despite never quite living up to its own ideals. This seminar explores how public opinion actually works, rethinking what it means to "know" in democratic politics. To do so, this seminar bridges two approaches that are often considered separately: political theory, which asks what democracy ought to be, and empirical research, which studies how people actually make political decisions. Each side has something to learn from the other: theory challenges assumptions embedded in public opinion research; empirical findings push theorists to grapple with real political behavior. Readings will range from pragmatist philosophy to media studies, from classic public opinion research to contemporary debates about misinformation and expertise. Alongside this, we'll analyze real political crises—from viral hoaxes to subverted elections—asking: Is democracy really in trouble? And if it is, how can we fix it?

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 10am on Mon, August 11th. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11th at 12 Noon.

This is a first-year seminar designed to introduce students to the diverse tools of political science. No prior background is required—only an interest in understanding how democratic politics functions, beyond (and through) the myths we tell about it.

FYSEMR 74E

Speech on Trial: Free Expression, Censorship, and Democracy

M 0300 PM - 0500 PM

Course ID: 226752
2026 Spring (4 Credits)

Instructor Permission Required

How do words and images shape our world? A single social media post can spark a movement, incite division, or inspire solidarity. But when does speech cross the line between free expression and harm? Does regulating speech protect marginalized communities, or does regulation risk suppressing dissent? As societies grapple with misinformation, digital censorship, and the rise of hate speech laws, we ask: What should a democracy look and sound like, and who gets to decide? In this seminar, we will examine the power and limits of free speech in law, media, and society. Through discussion, case studies, and interactive debates, we will explore how words and symbols shape public perception, identity, and community, as well as how legal and social frameworks regulate speech. Students will engage with foundational debates over free speech, hate speech, and misinformation while critically analyzing how digital platforms, campus speech policies, and government regulation shape public discourse. This seminar is designed as a highly interactive, discussion-driven seminar where students will actively debate controversial ideas, analyze real-world examples, and work collaboratively on projects. By the end of the semester, students will develop the tools to navigate complex issues of speech, power, and democracy with confidence and intellectual depth.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 10am on Mon, August 11th. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11th at 12 Noon.

In what ways can generative AI models, like ChatGPT, be a useful educational tool to accelerate and enhance your learning? We'll overview how these models work, and the surprisingly simple principles underlying their remarkable capacities. We'll dive into impact of AI on student learning right now, drawing on psychological and neuroscience insights into how we humans learn and remember things. We'll think through the ethical considerations of AI use in education going forward. In parallel, each week we will all try out different generative AI tools for enhancing academic skills--from synthesizing written material and writing to coding--and share these in group discussions and presentations. By the end of the class, you'll have a deeper understanding of how these AI systems are working, a suite of techniques and tools that you can use to enhance your own learning, and some broader ideas about how human learning might change in the era of large language models and generative AI.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 5 pm on Mon, August 11. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11 at 12 Noon.

Freud may be dead, but psychoanalysis as a perspective, resource, and—to a lesser degree—practice is very much alive, offering powerful accounts of paradoxical and difficult to understand aspect of human behavior and social relations. Freudian thinking has been assimilated into large swaths of our cultural life, even as it has been widely declared outdated and outlandish. Does Freud—and the discipline of psychoanalysis that he founded—still matter? In this seminar, we will address this question by first reading landmark Freudian texts. We will then turn to "Freud"—especially at several of his revisionist followers—to explore a range of contested topics on which the psychoanalytic voice is strong: attachment, loneliness, and anxiety among them. We end with the therapeutic chatbot, asking if Freud still matters in an age of AI. Throughout we will gather and share materials from the internet and various apps, always with an eye to finding Freudian resonances in contemporary culture.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 10am on Mon, August 11th. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11th at 12 Noon.

Human interaction is increasingly mediated by technology, and in constantly shifting ways. What changes when humans relate in these ways? Are connections deeper, shallower, better, worse, or just different? What is gained and what is lost? How are friendships, work relationships, family relationships, romantic relationships, differently affected? Discussion topics include social media, texting, videochat, and generative AI.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. FYSEMR 74I

Gender Politics, Race, and Moral Panics in the World of Sports

M 0600 PM - 0800 PM

Roberto Sirvent

Course ID: 226728
2026 Spring (4 Credits)

Instructor Permission Required

What does race have to do with sports gambling and fantasy football? Why do fans and the media get upset when elite athletes wish to take mental health breaks? What fears, anxieties, and aggressions motivate the interpersonal and structural violence against trans athletes? How complicit are fans in the long-term injuries and premature deaths of athletes when we encourage, celebrate, and take pleasure in violent sports? Why are athletes coached to "play through the pain"? How do sport governing bodies rely on colonial logics of ability and disability to reinforce racialized ideals of sexual difference? This first-year seminar introduces students to the gendered and sexual dynamics of sport in American culture, as well as the racialized gender policing that occurs within the world of sports. Through a combination of group discussions, guest speakers, and a sports watch party, we explore how amateur and professional sports aid in the formation of social classes, national and racial identities, sexuality, and gender roles, both in the United States and abroad. Key topics and case studies include: the rise of anti-trans moral panics in sport; the ways that legal, medical, and scientific discourses in global sport produce and reproduce power relations; anti-Black media representations of Simone Biles and Naomi Osaka; the racial politics of fandom; and, finally, what Travis Kelce and Taylor Swift's relationship might teach us about U.S. celebrity culture and its relation to dominant views of race, masculinity, and femininity.

First-Year Seminars are available only to first-year students. You may apply to both Fall 2025 and Spring 2026 First-Year Seminars via the FYS lottery between July 7 and August 7, 2025 at 11:59PM-midnight. You may apply to as many seminars each term as you would like, but we recommend you apply to at least six in fall and three in spring. As part of your application, you must provide a brief statement on why you are interested in each seminar. You will be notified of lottery results for both fall and spring seminars at 10am on Mon, August 11th. If you are unsuccessful in the lottery, you may still join any seminar with open seats. A list of open seminars and instructions on next steps will be available on the First-Year Seminar Program website August 11th at 12 Noon.

Fieldwork and Ethnography in Folklore: A Tutorial in Cultural Documentation and Community Engagement

2026 Spring (4 Credits)

No meeting time listed

Instructor Permission Required

Sarah Craycraft

This tutorial introduces students to the study of cultural traditions, beliefs, and artistic expressions—their performance, collection, representation and interpretation—through the practice of ethnography. Both ethnographic and theoretical readings serve as the material for class discussion and the foundation for ethnographic fieldwork. At once a crash course in ethnographic theory and ethics, and a practicum in qualitative methods, FM97 weds scholarly inquiry and academic study to practical experience in cultural documentation and personal involvement with local tradition bearers and folk communities. Guided by an interdisciplinary collection of texts, students will have the opportunity to study folklore from the ground up, not only through an academic lens, but through personal relationships, cultural participation, and inquisitive explorations of local communities. Throughout the semester you will be invited to develop skills in qualitative research, cultural documentation, proposal design, interviewing, and the arts of interpretation as you try your hand at fieldwork and ethnography. By examining folkways, expressive culture, traditions, and performances, and interrogating their import in the daily lives of individual and groups, we will aim to bridge the divide between grand theories and everyday practices, between intellectual debates and lived experiences, between the academic institution and the vernacular world. Ultimately, this course aims to bring "the folks" themselves into the center of the academic study, discussion, and debate. And it aims to give you the tools to help amplify and illuminate their voices, traditions, practices, and lore.

Course Note: Required of all concentrators, but open to all.

History and Theory of Folklore and Mythology

2025 Fall (4 Credits)

No meeting time listed

Instructor Permission Required

Daniel Frim

Are the myths of a society comparable to the dreams of an individual? Do all of a region's fairytales derive from a single plotline? Why do UFO abduction accounts sometimes show similarities to earlier elf and fairy lore? Can we reconstruct any of the narratives our ancestors told before the last ice age? Folklore, mythology, and oral literature are mysterious areas of study; some of the most pressing questions these topics pose remain as open today as when they first began to be researched. In this course, we equip ourselves to explore such questions anew by tracing the development of major theoretical orientations in our field. While the course will focus primarily on contributions dating from between the late-19th and late-20th centuries, some attention will also be devoted to theoretical approaches currently in the process of being born.

Folklore and Appalachia

MW 0130 PM - 0245 PM

Sarah Craycraft

Course ID: 222850
2026 Spring (4 Credits)

From moonshine and bluegrass to Lil Bubby Child memes, Latine music, and Affrilachian folk reporting: This course explores Appalachia through the region's folklore as well as the ways that folklore has constituted Appalachia as an imagined American region. Designated a federally recognized region as recently as 1965, Appalachia has long been romanticized as America's authentic "other." We will explore the many genres that make up Appalachian folklife as well as consider folklore's role in shaping portrayals of Appalachia. We'll also think about the ways that insider-outsider relations impact representations of the region. Discussions will explore issues such as cultural staging in Dolly Parton's Dollywood, the commodification of Mothman, and the use of folklore as a form of "back talk" in response to outsider portrayals of the region as backward, homogenous, and unchanging. Our course will also consider the ways Appalachian folklore links the region transnationally, engaging with comparative cases like the Carpathian Mountain communities, the Czech bluegrass scene, and Welsh coal communities.

FOLKMYTH 125

Introduction to the Indigenous Oral Literatures of the Northwest Coast of North America

No meeting time listed

Daniel Frim

Course ID: 225906
2026 Spring (4 Credits)

Instructor Permission Required

This course introduces students to the indigenous oral literatures of the Northwest Coast of North America. After overviewing the cultural history and linguistic diversity of the region, we will embark on a series of case studies focusing on Clackamas Chinook, Kwakwaka'wakw, Nuxalk, and Haida oral traditions. We will read narratives regarding the origins of the world and of the societies that inhabit it; accounts of heroic journeys to otherworldly realms above the sky and beneath the sea; shamanic initiation stories; and oral histories of migration, intertribal diplomacy, and early interactions with Europeans. Attention will be devoted to the formidable interpretive challenges that indigenous oral traditions pose when they are studied in the Western academy, as well as to the ethical complexities of this endeavor. It is hoped that students will gain an appreciation for the immense cultural diversity of the Northwest Coast's indigenous peoples and for the vastness of their oral-literary heritage.

FOLKMYTH 140

Jewish Magic and Folklore: Messages from beyond the Mountains of Darkness

R 1245 PM - 0245 PM

Daniel Frim

Course ID: 224633
2025 Fall (4 Credits)

Instructor Permission Required

This course surveys the centuries-long history of Jewish magic and folklore, with particular attention to two central paradoxes of the field: (1) The diverse magical and folkloric traditions of the Jewish diaspora have been substantially influenced by the practices and lore of neighboring non-Jewish groups. Nevertheless, Jewish magic and folklore exhibit remarkable continuities over time, with various ideas and motifs spanning Jewish history from its ancient beginnings to the present. (2) Jewish magical and folkloric traditions sometimes stand at odds with monotheism, yet they draw so heavily on other aspects of Jewish religiosity (e.g., prayer, Torah study, mysticism, etc.) that it can be difficult to define magic and folklore in Jewish contexts. Specific topics to be covered in this course include demonic possession narratives from ancient Israel; nautical tall tales told by the rabbis of Sasanian Iraq; accounts of werewolves, witches, and vampires in Jewish writings from medieval Germany; Ladino ballads; Yiddish fairytales; and many others. This course is designed both for newcomers to the study of Judaism and for students with a background in Jewish studies who are interested in learning more about magic and folklore. No prior familiarity with Jewish studies or knowledge of Jewish languages is required.

If any enrollees have the ability and desire to read magical texts and folk narratives in Hebrew/Aramaic, a special weekly section will be arranged for this purpose.

Course Note: There is an official enrollment cap for this course, but if the course has filled and you would like to enroll, please be encouraged to contact the instructor at danielfrim@g.harvard.edu

FOLKMYTH 141 (01)

Elves, Fairies, and UFOs: Dangerous Encounters with Otherworldly Beings in Folklore

No meeting time listed

Course ID: 225907
2026 Spring (4 Credits)

Instructor Permission Required

This course introduces folk traditions involving dangerous encounters between humans and otherworldly beings. Our primary areas of focus will include medieval through modern European elf and fairy lore, as well as twentieth- through twenty-first-century accounts of UFO abduction. The course will examine the historical conditions in which these traditions emerged, and in which they have developed. It will also explore the premise that while the contents of otherworldly abduction/intrusion narratives often show remarkable similarities between one cultural context and another, storytellers from different times and places have deployed these traditions in substantially different ways. We will investigate possible reasons both for these similarities and for these differences, drawing especially from relevant scholarship in folklore studies, anthropology, and the comparative study of religion.

FOLKMYTH 172

Quilts and Quiltmaking

T 0300 PM - 0545 PM

Felicity Lufkin

Course ID: 127859
2026 Spring (4 Credits)

Instructor Permission Required

Are quilts the great American (folk) art? From intricately stitched whole-cloth quilts, to the improvisational patchworks of Gee's Bend; from the graphic simplicity of Amish quilts to the cozy pastels of depression-era quilts; from the Aids Quilt to art quilts; quilts have taken on extraordinary significance in American culture. This class surveys the evolution of quilt-making as a social practice, considering the role of quilts in articulations of gender, ethnic, class and religious identities, and their positions within discourses of domesticity, technology, consumerism, and cultural hierarchy.

Tattoo: Histories and Practices

T 0300 PM - 0545 PM

Felicity Lufkin

Course ID: 161297
2025 Fall (4 Credits)

Instructor Permission Required

Tattooing has been practiced in many different social and cultural settings, in many different time periods, to different ends. In the United States, tattooing was long associated with marginalized and stigmatized groups, but since the 1970s, has become increasingly popular and even mainstream. This seminar style class will explore distinct regional histories of tattoo, the development of tattooing in the US, and the different ways that contemporary tattoo practitioners situate themselves historically and negotiate boundaries of race, class and gender. We will also consider tattoo as an art form that both invites and resists aesthetic judgments.

Americans as Occupiers and Nation-Builders

TR 0130 PM - 0245 PM

Andrew Gordon, Erez Manela

Course ID: 108359
2026 Spring (4 Credits)

Instructor Permission Required

How have US military occupations abroad, such as in the Philippines, Japan, and most recently Afghanistan and Iraq, shaped both the United States and the world? The United States has launched numerous projects of military occupation and nation-building in foreign lands since the late 19th century. These have been contradictory enterprises, carrying ideals of freedom and self-determination "offered" by force or by fiat. This course will assess the meanings and legacies of these projects by examining the ideas, strategies, policies, and outcomes of occupations ranging from the Philippines early on, to Japan, Germany, Korea, and Vietnam to, most recently, Afghanistan and Iraq. The course focuses on American activities and ideas but also examines the responses of the occupied.

GENED 1019

**The Caribbean Crucible: Colonialism, Capitalism and Post-Colonial
Misdevelopment In The Region**

MW 0130 PM - 0245 PM

Orlando Patterson

Course ID: 118290
2025 Fall (4 Credits)

How does the growing inequality between and within nations—which is the major global issue of our times—impact the Caribbean region and, in turn, its U.S. neighbor? This course explores the complex, formative role of the Caribbean in the development of Western colonialism and capitalism and the consequences for the peoples of the region. Four major themes will be examined. First, the importance of the region in the origin and early development of Western imperialism and capitalism: Why did both Western Europe and America begin their imperial and colonial expansion in this region and to what degree did the region's slave-based economies influence the nature and development of Western capitalism? Second, what were the consequences of imperialism for the demographic and socio-cultural fate of indigenous and African populations? Is genocide a proper designation of the fate of exploited peoples of the region up to the end of the period of slavery? Third, we examine the post-colonial consequences of this history for the socio-political, economic and cultural development of the region. What have been the main paths toward sustainable development in the modern Caribbean? Why in spite of its long history of engagement with Western capitalism, has the region largely faltered in its efforts to develop? We examine the different paths to development through five case studies—neo-colonial dependency in Puerto Rico, communist dependency in Cuba, democratic socialism in Jamaica, Barbados' neo-liberal strategy, and aid-dependency in Haiti. We also study the common problem of migration and transnationalism and the degree to which this process undermines national sovereignty. Fourth, we explore the distinctive features of racial classification and cultural representations in the Caribbean. What do we learn about race as a social construction from the Caribbean experience? How do Caribbean racism and colorism unsettle American notions of race and ethnic identities? Why has globalization not led to cultural homogenization? How do we account for the unusual influence of Caribbean music, especially that of Jamaica, on popular global culture?

Human Evolution, Human Health, and Climate Change

TR 1030 AM - 1145 AM

Kevin Uno

How and why did climate change influence how humans evolved to be the way we are, and what are the implications of our evolutionary history for human health in a post-industrial world? In addition, how did human activities drive and continue to influence climate change with major impacts on human health? To tackle these important issues, this course reviews the story of how humans evolved through a series of major transitions starting with our divergence from the apes continuing to the present day. At the same time, we explore how the earth's climate has changed over the course of human evolution, driving these transitions, which in turn have major effects on human health. Finally, we will explore the feedback loop between climate change, health, and the future of our species and planet.

GENED 1031

Finding Our Way

MW 1030 AM - 1145 AM

John Huth

How did/do humans find their way across the planet, and how can we replicate their wayfinding? Imagine a situation where modern technology vanishes. How would you find your way around? We can look back in time at Pacific Islanders or the Norse and see how they engaged in wayfinding, using the Sun and stars as guides. In this course, we'll explore time-honored techniques of navigation, and examine how they functioned. Many of the exercises will be devoted to the practice of these wayfinding traditions using our immediate environment as the laboratory. In the second half of the course, we'll see how people predicted the weather using natural signs and put this to the test. Finally, we'll touch on how modern navigation systems work, and how they can be spoofed. Mathematics required will be simple addition, subtraction, multiplication, and division, and we'll often use graphical solutions.

GENED 1032

What is a Republic?

MW 0300 PM - 0415 PM

Daniel Carpenter

Course ID: 120049
2026 Spring (4 Credits)

What is a democratic republic, and can such a regime — one that trusts citizens to capably choose and monitor those in power, and one that trusts those in power to restrain themselves and each other while attending to the public good — survive and protect us from tyranny?"A republic, if you can keep it." So did Benjamin Franklin characterize his hopes for American government. What did Franklin and others mean by republic, and why did he and so many others worry that it might be something hard to hold onto? This course will give you the theoretical basis and historical evolution of republics so that you can understand the American system of a democratic republic, now spread widely around the planet even as it is considered under threat. You will read Hamilton alongside Jefferson, Machiavelli alongside Montesquieu, and Angelina Grimké alongside Frederick Douglass. You will consider systems of governance in Republican Rome, medieval Europe, early modern England and France, Native American nations and the United States. The thinkers and founders you will read thought long and hard what freedom is, how to balance executive and legislative power, and why republics and democracies can be unstable. As a democratic republic, the United States places great faith in the capacity of voters to choose their rulers, who in turn make most of our policies. Is this faith misplaced? What is the role for virtue in a republic, and what is virtue? How does inequality undermine republican stability, and what might be done about it?Screen reader support enabled.

GENED 1034

Texts in Transition

MW 0300 PM - 0415 PM

Ann Blair, Leah Whittington

Course ID: 212840
2025 Fall (4 Credits)

Instructor Permission Required

What makes some texts long-lived while others are ephemeral, today and in the past?Description: We live in a moment of "crisis" around regimes of preservation and loss. As our communication becomes ever more digital—and, therefore, simultaneously more ephemeral and more durable—the attitudes and tools we have for preserving our culture have come to seem less apt than they may have seemed as recently as a generation ago. This course examines how texts have been transmitted from the past to the present, and how we can plan for their survival into the future. We will examine what makes texts durable by considering especially the media by which they are transmitted, the changing cultural attitudes toward their content, and the institutions by which they are preserved. The European Renaissance will provide a central case study. During this period scholars became aware of the loss of ancient texts and strove to recover and restore them insofar as possible. These interests prompted new developments in scholarly conservation techniques which we still value today (philology, libraries, and museums) but also the creation and transmission of new errors, ranging from well-intentioned but overzealous corrections and "improvements" to outright forgeries. What can the Renaissance teach us about how to engage productively with these problems, both as the source of our current attitudes toward preservation and loss, and as a case study of another culture dealing with anxiety over preservation and loss? Ultimately, we hope that students will be able to think productively about preservation in the past and in the future, while recognizing that all preservation inherently involves some kind of transformation.

This course has an enrollment cap and is a part of the Gen Ed lottery. GENED 1037

Great Experiments that Changed Our World

TR 0900 AM - 1015 AM

*Philip Sadler*Course ID: 212854
2026 Spring (4 Credits)*Instructor Permission Required*

In what ways does reliving 10 groundbreaking scientific experiments teach us how our own efforts can remake the world? Facing the edifice of preexisting knowledge, how are breakthrough scientific discoveries made that contradict the existing canon? Ten great experiments that have transformed our understanding of nature will guide us, first through immersion in the scholarship and popular beliefs of the time. Next, how did the discoverer prepare? What were the motivations, prior experiences, and training that led to the threshold of a fruitful advance? Then, to the degree possible, we will carry out the exact same investigations, building our own simple equipment from scratch, duplicating the challenges of wresting patterns from noisy and incomplete data. Students will compare their results to both private and published versions of the original research. The course will examine the magnitude of the cognitive shifts experienced and the often uphill battle to acceptance. We will build an understanding of the nature of scientific progress, examining how the mastery of natural phenomena leads to new technologies and how these can contribute to further scientific discovery. Experiments are drawn from the natural sciences, ancient to modern, from Eratosthenes measuring the earth's size to Rosalind Franklin determining the structure of DNA. We will consider how these discoveries continue to impact society, as well as the many ethical questions raised. The course will examine the difficulty of accepting new experimental evidence falsifying accepted scientific paradigms and how this remains an issue that plays out in current society. By unpacking these 10 experiments, students will be able to better prepare for their own future discoveries and contributions.

GENED 1046

Evolving Morality: From Primordial Soup to Superintelligent Machines

MW 0130 PM - 0245 PM

*Joshua Greene*Course ID: 203129
2026 Spring (4 Credits)

How can we understand the evolution of morality—from primordial soup to superintelligent machines—and how might the science of morality equip us to meet our most pressing moral challenges? In this course we'll examine the evolution of morality on Earth, from its origins in the biology of unthinking organisms, through the psychology of intelligent primates, and into a future inhabited by machines that may be more intelligent and better organized than humans. First, we ask: What is morality? Many people believe that morality descends from above, as divine commands or as abstract, timeless principles akin to mathematical truths. Here we take an empirical approach to morality, viewing it as a natural phenomenon that rises up from below—born of the strategic interactions among lifeforms and societies struggling to exist. Next, we take a scientifically informed look at the foundational questions of moral and political philosophy. Many people believe that the "is" of scientific knowledge has nothing to do with the fundamental "oughts" of morality, that science and morality exist in separate realms (and belong in separate courses). Here we challenge this assumption, asking whether our scientific self-knowledge can, and should, change our views about what's right and wrong and how a society should be organized. Finally, we consider the distinctive moral challenges posed by what may be the next stage in Earth's evolutionary history: the rise of artificial intelligence. Many people believe that there is and always will be a fundamental division between human minds and machines. Here we challenge this assumption, going beyond the tropes of science

fiction and drawing instead on the latest advances in cognitive neuroscience and neurally inspired artificial intelligence. Our conclusions will have implications for moral challenges of the near and more distant future: Can self-driving cars, military drones, and life-like robots be programmed to behave morally? Will artificial intelligence displace human labor? If so, how can our societies adapt? Could machines displace humans entirely? If so, how can we stay in control? If machines do take over, will they be our conquerors or our children? Across diverse topics, this course explores the implications of a single idea: that the wonder we see around us, and ahead of us, is the product of competition and cooperation at increasing levels of complexity.

Course Note: Not open to students who have taken PSY 2250. Prior to Spring 2019, this course was offered as PSY 1002.

Requires: Anti-requisite: Cannot be taken for credit if PSY 1002 already completed

East Asian Cinema

W 1245 PM - 0245 PM

Jie Li

Course ID: 110464
2026 Spring (4 Credits)

Instructor Permission Required

How can we critically analyze and creatively respond to films, meanwhile letting cinema open up a window to other cultures and histories while serving as a mirror for ourselves and our own times? This course introduces major works, genres, and waves of East Asian cinema from the silent era to the present, including films from Mainland China, Japan, Korea, Taiwan, and Hong Kong. We will discuss issues ranging from formal aesthetics to historical representation, from local film industries to transnational audience reception. This course does not assume prior knowledge of East Asian culture or of film studies, but rather seeks to provide students with a basic understanding of modern East Asian cultural history through cinema, and with an essential toolkit for analyzing film and media, including narrative, cinematography, editing and sound. In addition to critical approaches, students are strongly encouraged to creatively respond to course materials by collaborating on their own short films, beginning with the illustration of film terms in the first two weeks and culminating in the "Golden Monkey Awards"—a class screening of final projects with Oscar-like awards in various categories. As a General Education course, East Asian Cinema will help students develop aesthetic responsiveness and interpretive ability to moving images in an increasingly media-saturated world. While becoming acquainted with some analytical vocabulary and critical approaches to cinema, students will also gain insights into East Asian cultures and histories, aesthetic traditions and ethical values, as well as the politics and economics that went into the films' production and reception. Above all, the course will encourage students to be creative and enterprising with the digital media technologies at our disposal, to engage in collaborative teamwork and experiment with unorthodox ways of looking at the world through amateur filmmaking.

Course Note: All films subtitled in English. No prior knowledge of East Asian history or film studies necessary.

GENED 1051

Reclaiming Argument: Logic as a Force for Good

No meeting time listed

Ned Hall

Course ID: 112199
2026 Spring (4 Credits)

Instructor Permission Required

Argument and persuasion are features of all of our lives that can be as challenging and fraught as they are unavoidable and essential; what is the best way for us to handle them? Our lives are awash in argument and persuasion. This course aims to teach you how to manage argument and persuasion in your own life – not just with skill, but ethically. Accordingly, we will have two main goals. The first is to develop your skill at recognizing the myriad ways in which language can be used and misused as a tool for persuasion, by teaching you a variety of techniques drawn from formal logic, linguistics, and the discipline of argument-mapping. Master this skill, and anytime someone attempts to persuade you of something, you will be able to understand the structure of their attempt so deeply that you need not fear manipulation, but can decide for yourself whether you wish to sign on to the conclusion they want you to reach. Our second goal is even more important: we hope to show you how you can – and why you should – construct your own arguments with such clarity, honesty, and logical transparency that the people you direct them to will be optimally placed to decide, for themselves, whether and why they ought to agree with you. In this way, you will come to see argument not primarily as a contest to be won or lost, but as something that should be reclaimed for a more noble purpose: building genuine understanding between people, even across profound differences of viewpoint.

Race in a Polarized America

TR 1200 PM - 0115 PM

Jennifer Hochschild

Is the United States a beacon of liberal, democratic, diverse values and practices, that also has a pattern of racial injustice – or is the US at its core a white supremacist society, in which some people aspire to creating a genuinely tolerant liberal democracy? This course addresses these questions by examining policy disputes around issues such as incarceration and policing, free speech, the role of biology in ancestry and medical care, electoral politics, activism, and movement across borders. We will examine class, nationality, and gender differences within and across groups, and how group boundaries are made stronger or weaker. We will consider how to reduce unproductive polarization, and how you --the new generation of citizens of the world -- can promote a better America even, or especially, when we do not agree on just what "better" entails. Course readings range from public speeches and interviews to works in political science, sociology, economics, and a bit of genomic science. You will learn how and where the United States has progressed in promoting group equality and fairness, as well as where it has not or has even moved backwards. You will end the course with a deeper understanding of the core American paradox of the persistence of group hierarchy in a country dedicated to democracy, equality, and liberty, and what people such as yourselves can do to resolve that paradox.

This course has an enrollment cap and is a part of the Gen Ed lottery. To participate in the lottery, you must first submit a petition and then rank your choices through my.harvard by 11:59 p.m. EST Tuesday, April 8, 2025. The Global Heart Disease Epidemic: Stopping What We Started

MW 0900 AM - 1015 AM

Instructor Permission Required

Richard Lee

What are you willing to do for the health of others? Heart diseases have killed occasional humans since ancient times, but only in the past century have heart diseases become epidemic throughout the world. In fact, the first description of a heart attack in a human was not until 1912. In the current century, heart diseases will be the leading global cause of death, and the majority of those heart disease deaths will actually occur in the developing world. The epidemic of heart disease has been driven by many social, economic and technological events. Some of these events have been dramatically detrimental to human health, such as the accidental invention of the American cigarette by a slave in North Carolina in the 19th Century—an invention that is projected to kill one billion people between 2000 and 2100. Other events, such as advances in public health and safety, have been beneficial by extending lifespan and preventing early death, but they have also allowed age-related heart diseases to explode. Technological advances have improved our economic productivity but also led to changes in our lifestyles that promote heart diseases. In this course, we will consider the complex relationship of health and society by examining the epidemic in common heart diseases. We will explore how major lifestyle factors such as tobacco, alcohol, exercise and diet affect health, and we will also consider how economics and politics powerfully influence health. We will also discuss the role of government and our obligations to each other, and to future generations.

Course Note: You may not take GENED 1053 if you have previously taken SCRB 175.

Human Nature

What makes us human and why does it matter? What makes us psychologically and behaviorally human? Why is this important? In what ways are humans similar to other species, and how are we different? What are the evolutionary origins of the behavioral and psychological features found across human societies, including parental love, sibling rivalry, pair-bonding, incest aversion, social status, war, norms, altruism, religion, language and cooking? At the same time, how can we account for the immense diversity we observe in behavior and psychology across time and societies? Tackling these questions within a broad evolutionary framework, the course will draw on the latest insights and evidence from evolutionary biology, primatology, anthropological ethnography, neuroscience, genetics, linguistics, economics and psychology. We'll contextualize contemporary behavior by examining studies of non-human primates, especially chimpanzees, and a broad range of human variation based on comparative studies of hunter-gatherers, herders, agriculturalists and—most unusual of all—people from societies that are WEIRD (Western, Educated, Industrialized, Rich and Democratic). Along the way, we'll see how culture has driven much of our genetic evolution and runs deep into our evolutionary history. We'll consider how understanding the evolutionary origins of human behavior, psychology, and culture informs how we approach contemporary issues such as patriarchy, polygamous marriage, sex differences, child abuse, mating preferences, homosexuality, racism, psychological differences among populations and the use of oral contraceptives.

GENED 1059

Moral Inquiry in the Novels of Tolstoy and Dostoevsky

TR 1030 AM - 1145 AM

Justin Weir

Course ID: 220117

2025 Fall (4 Credits)

Instructor Permission Required

How can the novels of Tolstoy and Dostoevsky help us think differently about everyday moral dilemmas that are often seen as the prerogative of religion, politics, or philosophy? This course considers how Tolstoy and Dostoevsky take up moral inquiry in their fiction, introduces students to philosophical texts that informed their major fiction, and asks why the novel as a literary genre may be a good forum for the discussion of ethics. We will read Tolstoy's Anna Karenina, Dostoevsky's Notes from Underground and The Brothers Karamazov, as well as selected texts from Rousseau, Schopenhauer, Nietzsche, and others.

This course has an enrollment cap and is a part of the Gen Ed lottery. GENED 1062

Ballots and Bibles: Why and How Americans Bring Scriptures into Their Politics

MW 1030 AM - 1145 AM

David Holland

Course ID: 212843

2026 Spring (4 Credits)

Why do Americans' sacred texts have a close, frequently fraught relationship with their political history? In 2018, in a public speech to law enforcement officers, the attorney general of the United States used a scriptural passage to defend tougher implementation of immigration laws. His reference bewildered observers who were unaware of a long tradition of citing Romans 13 in American political controversies, including such formative conflicts as the American Revolution and the sectional crisis over slavery. This course introduces students to a complex history of political invocations of scripture, encouraging them to think about why this practice persists, the interpretive strategies it involves, and the implications of such scriptural appeals for civic culture. Co-taught by faculty with expertise in biblical studies and American history, the course asks students to engage texts thoughtfully, to consider historical contexts thoroughly, and to see why these texts and their use matters in the present. Course materials includes primary sources (e.g., campaign speeches, Congressional debates, Civil Rights slogans) and scholarly literature, such as the wealth of research on the history of biblical justifications for war or the legal theories that guide applications of the First Amendment. Student projects afford class participants the chance to engage in both historical research and textual hermeneutics. The objective of the course is to equip students to recognize the historical legacies that contemporary political conversations carry, to engage

critically the modes of textual interpretation that inform political rhetoric, and to write cogently about the complex implications of political appeals to scriptural authority.

GENED 1067

Creativity

TR 1200 PM - 0115 PM

David Atherton

Course ID: 215890
2026 Spring (4 Credits)

Instructor Permission Required

Where does creativity come from, how does it work, and how can we deepen its role in our own lives? Geniuses are said to possess it. Self-help books offer to teach it. Both the arts and the sciences celebrate it. It sits at the heart of some of our oldest myths and is the subject of up-to-the-minute neuroscientific research. Some say it comes in momentary flashes; others call it a way of life. Some identify it as the key to deep fulfillment; others claim that it entails intense suffering. Many agree that it sets us apart as a species—but does it? What is creativity? How have humans made sense of it across centuries and cultures, and what role might it play in our lives today? Exploring creativity takes us into the very question of what makes us human, and the answers we discover can help equip us for the lives we will lead beyond the classroom. This course casts a wide net, crossing disciplines as it takes us from ancient treatises on the art of poetic composition to modern brain scans, and from centuries-old debates over intellectual property to present-day questions of artificial intelligence. Is creativity the same as originality? Can plagiarism be creative? Should one own the fruits of one's creative labor? What happens in the brain at moments of creative insight? Can creativity be "hacked"? We will hear directly from practicing artists and experts as we explore these questions through regular, small-stakes creative experiments and a creative final project. By course's end, you will have a deeper sense of where creativity belongs in your own life—and of how you might share what you have discovered with others.

GENED 1068

The United States and China

No meeting time listed

William Kirby

Course ID: 217632
2026 Spring (4 Credits)

Instructor Permission Required

Are the United States and China destined for conflict or can they lead the world in addressing common challenges? The United States and China are global economic and military powers. They have a rich history of commerce, friendship, alliance, and antagonism. Both countries have been shaped and re-shaped by the nature of their mutual relations. Their relationship is in crisis, the outcome of which will do much to define the world of the 21st century. This course invites students to examine together the present and future of U.S.-China relations in the light of their past. What are the enduring patterns and issues in China's relations with the United States? How have these two countries perceived each other over time? How has trade defined the relationship from the Opium War to Huawei? How has war shaped experiences in the United States and China, and what are the risks of military confrontation today? What are the prospects for cooperation on global crises such as climate change? What is the role of American and Chinese universities, such as Harvard and Tsinghua, in shaping mutual relations in a time of global pandemic? The course emphasizes active, participant-centered discussions of major issues, texts, and contemporary events, and will engage with Harvard Business School cases, experts on the U. S.-China relationship, and the rich resources of Harvard's schools and the Harvard Center Shanghai. In their final project, students, working in groups, will address a central challenge in the Chinese-American relationship and propose a solution.

Life as a Planetary Phenomenon

TR 1200 PM - 0115 PM

Dimitar Sasselov

Course ID: 120881
2026 Spring (4 Credits)

Instructor Permission Required

Is there alien life beyond Earth? What is it about Earth that enables life to thrive? This question was reinvigorated with the 2016 ground-breaking discovery of a habitable planet around the nearest star, Proxima Centauri. A decade of exploration confirmed that such planets are common in our galaxy, and the commonality of habitable planets has raised anew some age-old questions: Where do we come from? What is it to be human? Where are we going? Are we alone in the universe? And last, but not least, what are the dangers of becoming a multi-planet

species? Life and planets are intricately linked through geological processes, chemistry, and ultimately, biology, all of which you will explore in this course as we endeavor to answer questions about our place on this planet and beyond. You will gain knowledge of some natural sciences fundamentals while exploring current issues in biotechnology and space exploration technology. This course aims to equip you with both a conceptual understanding of Earth and its place in the universe as well as the quantitative reasoning to think critically about it. Hands-on experiences are central to accomplishing these objectives.

GENED 1071

African Spirituality and the Challenges of Modern Times

Course ID: 212849
2025 Fall (4 Credits)

TR 1200 PM - 0115 PM

Jacob Olupona

What can African spiritual traditions contribute to human flourishing in the contemporary age? Taking the Marvel blockbuster *Black Panther* as a starting point, the course will explore the African spiritual heritage both on the continent and the diaspora communities (Black Atlantic diasporas). We will begin by spelling out the features of African indigenous religious traditions: cosmology, cosmogony, mythology, ritual practices, divination, healing ceremonies, sacred kingship, etc. We will then explore how these traditions have traveled across the oceans to the new world and how they have contributed to the emergence of new forms of black identities in Brazil, the Caribbean, the USA, and more. This class will equally look at African religious encounters with Islam and Christianity on the continent, resulting in what we often call "Africa's Triple Heritage." It then considers African religious sensibilities in the contemporary period, as they relate to the issues of modernity, economic and social development, ethnic and cultural identities, class, and community relations. Finally, we will look at the status of African religion as a global tradition, not necessarily in competition with other religious traditions, but in its relationship to other world religions.

GENED 1074

The Ancient Greek Hero

Course ID: 113501
2025 Fall (4 Credits)

MW 1200 PM - 0115 PM

Gregory Nagy

How did ancient Greek heroes, both male and female, learn about life by facing what all of us have to face, our human condition? How to face death? Concentrating on this central human question, we will explore some of the greatest works of ancient Greek literature in English translation. For the Greeks, a special way to address the problem of death was to think long and hard about what they called heroes in their myths. Our purpose in this course is to extend that kind of thinking to the present. Assignments invite you to engage in personal reflections on the meaning of life and death in the light of what we read in Greek literature about the ordeals of becoming a hero.

GENED 1079

Why Is There No Cure for Health?

Course ID: 125932
2025 Fall (4 Credits)

TR 1200 PM - 0115 PM

David Cutler

Given all our technological advances, why are we still not able to prevent preventable diseases, provide affordable healthcare for millions of people, and deliver cures for curable diseases? Around the world, billions of dollars are spent on health care treatments, public health initiatives, and pharmaceutical research and development. So why are we still not able to prevent preventable diseases, provide affordable healthcare for millions of people, and deliver cures for curable diseases? And what are the best ways to address these issues? Because these questions are so large, we will focus our discussion around questions like: What steps should be taken to address epidemics? How should the United States reform its health care system? And how should prescription drugs be produced and sold? We will explore how social scientists address empirical questions, the types of data that are available, how those data are analyzed, and the confidence with which causal statements are made. By the end of the course, you will be able to dissect a large question—such as how to reform American healthcare—into its technological, social, economic, and moral components, and weigh potential solutions according to these guiding vectors.

GENED 1080**How Music Works: Engineering the Acoustical World**

MW 1115 AM - 1230 PM

*Robert Wood*Course ID: 205412
2026 Spring (4 Credits)*Instructor Permission Required*

Music and technology are two dimensions of humanity that have been interdependent for tens of thousands of years; what can this intersection teach us about our past and our future? How does Shazam know what song is playing? Why do some rooms have better acoustics than others? How and why do singers harmonize? Do high-end musical instruments sound better than cheap ones? How do electronic synthesizers work? What processes are common in designing a device and composing a piece of music? How is music stored and manipulated in a digital form? This class explores these and related themes in an accessible way for all concentrators, regardless of technical background. The class is driven by hands-on projects to enhance your technical literacy, a critical skill for anyone designing solutions to today's most pressing and complex issues. The projects are designed so that the creativity of students in all fields will have a role to play. Lectures, demonstrations, and guest lecturers/performers are integrated into the class to build foundational knowledge and to inspire. We will also explore wider social and historical themes related to music and acoustics. The class is approached from an engineering perspective, using music and musical instruments as the framework to introduce a broad array of concepts in physics, mathematics, and engineering. Requires no previous exposure to physics or calculus beyond the high school level.

GENED 1083**Permanent Impermanence: Why Buddhists Build Monuments**

MW 1200 PM - 0115 PM

*Jinah Kim, Eugene Wang*Course ID: 207917
2026 Spring (4 Credits)*Instructor Permission Required*

Why do Buddhists build monuments despite the core teaching of ephemerality, and what can we learn from this paradox about our own conception of time and space? Everything changes. This is, in its simplest and most fundamental formulation, one of the essential teachings of Buddhism. Buddhist communities throughout history have preached, practiced, and written about the ephemerality and illusoriness of our everyday lives and experiences. Ironically, however, many of these same communities have attempted to express these teachings in the form of monumental structures meant to stand the test of time. Some of the world's greatest cultural heritage sites are a legacy of this seeming contradiction between the impermanence that is a central presupposition of Buddhist thought and the permanence to which these same monuments seem to aspire. If the world is characterized by emptiness and the Self is illusory, how does one account for the prodigious volume of art and architecture created by Buddhists throughout history? This Gen Ed course takes a multicultural and reflective engagement with the challenges presented by this conundrum through a study of Buddhist sites scattered throughout time and space. Pertinent topics such as cosmology, pilgrimage, materiality, relics, meditation, and world-making will be explored. Through these Buddhist monuments in South and Southeast Asia, the Himalayas, Central Asia, China, Korea, and Japan, students will learn about the rich, diverse world of Buddhist practice and experience.

GENED 1088**The Crusades and the Making of East and West**

TR 1200 PM - 0115 PM

*Dimiter Angelov*Course ID: 212838
2026 Spring (4 Credits)*Instructor Permission Required*

The course explores the birth of the civilizational categories of East and West during the era of the Crusades, one of the most significant and deeply symbolic events in human history. A series of wars in the Middle Ages fought between Latin Christians and the perceived enemies of Christendom, the Crusades saw the first experiments of European colonization, the rise of Western commercial capitalism, and the emergence of new cultural identities and boundaries across Europe and the Mediterranean. Students will learn about the origins of the Crusades, the most important expeditions, and the long-term consequences. This course is about the Crusades both in history and in memory, about communities in war and peace, and about stories and memories that have endured to the present day.

GENED 1089

The Border: Race, Politics, and Health in Modern Mexico

TR 1030 AM - 1145 AM

Gabriela Soto Laveaga

Course ID: 204416
2025 Fall (4 Credits)*Instructor Permission Required*

If we want to understand our own history we need to look at the fringes, in this case the ongoing tensions and violence at the U.S.-Mexico border illustrates what we value and fear as a society. Our southern border is continuously covered in newspapers, social media, and political debates. Why does the Mexico-U.S. border continue to be a space of discussion and controversy? In the twenty-first century, as nations across the world militarize or rebuild their borders, the U.S.-Mexico border serves as a vital case study to understand the ongoing trend of tightening national borders—it also allows us to better understand our own history, politics, and how we shape our view of the world. In addition to examining the creation of the U.S.-Mexico border in 1848 to the present, this course examines how ideas of public health have historically been used in border debates. For many, the border served (and serves) as a protective barrier from poverty, violence, and, especially, disease. By the early twentieth century many Mexican bodies were perceived as "alien," "illegal," and in need of patrolling. Yet these descriptions were also used by Mexican politicians to describe and isolate Indigenous groups and the Chinese within Mexico. By examining, for example, border ecological disasters, response to epidemics and a pandemic, and how ideas of race and health played out within Mexico and the U.S. we can better understand borders in general.

This course has an enrollment cap and is a part of the Gen Ed lottery. To participate in the lottery, you must first submit a petition and then rank your choices through my.harvard by 11:59 p.m. EST Tuesday, April 8, 2025. GENED 1090

What Is a Book? From the Clay Tablet to the Kindle

TR 0130 PM - 0245 PM

David Stern

Course ID: 212857
2026 Spring (4 Credits)*Instructor Permission Required*

What is the nature of the object that has been the focus of your education since you began to read--and at the core of Western culture since its inception-- and why is it important to understand and appreciate its presence before your eyes even if it's all but transparent? You have spent much of your life since kindergarten (and perhaps earlier) reading books; and you will spend much of your time at Harvard continuing to read them. But do you even know what a "book" is? Is it merely a conveyor, a platform, for presenting a text? Can a book have a use other than being read? Does the nature of the material artifact inscribed with words shape or influence the way you understand their meaning? Do people read a scroll differently than they do a book with pages? Or a digital text on a screen? Why does the physical book persist in the digital age? To answer these questions, we will study the many different material forms in which texts in Western culture have been inscribed—from tablets to e-books—and the technologies that have enabled their creation. We will also explore every possible aspect of the object we know as a "book," from the title page to the index, and from the layout of a page to the use of illustrations and decorations—and what each of these features of the book can tell us about its historical role, how readers have used the book, and what it has meant to them. Books we will look at will range from the Bible to Vesalius, from Homer to Harold and His Purple Crayon. Sections will visit the Weissman Preservation Center, Houghton Library, Fine Arts Special Collections, and the Harvard Art Museum, and all students will be required to study a manuscript close-up and participate in a printing workshop. The book as a material object is the focus of the course. The capstone project will be the creation of a (short) book by each student and an accompanying paper explaining its place in the history of the book in the West. After taking this course, you will never look at a book in the same way.

GENED 1092

American Society and Public Policy

MW 1030 AM - 1145 AM

Theda Skocpol, Mary Waters

Course ID: 119025
2025 Fall (4 Credits)

Instructor Permission Required

How do patterns of American economic, political, and social inequality shape our policy responses to working families, immigration, and poverty? In a period of contentious politics, Americans are debating fundamental issues about economic wellbeing, social justice, and the state of our democracy. How can the nation expand opportunity and security for workers and families following years of rising socioeconomic inequalities and shifts in the relationship of families to work? What is the relationship between rising economic inequality and rising political partisanship? How has ongoing partisan polarization and the design of our political institutions affected U.S. responses to social issues? How do we regulate immigration and citizenship and cope with surges in refugees and asylum seekers? Controversies in these areas are bitter and persistent, and this course will introduce students to the ways the United States has dealt with each set of challenges.

This course has an enrollment cap and is a part of the Gen Ed lottery. Who Lives, Who Dies: Reimagining Global Health

TR 1030 AM - 1145 AM

Salmaan Keshavjee, Lindsey Zeve, Jason Silverstein, Luke Messac, Luke Messac

Course ID: 124127
2025 Fall (4 Credits)

How can health care systems be restructured to provide high quality care even to the poorest and most vulnerable people on our planet? Health care is never just about medicine. It is about people. It is about those pushed to the margins, whose lives are ground down by poverty, trapped by unjust systems, and devalued by forces that declare some lives worth less than others. This course challenges students to reimagine disease, illness, and injury as biosocial phenomena—shaped as much by poverty, racism, and political violence as by pathogens. From rural Malawi to American prisons, from tuberculosis programs to the overdose crisis, we will trace the roots of global health inequities and examine the ideologies that sustain them. But this course is not only about identifying failures. It is about how we stand alongside the sick and destitute to fight for a future where health is a human right.

GENED 1098

Natural Disasters

TR 1030 AM - 1145 AM

Brendan Meade

Course ID: 112430
2025 Fall (4 Credits)

What makes our planet so dangerous? From Mexico to India, San Francisco to Tokyo, natural disasters have

shaped both the surface of our planet and the development of civilizations. These catastrophes claim thousands of lives and cause tens of billions of dollars in damage each year, and the impact of natural disasters is only increasing as a result of human population growth and urbanization. This course uses the methods and skills associated with earth science to help you to develop an understanding of both the causes and impacts of these events. Readings will be assigned from the textbook *Natural Disasters* by Patrick Abbott (11th edition), to deliver the scientific content - recorded lectures will be available throughout the course, and live lectures and discussion sessions will be held each week to address any difficulties with the material, to facilitate discussion, and to provide an opportunity for interacting with fellow students and the teaching staff. By the end of this course, you will be able to understand the ways in which societies can systematically anticipate and prepare for the kinds of natural disasters which many people have come to assume are inevitable.

GENED 1099

Pyramid Schemes: What Can Ancient Egyptian Civilization Teach Us?

Course ID: 126641
2026 Spring (4 Credits)

MW 1200 PM - 0115 PM

Peter Manuelian

How does ancient Egypt enlighten our times about what defines a civilization, and were those ancient humans, with their pyramids, hieroglyphs, and pharaohs, exactly like or nothing like us? How much of your impression of the ancient world was put there by Hollywood, music videos, or orientalist musings out of the West? How accurate are these depictions? Does it matter? This course examines the quintessential example of the "exotic, mysterious ancient world" - Ancient Egypt - to explore these questions. Who has "used" ancient Egypt as a construct, and to what purpose? Did you know that pyramids, mummies, King Tut, and Cleopatra represent just the (overhyped) tip of a very rich civilization that holds plenty of life lessons for today? Combine the ancient Egyptians' explanations of the world's natural forces with all the social complexity of human interaction and you have a fully formed society—about four millennia of accumulated experience! Can investigating the "real" ancient Egypt unpack our current misconceptions about the land of the pharaohs? Hardly morose, tomb-building "zombies," the Egyptians embraced life in all its messy details. Piety and corruption, imperialism and isolationism, divinity and mortality all played significant roles in life along the Nile. What can we learn about the nature of politics and society in our time by seeing the parallels between the ancient past and today? We will explore archaeology, modern Egyptomania, repatriation, new digital visualization technologies, and international politics. What was ancient Egyptian racism? What is modern archaeological racism? Who owns the past? Who needs it? We will take excursions into Egyptian art, history, politics, religion, literature and language (hieroglyphs), plus the evolution of Egyptology as a discipline. Field trips to the Museum of Fine Arts, Boston, the Peabody Museum, and the Harvard Museum of the Ancient Near East (formerly Harvard Semitic Museum) are included, along with the famous Giza Pyramids in 3D. Students will gain a transformative appreciation for the outstanding monuments and intellectual traditions of ancient Egypt. And with newly broadened horizons, we will debunk many popular myths.

Making Change When Change is Hard: the Law, Politics, and Policy of Social Change

Course ID: 212858
2025 Fall (4 Credits)

M 1245 PM - 0245 PM

Cass Sunstein

How does social change happen? How does change happen? When, why, and how do people, and whole nations, come to together to influence large-scale policies and actions on issues like the environment, equality, criminal justice? Why do revolutions occur? This course will try to answer these questions, and do so by exploring a diversity of efforts related to societal change. In an effort to draw general lessons for those interested in making change, we will assess a range of political and legal approaches; examine mass movements and the leadership by organizations, governments, and individuals; and attempt to gauge outcomes. Using research from psychology, political science, and economics, and focusing on case studies, the course will explore the ideas behind several arguments: 1) big problems are rarely resolved with comparably big solutions, but instead are better met with small acts of reform; 2) coalition-building among strange bedfellows is usually indispensable; 3) agents of change fare best when they look to measure their impact and never lose sight of the real world results they seek, rather than the expressive highs along the way; 4) informational "cascades" are possible and critical, as people follow one another; and 5) group polarization can be both desirable and dangerous, as groups become more heated and more extreme.

GENED 1104

Science and Cooking: From Haute Cuisine to Soft Matter Science

TR 1200 PM - 0115 PM

Pia Sorensen, David Weitz

How can we use scientific principles to make better food, for ourselves and for the world? Food and cooking are part of your everyday life. Whether you are a skilled chef or a home-cook, what you do in the kitchen is deeply rooted in science. This class brings together top chefs and Harvard scientists to explore how everyday cooking and haute cuisine can illuminate basic principles in physics and chemistry. Throughout the semester you will watch as chefs reveal the secrets behind some of their most famous culinary creations. Inspired by such cooking mastery, we will then explore the science behind the recipes. Students will gain a solid understanding of the properties and fundamental behaviors of soft matter materials. All food is made of soft materials, and cooking relies on many of their fundamental properties. Topics will include: emulsions, illustrated by aioli; elasticity, exemplified by the done-ness of a steak; and diffusion, revealed by the phenomenon of spherification, the culinary technique pioneered by Ferran Adria. The course includes laboratory work where students develop their skills as experimental scientists. Other assignments include weekly homeworks, in-class exercises, and a final project where students explore the science of a culinary topic of their choosing.

Course Note: Occasionally there will be an optional 15-30 minute question and answer session with visiting chefs.

GENED 1105

Can We Know Our Past?

MW 1030 AM - 1145 AM

Jason Ur, Rowan Flad

In a time when histories are being contested, monuments removed, and alternative facts compete with established orthodoxy, how do we evaluate competing narratives about what really happened in the past? What happened in the past? How do you know? Even though today we take great pains to document every major event that occurs, more than 99% of human history is not written down. How, then, can we determine with any certainty what people did, let alone thought about, hundreds, thousands, and even millions of years ago? This course addresses these and other fundamental questions: Can we ever really know what happened in the past? If the past is "dead and gone," how do we know what we (think we) know about it? And what is our degree of certainty about the past societies and cultures that historians, archaeologists and others study today? Through hands-on interaction with artifacts, experiments and other analytical methods you will consider how these approaches relate to different "stakeholders" – groups of people whose understanding of themselves is rooted in a connection to history. By the end of this course, you will have a sense of how your knowledge of the seemingly-distant past is, in fact, intimately tied to your experiences in the contemporary world.

This course has an enrollment cap and is a part of the Gen Ed lottery. To participate in the lottery, you must first submit a petition and then rank your choices through my.harvard by 11:59 p.m. EST Tuesday, April 8, 2025. The Gen Ed lottery will run Wednesday, April 9; if you are successful in the lottery, your course petition in your Crimson Cart will turn to a green check that allows you to enroll. You will have until 11:59 p.m. EST Friday, April 11, to claim your seat. After that time, enrollment will open up to non-lottery petitioners. Please note: Only a green checkmark indicates success in the lottery. If you see either "petition pending" or a red X, it means that your petition was unsuccessful. If this is the case and you would still like to try to enroll in the course, please submit a new petition after the lottery. For timely updates and detailed instructions about entering the Gen Ed lottery, please see <https://gened.college.harvard.edu/courses/registration-and-lottery/>

GENED 1112

Prediction: The Past and Present of the Future

W 0300 PM - 0545 PM

Alyssa Goodman

How and why do humans try to divine their own futures? Human beings are the only creatures in the animal kingdom properly defined as worriers. We are the only ones who expend tremendous amounts of time, energy, and resources trying (sometimes obsessively) to understand our futures before they happen. While the innate ability of individual people to predict has not changed much in the past few millennia, developments in mathematical and conceptual models have inordinately improved predictive systems. These systems have integrated comparisons to past results and quantified how "certain" we can be about various aspects of the future -- processes that were, in many cases, inconceivable at one point in the past. This course is a coordinated

Painting's Doubt: A Studio Course

2025 Fall (4 Credits)

R 0130 PM - 0245 PM

Instructor Permission Required

Matt Saunders

How does a hands-on practice of image making (painting) lead us to perceive, represent and inhabit our world differently? Painting is an engagement between the self and the world. It is a practice of embodied making, and, as a language outside of words, can think around conditioned understanding. This introductory studio art course proposes learning to paint as a new experience of relating to the world, and through painting we will investigate not only what we have to say, but what we have to see. Studio assignments in small sections are complemented by weekly lectures, visiting artist presentations, readings and visits to Harvard's collections. The primary materials for this course will be oil on canvas, with some excursions into drawing and work on a paper. No experience is necessary, except a willingness to make a mess.

This course has an enrollment cap and is a part of the Gen Ed lottery. To participate in the lottery, you must first submit a petition and then rank your choices through my.harvard by 11:59 p.m. EST Tuesday, April 8, 2025. The Gen Ed lottery will run Wednesday, April 9; if you are successful in the lottery, your course petition in your Crimson Cart will turn to a green check that allows you to enroll. You will have until 11:59 p.m. EST Friday, April 11, to claim your seat. After that time, enrollment will open up to non-lottery petitioners. Please note: Only a green checkmark indicates success in the lottery. If you see either "petition pending" or a red X, it means that your petition was unsuccessful. If this is the case and you would still like to try to enroll in the course, please submit a new petition after the lottery. For timely updates and detailed instructions about entering the Gen Ed lottery, please see <https://gened.college.harvard.edu/courses/registration-and-lottery/>

You need to commit to a scheduled timed studio section when you enroll. (This course does not have a placeholder section.) These studio sections will fill up quickly on a first come first served basis and there is no guarantee you will be able to switch to another studio section later on. If you cannot make any of the studio sections you will not be able to take the course. If you are not successful in the lottery but want to be considered for this course then please re-petition the course (once the lottery has cleared your original petition.) Limited seats may open up after the claim seat deadline and during add/drop period.

Human Trafficking, Slavery and Abolition in the Modern World

2026 Spring (4 Credits)

MW 0130 PM - 0245 PM

Instructor Permission Required

Orlando Patterson

Why do slavery, human trafficking and other forms of servitude thrive today globally, including in the USA, and what can we do about it? We often think of slavery as being a dark chapter in our past, but this is a tragic oversimplification. What defines slavery in the modern world, and what are the moral, political and social implications of its continued existence? As we explore its underpinnings, we discover that all of us may be in some way complicit in its survival. This course surveys the nature, types and extent of modern servitude such as transnational and domestic prostitution, forced marriage, labor trafficking and forced domestic labor, child soldiering and other forms of enslavement of children, organ trafficking and other health aspects of trafficking, debt-bondage, and the forced exploitation of other vulnerable groups such as refugees and stateless persons. Throughout the course, but especially in the final part, we examine anti-trafficking and anti-slavery measures and movements and ways in which you can increase awareness or become involved. You will, by the end of our exploration, be able to trace the moral and ethical arguments surrounding human slavery in its various forms, understand the ways in which this problem still affects so many people, and what can and should be done about it.

The Holocaust

TR 1030 AM - 1145 AM

Kevin Madigan

Who is responsible for genocide? Through the lens of the Holocaust – perhaps the most-studied genocide of the modern era – we will grapple with the issues of good and evil, blame and responsibility, duty and dissent as they pertain to violence enacted at the personal and state levels. What is the responsibility of "citizens and citizen leaders" in the face of local and global crises brought on by genocide, refugee catastrophes, terror, neo-fascism, etc.? And how do we make meaning out of what seems senseless? The course will address the historical background and context of the Holocaust, competing theories about who was responsible and why, and representations of the Holocaust in film and literature.

Course Note: This course is open to undergraduate students only.

The Political Economy of Globalization

TR 1030 AM - 1145 AM

Lawrence H. Summers, Robert Lawrence

How can a globalizing world of differing countries – rich and poor, democratic and authoritarian – best promote inclusive growth and human security by meeting the challenges of inequality, climate change, rising populism, and war? The world is profoundly interconnected through technology, commerce, capital markets, and the global challenges of climate change and public health. For decades, the international economic and geopolitical order favored and supported policies to meet the challenges of integration. But today, that order is under significant strain. This course draws upon history, economic theory, and empirical evidence to shed light on the choices and trade-offs faced by governments, international institutions, businesses, and citizens as globalization evolves and this year we will explore why globalization—which has provided decades of prosperity and peace—is currently in turmoil. We will trace the history of globalization starting from ancient times to contextualize the issues of today. Topics for discussion will include: (i) fragmentation of international trade, once on a path of deeper integration, now marked by tariffs, a trade war between the U.S. and China and trade frictions between the U.S. and its allies; (ii) erosion of international norms such as territorial integrity and mutual trust; (iii) rising domestic polarization over immigration and inequality; (iv) challenges to the U.S. dollar as the world's safe-haven currency; and (v) increasingly bleak prospects for collective climate and public health action. Our goal is to expose students to diverse and competing perspectives so they can develop their own informed views on globalization. Students will engage these perspectives through readings, guest lectures from leading policy experts, and in-class debates to explore critical issues from new angles. We emphasize experiential learning. Students will act as policymakers in negotiation simulations and write policy appraisals that advocate for specific positions. While the frameworks we emphasize reflect our backgrounds as economists, this course is designed for both economists and non-economists to gain a richer understanding of how theory and evidence applies to challenges of globalization.

Power and Civilization: China

2025 Fall (4 Credits)

MW 1030 AM - 1145 AM

Peter K. Bol, William Kirby

What does China's past mean for its and your future as China once again becomes the most powerful nation on earth? A century ago, the world was dominated by great empires—multinational, multicultural entities that spanned ethnic and geographic divides. But of all those empires—the Austro-Hungarian, the Russian, the Ottoman, the British and French colonial empires, and the Great Qing Empire of the Manchus—only the Great Qing survives, now reincarnated as the Chinese national state. In China today we see a new country built on the bedrock of an ancient civilization. It is in the midst of the most extraordinary economic transformation the world has seen. This development comes on top of the political, social, and cultural revolutions of the 20th century. All these changes occur against a deep historical background still much in evidence. This course explores how the world's largest and oldest bureaucratic state has dealt with enduring problems of economic and political organization. It will show how even modern answers to these challenges bear the imprint of China's history. We will explore intellectual and religious trends, material and political culture, the tension between local society and the center, art and literature, and China's multiple economic and political transformations. The consequences of the ancient Chinese political ideal of a single, civilized world empire is a central theme of the course, both from the comparative perspective of other multi-ethnic empires and in terms of the ever-broadening scope and intensity of China's global connections. We will draw comparisons with Rome between the 2nd century BCE to the 2nd century CE; with Romanov and Soviet realms in the 17th century and 20th centuries, respectively; and with Western global empires of the age of high imperialism in 19th and 20th centuries. All these empires have come and gone, while a unitary, multi-national, Chinese empire has endured. On one hand, this has been a history of conflict, in which Chinese empires used military force to control the peoples on their borders. When they failed, border peoples incorporated China into their own inland empires: the Mongols in the 13th century and Manchus in the 17th. On the other hand, it has been a history of economic and cultural relations, in which China absorbed foreign models (Buddhism from India in the 3rd century; the sovereign nation-state system from the West in the 19th century; and both industrial capitalism and Stalinist socialism in the 20th century), defended trade by land along the Eurasian silk routes and by sea with South and Southeast Asia, and put itself forward as a model state for others in East Asia and beyond. The course will enable students to debate how the choices China has made in the past bear on the challenges it faces today, when a modern "China model," with ancient roots, competes with the United States for global leadership. The course is taught with multiple pedagogies. By shifting lecture to on-line modules that include "field trips" to sites in China, class time is focused on active, participant-centered learning around major texts, works of art, and contemporary case studies. Class preparation and attendance are mandatory. Assignments include responses to online modules, weekly sections, a midterm examination, and a final group project.

Sectioning for this course will take place at the end of registration. Once you have enrolled in the course and the placeholder ("DIS") section, please rank your section preferences by 4/16/25. To do this, click on the cog icon next to the Gen Ed course in your Crimson Cart. You will then be prompted to rank the section times. Once we have your ranking, we will do our best to find you a seat in your highest-ranked available section. If none of the times work for you, you are welcome to not set any preferences and remain in the placeholder for the time being. However, please note that if enrollment does not significantly change during Add/Drop, no additional sections will be added and you will ultimately need to enroll in an available section or drop the course.

Borders

2026 Spring (4 Credits)

TR 1030 AM - 1145 AM

*Instructor Permission Required**Mary Lewis*

How have borders been formed historically, and what are the ethics of border construction, defense, expansion or transgression? As a society, we pay particular attention to borders when incidents such as children separated from their asylum-seeking parents or tear-gas being used to deter entry throw the legal divide between two nation states into sharp relief. But seldom do we stop to think about what a border is, or when and why some borders are defended more aggressively than others. This course looks at the modern history of borders, broadly construed, from national boundaries between sovereign countries, to supranational agreements such as the European Union. It considers how borders are erected and dissolved, both legally and materially. And it queries the legal, diplomatic, social, and ethical considerations that ensue from drawing a line between one side and another, and defending that line. We will also consider how actors within societies create internal (often racialized) boundary lines such as "gated communities" or "redlined zones," that are sometimes extra-legal or even illegal, but have profound effects on the everyday lives of individuals and groups.

Global Japanese Cinema

2025 Fall (4 Credits)

MW 1030 AM - 1145 AM

*Instructor Permission Required**Alexander Zahlten*

What can film from Japan tell us about the strange pair of intensifying global interconnections and rising nationalism in the world today? Global Japanese Cinema introduces some of the masterworks from the rich history of Japanese cinema as a way of exploring the global language of film. Participants will learn how to analyze moving images and the ways they influence us – a basic media literacy that we all need for life in a media-saturated society. Additionally we will learn how culture, in this case moving images, flows across the globe and transforms its meaning in site-specific ways. We will see how Japanese cinema's use of slow motion entered the American gangster film, or how samurai films helped create the Italian "Spaghetti Westerns", and many other examples. How do moving images constantly nudge us into a specific worldview, and how does the global circulation of these media subtly shift those nudges in unexpected ways? What does it mean that we nonetheless share a common media memory despite living in very different parts of the world? Join the course and explore how moving image culture functions in a networked, media saturated world!

Course Note: Japanese language skills are not required.

This course has an enrollment cap and is a part of the Gen Ed lottery. American Food: A Global History

2025 Fall (4 Credits)

MW 1200 PM - 0115 PM

*Instructor Permission Required**Joyce Chaplin*

Food has been central to American history, from Indigenous domestication of maize (now the world's most common food staple) to European invasion in search of spices, and from the starving time in early Virginia to debates about fatness and health in the United States today. But what--if anything--is American about American food? What does food tell us about the American past and what might that past indicate about food today? How have food and eating changed over time? How have individual food choices and national food policies connected Americans to the larger world, both the social or political worlds of other human beings and the natural world of all other living beings? Readings will include primary (raw) and secondary (cooked) sources, and assignments will include two short papers, a mid-term exam, and either a final exam or an individual research paper or project.

This course has an enrollment cap and is a part of the Gen Ed lottery. To participate in the lottery, you must first submit a petition and then rank your choices through my.harvard by 11:59 p.m. EST Tuesday, April 8, 2025. The Gen Ed lottery will run Wednesday, April 9; if you are successful in the lottery, your course petition in your Crimson Cart will turn to a green check that allows you to enroll. Water and the Environment

2026 Spring (4 Credits)

TR 0130 PM - 0245 PM

*Instructor Permission Required**Kaighin McColl*

How does the water cycle change us, and how do we change it? What do landslides in Brazil, droughts in California, mass migration in Syria and the collapse of Mayan civilization all have in common? Water. This course introduces students to the terrestrial water cycle: how it works, how humans manipulate it, and how it manipulates us. Students will learn about the major components of the terrestrial water cycle, including precipitation, evapotranspiration, runoff and streamflow, and saturated and unsaturated subsurface flow. We will

also learn about the causes and consequences of natural hazards associated with the water cycle -- including floods, landslides and droughts -- and examine several case studies, with a focus on human impacts. The course will consider how the water cycle has contributed to the demise of past civilizations, and explore implications for modern society in a warming world.

GENED 1159

American Capitalism

TR 1200 PM - 0115 PM

Sven Beckert

Course ID: 125496
2026 Spring (4 Credits)

Instructor Permission Required

What is capitalism and how has it unfolded in American history? How did capitalism emerge, expand and transform daily life in North America over the past 500 years? In this course, students will gain an in-depth understanding of how North America turned from a minor outpost of the Atlantic economy into the powerhouse of the world economy, how Americans built a capitalist economy and how that capitalism, in turn, changed every aspect of their lives. In the process, they will come to understand how contemporary capitalism is the result of centuries of human engagement, struggle, and aspirations. Topics range from the structure of Native-American economies to the economic consequences of the Civil War; from the impact of capitalism on gender relations to the changing structures of American businesses; and from the position of the United States in the world economy to the role of the government in channeling economic development. Boston merchants and Georgia sharecroppers, enslaved cotton growers and reforming statesmen, workers at the Ford assembly line and Silicon Valley entrepreneurs will all appear in the story. The course will put particular emphasis on the global context of American economic development and situate it deeply in political and social changes. Ultimately, students will gain an understanding of how the contemporary capitalism that so powerfully shapes all of our lives has emerged over the course of several centuries, and how the tools to understand the history of American capitalism can be applied to understanding our contemporary situation. Assignments in particular will encourage students to think about contemporary problems from historical perspectives.

Harvard Gets Medieval

MW 1200 PM - 0115 PM

Dan Smail

Course ID: 218241
2026 Spring (4 Credits)

Instructor Permission Required

How did our world come to be suffused with medieval images and motifs, and what do we learn about the past and ourselves as we begin to explore the fascinating time on the other side of the stereotypes? Starting in the late nineteenth century, Harvard got medieval. Through direct purchase and through the collecting activity of numerous alumnae/i, we began collecting all sorts of texts and artifacts generated by the medieval world of Arabic, Greek, and Latin civilizations. The things that arrived in Harvard's collections came in many forms, ranging from great architectural monuments and motifs to little stuff such as belt buckles, pilgrims' flasks, and fragments of pottery. Why did we want medieval stuff? And what have we since learned about the world from which it came? This is a course about objects and their meaning, focusing on the objects in Harvard's collections that derive from western Eurasia and North Africa between the fall of the Roman Empire to the eve of contact with the New World. The five modules in the course begin by introducing you to five objects—things, images, texts—in Harvard's collections. Each of these objects lies on the edges of canonical knowledge and therefore pose mysteries and invite questions. Our own exploration starts with the context of the object's acquisition and briefly explores what was happening in the world at the moment of its arrival. What did the acquisition of the medieval mean a hundred years ago? From there, we plunge into the past to explore the objects in their own context, working to grasp technologies, economies, social relations, and beliefs. Among other topics, we explore how medieval people imagined saints, miracles and witchcraft, as well as hell and other nasty regions of the afterworld. We explore trade networks and power structures and beliefs about others. We see how medieval peoples mapped visions of their own world, and work our way into the deep inner structures of their cognition, such as their understandings of time and calendar. Starting from the particular and moving to the general, lectures and assignments seek to frame the cultural context of each object and model how students can develop the skills they need to unpack and explain the unfamiliar. A major course-long assignment will invite students to make their own discoveries in Harvard's collections and elsewhere and to curate their own virtual gallery of objects that engages with the medieval world. The semester ends with a concrete proposal to the museum regarding areas of the collection that we need to build up to promote the concerns and issues of our own day.

GENED 1161

If There Is No God, All Is Permitted: Theism and Moral Reasoning

TR 1200 PM - 0115 PM

Jay Harris

Can we have confidence that our moral claims are true? For centuries in the West, Jewish and Christian thinkers (among others) have asserted that moral judgment is impossible without some concept of the deity. So convincing were they that one important character created by a Russian author of the nineteenth century was led to express the idea (if not exactly the words), "if there is no God, all is permitted." In more recent times some thinkers have challenged this assumption, and insisted that removing (or reducing) the role of God is indispensable to proper moral discourse. This course will examine the ways in which a concept of God has informed Western moral discourse, trying to help students engage the literature as they confront the basic question, why might one think "if there is no God, all is permitted?" and why might one think if there is a God human moral achievement is diminished or impossible. Further, we will examine ways in which the differing paradigms actually affect the moral conclusions we might generate. Belief in God and denial of God's existence have each figured prominently in Western moral discourse. Arguments have been advanced that: autonomous human reasoning is incapable of arriving at moral truths without a supreme principle to ground the system (which is sometimes invested with "personality" and called God); that autonomous human reasoning can have no impact on moral behavior due to human failure that only God can "correct"; that autonomous moral reasoning is impossible, and morality can only be understood as the submission to the will of a superior moral being; that a concept of God is necessary to direct and regulate moral reasoning, but the actual confessional versions of theism are metaphysically implausible or impossible; that autonomous human moral reasoning is impossible with God, and thus only a-theism can lead to moral conclusions. This course will engage all these different themes.

GENED 1168

Tragedy Today

MW 0130 PM - 0245 PM

Naomi Weiss

How can ancient Greek tragedy help us to address some of today's most pressing sociopolitical problems? "It's a sad tale, it's a tragedy / It's a sad song.... We're gonna sing it anyway." So sings Hermes at the start of *Hadestown*, the hit Broadway show that deals with capitalism, demagoguery, borders, and climate change. Based on the ancient artform of tragedy, this musical provokes its audiences to reflect on very modern concerns; it also, as the show's creator Anaïs Mitchell says, "lets us cry." This course is about how and why ancient Greek tragedy provides such a powerful lens for exploring some of today's most pressing sociopolitical issues. In Athens in the fifth century BCE, thousands would gather at the theater to grapple, through the medium of tragedy, with questions that continue to preoccupy us today: What happens if a woman is in power? How different are we from foreigners? Or what happens to the victims of war? 2500 years later, ancient Greek tragedy is all around us, from Broadway to hip hop to *Game of Thrones* to TV advertisements. Its adaptations can expose forms of inequity: Luis Alfaro's play *Oedipus el Rey*, for example, highlights incarceration rates among Latinx communities in 21st-century America. They can examine recent historical events that have fundamentally affected our understandings of race, conflict, and immigration, from Apartheid and the Truth and Reconciliation Commission in South Africa (Yaël Farber's *Molara*) to the ongoing civil war in Syria (*Queens of Syria*). They can also provide models for explorations of identity—as we can see when Freddie Mercury becomes Dionysus in Queen's iconic video for "I Want to Break Free." In this course you will read, watch, and listen to some of the most recent reincarnations of ancient Greek tragedies alongside the original plays. You will think about how such an old artform can change how we respond to 21st-century problems, and how it can make us think differently about ourselves.

2026 Spring (4 Credits)

Course ID: 216288
2026 Spring (4 Credits)

simple propaganda? More importantly, how can we tell China stories from perspectives outside of China? What seems beyond dispute is the power of stories to bring China to the world and the world to China. In exploring the "fictional turn" of contemporary Chinese cultural politics as it relates to the world, we will also trace its genealogy to earlier historical moments. Stories matter in China, not only in our times but also throughout history. Narrative fiction is one of the most effective ways to engage with the Chinese past and the Chinese present. Instead of presenting China as a monolithic civilization, this course uses stories to understand "the world of China" and "China in the world" from ideological, ethnic, cultural, and geo-political perspectives. The course highlights the variety and vitality of stories from both modern and pre-modern periods. In genres ranging from religious allegory to science fiction, from moral fable to fantastic romance, from philosophical anecdote to political satire, Chinese stories have enlightened, intrigued, puzzled, and scandalized readers, reflecting and constructing ever-changing worldviews.

Life and Death in the Anthropocene

MW 0130 PM - 0245 PM

Naomi Oreskes

What does it mean for us --both as a society and as individuals -- to live in a world radically remade by the human hand? In 2019, geologists voted to make the Anthropocene a time unit in the Geological Time scale. For scientists, this means that future geologists will be able to see the effects of human activities - climate change, biodiversity loss, plastic - in the stratigraphic record and thereby distinguish this epoch from the ones that came before. But what does this mean for us, as humans living at a time where millions of species are threatened with extinction, where lead pollution reaches every corner of the globe, where endocrine-disrupting chemicals threaten our sexual identity, and climate change potentially threatens the end of the world as we know it? How will we live in a world where--as the United Church of Christ Minister James Antal has put it--nature appears to have turned against us and it may feel as if we are truly alone? Is it ethical to be happy while the world around us is falling apart? Is it possible? This course will explore the diverse meanings of the Anthropocene, from scientific, technological, literary, philosophical, cultural, theological and personal perspectives, in an attempt to answer the question: What will it mean to live and die in the Anthropocene?

LGBT Literature, Politics and Identity

TR 1200 PM - 0115 PM

Instructor Permission Required

Linda Schlossberg

What is the relationship between LGBT literary representation and politics, activism, and culture? In this course, we'll learn how sexual identity and desire are understood and represented in different social and historical circumstances. We'll move beyond the binary of identifying images as "positive" or "negative," paying attention to how depictions, definitions, and understandings of sexuality are shaped by specific historical moments, as well as the aesthetic traditions and personal experiences shaping these individual works. Along the way, we'll unpack terms such as "intersectionality," "feminist," and "queer." We'll think carefully about how the evolving nature of language and terminology—for instance, the shift from "same-sex marriage" to "marriage equality"—affects political discourse and shapes our understanding of what is possible. In addition to novels, we'll look at op-eds, essays, poems, plays, photography, performance art, and film with an eye to thinking about how different genres speak to the larger world of politics, activism, citizenship, rights, and popular culture. Learning how to decode metaphors and images in novels, films, and other works will make you a more sophisticated reader of the texts that circulate outside the classroom. As you sharpen your ability to critically analyze these works as products of particular political and historical moments, you will become a more nuanced reader of the world around you, able to think critically about other texts (not only literature, but memes, videos, blogs, games, tweets, and advertising) that circulate in our own cultural moment and their crucial relationship to identity and social change.

Language in Culture and Society

MW 1030 AM - 1145 AM

Nicholas Harkness

How is verbal art -- from story-telling to poetry and from hip hop to church song -- created from linguistic and musical form, and how does its performance mediate social relations as well as construct cultural meanings that are central to our lives? The relation is complicated rather than simple, problematic rather than straightforward. To begin to explore this question, we discuss key theoretical issues and illuminating examples that begin to sketch out an approach to linking language, culture, and society. Specifically, we consider the following problems: How is language use a kind of social action? (It is something we do; it has social effects.) How does language organize and provide access to shared concepts and beliefs? (It has something to do with the way we collaborate, socially, to represent, reflect upon, and think about the world.) How do speakers think about and reflect upon language, and how do these reflections affect how they use it? (We have presuppositions about what language is and rely on these notions to orient to and situate ourselves within social worlds). Throughout the course, we develop a set of powerful analytical tools for studying both language and culture and, ultimately, for defining their role in social life.

Mexico's Culinary Roots: 10,000 Years of Food History

TR 1200 PM - 0115 PM

Instructor Permission Required

Jennifer Carballo

How have ancient food practices shaped the ways we eat today, and how can lessons from the past help us address challenges facing the future of food? GenEd 1178 focuses on the archaeology and history of the first 10,000 years of Mexican cuisine as our case study to explore these questions. We will examine Mexico's diversity of food, drink, and cultures across time and space with evidence from archaeology, anthropology, climatology, botany, genetics, history, and more, to investigate how and why various changes in Mexican cuisine took place. The origins of menu items like tacos, burritos, guacamole, and margaritas reveal critical changes in global foodways—not just in Mexico—that continue to shape our everyday lives and the world as we know it today. You will leave this course with a better understanding of where your own food comes from, and how you have been impacted by changes in food and food culture, both in the distant past and more recently, as well as how some Mexican food practices are influencing models for healthier and more sustainable food systems. We all need to eat and drink each day to nourish our bodies. Yet how often do you pause to think deeply about why you eat what you eat? Your food habits are likely influenced by family traditions, but also by a range of other factors like income, ethnicity, religion, politics, and the environment, which are facets of our lives deeply rooted in the past. What does the food we eat tell us about ourselves, as individuals, communities, and countries, and has humanity's relationship with food changed over time? How have ancient food practices shaped the ways we eat today, and how can lessons from the past help us address challenges facing the future of food?

This course has an enrollment cap and is a part of the Gen Ed lottery. The Power and Beauty of Being In Between: The Story of Armenia

TR 1030 AM - 1145 AM

Christina Maranci

How can one small, remote country change the way we think about the culture of the world? Being wedged between superpowers might seem like a recipe for ethnic assimilation and cultural conformity. Yet what if it made you stronger? In the case of Armenia, being "in-between" led to a vibrant, diverse, and resilient culture, a distinctive religious and national identity, and a dynamic diaspora. Travelling from antiquity to modernity, we will explore how Armenia and Armenians survived and thrived despite invasion, oppression, statelessness, and planned annihilation. We will explore the connections between Armenian culture and diverse traditions, including classical antiquity, the Ancient Near East, Sasanian and Islamic Iran, and the Byzantine empire, East Asia, and Europe, and the relations between Armenia and neighboring cultures of the Caucasus. We will follow the Armenian experience into the early modern period, when Armenians established a trade network reaching from the Indian subcontinent to Amsterdam, absorbing and informing a kaleidoscope of cultures along the way. We will wrap up with the survival of Armenian traditions in contemporary culture, the role of the Armenian genocide in shaping Armenian identity, including in neighboring Watertown. Finally, we will discuss the meaning of cultural

heritage for Armenians today, and explore its role at the intersection of politics, diplomacy, law, scholarship, human rights, and activism.

The Age of Anxiety: Histories, Theories, Remedies

MW 1030 AM - 1145 AM

Instructor Permission Required

Beth Blum

How have authors throughout history channeled anxiety into meaningful and imaginative works of art? The poet WH Auden described the 1940s as "the age of anxiety," but he could have been describing our own stress-ridden times: anxiety is today the most common class of contemporary mental health condition. This course pursues two guiding questions: how has anxiety changed throughout history and how has it stayed the same? And how have authors throughout history productively channeled anxiety into creating beautiful and meaningful works of art? Through a combination of readings and fieldwork, we'll investigate anxiety's potential causes, from the universal fear of death to the more historical contexts of urbanization and self-optimization, for instance, as well as its various treatments, such as stoicism, self-help, and psychopharmacology. The course combines practical and theoretical perspectives to examine the relation between anxiety and creativity and to engage with various aesthetic responses—from comedy to literature and film—to the troubles of being that anxiety designates. Smaller weekly assignments will include slow reading, technological unplugging, and proposing one improvement to the mental health culture on campus. Final project may be scholarly, creative, or a hybrid of both. Students will emerge from class readings and discussions with an understanding of anxiety as a social formation, literary preoccupation, and, when harnessed, a spur to aesthetic invention and political intervention.

AI, Computing and Thinking

MW 1200 PM - 0115 PM

Instructor Permission Required

Petros Koumoutsakos

How can AI and Computing be integrated in our thinking for solving societal and scientific challenges? We define ourselves as Homo Sapiens –wise humans– distinguished by our problem solving capabilities, and our constant development of new technologies. One of our technologies, computers, possesses a dizzying capability of acquiring, transmitting and processing massive amounts of data. Harnessing this resource requires a new form of inquiry: Computing. Computing is transforming our Thinking for solving complex problems and it is fueling the Artificial Intelligence (AI) revolution that is changing our world. This course is a guided exploration of how AI and Computing may affect our Thinking and aims to assist students to acquire the skills that computers do not possess. These include formulating problems and questions while understanding algorithmic powers and limitations and reflecting on the complementarity of artificial and natural intelligence. The course will introduce you to elementary algorithmic and programming concepts, discuss data driven and first principle models, argue about evidence, uncertainty and decision making aided by computing and AI. You will leave this course better prepared to assess the role of AI and Computing in society and technology and become more aware of the vehicles that will empower your journey into AI and Computing that may change the future definition of "Sapiens".

U.S. K-12 Schools: Assumptions, Binaries, and Controversies

T 0900 AM - 1145 AM

Instructor Permission Required

What if schools were for learning instead of education? You will be involved in education your whole life. As a taxpayer, voter, or parent, you will be connected with formal schooling. You will almost certainly be in the role of teacher at various points in your life, whether in a classroom, in another professional setting, or guiding someone in something you love to do. Leaders in any field are teachers and coaches--they develop the people around them to bring their full potential to some shared ambition. You will also be in the role of learner throughout your life in a variety of forms and contexts. Precisely because we are all learners and teachers and we've all had some direct experience with K-12 schools, everyone has interests and opinions about schools. Yet, U.S. K-12 schools are consistently failing to serve all children well. This course will prepare you to recognize the assumptions, binaries, and controversies that drive much of the sound and substance of U.S. K-12 education, and replace those with a different ABCs: awareness, both-and thinking, and context. Learning can get lost in all the noise of education. What would it look like to make schools less about achievement and attainment and more about learning--and what can be your contribution, no matter your future pathways?

Philanthropy, Nonprofits, and the Social Good

2026 Spring (4 Credits)

T 1200 PM - 0245 PM

Instructor Permission Required

Shai Dromi

How can we most effectively harness the power of philanthropic giving and nonprofit work to create positive social change and address society's most pressing challenges? How can charitable giving and nonprofit work be used to foster positive social impact? This course investigates this question by introducing students to the nature of philanthropy and nonprofit organizations, and their influence on civil society. Most moral and religious frameworks uphold some form of benevolence and charity, yet societies differ in their views of philanthropy and nonprofits. We will consider social scientific perspectives on charitable giving and apply them to topics like competing philosophies of giving and the relationship between philanthropic and state programs. Issues of social responsibility for billionaire and corporate philanthropic actors will also be addressed. The course offers two unique activity-based learning opportunities to gain skills and experience. First, students will work in groups to identify and evaluate nonprofits as potential recipients of a donation provided by the Philanthropy Lab. They will assess how a donation could impact these organizations. Second, through a partnership with the Lemann Program on Creativity and Entrepreneurship, student groups will develop their own nonprofit ventures. Ventures will receive startup funding, and successful teams will compete for additional funding. The course will also offer guest lectures and workshops on entrepreneurship to support venture development. Through class discussions and hands-on activities, students will gain an understanding of how charitable giving and nonprofit work can be leveraged to create positive social change.

Course Note: You may not enroll in this course if you have previously taken SOC 131 or SOC 1131.

Philosophy of Technology: From Marx and Heidegger to Artificial Intelligence

2026 Spring (4 Credits)

MW 1030 AM - 1145 AM

Mathias Risse

Is technology good, bad, or neutral – and if good, should we make it central to solving all our problems; if bad, should we radically change our ways; and if neutral, then what else should be the focus as we look for solutions to global problems? Technology shapes how power is exercised in society, and thereby also shapes how the present changes into the future. Technological innovation is all around us, and new possibilities in fields like artificial intelligence, genome-editing and geoengineering not only reallocate power, but might transform human life itself considerably, to the point of modifying the essence of what it is to be human. While ethical considerations enter prominently, the philosophy of technology is broader than its ethics. It aims to interpret and critically assess the role of technology for human life and guide us to a more thoughtful integration of technology in our individual lives and in public decision making. This course aims to teach you to do just that, starting with basic stances and key figures in the field and then progressing towards a number of challenges around specific types of technology as they arise for the 21st century. At times it is tech optimism that dominates these debates (sometimes even techno-boosterism that sees technology as key to heaven on earth), at other times it is more low-spirited attitudes from Romantic uneasiness to doom-and-gloom Luddism and technology-bashing. A closer look at these attitudes – alongside reflection on how technology and power are intertwined – will help generate a more skeptical attitude towards all of them and contribute to more level-headed debates, which are badly needed.

GENED 1195

Eating Culture: Past, Present, and Future

Course ID: 224393
2026 Spring (4 Credits)

MW 1200 PM - 0115 PM

Joseph Nagy

How and why do we humans "play" with the food we eat, and on which we depend for our lives, in so many different ways—creatively, profoundly, and consequentially? This interdisciplinary course is dedicated to exploring the proposition that the act of eating, in human civilizations from ancient to contemporary, and all the processes associated with eating—including finding, making, enjoying, and talking about food; feasting and fasting; digestion and its expected consequences and effects—that all these constitute a culture, a complex system of shared practices, beliefs, and worldview that both reflects and "feeds into" the cultures of particular communities. To understand a people's foodways (including what people like to eat or drink, and how they like to prepare it) is to gain insight into how they view themselves, interact with each other, and conceptualize their relationships with other communities. In this course we test the proposition that, when we humans eat or drink, whether we realize it or not, we are consuming, digesting, and ruminating with (in both a literal and metaphorical sense!) culture.

Tradition in Everyday Life

Course ID: 224414
2025 Fall (4 Credits)

MW 0130 PM - 0245 PM

Sarah Craycraft

How do groups express themselves creatively in everyday life, and how do these group expressions reflect our individual experiences of the world? What does a jar of homemade pickles have in common with the boisterous chants of the Harvard-Yale game? Both are artful expressions of communal, traditional culture in everyday life! Beyond the walls of museum galleries, creative expression exists all around us in surprising forms, shaped through individual and communal creation. In this course, you will learn to recognize and evaluate diverse expressions of traditional culture, from Harvard Lore to annual family traditions, to community festivals, to social media culture. Course readings introduce you to a variety of traditional texts (forms of expressive traditional culture); contexts (the sites and occasions where traditional expressive culture is performed); and textures (aesthetics, or the culturally informed, group-based parameters that shape traditional culture). You will complete small collection projects to look for and describe expressive traditions, and these exercises will culminate in your own capstone ethnographic project in which you document, analyze, and creatively present an expressive tradition of your choice. The course prepares you to see artful expressivity in everyday life, rethinking the universality of concepts often attached to creative expression such as 'beauty,' 'art,' 'individual genius,' 'progress,' 'ownership,' 'expertise,' 'agency,' and even time itself.

Grimm's Fairy Tales: Echoes of the Past, Reflections of the Present

Course ID: 224850
2026 Spring (4 Credits)

TR 1030 AM - 1145 AM

Instructor Permission Required

Ekaterina Pirozhenko

What do fairy tales reveal about universal human experiences such as birth, death, love, jealousy, discrimination, dreams, growth, resilience, and empowerment? We all tell stories, adapting them to reflect our values and making them relevant to our times. By analyzing texts from Jacob and Wilhelm Grimm's influential collection *Children's and Household Tales*, comparing them to similar fairy tales from other cultures, and examining the contributions of visual artists to these transformations, we will explore pressing human questions such as love and desire, infertility and procreation, trust and betrayal, hunger and abundance, parental guidance and child abuse, and the discriminatory practices embedded in these texts, and demonstrate the universality and particularity of such stories and their impact on society at large. By the end of this course, you will have a thorough understanding of fairy tale archetypes and plot structures, various scholarly perspectives on these tales, an awareness of intertextuality, and the ability to analyze stories with multiple layers of meaning. You will also be able to reassess how you and those around you tell stories.

GENED 1198

Ancient Global Economies

TR 1030 AM - 1145 AM

Irene Soto Marin

Course ID: 226251
2025 Fall (4 Credits)*Instructor Permission Required*

Is today's global economy truly more advanced and complex than the systems that shaped the world in the ancient past? Requiring no prior knowledge of economics or ancient history, the aim of this course is to introduce students to the nature of global economic systems by looking at the complex and sophisticated nature of different types of economic enterprises in antiquity. In our modern global economies, different markets are internationally intertwined, as technological advances have allowed for swift communication and economic dependence between practically all areas of the world. The shipping industry might be a salient example of this, where one cargo ship got stuck in the Suez Canal in 2021 and blocked the channel for six days, stranding ca. 400 vessels and delaying between \$6 and \$10 billion in trade per day, attesting to the importance of this trade route for the global economy. Yet, the use of this route for large scale long-distance sea voyages can be traced back at least to the Roman period, where there is evidence of cargo ships traveling from Muziris, India to the Red Sea Coast of Egypt, carrying with them 635 tonnes of cargo meant to travel all the way to Alexandria and Rome, and worth around 7 million Roman sesterces, the equivalent of the salary of seven senators at the time. In this case the ancient and the modern don't seem so different. By analyzing the global connections of well-known ancient civilizations such as the Assyrian, Egyptian, Macedonian, Roman, and Palmyrene Empires, students will learn to see similarities to our own current global economic enterprises and learn not only of the challenges but also the social injustices and exploitation that take place in these global enterprises. Another particularly poignant example is the week where we study ancient global pandemics, seeing the ways in which they affected the labor force, the lower classes, agricultural production, and even politics, much like during our recent COVID-19 pandemic. Furthermore, students will learn how to dissect historical and analytical narratives that utilize quantitative and qualitative data sets through selected case studies spanning millennia between them. For example, the class covers the economic logistics of the military conquests of Alexander, the constructions of the pyramids of Old Kingdom Egypt, the economic and human price of urban development of the city of Rome, and the capital investment and merchant networks required for the long-distance trade along the Silk Roads and Indian Ocean trade routes.

GENED 1199

Learning and Unlearning

T 1245 PM - 0245 PM

Liao Cheng

Course ID: 226290
2025 Fall (4 Credits)*Instructor Permission Required*

How do we learn and why? From birth, we embark on a lifelong journey of learning that shapes nearly everything we know and do, and ultimately who we become. Yet, we often fail to examine the implicit assumptions and approaches underlying our learning. In addition, we often overlook the importance of unlearning – the process of letting go of inaccurate information, misguided beliefs, harmful biases, limiting mindsets, and unproductive habits to make room for new learning. Unlearning has always been essential for replacing outdated and simplistic ideas with updated and sophisticated ones. Today, it has become even more critical due to contemporary challenges such as societal polarization and media echo chambers, the impact of generative AI and other technologies on traditional practices, the necessity for challenging the status quo to envision a more just society, and the urgent need for dialogue, understanding, and empathy in an increasingly tribalistic world. Intentionally examining the purposes and processes of learning and unlearning will help us become more effective (un)learners, and ultimately, illuminate how these processes can foster human flourishing in our current world and for future generations. In this course, we will engage with fundamental questions and debates, including: What does it mean to learn and unlearn? How do individuals prioritize the diverse purposes of learning, such as cultivating intellect, developing moral values, fostering personal growth, preparing for citizenship, and beyond? How do our experiences and cultural contexts influence our understanding of learning? How do we learn, and why do we learn in the ways that we do? When do we feel motivated or demotivated? How do schools nurture or stifle children's natural curiosity? Do students learn better through teachers' instruction or independent exploration? How do we monitor, evaluate, and adjust our own learning processes? How might generative AI be used to

support or hinder learning? How do we decide what is worth learning and what should be unlearned? Why do we struggle to change our minds and habits, and what strategies can effectively facilitate this transformation? We will examine the cognitive, metacognitive or self-reflective, emotional, social, and moral dimensions of learning and unlearning. We will use a cross-cultural and interdisciplinary lens, analyzing cases from East Asian and Western cultures and draw insights from psychology, neuroscience, education, and philosophy. Class sessions are highly interactive and emphasize active learning. Students will engage in a range of activities including lectures, discussions, debates, case studies, interviews, group teaching exercise, storytelling, guest speaker sessions, and reflections on both personal learning processes and the pedagogical design of this course. This course welcomes all students to enroll and requires no prerequisites.

This course has an enrollment cap and is a part of the Gen Ed lottery. Unity and Division

TR 1030 AM - 1145 AM

Ryan Enos

Course ID: 226303
2026 Spring (4 Credits)

Instructor Permission Required

How can diverse societies be successful? Diversity is a fundamental problem and fundamental advantage of the human condition. If humans were all the same, free of identity, ideology, or culture, then many social scourges—prejudice, discrimination, perhaps even some violent conflict—would be dramatically reduced, if not eliminated. But with diversity also comes the wonderful variation that allows for the forces of evolution and innovation to better societies. In response to this tension, humans have created institutions to manage diversity by regulating conflict and reconciling differences of opinion. Politics is the process of navigating these difference managing institutions. The problem of politics then is the problem of diversity. Drawing on the disciplines of political science, psychology, economics, and philosophy, this course examines the question of how diverse societies and institutions can be successful. The course ultimately aims to provide students with the tools to be informed citizens and leaders in a diverse society. In the first part of the course, we start with the psychology of division, examining the basic question of why there is variation between humans and why this variation affects our social behavior. We then examine the consequences of diversity. Why does diversity make the necessary elements of society, such as coordination, difficult? In the second part of the course, we will draw primarily on philosophy to ask if diversity is a desirable state for societies and institutions or if societies should rather seek homogeneity. Having considered these questions, in the third part of the course we examine how political institutions manage diversity by employing different strategies, sometimes strategies of division and sometimes strategies of creating unity. Drawing on classic works of political theory and contemporary political science, we will examine institutions, including ethnonationalist and multicultural states, constitutions, and other institutions that are created to successfully manage diversity. Finally, in the fourth part of the course, we will examine the public policy of managing diversity. How do societies choose to manage public spaces, restrict flows of immigration, and create institutions, such as schools, to reconcile a diversity of interests.

How the Germans Embraced Hitler: Politics, Culture & the Death of Democracy in Germany, 1918-1945

TR 1030 AM - 1145 AM

David Spreen

Course ID: 226256
2025 Fall (4 Credits)

Instructor Permission Required

In a time where modern democracies across the world face challenges, what can (and can't) we learn from the collapse of German democracy and the rise of Hitler between the two World Wars? Comparisons with fascism are yet again en vogue. Whether from the Left or the Right of the political spectrum, if statements about political opponents are to be believed, there are Nazis everywhere. Leaving aside such facile comparisons and analogies, this course offers an in-depth case study of Germany's path from a democracy full of promise and possibility to that democracy's collapse into tyranny, war, and the Holocaust. We will work extensively with primary sources including contemporary eye witness accounts, political and economic commentary, art, and literature to explore the rise of National Socialism in the context of the politics, culture, and economics of Germany after the First World War before turning to the way the Nazis managed to seize the state, remake

German society after 1933, and plunge Europe into war and genocide by the end of the decade. The course will debunk the many myths about the roots of Nazism and work towards an explanation of its rise that does justice to the complexities of lived experience between the two World Wars. With an eye towards the active nature of democratic citizenship, the course will emphasize the many junctures at which the ascend of National Socialism could have been prevented by people from the various corners of interwar Germany's political spectrum.

This course has an enrollment cap and is a part of the Gen Ed lottery. The Gen Ed lottery will run Wednesday, April 9; if you are successful in the lottery, your course petition in your Crimson Cart will turn to a green check that allows you to enroll. You will have until 11:59 p.m. EST Friday, April 11, to claim your seat. After that time, enrollment will open up to non-lottery petitioners. Please note: Only a green checkmark indicates success in the lottery. If you see either "petition pending" or a red X, it means that your petition was unsuccessful. If this is the case and you would still like to try to enroll in the course, please submit a new petition after the lottery. For timely updates and detailed instructions about entering the Gen Ed lottery, please see <https://gened.college.harvard.edu/courses/registration-and-lottery/>

GENED 1204

Why Democracy?

TR 1200 PM - 0115 PM

Daniel Ziblatt

What gives rise to democracies and what leads them to die? What is democracy? What gives rise to it and what leads it to die? This is a globally focused, historically grounded course in which we explore the origins, successes, and failures of democratic systems around the world from the 18th century to today. Through case studies ranging from the U.S. Constitution and Weimar Germany to contemporary Hungary and India, students will gain a deeper understanding of how democracies are built—and how they unravel. The course will focus on the difficult decisions leaders and citizens have had to make in fraught moments to ask what lessons we can learn about how citizens and leaders today can effectively defend democracy. The aim of the course is to learn from the past to understand what causes democracy to succeed and fail today and what can be done to defend it.

GENED 1205

The Power, Art, and Technology of Writing in East Asia

MW 0130 PM - 0245 PM

Si Nae Park, Thomas Kelly

How does writing as art and technology shape the ways in which humans imagine, generate, and use power? This course examines how humans experience, use, and build meaning around the shape of writing, focusing on East Asia across time, place, and media. Centered on a broad, enduring question about writing's role in society, students engage with materials from literature, art history, history of the book, linguistic anthropology, archaeology, and philosophy. By using materials that are both immediate to, and yet distant from, students' lives, the course seeks to enhance students' aesthetic and interpretive understanding of the world, to provide students with an understanding of the social and historical contexts for the development of various technologies related to the production, transmission, and refabrication of the written word in association with power in a variety of ways. By exploring everything from urban graffiti and online protests to ancient tombs and Buddhist temples to petroglyphs and white-paper protests, students will analyze writing's impact on identity, authority, spirituality, and artistic expression and learn through field works and hands-on experiences such as visits to Harvard's East Asian collections and workshops on calligraphy and ink-making. The course encourages reflection on how writing mediates power and social change, offering insights into both historical and contemporary practices. All students are invited to think beyond nation-centered and Eurocentric models, developing a nuanced understanding of writing as both art and technology. The course equips students to think critically about the role of writing in an age shaped by generative AI and large language models. No prior knowledge of East Asian languages is required.

Asian Americans as an American Paradox

T 1200 PM - 0245 PM

Course ID: 226611
2026 Spring (4 Credits)

Course ID: 226619
2026 Spring (4 Credits)

Course ID: 226727
2026 Spring (4 Credits)

How have paradoxical conceptions of Asian Americans informed Asian American history, culture, and politics, shaping modern America and the world? This course examines how paradoxical conceptions of Asian Americans have informed the identities, experiences, and political and creative contributions of peoples of Asian descent in the United States while shaping national debates concerning race relations, immigration, and foreign policy. We will explore the contradictory positions Asian Americans have had to occupy as both colonial subjects and settlers, "model minorities" and "the yellow peril," foreign friends and enemies, and people of color and "honorary whites," and consider their implications for US and transnational histories, politics, and culture.

One Hundred Years of Scandinavian Cinema

M 1200 PM - 0245 PM

Agnes Broome

Course ID: 159715
2026 Spring (4 Credits)

Instructor Permission Required

This course explores Scandinavian cinema from the pioneers of the silent era to the globally successful hit films of the present day. Students will trace the development of Scandinavian cinema through the films of directors such as Viktor Sjöström, Carl Th. Dreyer, Lars von Trier, Ingmar Bergman and Lukas Moodysson and discover the profound influence the region's films have had, and continue to have, on filmmaking in America and the world.

Course Note: Conducted in English.

Ekaterina Pirozhenko

This course is designed to further students' spoken and written German at the advanced level. Students will analyze and practice the stylistic and rhetorical features of various written and spoken genres. By focusing on aspects of contemporary society in the German-speaking countries, students will broaden and refine their vocabulary and idiom, become sensitized to different registers, as well as hone points of grammar.

Course Note: Conducted in German.

German 61, equivalent preparation, or permission of the instructor.

Crime

MW 1030 AM - 1145 AM

*Instructor Permission Required**Ekaterina Pirozhenko*

This course explores the theme of crime in German-language literature and culture, from classic texts to modern crime stories. We will analyze the portrayal of crime, guilt, punishment, innocence, and justice in short stories, novellas, novels, dramas, films, and series. We will make connections between fiction and real-life criminal cases. How do literary works reflect societal notions of morality and law? What role do psychological, social, and cultural factors, as well as gender roles, social class, race, ethnicity, and national identities, play in the depiction of crime in literature, film, and media outlets? We will read canonical crime literature by E.T.A. Hoffmann, Annette von Droste-Hülshoff, Ferdinand von Schirach, Wilhelm Busch, and Friedrich Dürrenmatt, as well as works by Wilhelm Hauff, Heinrich Kleist, Thomas Mann, Jeremias Gotthelf, Bertolt Brecht, Hannah Arendt, May Ayim, along with contemporary writers and journalistic reports on current crimes. We will also discuss films by Michael Haneke, Doris Dörrie, Oliver Hirschbiegel, Tom Tykwer, and Fatih Akin. We will read, watch, discuss, and write in German and work on refining grammar and style and expanding vocabulary.

Course Note: Course taught in German.

At least one 60-level course in German.

FAS Divisional Distribution: Arts and Humanities

German Drama and Theater

WF 1030 AM - 1145 AM

*Instructor Permission Required**Lisa Parkes*

Close reading, analysis, and full production of a play in German. The first part provides an introduction to a small selection of dramas, dramatic theory, the vocabulary of theater, as well as intensive pronunciation practice. The second part focuses on the rehearsal and production of a German play. Students participate on stage and collaborate on different aspects of the production, including costumes, set, sound, and program. Two performances take place at the end of term. Conducted in German.

Course Note: Conducted in German. Class meets for one hour twice weekly during weeks 1-5; the remaining weeks are reserved for two-hour rehearsals at the scheduled time.

FAS: Meets Foreign Lang Req: German

German through Community Engagement

F 0945 AM - 1145 AM

*Instructor Permission Required**Lisa Parkes*

This course provides an opportunity for professional development and civic engagement through team-teaching in a local school. By volunteering in an after-school program once a week, you will apply your own German language skills beyond campus as you create enriching learning experiences for younger students. You receive language and pedagogical training, develop lesson plans, and co-lead sessions. We also explore current issues in the German-language educational landscape as represented in literature and film.

Course Note: Conducted in German. After-school program: TBA.

Credit counts towards the Certificate for Civic Engagement.

Prerequisite: A minimum of intermediate-level German (20b or equivalent).

Your Brain on Poetry

M 1245 PM - 0245 PM

Anne Dymek

Course ID: 223012
2025 Fall (4 Credits)

Instructor Permission Required

Poetry is a powerful tool for expressing and exploring the human experience. But what is it about poetry that allows it to connect with us so deeply? What can we learn about the workings of the brain, the mind, and the nature of human experience through the study of poetry, and vice versa? In this course, we delve into the science and art of poetic expression, reception, and interpretation, drawing on insights from literary and cultural studies, neuroscience, philosophy, and (psycho)linguistics. We will unravel how poetry captivates our cognition and ignites our imagination, offering profound insights into the intricate interplay between this art and the human psyche.

Course Note: Jointly offered with Faculty of Arts and Sciences as German 113. Credit may be earned for MBB980BB or German 113, but not both. Enrollment via lottery; consult <https://mbb.harvard.edu/seminars> for lottery deadline, instructions, and link. Preference to students in Germanic Languages and Literatures and to juniors in MBB tracks or MBB secondary field. Course content inquiries to annedymek@fas.harvard.edu.

GERMAN 159 (1)

100 Years of Queer German Cinema

W 1200 PM - 0245 PM

Anne Dymek

Course ID: 224434
2026 Spring (4 Credits)

German Queer cinema played a pivotal role in the emergence of LGBTQ+ representation on celluloid. We'll delve into the groundbreaking contributions of German filmmakers, exemplified by productions like Richard Oswald's seminal work, "Different From the Others," a revolutionary silent melodrama that boldly challenged the oppressive laws of Paragraph 175, which criminalized homosexuality during the Weimar Republic era. Throughout the past century, German cinema has continued to blaze trails, offering a diverse array of films exploring the lives and experiences of LGBTQ+ individuals and communities. In this course, we will delve into the socio-historical underpinnings surrounding these cinematic landmarks, concurrently engaging in a nuanced analysis of the cinematic language employed to articulate Queer narratives. We will integrate theoretical, documentary, and poetic readings spanning Queer culture, European history, and film theory. Our course will be complemented by a series of film screenings at the renowned Brattle Cinema, featuring a curated selection of eight German Queer films. Instruction and readings are in English.

Course Note: This course is cross-listed in WGS and AFVS.

FAS Divisional Distribution: Arts and Humanities

GERMAN 165 (1)

Postmodern Prose: Literature in the Age of Electronic Media

R 1200 PM - 0200 PM

William Stewart

Course ID: 226357
2025 Fall (4 Credits)

If one of the end-stations of modernism's grand narratives was Nazism, then the attempts to move beyond a fascist past in the decades following Germany's defeat in the Second World War represent a distinctly German mode of postmodernism. The social and political manifestations of this long postmodernism—a divided Germany, the threat of nuclear war, the rise of the information age, the development of globalist identities and ecological awareness, a "reunified" Germany—are characterized by enormous rupture, discontinuity, and instability. Literary forms in this period are no different: the death of the author, a growing discontent with the realist novel, and the relegation of literature to a subset of media are all symptoms of an age in which fiction has come to question its own legitimacy. By the same token, however, this period also witnesses exhilarating experimentation and groundbreaking formal shifts that continue to influence our notions of what is possible in literature up to the present day. This course surveys key contributions to the literary avant-garde in German-

speaking postmodern contexts. We will study a range of prose fiction by major authors from West Germany, East Germany, postwar Austria, and a post-Wall Germany, including Thomas Bernhard, Uwe Johnson, Christa Wolf, Alexander Kluge, W.G. Sebald, Rainald Goetz, and Jenny Erpenbeck. The course will consider problems of authorship, the challenges to constructing subjecthood, the boundaries between the fictional and non-fictional, the influence of electronic media on prose forms, the relation of text to image, the response of fiction to market forces and historical trauma—and how each of these topics contributes to our understanding of the often overused signifier "postmodernism." This course will also examine a sample of key theoretical texts on the failure of modernism and whatever must come after it by Theodor W. Adorno, Roland Barthes, Fredric Jameson, Audre Lorde, and Jean-Francois Lyotard. Students will leave this seminar with a strong command of the ideas, styles, and provocations found in German literature from the end of World War II to the contemporary moment, as well as a clear idea of the debates and stakes at the heart of postmodernism in Western contexts.

Course Note: Readings in German or English, discussion in English.

FAS Divisional Distribution: Arts and Humanities

GERMAN 172 (1)

Cinematic Angst: The Aesthetics of Darkness and Disquiet

R 1200 PM - 0245 PM

Anne Dymek

Course ID: 226354
2025 Fall (4 Credits)

Instructor Permission Required

Stanley Cavell observed that the latent anxiety in viewing films stems from the medium's relentless demonstration that our convictions about reality rest on fragile foundations. Cinema, by its very form, presents a world that is both present and absent, immersive yet untouchable, exposing the instability of meaning and the uncertainty of reality. Kierkegaard describes angst as "the dizziness of freedom," while Heidegger sees it as a fundamental mood that reveals the "groundless ground" of our human existence. Film does not merely depict these tensions—it enacts them through its very form. Its aesthetic and structural choices manipulate time, space, and perspective, drawing the viewer into an experience where meaning and reality are unstable. We will analyze the work of seminal directors, including Luis Buñuel, Fritz Lang, Carl Dreyer, Andrei Tarkovsky, Alfred Hitchcock, Stanley Kubrick, Rainer Werner Fassbinder, Lars von Trier, Ari Aster, Kiyoshi Kurosawa, David Lynch, and Michael Haneke. Through weekly screenings and critical readings in film theory, psychology, as well as philosophy, the seminar interrogates how cinematic strategies construct an aesthetic of darkness and disquiet, engaging with broader notions of angst and the elusive logic of the unconscious.

Course Note: Language of instruction: English.

GERMAN 173 (1)

German Poetry Today

T 1200 PM - 0245 PM

Simone Stirner

Course ID: 226327
2025 Fall (4 Credits)

The course introduces students to the rich and vibrant landscape of contemporary German poetry and considers how poetry participates in the social, political, and emotional fabric of Germany today. We will talk rhythm and meter, discuss politics and pop culture, consider forms of intermediality and multilingualism, engage with poetry films and performance art, to assess not only what poems mean but also how they are protesting, mourning, remembering, loving, dreaming up futures—in German today. Practicing close analysis and attentive reading, we chart the formal innovations of individual poems alongside an understanding of broader trends in German literature and culture. Guest speakers include a poet, a translator, and a poetry editor who will connect us to the contemporary scene of poetry festivals and publishing houses in Germany. Poetry by Semra Ertan, May Ayim, Durs Grünbein, Monika Rinck, Marion Poschmann, Ann Cotten, Esther Dischereit, Yoko Tawada, Jan Wagner, Max Czollek, Dunajcsik Mátyás, and others.

GERMAN 188 (1)

Angst, Sex, and Dreams: the Psychoanalytic Worlds of Freud, Kafka, and Bachmann

W 0300 PM - 0500 PM

William Stewart

Course ID: 223073
2025 Fall (4 Credits)

This course examines three German-language writers whose works establish foundational critiques of modern

Western society. Why do we all seem to feel so discontent? What explains the differences between our conscious and unconscious thoughts? Why is our sexuality so fraught and yet so central to our lives? And is there a link between analysis of our inner selves and the preponderance of legal, bureaucratic, and administrative regimes that can turn waking life into a nightmare? Focussing on selected essays, lectures, and works of fiction by Sigmund Freud, Franz Kafka, and Ingeborg Bachmann, this course will develop tools to analyze the human psyche as it manifests in texts, actions, and social systems.

Course Note: Discussion in English, readings in English and optionally in German.

FAS Divisional Distribution: Arts and Humanities

GERMAN 192 (1)

Artificial Intelligences: Body, Art, and Technology in Modern Germany

Course ID: 220183
2026 Spring (4 Credits)

W 0300 PM - 0500 PM

William Stewart

Recent developments in artificial intelligence—most notably OpenAI's DALL-E and ChatGPT—have revealed an acute need for critical thinking about the social, aesthetic, and philosophical implications of these technologies. What do they tell us about the difference between the real and the artificial, the mechanical and the organic, or the body and the prosthetic? This course examines how ideas about these topics have developed over the past century alongside discussions of gender, personhood, and reality. We will deepen our notions of both "artifice" and "intelligence" by tracing a longer history in modernity of creative acts that blur the lines between the human and the machine. With an emphasis on visual material and three artistic media in particular—dance/performance, photography, and moving images—we will consider the human's changing relationship to technology in the 20th and 21st centuries, and the social and political ramifications of that relationship. The class will take advantage of Harvard's extensive art collections, with most of our meetings taking place in the Busch-Reisinger Museum and the Harvard Film Archive. This course provides an introduction to visual cultures, German media theory, and gender studies and will be conducted in English. No background in art history is necessary.

Course Note: Taught in English.

FAS Divisional Distribution: Arts and Humanities

GERMAN 260 (1)

Posthumanism

Course ID: 216389
2026 Spring (4 Credits)

T 1200 PM - 0245 PM

Nicole Suetterlin

What does it mean to be human in the 21st century? This question lies at the heart of the transdisciplinary approach known as posthumanism. In this time of increasing social and environmental injustices, the fast-growing field of the posthumanities challenges the patriarchal, colonialist, and anthropocentric paradigms underlying the Western tradition. This course focuses on a key player in posthuman ethics: the body. How does the literary imagination envision multispecies, multiracial, and gender-fluid bodies, selves, and societies that are inclusive of marginalized communities, be they human or other-than-human? This course explores how contemporary German literature helps us develop ethical frameworks for our fragile 21st-century ecologies. Topics include: Anthropocene, multispecies justice, gender and sexuality, Afrofuturism, algorithmic justice, diaspora and migration, ecofeminism, eco-materialism. Readings include German-language authors such as Dietmar Dath, Olga Flor, Sharon Dodua Otoo, Sasha Marianna Salzmann, and Ilija Trojanow, American authors such as Nnedi Okorafor and Richard Powers, and cultural theorists such as Donna Haraway, Saidiya Hartman, Bruno Latour, and Paul Preciado.

Course Note: Discussions in English, readings in English and German. Proficiency in German is not required for this course: most texts have been translated into English, and English-language alternatives will be provided for texts where English translations are not available. Undergraduates welcome.

GERMAN 275 (1)

The German Ecological Imagination

Course ID: 220185
2025 Fall (4 Credits)

W 0300 PM - 0545 PM

Daniel Carranza

It is common to read in the paper about the coming climate crisis, framed as a matter of saving the environment or planet. Less often invoked, however, is an older, more metaphysical notion of 'nature naturing' actively (natura

naturans). When (if ever) did the concept of the 'environment' replace that of nature? What are the exact differences between the terms we use to refer to the planet as our shared home, whether 'nature,' '(e/E)arth,' 'world,' 'environment,' 'planet,' or 'globe'? And what ramifications might the semantic shifts between these six terms have for current environmental debates?] This interdisciplinary course asks these questions by examining three phases in the history of the idea of nature as instigated by key German poets, thinkers, and visual artists. Beginning with the period around 1800, we will reconstruct the tensions animating Romanticism's holistic conception of nature by reading works by Kant, Goethe, Schelling, and Alexander von Humboldt, while the landscape paintings of Caspar David Friedrich will furnish our artistic case study. Turning to the first half of the twentieth century, we will encounter the first use of the German term Umwelt ('environment') in its modern sense in the work of theoretical biologist Jakob von Uexküll, who was friends with the poet Rainer Maria Rilke. We will reconstruct Martin Heidegger's critique of modern technology and compare and contrast his conception of the artwork's ties to 'earth' and 'world' vis-à-vis comparison to Schelling's theory of the artwork's relation to nature. Our exemplary artist for this second phase is Paul Klee, who grounded his aesthetic vision in nature's formative processes. Approaching our contemporary moment, we will read literary works by W.G. Sebald while attending to the political and communicative vicissitudes of coming to societal awareness of a transhistorical phenomenon such as climate change. Joseph Beuys's politico-aesthetic agitations and the first photos of the Earth taken from outer space provide our last artistic case studies. German students and majors will meet in an additional weekly section to discuss excerpts of select texts in German.

FAS Divisional Distribution: Arts and Humanities

GERMAN 277 (1)

Creative Non-Fiction

M 0300 PM - 0545 PM

Simone Stinner

Course ID: 226328
2025 Fall (4 Credits)

In this seminar, we will study contemporary forms of creative non-fiction—narrative and poetic non-fiction, literary journalism, personal essay, autotheory—in a cross-historical perspective. We consider how these often hybrid and experimental forms of writing articulate the relation between personal biography, historiography, and theory; study their errant genealogies; follow how aesthetic form comes to intersect with forms of lived experience; and collectively think about the stakes and limitations of creative, non-fictional modes for expressions of embodiment, subjectivity, and historical understanding. Primary readings by (among other) Alexander Kluge, Carolin Emcke, Esther Dischereit, José F.A. Oliver, Kim de l'Horizon and Şeyda Kurt will be discussed alongside historical examples and theoretical texts from German and other language traditions, including works by Walter Benjamin, Annemarie Schwarzenbach, Roland Barthes, Didier Eribon, Saidiya Hartman, Donna Haraway, and Maggie Nelson. Our discussions will be supplemented by writing workshops where students have the opportunity to develop their own pieces of creative non-fiction in dialogue with our theoretical reflections.

Course Note: Class discussions in English. Readings in German and English.

GERMAN 291 (1)

Questions of Theory

F 0900 AM - 1145 AM

John T. Hamilton, Jeffrey Schnapp

Course ID: 203281
2025 Fall (4 Credits)

To explore key literary, cultural and critical theories, we pose questions through readings of classic and contemporary theorists, from Aristotle to Kant, Schiller, Arendt, Barthes, Foucault, Glissant, Ortiz, Kittler, and

Butler, among others. Their approaches include aesthetics, (post)structuralism, (post)colonialism, media theory, gender theory, ecocriticism. Each seminar addresses a core reading and a cluster of variations. Weekly writing assignments will formulate a question that addresses the core texts to prepare for in-class discussions and interpretive activities.

Course Note: Conducted in English. This course is offered as ROM-STD 201 and GERMAN 291. Credit may be earned for one course only.

Global Health and Health Policy 20: Maternal and Reproductive Health and Health Policy: What Do We Know? How Do We Know It? What Are We Doing About It? This course will introduce students to the dominant issues in reproductive, maternal, and newborn health—including determinants of health care access, equity, quality, and outcomes—while exploring how evidence is generated and the complex translation of evidence into policy. We will consider a range of programmatic and policy approaches to improving maternal and reproductive health and unpack why some have worked and some have not. We will read and discuss research from a range of settings, including the United States and low- and middle-income countries. A primary goal of the course will be to sharpen students' ability to think critically about the measurement and evaluation of health care programs and to expose them to the tradeoffs inherent in different approaches to evidence generation and dissemination. Readings and coursework will introduce students to, or deepen their familiarity with, approaches to causal inference, including randomized controlled trials and "natural experiments." Throughout the course we will discuss the implications of health policy choices, health system designs, and clinical guidelines for maternal-reproductive health equity, both within and across countries. Some sessions will include guest speakers, who are experts in the field of maternal health, including clinicians, researchers, policy-makers, and advocates.

Course Note: Lotteried course; enrollment limited to 25.

Some familiarity with statistics is beneficial, but not required

The Quality of Health Care in America

TR 0300 PM - 0415 PM

Anupam Jena

Course ID: 114957
2025 Fall (4 Credits)

Instructor Permission Required

Offers information and experiences regarding the most important issues and challenges in health care quality. Overview of the dimensions of quality of care, including outcomes, overuse, underuse, variation in practice patterns, errors and threats to patient safety, service flaws, and forms of waste. Each session focuses on one specific issue, exploring patterns of performance, data sources, costs, causes, and remedies. Explores desirable properties of health care systems that perform at high levels in many dimensions of quality.

Course Note: Lotteried course; enrollment limited to 42.

Humanitarian Response to Conflict and Disasters

W 0300 PM - 0500 PM

Michael VanRooyen

Course ID: 161268
2026 Spring (4 Credits)

Instructor Permission Required

Global conflict, climate change, forced migration of refugees have increased in scale and complexity. How should the world respond when war and disasters force people from their homes? How can we better help the world's civilian populations in such extreme circumstances? This course examines the past, present, and future of the international humanitarian response system. We will explore through case studies of modern conflict and disaster, how Doctors Without Borders, the United Nations, the Red Cross, and other aid agencies came to be and how global response standards, international humanitarian law, and new technologies are shaping worldwide disaster relief. Through interactive discussions, case studies, and assignments, students will: Learn how aid workers prioritize and coordinate life saving humanitarian efforts. Explore the interaction of humanitarian agencies with governments and civil society to provide refugee aid. Understand the challenges of the refugee journey. Analyze the humanitarian community's response to conflicts and crisis.

Course Note: At the end of the course on May 2-3, 2025, students can opt to participate as a 'refugee' as part of a large, outdoor humanitarian response training exercise with students and professional aid workers from around the world.

Research in Global Health and Health Policy

W 0300 PM - 0500 PM

David Cutler

Course ID: 123102
2026 Spring (4 Credits)

Instructor Permission Required

Global health and health policy are interdisciplinary fields that apply the theories and methods of statistics, sociology, political science, economics, management, decision science, and philosophy to the study of population health and health care. Research from these fields influences policymaking in a variety of settings. For example, the Patient Protection and Affordable Care Act (ACA) drew upon health policy research to develop programs for improving access and quality of care in the United States. Similarly, global health research guides international institutions, such as the World Health Organization, in determining health guidelines for all countries. Global health and health policy research can also inform practices inside hospitals, initiate programs for diseases like HIV, and regulate the food and drug industries. This course introduces the fundamentals of research design and methods in global health and health policy and assists students in developing research projects and crafting policy recommendations that can impact health care systems and public health.

Course Note: This course fulfills the research requirement of the Secondary Field in Global Health and Health Policy, and enrollment is ordinarily limited to seniors in the GHHP Secondary Field. Underclass GHHP students may petition to take the course if all other Secondary Field requirements have been met. GHHP 99 is primarily taught by graduate students in the PhD in Health Policy program. It may not be taken pass/fail.

Foundations of Political Theory

TR 0130 PM - 0245 PM

Sergio Imparato

Course ID: 124414

2025 Fall (4 Credits)

This course investigates the central problems of political theory that concern the justification of democracy. Is democratic rule the uniquely just form of collective decision-making? What political institutions best express the democratic values of equality, freedom, deliberation, and participation? What are the moral responsibilities of citizens - whose representatives exercise political power in their name? Is democracy a human right? How do themes of race and globalization intersect with democratic theory? Readings integrate contemporary work in political philosophy from thinkers ranging from Chris Lebron to Karuna Mantena with canonical thinkers, including Plato, Aristotle, Rousseau, W.E.B. DuBois, John Rawls, Robert Nozick, Judith Shklar, and Charles Mills. Sections will be structured with thematic focus areas, and students will be asked to rank choices: options will include federalism and equality; civic agency; and race and democracy.

*theory_subfield*This course requires students to choose timed sections during registration.

 GOV 20
Foundations of Comparative Politics

TR 1030 AM - 1145 AM

Steven Levitsky

Provides an introduction to key concepts and theoretical approaches in comparative politics. Major themes include the causes of democratization, economic development, ethnic conflict, and social revolutions; as well as the role of the state, political institutions, and civil society. Examines and critically evaluates different theoretical approaches to politics including modernization, Marxist, cultural, institutionalist, and leadership-centered approaches. Compares cases from Africa, Asia, Europe, Middle East and Latin America to provide students with grounding in the basic tools of comparative analysis.

Data Science for the Social Sciences

TR 1030 AM - 1145 AM

Anthony Cunningham

Course ID: 115859

2025 Fall (4 Credits)

Data is a fundamental part of studying the social, political, and economic world. How can we measure racial discrimination in job hiring? What is the best way to predict election outcomes? What factors drive the onset of civil wars? Is it possible to determine what members of Congress are more or less liberal given their voting record? These are just a few of the numerous questions that social scientists in academia and industry are tackling with quantitative data. In this course, you will learn the fundamentals of data science as applied to the social sciences: visualization, wangling, causal inference, prediction, and inference. All the while you will learn how to communicate your findings to a broad audience and how to use the professional tools of the trade such as R, tidyverse, and GitHub. Each student will complete a final project to showcase their acquired skills. No previous experience with statistics or statistical computing required.

GOV 62

Research Practice in Qualitative Methods

W 0300 PM - 0545 PM

To prepare students to write senior theses within American politics, comparative politics, or international relations, this course introduces the principles of empirical research in political science. Students will learn how to frame a project, review literature, articulate theories, test arguments, and collect evidence. Engaging both quantitative and qualitative research traditions, the course covers topics including the logic of causal inference, measurement and conceptualization, and case selection. It also introduces analytic techniques in qualitative methods such as archival research, interviewing, and process tracing. Assignments in the course build towards a final prospectus for an empirical research project.

May count as a research practice course for honors candidates.

Democracy in Crisis in Latin America

T 0945 AM - 1145 AM

Frances Hagopian

Course ID: 220114

2025 Fall (4 Credits)

Instructor Permission Required

Not in decades have so many aspiring autocrats come so close to power in Latin America. Parties that have governed democracies for decades are losing popular support, institutions that check presidents are under attack, and ordinary people are protesting what they perceive are failed policies and exclusionary democratic rules. This course asks why democracy is in crisis. It examines common themes – ethnic, racial, and class divisions; distributive policies; the role of media and social movements in political polarization, and the resilience of democratic institutions – in countries that are no longer democracies, those in peril, and those that remain relatively stable.

*comparative_subfield*Please note that you must enter the Gov 94 lottery by 5pm on Tuesday, April 8 to enroll in this class: <https://www.gov.harvard.edu/undergraduate/academics/concentration-requirements/gov-94-seminars/>. European politics differs markedly from American politics, not only due to the fragmentation of Europe into a large number of national polities (each with complex historical legacies) and the emergence of a supra-national polity (the EU), but also because the very meaning of "Europe" is and has always been contested. This course introduces students to the heterogeneity of Europe as a political entity. Why Europe is home to different types of democracy, and how do history and social context shape this? Additionally, we focus on the process of Europeanization and its theoretical explanations. Why do states transfer sovereignty to the EU? What is the role of nation-states today in Europe? We conclude by discussing major challenges to European integration such as rising Euroscepticism and new geopolitical risks. At the end of the semester, students will also have a tool kit for a scientific analysis of European politics and the key challenges Europe is facing today.

Instructor: Michael Koß

M 0945 AM - 1145 AM

*Instructor Permission Required**Feyaad Allie*

This course examines India's democratic trajectory since independence. What is the state of India's democracy today? How has democratic governance in India expanded and contracted over time? What does political representation look like in India and how does it vary by identity groups? (How) do Indian voters hold politicians accountable? We will explore these questions, drawing primarily on academic articles and book chapters. Topics we will cover include elections, parties, institutions, voter behavior, and representation. The capstone assignment for the course will involve an individually written research paper delving into a key topic covered in the course.

*comparative_subfield*Please note that you must enter the Gov 94 lottery by 5pm on Tuesday, April 8 to enroll in this class: <https://www.gov.harvard.edu/undergraduate/academics/concentration-requirements/gov-94-seminars/>. Democracy and Development in Korea

W 0300 PM - 0500 PM

Course ID: 226236
2026 Spring (4 Credits)*Instructor Permission Required*

South Korea's experience in the last few decades is often cited as an example of democratic consolidation and economic development, especially in the context of East Asia, and often in comparison with its Northern counterpart. However, as showcased by the recent declaration of martial law by Yoon, democratic consolidation is an ongoing process that requires robust institutions and a vigilant civil society. This course will evaluate South Korea's unique path towards democratization and economic development but also discuss how the South Korean case can speak to bigger questions such as the ways in which democratic institutions promote development (and vice versa), and how domestic and international security threats interact with these two processes.

2026 Spring (4 Credits)*Instructor Permission Required*

The "rights revolutions" of the 1960s and 1970s removed barriers to full citizenship for African Americans, women, and other formerly marginalized groups. But inequalities of wealth and income have grown since the 1970s. How do changing social and economic inequalities influence American democracy? This seminar explores empirical research and normative debates about political participation, about government responsiveness to citizen preferences, and about the impact of public policies on social opportunity and citizen participation.

Political Theory and the Economy

M 0300 PM - 0500 PM

Jordan Ecker

Course ID: 224696
2025 Fall (4 Credits)

Instructor Permission Required

We all know what politics is about: "it's the economy stupid." But what is the economy? From its origins in the conjunction of two Greek words, oikos (household) and nomos (custom, law), this course will take a whirlwind tour across the history of political and economic thought, from Aristotle to Smith to Marx to Keynes to Hayek, to see how changing notions of economics have constrained or expanded the horizon of politics. Are we appendages on an inhuman machine or free and happy utility maximizers?

Race in Comparative Perspective

W 0945 AM - 1145 AM

Course ID: 218734
2025 Fall (4 Credits)

Instructor Permission Required

The predominant western conception of race is a relatively recent idea formed in the context of European imperialism, trade, exploration and slave trading and developed by many of the most important Enlightenment figures of the 17th and 18th centuries. This course explores various analogues to "race" that developed in other civilizations; focuses on the context and thinkers that were key to the European development of race and racism

in the modern era; and examines the variations in "race" that developed in contexts including the United States, Brazil, South Africa and the colonial empires of Spain, Britain and France.

Major Paradigms in International Relations Theory

M 1245 PM - 0245 PM

Ipek Sener

Course ID: 226330
2026 Spring (4 Credits)

Instructor Permission Required

This course provides students with a foundation in international relations theory by examining its evolution as a discipline, key theoretical approaches, and contemporary debates. Through a critical engagement with major paradigms—realism, neorealism, liberalism, neoliberal institutionalism, constructivism, and perspectives from the Global South—students will explore the strengths and limitations of each framework in explaining global political dynamics. The course will also investigate emerging critiques, including gender and race in IR, in shaping international outcomes. By analyzing both classical and contemporary scholarship, students will develop theoretical skills necessary for conducting research in international relations and contributing to ongoing academic and policy debates. Students will take turns leading class discussions each week. Over the semester, students will also develop a research paper, submitting a research question by Week 4, a literature review by Week 7, and an analysis section by Week 10. In the last week of classes, final papers will be submitted, and students will read and provide feedback on each other's work, encouraging constructive critique.

Ancient and Medieval Political Philosophy

MW 1030 AM - 1145 AM

Danielle Allen

Course ID: 114754

2025 Fall (4 Credits)

This course serves as an introduction to ancient political thought. Rather than being a broad survey, this course will offer an alternative to the distracted media universe of our current age by building habits of sustained attention trained on a few key texts of ancient political thought: Plato's Republic and Aristotle's Ethics and Politics. Political philosophy began with the questions "How should I live?" "How should we live?" This course seeks to bring those questions to life in our current age, to unfold the deep and rich answers offered to these questions by ancient philosophers, to offer some comparative exposure to ancient Near Eastern, Chinese, Jewish, and Islamic political thought, and to show the connections between ancient and contemporary debates.

theory_subfieldlaw_and_justice Enrollment limited to undergraduate students. Graduate students should enroll in Gov 2060.

 GOV 1062
Continental Political Theory

TR 1030 AM - 1145 AM

Shterna Friedman

This course focuses on core texts in twentieth century continental political theory. These include works by Hannah Arendt, Michel Foucault, Max Weber, and Carl Schmitt. We will examine the foundations, promises, and challenges of modern politics. Themes include the nature, sources, and effects of democracy, liberalism, rights, freedom, equality, justice, law, authority, legitimacy, sovereignty, power, war, violence, and revolution. We will be raising a number of questions, among them: What is modern about contemporary politics? What is political about modern life? Political as opposed to what? Does politics need a foundation? Is politics theology by another name? War by another name? Does politics require justice? Freedom? Power? Violence? Should we evaluate political action by its values, aims, instruments, or results? What do we want from politics? What can and should we want? Are the promises and dangers of political action inextricable? What are the boundaries, if any, between social and political life? How is sociopolitical change possible? What explains the political catastrophes of the 20th century? When are political disasters avoidable and when are they tragic? What kind of subject is produced by modern politics? What kind of subject produces politics? To what extent is the sociopolitical world a product of our own making? What are the limits, if any, to political self-fashioning?

GOV 1192

Democracy, Diversity, and Development in South Asia

MW 0430 PM - 0545 PM

Mashail Malik

This course explores major political and economic developments in South Asia, with a special focus on India and Pakistan. Since the partition and independence of British India in 1947, these two nations have followed divergent trajectories while grappling with shared challenges. India is famously known as the world's largest democracy — even as some worry about contemporary democratic backsliding — while Pakistan has alternated between military and civilian governments since its inception. Religion and ethnic diversity have profoundly shaped the political and social landscapes of both nations. Through the lens of nearly eight decades of post-

colonial politics, this course introduces students to various social scientific theories concerned with the interplay of democracy, diversity, and development. Drawing on interdisciplinary materials from the social sciences, alongside journalistic non-fiction and fiction, students will engage critically with the historical and contemporary dynamics that define South Asia.

comparative_subfield

GOV 1203

Capitalism and Democracy in Central and Eastern Europe

MW 1030 AM - 1145 AM

Grzegorz Ekiert

This course examines critical periods in Central and East European history and politics: the emergence and experiences of newly restored independent states in the aftermath of the First World War, the devastations of the Second World War and subsequent imposition of communist regimes, their evolution and their rapid and largely unanticipated collapse in 1989, subsequent transitions to democracy and a market economy, the accession to the European Union and the recent slowdown in economic reforms, democratic backsliding, and the largely unexpected authoritarian turn in some of the new EU member states.

Comparative Politics in Latin America

TR 0130 PM - 0245 PM

Steven Levitsky

Examines dynamics of political and economic changes in modern Latin America, focusing on Argentina, Brazil, Chile, Cuba, Mexico and Venezuela. Topics include the rise of populism and import-substituting industrialization, revolutions and revolutionary movements, the causes and consequences of military rule, the politics of economic reform, democratic transitions, and democratic consolidation. The course analyzes these phenomena from a variety of different theoretical perspectives, including cultural, dependency, institutionalist, and leadership-centered approaches.

Course Note: Course is open to graduate students with instructor permission.

GOV 1314

Race in American Society

MW 1030 AM - 1145 AM

Marcel Roman

This course will teach prospective students on how race structures American politics. The course will briefly chart the history of anti-Black chattel slavery and the colonization, displacement, and removal of indigenous populations in the pre-independence period. Then, we will briefly examine the role race played and continues to play in the development of the United States' founding political institutions. We will then survey how race and racism historically shaped American political behavior, touching on the American Civil War, the Age of Mass Migration, the Depression and the World Wars. Finally, we will thoroughly investigate the role of race in post-World War II American politics, touching on the Cold War, the Black Rights movement, the post-1965 immigration wave, the conservative backlash to Black Rights, Clinton's triangulation, the rise of Barack Obama, the rise of Donald Trump, and thinking through the future (and sustainability) of the United States' increasingly ethno-racially diverse democracy. This class will explicitly focus on the political behavior of non-dominant ethno-racial groups to garner an exhaustive understanding of American politics and democracy.

Ryan Enos

This data-driven course seeks to understand how psychology shapes mass political behavior. The course will cover a range of substantive topics, from voting to violence, and will always ask: why do people think and behave as they do? The course will also explore the science behind political psychology: students will work with data --- both existing data and data generated by the class --- to explore the science behind research claims and to extend existing findings. There are no pre-requisites for the course, but students who have some experience working with data may find it easier to get started. Students on the Gov Data Science Track can receive credit for this course if they fulfill specific requirements.

FAS Divisional Distribution: Social Sciences

GOV 1722

Politics of the Environment and Climate Change

TR 1030 AM - 1145 AM

Stephen Ansolabehere

Climate change has evolved over the past four decades into one of the most pressing challenges to the sustainable development of human societies. This course takes a realistic look at the effects of climate change and of climate change policies, at local, national, and international levels. How will climate change affect water resources, food supplies, and conflict? How will policies affect fossil-fuel dependent economies? How are people, companies, and governments responding? Climate politics reflect well-established environmental and economic perspectives, but also raise new, unique issues.

GOV 1736

Rethinking Nuclear Deterrence

No meeting time listed

Matthew Bunn

Course ID: 226607

2025 Fall (4 Credits)

Instructor Permission Required

The states that possess nuclear weapons – and other states that rely on their security guarantees -- see them as essential to their security. At the same time, nuclear deterrence comes with the ever-present risk of devastating failure, posing an existential risk to much of human civilization. This course will explore a range of views (including those of different countries) on the role of nuclear deterrence in international affairs today and in the future, in the context of events including Russia's war on Ukraine and nuclear saber-rattling, China's rapid nuclear buildup, North Korea's near-constant missile testing and nuclear threats, Iran's expanding ability to produce nuclear weapons material should it ever choose to do so, increasing alignment of all four of those countries, an ongoing nuclear arms competition between India and Pakistan, and more. What capabilities and what evidence of commitment are necessary for deterrence to be credible and effective? What challenges to a state's interests can nuclear weapons play a role in deterring? What steps might do the most to reduce the risk of nuclear conflict, ranging from strengthened deterrence through foreign policy actions to accords on nuclear restraint or risk reduction? There is a need for rethinking these questions as the nuclear world is becoming more multipolar, hostility between nuclear-armed states is at a fever pitch, U.S. actions and statements are leading allies (and adversaries) to question U.S. commitments to defend its allies, and new technologies from hypersonic missiles to cyberweapons and artificial intelligence are making both conventional and nuclear balances more complex and potentially more dangerous. This class will explore different concepts for managing nuclear balances and reducing their dangers; approaches to nuclear strategy and force posture; prospects for nuclear arms restraint; and ideas about what a world that no longer relied on nuclear deterrence might look like.

The course will confront students with real-world and hypothetical policy dilemmas, training them in risk-informed thinking about managing these issues, through case studies, policy memos, and negotiating or crisis simulations. The course will equip students with concepts and tools for careers managing nuclear deterrence

policies.

GOV 1737
**Evaluating the Impacts of Public Policies: How to Design and Implement
Randomized Controlled Trials**

Course ID: 218749
2026 Spring (4 Credits)

TR 0130 PM - 0245 PM

Michael Hiscox

In a randomized controlled trial, a policy intervention or program participation is allocated among study subjects by random assignment, then differences in subsequent outcomes (e.g., health, academic performance, income) are compared across the groups. Such trials have become a favored method for empirical research across the social sciences in recent years and the methodology has also altered the way governments approach development, health, welfare, and education policies. The aim of the course is to provide students with training in how to design and implement randomized controlled trials to evaluate policies and programs. We will discuss working with government and non-government partners, ethics, sampling, the use of online and digital platforms, and the analysis and interpretation of results.

Central Asia in Global Politics

Course ID: 207984
2025 Fall (4 Credits)

TR 1030 AM - 1145 AM

Nargis Kassenova

The course is designed as an in-depth study of the place of Central Asia in Eurasian and global politics, and the policies of key external actors, such as Russia, the United States, China, the European Union, Turkey, Iran, Japan, South Korea and India, toward the region. Students are familiarized with the ways Central Asia has been contextualized both in scholarly sources and media. We will dwell on the changing geopolitical dynamics of the region and analyze how developments there are intertwined with bigger contexts and stories, including nuclear non-proliferation and state-building, political Islam and democracy promotion, energy markets and climate change, the war in Ukraine and diversification of licit and illicit trade flows. We will define similarities and differences in the foreign policies of Central Asian states and discuss the future prospects of the region.

GOV 1796
Central Challenges of American National Security, Strategy, and the Press

Course ID: 113210
2025 Fall (4 Credits)

No meeting time listed

Instructor Permission Required

Graham Allison, Derek Reveron, David Sanger

From the rise of China and resurgence of Russia, to the ongoing war in Ukraine, and North Korea and Iran's advancing nuclear weapons programs, challenges in the Middle East, Central Asia, East Africa, and emergence

of cyber conflict, this course examines the central challenges to American national security. Through a series of cases, students address these issues as if they were professionals at the National Security Council working for the President or an assistant to the Secretary of State or Defense. In response to specific assignments, students write Strategic Options Memos that require analyzing the challenge, assessing the current strategy, and identifying alternative strategies for protecting and advancing national interests. Assignments require strategic thinking: analyzing dynamics of issues, formulating key judgments, and developing feasible strategies. In the real world of Washington today, this means thinking clearly about what the US is attempting to achieve in the world in the midst of a swirl of a government whose deliberations are often discombobulated by leaks, press reports, tweets, and fake news. A sub-theme of the course explores ways in which pervasive press coverage intrudes, sometimes informing, sometimes distorting, national security decision making. In addition, the course will include several related side bars where we will discuss Applied History, "behind the veil" at a major newspaper, strategy (as taught at the Naval War College), intelligence analysis, and basic numeracy. This course is open by instructor consent. Students interested in taking the course should complete and submit the online application form. Please email Arissa Shang (arissa_shang@hks.harvard.edu) with any questions. Completed applications are due by 12:00PM on Wednesday, September 3.

IR_subfieldpublic_policy Jointly offered with the Harvard Kennedy School as IGA-211. Enrollment for this course follows the HKS course-registration calendar. Course meeting time and information about the application process will be available in early summer.

GOV 2001

Quantitative Social Science Methods I

MW 0130 PM - 0245 PM

Anthony Cunningham

This course provides a rigorous foundation necessary for the rest of the sequence. After reviewing the basic probability theory, we offer a systematic introduction to the linear model and its variants -- the workhorse models for social scientists. We cover the classic linear regression model, least squares estimation and projection, fixed and random effects models, principal components analysis, instrumental variables, flexible regression models, and regularization for high dimensional data. In covering these topics, we deepen our knowledge of fundamental concepts in statistical inference while also demonstrating how these methods are applied in political science.

Course Note: Prerequisite: Gov 51 or the equivalent. Gov 2020 is highly recommended before taking Gov2001. Instructor: Scott Cunningham

Requires: Course open to Graduate Students Only (Undergraduates can submit a request to enroll)

Course ID: 124780
2026 Spring (4 Credits)

GOV 2002

Causal Inference with Applications

MW 0300 PM - 0415 PM

Kosuke Imai

Substantive questions in empirical scientific and policy research are often causal. Does voter outreach increase turnout? Are job training programs effective? Can a universal health insurance program improve people's health? This class will introduce students to both statistical theory and practice of causal inference. As theoretical frameworks, we will discuss potential outcomes, causal graphs, randomization and model-based inference, sensitivity analysis, and partial identification. We will also cover various methodological tools including randomized experiments, regression discontinuity designs, matching, regression, instrumental variables, difference-in-differences, and dynamic causal models. The course will draw upon examples from political science, economics, education, public health, and other disciplines.

This course is cross-listed with STAT 286 and requires students to choose timed sections during registration.

Basic probability and statistical inference, familiarity with R.

Requires: Prerequisite: Gov 2001 or the permission of the instructor.

Capitalism and its Critics

R 0300 PM - 0545 PM

Katrina Forrester

Course ID: 107798

2025 Fall (4 Credits)

Instructor Permission Required

This graduate course offers an advanced survey of critiques of capitalism. We will read a range of interdisciplinary social and political theorists in the Marxist tradition and beyond, to explore problems of exploitation and domination, social reproduction, racial capitalism, dispossession, and more. We will interrogate political features of capitalist social relations, including the role of violence in accumulation and the importance of the family and the state. This course will involve several workshop sessions with visiting scholars, who will share new research in the social and political theory of capitalism and related areas. Enrolment in the class will be capped, but the workshop is open to all.

FAS Divisional Distribution: Social Sciences

GOV 2060

Ancient and Medieval Political Philosophy

T 1245 PM - 0245 PM

Danielle Allen

Course ID: 117804

2025 Fall (4 Credits)

This course serves as an introduction to ancient political thought. Rather than being a broad survey, this course will offer an alternative to the distracted media universe of our current age by building habits of sustained attention trained on a few key texts of ancient political thought: Plato's Republic and Aristotle's Ethics and Politics. Political philosophy began with the questions "How should I live?" "How should we live?" This course seeks to bring those questions to life in our current age, to unfold the deep and rich answers offered to these questions by ancient philosophers, to offer some comparative exposure to ancient Near Eastern, Chinese, Jewish, and Islamic political thought, and to show the connections between ancient and contemporary debates.

Graduate level version of Gov 1060. Enrollment limited to graduate students. Undergraduates should enroll in Gov 1060.

Requires: Course open to Graduate Students Only (Undergraduates can submit a request to enroll)

FAS Divisional Distribution: Social Sciences

GOV 2077

Hobbes

W 0300 PM - 0500 PM

Eric Nelson

Course ID: 226160

2025 Fall (4 Credits)

This course will examine in depth the ethical, political, and historical writings of Thomas Hobbes, from his earliest humanist works to his final unpublished manuscripts. Particular attention will be paid to the three major statements of his political theory, The Elements of Law (1640), De cive (1642), and Leviathan (1651).

Requires: Course open to Graduate Students Only (Undergraduates can submit a request to enroll)
FAS Divisional Distribution: Social Sciences

GOV 2105

Comparative Politics: Field Seminar

W 0945 AM - 1145 AM

Steven Levitsky, Torben Iversen

Surveys topics in comparative politics (both the developed and the developing world), including the rise of the modern state; institutions of government; interest mediation; democracy and authoritarianism; revolution; political parties; mass and elite political behavior; political economy.

Requires: For Doctoral Students in Government, Government and Social Policy, and Political Economy and Government. Other students must petition for the course.
FAS Divisional Distribution: Social Sciences

GOV 2107

Political Violence

M 0300 PM - 0500 PM

Course ID: 226163
2026 Spring (4 Credits)

Political violence varies greatly in its intensity, scope, and form, depending on the characteristics of the perpetrator, target, and context of the conflict. This course is an introduction to the literatures on various types of political violence. It focuses on the following questions: What is political violence? Why and when do actors use violence, and what factors impact the type of violence actors use? What are the (intended and unintended) consequences of violence, both short and long-term? How does one evaluate the intentionality and "effectiveness" of violence? This course will draw from works in political science, sociology, economics, and psychology to address these questions.

Instructor: Hojung Joo

Requires: Course open to Graduate Students Only (Undergraduates can submit a request to enroll)

GOV 2124

Identity Politics in American and Comparative Perspective

M 0900 AM - 1145 AM

Mashail Malik, Marcel Roman

Course ID: 226152
2025 Fall (4 Credits)

This course will examine the varied relationships between identities and political behavior from a social science perspective. Over the course of the semester, we will investigate questions such as: What is identity and how does it affect social and political outcomes? Why are some identities salient for particular people or groups while others are not? Can we change our identities, and if so, under what circumstances and to what end? How do forces outside of us – such as the state or society – determine which identities are ascribed to us? And what are the causes and consequences of what we term "identity politics"? The capstone project of this course is a research paper by each student on an identity-related topic of their choice.

FAS Divisional Distribution: Social Sciences

GOV 2139

Topics in Comparative Political Economy

T 1200 PM - 0245 PM

Torben Iversen, Kathleen Thelen

The goal of this class is to delve into new and emerging areas of scholarship in political economy. The readings will range across both developed and developing countries but with more emphasis on developed democracies. Beyond considering several important contemporary topics in the literature on comparative political economy, the course helps students establish a strong foundation in political economy, and it serves as a forum in which students can explore potential research projects. As is the tradition with this class, some of the reading is organized by students in consultation with the instructors. Grades are based on: 1) 40% class participation and curating and introducing at least one week's readings; 2) 20% 2 reviews of weekly reading; 3) 40% final literature review or research proposal.

Requires: Course open to Graduate Students Only (Undergraduates can submit a request to enroll)

GOV 2156

Comparative Political Behavior

W 0945 AM - 1145 AM

Feyaad Allie

This graduate seminar is designed to provide an overview of some contemporary and foundational work in comparative political behavior and allow graduate students to develop a new empirical research project. The course is organized around three broad themes: political participation (turnout, vote choice, claims-making), collective action (protests, violence, coordination), and attitudes (inter and intra-group relations, nationalism). Readings will include a range of contexts in the country, but there will be a particular emphasis on the developing world. Class discussion will help students engage with key theoretical arguments and research designs. Course assignments will aim to teach practical skills for academic research such as developing a research paper, writing a peer-review, and planning for/conducting data analysis.

Requires: Course open to Graduate Students Only (Undergraduates can submit a request to enroll)

FAS Divisional Distribution: Social Sciences

GOV 2170

State-Building

M 0600 PM - 0800 PM

Daniel Ziblatt

Investigates the state, non-state forms of political power, and state-building. With focus on developing and developed worlds, topics include: What is the state? What are other forms of non-state power? What theoretical approaches best explain strong and weak states?

Requires: Course open to Doctoral Students Only

GOV 3002A Teaching and Communicating Political Science <i>No meeting time listed</i> <i>Thom Wall</i>	Course ID: 143023 2025 Fall (4 Credits)

This is a required course for Government PhD students who are teaching in the department for the first time (typically G3s). The course meeting five times in the fall semester. Between meetings, you will have the chance to apply what you learn through peer observation, having your section videotaped, and watching your section with the Departmental Teaching Fellow. The ultimate goal of this course is to help you to become a good teacher and an effective speaker.

Course Note: Limited to and required of all first time teaching fellows in Government.

The First World War

Course ID: 222178
2026 Spring (4 Credits)

No meeting time listed

Jamie Martin

The First World War was one of the largest and most devastating conflicts the world has ever seen. It was also one of the first wars that was waged across the entire earth – from Europe to Africa, China, and the Middle East. This course examines the First World War not only as a European conflict, but as a truly global one. Students will explore the origins, course, and legacies of the war and the impact it had on politics and societies around the world. As such, this course will focus not only on the military and economic aspects of the war in its principal European and Middle Eastern theaters but also on how the war transformed conceptions of democracy, the state, gender, race, and art around the world. This course will conclude by looking at how the war's outcome permanently reshaped international relations and sowed the seeds for many future conflicts.

Course Note: This course meets the "Beyond North America" History Concentration requirement. Former course number "HIST 1045."

This class requires students to enroll in an untimed, placeholder section during registration and to submit time preferences. Sections will be assigned immediately after registration based on student interest and preferences.

Immigration Law: A History of the Present

Course ID: 222203
2025 Fall (4 Credits)

MW 1030 AM - 1145 AM

Jesse Hoffnung-Garskof

Instructor Permission Required

This course assists students to develop an informed analysis of the current political debate through investigation of the legal history of immigration since founding of the republic. Students analyze the ways that histories of race, gender, sexuality, class and global politics have shaped and continue to shape the law and politics of

immigration. Through structured in-class activities and challenges, students learn a range of legal history methods. They then have opportunities to use these methods to study competing claims about immigration in the current moment. Ideal for anyone considering a career in immigration law, policy, social activism or public service, but all are welcome.

Course Note: This course meets the "Beyond North America" History Concentration requirement.

Former course number "HIST 1016."

This class requires students to enroll in an untimed, placeholder section during registration and to submit time preferences. Sections will be assigned immediately after registration based on student interest and preferences.

The section times are: Wednesdays 1:30-2:30, Wednesdays 3:00-4:00pm, Thursdays 9:00-10:00am, and Fridays 10:30-11:30am.

The Holocaust

Course ID: 226786

2026 Spring (4 Credits)

This course will examine the Holocaust—"the systematic, state-sponsored persecution and murder of six million Jews by the Nazi regime and its allies and collaborators," to use the United States Holocaust Memorial Museum's concise definition, as well as the persecution and murder of millions of people from other groups: Roma and Sinti ("Gypsies"), disabled people, some Slavic people, Soviet prisoners of war, Black people, and gay, lesbian, bisexual, and transgender people. We will address topics including historical antisemitism, World War I, Weimar Germany, the Nazi rise to power, Hitler's role in the Nazi dictatorship, the persecution and murder of European

Jewry, Jewish responses to persecution, and the attitude of the Allied nations. We will also place the Holocaust in the larger context of mass murder and genocide, and address some of its theological, moral, and political implications.

Course Note: This course meets the "Beyond North America" History Concentration requirement.

This class requires students to enroll in an untimed, placeholder section during registration and to submit time preferences. Sections will be assigned immediately after registration based on student interest and preferences.

Course ID: 109621
2026 Spring (4 Credits)

No meeting time listed

Arunabh Ghosh

This lecture course will provide a survey of some of the major issues in the history of post-imperial China (1912-). Beginning with the decline of the Qing and the dramatic collapse of China's imperial system in 1911, the course shall examine how China has sought to redefine itself anew over the past one-hundred years. The revolutionary years of 1911, 1949, and 1978 will serve as our three fulcra, as we investigate how China has tussled with a variety of 'isms' (such as republicanism, militarism, nationalism, socialism, and state capitalism) in its pursuit of an appropriate system of governance and social organization. In so doing, we shall also explore the social, economic, cultural, and scientific changes wrought by these varied attempts at state-building.

Course Note: No prior college level History is required or assumed. Students seeking to fulfill their Social Sciences distribution requirement, first-years, and others are welcome.

This course meets the "Beyond North America" History Concentration requirement. Former course number "HIST 1602."

Germany, 1848-1949

Course ID: 110285
2025 Fall (4 Credits)

TR 1030 AM - 1145 AM

Instructor Permission Required

Alison Frank Johnson

German History loomed like a specter over the twentieth century. In the twenty-first century, Americans have been debating the relevance and legitimacy of comparisons between German history and our contemporary world. How useful is German history for understanding our current moment? How might our present-day concerns distort what we see in the past? This course will examine the history of Germans in Europe and elsewhere, starting with the revolutions of 1848 and ending with the separation of Austria, West Germany, and East Germany following the Second World War. Themes will be war, insurrection, and terrorism, revolution and counter-revolution, gender and sexuality, reform, violence, anti-Semitism, racial thinking and racism, and migration.

Course Note: No prior college level History is required or assumed. Students seeking to fulfill their Social Sciences distribution requirement and first-years are welcome.

This course meets the "Beyond North America" History Concentration requirement.

Former course number "HIST 1265."

The Cold War

Course ID: 226624
2026 Spring (4 Credits)

No meeting time listed

Serhii Plokhii

This course introduces students to major topics in Cold War history. It begins with a discussion of the diplomatic legacy of the two world wars, proceeds to an analysis of postwar rivalry between the United States and the Soviet Union, and ends with the fall of the Berlin Wall (1989), the disintegration of the Soviet Union (1991), and the making of the post-Cold War world order. The course discusses the major crises of the Cold War era, focusing on the role of diplomacy in preserving peace between the two nuclear superpowers. While its main emphasis is on government and society in the United States and the Soviet Union, lectures and readings will also cover aspects of the political, economic, social, and cultural history of other lands involved in the great-power rivalry, including the countries of Eastern Europe, the Far East, the Middle East, and Central America. Special attention will be paid to the role of ideology and culture in Cold War rivalry. Class discussions will be based on an analysis and interpretation of primary sources.

Course Note: This course meets the "Beyond North America" History Concentration requirement.

This class requires students to enroll in an untimed, placeholder section during registration and to submit time preferences. Sections will be assigned immediately after registration based on student interest and preferences.

HIST 56 (1)

Coffee and the Nighttime: History and Politics, 1400-2020

MW 0130 PM - 0245 PM

Cemal Kafadar

Since the fifteenth century, individuals and societies in different parts of the world adopted a gradually but unmistakably quickening tempo in their everyday lives and started to make more uses of the nighttime –for socializing, for entertainment, and for work. In this reconfiguration of the architecture of day and night, people turned to various psychotropic substances such as coffee to help them better manipulate times of activity and repose. They have also created new social institutions such as coffeehouses, which turned into public spaces for engagement with new forms of arts and politics. The course offers a history of these developments until our own time of "living 24/7" in terms of their social, economic and political consequences. Biological aspects such as addiction and pressures on our circadian rhythms will also be explored in the context of histories of sleep and nocturnal activity.

Course Note: This course meets the "Pre-1750" and "Beyond North America" History Concentration requirement.

Former course number "HIST 1018."

This class requires students to enroll in an untimed, placeholder section during registration and to submit time preferences. Sections will be assigned immediately after registration based on student interest and preferences.

Empire, Nation, Partition: Modern South Asia in Global Perspective

No meeting time listed

Sugata Bose

An analytical survey of the Mughal, British and late Ottoman empires; anti-colonial nationalism in South Asia and its connections with freedom struggles elsewhere in the world; the partitions of India, Ireland and Palestine at the moment of British decolonization in comparative perspective; and their long shadow on post-colonial history.

Course Note: This course meets the "Beyond North America" History Concentration requirement.

This class requires students to enroll in an untimed, placeholder section during registration and to submit time preferences. Sections will be assigned immediately after registration based on student interest and preferences.

HIST 58 (01)

Palestine: 1,000 Years

TR 1030 AM - 1145 AM

Rosie Bsheer, Cemal Kafadar

Covering a whole millennium and beyond, this course privileges the long history of Palestine in order to center the continuities and breaks in the region's past and how these shaped people's everyday lives. The course takes off in the early medieval period with the Islamic conquests and moves through five centuries of Ottoman rule. The last third begins with Ottoman Palestine before and after Jewish settlement in the late-nineteenth century then proceeds to the emergence of nationalism, British colonial domination, the Nakba, the formation of the state of Israel and its aftermath, and the trajectory of the Palestinian struggle for national liberation.

Course Note: No prior college level history is required. Students seeking to fulfill their distribution requirement and first year students are welcome.

Afro-Indigenous Intersections in Early America

TR 0130 PM - 0245 PM

Tiya Miles

In ways both charged and complex, Native Americans and African Americans together contributed the ground/work of the U.S. nation and the European colonies that preceded it. This course traces intertwined historical lines among Indigenous peoples and African-descended people within the borders of the present-day United States. We will discuss multiple regions, tribal nations, Black communities, and "mixed-race" families across the seventeenth, eighteenth, and nineteenth centuries as well as contemporary memories, representations, and political dilemmas stemming from histories of colonization, enslavement, environmental degradation, and resistance. We will explore contacts, conflicts, relationships, collaborations, meanings of this multifaceted history to communities now, and historical aspects of Afro-futuristic and Indigenous-futuristic imaginings. Our readings will include primary documents, historical studies, cultural studies, memoirs, and novels.

Course Note: This course meets the "North America" History Concentration requirement. Former course number "Hist 1014."

This class requires students to enroll in an untimed, placeholder section during registration and to submit time preferences. Sections will be assigned immediately after registration based on student interest and preferences.

The 20th Century United States: Politics, Society, Culture

No meeting time listed

Lisa McGirr

This course charts key developments in the history of the 20th century United States beginning with United States emergence as a leader of global capitalism. Topics include World War I, twenties culture wars, the New Deal, World War II, the Cold War, sixties social movements, neo-liberalism, and the rise of mass incarceration. The contest over the meaning of American freedom at all levels of American society—from Congressional debates to the picket line—forms a central theme. The course includes discussion of high and low politics, political economy, and shifting patterns of culture. The course has two goals: First, to provide the foundational knowledge about past political struggles that will help students understand the roots of issues still wrestled with today; and second to introduce students to historical thinking and interpretation through the analysis of primary and secondary sources. No prerequisites are required and the course is open to all undergraduates.

Course Note: No prior college level History is required or assumed. Students seeking to fulfill their Social Sciences distribution requirement, first-years, and others are welcome.

This course meets the "North America" History Concentration requirement. Former course number "HIST 1002." This class requires students to enroll in an untimed, placeholder section during registration and to submit time preferences. HIST 76 (01)

The History of Energy

Course ID: 224204
2025 Fall (4 Credits)

TR 1030 AM - 1145 AM

Ian J. Miller

Modern life is defined by our use of energy: fossil fuels, hydroelectricity, nuclear power, renewables. These forms of energy power modern economies, politics, and everyday life. They heat and cool our homes, cook our food, enable our work, and illuminate the device you are almost certainly using to read these very words. Humanity's seemingly boundless appetite for energy has also remade global climate. This course tracks the development of modern energy history from the advent of age of coal to the present day, with special attention to the intersections between social change and energy systems. Our primary focus will be on the emergence of what some scholars call "fossil fuel civilization"; its costs, benefits, and prospects. Our approach is historical rather than economic or technical. We will read primary documents, place today's news in context, and craft our own narratives of historical change. This is an introductory course to a big topic. As such, it will demand your time and dedication. No prerequisites or specialist knowledge needed.

Course Note: This course meets the "Beyond North America" History Concentration requirement.

Former course number "HIST 1611."

This class requires students to enroll in an untimed, placeholder section during registration and to submit time preferences. Sections will be assigned immediately after registration based on student interest and preferences.

HIST 83 (1)

Heidegger's Being and Time

Course ID: 226274
2025 Fall (4 Credits)

TR 0900 AM - 1015 AM

Peter Gordon

Martin Heidegger's famous first book, *Being and Time*, is one of the most important philosophical works of the twentieth century. It existentializes Aristotle's ontology, systematizes the existential insights of Kierkegaard and Nietzsche, and on that basis offers a radical critique of Husserl's phenomenological account of intentionality. The result is a dramatically original and compelling interpretation of the human condition. This interpretation leads, in turn, to an account of the nature of philosophical and scientific inquiry, as well as their limitations. *Being and Time* has important implications for all those disciplines that study human beings. In this course we will explore major themes of this often bewildering work, with an emphasis on charitable interpretation: What is the relationship between theoretical knowledge and understanding-by-doing? What is the nature of our social being? What does it mean to be 'inauthentic' or 'authentic,' and what are the implications of human finitude? Finally, what is the 'Question of Being'?

Course Note: This course is equivalent to Phil. 138. Credit may be earned for History 83 or Phil. 138, but not both.

This course meets the "Beyond North America" History Concentration requirement.

Race and Public Health Crises: From TB to AIDS to COVID-19

TR 1200 PM - 0115 PM

george aumoithe

This course explores the complex interplay between race and public health crises, from tuberculosis to AIDS and COVID-19. Students will examine the visual culture of epidemics, critically analyze systems of racial classification, and study the work of influential sociologists, political scientists and historians of medicine and public health. The course challenges students to question the racial epistemology underlying epidemiological research and practice, fostering a deeper understanding of how race has shaped and has been shaped by public health responses from the 19th century to the present. By engaging with diverse materials and perspectives, students will develop critical tools to analyze racial health disparities and their societal implications, both in historical contexts and amid contemporary health challenges.

Course Note: This course is equivalent to AMRAFER 86 and HISTSCI 1465. Credit may be earned for HIST 86, AFRAMER 86, or HISTSCI 1456, but only once.

This course meets the "Beyond North America" History Concentration requirement.

This class requires students to enroll in an untimed, placeholder section during registration and to submit time preferences. Sections will be assigned immediately after registration based on student interest and preferences.

Requires: Anti-Requisite: Cannot be taken for credit if HISTSCI 1456 or AFRAMER 86 already complete.

HIST 89 (1)

Critical Theory

TR -

Peter Gordon

Max Horkheimer once observed that critical theory is animated by "the materialist content in the Idealist concept of reason." This course explores the tradition of Frankfurt School critical theory in all of its various strands over the past century. Though often identified a species of 'Western' or Hegelian Marxism, the philosophical and sociological school of critical theory has developed and diversified in manifold ways. It is unified chiefly by its attempt to identify and rectify the pathologies of bourgeois modernity by examining systemic problems of capitalist society such as reification, commodification, repression, and instrumental reason. Readings will include selections from representative authors such as Lukács, Horkheimer, Benjamin, Adorno, Marcuse, Habermas, Jaeggi, and Forst.

Course Note: This course is equivalent to Phil. 135. Credit may be earned for History 89 or Phil. 135, but not both.

This course meets the "Beyond North America" History Concentration requirement.

Ann Blair

Intellectual historians study almost every period, place, and theme in human history: from classical times to the present, from Asia to the Americas, by examining philosophy and religion, social and political thought, literature and art, and other expressions of human agency and intention that range from ancient epics to graphic novels. This section will draw examples from a wide range of moments and regions to ask how intellectual history has developed as a field, what methods it uses, and how it can be distinguished from other forms of history even as it informs debates of interest to all historians.

Course Note: Required of all History concentrators in the spring term of their sophomore year and open to all secondary field students. This course may not be audited or taken Pass/Fail. It enrolls prior to shopping period through the History concentration. Please contact the ADUS in History if you wish to enroll without being a concentrator in History.

HIST 97G (1)

"What is Legal History?"

Course ID: 110444
2026 Spring (4 Credits)

No meeting time listed

Instructor Permission Required

Myisha Eatmon

Legal historians study the rules and practices that have regulated human societies in the past and seek to understand both change and continuity in legal behavior. The history of law comes in many different flavors, ranging from highly technical studies of positive law to histories of justice both afforded and denied. This section introduces students to the art of legal history through the close reading of individual cases, emphasizing the skills required to set those cases in appropriate historical contexts.

Course Note: Required of all History concentrators in the spring term of their sophomore year and open to all secondary field students. This course may not be audited or taken Pass/Fail. It enrolls prior to shopping period through the History concentration. Please contact the ADUS in History if you wish to enroll without being a concentrator in History.

HIST 115 (1)

Amsterdam. Portrait of an early modern metropolis

T 0300 PM - 0500 PM

Course ID: 226397

2025 Fall (4 Credits)

Instructor Permission Required

This course introduces students to early modern urban life by examining one of Europe's largest metropolises. During the 17th century, Amsterdam rapidly transformed into Europe's global trading hub and political powerhouse of the emerging Dutch Republic. It nurtured some of the period's greatest luminaries, including Rembrandt, Descartes and Spinoza. Long celebrated for its religious tolerance, artistic innovation and economic modernity, Amsterdam's golden age also became notorious for its involvement with slave trade and military repression in Asia, Africa, and the Americas. This course seeks to probe these ambiguous characteristics of the city and to identify their possible interconnections. For this purpose, we will assess a variety of written and visual source material, including pamphlets, diaries and travel accounts as well as prints, paintings and material objects. These sources will enable students to gain a deeper understanding of early modern urban culture and to consider the use of visual evidence in historical scholarship. Classes on civic republicanism, religious diversity, and global migrations will alternate with sessions on the home, consumption, and gender. The course will make extensive use of the rich Dutch art collections of the Harvard Art Museums and Boston's Museum of Fine Arts.

Course Note: This course meets the "Beyond North America" History Concentration requirement.

This course will be taught by Visiting Erasmus Professor Dr. G.H. (Geert) Janssen

HIST 116 (1)

Why Do Native People Matter?: History and the Politics of Making It

No meeting time listed

Course ID: 226492

2026 Spring (4 Credits)

Instructor Permission Required

Historians of North America have traditionally discounted the histories of Indigenous peoples who have called its many environs home since time immemorial. This is certainly the case for scholars of United States history. As Western Shoshone scholar Ned Blackhawk has written, "Indigenous absence has long been a tradition of American historical analysis... exiled from the American origin story, Indigenous peoples await the telling of a history that includes them." With Blackhawk's words in mind, this course asks an essential question: why do Native people matter to US history? In pursuing an answer to this question, this seminar will focus on aspects of Indigenous sovereignty, race, gender, and environments in the process of U.S. expansion and grapple with the ways in which these struggles over land and sovereignty shaped the United States through the production of its history. Students will engage with the histories of various periods in "Native American history" and historians' (academic and lay) assessments of them to understand the practice of writing history as itself being a political process, integral to the very phenomenon examined in class. Over the semester, students will utilize museum collections in the Harvard Peabody Museum and Harvard Archives, and explore a range of methods in the discipline of history to grapple with and ultimately re-narrate the Native history of Harvard University.

Course Note: This course meets the "Beyond North America" History Concentration requirement.

HIST 117 (1)

The 'Settler Revolution' at the Edge of Empire: Australia, 1770-1901

R 1245 PM - 0245 PM

Course ID: 226399
2025 Fall (4 Credits)

Instructor Permission Required

Geographically tucked away at the southern confluence of the Pacific and Indian oceans, Australia occupies a portion of the globe easily dismissed as an historical outlier. But it is of cardinal importance to comprehending the outbreak of the 'Settler Revolution' that came on the heels of the great material and political convulsions of the late eighteenth century. Though lesser known than its American, French or Industrial counterparts, the mass exodus of willing (and unwilling) migrants in the wake of the Napoleonic Wars was no less revolutionary in its impact. The formidable scale, unprecedented reach and dogged persistence of this global phenomenon are by no means self-explanatory. Fundamental to making sense of 'settlerism' is the concept of global modernity – that potent mix of technological innovation, economic dynamism, hypermobility and destructive physical force that transformed the nineteenth-century world. Though the term itself is contested (and its core characteristics disputed) few would deny the step change in long-range capabilities that made colonizing the farthest ends of the earth a viable proposition. Fundamental to making sense of 'settlerism' is the concept of global modernity – that potent mix of technological innovation, economic dynamism, hypermobility and destructive physical force that transformed the nineteenth-century world. HIST 120 (1)

Atlantic Slave Wars

R 1245 PM - 0245 PM

Vincent Brown

Course ID: 216003
2025 Fall (4 Credits)

Instructor Permission Required

This course explores how the violence of imperial expansion and transatlantic enslavement remade the history of Europe, Africa, and the Americas. European imperial conflicts extended the dominion of capitalist agriculture. African battles fed captives to the transatlantic trade in slaves. Masters and their subalterns struggled with one another continuously. These clashes amounted to a borderless slave war: war to enslave, war to expand slavery, and war against slaves, precipitating wars waged by the enslaved against slaveholders, but also between slaves themselves. Examining how conflicts in one part of the world travel and take root in another will enhance our understanding of the relationship between European, African, and American history.

HIST 123 (1)

Immigrant Justice Lab

No meeting time listed

Jesse Hoffnung-Garskof

Course ID: 222202

2026 Spring (4 Credits)

Instructor Permission Required

This course trains and supports teams of undergraduates to contribute research and writing for asylum applicants represented by attorneys at the Mabel Center for Immigrant Justice. The course operates on four parallel tracks. The first is basic training in asylum law. The second involves a mixture of collaborative planning, research writing and editing about the history of the societies from which our asylum seekers have fled.

Students will be divided into teams and assigned case facts. They will generate research questions, build dossiers of research materials, and draft legal briefs relating their research findings to the pertinent questions in asylum law. The third involves reflection and on the ethical practice of legal advocacy, and responsible depictions of violence and injustice in foreign cultures. Fourth, students will participate actively in planning, building, and nurturing a partnership between an academic institution and a community-based organization.

Course Note: The fall 2023 course, History 1016/History 23: "Immigration Law: A History of the Present," is a prerequisite for enrolling in this course. Students will not be able to enroll without History 1016/ History 23 appearing on their transcript.

A History of Love: Modern South and Southeast Asia

T 0300 PM - 0500 PM

Sudarshana Chanda

Course ID: 226396

2025 Fall (4 Credits)

Instructor Permission Required

How do we study a history of love? And how does love manifest and endure across boundaries? In this seminar we will ask how Asians, mainly from South and Southeast Asia, pursued boundary crossing love in Asia and in the diaspora in the 19th and 20th centuries. Moving thematically after an introductory week, we will study how love manifests across various boundaries, such as ethnicity, race, religion, caste, gender/sex. By looking at a range of primary sources – love letters, matrimonial advertisements, podcasts, short stories, and films – we will think critically through ideas of love and how they have been articulated.

HIST 160 (1)

Abolitionist Women and Their Worlds

T 1245 PM - 0245 PM

Tiya Miles

Course ID: 216001

2025 Fall (4 Credits)

Instructor Permission Required

What was life like for women who stood at a major crossroads of history? What was required, in tumultuous times, to think and act boldly? This course focuses on women from diverse racial and regional backgrounds who labored to abolish slavery in the United States and then enlarged their political visions to include a range of

progressive causes: racial equality, temperance, black suffrage, and women's suffrage. We will explore the texture of women's experiences in the 19th century, the conditions that gave rise to multifaceted societal change, and the ways in which that change unfolded. Finally, our course will consider how these women's stories are remembered in present-day public culture and whether knowledge of this era can play a role in the urgent societal issues of our own time.

Course Note: This course meets the "North America" History Concentration requirement.

Former course number "HIST 12M."

Harvard and Native Lands

No meeting time listed

Philip Deloria

Course ID: 220261

2026 Spring (4 Credits)

Instructor Permission Required

Harvard's beginnings included a promise to educate both "English and Indian youth," but from its outset Harvard's endowment included Native lands expropriated through war, theft, and coercion. This class will conduct original research on these histories, seeking to contribute a new understanding of Harvard's institutional development and its historic and continuing impact on Native American peoples. We will work hands-on with Harvard's archives, developing research skills in navigating collections, reading early handwriting, and interpreting colonial documents. We will situate our research in readings and class activities on New England colonialism, the long history of European and U.S. dispossession of Native lands, and the political struggles of Native American communities today. Through close examinations of texts including poems, speeches, short stories, and deeds, we will explore the centrality of land and environment in colonial writings and in Native literature today. Our course will result in two products: working collaboratively, we will produce both a new database of Harvard land transactions and a set of detailed research projects on individual sites. Drawing inspiration from Harvard's own Legacy of Slavery initiative and the Land-Grab Universities website, we hope to come up with both new data and new narratives for describing Harvard's pasts and possible futures.

Oral Histories of Asian America: Migration, Memory, Method

No meeting time listed

Will Sack

Course ID: 226493

2026 Spring (4 Credits)

Instructor Permission Required

The history of Asian America is encoded in memory and family stories, as well as written documents. This course empowers students to engage that history through oral methods. It discusses best practices as well as key cases and themes in the history of Asian American activists and historians' use of oral history. By the end of the course, you will have conducted one oral history interview and built a skillset that can serve as the basis of a senior thesis. At the same time, oral history methods support community engagement in countless ways and can serve for a lifetime.

Course Note: This course meets the "Beyond North America" History Concentration requirement.

HIST 165 (01)

Asian American Women in the Archive: Schlesinger Library Immersive Course

M 1245 PM - 0245 PM

Erika Lee

Course ID: 224506

2025 Fall (4 Credits)

Instructor Permission Required

Asian Americans are the fastest growing group in the US, yet the long and diverse histories of Asian Americans, especially Asian American women, have often been absent from the research and teaching of American history. Much of this invisibility is due to the absence of Asian American women in the archives that historians traditionally use to write history. Asian American women's experiences of migration, labor, and activism can be particularly hard to find in institutional archives. When they do appear, their lives have often been recorded by outsiders and under conditions and constraints of state surveillance or patriarchal family structures and ideologies. Yet, new historical scholarship and new efforts to collect and preserve the records of Asian American women in community-based and institutional archives have revealed their strength, resilience, and

transformative power in shaping their own lives and impacting change within local, national, and transnational contexts.

Race, Gender, and the Law Through the Archive

W 1245 PM - 0245 PM

Myisha Eatmon

Course ID: 222186

2025 Fall (4 Credits)

Instructor Permission Required

From First Lady Michelle Obama to political mastermind Stacy Abrams to Vice President Kamala Harris, Black women have left their stamp on 21st-century politics and grassroots organizing. But, as historian Martha S. Jones (and many others) has shown, Black women have always been at the "vanguard" of affecting positive change in American society. This course sets out to look back to the 20th century to examine conditions under which Black women lived in the early days of Jim Crow and the role that Black women and non-binary people have played in shaping politics, grassroots organizing, the legal bar, and higher education during Jim (Jane) Crow and beyond. Through the archive and the personal papers of Pauli Murray, June Jordan, Angela Davis, and Flo Kennedy, we will see the human side of these themes and the Black Freedom Struggle. What did life look like for Black women during the Nadir? How did these people navigate gender and sexuality while pushing for civil rights? How did gender, sexuality, and intersectionality impact their political ideologies? Though many scholars argue that the law is autonomous, Critical Legal Studies scholars and Critical Race theorists argue that the law is subjective. In "Race, Gender, and the Law through the Archive," students will see the subjectivity of the Black women and non-binary people who helped push for social and legal reform. Some of these women/people shaped the law as attorneys (Pauli Murray and Flo Kennedy). In contrast, others shaped the law and visions of freedom through their activism (Murray, Kennedy, Angela Y. Davis, and June Jordan), teaching (Davis), and art (Jordan). Through their avenues of influence, all of these women/people, whose papers are housed at Harvard's Schlesinger Library, wielded the law or helped shape it in the twentieth century.

HIST 186 (1)

Moral Economy

T 0300 PM - 0500 PM

Sama Mammadova

Course ID: 226425

2025 Fall (4 Credits)

Instructor Permission Required

How have societies across history reconciled private interest with public good, profit with sustainability, economic necessity with moral obligation? What principles have governed the distribution of wealth and the provision of welfare? This course offers a historical exploration of the concept of moral economy and illuminates the enduring tensions around economic justice, mutual aid, and social responsibility. From regulation of commerce and credit to debates around slavery, colonialism, and environmental risks, this course will investigate the ethical

frameworks that have shaped economic life for centuries. In every class, we will work with a wide array of primary sources, as well as secondary sources from the fields of history, economics, theology, psychology, and anthropology to address pressing contemporary questions: Is it ethical for education and healthcare to leave individuals with lifelong debt, and how should economic policies address this burden? What role should governments play in regulating commerce, administering credit and welfare, and redistributing wealth? Is capitalism inherently at odds with morality? How can businesses balance shareholder interests with ethical responsibilities? And, finally, how does the prism of moral economy illuminate ongoing issues on our own campus, such as Harvard's investment in fossil fuels?

Course Note: This course meets the "Pre-1750" History Concentration requirement.

HIST 1901 (1)

Nationalism, Political Independence, and Economic Development in Africa

No meeting time listed

Emmanuel Akyeampong

Course ID: 220134

2026 Spring (4 Credits)

Instructor Permission Required

This course examines the nature of African nationalism, the attainment of political independence in the mid-20th century, and the challenge of economic development. It transcends the Western paradigms by which African nationalism has been understood to interrogate African histories and the oral and visual cultures that have shaped nationalism, and the culture of power that has informed African understandings and expectations of sovereignty. The first two decades of independence witnessed the popular endorsement of the "developmental" state, which had rapid economic growth as its objective. The failure of the developmental state, both socialist and capitalist, overlapped with the rise of authoritarianism, and ushered in Africa's lost decade of the 1980s – one of marked decline in agricultural productivity and reverses in industrialization. The informal economy assumed a dominant position in most African national economies. In the post-1980s, the West, and now Asia, have assumed leading roles in Africa's developmental agenda. Why has "development" proved so elusive in Africa?

HIST 1926 (1)

Decolonization: An Unfinished History

Course ID: 226400
2026 Spring (4 Credits)

Instructor Permission Required

This course marks the centenary of decolonization by surveying its key characteristics and historical trajectories since the interwar years. It presents an opportunity for students to enhance their conceptual toolkit and gain a critical purchase on one of the defining themes of twentieth-century world history. Decolonization took on a variety of shapes and forms in different settings at different times, and thus the course will consider its specific modalities across Asia, Africa, Australasia and in Europe itself. It is framed as an 'Unfinished History' because so many of the tensions and contradictions of global decolonization are yet to fully play themselves out. While much of the emphasis will be on decolonization as an evolving historical phenomenon, there will be no shortage of opportunity for reflection on the dilemmas of the contemporary, twenty-first-century world.

Course Note: This course meets the "Beyond North America" History Concentration requirement & can be used to fulfill the seminar requirement.

This course will be taught by Visiting Australian Studies Professor Dr. Stuart James Ward

HIST 1935 (1)

Political Debates in the Empire of New Rome

Course ID: 110448

Slavery, the Environment, and Public History

W 1200 PM - 0245 PM

Tiya Miles

Course ID: 212674
2026 Spring (4 Credits)

Instructor Permission Required

Confronting vexed historical meanings and present-day uses of the past is the special charge of public historians. This course explores the theme of slavery in environmental context through the lenses and methods of public history, a field of historical inquiry and applied knowledge production that stresses past-present connections, community engagement, collaborative work, and audiences beyond the academy. As a foundational element in the structure of U.S. society, slavery has made a lasting imprint on social, cultural, political, economic, and ecological relations. Nevertheless, American public culture has avoided sustained exploration of the broad and complex history of racialized slavery and instead maintains a stance of discomfort, distance, and ambivalence. We will discuss change over time in public representations of slavery while also addressing the tensions of collaboration and audience engagement.

Course Note: This course meets the "North America" History Concentration requirement.

2026 Spring (4 Credits)

Instructor Permission Required

This class uses history to make a difference in the natural world. Rewilding returns a habitat to an earlier form to promote biodiversity; urban rewilding does this within urban spaces. In this class, we will research historical and cultural definitions of wilderness and landscape, identify what precolonialist habitats were like in New England, survey how such places might be restored, and then contribute to a ten-year urban rewilding plan for Harvard, including an outdoor exhibit for the Harvard Museums of Science and Culture and a GIS reconstruction of Harvard's landscape history. The class is open to both graduate students and undergraduates in a broad and relevant range of disciplines and will fulfill conference course credit in the History Department.

Course Note: This course meets the "North America" History Concentration requirement & can be used to fulfill the seminar requirement.

FAS Divisional Distribution: Social Sciences

HIST 1980 (1)

The Soviet Empire, 1917-1991

No meeting time listed

Terry Martin

Course ID: 215999
2026 Spring (4 Credits)

Instructor Permission Required

This course will analyze the Soviet Union as a multi-national state and ask to what extent it functioned as an empire and how its strategies of national rule evolved from the revolution to 1991. It will also analyze Soviet foreign policy towards other Communist states in eastern Europe and in Asia and ask to what extent these were imperial. Finally, it will look at how strategies of domination over non-Russians in the USSR and abroad interacted in the collapse of European Communism.

Course Note: This course meets the "Beyond North America" History Concentration requirement & can be used to fulfill the seminar requirement.

FAS Divisional Distribution: Social Sciences

HIST 1984A (1)

Book history before the modern age

F 1200 PM - 0245 PM

Ann Blair

Course ID: 226248
2025 Fall (2 Credits)

Instructor Permission Required

This course meets every other week across fall and spring semesters. The fall will provide an introduction to recent work in the book history from antiquity to 1800, with an emphasis on Europe and some comparison with Islamic and East Asian contexts. In the spring we will discuss major themes in the field including authorship, commercial and legal regulations, distribution, reading, libraries, and survival rates. Assigned thematic readings will often concern Europe in the handpress era (1450-1800), but for their bibliographical essay (in fall) and final research paper (in spring) students may investigate materials in a pre-modern context of their choice. Designed for graduate students and advanced undergraduates. Students must complete both terms of this course (parts A and B) within the same academic year to receive credit.

Course Note: This course meets the "Pre-1750" History Concentration requirement.

Full Year Course: Indivisible Course

FAS Divisional Distribution: None

American Legal History: From Reconstruction to the Present

RF 0130 PM - 0330 PM

Laura Weinrib

Course ID: 222232
2026 Spring (4 Credits)

Instructor Permission Required

This course examines major legal and constitutional conflicts in American history beginning with Reconstruction. Topics include law and social movements, the role of the courts, rights consciousness, the legal profession, and legal thought. Students will connect legal texts and legal struggles to broader developments in social, cultural, and political history.

Course Note: This course is jointly-offered with the Harvard Law School as HLS 2519. Enrollment for FAS students is 10. This course will meet on the Harvard Law School Campus.

HIST 1993 (1)

Introduction to Digital History

R 1200 PM - 0245 PM

Gabe Pizzorno

Course ID: 156564
2025 Fall (4 Credits)

Instructor Permission Required

This course trains students in a range of digital methods used for the acquisition, analysis, and visualization of data in the context of historical research. Beyond developing practical skills, students will learn how to critically evaluate the potential and limitations of new technologies, and how to integrate them into their work in a careful, theoretically informed way. History Concentrators: History 1993 may be counted towards the distribution requirements of the History concentration on request.

HIST 2039 (1)

History from Things: Seminar

R 0300 PM - 0545 PM

Gabe Pizzorno

Course ID: 205145
2026 Spring (4 Credits)

Instructor Permission Required

This seminar focuses on the use of material culture as a primary source for constructing historical narratives that access aspects of the past not covered by written words. We will look closely at how materiality theory relates to the methodologies and conceptual categories used by historians to understand the past. Students will also be trained in the specific skills needed for interpreting material sources. Because material history relies on methodologies and theoretical approaches that transcend the fields that define our discipline, the course's coverage will be broad across both time and space, allowing for participants to explore corpora of materials according to their own interests and expertise.

HIST 2271 (1)

The Soviet Union: Proseminar

R 0300 PM - 0545 PM

Terry Martin

Course ID: 122085
2025 Fall (4 Credits)

Introduction to major debates in the historiography of the Soviet Union and late imperial Russia.

FAS Divisional Distribution: None

HIST 2412 (1)

Topics in the History of Atlantic Slavery: Seminar

No meeting time listed

Vincent Brown

Course ID: 123095
2026 Spring (4 Credits)

Will introduce graduate students to major synthetic works on the history of Atlantic slavery, surveying the period between the mid-15th century and the late 19th, and provide them an opportunity to develop original research projects.

FAS Divisional Distribution: None

HIST 2442 (1)

Readings in the History of the U.S. in the 19th Century: Proseminar

T 0945 AM - 1145 AM

Walter Johnson

The second in the sequence of three proseminars required of all graduate students in American history and open to graduate students in other history fields and other departments as space permits.

Course ID: 114882
2025 Fall (4 Credits)

FAS Divisional Distribution: None

HIST 2444 (1)

U.S. Politics and the State in the Twentieth Century: Seminar

R 0300 PM - 0500 PM

Lisa McGirr

Examines approaches to U.S. politics and state-building across the twentieth century. The course looks at seminal debates about the changing character of the American state and American political developments in what has been called by some the "American century." Students will be expected to hone a research question and to write an article length paper on a topic of their choosing.

Course ID: 220074
2025 Fall (4 Credits)

Instructor Permission Required

HIST 2492A (1)

Warren Center Seminar: Labor and Political Economy in U.S. History

M 1245 PM - 0245 PM

Sven Beckert, Joel Suarez

This seminar explores new currents in US labor history and political economy. As part of the Warren Center's faculty fellowship, participants will read new and often unpublished research on labor and working-class life and debate histories and theories of such topics as social reproduction, finance and money, unemployment and informal markets, the environment and the care economy, migration, gender and racism, and the welfare state. In addition to discussing original research, students will also engage with classic and recent cutting-edge labor histories that explore proletarianization, industrialization, deindustrialization, and class formation from the colonial period to the present with an eye towards their transnational dimensions. Students will be guided to write a research paper on any aspect of American labor history. Students must complete both terms of this course (Part A & B) in the same academic year to receive credit.

HIST 2638 (1)

Readings in Modern Chinese History: Proseminar

Course ID: 159563
2025 Fall (4 Credits)

M 0300 PM - 0500 PM

Instructor Permission Required

Arunabh Ghosh

This Pro-Seminar will examine developments in the field of modern Chinese history, with a particular focus on the twentieth century. Our principal goal is to gain some familiarity with the historical debates and methodological approaches that have given shaped to the field. Readings will aim to achieve a balance between classics in the field and contemporary scholarship. Topics covered include empire and semi-colonialism, rebellion and revolution, nationalism, civil society and public sphere, economic development, war, science and technology, foreign relations, and foreign relations. This Pro-Seminar is particularly recommended for students planning an examination field in modern Chinese history. Reading knowledge of Chinese is recommended but not a required; students must have some prior coursework in Chinese history.

HIST 2707 (1)

Comparative Slavery & the Law: Africa, Latin America, & the US: Seminar

W 1245 PM - 0245 PM

Emmanuel Akyeampong, Alejandro de la Fuente

Course ID: 159554

2025 Fall (4 Credits)

Instructor Permission Required

This seminar surveys the booming historiographies of slavery and the law in Latin America, the United States, and Africa. Earlier generations of scholars relied heavily on European legal traditions to draw sharp contrasts between U.S. and Latin American slavery. The most recent scholarship, however, approaches the legal history of slavery through slaves' legal initiatives and actions. These initiatives were probably informed by the Africans' legal cultures, as many of them came from societies where slavery was practiced. Our seminar puts African legal regimes (customary law, Islamic law) at the center of our explorations concerning slaves' legal actions in the Americas.

HIST-LIT 10AB

Introduction to the Medieval World

T 1245 PM - 0245 PM

Sean Gilsdorf, Brian Fitzgerald

Course ID: 222836
2025 Fall (4 Credits)

Join us for a journey through the cultures, peoples, objects, and ideas of the millennium commonly described as "medieval", extending from the reorganization of the Eurasian world in the fourth century to its transformation in the fifteenth. With primary documents in translation and medieval books and objects in Harvard's collections as your guides, you will travel virtually through a series of medieval spaces and places—Jewish, Christian, and Islamic houses of worship, homes, palaces, schools, marketplaces, and the open road—meet the fascinating people who occupied them, and uncover how those people lived, the stories that they told, they voyages that they took, and the things that they made.

Course Note: This course is offered by History & Literature as HIST-LIT 10AB and by Medieval Studies as MDVLSTD 10. It can be taken for concentration credit in History & Literature, and to fulfill the "Foundational" or "History" field requirement for the Secondary Field in Medieval Studies. Credit may be earned for either MDVLSTD 10 or HIST-LIT 10AB, but not both. However, enrollment in either course (MDVLSTD 10 or HIST-LIT 10AB) will count toward the concentration and secondary requirements for both Medieval Studies and History & Literature.

This course is offered as HIST-LIT 10AB and MDVLSTD 10. Credit may be earned for either MDVLSTD 10 or HIST-LIT 10AB, but not both.

England After Empire

R 0345 PM - 0545 PM

Duncan White

Course ID: 109958
2025 Fall (4 Credits)

Instructor Permission Required

This course considers the way the United Kingdom was transformed through the demise of its Empire after the Second World War through to the advent of Brexit Britain. From the birth of the welfare state to the rise of Thatcherism, from post-colonial migration to multicultural Britain, from the Swinging Sixties to punk rock and riots, we will track these radical political, social and cultural changes through novels, poetry, theater, film, pop music, photography, fashion, food and sport. We will explore the way Britain sought to retain its influence in the world, through its involvement in the Cold War, its relations with the Commonwealth, and its continuing 'special relationship' with the United States, even as what being English or British began to change in meaning. As well as reading literary works by John Osborne, Sam Selvon, and Zadie Smith, we will consider the nation's popular culture, from The Beatles to The Sex Pistols.

Interested students should petition to enroll on my.harvard. In your petition, say a few words about your interest in the course (including concentrations you are considering if you are undeclared), any requirement the course may satisfy, and whether you have taken any other History & Literature seminars. Please contact the instructor if you have any questions.

Work and Labor Across the Americas

T 0300 PM - 0500 PM

Dennis Hogan

Course ID: 159793
2025 Fall (4 Credits)

Instructor Permission Required

This seminar introduces students to the history of work and workers in the Americas. We will examine work and labor and their intersections with colonialism, imperialism, and slavery from the nineteenth century through

today. The course will also ask how working people have represented themselves, and how they have intervened to change their own lives, and, sometimes, the course of history. Our analysis will encompass racialized, feminized, and unfree labor; domestic and reproductive labor; migrant, casual, and emotional labor, as well as the labor of the artist and the organizer. We will engage with a wide range of historical and literary texts from Latin America and the United States to consider how writers from across the Americas have used literature to consider what it feels like to work, and to refuse work. Course readings may include Solomon Northrup's *12 Years a Slave*, Gabriel García Márquez's *100 Years of Solitude*, and Jamaica Kincaid's *Lucy*, as well as works from theorists such as Sylvia Federici, CLR James, Karl Marx, Kathi Weeks and Raymond Williams.

Interested students should petition to enroll on my.harvard. In your petition, say a few words about your interest in the course (including concentrations you are considering if you are undeclared), any requirement the course may satisfy, and whether you have taken any other History & Literature seminars. HIST-LIT 90FK

Europe After the Cold War

No meeting time listed

Matthew Sohm

Course ID: 220441

2026 Spring (4 Credits)

Instructor Permission Required

Contemporary Europe is a continent of contrasts: it's home to some of the most peaceful, prosperous societies on earth, while continuing to be marred by war, economic stagnation, and division. This course explores how we got to the Europe of today's headlines. We begin by investigating the apparent triumph of Western liberalism in the aftermath of the Cold War—what political scientist Francis Fukuyama dubbed "the end of history." How did this supposed victory of Western values confront new realities of economic stagnation, migration, racial conflict, and war? And how did European states seek to preserve equality, economic prosperity, and social welfare at home in an unequal world? Course topics include the fall of Communism and German reunification, neoliberalism and inequality, youth culture, social democracy and the welfare state, the 2008 financial crisis, the 2010s migrant crisis, and the rise of populist politics. We consider texts by Angela Merkel, Lea Ypi, Jenny Erpenbeck, Michel Houellebecq, Joan Scott, Thomas Piketty, Tony Judt, and Timothy Garton Ash; music from the Eurovision song contest; television shows such as *NSU German History X*; and films like the 1993 French drama *La Haine*, the 2003 German reunification comedy *Good Bye, Lenin!*, the 2013 Italian portrait of decadence *La Grande Bellezza* (*The Great Beauty*), and the 2016 German comedy *Toni Erdmann*.

Interested students should petition to enroll on my.harvard. In your petition, say a few words about your interest in the course (including concentrations you are considering if you are undeclared), any requirement the course may satisfy, and whether you have taken any other History & Literature seminars. Please contact the instructor if you have any questions.

HIST-LIT 90GB

American Education Reforms

No meeting time listed

Emily Gowen

Course ID: 222485

2026 Spring (4 Credits)

Instructor Permission Required

Education is often understood as a lever for social change, but ideas about what constitutes a good education have long been hotly contested. What is more, the seeds of today's most urgent educational controversies—such as debates about equity, educational purpose, censorship, etc.—can be found in archives related to America's earliest schools. In this course, we will trace various American education reform movements from the early colonial period through the turn of the 20th century, and explore the philosophical, practical, and social conflicts that animated them. We will move thematically and chronologically through the histories of Indian schools, common schools, freedpeople's schools, and women's colleges, and end with post-reconstruction regimes of school segregation. Readings will include essays by thinkers like Horace Mann, Emma Willard, and W.E.B. DuBois, as well as educational materials like the *New England Primer*, the *American Spelling Book*, *The Brownies' Book*, and a range of novels, poems, tracts, and stories spanning the long nineteenth century. Students will have the chance to conduct hands-on research at archives related to various local educational institutions and will be encouraged to explore the legacies of early American reforms in today's educational landscape.

Interested students should petition to enroll on my.harvard. In your petition, say a few words about your interest in the course (including concentrations you are considering if you are undeclared), any requirement the course may satisfy, and whether you have taken any other History & Literature seminars. Please contact the instructor if you have any questions.

HIST-LIT 90GP

Race & Ethnicity in Twentieth-Century American ThoughtCourse ID: 224364
2026 Spring (4 Credits)*No meeting time listed**Instructor Permission Required**Nicholas Bloom*

In his 1903 book *The Souls of Black Folk*, W.E.B. Du Bois famously wrote that "the problem of the twentieth century is the problem of the color line." This course is a survey of the work of intellectuals, artists, and activists in the late-nineteenth and twentieth centuries who took this "problem" seriously, and who sought to understand its origins, its functions, and how it ought to be addressed. It will expose students to certain foundational ideas, problems, and debates in the study of race and ethnicity in twentieth century America. Readings may include works by C.L.R. James, Zora Neale Hurston, Leslie Marmon Silko, Gloria Anzaldúa, James Baldwin, Cedric Robinson, bell hooks, William Faulkner, and Toni Morrison, among others. Most importantly, the course aims to provide students the opportunity to develop their own critical and historical acumen to study those aspects of race and ethnicity that they find most urgent or fascinating.

Interested students should petition to enroll on my.harvard. In your petition, say a few words about your interest in the course (including concentrations you are considering if you are undeclared), any requirement the course may satisfy, and whether you have taken any other History & Literature seminars. Please contact the instructor if you have any questions.

HIST-LIT 90GT

World War II in Image, Text, and SoundCourse ID: 224366
2025 Fall (4 Credits)

T 0945 AM - 1145 AM

*Instructor Permission Required**Jules Riegel*

Almost eighty years after the end of World War II, its legacies are alive as ever. The conflict was fought across much of the globe, ravaging landscapes and ecosystems and wiping villages, towns, and even cities from the face of the earth. Estimates of combined civilian and military deaths typically range between 50,000,000 and 85,000,000, an almost unimaginably devastating toll. Yet how does our understanding of World War II change when we return to literature, art, music, and other cultural works of the time? This course examines civilians' and soldiers' everyday experiences of the war through sources such as diaries, photographs, films, songs, and visual art. We will focus on the war in Europe, while considering sources from the war's other theaters, including the U. S. and the Pacific. Topics will include the war's origins; life and death under occupation; the impact of strategic bombing; the propaganda war; documentation of wartime atrocities, especially through photography; the Holocaust; the bombings of Hiroshima and Nagasaki; and the pursuit of postwar justice. Throughout the semester, we will employ lenses such as race, gender, and class as we analyze wartime cultural creations, seeking to better understand what it meant to live and die during the most terrible war in human history.

HIST-LIT 90GX

U.S. Women of Color Feminisms since the 1970sCourse ID: 224567
2025 Fall (4 Credits)

R 1245 PM - 0245 PM

*Instructor Permission Required**Kiran Lam-Saïli*

The history of U.S. women of color feminist politics and expressive cultures is one filled with Black, Indigenous, Chicana, and Asian American thinkers who have demanded that we take seriously how categories such as race, sex, gender, sexuality, class, and ability shape our world and our relation to it. With attention to the historical and political conditions from which our creative texts arise, this course will take three main, loosely chronological, turns. First, we will examine the emergence and implications of the term "women of color" in the late 1970s. Second, we will consider key developments in specific women of color feminisms during the 1980s and 1990s, from critiques of settler colonialism in Indigenous and Chicana thought, to challenges to imperialism's afterlives in the Asian American context. Finally, we will turn to the 21st century to engage contemporary women/queer of color thought on issues like media representation, reproductive justice, migrant carework, abolition, and disability justice. Primary sources will include fiction, poetry, visual art, and films, as well as protest performances, interviews, government/intergovernmental documents, political speeches/essays/pamphlets/manifestos, and magazine articles. We will read/watch, for example, fiction by Audre Lorde, mixed-memoir by Gloria Anzaldúa, poetry by Leah Lakshmi Piepzna-Samarasinha and Chrystos, and films like *Red Canary* Song's *Fly in Power*.

Interested students should petition to enroll on my.harvard. In your petition, say a few words about your interest in the course (including concentrations you are considering if you are undeclared), any requirement the course

may satisfy, and whether you have taken any other History & Literature seminars. Please contact the instructor if you have any questions.

HIST-LIT 90GZ

Magic and Mythology in Latin America and the Caribbean

No meeting time listed

Cristina Garcia Navas

Course ID: 224871
2026 Spring (4 Credits)

Instructor Permission Required

This course traces the presence of the supernatural in Latin American literature, art, and culture. How has contact between fantasy, magic, and mythology been central to defining and thinking about the contours of social and historical realities in the region? The seminar focuses on the historical meanings of fantasy, myths, and legends and how they relate to memory and identity. What is the relationship between myths and cultural imaginaries with colonial and post-colonial legacies? How has fiction about supernatural beings shaped notions of gender, race, and ethnicity, as well as national and transnational imaginary communities in the region? These are some of the questions we will explore in this course, which studies the social, ecological, and political meanings of popular myths present in the region's literature and oral tradition. We will analyze stories about Andean Huaca deities, Amazons, duels with the Devil, witches, and other supernatural creatures inhabiting fiction and imaginaries in -and about- Latin America and the Caribbean. Assigned texts may include works by Lydia Cabrera, Jorge Luis Borges, Oswald de Andrade, Juan Rulfo, José Guadalupe Posada, Frida Kahlo, Remedios Varo, Leonora Carrington, Gabriel García Márquez, Julio Cortázar, Elena Garro, José María Arguedas, Aimé Césaire, Gloria Anzaldúa, and Mariana Enríquez. While the course will be conducted in English, Spanish language materials will be available for students who wish to fulfill History & Literature's language requirement.

Interested students should petition to enroll on my.harvard. In your petition, say a few words about your interest in the course (including concentrations you are considering if you are undeclared), any requirement the course may satisfy, and whether you have taken any other History & Literature seminars. Please contact the instructor if you have any questions.

HIST-LIT 90HA

The American West

M 0945 AM - 1145 AM

Chloe Hawkey

Course ID: 225035
2025 Fall (4 Credits)

Instructor Permission Required

From cowboys to "tech bros," images of the American West are everywhere—and they have been for a long time. The data of geological surveys and census reports have never been able to outweigh Americans' (often conflicting) dreams of the West: the land of endless potential or a wasteland, naturally sublime or demanding development. This course explores these ideas, their development, and the interplay between them and political and economic growth. Where do these ideas come from, and how do they change over time? What happens when they clash with social or political reality? What are the benefits and drawbacks of focusing our attention on the realm of culture? As we work to answer these questions, we'll also address the methods of settler colonial theory, environmental history, and literary history. Our discussions will move between ideas about the land, geology, and environmental damage and ideas about people, cities, and technology, as we seek to understand how deeply interrelated these various aspects of the American West are.

Interested students should petition to enroll on my.harvard. In your petition, say a few words about your interest in the course (including concentrations you are considering if you are undeclared), any requirement the course may satisfy, and whether you have taken any other History & Literature seminars. Please contact the instructor if you have any questions.

Indigenous Economies and Environments

W 0945 AM - 1145 AM

Mandy Izadi

Course ID: 225721
2025 Fall (4 Credits)

Instructor Permission Required

The course surveys histories of economies built by Indigenous Americans on their own lands. It also examines economies—local and global—that settler colonists built from stolen lands and natural resources of Indigenous Americans. Spanning centuries, and extending to the present, this course is organized conceptually into three principal sections on Land, Energy, and Gaming. Moving chronologically from places as varied as wetlands and

oilfields to casinos, we will examine subjects relating to land loss, resource extraction, and Indigenous struggles for economic sovereignty. More broadly, we will study intersections of colonialism and capitalism; race-based violence; colonial legal systems; conceptions of hierarchy and harmony in human-nature relationships; cultural and spiritual underpinnings of Indigenous and non-Indigenous economies; environmental justice; human rights and the rights of nature. Special attention will be paid to Indigenous sciences, including traditional ecological knowledge that has sustained life here for millennia for the continent's first peoples and eventually, Euro-Americans. This class prioritizes perspectives, voices, knowledge systems of Indigenous Americans. It draws from the arts, humanities, and sciences. Film and literature—classic, celebrated, problematic—brings depth to our interdisciplinary readings. The academic scholarship we consult draws from Native history; Environmental Sciences; global Capitalism; the Law; Native Studies, and more.

Interested students should petition to enroll on my.harvard. In your petition, say a few words about your interest in the course (including concentrations you are considering if you are undeclared), any requirement the course may satisfy, and whether you have taken any other History & Literature seminars. Please contact the instructor if you have any questions.

Music, Memory, and Identity in Latin America

W 0300 PM - 0500 PM

Cristina Garcia Navas

Course ID: 226390

2025 Fall (4 Credits)

Instructor Permission Required

This course explores the role music plays in the creation and transmission of memory and identity in Latin American cultures. How have musical traditions shaped the development of collective ethnic and national narratives, as well as conceptions of gender and race? How has music engaged with political movements and power across the region? We begin with colonial sources documenting Indigenous and African voices through chronicles and early song collections. We then move to 19th century revolutionary corridos—popular ballads narrating events from the South American independence movements to the changing North American national borders. Along with examples from oral tradition, we study the reinterpretations of songs by marginalized peasant populations in literary works that helped to mold modern Latin American national identities, such as the Argentine epic poem Martín Fierro and the Colombian novel María. Finally, we turn to the rise of popular 20th-century musical genres, including cumbia, salsa, currulao, and reggaeton, as well as folk and rock artists like Mercedes Sosa and Sui Generis singing against 20th-century dictatorships. While the course will be conducted in English, Spanish language materials will be available for students who wish to fulfill History & Literature's language requirement.

Interested students should petition to enroll on my.harvard. In your petition, say a few words about your interest in the course (including concentrations you are considering if you are undeclared), any requirement the course may satisfy, and whether you have taken any other History & Literature seminars. Theories of the Tropics

No meeting time listed

Dennis Hogan

Course ID: 226393

2026 Spring (4 Credits)

Instructor Permission Required

This course considers the tropics, a zone spanning more than one hundred countries and housing nearly forty percent of the human population. What are the histories and cultures of the tropics and how have they been imagined, experienced, and struggled over by residents and visitors alike? How have the tropics been racialized in ways that justify and naturalize colonialism? We will organize our inquiry geographically and climatologically, zooming in on three moments: the eighteenth century, when Europeans sought to perfect agricultural and extractive enterprises founded in slavery and imperialism; the nineteenth century, when tropical nations won independence despite being subjected to forces of environmental determinism and scientific racism; and the twentieth century, when tropical cultures and motifs established themselves in the global mainstream. Readings include writing by Alexander von Humboldt, Charles Darwin, and José María Samper; political and social theory by Charles Mills, Sylvia Wynter, Eduardo Galeano, and Antonio Benítez Rojo; and literature by Amitav Ghosh, Jean Rhys, and Miriam Warner-Vieyra. We'll also listen to music, by Bad Bunny as well as the tropicália band Os Mutantes, and consider architecture from Havana to Singapore. Though focused on the Americas, our inquiry will extend to Africa, Asia, and across the Pacific.

Interested students should petition to enroll on my.harvard. In your petition, say a few words about your interest in the course (including concentrations you are considering if you are undeclared), any requirement the course may satisfy, and whether you have taken any other History & Literature seminars. Please contact the instructor if you have any questions.

A Cultural History of Machines

2025 Fall (4 Credits)

W 0945 AM - 1145 AM

Instructor Permission Required

Emmet von Stackelberg

Will machines destroy the world or rescue it? Are new technologies improving our lives or degrading them? This course investigates the history of fears—and hopes—regarding the massive technological ruptures of the 20th century, a period of rapid industrialization and urbanization punctuated by two technologically sophisticated world wars. We'll focus on how technological change has been represented across a range of cultural texts—including films like Fritz Lang's *Metropolis*, speculative fiction by W.E.B. DuBois and Ursula K. Le Guin, and the Afrofuturistic music of Sun Ra—asking what these representations reveal about the controversies, panics, and celebrations that swirled around technological changes to daily life. How did new machineries of battle change attitudes toward violence and trauma after the first World War? How did industrial mechanization alter the experience of work? And what stood behind Cold War preoccupations with flying saucers, atomic bombs, and the beginnings of the space race? Along the way we will also explore how new technologies of entertainment—including film, radio, and television—were attacked and adored as symbols of modernity themselves, even as they were used to pass judgment on modern science, technology, and medicine.

Interested students should petition to enroll on my.harvard. In your petition, say a few words about your interest in the course (including concentrations you are considering if you are undeclared), any requirement the course may satisfy, and whether you have taken any other History & Literature seminars. Queer Archives

2026 Spring (4 Credits)

W 0945 AM - 1145 AM

Instructor Permission Required

Lauren Kaminsky

Queer histories are all around us, but rarely do they announce themselves as such. This research seminar offers training in archival methods with a focus on historical subjects who deviate from dominant historical narratives. In centering "queer" archival traces, we will read along the grain with dissident voices representing minoritized gender and sexual subjectivities, while also cultivating a practice of reading against the grain as a way of attending to the exclusionary operations of representational practices. This course will be taught in and draw on the Schlesinger Library's extraordinary collections, and much of our class time will be spent exploring materials

that can only be accessed on site. This course requires no prior knowledge or experience, and assignments will culminate in an essay based on original archival research.

Interested students should petition to enroll on my.harvard. In your petition, say a few words about your interest in the course (including concentrations you are considering if you are undeclared), any requirement the course may satisfy, and whether you have taken any other History & Literature seminars. Please contact the instructor if you have any questions.

Oral Histories and Archives

R 0945 AM - 1145 AM

Andi Remoquillo

Course ID: 226394

2025 Fall (4 Credits)

Instructor Permission Required

To understand the archive is to understand history: neither is neutral, homogenous, nor fully representative of any one story. Indeed, many scholars argue that archives aren't repositories for objective truths but rather political and epistemological projects that have the power to suppress certain voices—or liberate them. How can we make sense of the archive in a way that counters historical silences? And how might oral histories fill in gaps left by archival negations? This course introduces students to theories, practices and controversies of the archive and oral history methodologies, with the goal of creating what the scholar Marianne Hirsch calls "countermemories," representations of the past that unearth ignored or disruptive material. Readings include interdisciplinary writing by feminist, anti-racist, and anti-colonial scholars demonstrating a range of approaches, as well as primary sources like historical documents and novels that incorporate archival materials to reimagine the past, present, and future. We will also work with Schlesinger Library's archival collections, community-based archives and digitized oral histories, and practice oral history interviews of our own. At semester's end, students will conduct original research on a topic of their choice using archival materials and oral histories collected earlier in the semester.

Interested students should petition to enroll on my.harvard. In your petition, say a few words about your interest in the course (including concentrations you are considering if you are undeclared), any requirement the course may satisfy, and whether you have taken any other History & Literature seminars. Please contact the instructor if you have any questions.

HIST-LIT 93AH

Music, Politics, and Protest in the United States

No meeting time listed

Caitlin Schmid

Course ID: 224872

2026 Spring (4 Credits)

Instructor Permission Required

In this course, we'll explore the intersection of music and social movements in the United States in the 20th and 21st centuries. How have musicians, critics, and audiences positioned music as "political" (and what does that mean)? What does a protest sound like, and what can that tell us about particular modes of resistance tied to race, class, gender, and sexuality? Can music be an effective agent of change? Drawing on a wide variety of sources—texts, archives, recordings, performances, experiential knowledge—we'll ask how music and sound have worked in history to document, dissent, and/or protest; how music functions in our own sociopolitical context; and how music imagines utopian and dystopian futures. The seminar will delve into methods of researching and writing about sound, and students will have the opportunity to conduct original research towards a substantial academic paper and to develop written and creative materials for public audiences. This course is affiliated with the Mindich Program in Engaged Scholarship and counts towards the course requirement for the Certificate in Civic Engagement.

Interested students should petition to enroll on my.harvard. In your petition, say a few words about your interest in the course (including concentrations you are considering if you are undeclared), any requirement the course may satisfy, and whether you have taken any other History & Literature seminars. 2025 Fall (4 Credits)

Introduction to the History of Art

M 1200 PM - 0115 PM

Instructor Permission Required

Felipe Pereda, Jeffrey Hamburger, Cecile Fromont, Jennifer L. Roberts, Jennifer L. Roberts

An introduction to major works of art and architecture from around the world, co-taught by a team of six HAA professors, two of whom will co-lead the course. Each week consists of one 75-minute lecture by a faculty member, 60-minute looking labs in the museum led by faculty members, and 75-minute discussion sections led by TFs. Every unit will focus on a specific artwork or site through which large humanistic questions and art historical concepts are considered.

Petitions will be accepted on a first-come, first-served basis. No additional information is required alongside your petition. Please make sure to complete enrollment into the course if you wish to secure a seat. Capped at 90. Formerly taught as "HUMAN 20/HUM 20 - A Colloquium in the Visual Arts"

Introduction to Italian Renaissance Art

MW 0130 PM - 0245 PM

Shawon Kinew

What is known as the Renaissance was a period of intense cultural transformation, a history and legacy we have inherited. During this time, artists reached an unprecedented stature and created some of the most powerful works of art in Europe. From the construction of the liberal arts to cultural encounters and territorial expansion, we live with the traditions of the Renaissance and its repercussions. This course traces an artistic narrative that moves from Giotto to Caravaggio, uncovering their poignant inquiries into nature, beauty and Antiquity within the shifting political and religious terrains of their times. We will look closely at the art of Masaccio, Donatello, Botticelli, Leonardo da Vinci, Michelangelo, Titian and Raphael and their contemporaries. We will be attentive to meaning and interpretation, both the ways artists made meaning and the ways we find it in the Italian Renaissance, in its beauty and in its power.

Please note that additional discussion sections will only be added if enrollments increase to support them. If you wish to be guaranteed a seat in this class, please register for one of the two currently available scheduled sections. If both are full, you are welcome to add yourself to the placeholder section.

HAA 51

Witches. From Dürer to Goya.

MW 1030 AM - 1145 AM

Felipe Pereda, Joseph Koerner

Witchcraft as a magical practice is documented across many cultures since ancient times, while the "witch" of popular imaginings is a more recent local phenomenon. Young or old, alluring or monstrous-but usually female-the image of the witch developed in the West at the start of the modern age, mobilizing the fantasies of major artists from the Renaissance through the Enlightenment to the present. This course explores the witch from three entangled perspectives: painters fascinated by nefarious illusions, witch-hunters and their (largely fictive) accusations, and modern historians making sense of this wildly elusive material. Artists studied include Albrecht Dürer, Pieter Bruegel, Salvatore Rosa, José de Ribera, Henry Fuseli and Francisco de Goya. The course consists of lectures, debate sections, and studio classes on the printing techniques (etching and aquatint) used by artists discussed.

2026 Spring (4 Credits)

HAA 73

Money Matters

TR 1030 AM - 1145 AM

Evriddiki Georganteli

Money is everywhere. As both an abstract construct and a material entity, money makes the world go around. Since before the invention of writing, money has been a common facet of everyday life, informing how we think and act. The course explores how societies across human history have made, used, and valued money in divergent ways. We will consider money as an object of aesthetic appreciation, an ethical problem, an architect of social relations, an environmental disruptor, a tool of political resistance, and much more. How has coinage design functioned as a political, religious, and cultural symbol? Is money a measure of value, and how does it align with other potential values, such as religious, moral, and aesthetic ones? Is it ethically neutral or an instrument of moral vice or virtue? What were the debates surrounding the rise of paper money? How has money been used as a tool of revolutionary movements and political resistance? Does money get recycled, and what is the environmental cost of different money forms today? What are the links between art, literature, theater, cinema, and money? Be part of a thrilling journey of exploration that will take us from the economic systems of Ancient Mesopotamia to 21st-century digital currencies. Weekly sections in the Harvard Art Museums, the Peabody Museum of Archaeology and Ethnology, and the Baker Library of Historical Collections at the Harvard Business School will offer us the chance to handle and discuss Harvard's world-class numismatic holdings.

Modern Art and Its Colonial Matrix

Course ID: 218152
2026 Spring (4 Credits)

TR 0130 PM - 0245 PM

Maria Gough, David Joselit

How does modernist innovation and experimentation in the visual arts relate to the European quest for empire, and its aftermath in the postcolonial period? How was European and American modernism shaped by imperial ambition and colonial expansion? By the domination and subordination of others? By the exoticization and "orientalization" of Asian and Islamic cultures, and the "primitivization" of African and Native American traditions? Moreover, to what extent do the economic and political structures of imperialism persist after formal decolonization in the mid-twentieth century in political formations such as the Cold War, or economic ones like the "imperialism" of American popular culture. By exploring significant artworks from the 19th, 20th, and 21st centuries in light of the history and legacy of imperialism, this course seeks to evaluate how modern artists may be implicated in the colonial matrix, and to what extent they opposed or critiqued it.

Design Speculations: Senior Design Tutorial

R 0900 AM - 1145 AM

Megan Panzano

Course ID: 207690

2025 Fall (4 Credits)

Instructor Permission Required

This seminar will serve as a design platform for inquiry, documentation and analysis in relation either to the thesis topic or capstone project of interest to each student. Thesis students will be responsible for selecting a Thesis Advisor (or Advisors) with whom they will meet regularly to develop specific intention, substance and methodology of the thesis research and paper. This seminar is a support of independent thesis and/or independent project research, extending methodological inquiry of the project topic to design where students may convene to collectively discuss and experiment with design speculations – design tests that explore research through the visual and spatial language of architecture. The course will cover topics general to design research with discussions, assignments, and readings focused on three main themes in relation to architectural design: Discourse, the development of a proposition for the role and significance of architecture relative to the project topic of interest; Method, the design steps/process of working through a design application/inquiry of those ideas; and Context, the relationship of the project topic of study to broader surroundings which include but are not limited to the discipline of architecture, cultural contexts, technical developments and/or typologies. The seminar will emphasize and support the translation of ideas emerging from independent research into visual forms of representation including, but not limited to, drawings, diagrams, images, study models, and shortanimations. The techniques of representation reviewed will be catered to the project topics of individual students, but will also form a part of the general discussion of the course. HAA 96A Transformations or HAA 96B Connections design studios is a pre-requisite to the Design Speculations course. HAA 92R is open exclusively to HAA architecture-track concentrators.

Course Note: HAA 92R is open exclusively to HAA architecture-track concentrators.

Architecture Studio I: Transformations

MW 1200 PM - 0245 PM

Megan Panzano

Course ID: 109375

2026 Spring (4 Credits)

Instructor Permission Required

Architecture assembles multiple models, surfaces, and materials; it is not a single monolithic thing, rather it is comprised of disparate parts and organizational systems operating at different scales. Design, the bringing together of these elements, requires sensitivity, registers scale, and renders perceptual effect. This course is an introductory architectural design studio focused on building foundational architectural concepts and design methodologies studied through a process of making. A series of physical modeling/fabrication assignments explore spatial and organizational transformations as a consequence of the changing interactions among material, fabrication technique, and form. Resultant expressions of space, scale, and perceptual effects are discussed and evaluated in relation to a series of course readings that frame the intentions of each assignment within architectural theory and history discourse. Both studios in the Architecture Studies Track (Transformations HAA 96A and Connections HAA 96B) explore architectural means and methods of design. Each begins from a different scale of inquiry, but converges at a similar end. This studio originates at the scale of material - focusing on specific capacities and effects thereof as well as the details of assembly - and expands from this to an investigation of an occupiable architectural scale in relation to a dynamic site. The course emphasizes fluency in the visual and spatial communication of ideas through instruction in 2D drawing and 3D modeling techniques. Technical workshops are provided in choreography with serial assignments encompassing drafting and 3D modeling (AutoCAD + Rhino), techniques of fabrication (Rhino to various outputs), 3D printing, and representational processing (Adobe Creative Suite). The studio exposes students to critical architectural thinking and design methods for more broad disciplinary application following. No particular skill set, technical or otherwise, is a required prerequisite for this course; students from all backgrounds are welcome.

Architecture Studio II: Connections

TR 0130 PM - 0415 PM

Megan Panzano

Course ID: 110362

2026 Spring (4 Credits)

Instructor Permission Required

The practice of architecture fundamentally asks us to continuously engage with, and re-conceptualize, the world for which we are designing. As such, architecture as a discipline is not only about designing buildings, but also about challenging us to imagine new ways of seeing the world. This studio takes on the challenge through a series of design exercises focused on understanding, engaging with, and reimagining the urban condition. Throughout the course, we will approach architectural design as both a method of producing urban

environments, and also as an avenue through which to understand our cities. We will be directly confronting the social, political, and environmental contexts that are necessarily implicated in any design process. Both studios in the Architecture Studies Track (Transformations HAA 96A and Connections HAA 96B) explore architectural means and methods of design. Each begins from a different scale of inquiry, but converges towards a similar end. This studio originates at the scale of the urban site, and begins with a set of design research assignments that ask students to imagine the city from the perspective of a non-human agent. Extrapolating abstract principles from these agents, we will be mobilizing the possibilities of architectural representation to reimagine the city through mapping, diagramming, and collage. The studio culminates in a design proposal for a site in Harvard Square. Students will be given an architectural brief, and will produce projects that address existing site conditions, programmatic space requirements, and projected users of the site. Technical workshops will provide all the necessary skills required for the course, and will allow students to develop aptitude in architectural drawing, mapping, rendering, and simple animation. No existing expertise or technical proficiency is necessary for this course. Students from all backgrounds are welcome; we will be encouraging interdisciplinary thinking throughout the design research process.

The Age of Albrecht Dürer

2026 Spring (4 Credits)

R 1200 PM - 0245 PM

Instructor Permission Required

Joseph Koerner

Albrecht Dürer became the world's first world-famous artist largely because he invested his talent in the new medium of print. Multiplying his work a thousand fold and disseminating it (on sheets of paper) to innumerable viewers in multiple locations, print made Dürer the first beneficiary of "distance viewing" and, thus, a perfect topic for "distance learning" forced on us by the current pandemic. Looking together, creatively, at this artist's fascinating and enduring oeuvre — all available online — we will explore the wider cultural dynamics of Renaissance and Reformation that underlay the making, and the breaking, of art.

Unseen Black Art

M 1200 PM - 0245 PM

Sarah Lewis

Course ID: 226013

2025 Fall (4 Credits)

Instructor Permission Required

What is left out of view and why? Many landmark works about the intersection of race, culture, and equity have been censored, excised, or unseen—viewed and then disregarded—or even erased from official narratives. This course will focus on key works from monuments to photographs, paintings to maps to consider the impact of these strategies for the direction and field of the future of visual culture in America.

Circuits, Circles, and Loops: Towards a Regenerative Architecture

No meeting time listed

Jonathan Grinham

Course ID: 120658

2026 Spring (4 Credits)

Instructor Permission Required

Present assumptions indicate that the management of our material world accounts for more than half of all global greenhouse gas emissions. Nearly fifty percent of these emissions are attributed directly to building construction. And these numbers are predicted to grow, more than doubling the gross amount of material extraction and flow around the planet by 2060. This course asks how we design new architectures that fit within the circuits, circles, and loops of a healthy, regenerative material ecology. Through in-class lectures, case studies, and hands-on workshops, students will develop a comprehensive understanding of both contemporary theory and practical applications surrounding lifecycle material design. They will actively research topics such as systems ecology, extractive geographies, life cycle material modeling, circular design, pervasive connectivity, biomaterials, adaptive reuse, indigenous and traditional craftsmanship, healthy materials, social equity, and other pertinent subjects. Additionally, students will acquire advanced proficiency in utilizing software tools and innovate new fabrication processes to address material flows around and through buildings effectively. Beyond theoretical knowledge, this course offers a unique opportunity for students to actively confront the environmental and human impacts associated with material management in the built environment. Through hands-on, design-led learning experiences, students will be encouraged to tackle these challenges by designing and building real-world prototypes through semester-long team projects that utilize industry and Harvard University material resources. Ultimately, students will develop a robust research framework to investigate, deconstruct, and invent new material life cycle design strategies that critically engage pluralistic design solutions toward a new regenerative architecture.

Himalayan Art

M 0300 PM - 0545 PM

Jinah Kim

Course ID: 109902

2026 Spring (4 Credits)

Instructor Permission Required

Understood as a divine abode in Indic mythology and envisioned as the immortal realm of "Shangri-la" by later western interpreters, the Himalayas abound with Hindu and Buddhist holy sites. This course explores the vibrant visual culture of the Himalayan region. Two learning goals are: 1) Understanding the historical development of distinctive artistic forms in paintings and sculptures of Nepal and Tibet during major moments of artistic innovations in the region, including the artistic responses to the current political situation; 2) Locating this knowledge in the context of the history of reception and collecting of Himalayan art in the west.

Art of Roaming

R 0300 PM - 0545 PM

Eugene Wang

Course ID: 226014

2026 Spring (4 Credits)

Instructor Permission Required

This course explores the human aspiration to roam freely—both physically and imaginatively—through art. From the First Emperor's bronze chariot to Arthur Clarke's interplanetary spaceship, from ancient Indian Vimanas to drone-age cinema, from Nezha's fiery wheel to Tesla's optimus robot, we examine how movement and mobility have been envisioned across time and media. Key themes include the ontology of motion, the aesthetical and experiential modes of mobility, the materiality of flow, and the question of subjectivity, framed through case studies and conceptual frameworks. In the final weeks, students develop concept-driven projects culminating in a pop-up exhibition, Art of Roaming, held at Harvard CAMLab Cave.

HAA 197P

Introduction to Pre-Columbian Art

F 1200 PM - 0245 PM

Thomas Cummins

Course ID: 207743

2025 Fall (4 Credits)

Instructor Permission Required

This is a general introduction to and survey of the arts of Ancient America. We will look at both Mesoamerica and the Andean art and architecture beginning with some of the earliest cultures and ending with Aztec, Maya, Muisca and Inca. Questions about the materials, urban planning, meaning and aesthetics will be addressed.

The course will also take advantage of the great collections at the Peabody Museum as well as the MFA. There are no prerequisites.

This course will be taught primarily via Zoom.

Translations and Negotiations: the Afterlife of the Roman Landscape

R 0900 AM - 1145 AM

Kaja Tally-Schumacher

Course ID: 224877

2025 Fall (4 Credits)

Instructor Permission Required

This course investigates the myriad ways ancient Roman place-making, visual culture, and thought have been evoked, utilized, weaponized, and translated in North American thought, design, and visual history. Our investigation juxtaposes well established connections between White Supremacy and the Classical Past with often overlooked Indigenous and Black engagement with classical forms. At the heart of our investigation are concepts of agency, ownership, and power, i.e. who shapes the land and who owns the classical forms? Topics explored include: the way Indigenous and Black artists, thinkers, and designers have engaged with and translated classical visual practices and concepts (such as Edmonia Lewis and Kent Monkman); Neoclassicism and White Supremacy (i.e. who owns the classical past in public parks? The question of Robert E. Lee/Marcus Aurelius); the entanglement between working the land and enslavement and the parallels and divergences between Roman and New World enslavement; the influence of Roman landscape design and horticulture on later American landscapes and gardens; the legacy of Roman surveying methods and centuriation in the mapping of the US; imperialism and the construction of the Other (Neoclassical portrayals of Indigenous figures in civic spaces in the guise of ancient Mediterranean barbarians); the translation and adoption of ancient Mediterranean and Roman visual culture in American cemeteries (including a class visit to Mount Auburn Cemetery). Class visits: Mount Auburn Cemetery (reached via public transportation) and the Harvard Map Collection.

Students must attend the first class meeting to maintain enrollment in this course. This GSD seminar (HIS 4521) is jointly offered with FAS as HAA 234G and CLS-STDY 224. Enrollment in each offering is capped but may be adjusted to account for student interest.

Stages of Life, in Art

W 0945 AM - 1145 AM

Joseph Koerner, Stephen Greenblatt

People change. They grow up and grow old, each differently but in ways divisible into stages. Different cultures and different eras understand and number these stages differently, but between birth and death bodies and minds develop and age. This interdisciplinary seminar, conducted together with a course in the English department taught by Professor Stephen Greenblatt, explores how art and literature, with their distinctive capabilities and limits, give visual and verbal shape to "life history" from infancy to "second childishness and mere oblivion, sans teeth, sans eyes, sans taste, sans everything" (Shakespeare). Focused on the European Renaissance with consideration of later (particularly Romantic) developments. Enrollment Limited."

**The King's Money: Power, Art, and Economy in the Global Middle Ages
(Course Development Seminar)**

M 1200 PM - 0245 PM

Evridiki Georganteli

Course ID: 226190

2026 Spring (4 Credits)

Instructor Permission Required

This course provides graduate students the opportunity to help design a new course planned for the fall for AY26-27, "The King's Money: Power, Art, and Economy in the Global Middle Ages." The King's Money introduces Harvard undergraduates to the highly interrelated world between 500 and 1500 CE. The course is a journey through vibrant historical hubs, each connected in a complex web of trade, culture, and politics. From Byzantine Constantinople, Europe's cultural and commercial powerhouse, to the kingdom of Aksum, East Africa's crossroads of trade and religions, and from the splendor of Venice to Hangzhou, one of ancient China's capitals, as we trace Marco Polo's footsteps. Delving into the rise and fall of empires and kingdoms, we will investigate conflicts, journeys of exploration, economic and scientific developments, and a rich tapestry of art and material culture. At the core of The King's Money is the study of medieval currencies—the most widely circulated art form extending from Britain to the Indian Ocean. The course highlights how coins, seals, and medals served as vital symbols of political authority, artistic innovation, cultural identity, and economic exchange. By examining how disparate communities separated by language, religion, political systems, and swathes of land and sea interacted through currencies, we will gain insight into the profound connections money forges along routes of trade, warfare, pilgrimage, and diplomacy. The course also examines the lasting impact of medieval currencies on 21st-century economics, art and literature, politics, and national narratives, as well as their significance in museum collections and the digital landscape, emphasizing their relevance to our modern world

HAA 274G

Art, Race, and Politics

M 0300 PM - 0500 PM

Sarah Lewis

Course ID: 225895

2026 Spring (4 Credits)

Instructor Permission Required

How do images—photographs, films, and videos—create narratives that shape our definition of national belonging? Social media has changed how we ingest images. Protests, social injustice, and collective moments of triumph are all played out in photos and videos in real time unlike anything we thought possible just a few decades ago. What skills of visual literacy and critical consciousness are required to understand of the opportunities and challenges that technology is presenting to civic life? This seminar—primarily for graduates and open to undergraduates as well—will explore the connection between images and justice in America. What constitutes a figurative emblem of protest? What does effective resistance look like in art and in the digital realm? By the end of the course, students should be able to consider how images have had persuasive efficacy in the context of social and racial justice movements, critically engage with and contextualize the narratives surrounding images posted online, and understand how democratic rights are connected to visual representation in the United States.

HAA 276P

Photomontage & the Power of Assembly

T 1200 PM - 0245 PM

Maria Gough

Course ID: 121785

2025 Fall (4 Credits)

Instructor Permission Required

Photomontage—the assembly of photographic fragments—is as old as photography itself. Prompted by the Harvard Art Museums' recent accession of over one hundred works by Gustavs Klucis and Valentina Kulagina--leading Soviet photomonteurs of the 1920s and 1930s--and the Houghton Library's growing collection of photomontaged books and magazines, this seminar offers an episodic history of the medium from the 19th-

century to the advent of the digital age. Through first-hand examination of individual works, we study the medium's use in not only the fine arts, but also agitational political posters and postcards distributed en masse, protest flyers, magazines and albums, and monumental displays at exhibitions and trade fairs. Of particular interest is the recourse to photomontage for the expression of political dissent (Berlin Dada) and the affirmative representation of public assemblies and collectivities (Soviet avant-garde). In addition to Klucis and Kulagina, other photomonteurs to be discussed include Hannah Höch, John Heartfield, Marianne Brandt, El Lissitzky, Romare Bearden, and Martha Rosler. A darkroom session will introduce students to analogue processes, while a field trip will enable us to visit New York museums and meet with one of the world's most important collectors of photomontage. Open to graduate students and advanced undergraduates (with the permission of the instructor). Limit 10.

KEY DATES & INFO FOR PETITION PROCESS: By Tuesday, April 8 at the latest, please send me an email (gough@fas.harvard.edu) with your response to the following questions: 1. What year/program/school are you in? 2. Name three works of visual art or architecture (broadly construed, and may include any media) that you have seen in person. Describe each work in one to three sentences. (Please don't exceed this number.) 3. Do you have any extra-curricular commitments in Fall 2025? Are there any specific weekends when you would be unavailable for our New York field trip due to these commitments (eg attendance at a conference, participation in a performance on a Friday or Saturday evening)? 4. What draws you to this course? 5 (optional). Is there any other information about you or your interests that you'd like me to know? Then, by 11:59pm on Wednesday, April 9, I will let you know if you have a seat in the seminar. To secure your seat, you will then need to enroll in the course by 11:59pm on Friday, April 11. If you do not claim your seat by then, it will be offered to the next student on the waitlist. (Thank you in advance for your kind understanding about the necessity of internal deadlines here, due to the fact that there are only ten seats in the class, two of which, per Department policy, must be reserved for incoming G1 students [who cannot officially register until August].)

A graduate reading seminar taking an interdisciplinary approach to the history of African art and expressive cultures, on the continent and its diasporas, with a focus on scholarship and museum exhibitions from the last 5 years.

HAA 277G

Curiosity: contemporary art and the practice of knowledge

R 1200 PM - 0245 PM

Carrie Lambert-Beatty

Course ID: 226027
2026 Spring (4 Credits)

Instructor Permission Required

This seminar explores a proposition: just as modernity demanded new forms of art--like motion pictures--to help manage new experiences of time, recent decades drafted art to work through ruptures in ways of knowing. Institutional critique, research-based practice, the archival impulse, pedagogical aesthetics, parafiction, forensics, speculative world-building; against the historical backdrop of multiculturalism, globalization, the internet, filter-bubbles, and post-truth politics. Key topics: how artists leveraged the epistemic dimensions of race and racism; why resistance to capitalism took the form of imposture and hoax; whether epistemic experience is aesthetic; and what art has to teach us about a progressive epistemic set: the values, capacities, and habits of knowing we need now.

HAA 279P

The Object in the Art Museum

T 0300 PM - 0545 PM

Joachim Homann, Kate Smith

Course ID: 211197
2026 Spring (4 Credits)

Instructor Permission Required

The field of art history is one of many that intersect within the walls of a museum where works of art live as sites of contemplation, tools of teaching and learning, and even the focus of scientific analysis. This object-centered seminar will introduce students to the complex pathways that collection objects travel from creation, into the market, within collections, and throughout the galleries where we encounter them. Through practical and written assignments accompanied by readings, as well as site visits and behind-the-scenes introductions, students will gain an understanding of how a museum experience is conceived and built. The course will consider the key

issues, debates, and interpretative strategies driving museum practice, and tackle existential questions about the role and responsibility of the 21st-century museum. Students will research individual objects, identify potential acquisitions, and conceive and propose an installation design at the end of the semester. The course will meet at the Harvard Art Museums, a uniquely rich university museum environment endowed with deep collections and state of the art curatorial and conservation facilities.

Art of Indian Esoteric Buddhism

M 0300 PM - 0545 PM

Jinah Kim

Course ID: 156273
2025 Fall (4 Credits)

Instructor Permission Required

This seminar explores the art of Indian Esoteric Buddhism from various interpretive vantage points. After a brief historiographical introduction, we will examine scholarly discourses on Esoteric or Tantric Buddhism in relation to the artistic productions in medieval South Asia (ca. 800-1200CE). We will read *sādhana*s (ritual texts for visualization practices) and study the formal and historical structure of Esoteric Buddhist iconography as it developed in the Indian sub-continent. The two main topics for this semester will be 1) Saiva-Buddhist interactions as manifested in iconographic and artistic articulations, and 2) women in the age of tantra. Students will engage in case studies exploring a historical relationship between ritual practices and artistic outputs in various Esoteric Buddhist contexts, which may include comparative examples from outside the Indian sub-continent.

Japanese Screen Paintings

W 0300 PM - 0545 PM

Melissa M. McCormick

Course ID: 226369
2026 Spring (4 Credits)

Instructor Permission Required

This graduate course surveys the history and development of the folding-screen format in Japanese painting from the 8th to the 20th centuries. Through a series of case studies, the course explores art historical issues for which the folding screen provides a unique perspective, including the relationships between painting and architectural space, poetic practice, and religious ritual. Functioning simultaneously as furniture and pictorial surface, spatial divide and architectural decor, the folding screen has played an important role in shaping culture and lived experience in the Japanese archipelago for over a millennium. Transportable and displayable in a variety of ways, the folding screen can surround a space and immediately charge it with meaning. Some of the most historically significant Japanese paintings were executed in this format, and its influence around the world can be seen in everything from the painted panels of James McNeil Whistler to the biombo of colonial Latin America. This graduate lecture surveys the history and development of the Japanese folding screen from the 8th to the 20th centuries. Each week will focus on one case study from the screen painting tradition to highlight a historical theme and methodological problem closely linked to the unique properties of this format. These themes offer a range of issues crucial to the reconceptualization of Japanese painting history as a whole: 1) The function of screens in different social spaces (the Nara Imperial Palace, the Heian aristocratic compound, the Buddhist temple hall, the Ashikaga shogunal residence; or the modern reception room); 2) the various text-image relationships embodied by different types of screens (including both the relationship of painting to poetic practice and the pictorialization of narrative texts); 3) the role of screens in religious ritual, including the Esoteric initiation (*abisekha*) ceremony and mortuary practice; 4) compositional strategies reflected in the adaptations of painting subjects in other formats to the folding-screen surface; 5) the function of screens as representations of different types of topoi, charged with a panoply of political and cultural meanings; and 6) the interpretation of depictions of screens within other paintings.

HISTSCI 100

Knowing the World: An Introduction to the History of Science

MW 1030 AM - 1145 AM

Alex Csiszar

What are the origins of modern science and of the scientific method? Have the ways of knowing the world of different cultures and societies changed over time? How has scientific knowledge been related to other enterprises such as art, religion, literature, and commerce? We will ask these questions and more through a broad survey of many of the crucial moments in the development of science from the Middle Ages to the present day. Topics and figures will include Ibn Sina, Li Shizhen, Galileo, evolution, eugenics, the atomic bomb, and the human genome project.

Course Note: HISTSCI 100 is a required course for students in the History and Science concentration.

FAS Divisional Distribution: Social Sciences

HISTSCI 101

Making the World: An Introduction to the History of Technology

MW 0130 PM - 0245 PM

Victor Seow, Eric Gurevitch

How do people use technologies to transform the world, and how are we transformed in the process? Who—or what—drives technological innovation? How does technology relate to nature, to art, to science? What might machines tell us about our humanity? In this course, we will explore these and other questions through a broad survey of the social life of technology across the globe from the past to the present. Our contention here is that by gaining a deeper understanding of technology in history, you will become a better user—and possibly maker—of technical things in this thoroughly technological world.

HISTSCI 1110

Galileo: Discovery, Faith, Ego, and the Making of Scientific Controversy

M 1200 PM - 0245 PM

Hannah Marcus

Course ID: 226375

2025 Fall (4 Credits)

Instructor Permission Required

Galileo Galilei (1564-1642) is undeniably among the most iconic scientists in history. His long career was defined by scientific controversy. From early disputes over his military compass to his telescopic discoveries and vocal advocacy for a heliocentric cosmos despite religious opposition, Galileo never shied away from a scientific dispute. This class explores the life and writings of Galileo and his family, disciples, and adversaries. We will appreciate Galileo's inventive work and striking prose, critique his social and scientific strategies, and grapple with the deep impression that this figure has left on the history and future of scientific controversy.

FAS Divisional Distribution: Social Sciences

HISTSCI 1115

The Occult: A History of Science and Magic before Modernity

M 1245 PM - 0245 PM

Hannah Marcus

Course ID: 226398

2026 Spring (4 Credits)

Instructor Permission Required

The histories of science and magic are deeply intertwined. Both of these knowledge traditions offered ways to understand and harness the powers of the natural world. In this seminar we will read key texts in the premodern histories of occult practices from across the medieval and early modern Mediterranean world. We will explore the distinct but interconnected practices of astrology, alchemy, divination, and demonology alongside "mainstream" natural philosophical traditions.

HISTSCI 1338

Sex, Gender, and Evolution

No meeting time listed

Sarah Richardson

Evolutionary theories of sex and gender and central controversies in human evolutionary biology from Darwin to the present. Topics include debates over the theory of sexual selection and the evolutionary basis of monogamy, sexual preference, physical attraction, rape, maternal instinct, and sex differences in cognition. Readings: primary texts and historical, philosophical, and feminist analyses.

FAS Divisional Distribution: Social Sciences

HISTSCI 1350

Modern Life Science: From Pasteur to CRISPR

MW 0130 PM - 0245 PM

Rijul Kochhar

Course ID: 224530
2026 Spring (4 Credits)

Instructor Permission Required

What do we mean when we speak of the "the modern life sciences"? In this course, we examine this question following Darwin's revolutionary theories of evolution. We cover a range of topics spanning the late 19th to the early 21st centuries, including the emergence of the scientific laboratory; the development of disciplines such as bacteriology, virology, genetics, and molecular biology; and the promissory horizons of emergent bio(medico) technologies. In a time where scientific actions are both a source of rapid innovation and social suspicion, this course emphasizes how the life sciences and society profoundly shape one another.

FAS Divisional Distribution: Social Sciences

HISTSCI 1380

Science and the Invention of the Tropics

W 1200 PM - 0245 PM

Gabriela Soto Laveaga

Course ID: 224537
2026 Spring (4 Credits)

Instructor Permission Required

Europeans' discovery of a "torrid" zone with distinct flora, fauna, and, presumably, different humans spurred a race to catalogue difference. This seminar examines how scientific knowledge of the tropics was collected, classified, and disseminated from the 1500s onward as evidence that the Global South not only had a different climate but was characteristically "less" developed than the north. Students will examine arguments from imperial botany and biology that made their way into how we explain societies today.

Course Note: Students who have taken HISTSCI 2940 for credit cannot enroll in this course for credit.

FAS Divisional Distribution: Social Sciences

HISTSCI 1441

Foreign Bodies: On Health and Migration

W 1200 PM - 0245 PM

Eram Alam

Course ID: 212935
2025 Fall (4 Credits)

Instructor Permission Required

During the twentieth century, unprecedented human mobility has raised significant questions regarding migration and health. Whether coerced or voluntary, these migratory flows reverberate through individuals, communities, populations, environments, and the body politic in unexpected ways. This course will focus on the relationship between health and migration and ask the following questions: How are moving bodies named and managed? What are the political, economic, juridical, and medical implications of movement? How is risk defined and constructed in relation to migration? Readings will include case studies from around the world, supplemented with theoretical and literary texts.

Course Note: Enrollment limited to 20.

FAS Divisional Distribution: Social Sciences

HISTSCI 1445

Medicine and Health in America

Course ID: 213244
2025 Fall (4 Credits)

TR 1030 AM - 1145 AM

Eram Alam

This course surveys major historical developments in medicine and health in the United States during the modern period. We will analyze medicine and health within social, cultural, and political contexts to better understand the relationship between medicine and power. Topics will include: citizenship, nationalism, and imperialism; race, gender, and the body; capitalism and the medical marketplace; professionalization, expertise, and authority; crises and epidemics; technology and therapeutics; and questions of care.

FAS Divisional Distribution: Social Sciences

HISTSCI 1462

Therapeutic Histories: Global Encounters between Healing Systems

R 0300 PM - 0500 PM

Rijul Kochhar

Course ID: 224513

2025 Fall (4 Credits)

Instructor Permission Required

This seminar will examine the ways in which cultures and therapeutic techniques are entangled with each other. We will focus on a variety of healing traditions, from a range of historical and geographic locations. Readings will include Western biosciences, Chinese and Ayurvedic "traditional" therapies, Unani and Perso-Arabic curative practices, and medical life sciences from the former Soviet Union. A key question we will ask throughout the seminar is: how is therapeutic knowledge historically produced? This question will help us think through illness experiences, the pursuit of cures, and quests for therapeutic pluralism amidst technological advancement. Readings will also grapple with culturally salient phenomena such as science and embodiment; collective memory; social deprivation; and therapeutics in times of multiple crises.

FAS Divisional Distribution: Social Sciences

HISTSCI 1490

The History and Culture of Stigma

R 0300 PM - 0500 PM

Allan Brandt

Course ID: 110099

2025 Fall (4 Credits)

Instructor Permission Required

This course will investigate the history of a number of stigmatized conditions and diseases including, for example, cancer, mental illness, addiction, obesity, AIDS, and disability. A central goal will be to understand the stigmatization of disease and its effects in diverse historical and cultural contexts. The course will evaluate both the impact of stigmatization on health disparities and outcomes, as well as attempts to de-stigmatize conditions that are subject to discrimination, prejudice, and isolation.

Course Note: Enrollment limited to 20.

FAS Divisional Distribution: Social Sciences

HISTSCI 1630

Writing Histories of Climate Change

W 1245 PM - 0245 PM

Victor Seow, Emma Rothschild

Course ID: 220178

2025 Fall (4 Credits)

Instructor Permission Required

Explores different ways of writing about the history of climate change. The course will emphasize connections between large-scale data and local or micro-histories. It will consider the causes of human-induced climate change in particular places and times, and ways of averting them. Students will write short texts drawing on economic history, literature, environmental history, the history of science, and opinion writing.

Course Note: The course is open to all undergraduate students, first-year, sophomores, juniors and seniors. This course is also offered through the Department of History as HIST 187. Credit may be earned for either HISTSCI 1630 or HIST 187, but not both.

FAS Divisional Distribution: Social Sciences

HISTSCI 1735

Being Human since 1945

Course ID: 223081

2025 Fall (4 Credits)

Simon Torracinta

This course traces the arc of scientific thinking about human nature since 1945. In this period, the anchoring of human origins in the "modern synthesis" of genetics and evolutionary biology promised a new biological approach that would finally get at the root of the human, while generating utopian aspirations for remaking humanity altogether. The course is structured thematically, looking at scientific and social debates about genes, race, minds, sex, blood, primates, and other key topics in the postwar human sciences, including genetics, evolutionary biology, primatology, medicine, psychology, neuroscience, and physical anthropology.

FAS Divisional Distribution: Social Sciences

HISTSCI 1740

Course ID: 224481

The Psychology of War

2025 Fall (4 Credits)

T 0300 PM - 0545 PM

*Instructor Permission Required**Leslie-William Robinson*

How has war functioned as a social laboratory for the testing of psychological theories and influenced scientific and popular understandings of the human mind? Predominantly focused on the US from the long nineteenth century to today, Psychology of War examines changing social scientific explanations for why people fight wars, and ideas about how to manage and motivate them when they do. We cover the diagnosis and treatment of combat trauma and the rise of humanitarianism, highlighting shifts in moral and legal approaches to warfare. We unpack the pathologization of anti-war sentiment and the application of military psychological strategies to public life. We analyze cultural representations of war including art, film, and literature, especially for their role in shaping memory and the commemoration of wars.

HISTSCI 1770

Course ID: 160496

Broken Brains: A Patient-Centered History

2026 Spring (4 Credits)

R 0300 PM - 0545 PM

*Instructor Permission Required**Anne Harrington*

An exploration of the complex relationship between doctors and scientists who study and treat different kinds of "broken brains," the patients they study and treat, and larger public conversations about being human in today's neurological society. Topics include iconic cases of brain damage that catalyze new scientific understandings (like the case of H.M.), the study of brain damage in war, the emergence of writings (including memoirs and novels) that attempt to describe "what it is like" to suffer from disorders like autism and Alzheimer's, and controversies over recent efforts to see psychiatric disorders like depression as simple products of a chemically "broken brain."

FAS Divisional Distribution: Social Sciences

HISTSCI 1771

Course ID: 226346

Science and the Quest for Consciousness

2025 Fall (4 Credits)

MW 1200 PM - 0115 PM

Anne Harrington

In 1990, in a paper cited more than 3,000 times, Nobel Prize-winning microbiologist Francis Crick and neurobiologist Christof Koch declared "the time is now ripe for an attack on the neural basis of consciousness." Thirty years later, though, we have largely lost the bullish certainties of the 1990s. People still speak of "consciousness studies," but it is unclear who polices the borders of that field. Instead, we see increasing interest in phenomena that even a decade ago would have been beyond the pale, from psychedelics to near-death experiences, to deathbed visioning, to lucid dreaming. The spaces in which consciousness research happens has also expanded: no longer just the neuroscience lab, but the hospice, the meditation retreat, the ICU, the operating theater, the wildlife preserve, and AI research labs. This course is an invitation to travel to these spaces and others, to try to understand what is happening in each of them, how they relate to one another, and what it would mean, really, for science to understand consciousness.

FAS Divisional Distribution: Social Sciences

HISTSCI 1780

Psychopathologies of Modern Life

W 0300 PM - 0545 PM

Elizabeth Lunbeck

Course ID: 218690

2025 Fall (4 Credits)

Instructor Permission Required

What is the relationship between cultural change and individual pathology? Are the stresses of modern life implicated in the emergence of new forms of psychic distress and mental illness? Over the past century, psychological experts have identified new emotions, dissatisfactions, and disorders, producing an expansive catalogue of modern woes and fashioning a range of remedies. With attention to variations across race and gender, we explore the coalescence and cultural fortunes of, among other topics, the personality disorders (narcissism, BPD); trauma, PTSD; disorders of identity and of attachment; social anxiety, isolation; gaslighting; Black Rage; greed, success neurosis, imposter syndrome; stress, coping, burnout.

HISTSCI 1840

Science, Technology, and Medicine in South Asia

No meeting time listed

Eric Gurevitch

Course ID: 226374

2026 Spring (4 Credits)

Instructor Permission Required

Science is big in South Asia, and it has been for a long time. Today, the Constitution of India speaks of the duty of citizens to develop a "scientific temper" and of the responsibility of the government to finance "scientific or technical education." Medicine, mathematics, astronomy, and other practical sciences have lengthy histories in the region, and these disciplines were used to theorize society and belonging in colonial and nationalist thought. This undergraduate seminar explores the changing and contested understandings of science, technology and medicine in South Asia from the precolonial to the present. No prerequisites or specialized knowledge required.

HISTSCI 1850

Technologies of Social Reform

M 0300 PM - 0545 PM

Marc Aidinoff

Course ID: 226401

2025 Fall (4 Credits)

Instructor Permission Required

Throughout U.S. history, some of the best and brightest minds have worked to address the most difficult problems of social life. The results are decidedly uneven; extraordinary accomplishments addressing once seemingly intractable problems are complemented by the collateral damage of well-intentioned plans. Beginning with Reconstruction and ending with the Biden Administration, this course examines the development and implementation of public policy ideas in the United States. Along the way, students will examine competing forms of expertise, including social workers, engineers, lawyers, economists, scientists, community organizers, and quite a few Harvard graduates as they vied for ultimate authority to shape society.

FAS Divisional Distribution: Social Sciences

HISTSCI 1851

Digital Democracy: AI, Algorithms, and the Future of Governance

No meeting time listed

Marc Aidinoff

Course ID: 226370

2026 Spring (4 Credits)

How is democracy evolving, or continuing to function, in an age of Artificial Intelligence (AI)? This course explores how cutting-edge and mundane technologies have changed the basic building blocks of collective governance, from voting systems and public service delivery to networked activism and digital communities. We'll dive into the opportunities and risks of emerging tools and ask if technology has remade core concepts like freedom, fairness, and citizenship. Intended for students interested in the intersection of history, technology, and public policy, with special attention paid to debates in the United States over the past fifty years including over privacy, innovation, encryption, online sexuality, and the algorithmic harms.

HISTSCI 1861

From Steam Engines to Silicon Valley: Science and Capitalism in History

TR 0300 PM - 0415 PM

Simon Torracinta

Course ID: 223137
2026 Spring (4 Credits)

This undergraduate lecture course examines the interrelated histories of science and capitalism, from the steam engine to Silicon Valley. The course begins with the dramatic and intertwined transformations of the "scientific revolution," the transition to capitalism, and the global "great divergence," and continues to the present day. Topics covered include global science and empire; energy, work, and fossil capitalism; the technics of the industrial revolution; the science of racial capitalism; the rise of corporate science and R&D; techniques of quantification and economic calculation; biotechnology and pharmaceuticals; and the origins of "Big Tech."

HISTSCI 1955

Science in Popular Culture

MW 1030 AM - 1145 AM

Erik Baker

Course ID: 220651
2026 Spring (4 Credits)

Very few people are scientists, but almost everyone knows something about science -- about what "the science says" about the world, who scientists are, and the role of science as an institution in society. In this course, we'll think together about where these beliefs come from and why they matter, with a focus on the twentieth-century United States. Topics include the history of science education, including recurrent debates about teaching evolution; the popular science publishing industry and celebrity popularizers like Bill Nye; the "mad scientist," the "troubled genius," and other tropes in film and literature; and the history of "pseudoscience."

Science Before Science: Sources and Methods for the Study of the Premodern History of Science

T 0900 AM - 1145 AM

Hannah Marcus

Course ID: 218687
2025 Fall (4 Credits)

Instructor Permission Required

This graduate seminar is designed to introduce students to the important thematic areas and historiographical questions in the study of premodern science. We will survey the landscape of premodern technology, medicine, and natural philosophy with the goal of providing students with the necessary toolkit to conduct research in premodern sources and to read critically in the secondary literature.

Planetary Insecurities

W 0300 PM - 0500 PM

Rijul Kochhar

Course ID: 224515
2025 Fall (4 Credits)

Instructor Permission Required

How is the biological body—the entity of life—being reconfigured in its environing worlds? This seminar seeks to answer this question by exploring three distinct registers in which the concept of the "planetary" has been gestated in 20th century collective life. Readings will be divided into three analytic parts. Part I will deal with drones as a technoscientific entity in late modernity that is responsible not merely for the militarization of the air but also a concomitant production of airspace as planetary battlescape and an agent for the geo-mapping of diverse biological entities. Part II will provide historical genealogies of One/Planetary health discourse concerning the flow of pathogenic life over earthly space. Such discourse, we will examine, as the symptomatology of the fictions of national borders. Part III will delve deeper into 20th century and Cold War environmental imaginaries which have produced the planet/globe/earth as slippery signifiers of imperiled spatial life in late modernity. The securitization of life—and the life of insecurity—thus emerge in this seminar through their spatial, species, and technoscientific vectors.

HISTSCI 2855

Thinking with Computers

Course ID: 226368
2025 Fall (4 Credits)

R 0300 PM - 0545 PM

Instructor Permission Required

Marc Aidinoff

This graduate course introduces students to the history and social studies of computing. We will question the role of digital technology in race-making, class formation, gender construction, history writing, and the creation of other social facts. The course will survey canonical texts, analytic frameworks, and research methods, that have guided the history of computing, while also exploring how computers function as an explanatory tool in more recent humanistic and social scientific attempts to make sense of digital life.

Science, Power and Politics

Course ID: 122718
2025 Fall (4 Credits)

W 0200 PM - 0400 PM

Instructor Permission Required

Sheila Jasanoff

This seminar introduces students to the major contributions of the field of science and technology studies (STS)

to the analysis of politics and policymaking in democratic societies. The objective is to expand students' understanding of the ways in which science and technology participate in the creation of social and political order. The seminar is devoted to reading and analyzing works by scholars in STS and related fields who have addressed such topics as the relationship between scientific and political authority, science's relations with the state, science and democracy, scientific and technical controversies, and citizenship in technological societies.

Course Note: Undergraduates may enroll only by permission of the instructor and should email the instructor directly to explain their interest and background.

Offered jointly with the Kennedy School as IGA-513.

Human Biology, Behavior, and Evolution

Human Evolutionary Biology

HEB 30

Monkey style: Primate Social Behavior

TR 1030 AM - 1145 AM

Martin Surbeck

Course ID: 113837
2025 Fall (4 Credits)

This course provides an overview of primate social behavior and will cover topics such as kinship, social structure, friendship, competition, cooperation, dominance, development, mating systems, parental care, inter-group relationships, social learning, and applications to humans. Over the course of the semester we will attempt to address fundamental questions about the Primate order from three perspectives: Evolutionary perspective. How do primate species differ from one another? What are the selection pressures that account for the differences? How to explain a vast range of behaviour, social structures and relationships within an evolutionary framework? Primate perspective. How do primates see the world? How do they think about others? Do they have concepts? Are their vocalizations equivalent to words? What is the nature of their relationships? A human perspective. What are the continuities and discontinuities between human and non-human primates? What is it that sets humans apart from other primate species?

FAS Divisional Distribution: Science & Engineering & Applied Science

HEB 39

The Human Brain in the Animal Kingdom

TR 0130 PM - 0245 PM

Erin Hecht

Course ID: 214351
2026 Spring (4 Credits)

Instructor Permission Required

Our brains make us what we are. How did they get that way? How are they different from other animals', and how are they similar? This course will explore the structure and function of the modern human brain and examine the selective pressures that have impacted the evolution of human neuroanatomy and cognition.

Frequent comparisons will be made with other primate and non-primate species in order to situate an understanding of Homo sapiens within the context of the broader animal kingdom. Additionally, the course will delve into the types of methodological approaches used to study these topics and consider the frontiers of new knowledge in this area. The course will integrate research and theory from biological anthropology, archaeology, psychology, ethology, and neuroscience. Topics covered include the evolution of large brains in humans and other species; the emergence of specializations for communication, tool use, and culture; social cognition and theory of mind; individual variation and experience-dependent plasticity in the brain; and domestication and self-domestication.

HEB 45

Technology, Behavior, and Human Evolution

TR 0900 AM - 1015 AM

Abigail Desmond

Course ID: 220758
2025 Fall (4 Credits)

Instructor Permission Required

When does human history begin? We now know that some of the first Homo sapiens appeared over 315,000 years ago. Looking back to even earlier human species, around 2-3 million years ago, we would perhaps be surprised to encounter familiar behaviors: people walking upright, cooperating and socializing, hunting, and using technology. Everything that exists as written history represents less than 2% of what has happened since we emerged as a species, and less than 0.3% of what has happened since archaic humans first emerged. If we want to understand who we are, and why we do the things we do, we need to take a closer look at our relatives in the Paleolithic. Technology, Behavior, and Human Evolution is an introductory course which offers primatological, fossil, environmental, genetic, and archaeological perspectives on human evolution. Starting with the earliest hominins, each week we will examine central themes and developments in human evolution over the last 6 million years. Students will consider how the emergence and spread of new technologies, biological capacities, changing social dynamics, symbolic behaviors, and cultural complexity shaped human evolutionary trajectories. The behavioral repertoire of modern humans at the end of the last ice age will form the final part of the lecture course.

Course Note: Class visit to the Peabody Museum collections, details to be announced.

FAS Divisional Distribution: Science & Engineering & Applied Science

HEB 50

Human Metabolism

MW 0130 PM - 0245 PM

Andrew Yegian

Course ID: 225855
2026 Spring (4 Credits)

Instructor Permission Required

What is metabolism and how does it affect our lives? This course investigates human metabolism through several levels of organization and uses evolutionary theory to explore the unique metabolism of our species. We will establish the foundations of molecular and cellular metabolism, integrate that knowledge into an organismic model, and tie in ecology and the evolution of metabolism within primates and the human lineage. Throughout the course we will make connections to metabolic dysfunction and disease, and their rising salience in modern health.

Course Note: This course includes a weekly lab or discussion section.

HEB 55

Human Evolutionary Anatomy

MW 0130 PM - 0245 PM

Joanne Clark-Matott

Course ID: 116069
2026 Spring (4 Credits)

HEB 1420 takes a deep dive into the anatomy of the human body. We explore the structure, function, and evolution of the muscular, skeletal, nervous, circulatory, digestive, and reproductive systems using a combination of lectures and small-group teaching. Students also have the option to study anatomy in the traditional way by viewing human cadaver dissections at Harvard Medical School. HEB 1420 fulfills the anatomy/physiology requirement for Human Evolutionary Biology and is an excellent foundation for students pursuing research in the department, those who plan to attend medical school, or students who are simply curious about the human body and want to know what the different parts are named and how they came to be.

Course Note: This course fulfills the anatomy/physiology concentration requirement for Human Evolutionary Biology

This course is not recommended for first-year students.

Life Sciences 2 recommended, but not required

FAS Divisional Distribution: Science & Engineering & Applied Science

HEB 58

Evolutionary Medicine

MW 0130 PM - 0245 PM

Christopher Kuzawa

Course ID: 226494

2025 Fall (4 Credits)

Instructor Permission Required

Many common diseases, including ailments like obesity, diabetes, and depression, have only emerged as health issues in recent human history. In addition, different human groups or ethnicities vary markedly in the burden of these conditions. In this course we will explore two related ideas to gain insight into these issues. The first is that many modern ailments reflect an imbalance between modern life ways and those which shaped our ancestors' biology during much of human evolution. The second is that factors like inequality and discrimination, which trace to political, economic, and historical forces, help explain why some groups experience unequal conditions that ultimately drive health inequality. We will begin by reviewing foundational concepts in evolutionary biology, molecular biology, anthropology and human evolution, revealing why our bodies by necessity come equipped with biology that is responsive to the environments that we inhabit. We will then use these principles to explore domestic and global case studies that illustrate the power of evolutionary principles to shed light on why we get sick, including the role of social, economic and political factors as drivers of major disparities in disease burden.

HEB 110

Research in Human Biomechanics and Physiology

M -

Course ID: 127206

2026 Spring (4 Credits)

Instructor Permission Required

Introduces students to experimental techniques used to investigate the musculoskeletal structure and physiology of humans. Students undertake a supervised research project in the Skeletal Biology and Biomechanics Laboratory. Students meet to introduce their project, discuss their work and progress, and to present their final results, as well as for several lectures on writing and presenting research findings. An extensive commitment of time in the laboratory is required. Grades are based on the work completed, the oral presentation, and a short research paper.

Course Note: This course fulfills the research seminar concentration requirement for Human Evolutionary Biology

Recommended: Life Sciences 2 or Human Evolutionary Biology 1420

FAS Divisional Distribution: Science & Engineering & Applied Science

HEB 114

Gut Microbiome and Human Health

W 0300 PM - 0500 PM

Cary Allen-Blevins

Course ID: 204010

2025 Fall (4 Credits)

Instructor Permission Required

Microorganisms residing in the human gastrointestinal tract are as numerous as our own cells and together encode at least 150 times as many unique genes. In this research seminar, we explore gut microbial contributions to human physiology in states of health and disease. We consider how the human gut is colonized, the factors shaping the structure and function of the gut microbiome, and the pivotal roles of the gut microbiome in digestion, energy regulation, immunity, development, drug metabolism, and behavior. We evaluate fast-growing evidence for the gut microbial modulation of metabolic syndrome, cardiovascular disease, cancer, and neurodevelopmental and neurodegenerative disorders, and discuss prospective microbiome-targeted approaches for the prevention and treatment of human disease. The weekly three-hour lab will introduce students to experimental, bench and computational techniques used to investigate the gut microbiome, enabling students to collaborate on a novel research project that dovetails with topics discussed in seminar.

Course Note: This course fulfills the research seminar requirement for Human Evolutionary Biology. Preference will be given to students fulfilling a research seminar or thesis requirement.

Life Sciences 2 or permission of instructor.

FAS Divisional Distribution: Science & Engineering & Applied Science

HEB 115

Investigating the Human Genome

MW 0900 AM - 1015 AM

Éadaoin Harney

Course ID: 222982

2025 Fall (4 Credits)

Instructor Permission Required

Since the first human genome was sequenced over 20 years ago, millions of people, both living and ancient, have had their genomes sequenced. While many genetic studies examine the genomes of hundreds or thousands of individuals to make population-level insights, a huge amount of information can be gleaned through the study of just a single human genome. In this research course, each student will investigate the genome of an unknown individual using a variety of population genetic tools to learn about their ancestry, health, and other phenotypes. The course will culminate in a written report and presentation on the biological identity of their chosen individual.

Life Sciences 1b or equivalent genetics/genomics course. Familiarity with computer programming will be helpful but is not required.

FAS Divisional Distribution: Science & Engineering & Applied Science

HEB 116

A Pan Model for Human Evolution - What can we learn from Chimpanzees and Bonobos about ourselves?

Course ID: 222986
2025 Fall (4 Credits)

W 1200 PM - 0245 PM

Instructor Permission Required

Martin Surbeck

This seminar explores the behavioral variation in our closest living relatives, bonobos and chimpanzees, to develop referential models of human evolution. Weekly readings and discussions will be used to explore how variation in behavioural aspects linked to warfare, peace, sexual coercion, dominance between the sexes, food sharing and cooperation within groups of bonobos and chimpanzees can inform us on the evolution of similar traits in humans. In doing so, we challenge the traditional understanding of the contribution of these species to our understanding of human traits.

HEB 117

Evolution, Anatomy and Physiology of Sleep

Course ID: 217869
2026 Spring (4 Credits)

M 0300 PM - 0500 PM

Instructor Permission Required

Joanne Clark-Matott

What is special about human sleep? HEB 1317 is a research seminar that introduces current research on the evolution of sleep, the neuroanatomical circuits that regulate sleep and wake, and the cultural and social factors that can affect sleep duration and quality. Students in HEB 1317 analyze and interpret physiological sleep recordings and sleep diary data to build data analysis skills while completing a self-directed research project on a topic of their own choosing using publicly-available datasets, existing research data, or self-collected data.

Course Note: This course counts as a Junior Research Seminar.

FAS Divisional Distribution: Science & Engineering & Applied Science

HEB 118

Building the Human Body

Course ID: 156174
2025 Fall (4 Credits)

TR 1030 AM - 1145 AM

Instructor Permission Required

Terence Capellini

Humans and our primate relatives are incredibly variable. This variation results from natural selection operating on the developmental mechanisms that control anatomy and physiology. While these mechanisms remain mostly undiscovered, we are beginning to understand these complex processes due to major advances in technology that have pushed the fields of genetics, genomics and developmental biology rapidly forward. This research-centered course explores these relationships in the context of the human paleontological record. We focus on the evolution and development of the musculoskeletal system, which includes the cranium, axial skeleton and limbs, and present studies that cast light on the developmental genetic mechanisms that underlie major transitions in human evolution.

Course Note: This course fulfills the research seminar requirement for Human Evolutionary Biology and includes a mandatory laboratory section.

LS1b (Genetics, Genomics, and Evolution). Introductory courses in paleoanthropology, anatomy helpful but not required.

FAS Divisional Distribution: Science & Engineering & Applied Science

HEB 123

Dogs: Behavior, evolution, and domestication

Course ID: 220650
2025 Fall (4 Credits)

Erin Hecht

What makes dogs behave the way they do, and what can this teach us about our own species? In this course, we will explore the evolution of canine behavior through the lens of ethology. We will discuss current research on the evolutionary history of dogs, and consider whether this might parallel some aspects of human evolution. We will also examine communication, cooperation, attachment, and other aspects of behavior in dogs, humans, and other species. Students will learn to understand behavior as an adaptive, evolved trait and consider artificial selection as a window on mechanisms of behavior evolution. In the weekly 3-hour lab, students will also receive hands-on training in the collection and analysis of dog behavior data through a semester-long group research project.

Course Note: Dog behavior data will be collected on campus in the Canine Brains Project dog behavior lab space.

FAS Divisional Distribution: Science & Engineering & Applied Science

HEB 124

Course ID: 224018

Primate Playtime

2026 Spring (4 Credits)

W 1245 PM - 0245 PM

*Instructor Permission Required**Kristin Sabbi*

Play is a major feature of our young lives- and that is a trait that we share with our closest primate cousins, chimpanzees. Even though play is an obvious (and delightful) behavior, there are still many open questions about how and why it evolved. In this research course, we will work toward answering some of those questions. What is the function of playing for chimpanzees and how does it change across their life course? In addition to learning the ins and outs of famous hypotheses that explain play and how they have been tested in the primate literature, through this course you will learn important skills for independent research from shaping your questions and hypotheses to testing those ideas by analyzing real behavior from wild chimpanzees. These skills can be applied across behavioral studies with primates and other animals, but they are also valuable tools with transferrable benefits across industries.

Course Note: This course counts as a junior research seminar.

HEB 130

Course ID: 112219

Hormones and Behavior

2026 Spring (4 Credits)

TR 1030 AM - 1145 AM

*Instructor Permission Required**Kristin Sabbi*

Why do we act the way we do? This course will introduce you to the role of hormones in human and nonhuman primate behavior. After some grounding in the endocrine system and how its axes operate, we will explore the ways that behavior and hormones interact with one another across the life course from development through adulthood. We will focus on human reproduction, energy metabolism, mating and sexuality, parental behavior, learning and memory, stress, and dominance interactions. Throughout the course we will examine these relationships at multiple levels of analysis, emphasizing evolutionary perspectives.

HEB 132

Course ID: 221986

Mammalian Business

2025 Fall (4 Credits)

MW 0130 PM - 0245 PM

*Instructor Permission Required**Joyce Benenson*

Mammalian species solve problems in remarkably different ways. This course will begin by reviewing evolutionary theories regarding natural and sexual selection, with an emphasis on social species and

cooperative competition. The course will continue by reviewing select mammalian species' approaches to structuring communities, selecting mates, dispersing at adolescence for a new community, and cooperating and competing with same-sex and other-sex individuals. Principles underlying common solutions to universal problems of survival and reproductive success will be highlighted. The course will focus on commonalities between humans and specific non-human mammalian solutions to similar problems.

FAS Divisional Distribution: Science & Engineering & Applied Science

HEB 135

Clinical Comparative Medicine: Evolutionary Perspectives on Mental and Physical Health

W 0300 PM - 0500 PM

Barbara Natterson-Horowitz

Course ID: 205490
2025 Fall (4 Credits)

Why are human beings so vulnerable to mental and physical illness? Insights into the causes of human diseases and disorders can be found by studying similar health challenges in other species. In HEB 1328 students will explore physical illnesses and behavioral disorders in non-human animals—from wild animals to beloved family pets. While heart disease, cancer and other significant medical challenges will be explored, this year special emphasis will be placed on mental health. Comparative psychopathology—studying mental illness and abnormal behavior in fish, reptiles, birds, and non-human mammals—will be introduced as a framework strengthening our understanding of human depression, eating disorders, social anxiety, OCD, self-injury, addiction and other emotional and biobehavioral challenges. Taught by a physician and evolutionary biologist, this course uses a 'mini-medical school' approach to explore the evolutionary origins of disease. Each lecture takes on a specific common and challenging human health issue beginning with a brief overview of what modern medicine currently does and does not understand. Lectures then quickly move into the wild (literally—through the use of curated wildlife video) and into our evolutionary past that has shaped modern vulnerabilities. Students will explore Harvard Museum of Natural History collection and learn to build phylogenetic models to develop an expanded understanding of the nature and origin of mental and physical illness. No prior medical or advanced scientific knowledge is assumed. Both physical and mental illnesses will be covered. As noted above, this year mental health will receive special focus. This year course lectures and other content will be presented in an interactive seminar style. Students will be expected to deeply engage with weekly readings and assignments and to contribute to a collective research project.

FAS Divisional Distribution: Science & Engineering & Applied Science

HEB 140

The Evolution of Friendship

TR 0300 PM - 0415 PM

Jennifer Devereaux

Course ID: 222906
2025 Fall (4 Credits)

Instructor Permission Required

Friendship is a key feature of human sociality, shaped by evolutionary pressures and cultural dynamics. While voluntary associations occur in many animals, human friendships take diverse forms, from lifelong bonds to transient affiliations, influencing everything from health and reproduction to cooperation and group identity. This course examines friendship through the framework of gene-culture coevolution, exploring the biological and psychological mechanisms that underpin social bonds. Topics include the effects of friendship on physiological and mental health, the role of social emotions in strengthening group cohesion, and how environmental pressures — from resource scarcity to social upheaval — shape affiliative behavior. The course also investigates the role of technology in human sociality across deep time, from the earliest stone tools to AI-driven interactions, examining how innovations shape trust, cooperation, and the neurobiological systems that regulate social behavior. Weekly discussion sections provide an opportunity to engage more deeply with key readings, explore cross-cultural and interdisciplinary perspectives, and apply course concepts to contemporary debates on friendship and technology. Integrating perspectives from evolutionary biology, cognitive psychology, and anthropology, this course provides a comprehensive framework for understanding the adaptive significance of friendship across different social and technological contexts.

Course Note: This course will count for the Science and Engineering and Applied Science divisional requirement for undergraduates. There are no prerequisites.

FAS Divisional Distribution: Science & Engineering & Applied Science

HEB 143

Primate Development

Course ID: 222985
2026 Spring (4 Credits)

Joyce Benenson

Early development sets the stage for an adult's life. Understanding how primates develop during their early lives provides a window into evolutionary solutions to problems of survival and reproduction. This course will focus on the early development of non-human and human primates from the perspective of natural selection. The course requires weekly observations of human children in their natural environments using techniques from primatology and includes a field trip to the Franklin Park Zoo.

FAS Divisional Distribution: Science & Engineering & Applied Science

HEB 144

Course ID: 218851

The Human Face: How evolution, growth, and behavior has shaped the way we look

2025 Fall (4 Credits)

M 1245 PM - 0245 PM

Instructor Permission Required

Julie Lawrence

Our faces are the means by which we perceive the world and the world perceives us. The size and shape of the face has changed dramatically across human evolution. Some of our prehistoric relatives had huge teeth and enormous cheek bones, others had massive brow ridges, and modern humans have unique features such as our chins and our unusually big, globular brains. This course will explore how our social interactions and facial expressions, changes in what we eat and how we eat it, and evolutionary adaptations (sexual selection and cultural/environment influences) have molded the face and led to the variety of facial forms we see within and between populations today. We will examine the origins of human facial variation from our early primate origins, across the hominin fossil record, to the impact of modern soft diets and dentistry. What do we think the last common ancestor of humans and chimpanzees looked like? What were the earliest changes to the face and what can they tell us about the lives of our ancestors? What can our own faces tell us about our ancestry, development, and health?

FAS Divisional Distribution: Science & Engineering & Applied Science

HEB 145

Course ID: 222987

Thinking Through Human Cognition

2026 Spring (4 Credits)

W 0300 PM - 0500 PM

Instructor Permission Required

Abigail Desmond

What does it mean to inhabit a human mind? This course will investigate the origins of - and selective advantages provided by - key human cognitive traits. We will examine how these traits appear and develop in human evolutionary timescales, with a special focus on the origins of symbolic communication, language, exosomatic information storage, and the exponential nature of human technology. We will also examine how cultural norms are shaped by human cognition, with an eye to concepts such as fairness, collaboration, sharing, nurturance, reciprocity, spite, violence, social exclusion, and a concern for curating our reputation. This course will use a multidisciplinary approach, drawing on recent developments in fields such as evolutionary psychology, cognitive science, philosophy, linguistics, archaeology, anthropology, developmental biology, neuroscience, genetics, and primatology.

Human Life History

TR 0900 AM - 1015 AM

Kristin Sabbi

Course ID: 223125

2025 Fall (4 Credits)

Instructor Permission Required

As humans, the combination of characteristics that make up our life history—the timing and pace of our growth, reproduction, and aging—make us unique among other animals including our closest cousins, the great apes. In this course you will learn about humans' puzzling combinations of fast and slow life history and how these patterns evolved. We will apply evolutionary theory to better understand human behavior and biology, especially through comparing ourselves to our great ape cousins and other animals. Throughout the semester we will tackle questions like: why do we take so much longer than other apes to grow up? And since we do take so long to mature- how do we reproduce so much faster? How do evolutionary forces shape mating decisions across cultures and time? Why do we outlive our ability to reproduce- and have we always lived so long?

FAS Divisional Distribution: Science & Engineering & Applied Science

HEB 180

Ancient DNA as a Window Into the Human Past

MW 0900 AM - 1015 AM

David Reich

Course ID: 216425
2026 Spring (4 Credits)

Instructor Permission Required

Over the last decade, ancient DNA technology has made it possible to ask and answer questions that were impossible to address before, and the findings that have emerged are challenging and enriching previous understandings of the past. This course will provide students with the tools they need to critically evaluate and perform research on ancient DNA. The centerpiece of the course is analyzing unpublished data produced by the instructor's lab under the mentorship of members of the instructor's laboratory, leading to a final project in which students will write an original research paper based on their analysis of data. The course will include lectures aimed at providing students with an understanding of major issues in this field, seminar-style discussions critically assessing papers and student research projects, and four homework assignments that will provide students with the core computational skills they need to analyze data.

Course Note: This course will be of interest for students in Human Evolutionary Biology, Computer Science, Statistics, Organismic and Evolutionary Biology, Anthropology, Molecular and Cellular Biology, and History. This course is aimed at providing deep disciplinary knowledge in Ancient DNA research and as such could be a jumping-off point for students who wish to do an Honors Senior Thesis in this area or carry out Ph.D. thesis research in Ancient DNA.

Computer programming background (AP Computer Science or equivalent). Statistics background (AP Statistics or equivalent). Students who do not have computer or statistics background but are highly motivated to take the course should write to the instructor to have a discussion about whether they might have the background needed to take the course.

FAS Divisional Distribution: Science & Engineering & Applied Science

HEB 183

Science Writing

F 0945 AM - 1145 AM

Bridget Alex

Course ID: 220759
2025 Fall (4 Credits)

Instructor Permission Required

Great research isn't enough. Scientists need to effectively communicate their work to diverse audiences. This course will explore written communication in human evolutionary biology and related disciplines. Students will become better writers and produce publishable writing samples. We will survey major genres in academia and beyond, including research papers, grant proposals, job/school/fellowship applications, and pop-science writing for non-specialists. By analyzing exemplary models from these genres, we will distill elements that make scientific writing successful and sometimes beautiful. In this way, we'll approach science writing as a technical and creative endeavor. We'll also discuss strategies to make writing easier, which consider the writer's emotional, social, and environmental conditions. For the major course assignment, students will choose a specific writing project (e.g. grant proposal, op-ed) and work on it throughout the term in order to produce a document that's ready to publish or submit. Course intended for upper-level undergraduates or graduate students.

FAS Divisional Distribution: Science & Engineering & Applied Science

HEB 189

The Devil's Teeth: Archives of Health, History, and Climate

W 0945 AM - 1145 AM

Daniel Green

Course ID: 226498
2025 Fall (4 Credits)

Instructor Permission Required

From childhood lead exposure, to the pathways and practices of our ancestors millions of years ago, teeth retain incredible records of our collective pasts. This course examines teeth from two main perspectives. The first is medical and dental, examining the developmental biology and mineralogy of how teeth form, and how formation can fail in the context of health crises. The second is historical: the class will learn how teeth are records of past history and climate, even into deep time, millions of years into the past. Every week, we will read contemporary scientific literature on teeth from multiple perspectives. In the second half of the course, students will work collectively on a research project.

2025 Fall (4 Credits)

Advanced Topics in Human Behavior

R 1245 PM - 0245 PM

Instructor Permission Required

Kristin Sabbi

Topic: Evo Endocrinology & Social

This course offers a focused exploration on a topic within human behavior that varies by term (see class note for current topic). It meets in small seminar style, with potential for coursework in a faculty research lab as well. Open to juniors, seniors, and graduate students by permission of instructor. Repeatable for credit.

Fall 2025 Topic: Evolution, Endocrinology, and Social Relationships As humans, we are social creatures who depend on our relationships with others throughout our lives. This advanced seminar applies the lens of evolutionary endocrinology to explore the intricate interplay between social behaviors, bonds, and hormones, offering a comprehensive examination of how endocrine mechanisms shape and are shaped by social relationships. Over the course of the semester, we will delve into key questions such as: How do hormones create bonds between people and other animals? What are the hormonal underpinnings of our parenting and pair-bonding? Why and how do social interactions cause or reduce our stress? How do we balance cooperation with competition with our kin, group-members, and people on the outside of our close relationships? How can we compare human patterns to other animals to learn how these patterns evolve? Throughout the course students will critically engage with and discuss primary research across human evolutionary biology and anthropology, primatology and animal behavior to gain insights into the innerworkings of our social lives and how sociality deeply intertwines with our biology.

Topic: African Human Evolution

This course offers a focused exploration on a topic within human evolution that varies by term (see class note for current topic). It meets in small seminar style, with potential for coursework in a faculty research lab as well. Open to juniors, seniors, and graduate students by permission of instructor. Repeatable for credit.

Advanced Topic Fall 2025: Key Junctures in African Human Evolution This upper division course investigates key transitions in hominin evolution during the Early, Middle, and Later Stone Ages of Africa, from the Late Pliocene to the transitional Holocene. In an in-depth seminar format, we critically evaluate apparent step-changes in hominin evolution, with a special focus on issues at the forefront of scholarly debate in the fields of archaeology and human origins. Through a series of weekly deep-dives, we will assess the integrity of current bioanthropological and archaeological explanatory models of hominin evolutionary transitions in light of novel and/or recently generated data. Special topics include whether - and how - a changing climate could have driven incipient bipedalism, whether the Sahara remained a consistent barrier in structuring pan-African dispersals of hominin populations, and the technological, social, and demographic developments of *Homo sapiens* that enabled their eventual successful colonization of global environments beyond Africa.

The Human Brain in the Animal Kingdom

TR 0130 PM - 0245 PM

Instructor Permission Required

Erin Hecht

Our brains make us what we are. How did they get that way? How are they different from other animals', and how are they similar? This course will explore the structure and function of the modern human brain and

HARVARD UNIVERSITY 967 of 1792

examine the selective pressures that have impacted the evolution of human neuroanatomy and cognition.

Frequent comparisons will be made with other primate and non-primate species in order to situate an understanding of *Homo sapiens* within the context of the broader animal kingdom. Additionally, the course will delve into the types of methodological approaches used to study these topics and consider the frontiers of new knowledge in this area. The course will integrate research and theory from biological anthropology, archaeology, psychology, ethology, and neuroscience. Topics covered include the evolution of large brains in humans and other species; the emergence of specializations for communication, tool use, and culture; social cognition and theory of mind; individual variation and experience-dependent plasticity in the brain; and domestication and self-domestication.

Course Note: This course is the graduate level of The Human Brain in the Animal Kingdom. Only graduate students should enroll in this course; if you are interested in taking this course for undergraduate credit, please enroll in HEB 1339.

HEB 2480

Human Nature

No meeting time listed

Joseph Henrich

Course ID: 203596

2025 Fall (4 Credits)

Instructor Permission Required

This course asks: What makes us behaviorally and psychologically human? In what ways are humans similar to other species and in what ways are we different? What are the evolutionary origins of the behavioral and psychological features found across human societies including parental love, sibling rivalry, pair-bonding, incest aversion, social status, war, norms, altruism, religion, language, and cooking? At the same time, how can we account for the immense diversity we observe in behavior and psychology across time and across societies? Tackling these questions within a broad evolutionary framework, the course will draw on the latest insights and evidence from evolutionary biology, primatology, anthropological ethnography, neuroscience, genetics, linguistics, economics and psychology. We'll fully contextualize contemporary behavior by examining studies of non-human primates, especially chimpanzees, and a broad breadth of human variation, based on comparative studies of hunter-gatherers, herders, agriculturalists and—the most unusual of all—people from industrialized societies. We'll also consider how cultural evolution has shaped our genetic evolution, both over our species' deep history and in more recent millennia. Along the way, we'll consider how understanding the evolutionary origins of human behavior, psychology and culture informs how we approach contemporary issues such as patriarchy, polygamous marriage, sex differences, child abuse, mating preferences, homosexuality, racism, psychological variation among populations and the use of oral contraceptives.

Course Note: Undergraduate students interested in this course should enroll in GenEd 1056.

Requires: Course open to Graduate Students Only (Undergraduates can submit a request to enroll)

HUMAN 2

Course ID: 226533

Introduction to the Medical and Health Humanities

2025 Fall (4 Credits)

Karen Thornber

HUM 2 serves as an introduction to the burgeoning field of the medical and health humanities, a thriving discipline that explores the human side of medicine, health and healthcare through the lens of the humanities, social sciences, and the arts. We will bring together perspectives from literature, media, history, philosophy, ethics, anthropology, and the visual and performing arts to deepen our understanding of illness, health, and healing. This course is aimed at students with a broad range of career goals - from medicine and the other health professions to politics, law, journalism, nonprofits, and the creative and performing arts.

FAS Divisional Distribution: Arts and Humanities

HUMAN 7

Course ID: 226534

Culture in Context

2025 Fall (4 Credits)

M 1245 PM - 0245 PM

Lauren Kaminsky

This course introduces students to the interdisciplinary study of cultural materials in their historical contexts. Weekly lectures, given by members of History and Literature's Committee on Degrees and other members of the faculty, will focus on types of primary sources (such as film, fiction, music, photography, and archival documents), approaching them from key theoretical and methodological perspectives. Class meetings will feature trips to campus museums, archives, and performances. Assignments will practice the fundamental skills of close reading and historical contextualization, culminating in a research project.

Course Note: All students are expected to attend the tutorial component of the course. Please sign up for the Wednesday 12:45 - 2:45 section time. If you have a scheduling conflict, you may sign up for the TBD section time in order to register; however we cannot guarantee an alternate section time.

HUMAN 7 is open to all undergraduate students. The course satisfies the sophomore tutorial requirement in History and Literature.

Reading for Fiction Writers

2025 Fall (4 Credits)

MW 1030 AM - 1145 AM

Instructor Permission Required

Indraneel Mukherjee, Laura van den Berg

There is no writing without reading. This is a fact that all writers know. Ask any writer why they became a writer, and they'll tell you that it's because they read. Octavia Butler, who came from a poor family, once said that she became a writer because she had access to public libraries. Books, in other words; they showed her what was possible. What kind of training in reading prepares one to become a writer? This is an open-enrollment creative writing course that will introduce you to some extraordinary writers who will inspire you, make you think, make you quarrel with them, fill you with wonder and awe and, sometimes, bafflement. The reading list is meant to be a stepping-stone to possibilities, to greater imaginative and creative worlds.

*We will begin with Ursula Le Guin's *The Left Hand of Darkness*; students should plan to read the novel before the second course meeting.*

Course ID: 110440

A Humanities Colloquium from Homer to Joyce

2025 Fall (4 Credits)

T 1030 AM - 1145 AM

Instructor Permission Required

Louis Menand, David Elmer, Glenda Carpio, Stephen Greenblatt, Stephen Greenblatt

A Humanities Colloquium: from Homer to Joyce: 2,500 years of essential works, taught by six professors. Humanities 10a will tentatively include works by Homer, Sappho, Sophocles, Plato, Virgil, Dante, Boccaccio, Shakespeare, Descartes, Du Bois, Kafka and Woolf. One 75-minute lecture plus a 75-minute discussion seminar led by the professors every week. Students will receive instruction in critical writing one hour a week, in writing labs and individual conferences. Students also have opportunities to participate in a range of cultural experiences, ranging from plays and musical events to museum and library collections.

Course Note: The course is open only to first-year students. Students who complete Humanities 10a meet the Harvard College Curriculum divisional distribution requirement for Arts & Humanities. Students who take both

Humanities 10a and Humanities 10b fulfill the College Writing requirement. This is the only course outside of Expository Writing that satisfies the College Writing requirement. No auditors. The course may not be taken Pass/Fail. Students must apply to be admitted to the course. Enrollment is limited to 90.

The Human Sciences: Fundamentals and Basic Concepts

2026 Spring (4 Credits)

R 1245 PM - 0245 PM

John T. Hamilton

What do humanist scholars do and how do they do it? This preparatory course introduces students to the fundamental skills, techniques, and methods that are applicable for study in any one of the disciplines offered in the Humanities, including languages and literatures, philosophy and theory, music, performance and the visual arts, from antiquity to the present. Through a comprehensive and systematic explication of cross-disciplinary terminology, participants acquire the tools necessary for interpretation and analysis, for critically engaging with what has been produced, expressed, and argued by artists and thinkers across the world's epochs and cultures.

Bob Dylan the Classic

2025 Fall (4 Credits)

TR 1030 AM - 1145 AM

Instructor Permission Required

Richard Thomas

This course examines Bob Dylan the creative genius and enduring and continuing musical, literary, and general cultural phenomenon, in the context of popular and higher literary culture of the last 60 years; also in the context of those long-lived literary and musical cultures with which he works: the Beats and Moderns of the 20th and Romantics of the 19th century; Poe, Melville, Whitman and Americana of the same 19th century; Shakespeare and the old ballad traditions; and in more recent songs going back to Homer, Virgil, Ovid, and the western literary canon. Traces the evolution of his songs and lyrics from their early folk, blues, rock, gospel, and protest roots, through the transition from acoustic to electric, in studio and performative contexts, also through the many persona evolutions and reinventions that have characterized and continue to characterize his career in songwriting, performance, literature, film and painting. Lectures, listening to, viewing, and discussing a broad representation of Dylan's output.

This course has an enrollment cap. When you submit an enrollment petition, in the text field please note your concentration (if you have declared one) and write in no more than 50 words/two sentences why you would like to take this course. This course will have a section. Section scheduling preferences will be collected after enrollment closes.

Kathryn Davidson

Course ID: 000010

2026 Spring (4 Credits)

What is Language? Is language "a uniquely human gift"? Is it central to the human experience, as many have suggested? Why do some writers say that Language is what "makes us human?" Do other animals have Language? Do AI models "know a language"? What does it even mean to ask questions like these? Do languages vary from one another without limit? Or is there an underlying common core beneath the surface diversity? How similar are languages across modalities (signed/spoken)? Do the languages we know determine the thoughts we can think? Do we think (only) in language? Are there right and wrong ways of speaking? Who decides? What's the difference between a language and a dialect? Where do our words come from? It's said that more than half of the world's languages and maybe as many as 90% are "endangered" and may no longer be spoken by the end of the century. Are they "unsuited to the modern world" or are other factors at play? Are some languages more logical than others? Students in this course will be exposed to classical and new questions about language, and will gain analytic tools drawing on a wide variety of disciplines to get an appreciation of how one can approach these questions rationally and analytically. Our aim is not to present answers, but to foster critical thinking, and to understand on the one hand what such questions mean, and on the other, how one might approach them and why various answers have been given from a diversity of perspectives from Linguistics, Philosophy, Languages and Literatures, Psychology, Computer Science, Anthropology, and related fields in the humanities and sciences.

ASL III is designed for students who have completed ASL levels I and II. Students come to ASL III with an understanding of the fundamentals of ASL comprehension and production. These foundational courses (ASL I and II) introduce students to the language using a natural acquisition approach without explicit focus on grammatical rules. ASL III has an increased focus on the appropriate ways to converse with members the Deaf community. In this class, students will learn how to tell stories that adhere to the pragmatic and linguistic standards of the Deaf community with a focus on stylistically appropriate production. In this class, students will learn how to engage with members of the Deaf community in respectful and culturally appropriate ways. In addition to fostering language development, we will discuss the history and culture of the Deaf community.

Course Note: This course is limited to 22 students.

ASL IV course will build on the foundation set in the first three levels of ASL and will focus on expressive language at a more advanced level. Students will have an opportunity to play with the language and explore different literary genres including: classifier stories, narratives of personal experience, visual vernacular and ASL poetry. Given that language learning doesn't happen in isolation, we will continue our exploration of Deaf culture

and norms in order to develop a deeper understanding of the Deaf community. Growing out of this discussion, students will learn what it means to work as an ally to the Deaf community and avoid oppressive behavior. Other issues to be discussed include recognizing audism in oneself and others and how to appropriately respond.

Course Note: This course is limited to 22 students.

LING 83

Language, Structure, and Cognition

MW 1030 AM - 1145 AM

Kathryn Davidson

Even though everyone speaks or signs at least one language, the complexity of language in its structure and function is often underappreciated and misunderstood. This myth-busting class guides students to the field of linguistics. Together, we will explore how language is structured from sound to conversation, how language is related to society, and how language is processed in the brain and simulated by machines. Students will engage with linguistic data, explore language technology, and reflect on their positions in the social world through ideologies about languages and their speakers. At the end of the class, with a taste for being a linguist, students will appreciate the skills and opportunities that linguistics can offer.

LING 102

Sentence Structure

TR 1200 PM - 0115 PM

Kaden Holladay

Course ID: 121089

2026 Spring (4 Credits)

What determines how the words in a sentence are put together in a given language? This course introduces the field of syntax, and the study of order and structure among words. Students will learn to construct and evaluate syntactic analyses and argumentation and will be exposed to variation and universals in the syntactic patterns found in natural languages. The course will also provide an introductory survey of syntactic phenomena, including question formation, the passive, anaphora, and agreement.

FAS Divisional Distribution: Arts and Humanities

LING 103

Language in its Social Context

TR 1030 AM - 1145 AM

Kathryn Franich

Course ID: 140523

2025 Fall (4 Credits)

Instructor Permission Required

Every language is characterized by a great deal of variation, much of it systematic and structured by sociological, individual, and environmental factors. Our speech patterns serve both as a historical record and as a tool for constructing and communicating our identities as speakers. In this course, we will use methods in sociolinguistics to investigate patterns of variation and the social factors that shape them. We will also explore how sociolinguistic variation is linked with language change. Students will read and respond to a variety of articles, blog posts, and academic publications, and learn to conduct qualitative and quantitative analysis of linguistic variation based on two class projects.

FAS Divisional Distribution: Arts and Humanities

LING 105

Sounds of Language

MW 1030 AM - 1145 AM

Kathryn Franich

What are the sounds of the world languages, and how are they organized to make words and sentences? Why are some sounds hard to hear or make? Is there a 'universal inventory' of sounds? This class introduces students to the sounds of the world's languages, and provides tools for studying them systematically. We will study the setup to transfer thoughts from one brain to another.

FAS Divisional Distribution: Arts and Humanities

Quantitative Reasoning with Data: Yes

Course ID: 111954
2026 Spring (4 Credits)

LING 106

Knowledge of Meaning

MW 0130 PM - 0245 PM

Gennaro Chierchia

This course is an introduction to the field of natural language semantics, which is a branch of linguistics concerned with meaning. What does it mean to know the meaning of a sentence? How do different parts of a sentence compose to form a sentence meaning? We will start by looking at sentence-level meanings and relations between them. Then, we will investigate how the meanings of sentence-internal elements (like verbs, subjects, and adjectives) are composed to form sentence meanings. During the process, we will cover some formal tools that allow us to talk about language in a precise way: set theory, propositional logic, predicate logic, and lambda notation. We will consider how the formal tools apply (and not apply) to natural languages and discuss how we can achieve a more comprehensive understanding of meaning.

language documentation and revitalization. How does one document different properties of a language? How can linguists help communities in language revitalization efforts? This class approaches these questions in a hands-on manner, with students directly engaging with the existing collaboration between Harvard linguists and the Alabama-Coushatta community. prerequisite is an introductory class - 101 or 83 (or permission of the instructor).

LING 179

Structure of Finnish

R 0200 PM - 0400 PM

Kaden Holladay

This course will investigate aspects of the phonology, morphology, syntax, and semantics of Finnish (Uralic). Special attention will be paid to the features of Finnish that distinguish it from some of its better-known Indo-European neighbors. Among those features are vowel harmony, synchronically productive consonant lenition (implicated in several opaque morpho-phonological interactions), a link between telicity and object case, and a complex interplay between case marking, numerals, and pluralia tantum nouns. The particulars of course content will be guided both by student interest and by influential publications on the language.

LING 207R

Topics in Semantics

M 1245 PM - 0345 PM

Gennaro Chierchia

Current issues in semantics. Topics to possibly include: Scope and anaphoric properties of indefinites, quantificational variability and generic uses, long distance indefinites. Spring Term 2026 course will be co- taught with G.Chierchia and Danny Fox, MIT

Course Note: For Spring 2025, this course will be co-taught by Kathryn Davidson and Athulya Aravind, MIT and focus on experimental methodology in syntax and semantics.

LING 215

Phonological Theory II

R 1245 PM - 0245 PM

Kevin Ryan

This course addresses topics of current interest in phonological theory, potentially including competing constraint grammar frameworks, learnability, naturalness biases, prosody, quantitative approaches (experimental or corpus-driven), variation, gradience, and the morphological interface.

Linguistics 105, equivalent, or permission of the instructor

Mathematics

Mathematics

MATH LS (LEC) Mathematics of Biological Systems: a Calculus-Based Approach <i>No meeting time listed</i> <i>Janet Chen</i>	Course ID: 224377 2026 Spring (4 Credits) <i>Instructor Permission Required</i>
--	---

In this course, we will use mathematical modeling to understand the behavior of biological systems. We will focus on creating and understanding models using concepts from calculus, as well as using computational tools to explore the implications of such models. Although we will study ideas from calculus, this course has a much more applied focus than Math Mb. Students who intend to take Math 1b or Math 21a should take Math Mb. Pre-requisite: Math Ma

Course Note: Math LS is taught in small sections throughout the day (9 am and 12 pm). To register, please enroll

in the course on my.harvard by November 12th. Once enrolled, you must share your time preferences with us by filling out this form (<https://bit.ly/4dyaHmj>).

Pre-requisite: Math Ma

FAS Divisional Distribution: Science & Engineering & Applied Science

MATH MA (LEC)

Course ID: 111161

Introduction to Functions and Calculus I

2025 Fall (4 Credits)

No meeting time listed

Kate Penner

This is the first half of a full-year course that studies functions and their rates of change. Fundamental ideas of calculus are introduced early and used to provide a framework for the study of mathematical modeling involving algebraic, exponential, and logarithmic functions. In this semester, we will emphasize conceptual mastery of and computational fluency with the critical ideas of differential calculus. There will be required workshops Tuesdays. This course is appropriate for students with and without calculus experience. Techniques from high school algebra are used right away and students who have taken a break from mathematics can expect to spend extra time reviewing them.

Course Note: Math Ma is taught in small sections throughout the day on a Monday/Wednesday/Friday schedule (9:00-10:15 am, 10:30-11:45 am, 12-1:15 pm, 1:30-2:45 pm, and 3:00-4:15 pm with sufficient enrollment). Completing your registration for Math Ma is a two-step process: first, you'll enroll in the course within my.harvard, and then, you'll fill out the Math Sectioning form in your my.harvard To-Do list to submit your time preferences. Please submit time preferences before 5pm on Tuesday, September 2. Note this To-Do list may take up to 15 minutes to appear after enrolling. If your time preferences change, you may submit the form again; only your latest submission will be used.

At a later date, you'll be asked to sign up for your Tuesday workshop.

In order to receive your section assignment, you are required to take the Math MA skills check in-person on September 2. Please see the course's Canvas site for more information.

This course, when taken together with Mathematics Mb, can be followed by Mathematics 1b. Mathematics Ma and Mb together cover all the material in Mathematics 1a (and more).

The QUIZ component of this course represents the designated time slot for your mid-term exams. While these exams do not occur weekly, it's important that this period remains on your schedule. If you encounter an academic conflict, you have the option to enroll in the TBA section. Students enrolled in the TBA section will be required to take all exams out of sequence.

FAS Divisional Distribution: Science & Engineering & Applied Science

MATH MA5 (LEC)

Course ID: 224755

An In-depth Introduction to Functions and Calculus I

2025 Fall (4 Credits)

MWF -

Justin Hancock, Kate Penner

This is a version of Math Ma that meets 5 days a week. It is the first half of a full-year course that studies functions and their rates of change. Fundamental ideas of calculus are introduced early and used to provide a framework for the study of mathematical modeling involving algebraic, exponential, and logarithmic functions. In this semester, we will emphasize conceptual mastery of and computational fluency with the critical ideas of differential calculus. There will be required workshops twice weekly on Tuesdays and Thursdays, which focus on additional practice and core skills important for the course's content. This course is appropriate for students with and without calculus experience. Techniques from high school algebra are used right away and students who have taken a break from mathematics can expect to spend extra time reviewing them.

Course Note: Note: This course is taught in small sections that run at different times throughout the day on a Monday/Wednesday/Friday schedule (MWF) with a twice weekly workshop on Tuesdays and Thursdays. Math Ma5 students will attend a Math Ma section MWF.

Math Ma is taught in small sections throughout the day on a Monday/Wednesday/Friday schedule (9:00-10:15 am, 10:30-11:45 am, 12-1:15 pm, 1:30-2:45 pm, and 3:00-4:15 pm with sufficient enrollment).

Completing your registration for Math Ma5 is a two-step process: first, you'll enroll in the course within my.harvard, and then, you'll fill out the Math Sectioning form in your my.harvard To-Do list to submit your time preferences. Please submit time preferences before 5pm on Tuesday, September 2. Note this To-Do list may take up to 15 minutes to appear after enrolling. If your time preferences change, you may submit the form again; only your latest submission will be used. At a later date, you'll be asked to sign up for your Tuesday/Thursday workshop.

NEW for 2025-2026: All students planning on enrolling in any mathematics course (Math Ma through Math 21b) for the 2025-2026 academic year are required to sit a skills check on Tuesday, September 2, in order to offer accurate course selection information beyond the June placement exam recommendation. Please see the course website for more information and logistics.

After Math Ma5, students may take Math Mb (just like Math Ma students). Math Ma5 and Math Mb, can then be followed by Mathematics 1b. Mathematics Ma5 and Mb together cover all the material in Mathematics 1a (and more).

The QUIZ component of this course represents the designated time slot for your mid-term exams. While these exams do not occur weekly, it's important that this period remains on your schedule. If you encounter an academic conflict, you have the option to enroll in the TBA section. Students enrolled in the TBA section will be required to take all exams out of sequence.

FAS Divisional Distribution: Science & Engineering & Applied Science

MATH MB (LEC)

Course ID: 113464

Introduction to Functions and Calculus II

2026 Spring (4 Credits)

No meeting time listed

Justin Hancock

Continued investigation of functions and differential calculus through modeling; an introduction to integration with applications; an introduction to differential equations. Solid preparation for Mathematics 1b. There will be required workshops Tuesdays.

Course Note: Math Mb is taught in small sections throughout the day (9:00 am, 10:30 am, noon, 1:30 pm, and 3:00 pm). To register, please enroll in the course on my.harvard by November 12th. Once enrolled, you must share your time preferences with us by filling out this form (<https://bit.ly/4dyaHmj>).

This course, when taken together with Mathematics Ma, can be followed by Mathematics 1b. Mathematics Ma and Mathematics Mb together cover all the material in Mathematics 1a (and more).

Requires: Prerequisite: Mathematics MA or Mathematics MA5

FAS Divisional Distribution: Science & Engineering & Applied Science

MATH Q (LEC)

Course ID: 218229

Quantitative Analysis for Economics and the Social Sciences I

2026 Spring (4 Credits)

No meeting time listed

Brendan Kelly

Instructor Permission Required

This course develops a portable toolkit of quantitative skills that supports students' strategic thinking. At the center of the course is a set of case studies that require comprehensive quantitative analysis to properly diagnose and address the broad range of problems presented. After taking this course, students' strategic thinking will be bolstered by the ability to develop mathematical models, apply core ideas from differential and integral calculus and statistics to solve problems in economics and social science, and make use of spreadsheets and the R statistical package to carry out data analysis. Each analytical tool comes to life in an authentic application. The course focuses not just on how to carry out the analysis, but how to communicate results to a non-mathematical audience in simple functional language. This course should be seen as an applied alternative for Math Ma/Math Mb or Math 1a for students interested in Economics and the Social Sciences. Students completing Math Ma and Math Q will satisfy the Math 1a requirement for the Economics Concentration. Students who want to take Math 1b should instead enroll in Math Mb.

Course Note: Math Q is taught in small sections throughout the day (9:00 am, noon, and 1:30 pm). To register, please enroll in the course on my.harvard by November 12th. Once enrolled, you must share your time preferences with us by filling out this form (<https://bit.ly/4dyaHmj>).

MATH 1A

Course ID: 123680

Introduction to Calculus

2026 Spring (4 Credits)

MWF 0900 AM - 1015 AM

Hannah Constantin

The development of calculus by Newton and Leibniz ranks among the greatest achievements of the past millennium. This course will help you see why by introducing: how differential calculus treats rates of change;

how integral calculus treats accumulation; and how the fundamental theorem of calculus links the two. These ideas will be applied to problems from many other disciplines.

Course Note: Math 1A is taught in small sections throughout the day (9:00-10:15 am, 10:30-11:45 am, 12-1:15 pm, 1:30-2:45 pm, and 3:00-4:15 pm with sufficient enrollment). Registering for Math 1A is a two-step process. Once enrolled, you must submit your time preferences before 5 pm on September 2 by filling out the Math Sectioning form in your To-Do list on my.harvard (this may take up to 15 minutes to appear after you enroll). If your time preferences change, you may submit the form again; only your latest submission will be used.

In order to receive your section assignment, you are required to take the Math 1A skills check in-person on September 2. Please see the course's Canvas site for more information.

A solid background in precalculus.

Requires: Anti-requisite: cannot be taken for credit if MATH S-1AB already complete

FAS Divisional Distribution: Science & Engineering & Applied Science

MATH 1A (LEC)

Integration, Series and Differential Equations

2025 Fall (4 Credits)

No meeting time listed

Erica Dinkins

Speaking the language of modern mathematics requires fluency with the topics of this course: infinite series, integration, and differential equations. Model practical situations using integrals and differential equations. Learn how to represent interesting functions using series and find qualitative, numerical, and analytic ways of studying differential equations. Develop both conceptual understanding and the ability to apply it.

Course Note: Math 1B is taught in small sections throughout the day (9:00-10:15 am, 10:30-11:45 am, 12-1:15 pm, 1:30-2:45 pm, and 3:00-4:15 pm with sufficient enrollment). Registering for Math 1B is a two-step process. Once enrolled, you must submit your time preferences before 5 pm on September 2 by filling out the Math Sectioning form in your To-Do list on my.harvard (this may take up to 15 minutes to appear after you enroll). If your time preferences change, you may submit the form again; only your latest submission will be used.

In order to receive your section assignment, you are required to take the Math 1B skills check in-person on September 2. Please see the course's Canvas site for more information.

MATH 18A

Course ID: 125396
2025 Fall (4 Credits)

Multivariable Calculus for Social Sciences

MWF 0900 AM - 1015 AM
Roderic Guigo Corominas

Focuses on concepts and techniques of multivariable calculus most useful to those studying the social sciences, particularly economics. Topics include functions of several variables, partial derivatives, linear approximation, multiple integrals, gradient, differential equations, mathematical modeling, constrained and unconstrained optimization, including the method of Lagrange multipliers. Covers topics from Mathematics 21a most useful to social science, adding a modeling component to it.

Course Note: Mathematics 21b can be taken before or after Mathematics 18. Examples draw primarily from economics and the social sciences, though Mathematics 18 may be useful to students in certain natural sciences. Students whose main interests lie in the physical sciences, mathematics, or engineering should consider Math 21a or Applied Math 22a.

The QUIZ component of this course represents the designated time slot for your mid-term exams. While these exams do not occur weekly, it's important that this period remains on your schedule. If you encounter an academic conflict, you have the option to enroll in the TBA section. Students enrolled in the TBA section will be required to take all exams out of sequence.

Mathematics 1b or equivalent, or a 5 on the BC Advanced Placement Examination in Mathematics.

Requires: Anti-Requisite: Not to be taken in addition to Mathematics 21a or Applied Mathematics 22a
FAS Divisional Distribution: Science & Engineering & Applied Science

Quantitative Reasoning with Data: Yes

MATH 19A

Course ID: 110596
2025 Fall (4 Credits)

Modeling and Differential Equations for the Life Sciences

MWF 1030 AM - 1145 AM
John Cain

Considers the construction and analysis of mathematical models that arise in the life sciences, ecology and environmental life science. Introduces mathematics that include multivariable calculus, differential equations in one or more variables, vectors, matrices, and linear and non-linear dynamical systems. Taught via examples from current literature (both good and bad).

Course Note: This course is recommended over Math 21a for those planning to concentrate in the life sciences and ESPP. Can be taken with or without Mathematics 21a,b. Students with interests in the social sciences and economics might consider Mathematics 18. This course can be taken before or after Mathematics 18.

A course in one variable calculus preferably at the level of Mathematics 1b.

FAS Divisional Distribution: Science & Engineering & Applied Science

Quantitative Reasoning with Data: Yes

Course ID: 119196
2025 Fall (4 Credits)

Multivariable Calculus

No meeting time listed

Amadeus Martin

To see how calculus applies in practical situations described by more than one variable, we study integration over curves, surfaces, and solid regions using different coordinate systems; parameterization of curves and surfaces; vectors, lines, and planes; partial derivatives and the gradient; constrained and unconstrained optimization; divergence and curl of vector fields; and the Green's, Stokes's, and Divergence Theorems. There will be required workshops Tuesdays.

Course Note: Math 21A is taught in small sections throughout the day (9:00-10:15 am, 10:30-11:45 am, 12-1:15 pm, 1:30-2:45 pm, and 3:00-4:15 pm with sufficient enrollment). Registering for Math 21A is a two-step process. Once enrolled, you must submit your time preferences before 5 pm on September 2 by filling out the Math Sectioning form in your To-Do list on my.harvard (this may take up to 15 minutes to appear after you enroll). If your time preferences change, you may submit the form again; only your latest submission will be used.

In order to receive your section assignment, you are required to take the Math 21A skills check in-person on September 2. Please see the course's Canvas site for more information.

MATH 22A

Vector Calculus and Linear Algebra I

Course ID: 207485
2025 Fall (4 Credits)

MWF 1200 PM - 0115 PM

Philip Wood

Mathematics 22 covers multivariable calculus and linear algebra for students interested in mathematical sciences. It covers the same topics as Mathematics 21, but does so with more rigor. Students are taught techniques of proof and mathematical reasoning. The workload and content is comparable with the Mathematics 21 sequence. But unlike the latter, the linear algebra and calculus are more interlinked. The content of Math 22a is mostly aligned with Math 21b (linear algebra), and the content of Math 22b is mostly aligned with Math 21a (multivariable calculus).

Requires: Anti-Req: Cannot be taken for credit if enrolled in or has completed APMTH 22A.

FAS Divisional Distribution: Science & Engineering & Applied Science

Quantitative Reasoning with Data: Yes

MATH 22B
Vector Calculus and Linear Algebra II

Course ID: 207486

MWF 1200 PM - 0115 PM

Philip Wood

A continuation of Mathematics 22a

Requires: Pre-Requisite: Students must complete Math 22A prior to enrolling in this course.

FAS Divisional Distribution: Science & Engineering & Applied Science

MATH 25A
Theoretical Linear Algebra and Real Analysis I

Course ID: 110808
2025 Fall (4 Credits)

MWF 1030 AM - 1145 AM

Thibault Decoppet

A rigorous treatment of linear algebra. Topics include: Construction of number systems; fields, vector spaces and linear transformations; eigenvalues and eigenvectors, determinants and inner products. Metric spaces, compactness and connectedness.

Course Note: Expect to spend a lot of time doing mathematics.

5 on the Calculus BC Advanced Placement Examination and some familiarity with writing proofs, or the equivalent as determined by the instructor.

FAS Divisional Distribution: Science & Engineering & Applied Science

MATH 25B
Theoretical Linear Algebra and Real Analysis II

Course ID: 110855
2026 Spring (4 Credits)

MWF 1030 AM - 1145 AM

Sarah Koch

A rigorous treatment of basic analysis. Topics include: convergence, continuity, differentiation, the Riemann integral, uniform convergence, the Stone-Weierstrass theorem, Fourier series, differentiation in several variables. Additional topics, including the classical results of vector calculus in two and three dimensions, as time allows.

Course Note: Expect to spend a lot time doing mathematics.

Requires: Prerequisite: Mathematics 25A OR Mathematics 55A

FAS Divisional Distribution: Science & Engineering & Applied Science

MATH 55A
Studies in Algebra and Group Theory

Course ID: 113627
2025 Fall (4 Credits)

MWF 0900 AM - 1015 AM

Denis Auroux

Instructor Permission Required

A rigorous introduction to abstract algebra, including group theory and linear algebra. This course covers the equivalent of Mathematics 25a and Mathematics 122, and prepares students for Mathematics 123 and other advanced courses in number theory and algebra. (A course in analysis such as Mathematics 25b or 55b is recommended for Spring semester.)

Course Note: Mathematics 55a is an intensive course for students who are comfortable with abstract mathematics. (Students without this background will gain it and learn the material from Math 55a,b in other courses by continuing into the Mathematics Concentration as sophomores.) Students can switch between Mathematics 55a and either Mathematics 25a, 23a, 22a, 21a during the first three weeks without penalty.

Familiarity with proofs and abstract reasoning; and commitment to a fast moving course.

FAS Divisional Distribution: Science & Engineering & Applied Science

MATH 55B
Studies in Real and Complex analysis

Course ID: 112871
2026 Spring (4 Credits)

MWF 0900 AM - 1015 AM

Instructor Permission Required

Denis Auroux

A rigorous introduction to real and complex analysis. This course covers the equivalent of Mathematics 25b and Mathematics 113, and prepares students for Mathematics 114 and other advanced courses in analysis.

Course Note: Mathematics 55b is an intensive course for students having significant experience with abstract mathematics.

Requires: Prerequisite: Mathematics 55A

FAS Divisional Distribution: Science & Engineering & Applied Science

MATH 60R

MATH 101

Course ID: 122943

Sets, Groups, and Real Analysis

2025 Fall (4 Credits)

WF 1200 PM - 0115 PM

Janet Chen

This course is an introduction to abstract mathematical thought and proof techniques, via topics including set theory, group theory, and real analysis.

Course Note: Problem sessions (optional but highly encouraged) Mondays 12 - 1 pm.

Students who have already taken Mathematics 25a,b or 55a,b should not take this course for credit. Ordinarily, students who have already taken Mathematics 22a,b or 23a,b should not take this course for credit, but they may do so with the instructor's permission. This course is offered in the Fall and Spring terms.

Anti-Req: Not to be taken in addition to Mathematics 25a,b or 55a,b.

Problem sessions (optional but highly encouraged) Mondays 12 - 1 pm.

An interest in mathematical reasoning. Acquaintance with algebra, geometry and/or calculus is desirable.

FAS Divisional Distribution: Science & Engineering & Applied Science

MATH 101

Course ID: 122943

Sets, Groups, and Real Analysis

2026 Spring (4 Credits)

TR 1030 AM - 1145 AM

Gage Martin

This course is an introduction to abstract mathematical thought and proof techniques, via topics including set theory, group theory, and real analysis.

Course Note: Problem sessions (optional but highly encouraged) Mondays 12 - 1 pm.

Students who have already taken Mathematics 25a,b or 55a,b should not take this course for credit. MATH 117

Probability and Random Processes with Economic Applications

Course ID: 127947

2026 Spring (4 Credits)

TR 0900 AM - 1015 AM

Kevin Yang

A self-contained treatment of the theory of probability and random processes with specific application to the theory of option pricing. Topics: axioms for probability, calculation of expectation by means of Lebesgue integration, conditional probability and conditional expectation, martingales, random walks and Wiener processes, and the Black-Scholes formula for option pricing. Students will work in small groups to investigate applications of the theory and to prove key results.

FAS Divisional Distribution: Science & Engineering & Applied Science

MATH 118R

Dynamical Systems

TR 0130 PM - 0245 PM

Alex Kapiamba

Introduction to dynamical systems theory with a view toward applications. Topics include existence and uniqueness theorems for flows, qualitative study of equilibria and attractors, iterated maps, and bifurcation theory.

Mathematics 19a,b or 21a,b or Math 22a,b,or Math 23a,b or Math 25a,b or Math 55a,b; or an equivalent background in mathematics.

FAS Divisional Distribution: Science & Engineering & Applied Science

MATH 121

Linear Algebra

MW 0900 AM - 1015 AM

John Cain

This is a second course in linear algebra, with an emphasis on understanding linear algebra at a more abstract level and learning to read and write proofs. Topics include real and complex vector spaces, linear transformations, and eigenvalues and eigenvectors.

Mathematics 19b or 21b or an equivalent background in mathematics.

Requires: Anti-req: Not to be taken in addition to Mathematics 22a, 23a or 25a or 55a.

FAS Divisional Distribution: Science & Engineering & Applied Science

MATH 122

Algebra I: Theory of Groups and Vector Spaces

MW 1200 PM - 0115 PM

Vasily Krylov

The theory of groups and group actions, rings, ideals and factorization.

Not recommended for most students who took Mathematics 55a and/or Mathematics 55b. Talk to the Director of Undergraduate Studies in Mathematics if you took Mathematics 55a and/or Mathematics 55b and wish to take this course.

FAS Divisional Distribution: Science & Engineering & Applied Science

MATH 122

Algebra I: Theory of Groups and Vector Spaces

MW 1200 PM - 0115 PM

Peter Kronheimer

The theory of groups and group actions, rings, ideals and factorization.

Not recommended for most students who took Mathematics 55a and/or Mathematics 55b. Talk to the Director of
HARVARD UNIVERSITY 1017 of 1792

Undergraduate Studies in Mathematics if you took Mathematics 55a and/or Mathematics 55b and wish to take this course.

MATH 129

Number Fields

TR 0130 PM - 0245 PM

Ashvin Swaminathan

This course is an introduction to algebraic number theory. Topics will include unique factorization in rings of integers, finiteness of the class group and the Dirichlet unit theorem. There will also be applications of these results to solve Diophantine equations. We will also study p-adic fields, and if time permits, adeles.

Knowledge of the material in Mathematics 123.

Requires: Prerequisite: Mathematics 123

FAS Divisional Distribution: Science & Engineering & Applied Science

Course ID: 115734
2026 Spring (4 Credits)

MATH 130

Classical Geometry

MW 0130 PM - 0245 PM

Thibault Decoppet

Presents several classical geometries, these being the affine, projective, Euclidean, spherical and hyperbolic geometries. They are viewed from many different perspectives, some historical and some very topical. Emphasis on reading and writing proofs.

Mathematics 19a,b or 21a,b or 22a,b or 23a or 25a or 55a which may be taken concurrently; or an equivalent background in mathematics.

FAS Divisional Distribution: Science & Engineering & Applied Science

Course ID: 123211
2026 Spring (4 Credits)

MATH 131

Topological Spaces and Fundamental Group

MW 0130 PM - 0245 PM

Michael Hopkins

First, an introduction to abstract topological spaces, their properties (compactness, connectedness, metrizability) and their corresponding continuous functions and mappings. Then, an introduction to algebraic topology including homotopy theory, fundamental groups and covering spaces.

Some acquaintance with metric space topology as taught in Mathematics 22a,b, 23a,b, 25a,b, 55a,b, 101, 102, or 112; and with groups as taught in Mathematics 101, 122 or 55a.

FAS Divisional Distribution: Science & Engineering & Applied Science

MATH 132

Differential Topology

TR 0900 AM - 1015 AM

Sunghyuk Park

Differential manifolds, smooth maps and transversality. Winding numbers, vector fields, index and degree. Differential forms, Stokes' theorem, introduction to cohomology.

Mathematics 22a,b, 23a,b or 25a,b or 55a,b or 112; or an equivalent background in mathematics.

FAS Divisional Distribution: Science & Engineering & Applied Science

MATH 136

Differential Geometry

TR 1200 PM - 0115 PM

Oliver Knill

The course is an introduction to Riemannian geometry with the focus (for the most part) being the Riemannian geometry of curves and surfaces in space where the fundamental notions can be visualized.

Mathematics 19a,b or 21a,b or 22a,b or 23a or 25a or 55a (may be taken concurrently); or an equivalent background in mathematics.

FAS Divisional Distribution: Science & Engineering & Applied Science

MATH 137

Algebraic Geometry

TR 1030 AM - 1145 AM

Joseph D. Harris

Affine and projective spaces, plane curves, Bezout's theorem, singularities and genus of a plane curve, Riemann-Roch theorem.

Knowledge of the material in Mathematics 123.

Requires: Prerequisite: Mathematics 123

FAS Divisional Distribution: Science & Engineering & Applied Science

MATH 143

Mathematical Logic I: Logic-- Completeness

WF 1030 AM - 1145 AM

Peter Koellner

An introduction to first-order logic (the basis of mathematical reasoning) from a meta-mathematical point of view. Topics include: The axiomatic method, the principles of first-order logic, the meta-mathematical point of view, the central theorems (soundness and completeness), and the expressive limitations (Löwenheim-Skolem).

Instructor Permission Required

Course Note: An additional hour of lecture will be scheduled independently.

Familiarity with proof based mathematical reasoning at the level of Math 22a, 25a, 55a or Math 101

Requires: Anti-Requisite: Cannot be taken for credit if MATH 141A or PHIL 143 already complete or in progress.

MATH 144

Mathematical Logic II: Mathematics — Incompleteness

WF 1030 AM - 1145 AM

Peter Koellner

Course ID: 110598
2026 Spring (4 Credits)

Instructor Permission Required

An introduction to limitative results in mathematics from a meta-mathematical point of view. Topics include: Gödel's incompleteness theorems, Turing's analysis of computability, and the hierarchy of mathematical systems as ordered under interpretability.

Course Note: Familiarity with the material in either Math 143 or Math 141

Requires: Anti-requisite: Cannot be taken for credit if PHIL 144 already complete or in progress.

MATH 154

Probability Theory

MW 0900 AM - 1015 AM

Oliver Knill

Course ID: 113811
2026 Spring (4 Credits)

An introduction to probability theory. Discrete and continuous random variables; distribution and density functions for one and two random variables; conditional probability. Generating functions, weak and strong laws of large numbers, and the central limit theorem. Geometrical probability, random walks, and Markov processes.

A previous mathematics course at the level of Mathematics 19ab, 21ab, or a higher number. For students from 19ab or 21ab, previous or concurrent enrollment in Math 101 or 102 or 112 may be helpful. Freshmen who did well in Math 22a, 23a, 25a or 55a fall term are also welcome to take the course.

FAS Divisional Distribution: Science & Engineering & Applied Science

MATH 155R

Combinatorics

TR 1200 PM - 0115 PM

Colin Defant

Course ID: 116196
2026 Spring (4 Credits)

An introduction to counting techniques and other methods in finite mathematics. Possible topics include: the inclusion-exclusion principle and Mobius inversion, graph theory, generating functions, Ramsey's theorem and its variants, probabilistic methods.

Prerequisites: familiarity with proofs. A previous mathematics course at the level of Mathematics 23ab, 25ab, 55ab, 101, 102, or 112 would be enough.

FAS Divisional Distribution: Science & Engineering & Applied Science

MATH 157

Mathematics in the World

MW 1200 PM - 0115 PM

Nathan Chen

Course ID: 159763
2026 Spring (4 Credits)

Instructor Permission Required

An interactive introduction to problem solving with an emphasis on subjects with comprehensive applications. Each class will be focused around a group of questions with a common topic: logic, information, number theory, probability, and algorithms.

Course Note: Taught by members of the department

Mathematics 19b or 21b or 22a,b or 23a; or an equivalent background in mathematics. More importantly, students should have a broad mathematical curiosity and be eager to brainstorm during in-class problem solving sessions.

MATH 161

Introduction to Formal Verification of Mathematics

MW 0130 PM - 0245 PM

Philip Wood

How can a computer check if a mathematical proof is completely and truly correct? This course will be an introduction into the world of formal verification of mathematics, starting with basic examples of sets and natural numbers, and moving on to more advanced mathematics. We will work with Lean, an open-source programming language for formal verification that has been used to verify large portions of mathematics, including a few examples reaching all the way to the forefront of current mathematics research.

Course ID: 220544
2026 Spring (4 Credits)

FAS Divisional Distribution: Science & Engineering & Applied Science

MATH 212

Advanced Real Analysis

MW 0300 PM - 0415 PM

Cliff Taubes

Functional analysis and applications. Topics may include the spectral theory of self-adjoint operators, partial differential equations, Sobolev spaces, calculus of variations with applications to non-linear PDE. Harmonic analysis if time permits.

Mathematics 114 or similar courses plus some basic familiarity with complex analysis (holomorphic functions, contour integrals) at the level of Mathematics 113.

Requires: Prerequisite: Mathematics 114

FAS Divisional Distribution: Science & Engineering & Applied Science

Course ID: 116137
2026 Spring (4 Credits)

MATH 213A

Advanced Complex Analysis

TR 1200 PM - 0115 PM

Curtis McMullen

Fundamentals of complex analysis, and further topics such as conformal mapping, hyperbolic geometry, canonical products, elliptic functions and modular forms. Prerequisites: Basic complex analysis, topology of covering spaces, differential forms.

Basic complex analysis, topology of covering spaces, differential forms.

FAS Divisional Distribution: Science & Engineering & Applied Science

Course ID: 110880
2025 Fall (4 Credits)

MATH 213BR

Riemann Surfaces

TR 1200 PM - 0115 PM

Curtis McMullen

Fundamentals of algebraic curves as complex manifolds of dimension one. Topics may include branched coverings, sheaves and cohomology, potential theory, uniformization and moduli.

Knowledge of the material in Mathematics 213a.

FAS Divisional Distribution: Science & Engineering & Applied Science

Course ID: 111824
2026 Spring (4 Credits)

MATH 221

Commutative Algebra

MW 1200 PM - 0115 PM

Course ID: 123232
2025 Fall (4 Credits)

Mihnea Popa

Commutative Algebra lies at the foundations of Number Theory and Algebraic Geometry. It plays an important role in Algebraic Topology, Geometry and other fields. We will cover the main topics of Commutative Algebra and give a taste of its applications. Starting from generalities on rings, modules and ideals, localization and primary decomposition in Noetherian rings and modules, we then move to integral extensions, going-up and going-down, Noether normalization and Hilbert's Nullstellensatz, dimension theory. The final part of the class will cover graded rings, Hilbert polynomials and homological methods (if time permits, including regular local rings).

Math 122 and Math 123.

FAS Divisional Distribution: Science & Engineering & Applied Science

MATH 222

Lie Groups and Lie Algebras

TR 1200 PM - 0115 PM

Houcine Ben Dali

Lie theory, including the classification of semi-simple Lie algebras and/or compact Lie groups and their representations.

Knowledge of the material in Mathematics 114, 123 and 132.

FAS Divisional Distribution: Science & Engineering & Applied Science

Course ID: 123238
2026 Spring (4 Credits)

MATH 223AR

Algebraic Number Theory

MW 1030 AM - 1145 AM

Melanie Wood

A graduate introduction to algebraic number theory. Topics: the structure of ideal class groups, groups of units, a study of zeta functions and L-functions, local fields, Galois cohomology, local class field theory, and local duality.

Knowledge of the material in Mathematics 129.

FAS Divisional Distribution: Science & Engineering & Applied Science

Course ID: 123239
2025 Fall (4 Credits)

MATH 223BR

Algebraic Number Theory

TR 1030 AM - 1145 AM

David Linus Hamann

Continuation of Mathematics 223ar. Topics: adeles, global class field theory, duality, cyclotomic fields. Other topics may include: Tate's thesis or Euler systems.

Knowledge of the material in Mathematics 223ar.

FAS Divisional Distribution: Science & Engineering & Applied Science

Course ID: 123240
2026 Spring (4 Credits)

MATH 229

Introduction to Analytic Number Theory

TR 0130 PM - 0245 PM

Ashvin Swaminathan

Fundamental methods, results, and problems of analytic number theory. Riemann zeta function and the Prime Number Theorem; Dirichlet's theorem on primes in arithmetic progressions; asymptotics for arithmetic functions; sieve methods; analytic estimates of exponential sums and their applications.

Knowledge of the material in Mathematics 113 and 123.

Course ID: 123242
2025 Fall (4 Credits)

MATH 230A

Differential Geometry

TR 0300 PM - 0415 PM

Yum-Tong Siu

Basic properties and examples of smooth manifolds, Lie groups, and vector bundles; Riemannian geometry (metrics, geodesics, Levi-Civita connections, and Riemann curvature tensors); principal bundles and associated vector bundles with their connections and characteristic classes.

Knowledge of the material in Mathematics 132 and 136.

FAS Divisional Distribution: Science & Engineering & Applied Science

Course ID: 113369

2025 Fall (4 Credits)

MATH 231A

Algebraic Topology

TR 1030 AM - 1145 AM

Joseph D. Harris

Covering spaces and fibrations. Simplicial and CW complexes, Homology and cohomology, universal coefficients and Künneth formulas. Hurewicz theorem. Manifolds and Poincaré duality.

Knowledge of the material in Mathematics 131 and 132.

FAS Divisional Distribution: Science & Engineering & Applied Science

Course ID: 123243

2025 Fall (4 Credits)

MATH 231BR

Advanced Algebraic Topology

TR 0900 AM - 1015 AM

Thomas Brazelton

Continuation of Mathematics 231a. Topics will be chosen from: Cohomology products, homotopy theory, bundles, obstruction theory, characteristic classes, spectral sequences, Postnikov towers, and topological applications.

Knowledge of the material in Mathematics 231a.

FAS Divisional Distribution: Science & Engineering & Applied Science

Course ID: 123433

2026 Spring (4 Credits)

MATH 232AR

Introduction to Algebraic Geometry I

MW 0130 PM - 0245 PM

Ming Hao Quek

This course is a general introduction to scheme theory and other foundational aspects of algebraic geometry. Occasionally this may be replaced by an introduction to the complex analytic side of algebraic geometry, via complex manifolds. See the course Canvas website for more about the semester's course focus.

Knowledge of the material in Mathematics 123 and 132 and 137.

FAS Divisional Distribution: Science & Engineering & Applied Science

Course ID: 123441

2025 Fall (4 Credits)

MATH 232BR

Introduction to Algebraic Geometry II

MW 0900 AM - 1015 AM

Aaron Landesman

Course ID: 123444

2026 Spring (4 Credits)

This is a continuation of the material covered in the first semester, with a focus on coherent sheaves, cohomology, and their applications to the theory of curves and surfaces. Occasionally it may cover Hodge structures, Lefschetz theorems, or deformations. See the course Canvas website for more about the semester's course focus.

Knowledge of the material in Mathematics 232a.

FAS Divisional Distribution: Science & Engineering & Applied Science

MATH 242

Mathematical Biology-Evolutionary Dynamics

TR 1200 PM - 0115 PM

Martin Nowak

This course introduces basic concepts of mathematical biology and evolutionary dynamics: reproduction, selection, mutation, genetic drift, quasi-species, finite and infinite population dynamics, game dynamics, evolution of cooperation, language, spatial models, evolutionary graph theory, infection dynamics, virus dynamics, somatic evolution of cancer.

Mathematics 19a,b or 21a,b or 22a,b or 23a,b or 25a,b or 55a,b; or an equivalent background in mathematics.

FAS Divisional Distribution: Science & Engineering & Applied Science

MATH 243

Evolutionary Dynamics

TR 1200 PM - 0115 PM

Martin Nowak

Research seminar on evolutionary dynamics, spanning mathematical and computational models of evolution in biological and social systems. Students attend a weekly lecture and conduct an original research project.

Experience with mathematical biology at the level of Mathematics 153.

FAS Divisional Distribution: Science & Engineering & Applied Science

MATH 251Z

Arithmetic statistics over function fields

MW 0900 AM - 1015 AM

Aaron Landesman

This course will survey recent developments in arithmetic statistics over function fields. Specifically, we will focus on three conjectures. The first is the Cohen-Lenstra heuristics about class groups of quadratic extensions. The second is Malle's conjecture pertaining to counting Galois extensions. The third is the Poonen-Rains heuristics about Selmer groups and ranks of elliptic curves. The general plan for the course will be to explain how these conjectures are related to various forms of homological stability for Hurwitz spaces and explain what is known about the homology of these Hurwitz spaces.

FAS Divisional Distribution: Science & Engineering & Applied Science

MATH 252Z

Gauge theory and related tools

MW 1030 AM - 1145 AM

Peter Kronheimer

The course will be an introduction to some of the tools in low-dimensional topology, and some examples of how they are used.

Link homology and foams

MW 0130 PM - 0245 PM

William Ballinger

This course will describe categorifications of the Reshetikhin-Turaev invariant of links and their topological applications, both as originally developed by Khovanov and Rozansky via matrix factorizations and via the Roberts-Wagner foam evaluation. Particular goals will be to study the general theory of matrix factorizations in some detail and understand the connections between these two approaches. Once this background is established, we will discuss functoriality under cobordisms, and the many resulting obstructions to concordance.

FAS Divisional Distribution: Science & Engineering & Applied Science

MATH 254Z

Course ID: 121093
2025 Fall (4 Credits)

Applications of Khovanov homology in low-dimensional topology

TR 0900 AM - 1015 AM

Gage Martin

This course aims to provide an introduction to Khovanov homology with a focus on a non-exhaustive survey of its applications in the world of topology. A topologist can hope to leave this course with a better idea of when a tool like Khovanov homology could be helpful/how they might use it. On the other side of the spectrum, a categorification expert can hope to leave this course with a better idea of what types of questions topologists might hope to use Khovanov-like invariants for as well as the current gaps between what a topologist might want and what the theories are capable of doing.

FAS Divisional Distribution: Science & Engineering & Applied Science

MATH 255Z

Course ID: 226280
2025 Fall (4 Credits)

Markov Chains

TR 1030 AM - 1145 AM

Colin Defant

A Markov chain is a random process in which states change in a "memoryless" manner that only depends on the current state. Markov chains are ubiquitous objects in probability theory that permeate through both pure and applied mathematics. When one runs an irreducible Markov chain for a long time, the distribution of the states will converge to a stationary distribution. This course will develop tools for computing this stationary distribution and estimating how quickly the Markov chain converges to it.

FAS Divisional Distribution: Science & Engineering & Applied Science

MATH 257Z

Course ID: 120085
2025 Fall (4 Credits)

Parabolic equations and their applications

TR 0300 PM - 0415 PM

Kevin Yang

This class will focus on the theory of parabolic PDEs, namely well-posedness, regularity, and long-time behavior. Tentative topics include linear PDEs with variable coefficients, some theory for nonlinear PDEs, and Li-Yau Harnack inequalities. Important applications to other areas, such as stochastic processes and geometry, will be discussed throughout the semester according to students' interests. Pre-requisites: Math 114 or Math 212, i.e. familiarity with Lebesgue integration, Banach spaces, Hilbert spaces, and Fourier analysis.

FAS Divisional Distribution: Science & Engineering & Applied Science

MATH 258Z

Course ID: 113274
2026 Spring (4 Credits)

Face numbers of polytopes, spheres and beyond

WF 1030 AM - 1145 AM

We will review f-vector theory, from classical results to recent developments, focusing on face numbers of polytopes, simplicial spheres and other manifolds. Tools used combine Combinatorics (e.g. graph theory and shelling), Algebra (e.g. framework rigidity, Stanley-Reisner rings and anisotropy), Algebraic Geometry (e.g. toric varieties and hard Lefschetz), and PL-topology.

MATH 259A

Mapping class groups and 4-manifolds

MW 0130 PM - 0245 PM

Eun Bi Lee

This course will be an introduction to mapping class groups with an eye towards 4-manifold topology. The mapping class group of a manifold is the group of isotopy classes of its diffeomorphisms or homeomorphisms. We will first discuss the case of surfaces, for which the mapping class group is often studied via its action on related spaces (e.g. curve complex, Teichmüller space) and has applications to 4-manifold topology (e.g. surface bundles, Lefschetz fibrations). We will also discuss some of what is known about the (smooth, topological) mapping class groups of 4-manifolds. Some tentative topics include the Nielsen—Thurston classification theorem, surface bundles and Lefschetz fibrations, basic 4-manifold topology, finite group actions on 4-manifolds.

Course ID: 226289
2026 Spring (4 Credits)

MATH 260Z

Positive characteristic algebraic geometry

MW 0300 PM - 0415 PM

Iacopo Brivio

A discussion of topics in higher dimensional algebraic geometry over a field of characteristic $p > 0$, with an emphasis on pathological examples. Possible topics: F-split singularities and their relation to singularities of the Minimal Model Program, Witt liftability, the theorem of Deligne and Illusie, vanishing and extension theorems, subadditivity of Kodaira dimension, stable families.

Course ID: 226293
2026 Spring (4 Credits)

MATH 264Y

Cluster algebras

TR 1030 AM - 1145 AM

Lauren Williams

This course will survey one of the most exciting recent developments in algebraic combinatorics, namely, Fomin and Zelevinsky's theory of cluster algebras. Cluster algebras are a class of combinatorially defined commutative rings that provide a unifying structure for phenomena in a variety of algebraic and geometric contexts. Introduced in 2001, cluster algebras have already been shown to be related to a host of other fields of math, such as quiver representations, Teichmüller theory, Poisson geometry, and total positivity. Cluster structures in Grassmannians have in particular been linked to integrable systems and physics. In the first part of the course I will cover the basics of cluster algebras and total positivity. In the second part of the class I will discuss recent developments and applications of the theory (topics could include the positive Grassmannian, the amplituhedron, KP solitons, etc). I will assume that people have some familiarity with combinatorics. Familiarity with root systems would also be helpful. I will not assume prior knowledge of total positivity or cluster algebras.

Course ID: 226291
2026 Spring (4 Credits)

MATH 265Z

Techniques and Recent Results and Problems in Several Complex Variables

TR 0300 PM - 0415 PM

Yum-Tong Siu

Will present important techniques in several complex variables developed over the last few decades with motivations from, and applications to, related fields such as partial differential equations, differential geometry,

Course ID: 226292
2026 Spring (4 Credits)

algebraic geometry and arithmetic geometry. Some examples are: (i) Solvability and regularity problems of partial differential equations. (ii) Global non-deformability and strong/super rigidity problems. (iii) Effective theorems such as the Fujita conjecture, especially its very ampleness part. (iv) Skoda's division and finite generation of canonical ring for any general compact complex manifold. (v) Hyperbolicity problem and Nevanlinna theory for generic complex hyper-surface. (vi) Gelfond-Schneider's technique for Hilbert's 7th problem, Lang-Bombieri's theory of algebraic values of meromorphic maps, Bombieri-Pila's counting of integral points on arcs, Pila-Wilkie's o-minimal geometry, together with further later developments by many others, to treat the Andr e-Oort conjecture

MATH 266Z

Mathematics of BPS States

TR 0300 PM - 0415 PM

Ahsan Khan

Course ID: 226333
2026 Spring (4 Credits)

The concept of "BPS state" in quantum field theory is connected to a vast array of rich mathematics ranging from PDEs to category theory and homological algebra. In this course we will uncover this gradually and systematically by working through examples connected to field theories in two, three and four dimensions. Along the way we will aim to connect this notion to the mathematics of Fukaya-Seidel categories, Fueter 2-categories and cohomological Hall algebras.

MATH 282Z

Diophantine Geometry

MW 1030 AM - 1145 AM

Max Weinreich

Course ID: 226325
2026 Spring (4 Credits)

We will survey foundational methods in arithmetic geometry and Diophantine equations. Topics may include the arithmetic of elliptic curves, abelian varieties, heights, Diophantine approximation, Siegel's Theorem on integral points, Vojta's proof of Faltings' Theorem, and arithmetic dynamics.

MATH 299

Arithmetic and Exposition

M 0300 PM - 0545 PM

Melanie Wood

Course ID: 127718
2026 Spring (4 Credits)

Instructor Permission Required

We will study recent advances in number theory. One of the aims of the class is to help participants improve their expository skills by giving talks on recent number theory papers, or on their own work in this subject.

Medical Sciences

Human Bio & Translational Med

Pathology of Human Disease

TR 0900 AM - 1100 AM

Maria Lehtinen

This course provides a comprehensive overview of human pathology with emphasis on mechanisms of disease and modern diagnostic technologies. Topics include (1) general mechanisms of disease (inflammation, infection, immune injury, host response to foreign materials, transplantation, genetic disorders and neoplasia), (2) pathology of major organ systems, and (3) review of diagnostic tools from invasive surgical pathology to non-invasive techniques such as diagnostic imaging and molecular pathology. The objectives of this course are achieved through a set of integrated lectures and laboratories, as well as a student-driven term project leading to a formal presentation on a medical, socioeconomic, or technological issue in human pathology.

*Course Note: Enrollment may be limited.**General biology.*

FAS Divisional Distribution: None

HBTM 235Course ID: 109394
2025 Fall (4 Credits)**Principles of Human Disease: Physiology and Pathology**

MWF 0900 AM - 1030 AM

Connie Cepko, Jonathan Carlson

This course covers the normal physiology and pathophysiology of selected organs, through lectures, readings, tutorials based on clinical cases, and patient presentations. Human biology is emphasized, with some examples also drawn from model organisms. Using a combination of lectures and case-based small group tutorials, the course will survey some key areas of human physiology: cardiovascular, pulmonary, renal, and gastrointestinal systems, as well as neurobiology, endocrinology, cancer and immunology. Molecular and cellular approaches to drug discovery and therapeutics will be presented where appropriate, with a particular emphasis on the current state-of-the-art in our scientific and clinical understanding.

*Course Note: Course enrollment is open to graduate students from any program as well as undergraduates.**Meeting Location: Lectures: NRB 350 Tutorials: Longwood campus - instructor to provide location**Knowledge of introductory biochemistry, molecular biology, and cell biology required (MCB52 and MCB54 or equivalent for undergraduates is recommended).*

FAS Divisional Distribution: None

2026 Spring (2 Credits)**Case Studies in Human Biology and Translational Medicine**

MTWRF 0900 AM - 1030 AM

*Instructor Permission Required**Thomas Michel, Marc Bonaca*

Two-week course that is required of and restricted to first-year LHB students. This course will review models of therapeutic development from epidemiologic observations through clinical development with a focus on lipid lowering therapies and diabetes. Students will be engaged in interactive workshops and will attend lectures led by leading clinical researchers.

Course Note: This is an intensive January term course. Restricted to Leder students only. Students will add this course to their cart and complete enrollment during the Spring Add/Drop period in January.

FAS Divisional Distribution: None

HBTM 302QCCourse ID: 107418
2025 Fall (2 Credits)**Imaging and Microscopy Methods in Biology and Medicine**

R 0300 PM - 0500 PM

*Instructor Permission Required**Lev Perelman*

This quarter course will introduce students to modern imaging modalities used in biology and medicine, with emphasis on modalities most frequently employed in cellular and molecular biology. The course will offer an overview of the basic principles of light and electron microscopy and explain their resolution limits and sources of contrast. We will discuss modality-specific functionally relevant fluorescence molecular probes which can be used for live cell imaging. The course will provide a detailed review and theory of operation of modern advanced light microscopy techniques such as confocal, line-scanning, light sheet, STED, light scattering, multi-photon and

superresolution microscopy. We will then discuss Raman and light scattering spectroscopy methods for monitoring induced pluripotent stem cell differentiation, genetic targeting in microscopy and CRISPR-based photoactivatable transcription systems and basic concepts of optogenetics. We will review specific optogenetic actuators and sensors, modern light delivery techniques and various applications from investigating brain functions to cardiac optogenetics. We will also offer an overview of medical imaging techniques, such as ultrasound, X-ray CT, MRI, PET/SPECT, and ultrasound imaging, along with emerging optical imaging and spectroscopy methods. Lectures will be supplemented by visual demonstrations of the microscopy systems and hands-on laboratory work and discussions of the operation principles of those systems.

Concepts in genome analysis

MW 0230 PM - 0400 PM

Instructor Permission Required

Shamil Sunyaev, Heng Li, Cheng-Zhong Zhang, Luke O'Connor, Luke O'Connor

This course focuses on quantitative aspects of genetics and genomics, including computational and statistical methods of genomic analysis. We will introduce basic concepts and discuss recent progress in population and evolutionary genetics and cover principles of statistical genetics of Mendelian and complex traits. We will then introduce current genomic technologies and key algorithms in computational biology and bioinformatics. We will discuss applications of these algorithms to genome annotation and analysis of epigenomics, cancer genomics and metagenomics data. Proficiency in programming and basic knowledge of genetics and statistics will be assumed.

Course Note: This course includes a discussion component on Mondays, from 4:00pm-5:00pm. Any additional details about this component will be provided by the course faculty.

Artificial Intelligence in Medicine I

W 0200 PM - 0500 PM

Instructor Permission Required

Arjun Manrai, Chirag Patel, Zak Kohane

AI in Medicine I is a graduate-level seminar course at Harvard Medical School that explores the rapidly-growing applications of artificial intelligence in medicine. The goal of this course is to equip students with the skills to appraise both the clinical relevance and methodological novelty of scholarship at the intersection of artificial intelligence and medicine. This discussion-oriented course promotes active engagement through student-led presentations of seminal papers spanning multiple decades, from early efforts to apply decision analysis and rule-based systems to the powerful deep learning and generative AI models being deployed in medicine today. Students will engage with faculty at HMS and the HMS-affiliated hospitals, editors at leading general medical and medical AI journals, and clinicians driving change at the point of care. Our aim is to bridge the gap between the technical aspects of artificial intelligence and its impact on medicine.

Course Note: Course enrollment is capped at 12 students and requires instructor permission.

2026 Spring (4 Credits)

Artificial Intelligence in Medicine II

T 0200 PM - 0400 PM

Instructor Permission Required

Marinka Zitnik

Artificial intelligence (AI) continues to transform medicine, offering cutting-edge approaches to address challenges in medical research and practice. This course covers the foundations of modern AI, including self-supervised learning, generative models, and multimodal techniques with applications to natural language processing, medical image analysis, patients' medical records, and longitudinal data. The course aims to equip students with both a technical understanding of AI techniques and the implications of these technologies, especially in terms of model and data interpretability, integration into clinical and research workflows, human-AI interaction, and ethical considerations. Materials will be presented through lectures by faculty, readings of contemporary literature, small group research projects, and multiple practical tutorials with hands-on components.

Intended primarily for graduate students with good programming skills in Python, knowledge of basic statistics and linear algebra, and practical experience with fundamental data science concepts.

Course ID: 226341
2025 Fall (4 Credits)

Foundations of Clinical Data and its Applications

Sebastian Schneeweiss

Data generated by the health system ("clinical data") as part of patient care is diverse and complex to interpret, mainly when used to create predictive algorithms, configure precise study cohorts, identify co-morbidities, evaluate outcomes, etc. Furthermore, since each data type may exclude information necessary to a given project goal, it is essential that users understand the nature, limitations, and opportunities of each data source before selecting one and using it for scientific inquiry. This introduction to clinical data types will cover those sources most typically used in human health research, such as electronic health records, national databases, insurer data, and commercially available consolidated databases. It will provide an essential foundation for students evaluating publications and research deriving from these sources.

Course Note: Enrollment limited to PhD students in the Biomedical Informatics – AI in Medicine track

AI in Medicine Clinical Experience I

2026 Spring (4 Credits)

F 0200 PM - 0500 PM

Instructor Permission Required

Gabriel Brat

This course will expose students to the processes and logistics of data collection within the healthcare enterprise. Introduction lectures will explore how data is collected in the operating room, emergency department, intensive care, unit, inpatient hospital units, and ambulatory clinics. Students will have the opportunity to shadow clinicians working in the outpatient and inpatient setting.

Course Note: This course is only open to Biomedical Informatics PhD students in the AI in Medicine track.

BMIF 302 (0001)

Course ID: 226384

AI in Medicine Clinical Experience II

2025 Fall (4 Credits)

F 0200 PM - 0500 PM

Instructor Permission Required

Gabriel Brat

AI in Medicine Clinical Experience II (ACE II) is a graduate-level seminar course that builds on the foundation established in BMIF 301- ACE I. This course deepens students' understanding of healthcare data by expanding their clinical shadowing to a specialty of their choice and exposing them to the broader hospital data ecosystem. Students will shadow physicians in specialized fields and will engage with non-clinical professionals—including nurses, medical coders, billers, IT specialists, and data managers—to explore how hospital data is generated, stored, processed, and utilized in decision-making and AI applications. By the end of the course, students will gain a holistic understanding of healthcare data pipelines, from bedside patient interactions to backend data processing systems, critical for AI research in medicine.

Course Note: Enrollment limited to PhD students in the Biomedical Informatics – AI in Medicine track

Successful completion of BMIF 301 is recommended before taking this course. Exceptions will be made based on instructor consent.

Virology

TR 0930 AM - 1100 AM

Instructor Permission Required

Benjamin Gewurz, Aaron Schmidt

The course focuses on the following areas of virology: (i) RNA and DNA virus replication mechanisms, (ii) innate responses to viral infection (iii) adaptive immune responses to viral infection, (iv) viral latency and reactivation, (v) inhibition of viral infection. The course will comprise lectures as well as reviewing literature that describes fundamental breakthroughs relevant to these areas. Within those areas, the class will read and discuss papers dealing with virus structure, replication, pathogenesis, evolution, emerging viruses, chronic infection, innate and adaptive immunity, anti-viral drugs/vaccines. Special emphasis will be placed on preparing students to critically evaluate the literature, formulate hypotheses and design experiments.

Course Note: Course format will be lectures, literature-based critical reading and discussion. Prepare and defend a written research proposal.

NEUROBIO 215A

The Discipline of Neuroscience

TR 0900 AM - 1200 PM

John Assad, Mark Andermann

Course ID: 205295
2025 Fall (4 Credits)

Instructor Permission Required

This course will endow students with the broad conceptual fluency in the discipline of neuroscience required to relate genes to circuit function, metabolism to neurological disease, and cell biology to neural computations. Through a combination of asynchronous instructional materials and synchronous in-class activities, students will learn to design, quantitatively analyze, and interpret experiments that address a variety of questions spanning molecular to systems neuroscience. During the first semester, students will think critically about the fundamental units of the nervous system within the context of cellular function, electrical conduction, and chemical signaling. The second half of the course builds upon this foundation to focus on broadly defined "networks of neural function"; as related to coordinated neural activity, the concerted execution of genetic programs, and anatomically defined structural networks. The course culminates with students writing an experimental proposal. Part one of a two-part series. The curriculum for this course builds throughout the academic year. Students are strongly encouraged to enroll in both the fall and spring course within the same academic year.

Course Note: Please note that Program in Neuroscience (PiN) students must take both semesters to fulfill the requirement. Non-PiN students may enroll in just the fall semester with the instructor's approval. Students must complete the fall semester (NB215A) to enroll in the spring semester (NB215B).

Meeting Location: WAB 236

Requires: Only students with a concentration in Neurobiology may register for this course. Students not in Neurobiology must petition to join.

FAS Divisional Distribution: None

NEUROBIO 215B

The Discipline of Neuroscience

TR 0900 AM - 1200 PM

Rachel Wilson, Richard Born

Course ID: 207100
2026 Spring (4 Credits)

Instructor Permission Required

This course will endow students with the broad conceptual fluency in the discipline of neuroscience required to relate genes to circuit function, metabolism to neurological disease, and cell biology to neural computations. Through a combination of lectures and discussions, students will learn to design, quantitatively analyze, and interpret experiments that address a variety of questions spanning molecular to systems neuroscience. During the first semester (NB215A), students will think critically about the fundamental units of the nervous system within the context of cellular function, electrical conduction, and chemical signaling. The second half of the course (NB215B) builds upon this foundation to focus on broadly defined "networks of neural function" as related to coordinated neural activity, the concerted execution of genetic programs, and anatomically defined structural networks. The course culminates with students writing a grant proposal in the style of the NIH NRSA.

Course Note: Full year course. Students may not enroll for the second semester unless they have completed the first semester; however, students may elect to take just the first semester. Please note that Program in Neuroscience (PiN) students must take both semesters to fulfill the requirement.

Students must successfully complete Fall semester of course (NEUROBIO 215A).

Requires: Must complete NEUROBIO 215A

FAS Divisional Distribution: None

NEUROBIO 230

Visual Recognition: Computational and biophysical perspective

M 0300 PM - 0545 PM

Gabriel Kreiman

Course ID: 107755
2025 Fall (4 Credits)

Examines how neuronal circuits represent information and how those circuits are implemented in artificial intelligence algorithms. Topics: architecture of visual cortex, neurophysiology, visual consciousness, computational neuroscience, models of pattern recognition and computer vision.

Course Note: Neuro 130 cannot be taken if Neurobio 230 has been taken. Neuro 130 cannot be taken concurrently with Neurobio 230.

Course Website: https://klab.tch.harvard.edu/academia/classes/hms_neuro300_vision/hms_neuro300_vision.html

Location: Cambridge campus, TBD

Recommended Prep: Math (Maa/Mab, Math 1A, 1B, Math 19 a or equivalent). Physical Sciences 1. MCB 80.

Prerequisite: ((LifeSci 1A OR LPS A) AND (LifeSci 1B)) AND may not be taken at the same time with NEUROBIO 230.

Requires: Anti-Req: Cannot be taken for credit if NEURO 130 already complete.

FAS Divisional Distribution: Science & Engineering & Applied Science

NEUROBIO 240

Biological and Artificial Intelligence

T 0300 PM - 0500 PM

Gabriel Kreiman

This course provides a foundational overview of the fundamental ideas in computational neuroscience and the study of Biological Intelligence. At the same time, the course will connect the study of brains to the blossoming and rapid development of ideas in Artificial Intelligence. Topics covered include the biophysics of computation, neural networks, machine learning, Bayesian models, theory of learning, deep convolutional networks, generative adversarial networks, neural coding, control and dynamics of neural activity, applications to brain-machine interfaces, connectomics, among others. Lectures will be taught by leading Harvard experts in the field.

Course Note: Jointly offered with the Faculty of Arts & Sciences as NEURO 140.

Basic knowledge of multivariate calculus, differential equations, linear algebra, elementary probability theory, basic computer programming skills

Evolution of Neuronal Circuitry: Structure, Function and Behavior	2025 Fall (2 Credits)
MW 1000 AM - 1130 AM	<i>Instructor Permission Required</i>
Mohini Lutchman, Wei-Chung Lee	

Neuroscientists employ diverse model systems and experimental approaches to study nervous system structure, function, and behavior. Modern experimental methods and online resources will be used to study neural circuit structure and function across species using a combination of lectures, hands-on lab activities, and paper discussions. This quarter course will introduce students to principles of nervous system organization and provide a conceptual understanding of the structural and functional relationships between components of the nervous system from an evolutionary perspective.

Science Reconsidered

MW 0200 PM - 0400 PM

Tari Tan

Course ID: 225863
2026 Spring (2 Credits)

Instructor Permission Required

Through this collaborative, interdisciplinary course between HMS and the Okinawa Institute for Science and Technology (OIST), we will critically review the dominant narratives that influence the teaching of our scientific disciplines (while excluding the important representations, contributions, and insights of minoritized populations) and re-contextualize the teaching of science to affirm a plurality of contexts (societal, cultural, historical, epistemological, etc.). You will critically engage with the scientific literature and reflect on the broader context of your own research. We will provide foundational training in instructional design and pedagogy to empower you to directly transform STEM education through a capstone project in which you will develop instructional materials to "reconsider" a dominant research narrative or educational practice. These materials will be published as open-access resources available to STEM educators around the world.

Course Note: This course has a few evening Zoom class sessions that fall beyond the typical course meeting pattern to accommodate the time zone difference with Japan.

Please see Additional Course Notes for details.

NEUROBIO 327QC (0001)

Neuronal Diversity

MF 1000 AM - 1200 PM

Lisa Goodrich, Gord Fishell, Evan Macosko

Course ID: 225864
2026 Spring (2 Credits)

Instructor Permission Required

A hallmark of the nervous system is the tremendous morphological, molecular, physiological, and functional diversity of its cells, the neurons and glia. This course will examine how neuronal diversity is assessed experimentally and how this diversity is created during development. Lectures will provide both historical and current perspectives, which students will learn about further by reading and discussing relevant papers. Topics

include single cell sequencing techniques, the role of morphogens in patterning the nervous system, intrinsic determinants and gene regulatory network analysis, the influence of activity, and functional maturation.

Course Note: Course expected to be offered every other year starting in 2024

Immunology

IMMUN 201

Advanced Topics in Immunology

TR 0130 PM - 0430 PM

Thorsten Mempel, Daniel Dwyer

Course ID: 148547
2025 Fall (4 Credits)

Instructor Permission Required

This course provides an intensive and in-depth examination of a selection of fundamental concepts in immunology. It takes advantage of the unique expertise of members of our Immunology faculty to illustrate how these concepts have been established and continue to be developed based on seminal work in the field including contributions from their own laboratories.

Course Note: Intended for students who have had prior exposure to immunology on the undergraduate level. In the absence of such exposure, students must obtain the permission of the Course Director.

A background in genetics and biochemistry strongly recommended.

FAS Divisional Distribution: None

IMMUN 202

Immune and Inflammatory Diseases

TR 0130 PM - 0330 PM

Wendy Garrett

Course ID: 148503
2026 Spring (4 Credits)

Instructor Permission Required

IMMUN 202 builds on IMMUN 201 and explores fundamental principles of immunology in the context of immune and inflammatory diseases. Through a series of lectures and discussion, students will survey a broad range of diseases in which the immune system is essential. Topics will include not only diseases that mobilize classical immunity but also conditions to which we now know the immune systems contributes. Students will use oral (paper discussions) and written exercises (problem sets) to learn how to critically evaluate and synthesize major concepts and tools essential for the study of immunology.

Immunology 201 or its equivalent.

FAS Divisional Distribution: None

IMMUN 203

Advances in Immunology

T 0200 PM - 0300 PM

Daniel Lingwood

Course ID: 215751
2026 Spring (4 Credits)

Instructor Permission Required

Semester long course, intended for graduate students at Harvard and MIT, jointly taught by Harvard and MIT faculty members at the Ragon Institute of MGH, MIT, and Harvard.

Students should have completed or be concurrently enrolled in a basic immunology course.

FAS Divisional Distribution: Science & Engineering & Applied Science

IMMUN 204

Critical Readings for Immunology

R 1000 AM - 0100 PM

Duane Wesemann

Course ID: 143254
2026 Spring (4 Credits)

Original research articles from fields including immunology, biochemistry, genetics, and cell and developmental biology will be critically analyzed in an intensive small group format. Grading will be based on class participation and oral presentations.

Course Note: Required for first-year immunology students, open to second-year immunology students. No auditors.

FAS Divisional Distribution: None

IMMUN 319QC (0001) Mechanisms and therapeutics of inflammation and resolution R 1000 AM - 1200 PM <i>Timothy Hla</i> <p>Physiologic inflammation is followed by active resolution mechanisms to return the tissues to normal homeostasis. Uncontrolled inflammation and/or defective resolution mechanisms lead to many diseases, including asthma, fibrosis, cancer, autoimmunity, neurodegeneration and cardiovascular diseases. This course will cover multicellular interaction networks that involve immune, vascular and parenchymal cells, lipid mediators, signaling pathways and organ system-specific mechanisms. Discrete lipid mediator networks, namely, eicosanoids, SPMs, S1P, and LPA that are therapeutically employed to treat diseases will be highlighted. In addition, development of novel therapeutics to control inflammatory and resolution pathology will be discussed. The course will have an hour of didactic lectures given by expert faculty. The second hour will feature a student-led discussion of a recent journal article in the area of the lecture. Students will also have an opportunity for synthesizing the lecture and/or the journal club in a social media format (i.e. Tweetorial, You Tube video, minipodcast) for the purpose of communication/ dissemination of scientific information.</p> <i>Course Note: This course includes a discussion component. Any additional details about this component will be provided by the course faculty.</i>	Course ID: 218590 2025 Fall (2 Credits)

2025 Fall (4 Credits)

Principles of Molecular Biology

MWF 1100 AM - 1200 PM

Instructor Permission Required

Joseph John Loparo, Karen Adelman, Alan Brown, Stirling Churchman, Stirling Churchman

Principles of Molecular Biology is a course organized around the Central Dogma of Biology with presentations covering fundamental aspects of DNA and RNA structure, their function, and their interactions with proteins. The course opens with a discussion of the physical and chemical properties that drive the interactions of proteins with nucleic acids. This is used as a basis for understanding the material presented in the subsequent six modules, which cover DNA replication, DNA repair, gene regulation, transcription, RNA processing, and translation. Throughout this course, an emphasis will be placed on how the structure of small molecular machines (proteins) define their function in the processes and pathways that are introduced.

Course Note: Enrollment for G1 and G2 students in graduate programs that require this course, such as BBS and BIG, is prioritized. Petitions will be reviewed, prioritized and approved primarily during August enrollment.

Intended primarily for graduate students familiar with basic molecular biology or with strong biology/chemistry background.

FAS Divisional Distribution: None

BCMP 213 (0001)

Course ID: 141859
2026 Spring (4 Credits)

Behavioral Pharmacology

W 1200 PM - 0245 PM

Instructor Permission Required

Brian Kangas

This course serves as an introduction to the behavioral pharmacology of psychoactive drugs (e.g., stimulants, cannabinoids, opioids, psychedelics, anxiolytics, antipsychotics). It is organized in a seminar format with emphasis on behavioral methodology (i.e., model and assay development) and pharmacological analysis (i.e., receptor selectivity and efficacy). Special attention is paid to the behavioral processes involved in tolerance, drug dependence, addiction, and treatment.

One year of neuroscience, psychology, or biology recommended.

FAS Divisional Distribution: None

BCMP 218

Course ID: 122596
2025 Fall (4 Credits)

Molecular Medicine

T 0100 PM - 0300 PM

Instructor Permission Required

Srinivas Viswanathan, Vidyasagar Koduri

A seminar on various human diseases and their underlying genetic or biochemical bases. Primary scientific papers discussed. Lectures by faculty and seminars conducted by students, faculty supervision.

Course Note: Faculty mentors will guide student-led discussions of the papers. Go to canvas.hms.harvard.edu to view contents for the course.

College-level mastery of principles of cellular and molecular biology and genetics.

FAS Divisional Distribution: None

BCMP 230

Course ID: 114740
2025 Fall (4 Credits)

Principles and Practice of Drug Development

W 0300 PM - 0600 PM

Stan Finkelstein, Peter Sorger

Introduction to and critical assessment of the concepts, technologies and practical challenges of developing new medicines and bringing them to market. Pharmacology fundamentals, preclinical drug discovery, clinical trials, manufacturing and regulatory issues, as well as financing and marketing are discussed for small molecule,

biologic and cellular therapies.

Course Note: Suitable for individuals with a wide variety of backgrounds and interests from biology to engineering, business and medicine (undergraduate, graduates in MBA, MD and PhD programs). Taught by MIT and HMS faculty and by industry experts. Emphasizes a high level of student engagement via weekly news updates and projects involving collaboration across interdisciplinary teams.

Course Website: <https://www.principlespracticedrugdevelopment.org/>

Meeting Location: MIT Building 4, Room 237

No particular course is required. Knowledge of basic biology, biomedicine or bioengineering, and familiarity with basic economic principles will be helpful but not necessary for the course.

FAS Divisional Distribution: None

BCMP 234

Cellular Metabolism and Human Disease

MWF 0900 AM - 1022 AM

Thomas Michel, Bruce Levy, D. Moody, Joseph Loscalzo, Joseph Loscalzo

Cellular and organismal metabolism, with focus on interrelationships between key metabolic pathways and human disease states. Genetic and acquired metabolic diseases and functional consequences interactive lectures and critical reading conferences are integrated with clinical encounters.

Course Note: Enrollment is open to all HILS graduate students with adequate preparation in cell biology and biochemistry.

Prerequisites for undergraduate students only. For undergraduates interested in this course, a knowledge of introductory biochemistry, genetics, and cell biology is required (MCB 63 or MCB 60 or LIFESCI50, and MCB 64 or equivalent); plus one year of organic chemistry (Chem 17/27 or 20/30). Please petition the course instructor for an exemption.

BCMP 236

Principles of Drug Action in People

TR 0330 PM - 0500 PM

Sara Buhrlage, Catherine Dubreuil

This course will discuss principles of early drug discovery, drug modalities, and drug pharmacology. In the first part of the course, fundamental aspects of receptor and enzyme targeting agents, drug mechanism, drug metabolism, pharmacokinetics and pharmacodynamics will be described. Selected examples of small molecule drugs, biologics, gene and cell therapies will be utilized through the course. In the second part of the course, the pharmacology of therapeutics that act on selected human physiological systems, specifically the cardiovascular, immunologic, and central nervous systems, will be covered. The course will include frontier lectures delivered by experts at Harvard and in the Biopharmaceuticals industry. A range of speakers enlisted from the Harvard faculty and pharmaceutical scientists will participate in teaching throughout this course.

Course Note: Please note that all sessions will be held in person. All course materials including lecturers PowerPoint presentations will be posted on the course website. Attendance to all in class activities, discussions and journal clubs is mandatory, not attending these without an excused absence can lead to an incomplete grade for the course.

BCMP 250

Biophysical and Biochemical Mechanisms of Protein Function

TR 1100 AM - 1200 PM

Josefina del Marmol

Biophysical and Biochemical Mechanisms of Protein Function focuses on the molecular mechanisms that underlie essential biochemical processes such as signal transduction. Major topics include biochemical thermodynamics and conformational equilibria, protein structure and folding, receptor pharmacology, allostery, and enzymatic mechanisms of signaling. The course includes both content lectures and research frontiers seminars focused on current research in biochemistry with an emphasis on signal transduction in therapeutically relevant pathways.

Course ID: 204396

2026 Spring (4 Credits)

Instructor Permission Required

A foundational biochemistry course is recommended as a prerequisite (we expect students to have a solid understanding of the core concepts in biochemistry and molecular biology, including knowledge of the amino acids and their properties as well as the central dogma).

FAS Divisional Distribution: None

BCMP 301
Translational Pharmacology: The Science of Therapeutic Discovery and Development

Course ID: 225858
2026 Spring (4 Credits)

MTWRF 0900 AM - 1200 PM

Instructor Permission Required

David Golan, Mark Namchuk

This intensive course, held during three weeks in January (13 class days), covers principles of pharmacology and their translation into new drug discovery and development. Students participate in project groups, composed primarily of graduate students, to propose a drug development strategy from target choice through clinical trials. Most sessions include lectures, panel discussions, and/or case studies presented by Harvard faculty and faculty experts from the pharmaceutical and biotechnology industries; several sessions provide scheduled time to work on the group project with expert facilitators from industry. Evaluation is based on written and oral presentations of the group project and on class participation. Enrollment may be limited.

Course Note: Attendance at all sessions is mandatory, and students are expected to spend most afternoons preparing for the following day's sessions and working on the group project.

TR 0930 AM - 1130 AM

Course ID: 126271
2026 Spring (4 Credits)

Instructor Permission Required

David Rudner, Tom Bernhardt, Simon Dove, Sophie Helaine, Sophie Helaine

This course is devoted to bacterial structure, physiology, genetics, and regulatory mechanisms. The class consists of lectures and group discussions emphasizing methods, results, and interpretations of classic and contemporary literature.

Course Note: This course will include in person lectures and paper discussions as well as asynchronous paper reading and problem set assignments.

FAS Divisional Distribution: None

MICROBI 202

Mechanisms of Bacterial Pathogenesis and Host Immune Response

TR 0300 PM - 0500 PM

Course ID: 126269
2025 Fall (4 Credits)

Instructor Permission Required

Marcia Goldberg, Michael Starnbach, Sophie Helaine, Amy Barczak, Amy Barczak

This course focuses on molecular mechanisms of bacterial pathogenesis and the host response to infection. The class consists of lectures and group discussions emphasizing themes of pathogenesis, methods, results, and interpretations of classic and contemporary literature. Subjects including bacterial secretion systems, mechanisms of entry into host cells, biofilm formation, and motility are viewed primarily from the pathogen's perspective, whereas topics including inflammasome activation, TLR signaling, and adaptive immune responses provide a host-centric view. Additional sessions are spent examining current methods of antibiotic discovery and vaccine development. The course also introduces students to the wide diversity of pathogenic bacteria. Organisms discussed include pathogenic *E. coli*, *Shigella* species, *Vibrio cholerae*, *Listeria monocytogenes*, *Chlamydia trachomatis*, *Pseudomonas aeruginosa* and *Staphylococcus aureus*, as well as a discussion of the challenges presented by currently unculturable species. Where relevant, connections will also be made with pathogenesis and immune responses to viruses, parasites, and fungi.

Course Note: Designed to complement Microbiology 201; however, students who have not taken Microbiology 201 previously are welcome. Designed for graduate students in their first year or beyond, however undergraduates with specific interest in the field may also enroll.

Meeting Location: TBD

FAS Divisional Distribution: None

MICROBI 210

Microbial Sciences: Chemistry, Ecology and Evolution

F 0945 AM - 1145 AM

Course ID: 124109
2026 Spring (4 Credits)

Instructor Permission Required

Michael Gilmore, Peter Girguis

This is an interdisciplinary graduate-level and advanced undergraduate-level course in which students explore topics in molecular microbiology, microbial diversity, host-microbe associations in health and disease, and microbially-mediated geochemistry in depth. This course will be taught by faculty from the Microbial Sciences Initiative. Topics include the origins of life, biogeochemical cycles, microbial diversity, and ecology. Course will limit enrollment to 20 students.

Course Note: Offered as OEB 290 and MICROBI 210

For graduate and advanced undergraduate students, Life Sciences 1a and 1b or their equivalent are required, or permission of instructor. MCB 60 or equivalent is recommended.

Social Issues in Biology

W 0500 PM - 0700 PM

Course ID: 122708
2026 Spring (4 Credits)

Instructor Permission Required

Richard Born

The goals of the course are two-fold: 1) to provide future scientists with a background for considering the ethical and social implications of research in biology and 2) to engage in discussions on difficult topics in an open, critical and respectful manner. Students will read both historical and contemporary pieces on controversial topics related to biology and discuss them in class, guided by faculty experts from both inside and outside of Harvard. Examples of topics from previous course offerings include: Jill Fisher on racial inequalities in testing new pharmaceuticals; Emily Hamilton on the public perception of vaccinations; Michael Pollan on the history and current uses of psychedelic drugs; Nuno Martins on the genetics of race; Christine Korsgaard on the ethics of animal experimentation; and Carole Hooven on the biology of sex and contentious issues related to transgender athletes.

Some background in genetics.

The Human Microbiome: Comprehensive Experimental Design and Methodologies

MW 0100 PM - 0230 PM
Alex Kostic, Sloan Devlin

Course ID: 207117
2026 Spring (2 Credits)

This is a comprehensive introduction to the study of human microbial communities and their functions relevant to human physiology. Topics covered include metagenomics, mechanistic interactions of the microbiome with metabolism, the immune system, and the gut-brain axis. Rather than lectures, this course is primarily a critical discussion of the literature.

CELLBIO 201

Principles of Cell Biology

MWF 1030 AM - 1200 PM

Susan Shao, Lucas Farnung

Course ID: 108339
2026 Spring (4 Credits)

Instructor Permission Required

CB201 is a graduate level course in which students examine fundamental concepts and methodologies in cell biology with faculty from the field. Through content lectures, methods lectures, student presentations, and discussion sections, students will explore a broad range of topics including: the cytoskeleton, protein folding and quality control, the ubiquitin-proteasome system, autophagy, protein translocation across membranes, vesicular trafficking, organelle biology, chromosome organization, epigenetics, cell cycle regulation, and signal transduction. By the end of this course, students should be able to: Evaluate primary scientific literature from a broad range of topics in cell biology Identify current questions in cell biology and the evolving approaches used to address those questions Design appropriate experimental approaches to address hypotheses related to cell biology Analyze and effectively present experimental datasets produced from modern instrumentation

Course Note: Focus on current paradigms and approaches in cell biology.

The structure of this course also includes a discussion component. Any additional details about this component will be provided by the course faculty.

Introductory knowledge in biochemistry, genetics, and cell biology.

FAS Divisional Distribution: None

CELLBIO 207

Development, Stem Cells and Regeneration

MW 0200 PM - 0400 PM

Andrew Lassar, John Flanagan, Guillermo Garcia-Cardena, Jordan Kreidberg, Jordan Kreidberg

Course ID: 111215
2026 Spring (4 Credits)

Instructor Permission Required

This class is evenly divided between lectures and conference sessions which cover the principals that guide vertebrate development and stem cell maintenance in various renewing tissues; in addition, we discuss how these principals can be leveraged to generate cells/tissues for regenerative biology or disease modeling in vitro. Specific topics include a molecular dissection of the signaling pathways, gene regulatory networks, and epigenetic mechanisms that control primary axis formation and regional specification, establishment of cell fate, homeotic genes and patterning, cell migration and cell-cell signaling, organoid models of nervous system development and their application, axon development and regeneration, neuromuscular development and mechanistic insights for human birth defects, skeletal muscle stem cells in aging and disease, morphogenesis of branched tubular systems, vasculogenesis, biomechanical regulation of developmental processes, skeletal patterning and development, stem cell maintenance in various renewing tissues, germ cells and pluripotency, and directed differentiation of ES and iPS cells for regeneration and disease modeling. We will discuss how state of the art technologies in iPS organoids, cell lineage labeling, genetic manipulation, and genome wide epigenomic/transcriptomic analyses can be employed to study organ development, stem cells and regeneration.

Students employ the knowledge gained by lectures and conference sessions to identify interesting new research goals in either vertebrate development, stem cell, or regenerative biology and present research proposals to achieve these goals. Thus, the goals of this course are for students to both learn about the molecular tool-kit that evolution has endowed to vertebrates (and other multicellular animals) AND to learn how to synthesize the literature to come up with their own novel research ideas, and develop a strategy to investigate their hypotheses.

Course Note: This course is offered as CELLBIO207 and also as DRB207. Includes lectures and conference sessions in which original literature is discussed in depth. A short research proposal is required in lieu of exams.

Introductory graduate-level courses in both Cell and Molecular Biology.

Biology of the Cancer Cell: From Molecular Mechanisms to Therapeutic Implications

MW 1230 PM - 0200 PM

Alex Tokar

Course ID: 125825
2026 Spring (4 Credits)

Instructor Permission Required

This semester-long course will take you on a molecular approach journey to examine the basis of human cancer – from deep dive on genetic aberrations in a cancer cell, to signaling pathways, and big picture cellular and organismal perspectives on cancer. Some of the main concepts we will cover include cancer genetics and epigenetics, tumor suppressor genes and oncogenes, signal transduction, DNA damage and repair, angiogenesis, metastasis and invasion, apoptosis, cancer stem cells, and tumor immunology and immunotherapy. Faculty joining us this Spring are experts in the various fields and will provide you with an integrated perspective on past, current, and future approaches in cancer biology research. Many of our faculty are also clinical oncologists and hematologists, providing you with an insight into how molecular advances are impacting patient care now and are likely to do so in the future. After each part of the course, you will participate in student workshops, where you will get the opportunity to dissect and learn about the major components of a research proposal and how to successfully write one. You will also have the opportunity to engage in an iterative writing and evaluation process with your peers while practicing giving feedback and critique.

COURSE OBJECTIVES

- Understand foundational discoveries that led to major concepts in the field
- Describe the molecular basis of cancer formation
- Identify big open questions in the research areas around these topics
- Synthesize and implement content knowledge while practicing writing skills
- Identify the main components of a research proposal
- Write a research proposal draft
- Practice your peer evaluation and critique skills

Course Note: Given alternate years with Cell Biology 211.

Advanced biochemistry, molecular genetics, and cell biology.

Advanced Experimental Design for Biologists

W 0530 PM - 0730 PM

David Glass, Catherine Dubreuil

Course ID: 127479

2025 Fall (2 Credits)

Instructor Permission Required

This course will focus on both the theory and practice of experimental design. The emphasis is on project planning and vetting, individual experimental design, and trouble-shooting. Special focus will be placed on methods to avoid experimental bias, and potential sources of inappropriate interpretation. Also the importance of system validation is especially emphasized.

Course Note: Special consent required - preference given to Therapeutics Certificate Program students.

Teaching 100: The Theory and Science of Teaching

2025 Fall (2 Credits)

W 0200 PM - 0400 PM

*Instructor Permission Required**Tari Tan*

For many graduate students and medical educators, teaching will be part of their career, whether as mentoring, formal classroom teaching, or teaching in the hospital. In addition, the theory and research evidence accumulating in the disciplines of cognitive psychology, neuroscience, and from STEM classrooms, has turned the question of "How do we best teach science and medicine?" into its own scientific discipline. The Theory and Science of Teaching focuses on understanding why certain teaching methods are effective by examining the scientific research and theoretical frameworks that support these methods. We will read and discuss foundational educational and cognitive psychology texts and primary literature, and then develop course materials that allow us to put these ideas into practice.

Course Note: The course has been designed as a companion to Genetics 302qc: Teaching 101, but neither course is a prerequisite of the other.

Class will meet for 2 hours of synchronous discussion and learning activities each week. The remote section will meet Wednesdays from 8:00-10:00 am over Zoom and is reserved for master's students. The in-person section will meet Wednesdays from 2:00-4:00 pm in Longwood and is intended for PhD students who must take their classes in-person. The content of the sections will be the same and both will share identical asynchronous learning components. This will include watching videos, reading a variety of materials, participating in discussion boards, creating sample materials, and writing learning reflections. The synchronous and asynchronous components combine to meet the course objectives and are equally important to students' learning. Class begins September 3rd with the release of the first asynchronous module, which students will complete and discuss in short, individually scheduled small group meetings with the course instructor during the week of Sept. 8, in place of a synchronous class session that week. The first synchronous class meeting is September 17. The course concludes with the final synchronous class session on November 12 and the final capstone assignment due November 19.

Make It Stick, by Brown, Roediger and McDaniel is required pre-reading and should be completed before the first day of class on September 17. A required asynchronous 'module 0' will be released on Canvas on September 3.

Quantitative Imaging: Making measurements with fluorescence microscopy	2025 Fall (2 Credits)
WF 1030 AM - 1200 PM	
<i>Jennifer Waters</i>	
<p>This course provides an overview of quantitative fluorescence microscopy methods, with a focus on generating reliable and reproducible measurements from imaging data. Key topics include resolution, signal-to-noise ratio, sampling, and the use of fluorophores and fluorescent proteins in imaging applications for biomedical research. The curriculum covers digital detectors, imaging of live specimens, and advanced techniques such as confocal and quantitative phase microscopy. It also covers the fundamentals of bioimage analysis, including modern machine learning and deep learning approaches. Participants will also gain hands-on experience with image analysis using open-source software (ImageJ/FIJI) to perform critical measurements in biomedical research, including co-localization and dynamic fluorescence intensity changes, such as calcium signaling detected with GCaMP. By the end of the course, learners will acquire the theoretical foundation and practical skills necessary to conduct quantitative analyses in biological imaging.</p>

Science of Mindfulness: A research based approach to understanding and practicing mindfulness	2026 Spring (2 Credits)
WF 1000 AM - 1130 AM	
<i>Neena Haider</i>	

This course delves into the science behind mindfulness using a research-based approach to understand the impact of mindfulness on the mind and body. The course will include a discussion of published work as well as practical applications in a workshop format. Topics include power of breath, positive thinking, and impact of mindfulness on cognitive function. Workshop portions will include guided breath and guided meditation and learning how to focus the mind, and learn observation without judgment.

Speech & Hearing Sciences

SHBT 201

From Sound to Neuron

TR 0300 PM - 0500 PM

Course ID: 108213
2025 Fall (4 Credits)

Acoustics, anatomy, normal biology, biophysics, physiology and morphology of the middle ear and inner ear, its sensory innervation and efferent control systems, and the mechanisms underlying sensorineural hearing loss and medical devices used to treat pathology. Material is presented through lectures, laboratory exercises, discussions of the primary literature, and textbooks.

Course Note: Lecture notes will be available online

FAS Divisional Distribution: None

SHBT 202

Clinical Aspects of Speech and Hearing

MW 0500 PM - 0700 PM

David Jung

Course ID: 108217
2026 Spring (4 Credits)

Instructor Permission Required

An extensive exposure to clinical approaches to speech and hearing disorders as practiced by physicians, audiologists, speech clinicians, rehabilitation specialists, pathologists, and bioengineers. The course includes a series of didactic lectures and discussion sections, as well as observations of patient care in the clinic and operating room. Clinical and surgical experience includes observations of diagnostic and therapeutic procedures in otology, laryngology, audiology, voice and speech clinic, and vestibular neurology.

Course Note: Classes to be held in person at Mass Eye and Ear unless otherwise indicated. Class meeting times may change according to physician, OR, and clinic schedules.

Anatomy of Speech and Hearing, Acoustics of Speech and Hearing, or permission of the course director

SHBT 203 (0001)

Anatomy of Speech and Hearing

MTWRF 0900 AM - 1029 AM

Barbara Fullerton, James Heaton

Course ID: 108218
2026 Spring (4 Credits)

Instructor Permission Required

This is now an elective course for graduate students in the SHBT speech and hearing program. It is based on anatomical dissection of the head, neck, and thorax in human cadavers with an emphasis on structures that are important in speech and hearing. Lectures cover basic brain anatomy and neuroscience, including some information on head and neck imaging, surgery, and head and neck cancer

Course Note: This is an intensive January course and is 4 credits. Students should be comfortable with basic biology. Students not enrolled in the SHBT program must get permission from the course director to register for the course.

FAS Divisional Distribution: None

SHBT 205

Audition: Neural Mechanisms, Perception and Cognition

MWF 0930 AM - 1130 AM

Anne Takesian, Joshua McDermott, Daniel Polley, Satrajit Ghosh, Satrajit Ghosh

Course ID: 108224
2026 Spring (4 Credits)

Instructor Permission Required

The course is focused on neural structures and mechanisms mediating the detection, localization and recognition of sounds as well as speech production and perception. General principles are conveyed by theme discussions of cellular and circuit mechanisms of perception and plasticity within the central auditory system, human auditory cortex, pitch and auditory scene analysis, speech, cochlear implants and language.

Course Note: Offered jointly with MIT HST.723 and MIT 9.285

SHBT 261 (0001)

Artificial Intelligence in Medicine

T 0100 PM - 0400 PM

Mengyu Wang, Tobias Elze

This course, offered at Schepens Eye Research Institute, will serve as an introduction to artificial intelligence (AI) with an emphasis on its applications in medicine. The course will begin with classical linear and non-linear regression models, then move to classical machine learning models, including matrix decomposition methods, random forests, support vector machines, and traditional neural networks based on multilayer perceptrons. Finally, it will explore the latest deep neural networks, such as convolutional neural networks, transformers, pretrained foundation models, diffusion models, and large language models. The class will include homework in the form of three mini-projects and one final project, primarily using medical imaging data along with other medical tests and diagnostic information. The last three sessions will be dedicated to special topics, providing an overview of recent developments in common medical AI modeling areas, including segmentation, few-shot learning, anomaly detection, and AI for science.

Course Note: Students should be familiar with at least one programming language such as MATLAB, R or Python.

The structure of this course also includes a discussion component. Any additional details about this component will be provided by the course faculty.

Development, Stem Cells and Regeneration

MW 0200 PM - 0400 PM

Instructor Permission Required

Andrew Lassar, John Flanagan, Guillermo Garcia-Cardena, Vandana Gupta, Vandana Gupta

This class is evenly divided between lectures and conference sessions which cover the principals that guide vertebrate development and stem cell maintenance in various renewing tissues; in addition, we discuss how these principals can be leveraged to generate cells/tissues for regenerative biology or disease modeling in vitro. Specific topics include a molecular dissection of the signaling pathways, gene regulatory networks, and epigenetic mechanisms that control primary axis formation and regional specification, establishment of cell fate, homeotic genes and patterning, cell migration and cell-cell signaling, organoid models of nervous system development and their application, axon development and regeneration, neuromuscular development and mechanistic insights for human birth defects, skeletal muscle stem cells in aging and disease, morphogenesis of branched tubular systems, vasculogenesis, biomechanical regulation of developmental processes, skeletal patterning and development, stem cell maintenance in various renewing tissues, germ cells and pluripotency, and directed differentiation of ES and iPS cells for regeneration and disease modeling. We will discuss how state of the art technologies in iPS organoids, cell lineage labeling, genetic manipulation, and genome wide epigenomic/transcriptomic analyses can be employed to study organ development, stem cells and regeneration.

Students employ the knowledge gained by lectures and conference sessions to identify interesting new research goals in either vertebrate development, stem cell, or regenerative biology and present research proposals to achieve these goals. Thus, the goals of this course are for students to both learn about the molecular tool-kit that evolution has endowed to vertebrates (and other multicellular animals) AND to learn how to synthesize the literature to come up with their own novel research ideas, and develop a strategy to investigate their hypotheses.

Course Note: This course is offered as CELLBIO207 and also as DRB207. Includes lectures and conference sessions in which original literature is discussed in depth. A short research proposal is required in lieu of exams.

Introductory graduate-level courses in both Cell and Molecular Biology.

2025 Fall (4 Credits)

Principles of Genetics

MWF 0910 AM - 1040 AM

Fred Winston, Maxwell Heiman, Tom Bernhardt, Matthew Warman, Matthew Warman

An in-depth survey of genetics that covers basic principles and modern approaches. We will draw on examples from various systems, including bacteria, yeast, *Drosophila*, *C. elegans*, zebrafish, mouse, and human.

Course Note: Intended for first-year graduate students.

FAS Divisional Distribution: None

GENETIC 216 (0001)

Course ID: 111358
2026 Spring (4 Credits)

Advanced Topics in Gene Expression

T 0200 PM - 0500 PM

Instructor Permission Required

Fred Winston, Scott Kennedy, Stephen Buratowski

This course covers different topics in gene regulation, covering genetic, genomic, biochemical, and molecular approaches. A small number of topics are discussed in depth, using the primary literature. Topics range from prokaryotic transcription to eukaryotic development.

BCMP 200 and Genetics 201. All students taking Genetics 216 should read and be prepared to discuss the papers for the first meeting. The readings can be downloaded from the course website.

Course ID: 121745
2026 Spring (4 Credits)

Genetics in Medicine - From Bench to Bedside

F 0200 PM - 0500 PM

Instructor Permission Required

David Sweetser

Focus on translational medicine: the application of basic genetic discoveries to human disease. Each three-hour class will focus on a specific genetic disorder and the approaches currently used to speed the transfer of knowledge from the laboratory to the clinic. Each class will include a clinical discussion, a patient presentation if appropriate, followed by lectures, a detailed discussion of recent laboratory findings and a student-led journal club. Lecturers will highlight current molecular, technological, bioinformatics and statistical approaches that are being used to advance the study of human disease. There is no exam. Students will present one paper per session in a journal club style. Attendance and active participation for the duration of all class meetings is required. If you are unable to attend class or cannot be present for the entire session, you are expected to contact the course instructor. Two incomplete or missed sessions will result in a failing grade. Please do not sign up if you know you will have to miss 2 or more sessions. For more information visit https://ecor.mgh.harvard.edu/Default.aspx?node_id=375

Course Note: Undergraduates wishing to enroll should contact the instructor at dsweetser@mgh.harvard.edu to request permission and give a description of their previous genetics training.

Genetics 201 or equivalent.

---	---

CRISPR genome editing has revolutionized the study of genetics and has shown promise to treat genetic disease at its roots. This course will provide an overview on how CRISPR-based genome editing tools work, how they are used to unravel the genetics of complex disease, and how they are being deployed to ameliorate genetic diseases. The course will combine lectures from experts on the development and use of CRISPR-based tools with seminars on the practical application of and ethical issues surrounding genome editing.

Course Note: Strong background in genetics expected. Course expected to be offered annually.

The structure of this course also includes a discussion component. Any additional details about this component will be provided by the course faculty.

Analysis of Biological Literature and Experimental Design

TR 1000 AM - 1200 PM

Instructor Permission Required

David Van Vactor

BBS 230 is a research skills core course required for all BBS first-year graduate students that is designed to build (a) familiarity with the scientific peer review process, (b) a deeper understanding of rigorous experimental design, data presentation, data analysis and data interpretation in the literature, and (c) increasing competency in applying effective experimental design principles to future project planning. Our training in literature analysis is comprised of two related components: (1) eight weekly seminar-style, small group paper discussions with pairs of Harvard faculty instructors that will focus on understanding, dissecting, and evaluating a dozen seminal research papers; and (2) parallel weekly sections led by teaching fellows that focus on the process of peer review and revision of two different scientific manuscripts. In separate sessions, you will engage groups of professional journal editors or faculty members in panel discussions to explore the process of peer review and publishing from different perspectives. Then, toward the end of the course, you will plan and outline your own study design for a current or future project (e.g. current or future rotation), thus applying many of the elements that you have considered in the various section discussions. Finally, you will hold one-on-one conferences to with your teaching fellows to discuss reflections on your goals and strategy for the year ahead.

Course Note: BBS 230 is open for enrollment only to BBS and BIG students. This course is required for first-year BBS students.

Critical Thinking & Research Proposal Writing

R 0200 PM - 0300 PM

Jessica Lehoczky, April Craft

A small group tutorial systematically guiding students in the writing of original, hypothesis-driven research proposals from initial topic selection through completion of a final draft.

Course Note: This course is open to second year BBS students. Others need permission of the instructors. Dates, times and locations for small group sessions are determined by the faculty running the small group sessions. Three in person lectures will provide guidelines for preparing drafts and peer reviews. Two small group sessions vary as scheduled by faculty instructors.

Medieval Studies

MEDVLSTD 10

Course ID: 222836
2025 Fall (4 Credits)

Introduction to the Medieval World

T 1245 PM - 0245 PM

Sean Gilsdorf, Brian FitzGerald

Join us for a journey through the cultures, peoples, objects, and ideas of the millennium commonly described as "medieval", extending from the reorganization of the Eurasian world in the fourth century to its transformation in the fifteenth. With primary documents in translation and medieval books and objects in Harvard's collections as your guides, you will travel virtually through a series of medieval spaces and places—Jewish, Christian, and Islamic houses of worship, homes, palaces, schools, marketplaces, and the open road—meet the fascinating people who occupied them, and uncover how those people lived, the stories that they told, the voyages that they took, and the things that they made.

Course Note: This course is offered by History & Literature as HIST-LIT 10AB and by Medieval Studies as MDVLSTD 10. It can be taken for concentration credit in History & Literature, and to fulfill the "Foundational" or "History" field requirement for the Secondary Field in Medieval Studies. Credit may be earned for either MDVLSTD 10 or HIST-LIT 10AB, but not both. However, enrollment in either course (MDVLSTD 10 or HIST-LIT 10AB) will count toward the concentration and secondary requirements for both Medieval Studies and History & Literature.

This course is offered as MDVLSTD 10 and HIST-LIT 10AB. Credit may be earned for either MDVLSTD 10 or HIST-LIT 10AB, but not both.

2026 Spring (4 Credits)

Sex, Love, and Marriage in the Middle Ages

No meeting time listed

Sean Gilsdorf

This class explores the relationships of passion, love, and obligation that bound men and women over the course of nearly two millennia, from Rome in the first century B.C.E. to sixteenth-century Italy. In particular, it focuses on how those relationships were organized legally and institutionally, on the social roles created by such relationships, and on the connection (or lack thereof) between marriage, love, and sexual passion. Although marriage in the West long was viewed as an exclusively heterosexual estate, the course also considers how homosocial and homosexual desires have affected it throughout history.

English Legal History, 600-1600

MW 1030 AM - 1145 AM

Elizabeth Kamali

An introduction to the legal and constitutional history of England from the Anglo Saxons to the end of the Tudor period, essentially 600 – 1600, including the development of private (e.g., contract, torts, property) and public law (e.g., criminal and constitutional law). No previous background in English legal history is assumed.

Course Note: Meets together with HLS 2165.

Course ID: 114765
2025 Fall (4 Credits)

Latin Palaeography and Manuscript Culture

TR 1030 AM - 1145 AM

Sean Gilsdorf

Instructor Permission Required

A weekly seminar training students to read medieval Latin handwriting from a variety of text-types, regions, and periods, and to recognize and decipher the abbreviations commonly used by medieval scribes. Students also will encounter a range of medieval texts, learning more about the materials and formats of medieval written culture, and explore the diverse uses, genres, and formats of medieval writing as well as its textual and paratextual features. Students will be required to transcribe from manuscript samples in facsimile, as well as original

documents in Houghton, throughout the semester.

Completion of an intermediate Latin course or the equivalent.

Your Brain on Poetry

2025 Fall (4 Credits)

M 1245 PM - 0245 PM

Instructor Permission Required

Anne Dymek

Poetry is a powerful tool for expressing and exploring the human experience. But what is it about poetry that allows it to connect with us so deeply? What can we learn about the workings of the brain, the mind, and the nature of human experience through the study of poetry, and vice versa? In this course, we delve into the science and art of poetic expression, reception, and interpretation, drawing on insights from literary and cultural studies, neuroscience, philosophy, and (psycho)linguistics. We will unravel how poetry captivates our cognition and ignites our imagination, offering profound insights into the intricate interplay between this art and the human psyche.

Course Note: Jointly offered with Faculty of Arts and Sciences as German 113. Credit may be earned for MBB980BB or German 113, but not both. Enrollment via lottery; consult <https://mbb.harvard.edu/seminars> for lottery deadline, instructions, and link. Computational Psychiatry

2025 Fall (4 Credits)

T 0345 PM - 0545 PM

Instructor Permission Required

Poornima Kumar

Computational Psychiatry is an emerging interdisciplinary field that combines principles from neuroscience, psychology, and computer science to understand the neural basis of mental disorders and develop

computational models for diagnosis, treatment, and prevention. The objectives of this seminar are to 1) introduce students to computational methods and modeling approaches used in psychiatric research, 2) explore the application of computational psychiatry in understanding the etiology, diagnosis, and treatment of mental disorders, 3) to develop students' critical thinking through assignments and final project, 4) to prepare the next generation of computational neuroscientists. Overall, the seminar aims to provide students with a comprehensive understanding of computational modeling in psychiatry, its applications in mental illness research, and the potential for advancing precision psychiatry through these approaches.

Enrollment via lottery; consult <https://mbb.harvard.edu/seminars> for lottery deadline, instructions, and link. Preference to juniors in MBB tracks or MBB secondary field. Course content inquiries to pkumar@mclean.harvard.edu.

Neuroscience of Music: Clinical Applications across the Lifespan

2026 Spring (4 Credits)

T 0345 PM - 0545 PM

Instructor Permission Required

Anne Arnett

With the advent of modern neuroimaging technology, there has been a rapid expansion of neuroscientific research on music and its biomedical applications. The burgeoning field of music neuroscience investigates how the brain perceives, processes, and responds to musical stimuli, and how musical training and music-based interventions influence brain and behavior across the lifespan. This course will delve into the state-of-the-art research in both basic and clinical auditory neuroscience. Students will learn about brain plasticity associated with musical training and the therapeutic potential of music in clinical contexts, ranging from neurodevelopmental to neurodegenerative conditions. The course will be interdisciplinary, blending research from psychology, cognitive neuroscience, and medicine. The class will also take a trip to Dr. Arnett's laboratory at Boston Children's Hospital to see a demonstration of how electroencephalography (EEG) is used to measure brain activity during auditory-perceptual paradigms in children. By the end of the course, students will have developed critical thinking skills and the ability to evaluate scientific findings related to the therapeutic applications of music. They will gain a deeper understanding of experimental methods and the contentious theoretical issues and debates in music neuroscience and therapy. These topics will be explored through a mix of student- and faculty-led presentations, written critiques, and class discussions.

Enrollment via lottery; consult <https://mbb.harvard.edu/seminars> for lottery deadline, instructions, and link. Preference to juniors in MBB tracks or MBB secondary field. Course content inquiries to marija.pranjic@childrens.harvard.edu.

MBB 980FF (1)

Course ID: 226472

The Cortisol Chronicles: A Deep Dive into the Science of Stress

2025 Fall (4 Credits)

M 0300 PM - 0500 PM

Instructor Permission Required

Charles Nelson

Whether acute or chronic, minor or major, stress is a part of our everyday lives. Yet, stress is often fundamentally misunderstood by many and misrepresented in popular media. This course will provide students with an introduction and overview of core concepts of stress and a tutorial on how to read and interpret the scientific literature on stress. We will consider contemporary models of stress, links between stress and major biological systems, and the ways in which stress can impact both physical and mental health across the lifespan. We will then delve into the science of resilience to identify the factors that help us thrive in the face of stress across the lifespan. A major focus of this course will be to support students in becoming critical consumers of the scientific and popular literatures. This course is inherently multidisciplinary and includes topics relevant to psychology and adjacent fields including biology, neuroscience, cognitive science, and health science. In addition, students will actively participate in shaping course content as they will be invited to determine the topics for two open lecture/discussions throughout the semester.

Enrollment via lottery; consult <https://mbb.harvard.edu/seminars> for lottery deadline, instructions, and link. Preference to juniors in MBB tracks or MBB secondary field. Course content inquiries to ellen.jopling@childrens.harvard.edu.

MBB 980GG (1)

Course ID: 226474

Neuroendocrine Pathways: Brain, Sex, and Hormones

2026 Spring (4 Credits)

No meeting time listed

Instructor Permission Required

Victor Navarro

This course focuses on the study of the neuro-endocrine interactions that determine the organizational and functional effects of hormones in the brain throughout development with a focus on the role of sex hormones (estradiol, testosterone) in the brain. The course will address a) the role of hormones in the sexual differentiation of the brain; b) the role of the brain in the maintenance of the body homeostasis through the regulation of the different endocrine axes; c) central control of sexual maturation (puberty); d) regulation of the hypothalamic neuronal networks by peripheral factors (e.g. metabolism, stress, environment, endocrine disruptors); e) effect of hormonal cues on behavior; f) senescence of the neuroendocrine systems (e.g. the hypothalamus after menopause). At the end of the course, the students will gain basic knowledge of the interactions between the brain and the endocrine system, and how sex hormones play a crucial role in the development and function of the brain throughout life. These developmental and functional effects of sex hormones in the brain are essential for the full understanding of neurobiological processes.

Enrollment via lottery; consult <https://mbb.harvard.edu/seminars> for lottery deadline, instructions, and link. Preference to juniors in MBB tracks or MBB secondary field. Course content inquiries to vnavarro@bwh.harvard.edu.

MBB 980H

What Disease Teaches about Cognition

T 0345 PM - 0545 PM

William Milberg

Course ID: 109866
2026 Spring (4 Credits)

Instructor Permission Required

This course seeks to reconcile the complicated and messy problems of patients with brain disease with the concise analysis of precisely defined cognitive functions in normal subjects. Students will learn to overlap cognitive functions on to the brain in disease - at the gross dissection and imaging levels - and to understand some of the complex interactions of individual cognitive operations in disease using the examples of famous landmark cases in the literature (e.g. Broca's Monsieur Leborgne, Phineas Gage, HM and others). The course will include a dissection of a human brain, an examination of how the actual brain maps onto two dimensional neuroimages, and discussions of how the classic lesion based maps of cortical function are related to contemporary maps based on functional neuroimaging.

Enrollment via lottery; see <https://mbb.harvard.edu/seminars> for lottery deadline, instructions, and link. Preference to juniors in MBB tracks or MBB secondary field. Course content inquiries to william_milberg@hms.harvard.edu.

FAS Divisional Distribution: Social Sciences

MBB 980M

Functional Neuroimaging of Psychiatric Disorders: Insights into the Human Brain-Mind

R 0300 PM - 0500 PM

David Silbersweig

Course ID: 160759
2026 Spring (4 Credits)

Instructor Permission Required

Functional brain imaging has revolutionized the study of systems-level behavioral neuroscience and psychiatric disorders, through the ability to localize and characterize distributed brain activity directly associated with perception, cognition, emotion and behavior in disorders where there are not gross brain lesions. This seminar will introduce students to translational neuroimaging methods at the interface of neuroscience, psychology and medicine. It will cover recent and ongoing advances in our understanding of fronto-limbic-subcortical brain circuitry across the range of psychiatric disorders (e.g. mood disorders, anxiety disorders, psychotic disorders, personality disorders, addictions). It will discuss new, emerging biological (as opposed to descriptive) taxonomies and conceptualizations of mental illness and its treatment. It will explore the implications of such knowledge for issues such as consciousness, meaning, free will, emotion, resilience, and religiosity. It will incorporate clinical observations, scientific data and readings, and examine future directions in brain-mind medicine.

Enrollment via lottery; consult <https://mbb.harvard.edu/seminars> for lottery deadline, instructions, and link. Preference to juniors in MBB tracks or MBB secondary field. Course content inquiries to dsilbersweig@bwh.harvard.edu.

FAS Divisional Distribution: Science & Engineering & Applied Science

MBB 980P (1)

The Role of Music in Health and Education

R 0300 PM - 0500 PM

Lisa Wong

Course ID: 205158
2025 Fall (4 Credits)

Instructor Permission Required

Music shapes the course of human history at both a micro and macro scale; The "universallanguage" has the power to connect people who share no other common ground. Its power to bind people together is intuitively understood, but only through recent neuroimaging advances over the past few decades have scientists been able to move past intuition to reveal its impact on the brain. In this course, we will examine the exciting progress of the fields of music, science, and social science, through a variety of lenses, and meet some of the experts in the field. Who are the key investigators and practitioners in today's emerging music/brain landscape? What are the latest discoveries about how music affects the brain? How does how we hear and listen impact our perception of music? Who are some of the key influencers in music and social change? This course invites students to deepen their relationship with music, exploring different aspects of the art form through the lens of neuroscience, education, medicine, music therapy, public health and social justice. By the end of this course, the learner will (1) understand the effect of music on the developing brain; (2) understand the mechanism of hearing music; (3) consider the pathophysiology of disordered movement and hearing and how music can be used therapeutically; and (4) understand how other disciplines can add to their knowledge of the therapeutic uses of music. Given the transdisciplinary nature of the work, students will be introduced to literature from different disciplines and use these resources to explore their own individual interests in music.

Enrollment via lottery; see <https://mbb.harvard.edu/seminars> for lottery deadline, instructions, and link. Preference to juniors in MBB tracks or MBB secondary field. Course content inquiries to lmwong@fas.harvard.edu.

Cognitive Neuroscience of Meditation

M 1200 PM - 0200 PM

Sara Lazar

Course ID: 207091
2025 Fall (4 Credits)

Instructor Permission Required

Buddhist philosophy describes a model of how the mind works, as well as a method, mindfulness meditation, that can be used as a tool to transform consciousness and reduce mental distress. Neuroscientists have begun to study the impact of meditation on brain structure and function, often using Buddhist philosophy to guide their hypotheses. We will review and discuss how the science relates to Buddhist philosophy, using the four foundations of mindfulness as the primary framework. We will also compare and contrast the Buddhist model with modern scientific models of how conscious experience is created in the brain, in order to gain a more nuanced understanding of consciousness that integrates philosophy, neuroscience, and personal experience. No prior knowledge of Buddhism is required. The course will be a mixture of lecture, discussion of two primary scientific articles that are assigned each week, and formal powerpoint presentations by students. Students will write a final paper on a topic of their choice that is relevant to the themes of the course.

Enrollment via lottery; consult <https://mbb.harvard.edu/seminars> for lottery deadline, instructions, and links. Preference to juniors in MBB tracks or MBB secondary field. Course content inquiries to slazar@mgh.harvard.edu.

FAS Divisional Distribution: Science & Engineering & Applied Science

MBB 980T (1)

Sleep and Mental Health

M 0345 PM - 0545 PM

Edward Pace-Schott

Course ID: 207092
2026 Spring (4 Credits)

Instructor Permission Required

The scientific study of sleep is an area of research that is both highly diverse and among the most interdisciplinary and unifying of topics in psychology and neuroscience. In the past several decades, exciting new discoveries on the neurobiology of sleep have been facilitated by technologies such as functional neuroimaging and molecular genetics. Nonetheless, sleep remains mysterious and controversial and, remarkably, there still is no generally agreed upon function for this behavioral state that occupies one third of our lives! Sleep science exemplifies the translational approach in biomedical science whereby human and animal research together continually advance the field of sleep medicine. In this seminar, lectures during the first half of each class will provide overviews of the physiology and behavioral neuroscience of sleep. The second half of each class will be devoted to student-led discussions of assigned study questions as well as free discussions. In a short term paper, students will research in depth a topic of their choice that they find particularly interesting related to sleep neuroscience or mental health. Students will also briefly present what they have learned about their topic during the final class meetings. Some topics students might choose are described in the following paragraph. In addition, students will keep a nightly sleep and/or dream diary for 2-3 weeks at some point during the semester in order to learn more about sleep from their own experiences. They will then describe what they have observed in a short essay. In the past, students have found this exercise to be especially interesting. Lastly, there will be a short open-book, unlimited-time final exam on material from the lectures. Topics for term papers might include the characteristic abnormalities of sleep in mood, anxiety, psychotic, addictive or neurodevelopmental disorders. Scientific findings increasingly point to the importance of sleep for mental health and optimum performance, as well as to sleep disruption as both a result and a contributing cause of mental illnesses. Thus, one might focus on

the contribution of primary sleep disorders to psychiatric and neurological illness, such as the circadian rhythm disorders in bipolar illness or insomnia as a risk factor for mood and anxiety disorders. Still other topics might focus on the contribution of normal sleep to emotional regulation, memory consolidation, and cognitive performance. For those with more cellular neuroscience interests, topics might focus on linkages between sleep and immunity or the role of sleep in disposal of abnormal proteins as it relates to neurodegenerative diseases.

Enrollment via lottery; see <https://mbb.harvard.edu/seminars> for lottery deadline, instructions, and form.

Preference to juniors in MBB tracks or MBB secondary field. Course content inquiries to epace-schott@mgh.harvard.edu.

MBB 980V (1)

Neuroimaging and Big Data in Connectomics: Advances in Understanding the Wiring of the Brain

T 0300 PM - 0500 PM

Instructor Permission Required

Lisa Nickerson

Constructing a map of the connections between the 86 billion neurons in the human brain has been a goal of neuroscience since the field originated. Connectomics research, which aims to understand how the brain is wired together into this map, has shown the human brain to be a complex network with the same properties that other complex networks exhibit. Much like our social networks, the world wide web, and our travel systems, the brain demonstrates organization along similar principles as these networks and can be studied using techniques adapted from network science. Using this "network neuroscience" approach has shown that the brain's gray matter is organized into a functional connectome comprised of modules called brain networks that orchestrate their functions to support our everyday activities. More recently, advances in another MRI technique called diffusion MRI have made it possible to study the organization of the brain's white matter "information highways", or structural connectome, that transmit information from brain region-to-brain region, brain network-to-brain network. MRI-based connectomics is a rapidly growing field, with new methods and applications evolving at an incredibly fast pace and there are now numerous large-scale neuroimaging initiatives across the world that are aimed at mapping the human brain connectome. These studies aim to map the human brain connectome across the lifespan, from in utero to the oldest old, and in brain disorders such as mental illnesses, developmental disorders, neurological disorders and other health conditions. The goal of this class is to understand how MRI can be used to study the living human brain connectome and the latest advances these approaches have revealed in our understanding of the wiring of the brain. We will also dive into some of the large-scale neuroimaging datasets to see how we can leverage these open access resources for connectomics research. This course is designed for students in the MBB programs who are interested in learning about how we study brain connectivity and how the brain is organized, including those who are interested in neuroscience applications and brain disorders and those interested in bioinformatics/computer science/statistics/physics applications in neuroimaging. To unlock the "black box" nature of the sophisticated MRI methods used for connectomics research, we will learn the basics of the workhorse MRI connectomics methods, functional and diffusion MRI, from a conceptual perspective. We will learn how each of these techniques is used for connectomics studies and some key methodological and interpretational issues for each. Then we will focus on the brain's connectome. We will discuss brain organization, including how to construct a brain graph as the mathematical embodiment of the brain's connectome and how to evaluate the brain's network properties using graph theory and other approaches, the brain networks that have been reported in the literature, and the links between structural and functional connectomes. We will do a survey of widely used open access tools for connectivity and connectome analyses, and open access connectome datasets with sample sizes of hundreds up to a hundred thousand, including the Human Connectome Lifespan and Disease Connectome studies, the ABCD study, and the UK Biobank. These datasets will also be used as hypothetical data sources for your final research projects. Last, we will discuss ethical, computational, and statistical issues when working with these large open access datasets.

Enrollment via lottery; consult <https://mbb.harvard.edu/seminars> for lottery deadline, instructions, and link.

Preference to juniors in MBB tracks or MBB secondary field. Course content inquiries to lisa_nickerson@hms.harvard.edu.

MBB 980X

Translational Neuroscience: Limits of Adaptation from Extreme Environments to Clinical Practice

F 1200 PM - 0200 PM

Instructor Permission Required

Gary Strangman, Vladimir Ivkovic

What can we learn about the limitations of human neurobehavioral function through exposure and adaptation to extreme environments, as well as readaptation to "normal" environment, or onset of neuropsychiatric disorders? Within the translational neuroscience paradigm, this course explores the concepts of neurobehavioral

Course ID: 219973

2026 Spring (4 Credits)

adaptation, stress, resilience, and neuropsychiatric disorders, in relation to the underlying neurophysiologic mechanisms that regulate them. We will explore adaptations to extreme activities such as spaceflight, expeditionary (polar, underwater, desert exploration, military deployments), emergency response services (e.g. firefighting), and impact sports (e.g. football). These will be discussed in the context of mental and occupational health, gender differences, and understanding the etiology of neuropsychiatric conditions such as, post-traumatic stress disorder (PTSD), traumatic brain injury (TBI), Chronic Traumatic Encephalopathy (CTE), intracranial hypertension, etc. This course may be particularly interesting to Mind Brain and Behavior students pursuing careers in translational neuroscience, psychology, medicine, and related fields. Features expert guest lecturers (e.g. NASA researchers, Antarctic expeditionary physicians, underwater explorers, etc.), demonstrations of unique experimental methodologies and equipment (e.g. ambulatory brain and physiologic monitoring) used in extreme environments, and potential visits to field / operational facilities.

Enrollment via lottery; consult <https://mbb.harvard.edu/seminars> for lottery deadline, instructions, and link. Preference to juniors in MBB tracks or MBB secondary field. Course content inquiries to vivkovic@mgh.harvard.edu.

Molecular and Cellular Biology

Molecular & Cellular Biology

MCB 60

Cellular Biology and Molecular Medicine

MW 1030 AM - 1145 AM

Dominic Mao, Marissa Gredler, Emma Nagy

MCB 60 provides an introduction to the principles of molecular and cellular biology and their connections to biomedicine. The course explores how medical syndromes provide insights into biological processes and how biological mechanisms underlie human disease and physiology. Topics range from DNA repair, protein folding and vesicle transport to metabolism, cell migration, and cancer. Content for lecture topics comprising of reading and viewing material will be released weekly followed by mandatory, interactive live sessions with the instructors. Weekly sections will combine a laboratory that focuses on experimental design and data analysis, primary literature reading, and review of lecture materials.

LS 1b recommended.

Requires: Prerequisite - LS1A, LPSA, or LS50

FAS Divisional Distribution: Science & Engineering & Applied Science

MCB 63

Biochemistry and Molecular Medicine

TR 0130 PM - 0245 PM

Alain Viel, Michele Markstein

The course integrates an introduction to the structure of macromolecules and a biochemical approach to cellular function. Topics addressing protein function will include enzyme kinetics, the characterization of major metabolic pathways and their interconnection into tightly regulated networks, and the manipulation of enzymes and pathways with mutations or drugs. An exploration of simple cells (red blood cells) to more complex tissues (muscle and liver) is used as a framework to discuss the progression in metabolic complexity. Students will also develop problem solving and analytical skills that are more generally applicable to the life sciences.

Requires: Prerequisite: LS 1a OR LPS A OR LIFESCI 50A/B

FAS Divisional Distribution: Science & Engineering & Applied Science

MCB 65

Physical Biochemistry: Understanding Macromolecular Machines

MWF 1030 AM - 1145 AM

Monique Brewster, Maxim Prigozhin, Rebecca LaCroix

This course develops your understanding of fundamental biochemistry concepts and how they are applied in cutting-edge structural and molecular biology research. You will learn about protein and nucleic acid structure, thermodynamics, kinetics, and intermolecular interactions while exploring techniques like cryo-electron

Course ID: 114796
2026 Spring (4 Credits)

microscopy, AlphaFold protein structure prediction, molecular dynamics, and protein design with Rosetta. The course emphasizes the application of these concepts to cell signaling, metabolism and drug-target interactions using interactive lectures and weekly sections. As part of section, students will undertake a discovery-based laboratory research project in which they will apply these course concepts toward understanding the structure and function of the ATPase domain of a transporter protein associated with antigen processing.

Requires: Prerequisite: (LPS A OR LS 1a) AND (CHEM 20 OR CHEM 17)

MCB 66

Pathological Cell Biology

MW 1030 AM - 1145 AM

Sam Kunes, Michele Markstein

Course ID: 220875

2026 Spring (4 Credits)

Instructor Permission Required

Pathological cell states are at the heart of human disease: in this course, we view cell pathology as a window into the normal state of the cell; the robustness of its homeostatic mechanisms and the alternative modes a cell may adopt in order to contribute to multicellular structures as precise as a nervous system and as chaotic as a malignant tumor. The curriculum draws upon foundational courses in genetics and cell biology (e.g. LS1A, LS1B, MCB60 and related coursework) and supports further understanding of normal cell states through exploration of cell's pathological states. The curriculum emphasizes advanced experimental approaches and current findings in oncogenic transformation and other pathologies. The prereqs for this course are: LS1A, LS50A, or LPSA with Recommended Prep of LS1B.

LS1B

Requires: Requires LS1A, LS50A, or LPSA

FAS Divisional Distribution: Science & Engineering & Applied Science

MCB 68

Cell Biology Through the Microscope

TR 0130 PM - 0245 PM

Ethan Garner, Douglas Richardson, Emma Nagy

Course ID: 109851

2026 Spring (4 Credits)

Instructor Permission Required

MCB 68 explores three fundamental fields of eukaryotic cell biology: chromosome segregation, cell motility, and neuroscience. Each topic is approached from a historic and technical perspective. Students will discover these systems as the scientific field did, learning how each successive advance in microscopy revealed new biological details. Students will come away with a theoretical and hands-on understanding of microscopy as well as a grasp of the biological findings each technology revealed.

Course Note: An additional introductory course in biology (e.g., MCB 60, MCB 80 or SCRB10) is recommended but not required. The course design, level, and content is best suited for students in their sophomore year.

Requires: Prerequisite: LS 1a OR LPS A

MCB 80

Neurobiology of Behavior

TR 1030 AM - 1145 AM

Katie Quast, Naoshige Uchida

Course ID: 207476

2025 Fall (4 Credits)

Instructor Permission Required

An introduction to the ways in which the brain controls mental activities. The course covers the cells and signals that process and transmit information, and the ways in which neurons form circuits that change with experience. Topics include the neurobiology of perception, learning, memory, emotion, and neurologic disorders. This year we are combining interactive, didactic lecture videos with live Tuesdays and Thursdays featuring guest lectures, hands-on demonstrations, and review sessions in addition to small discussion sections.

MCB 80 is a cross-listed course with Neuro80 (Same course, assignments, and requirements). For pre-enrollment and sectioning purposes, students interested in taking MCB 80 are asked to enroll in Neuro 80. Please enroll in Neuro 80 and choose one of the timed sections for Neuro 80 during registration. The course staff will then assist you in switching from Neuro 80 to MCB 80 in September (keeping your section time) if you want the course listed as MCB 80 on your transcript.

The course includes a series of workshops designed to help prepare students for the process of writing their thesis.

Course Note: Limited to students writing a thesis in MCB. Students are required to submit a written proposal to the MCB undergraduate office in the summer for review by the Board of Tutors in Biochemical Sciences for enrollment that fall. Only those students whose thesis proposals are approved are eligible to enroll. Ordinarily may not be taken as a fifth course. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit. Students must complete basic laboratory safety training and other

safety training required by the host lab prior to starting work.

Experimental Research in the Life Sciences

2025 Fall (4 Credits)

R 0300 PM - 0545 PM

Instructor Permission Required

Alain Viel

A laboratory course that immerses students in a dynamic project-based research environment. Participate in experimental projects directly linked with ongoing faculty research. Students select a project from the following research tracks: neurobiology, microbial sciences, cell biology, and synthetic biology. New projects, including some in other research fields, are offered every term. In a highly collaborative atmosphere, students form a fully-functional and diverse research group based on the sharing of ideas and progress reports between projects. The spring microbiology project is part of the "genomes to Biomes" series. This course cannot be taken concurrently with LifeSci 100.

Course Note: Location of the first meeting will be announced on the course website. Open to freshmen, sophomores, juniors, and seniors, regardless of concentration, and suitable for students either with or without extensive laboratory experience. The course may only be repeated once and the second enrollment must be approved by the instructor.

This course shares a combined enrollment cap of 30 students with LIFESCI 100R.

Students interested in a neurobiology project will need MCB 80 or permission of the instructor. Please also note that students cannot take MCB 100 and LS 100 at the same time.

Requires: Prerequisite: LPS A OR LS 1a

FAS Divisional Distribution: Science & Engineering & Applied Science

Creativity, Innovation, and Entrepreneurship in the Life Sciences

R 1200 PM - 0200 PM

Course ID: 224947

2026 Spring (4 Credits)

Instructor Permission Required

The liberal arts were initially meant to express the broadest swath of human thought and experience. Yet, somehow, the workplace's skills and habits of mind gradually separated from this curriculum. This left students to tackle each domain in sequence: first, the liberal arts and then workplace skills. This unnecessary sequencing has contributed to the so-called skills gap. The course will aim to fill this gap. You will learn to identify life sciences problems, develop essential skills in innovation, creativity, and entrepreneurship, and apply them to life science challenges of your choice. The course will emphasize the development of actionable proposals by students that address current challenges and create social and economic value for society. This course will use activity-based learning, guest speakers, and a group of life sciences and business experts providing students with bespoke mentoring. Throughout the term, you will interact with students within the Harvard innovation community, including members of the Lemann Program in Creativity and Entrepreneurship (LPCE) and the Harvard HealthLab accelerator (H2A). At the end of the term, you will present your projects to your peers and mentors at the LPCE's Founder Crush event.

LS1A, LPSA, and LS50.

MCB 127

Organelle Biology and Cellular Function

TR 1045 AM - 1200 PM

Jeeyun Chung, Daniel Needleman

Course ID: 224454
2025 Fall (4 Credits)

What is the definition of subcellular organelles? Why do our cells need to be compartmentalized? How do individual proteins traffic into their final destinations to perform distinct functions in our cells? In this class, we will explore the organelles present in our cells and the specialized functions they perform to maintain cellular metabolism. Additionally, we will examine how dysregulation in organelle functions contributes to diseases and what therapeutic strategies are currently available. This course consists of weekly, in-depth lecture sessions and primary literature discussion sessions. Each week, you'll engage in complementary sessions — 'lecture' and 'discussion' — that help enhance your understanding of how the current knowledge of organelle biology has been shaped by research and what open questions remain in the field. In lecture sessions, you will learn about the historical discoveries of individual subcellular organelles and classical and modern methodologies used to

study organelle functions. Topics covered include fundamental cellular compartments mainly involved in cellular metabolism, such as the nucleus, mitochondria, lysosomes, lipid droplets, stress granules, and peroxisomes, as well as their communication. During primary literature discussion sessions, you will learn to identify key questions in cell biology and design critical experiments to address those questions. For the final project, you will draw upon insights acquired from the classes to identify open questions in organelle biology and design a key experiment to address those questions. The final project will be submitted as a final term paper and also presented in class. This course presents an exceptional opportunity to explore the importance of subcellular compartmentalization and its unique contributions to cell metabolism in physiology and diseases.

MCB 130

The pharmacy of life – exploring the function and biochemistry of natural products

MW 0900 AM - 1015 AM

Ryan Nett

Life has evolved countless bioactive molecules, or "natural products", that act like pharmaceuticals to affect the cellular processes of other organisms, and many of these molecules serve as critical medicines and research tools. In this course, we will explore the diverse functions of natural products – including many important medicines like plant-derived chemotherapeutics, fungal psychedelics, and cone snail venoms – as case studies to teach fundamental principles of biochemistry and cell biology. By exploring the diverse pharmacy of natural products that have evolved in nature, we aim to illustrate how specific, molecular level interactions can lead to powerful toxic and medicinal effects on other organisms. Additionally, we will introduce major research techniques that are used to study the biological functions of natural products and discuss the essential role of these techniques for future efforts to discover new drugs from nature. Collectively, this course will provide a cross-disciplinary platform for exploring the molecular and biochemical properties that make natural products a critical component of not just the evolution of species, but also our medicine, culture, and research.

Course ID: 225811
2026 Spring (4 Credits)

One semester of organic chemistry (e.g. CHEM 17 or CHEM 20) or biochemistry (e.g. MCB 63 or MCB 65).

MCB 146

Experience-Based Brain Development: Causes and Consequences

TR 0300 PM - 0415 PM

Takao Hensch

At no time in life does the surrounding environment so potently shape brain function as in infancy and early childhood. This course integrates molecular/cellular biology with systems neuroscience to explore biological mechanisms underlying critical periods in brain development. Understanding how neuronal circuits are sculpted by experience will motivate further consideration of the social impact on therapy, education, policy, and ethics.

Cancer: Genetics, Genomics and Therapeutics

MW 0130 PM - 0245 PM

Craig Hunter

Course ID: 225750
2026 Spring (4 Credits)

Instructor Permission Required

This is a project and discussion-based course for advanced students to explore the genetic and genomic basis of cancer and the development of cancer therapeutics. The course is interactive, with an emphasis on critical analysis, discussion, and collaboration. The assignments are structured to encourage both individual and group engagement with the material, ensuring that students develop a comprehensive understanding of the subject matter while honing their communication skills. The readings will focus on seminal discoveries, modern experimental approaches, and break-through treatments. The learning goals for the students include, how to read the primary literature, how to ask scientific questions, and how to apply the scientific method.

LS1A/B or equivalent.

MCB 165

Interplay between Viruses and their Hosts

MW 1030 AM - 1145 AM

Victoria D'Souza

Course ID: 156010
2026 Spring (4 Credits)

This course provides a foray into virology, advanced cell biology, biochemistry and structural biology topics through the lens of viruses as they invade their hosts. Lectures first demonstrate concepts by placing a particular emphasis on the human immunodeficiency virus (HIV), which provides well-studied examples of intricate virus-host interactions that occur throughout its complex life cycle. Discussion sections then solidify these concepts by analysis of primary literature on other viruses, for example SARS-CoV2, Ebola, etc.

Requires: Prerequisite: MCB 60

MCB 169

Molecular and Cellular Immunology

TR 1030 AM - 1145 AM

Shiv Pillai

Course ID: 111720
2025 Fall (4 Credits)

The immune system is the frontier at which molecular biology, cell biology, and genetics intersect with the pathogenesis of disease. There is no area of modern biology that is as intimately linked to disease as Immunology. This field has given us the first rational therapies in medicine, actual cures for many cancers, and new innovative therapies harnessing immunology are being created at breakneck speed! In this course we examining the underlying scientific bases of how the immune system works and its contributions to disease pathogenesis, protection, treatment and prevention. We will discuss the biology of the host response to infections, autoimmunity, allergic disorders, primary immunodeficiency syndromes, transplantation, and cancer.

Some understanding of basic cell biology and genetics is very helpful.

Requires: Prerequisite: LPS A OR LS 1a

FAS Divisional Distribution: Science & Engineering & Applied Science

MCB 170

Brain Invaders: Building and Breaking Barriers in the Nervous System

MW 0130 PM - 0245 PM

Laura Magnotti

Course ID: 207770

2026 Spring (4 Credits)

Instructor Permission Required

The brain has evolved a unique but very effective system to protect itself from invaders. In this course, we will explore the specific defenses that the nervous system uses to protect itself. We will also examine how some pathogens evade or breach those defenses and the impact of those invasions. Finally, we will explore how scientists have been able to translate their understanding of these pathogenic mechanisms into technologies for research and therapeutic applications.

Prerequisite: (LPS A OR LS 1a) AND MCB/NEURO 80 or Instructor Approval.

FAS Divisional Distribution: Science & Engineering & Applied Science

MCB 175

Principles of Cell Physiology

MW 0130 PM - 0245 PM

Nicholas Bellono

Course ID: 218679

2025 Fall (4 Credits)

How do cells communicate and respond to their environment? How do cells communicate and respond to their environment? MCB175 explores foundational principles in cell physiology using biological extremes to provide insights into core fundamental concepts. We exploit unusual sensory receptors, venomous animals, peculiar unicellular organisms, plants, and diseases as examples of specialized signaling mechanisms in diverse cell types, organismal states, and evolutionary adaptations. Through reading and discussing primary literature and scientific writing and presentation assignments, students strengthen skills in critical thinking, interpretation of data, and experimental strategy to ask biological questions.

MCB 60 or MCB/Neuro 80

MCB 197

Gene Regulation: A Bench-to-Bedside Journey

MW 0130 PM - 0245 PM

Amanda Whipple

Course ID: 224007

2025 Fall (4 Credits)

Instructor Permission Required

How do all our cells carry the same DNA yet perform distinct functions in our body? How do cells know what type of proteins they should produce? In this class, we will look at the rules and mechanisms that enable a subset of genes to be selectively expressed in each cell. We will examine how disruptions in gene regulation contribute to disease and design therapeutic strategies for correcting gene expression in disease. This course adopts a classroom "bench-to-bedside" approach, mirroring the translation of basic scientific research in the laboratory into practical medical applications in the clinic. Each week you'll engage in complementary sessions — "bench" and "bedside" — that bridge the gap between scientific foundations and practical applications. In bench sessions, you will engage in lectures exploring historical discoveries and modern methodologies in gene regulation, foster critical thinking through in-class discussions, and critique primary research publications. Topics

covered will include genome architecture, gene expression, RNA processing, and the non-coding genome. In bedside sessions, you will learn to visualize and interpret human genomic and transcriptomic data through public genome browsers (no coding required), and you will practice designing CRISPR, siRNA, and ASO therapeutics for disease. As a final project, you will draw upon insights acquired from bench and bedside sessions to design a novel therapeutic strategy for a genetic condition, which will be presented in class. This course offers a unique opportunity to explore aspects of gene regulation, from its molecular foundation to practical implementation in gene therapy.

MCB 207

Course ID: 224869

MCO 101: The PhD Journey - Navigating Towards Success

2026 Spring (2 Credits)

W 0300 PM - 0545 PM

Jeeyun Chung

Identifying a scientific question that excites an individual G1 student and effectively communicating their research progress to the community are critical for successful graduate studies. This course provides an essential roadmap for first-year MCO graduate students to learn how to present their research questions and their impacts in the most effective way through a short research proposal format (specific aims limited to 1 page). Additionally, students will learn how to deliver a 10-minute short oral presentation on their research progress by giving three rounds of rotation progress talks in the class. Short oral presentations are the most common presentation style that graduate students will encounter during their training at conferences, making it a critical skill to master. Moreover, students will participate in a forum-style class at the end of their third rotation term to understand the crucial factors to consider when choosing a thesis lab. This will aid them in making a thoughtful decision about their PhD thesis lab. Overall, the course is designed to assist MCO students in preparing for their PhD journey and full commitment.

Talking about Science

2025 Fall (4 Credits)

T 0430 PM - 0600 PM

Instructor Permission Required

Richard Losick, Michael Greenberg, Clifford Tabin

Teaches advanced students how to give a good research talk while exposing them to seminal scientific discoveries. Emphasis will be on speaking style, lecture organization, and use of video projection tools.

Course Note: In addition to lecture material from the instructor, students will present experiments from Nobel Prize-winning work. The presentations will be critiqued in class by the participants. Open to second year graduate students or with permission of the instructor.

FAS Divisional Distribution: Science & Engineering & Applied Science

MCB 231

Computational Neuroscience

MW 0300 PM - 0415 PM

Haim Sompolinsky

Follows trends in modern brain theory, focusing on local neuronal circuits as basic computational modules. Explores the relation between network architecture, dynamics, and function. Introduces tools from information theory, statistical inference, and the learning theory for the study of experience-dependent neural codes. Specific topics: computational principles of early sensory systems; adaptation and gain control in vision, dynamics of recurrent networks; feature selectivity in cortical circuits; memory; learning and synaptic plasticity; noise and chaos in neuronal systems.

Course Note: Also offered as Neuro 231 and MCB 231. Cannot be taken for credit as Physics 231 if Neuro 231 or MCB 231 is already complete.

Basic knowledge of multivariate calculus, differential equations, linear algebra, and elementary probability theory.

Requires: Anti-Requisite: Cannot be taken for credit if NEURO 131 already complete.

FAS Divisional Distribution: Science & Engineering & Applied Science

MCB 260

Physical Biochemistry: Understanding Macromolecular Machines

MWF 1030 AM - 1145 AM

Monique Brewster, Maxim Prigozhin, Rebecca LaCroix

This course develops your understanding of fundamental biochemistry concepts and how they are applied in cutting-edge structural and molecular biology research. You will learn about protein and nucleic acid structure, thermodynamics, kinetics, and intermolecular interactions while exploring techniques like cryo-electron microscopy, AlphaFold protein structure prediction, molecular dynamics, and protein design with Rosetta. The course emphasizes applying these concepts to cell signaling, metabolism and drug-target interactions using interactive lectures.

Instructor Permission Required

Bence Olveczky

Topic: Neuroscience and Behavior

Each of the four Method and Logic courses are devoted to understanding the epistemic strategies used in four distinct areas of biology (A: Principles of spatiotemporal cell organization; B: Neuroscience and behavior; C: Discovery of cell mechanism; D: Evo/Devo). All four courses are based on critical evaluation of the primary scientific literature through weekly discussions of two papers, which could be either classic or modern. Students are expected to understand the following aspects of each paper: What came before and what came (or is likely to come) after? What is the key question that the authors are asking? What methodologies are used and what are their strengths and pitfalls for the question being addressed? Are the findings communicated clearly and effectively? And, most importantly, do the authors rigorously demonstrate their main conclusions or are other interpretations possible? In addition to in-class discussion of research papers, requiring robust contributions from all members of the class, each student will be individually graded on a writing assignment and an oral presentation focused on an open research question.

Students are expected to understand the following aspects of each paper: What came before and what came (or is likely to come) after? What is the key question that the authors are asking? What methodologies are used and what are their strengths and pitfalls for the question being addressed? Are the findings communicated clearly and effectively? And, most importantly, do the authors rigorously demonstrate their main conclusions or are other interpretations possible? In addition to in-class discussion of research papers, requiring robust contributions from all members of the class, each student will be individually graded on a writing assignment and an oral presentation focused on an open research question.

MCB 350 is designed for first year students in the MCO Program. The course is a discussion forum on scientific integrity using case studies to examine basic ethical and regulatory requirements for conducting research, and fulfills the National Institutes of Health (NIH) and National Science Foundation (NSF) requirements for formal Responsible Conduct of Research (RCR) instruction. Students are required to complete a pre-course assignment, attend all lectures including the final lecture in February, participate in class discussions, and complete a final course evaluation. A certificate will be issued upon successful completion of the course.

*Course Note: According to NIH Guidelines, students are required to take a Scientific Integrity Refresher Course every four years (*MCB 351).*

Course ID: 156952
2026 Spring (2 Credits)

Instructor Permission Required

This course presents the fundamental concepts that underlie modern light microscopy in a rigorous but non-mathematical way for biological applications. The students will learn about the four major frameworks for light (ray optics, wave optics, electromagnetism, and quantum optics). The ways lenses work, the theory of resolution, and the optical design of the compound microscope will be described. The course will also describe the photo-physical principles that underlie fluorescence and genetically encoded fluorescent proteins, and light detector and imaging strategies. Scanning (confocal and 2P), light sheet and super-resolution microcopies will also be described. We will end with a tour of the Harvard Center of Biological Imaging. This course will be held March 26, April 2 and April 9, 2025 from 1:00 to 4:00PM.

MCB 355**Visualizing, Analyzing and Presenting Macromolecular Structures with PyMOL**Course ID: 160523
2026 Spring (2 Credits)*No meeting time listed*
*Rachelle Gaudet**Instructor Permission Required*

PyMOL is one of the most popular software programs to display and explore high-resolution structures of macromolecules. It is readily used to create publication-quality figures, and movies and animations of structural information. In this course, you will learn the basics of PyMOL and be able to display, explore and present three-dimensional structures of macromolecules. With this basic training, you will be able to generate high-quality images and simple movies, and have the resources to learn more on your own to generate more complex displays. The course will be held on March 24, 26, 31, and April 2 from 3:00-5:45 PM.

Course Note: The course will be held on March 24, 26, 31, and April 2 from 3:00-5:45 PM.

LIFESCI 1A**An Integrated Introduction to the Life Sciences: Chemistry, Molecular Biology, and Cell Biology**

TR 0130 PM - 0245 PM

Daniel Kahne, Rachelle Gaudet, Sien Verschave, Rebecca LaCroix, Rebecca LaCroix

What are the fundamental features of living systems? What are the molecules imparting them and how do their chemical properties explain their biological roles? The answers form a basis for understanding the molecules of life, the cell, diseases, and medicines. In contrast with traditional presentations of relevant scientific disciplines in separate courses, we take an integrated approach, presenting chemistry, molecular biology, biochemistry, and cell biology framed within central problems such as the biology of viral infections.

Course Note: This class requires students to enroll in an untimed, placeholder section during registration and to submit time preferences as listed on the course website. Weekly section consists of discussion (75min) and lab (75min) at one assigned section time (150min total). Students will be asked to submit their preferred section times in advance before the end of registration. For more information about the section assignment process and how to submit time preferences, please see the course website. Sections will be assigned in my.harvard by April 26 for returning students and by Aug 22 for incoming students. This course, in combination with Life Sciences 1b, constitutes an integrated introduction to the Life Sciences.

SECTIONING TIMES OFFERED:

Wed 6-8.45pm

Thu 9-11.45am

Thu 3-5.45pm

Fri 9-11.45am

Fri 12-2.45pm

FAS Divisional Distribution: Science & Engineering & Applied Science

LIFESCI 1B**An Integrated Introduction to the Life Sciences: Genetics, Genomics, and Evolution**

MWF 0130 PM - 0245 PM

Andrew Berry, Monica Boselli, Maria Ostapovich, Scott Edwards, Scott Edwards

How are observable characteristics of organisms influenced by genetics? How do genomes change over time to produce the differences we see among species? This course takes an integrated approach, showing how genetics and evolution are intimately related, together explaining the patterns of genetic variation we see in nature, and how genomics can be used to analyze variation. In covering Mendelian genetics, quantitative genetics, and population genetics, this course will emphasize developments involving our own species.

Course Note: This course, in combination with Life Sciences 1a, constitutes an integrated introduction to the Life Sciences.

MTWRF 1030 AM - 1145 AM

Andrew Murray, Emma Nagy, Benjamin de Bivort, Kara McKinley, Kara McKinley

Course ID: 159706

2025 Fall (8 Credits)

Instructor Permission Required

This is an intensive two-semester, double course that introduces the natural sciences as an integrated whole to students who have a very strong interest in science. Our goal is to teach students how to solve scientific problems by drawing methods and concepts from biology, chemistry, physics, and mathematics. The course uses examples from biology as an integrating theme, principles from physics and mathematics to reduce complex problems to simpler forms, and computer simulation to allow students to develop their intuition about the behavior of the dynamical systems that control the physical and biological universe. The course includes bootcamps to introduce students to biological experiments and the computer language, Python. Each semester will include a project lab, in which students will work in small teams to do original research on unsolved biological problems.

Experimental Research in the Life Sciences

R 0300 PM - 0545 PM

Course ID: 119061
2025 Fall (4 Credits)

Instructor Permission Required

Alain Viel

A laboratory course that immerses students in a dynamic project-based research environment. Participate in experimental projects directly linked with ongoing faculty research. Students select a project from the following research tracks: neurobiology, microbial sciences, cell biology, and synthetic biology. New projects, including some in other research fields, are offered every term. In a highly collaborative atmosphere, students form a fully-functional and diverse research group based on the sharing of ideas and progress reports between projects. The spring microbiology project is part of the "genomes to Biomes" series. This course cannot be taken concurrently with LifeSci 100.

Course Note: Location of the first meeting will be announced on the course website. Open to freshmen, sophomores, juniors, and seniors, regardless of concentration, and suitable for students either with or without extensive laboratory experience. The course may only be repeated once and the second enrollment must be approved by the instructor.

Students interested in a neurobiology project will need MCB 80 or permission of the instructor. Please also note that students cannot take MCB 100 and LS 100 at the same time.

Requires: Prerequisite: LPS A OR LS 1a

FAS Divisional Distribution: Science & Engineering & Applied Science

LIFESCI 132

The Business of Biotech: Fundamentals of Entrepreneurship

MW 1030 AM - 1145 AM

William Marks

Healthcare spending is rapidly nearing ~20% of GDP in many major countries. Digital technologies, AI and GenAI are redefining innovation. Dive into the world of biotech from a practitioner's perspective, with real-world insights that will fundamentally alter how you think about and operate in the industry. The course will cover topics essential for students interested in starting a new venture, joining an existing company, or working on the investing side of the biotech or pharmaceutical industries. The course will have regular guests (industry experts, CEOs, investors), and will include a mix of lecture and HBS cases and case method discussions.

Course ID: 226564

2025 Fall (4 Credits)

Music

Music

MUSIC BHFA

Graduate Musicianship

No meeting time listed

Liam Hynes-Tawa

This musicianship course encompasses multiple sections, which follow independent paths of study based on the general exam requirements of different degree programs. Students may expect to engage with music from across a wide range of historical and cultural contexts, covering topics such as functional harmony or post-tonality, while also branching into popular and non-Western music-theoretical systems and styles based on student research interests. In weekly assignments, students will learn how to apply analytical tools through close readings of music examples, and they will further aim to forge connections between theory and practice through sight-singing and ear-training activities. Students should plan to consult with the professor at the beginning of the semester to establish which areas of musicianship will be prioritized in their course of study. Students must complete both terms of this course (parts A and B) within the same academic year to receive credit.

Course Note: Required of all graduate students. This requirement must be met before admission to the General Examination.

Full Year Course: Indivisible Course

FAS Divisional Distribution: None

Course ID: 112235

2026 Spring (2 Credits)

Requires: Pre-requisite: MUSIC BHFA

MUSIC 2 (LEC)

Foundations of Tonal Music I

Course ID: 118594
2026 Spring (4 Credits)

No meeting time listed

Liam Hynes-Tawa

Course description: In Music 2, students will learn the fundamental elements of music and staff notation, learning standard terminology and fundamental techniques through a variety of methods and repertoires. We will study the principles of musical organization (within a range of styles and historical periods) by means of composition projects, score analysis, improvisation, and aural skills. We will begin to think critically about larger topics, such as how music communicates emotion, and how this might change between cultures. No prior experience with music performance or with reading notation is required. Who should take this class? This course is best suited for students with little to no background in music, at least in terms of terminology and notation. Students who are already familiar with the fundamentals of music should consider Music 51a. What will I take away from this class? By the end of the course students will have learnt the basics of music terminology and notation, as well as the norms of Western harmony as far as the composition and analysis of simple chord progressions is concerned. Students will also have gained the experience of writing and performing a few simple pieces of their own.

Course Note: Department of Music courses in music theory will no longer require students to complete a placement exam. Instead, students are instructed to self-place into music theory course(s) that match their abilities and experience levels at the time of course registration. Students should follow the instructions here for more information: <https://music.fas.harvard.edu/music-theory-course-placement/>

No prior experience with music performance or with reading notation is required. Open to all students.

FAS Divisional Distribution: Arts and Humanities

MUSIC 4 (SEM)

Introduction to Composition

Course ID: 111353
2025 Fall (4 Credits)

T 1245 PM - 0245 PM

Instructor Permission Required

Yvette Jackson

Open to students with little or no prior experience in composition. Explores ways of thinking about and organizing basic compositional elements such as melody, harmony, rhythm and instrumental color, as well as developing skills of score preparation and analytical listening. The primary focus of the course is a series of short compositional exercises, culminating in a somewhat longer final project.

Some prior experience in music theory or permission of the instructor.

This class offers a survey of music traditions among the different Latino communities in the U.S., with a special focus on Mexican-Americans, Cuban-Americans, Puerto Ricans, Colombian-Americans, and Central Americans. Through a combination of lectures, class discussion, and individual and group projects, this class emphasizes the relation between musical practices and particular cultural, political, social, and economic issues affecting these communities from a transnational perspective. It pays particular attention to questions concerning American identity, nation building, immigration, gender, race, acculturation, cultural hybridity, and transnational cultural flows in order to gain a relational knowledge of how a sense of identity is constructed within and among these communities.

Music, Technology, and Ecology: Re-imagine the World with Sound

MW 0130 PM - 0245 PM

Jessie Cox

This course explores music that aims to reimagine our world with regards to ecology, society, and our sense of self. To do so we engage sound art, Afrofuturism, and experimental music practices. Attendees engage in both scholarly study and creative practice. No background in music is needed. Music and non-music concentrators are welcome to share their unique disciplinary interests. Everyone will build on their own skills and develop a broad set of approaches to sound making, listening, and analysis. Our listening journey will take us to Blombos cave 30'000 years ago, foreign planets (like Mars), across high-speed networks (like the internet), cyborgs, into forests, and disappearing glaciers. We build our own instruments, microphones, listen to sounds of animals and various materials, learn basics of electronic music production, and develop improvisation and collaboration skills.

Course Note: The course is equally open to beginners and more experienced music practitioners.

MUSIC 51ACourse ID: 125212
2025 Fall (4 Credits)**Analyzing Tonal Music I**

W 0300 PM - 0500 PM

Instructor Permission Required

Toru Momii

Course description: In Music 51a, we will explore topics in tonal harmony, rhythm and meter, acoustics, form, and melodic structure in popular music, Western art music, and gagaku. Students will work with a variety of notational systems, including Western staff notation, the Nashville number system, lead sheet notation, and others. In addition, the class features a series of workshops on digital audio workstation GarageBand to develop skills for manipulating and analyzing recorded material. Who should take this class? Students with a strong interest in the "nuts and bolts" of music who are looking to learn about the stylistic conventions of popular music and European tonal music, and to understand how musical pieces in these genres are put together. What will I take away from this class? This course will help students develop a solid foundation for critical listening, aural and notation-based analysis, and musical interpretation. Students will gain basic fluency in recording and manipulating audio files. These skills can be applicable to a variety of musical contexts: performance, composition, songwriting, music criticism, and listening.

Course Note: Department of Music courses in music theory will no longer require students to complete a placement exam. Instead, students are instructed to self-place into music theory course(s) that match their abilities and experience levels at the time of course registration. Students should follow the instructions here for more information: <https://music.fas.harvard.edu/music-theory-course-placement/>

Competency with material from Music 2 is required. Students are expected to be able to read Western staff notation fluently (treble and bass clef) and be familiar with the following concepts: major and minor scales, time signatures, key signatures, triads, and chord structure including seventh chords.

FAS Divisional Distribution: Arts and Humanities

MUSIC 51BCourse ID: 125213
2026 Spring (4 Credits)**Analyzing Tonal Music II**

W 0300 PM - 0500 PM

Instructor Permission Required

Michèle Duguay

Students will build on knowledge and skills acquired in 51a, gaining greater familiarity with advanced theoretical and analytical approaches on diatonic modes, chromatic harmony, chord extensions, form, and timbre. Repertoires from Western art music and popular music are a central focus, and students will be working from a variety of notational systems. Continuing the trajectory established in Music 51a, the class features a series of workshops on digital audio workstation Logic Pro and audio analysis software Sonic Visualiser. In this course, you will continue to strengthen your critical listening and musical interpretation skills through aural, score-based, and computer-assisted audio analysis. These skills are applicable to performance, composition, songwriting, music criticism, and listening, and will prepare you for more advanced topic-based courses such as Music 150 and composition courses. Who should take this class? Students with a strong interest in the "nuts and bolts" of music who are looking to learn about the mechanisms of chromatic harmony, modality, timbre, and rhythm in popular music and Western art music. Sections: Tuesday, 9am-10am Thursday, 9am-10am

Course Note: Department of Music courses in music theory will no longer require students to complete a placement exam. Instead, students are instructed to self-place into music theory course(s) that match their abilities and experience levels at the time of course registration. Students should follow the instructions here for more information: <https://music.fas.harvard.edu/music-theory-course-placement/>

Students must have previously completed Music 51a. Students are expected to be able to read Western staff notation and lead sheets and be familiar with the following concepts: diatonic harmony, syncopation, AABA and verse-chorus forms, the twelve-bar blues, and the harmonic series.

Sophomore Tutorial

Course ID: 204967
2025 Fall (4 Credits)

T 0945 AM - 1145 AM

Instructor Permission Required

Liam Hynes-Tawa

Topic: Musical Narratives

The sophomore tutorials introduce students to a range of music-related activities—e.g. hearing and listening attentively to music, thinking and writing about music and music-making. Students choose from an array of small individual seminars that are centered on broad topics. Fall 2025: Music 97F: Musical Narratives Spring 2026: Music 97S: Border Sounds: From Corridos to AI, Music at the Edge of Culture and Identity Please see the individual websites for syllabuses and course materials. There are no prerequisites for the sophomore tutorials. Every individual seminar focuses on developing skills that will equip students for further work in the music concentration: in performance, in composition and artistic creation, in music history, ethnomusicology, music theory, and in cross-disciplinary research involving music.

Course Note: This course broadly considers the many relationships between music and story. On one hand, how are music and sound employed to support an external (and often fictional) narrative? On the other, how does music studies tell stories about music to a variety of audiences? Accordingly, this course is divided loosely in half. The first half of the course focuses on storytelling with music; we will survey and analyze a variety of narrative mediums that incorporate music and sound—including opera, film, and games—in order to gain a sense of the roles of the aural dimension in fiction. We will also interrogate the differences between plot and

narrative, asking whether or not music has the power to narrate. The second half of the course investigates storytelling about music; here, we explore how music studies crafts narratives about music and musical happenings to communicate an interpretation of events.

Students choose from an array of small individual seminars that are centered on broad topics. Fall 2025: Music 97F: Storytelling With/About Music Spring 2026: Music 97S: Border Sounds: From Corridos to AI, Music at the Edge of Culture and Identity Please see the individual websites for syllabuses and course materials. There are no prerequisites for the sophomore tutorials. Every individual seminar focuses on developing skills that will equip students for further work in the music concentration: in performance, in composition and artistic creation, in music history, ethnomusicology, music theory, and in cross-disciplinary research involving music.

Course Note: This course will examine a particular definition of social practice: that of art's (and an artist's) relationship to community - both to specific communities and to society at-large. Within this course I aim to broaden our expectations of music's capacity to transform communities and societies past the immediate moment of music-making and music-hearing - even beyond the moment of affect - investigating and attempting to define how it is possible for music to have measurable impacts on a country's sociological, cultural, and political frameworks. We will also examine the problematics of social practice: what does it truly mean to be in community? Questions of audience, institutional practice, gaze, historical context, and socioeconomic power dynamics will be considered and discussed.

The first portion of weeks in the course will be focused on grounding us together within the subject via class discussion of assigned readings and listening/viewing resources. The second portion of weeks will be focused on practical application of class topics through students' creation of new musical works. The third portion of weeks will be focused on collaboration and practical application/social practice.

Music 110 Harvard-Radcliffe Orchestra is an experiential learning course. The ensemble gives four main concerts each year, sometimes joining with the chorus to perform large-scale works. Repertoire includes major works of the classical symphonic repertoire, solo concertos (selected through an internal competition), contemporary or late 20th century music and special projects. Students are required to attend all rehearsals and HRO activities (including Wednesdays for large project rehearsals and Saturdays for concerts/special activities). Students are expected to practice their music outside the rehearsal time. This course is graded, and grades are given based on attendance, participation, and assigned coursework. Students are expected to enroll in the course for the duration of the season (both Fall and Spring semesters).

Course Note: Music 110 Harvard-Radcliffe Orchestra replaces previous courses Music 10 and Music 107. Students enrolled in Music 110 will take part in integrative academics and assigned special projects.

Prerequisites: Admission based on performance in HRO auditions (2 pieces in contrasting style) to be held before the start of semester classes.

Musical Analysis and Interpretation in the Classical Style

Course ID: 114188
2025 Fall (4 Credits)

R 0945 AM - 1145 AM

Instructor Permission Required

Michèle Duguay

This iteration of Music Analysis and Interpretation focuses on the intersection of music, voice, and text. We will begin by looking at issues of form, rhetoric, and narrative in instrumental Western art music of the 18th- and early 19th-centuries. How did Martines, Mozart, Beethoven, Sancho, and others create direction and closure in music with no text? We will then shift our focus to art songs in the 19th and 20th centuries, by studying the ways in which form, pitch, meter, and texture give rise to unique relationships between text and music in this repertoire. Lastly, we will delve into issues of intertextuality, vocal performance, and musical covers in the recorded music of 20th- and 21st-century popular singers. Through various writing assignments—concert reviews, liner notes, and analytical essays—students will hone their music analytical skills by interpreting the ways in which music, voice, and text are intertwined.

Who should take this class? This course is for musical performers, composers, and listeners who want to deepen their musical understanding and appreciation through music analysis. This iteration of Music Theory and Interpretation focuses on the intersection of music, voice, and text in three different repertoires. We will begin by looking at issues of form, rhetoric, and narrative in instrumental Western art music of the 18th- and early 19th-centuries. How did Martines, Mozart, Beethoven, Sancho, and others create direction and closure in music with no text? We will then shift our focus to art songs in the 19th and 20th centuries, by studying the ways in which form, pitch, meter, and texture give rise to unique relationships between text and music in this repertoire. 2025 Fall (4 Credits)

W 0700 PM - 0900 PM

Instructor Permission Required

Claire Chase, Ken Hamao

MUSIC 186 is a course taught by Professors of the Practice Claire Chase and Ken Hamao that explores the performance and interpretation of contemporary chamber music. Through auditions, students will be divided into small ensembles that focus on repertoire of today and the recent past, with an emphasis on work by living composers. Groups will receive weekly coachings from either Prof. Chase or Prof. Hamao and will participate in workshops throughout the semester as well as projects and performances. Composers will also write and workshop new material with groups. Pre-formed groups (consisting of a minimum of three players) with specific projects in mind, individual performers who are interested in learning about contemporary chamber music, and undergraduate composers are encouraged to apply. In all cases, each individual is required to apply to the course separately. Please contact chase@fas.harvard.edu or ken_hamao@fas.harvard.edu to discuss any questions regarding repertoire or group type. All instrument types and vocalists are welcome to apply, whether or not you have specific repertoire projects to propose.

Course Note: Information about auditions and application procedures will be available in late Spring 2025. Graduate students are welcome to apply.

FAS Divisional Distribution: Arts and Humanities

Chamber Music Performance

Course ID: 153042
2025 Fall (4 Credits)

R 0730 PM - 0930 PM

Instructor Permission Required

Jessica Bodner, Daniel Chong, Kee-Hyun Kim, Ken Hamao, Ken Hamao

Through auditions, students will be divided into chamber music ensembles by the Parker Quartet, and have weekly coachings with members of the Parker Quartet and pianist Mia Chung. The semester will culminate with public performances in Paine Hall. Instrumentalists and vocalists are welcome to audition; however, duos or vocal-only ensembles are not allowed. Students will be expected to rehearse between each coaching and to participate in class meetings throughout the semester. There will be a final jury evaluation prior to the final public

performances, to be held sometime during Reading Period--all students are required to be available. Students who do not meet the requirements in the Course Notes below may take the course for Pass/Fail credit. Please check audition dates and other mandatory meetings/classes on the Canvas Music 189R home page.

Course Note: New for the Fall 2025 semester: students will not be able to request pre-formed groups or personnel preferences. All group personnel decisions will be made by the instructors. Please visit Canvas page for the most updated schedule. In addition to end-of-semester public performances, this course will have mandatory full-class meetings on select Tuesday/Thursday evenings. Additionally, coachings will be scheduled throughout the semester between each group and instructor. Students who are currently in the NEC/Harvard dual program do not need to audition for the Fall 2025 semester, although this does not guarantee acceptance. Any other students who have enrolled in the course in past school years are required to re-audition. ALL students (including those exempt from a live audition) must fill out a questionnaire and submit it through Music 189's Canvas page. Students intending to enroll in both Harvard-Radcliffe Orchestra and Music 189R must audition for each course separately. This course is offered for letter-grade credit only when students are involved in one or more of the following: a Concentrator in Music; enrollment in a Department of Music course concurrently or in a previous semester (other than 189R); a member of a faculty-led music ensemble in the same semester; a student of the NEC/Harvard dual program. Students who do not meet one of these requirements may take the course for Pass/Fail credit, which must be done by petition after the first week of class. Entire class meets on select Tuesdays and Thursdays. Please see Canvas for specific dates.

Chamber Music Performance

2026 Spring (4 Credits)

TR 0730 PM - 0930 PM

Instructor Permission Required

Jessica Bodner, Daniel Chong, Kee-Hyun Kim, Ken Hamao, Ken Hamao

Through auditions, students will be divided into chamber music ensembles by the Parker Quartet, and have weekly coachings with members of the Parker Quartet and pianist Mia Chung. The semester will culminate with public performances in Paine Hall. Instrumentalists and vocalists are welcome to audition; however, duos or vocal-only ensembles are not allowed. Students will be expected to rehearse between each coaching and to participate in class meetings throughout the semester. There will be a final jury evaluation prior to the final public performances, to be held sometime during Reading Period--all students are required to be available. Students who do not meet the requirements in the Course Notes below may take the course for Pass/Fail credit. Please check audition dates and other mandatory meetings/classes on the Canvas Music 189R home page.

Gospel Music from the Church to the Streets

2026 Spring (4 Credits)

TR 0130 PM - 0245 PM

Instructor Permission Required

Charrise Barron

Gospel music has informed some of the greatest popular music artists of all time, including Elvis Presley, Snoopy Dogg, Aretha Franklin, Whitney Houston, and Beyoncé. This seminar surveys the history of African American gospel music as it has been implemented for worship, evangelism, and popular consumption. Beyond analysis of key musical and lyrical characteristics of gospel, this class gives attention to the religious and sociocultural contexts that inform gospel composition and performance. Consequently, this course is a musical introduction to African American Christianity. Finally, the global resonances of this music are explored to situate the music in the context of global Christianity. Classes include interactive demonstrations in addition to discussion of audio/video recordings, other primary source material, and required texts.

MUSIC 190RAM (SEM)**Music in Colonial Latin America**

M 1245 PM - 0245 PM

*Alejandro Madrid-Gonzalez*Course ID: 224703
2026 Spring (4 Credits)*Instructor Permission Required*

Music in Colonial Latin America. In 1494 the two kingdoms of the Iberian Peninsula, Spain and Portugal, signed the Treaty of Tordesillas, which divided the New World between them with the eventual blessing of the Pope Julius II's bull *E aquae pro bono pacis*. These events paved the way to the continuous presence of the Spanish and Portuguese empires as colonial powers in the Americas until 1898, when Spain lost its last two colonies in the continent, Cuba and Puerto Rico. This course explores the dynamics of coloniality in Latin America through the lens of musical and aural practices that, regulated by a variety of imperial, religious, and civic institutions, played a significant role in shaping the ideologies that have affected everyday class, racial, and gender relations in the region for centuries. The class studies the uses of Catholic music (cathedral and convent), secular music (villancicos and theatrical forms), and folk music (son traditions, fandangos, and Afro Latin American traditions) and their intersections in the implementation and negotiation of colonial class and racial structures and everyday practices, as well as in the development of new transgressive hybrid forms and spaces. These were transcultural forms that allowed members of subaltern racial and ethnic groups to forge cultural spaces of resistance and collective expression within the highly hierarchical order of the colonial Spanish vicerealties and the Portuguese captaincies of Brazil.

2026 Spring (4 Credits)*Instructor Permission Required*

This course introduces students to the discipline of musicology. Particular attention will be given to emerging trends, methodologies, and modes of writing history. That is, we will concentrate not on music history per se, but on historiography—the way scholars write about music's past and present. We will examine the premises by which scholars frame their arguments, the methods they adopt (and neglect), and the basic problematics of research. We will also consider issues that connect musicology to the broader world. Emphasis will be on weekly readings of recent publications, brief writing assignments, and discussion.

Course Note: Graduate students only. Undergraduates may enroll only with prior approval from faculty.

2025 Fall (4 Credits)

W 0300 PM - 0500 PM

Alejandro Madrid-Gonzalez

Music Biography: Reassessing a Genre. Johann Nikolaus Forkel's 1802 biography of Johann Sebastian Bach not only helped cement the idea of the composer from Eisenach as a musical "genius" but also, arguably, signaled the birth of musikwissenschaft (musicology) as an authoritative scholarly field. From the discipline's inception through the 1990s, biographical studies thrived through the most important epistemological transformations of musicology as a field of studies. However, at a moment when critical music research moves away from celebrating "great men," reproducing Eurocentric teleology, and embracing grand historical narratives, one would think that the genre may lose its popularity. By critically engaging classic as well as recent music biographical literature this class seeks to interrogate the genre, its current transformations, and its future viability as music scholarship opens to modes of inquiry from ethnomusicology, popular music studies, anthropology, sociology, cultural studies, and performance studies.

Current Issues in Music Theory

T 1245 PM - 0245 PM

Toru Momii

Course ID: 124044

2025 Fall (4 Credits)

Instructor Permission Required

This seminar introduces students to the current issues in U.S./Canadian music theory, with particular emphasis on the field's interdisciplinary connections with the intellectual project of ethnic studies. Readings will draw widely from music theory, historical musicology, and ethnomusicology, as well as from disciplines such as Black Studies, Indigenous Studies, Asian American Studies, decolonial theory, gender and sexuality studies, and critical university studies to consider how these methodologies reimagine music theory's normative practices of listening, analysis, and pedagogy. By exploring how questions of power and identity intersect with contemporary issues facing music theorists, we will examine the possibilities of interdisciplinary, socially engaged, and public-facing music-theoretical work and how we might imagine and act towards a more equitable discipline.

Course Note: Enrollment is open to all graduate and upper-level undergraduate students, upon approval by instructor.

Opera, Empire, Modernity

Course ID: 226365

2025 Fall (4 Credits)

Since the late Renaissance, the work of opera has been bound up with Europe's imperial ambitions. In this course, we will interrogate its role as a world-historical phenomenon in consolidating, sustaining, and challenging colonial empires over the past four centuries. How was the growth and development of opera as a cultural institution affected by European expansionism? Does opera have a special kinship with secular modernity? What can quintessentially operatic figures (the castrato, the prima donna, the doomed lover, the femme fatale) tell us about non-normative identities? And what social, cultural, or political roles can opera fill in the era of global capitalism? Topics include exoticist and Orientalist tropes and racial costuming; adaptation of European opera across the globe; transgressions of the gender frontier; and hybrid re-interpretations and stagings of works from the operatic canon. We survey a variety of genres from Restoration semi-opera to contemporary Baroque-folk fusion, postmodern re-stagings of opera seria and postcolonial musical adaptations, television opera and the concept album; and visits from practitioners and creative artists are planned.

Course taught by new Music Department faculty member, Devon Borowski.

Sound Studies

M 0300 PM - 0500 PM

Course ID: 226426
2025 Fall (4 Credits)

Instructor Permission Required

Sound studies is an interdisciplinary field, situated at the intersection of science and technology studies, film, music, media, anthropology, and cultural studies. Scholars in sound studies analyze both the technologies and cultural techniques involved in the production, reception, and meaning of sound and listening. This seminar is intended as a broad introduction to sound studies. We read major texts and theorists in the field and investigate some of the central topics of concern, such as soundscape (contemporary and historical), acoustic ecology, listening (from philosophical, sociological, and cultural perspectives), electronic music and noise, sound art, histories of audio technologies, and cultural techniques of sound production and reception. Substantial weekly readings and a final research project are required.

Graduate students from other department are welcome.

Artist-Scholars and Book Writing. Enrolled attendees learn skills directly applicable to their scholarly work as artist-scholars. Part of this is reflecting on how musicians practice writing and how we may turn our own, or our colleagues, artistic practices into academic books, or other kinds of written texts to share our theorizing with the public. Attendees read a book of their choice as a way to study the art of book writing. Subsequently, they develop the skills to write a book proposal of their own. To foster peer feedback and working within a community of thinkers and artists, the seminar hosts a series of guests with whom attendees enter into conversations. Attendees will moderate discussions, serve as respondents, and engage in open discussions with some of the leading scholars and artists of the topic for the semester. Some of the questions that we engage are: What unique ways of thinking our world might music afford? How do praxis and theory intertwine and influence each other? What kinds of methodologies and new approaches to study, research, and interdisciplinarity might listening, sound, and musicians and their work propose? Our study is aided by reading the writing of musicians who theorized the world as part of their artistic practice and of scholars whose works derive from thinking alongside these practices. Specifically, we will read musicians' texts such as Anthony Braxton's *Tri-Axium Writings*, Alice Coltrane's books, Cecil Taylor's liner notes to *Unit Structures*, and Susie Ibarra's *Rhythms of Nature*. Alongside those we also engage scholars who develop their theorizing from these musical practices such as Fred Moten and Fumi Okiji. This course is for graduate students of all disciplines. Artists are welcome but skill in music or other artistic disciplines is not required. Nonetheless, the course centers particularly music and sound in their relation to scholarship.

Carolyn Abbate

The seminar will introduce participants to some classic texts in music philosophy, as well as exploring questions relevant to here and now, as they emerge from the discussions. We look at assertions and arguments that music is able to do things: inspire political change (for example, lead to climate activism), model ethical behavior (represent cooperation), reflect social and historical constructs (trace disenchantment), shape an emotional habitus (induce serenity); and claims that music constitutes a kind of thinking that improves on more humdrum and/or dubious ways of knowing. These have been central questions explored by music philosophers, and their responses range from skepticism to passionate hyperbole. What is the motivation for these claims, and why is their fervor often in inverse proportion to the economic value ascribed to music by society? Our entry into the subject is both via several famous philosophers and via contemporary reappraisals in a recent publication, *The Oxford Handbook of Western Music and Philosophy*.

Anne Shreffler

In investigating music since 2014, we will focus on work from a variety of genres from different geographic, cultural and aesthetic positions, rather than attempting a comprehensive survey. About half of the repertoire shall be by composers who live and work in the U.S., the other half international. Creators of notated and improvised music (of all genders) will be considered. Students will have input into the choice of music. Our main goals will be to get to know some pieces of music well and to develop a vocabulary for writing and talking about them. We will need to think about how to develop a frame of reference necessary to listen to, analyze, and understand a new

musical creation, to which accepted categories and descriptions might not necessarily apply. Another topic is how to evaluate the flood of information about new music currently available and ask how current trends alter existing historiographies. I believe that not only composers, but also musicologists, ethnomusicologists, and theorists should occupy themselves with new music as a significant cultural phenomenon. Writing about new music is not peripheral, but helps establish a discourse within which this repertory can become more visible in the cultural landscape.

Course Note: The seminar is open to graduate students in Music (all programs), as well as to undergraduates (with permission of instructor) and graduate students from other departments

Arabic Literature from Pre-Islamic to the modern period

MW 1200 PM - 0115 PM

Shady Nasser

Course ID: 122191
2025 Fall (4 Credits)

This course will introduce students to the major writers, canonical works, and important literary movements of Arabic Literature from late antiquity up to the modern period. The course will be structured thematically with special focus on the historical context and cultural tradition within which literary works fit and resonated. The course will consider the development of various literary genres over time (poetry and qasida form, narratives, fiction, Belles-lettres, maqama, shadow plays and Drama, etc.). Selected works of literature will be read in translation, but students with Arabic can work with the original texts in a separate section. Texts will often be discussed vis-à-vis parallel themes in other works of literature whenever relevant (e.g. The Qur'anic and Biblical Joseph, Ma'arri's Epistle of Forgiveness and Dante's Divine Comedy, Ibn Battuta and Marco Polo's travelogues, etc.) with special attention to the influence of Western Literature on Modern Arabic poetry and prose. The course is open to both undergraduates and graduate students.

This course introduces students to modern and contemporary Arabic prose from the early twentieth century to the present as a window on Arab thought, culture, society, and politics. The course aims to enable students to closely read and analyze Arabic writing ranging from shorter narratives to novels. All language skills form an essential part of this communicative course; course objectives include developing students' written and spoken discourse, as well as enriching their command of high-register vocabulary. Students will take part in determining course readings.

Course Note: Course conducted solely in Arabic; all readings in Arabic.

Classical Arabic Texts Seminar: An Introduction to Reading in Arabic Manuscripts

R 0300 PM - 0545 PM

Shady Nasser, Khaled El-Rouayheb

In this seminar, we introduce students to Arabic manuscripts by (i) giving them practice reading and comparing Arabic manuscripts belonging to different genres and written at different periods and regions, and (ii) reading a selection of secondary literature on medieval scholarly culture, textual criticism and paleography. Though primarily working with scanned manuscripts, we will integrate a visit to Houghton library to inspect physical manuscripts.

Three years of Arabic. Students are expected to be able to read 15-20 pages of classical Arabic per week.

Historical Background to the Contemporary Middle East: Religion, Literature and Politics

TR 1200 PM - 0115 PM

Andrew Danielson

What defines the Middle East? What long-term historical and cultural developments can we trace in the region? How do these affect contemporary global order and policy? This team-taught course in the NELC department will address these three fundamental questions of great present relevance by introducing students to the ancient and modern peoples, languages, cultures, and societies of Western Asia and North Africa. The study of this diverse region is uniquely aided by a deep-time perspective afforded by thousands of years of vibrant art, writing and cultural artefacts. Relying on the classic expertise integral to area studies, the course brings together faculty from a variety of disciplines – from history and archaeology to literature and philology, and from sociology and economy to the political sciences – in a common endeavour to explore the rich cultural complex of the region through four key topics: history, religion, literature and politics.

Course Note: Formerly NEC 97r, this course satisfies the NELC Sophomore Tutorial requirements.

NELC Doctoral Colloquium: Research, Resources and Pedagogy

M 0600 PM - 0715 PM

Khaled El-Rouayheb

Course ID: 203473
2025 Fall (2 Credits)

Instructor Permission Required

This practical colloquium addresses major issues of research and teaching competence. Designed to introduce G-1 students to the Ph.D. requirements, to methodological issues and examples of ongoing scholarship in NELC, it further offers opportunity for reflection on the art of teaching (leading discussion sections, designing syllabi, giving lectures, etc.). Questions covered will include: How to choose coursework? How to prepare for qualifying and general exams? What are the challenges of language training? How does one prepare and write a prospectus? How to use the library resources most efficiently? What type of investment does recourse to digital and quantitative methodology require? How best to prepare for professional life after the Ph.D., both inside and outside of academia? In addition, NELC faculty will informally present their respective fields (main issues and methods), in broad strokes through their current research, and advanced Ph.D. students will present their prospectus for discussion and feedback before submitting it to the faculty.

M 0600 PM - 0715 PM

Khaled El-Rouayheb

Course ID: 204053
2026 Spring (2 Credits)

Instructor Permission Required

This course consists of a series of workshops in which NELC doctoral students in their G3-year will develop a strong foundation of skills to prepare them for their first teaching at Harvard and to enhance the effectiveness of their teaching in the long term. Each session will inculcate best practices for major Teaching Fellow roles and introduce key topics in pedagogy, such as teaching languages (ancient and modern), communicating with students, and grading and providing feedback on student work. In addition, a few sessions throughout the semester will be devoted to workshopping the dissertation prospectuses of NELC PhD students prior to their presentations to the faculty; these sessions afford a chance to share feedback and to learn about the research of other NELC doctoral students.

M 0345 PM - 0545 PM

Adam Mestyan

Course ID: 226562
2025 Fall (4 Credits)

Instructor Permission Required

This seminar focuses on the history of the State of Syria over the last hundred years. We will survey the economic, legal, political, environmental, and cultural history of this polity from the late Ottoman Empire to the present day. The main objective is to highlight the regional consequences of imperial partition and state-making under European administrative control, the creation of Israel, the Syrian occupation of Lebanon, and post-1989 American hegemony. In addition to state-centered histories, we will also explore the social history of the regional and global Syrian diaspora, the French and Arab imperial projects of the twentieth century, the question of whether "decolonization" is an appropriate term for describing independent polities, and the role of religion in the Baathist regime. We will conclude with a discussion of recent developments, including the fall of Asad in December 2024.

Classical Hebrew

CLAS-HEB AA

Elementary Classical Hebrew I

MWF 1030 AM - 1145 AM

Vladimir Olivero

This course offers a thorough and rigorous introduction to Classical Hebrew grammar. In this first semester, students will learn the Hebrew script and the basics of Hebrew morphology. This will allow students to begin reading and translating biblical prose in the second semester. By the end of the year, students who have taken both semesters will have covered all the basics of nominal and verbal morphology and will know the foundations of Classical Hebrew syntax. Daily preparation and active class participation mandatory. Course to be taught by Dr. Vladimir Olivero.

Course Note: Offered jointly with the Divinity School as 4010A.

FAS: Meets Foreign Lang Req: Hebrew

FAS Divisional Distribution: None

CLAS-HEB AB

Elementary Classical Hebrew II

MWF 1030 AM - 1145 AM

Vladimir Olivero

Continuation of Classical Hebrew AA. A thorough and rigorous introduction to Biblical Hebrew, with emphasis on grammar in the first term, and translation of biblical prose in the second. Daily preparation and active class participation mandatory.

Course Note: Offered jointly with the Divinity School as 4010B.

Requires: Pre-requisite: CLAS-HEB AA

FAS: Meets Foreign Lang Req: Hebrew

FAS Divisional Distribution: None

CLAS-HEB 120A

Intermediate Classical Hebrew I

MWF 0900 AM - 1015 AM

Vladimir Olivero

The goal of this course is to help students develop fluency and confidence in reading texts from the Hebrew Bible in Hebrew. To this end, the bulk of the course will consist of close readings of select narrative passages from the Bible, with a focus on understanding and analyzing their vocabulary, morphology, and syntax. Students will also systematically review the most common vocabulary found in the Hebrew Bible as a whole as well as the grammar covered in first-year Hebrew, besides being introduced to more advanced aspects of syntax and to a more nuanced approach to the Masoretic text. Prerequisite: Introductory Classical Hebrew I and II (CLAS-HEB AA+AB = HDS 4010 A+B) or the equivalent. Daily preparation and active class participation mandatory. Course to be taught by Dr. Vladimir Olivero.

Course Note: Offered jointly with the Divinity School as 4020.

Rapid Reading Classical Hebrew I: Pentateuch

R 1200 PM - 0159 PM

Vladimir Olivero

This course is designed to help students increase their reading fluency with Classical Hebrew (in the Tiberian tradition), deepen their knowledge of Hebrew morphosyntax, and expand their Hebrew vocabulary by covering large areas of biblical Hebrew narrative from the Pentateuch (selections from Genesis through Deuteronomy). In the process, students will be exposed to Hebrew prose materials that are key to understanding the history of ancient Israel and Judah and the formation of the Hebrew Bible. Prerequisites: Classical Hebrew AA/AB sequence, CH 120a, and 120b, or equivalent to two years of academic study of Classical Hebrew.

Course Note: Offered jointly with the Divinity School as 1625.

Classical Hebrew AA/AB sequence, CH 120a, and 120b, or equivalent.

2026 Spring (4 Credits)

Rapid Reading Classical Hebrew II

R 1200 PM - 0159 PM

Vladimir Olivero

This course is designed to help students increase reading fluency and speed in Classical Hebrew poetry. To this end, the course will consist of a close reading of the Book of the Twelve (Hosea–Malachi), paying particular attention to the areas of phonology, morphology, and syntax. Given its internal linguistic diversity, the Book of the Twelve offers the unique advantage of exposing students to the diachronic (e.g., Standard vs. Late Biblical Hebrew) and stylistic dimensions of Biblical Hebrew. Depending on individual student interests, the course will also provide opportunities to explore historical linguistics, compositional poetics, textual criticism, and the Tiberian reading tradition. Prerequisites: Classical Hebrew AA/AB sequence, CH 120a, and 120b, or equivalent.

Classical Hebrew 130a or equivalent. Offered jointly with the Divinity School as 1626.

What is Biblical Hebrew?

W 0300 PM - 0545 PM

Vladimir Olivero

Biblical Hebrew is taught and often studied as a monolithic entity, despite the widespread recognition that behind this label lies a more complex reality. The goal of this course is twofold: first, to familiarize the students with the variety of attested reading traditions and, second, to introduce them to the periodization of Biblical Hebrew. In each case we will read portions of texts to better grasp the main linguistic differences between reading traditions and between chronolects, and to understand the interpretative implications of such differences. We will begin with a detailed and advanced study of the Tiberian reading tradition, whose basic features the students already know. We will then explore the less known, yet prestigious, Babylonian reading tradition, which we will compare

to the more familiar Tiberian one. Finally, the students will be introduced to the so-called popular reading traditions, that is the Palestinian reading tradition and the transliterations of portions of texts and words of the Hebrew Bible into Greek (e.g., Origen's *Secunda* and those found in the Septuagint) and into Latin (e.g., Jerome). To conclude our study of reading traditions, we will study the Samaritan reading tradition and read portions of the Samaritan Pentateuch. With regards to periodization and linguistic diachrony, the students will be introduced to the distinctive features (mostly syntactic and semantic) of the three main chronolects of Biblical Hebrew and their respective textual corpora: Classical Biblical Hebrew (pre-exilic); Transitional Biblical Hebrew (exilic); Late Biblical Hebrew (post-exilic). Epigraphic Hebrew and textual criticism will help illustrate how chronolects can be further assessed.

Yiddish Literature and Culture in America

W 1245 PM - 0245 PM

Justin Cammy

Explores the diversity of Yiddish literary culture in the Americas, from immigrant narratives to avant-garde experimentation, from the ways Yiddish translated and interpreted America to a consideration of the Yiddish trace in more recent texts. Explores such themes as encounters with new American landscapes; race and racialization; the creative deployment of folk-types such as the shlemiel and otherworldly dybbuks; literary modernism and proletarian writing; humor and ethnic performance; and construction of imagined Yiddishlands. Ideal for students looking to enhance their understanding of American literature through a multilingual lens. Includes a curated visit to the Yiddish Book Center in Western Massachusetts. Students interested in English and American literature, Comparative Literature, and American history are especially encouraged, though no prior knowledge is expected. All readings in translation. To be taught by Dr. Justin Cammy.

The Jewish Library: Four Jewish Classics

M 1200 PM - 0245 PM

David Stern

Course ID: 214616

2025 Fall (4 Credits)

Judaism is a famously text-centric religious culture, founded not only on a single book, the Hebrew Bible, but profoundly involved in the study and ritual use of other classic texts like the Babylonian Talmud, the Prayerbook, Biblical commentaries like that of Rashi, and the Passover Haggadah. This course will study the development of these four books and their transformation from texts into books with distinct physical and material features. In the case of each book, the text will be studied historically-- "excavated" for its sources and roots, and its subsequent development over the centuries—and holistically, as a canonical document in Jewish tradition. Class time will be devoted primarily to learning to read the primary sources in translation; supplementary secondary readings will provide historical and cultural context. The seminar will also include regular visits to Houghton Library to look at manuscripts, early printed editions, and facsimiles of these books in order to study the changing shapes these books have taken as a key to understanding how they were studied and used, and to consider the relationship of materiality to textuality. While each book will raise its own set of issues, we will repeatedly deal with three basic questions: What makes a "Jewish" text? How do these books represent different aspects of Jewish identity? What can these books tell us about the canonical books of other religious traditions? No previous background in either Judaism or Jewish history is required. All readings in English translation. While this course is not a formal introduction to Judaism, it does aim to introduce students to Judaism and Jewish culture from inside its classic texts.

Jews in the Americas

MW 1030 AM - 1145 AM

Susannah Heschel

Course ID: 226605

2025 Fall (4 Credits)

In less than a century, the United States became the site of the largest migration in Jewish history. Jews came for various reasons, mostly with eagerness to leave where they were living, and they came to a country which had mythic importance to them. How did Jews come to imagine America as the "promised land" for Jews? This course is defining America as the hemisphere – Jews in North, Central and South America – with attention to landmark events, ideas, controversies, religious innovations, and institutions that emerged from the 17th century to the present.

JEWISHST 209

What We Owe to Others: The Ethics of Obligation in Jewish Law

M 0345 PM - 0545 PM

Course ID: 226581

2026 Spring (4 Credits)

Instructor Permission Required

The seminar will explore obligations to others in Jewish Law such as charity, saving life and different domains of care for others. We will examine biblical, Talmudic and later materials in Jewish Law that deal with the following questions: how is the category of the poor defined; how does the Talmud define needs and deprivation; and what is the hierarchy of needs? How does Jewish law deal with the risk of humiliation which is inherent in the act of accepting help? Responsibility and care for others and the limits of sacrificing for others? Do we give what is ours, or does the obligation of giving assume limitations on ownership? The seminar will examine communal obligations to others as well, such as taxation and organized distribution in the Talmud and Responsa literature. The examination of these questions will be conducted from a comparative perspective, which explores approaches to these problems in ethics, political theory and law. The analysis of these diverse seminar themes will be conducted through close readings, mainly of Talmudic discussions. Course materials, including all the relevant sections from the Talmud and later commentaries and codes, will be distributed during the first meeting of the seminar. No prior knowledge of Hebrew or Aramaic is necessary, and English translations of the original materials will be provided

Course Note: Jointly offered with HLS 3381

JEWISHST 212

Maimonides on Religion, Philosophy and Law

T 0345 PM - 0545 PM

Course ID: 226553

2026 Spring (4 Credits)

Instructor Permission Required

The seminar will explore Maimonides' comprehensive reinterpretation of the Jewish tradition in light of his philosophical commitments and religious sensibilities. The diverse topics will be studied through close readings from Maimonides major works - "Guide of the Perplexed", his code "Mishne Torah", and the "Commentary on the Mishnah". Special attention will be devoted to the examination of Maimonides' outlook in relation to alternative positions that emerged from the encounter of religion and philosophy within Islamic medieval thought and other Jewish thinkers such as Sa'adya Gaon and Yehuda Ha-Levi.

Sumerian

SUMERIAN AA

Course ID: 115449
2025 Fall (4 Credits)

Introductory Sumerian I

TR 1030 AM - 1145 AM

Anna Glenn

The course provides an introduction to the Sumerian language, a language isolate spoken in ancient Mesopotamia and probably the world's first written language. Although several aspects of Sumerian remain debatable, students learn the fundamentals of the grammar and writing system as well as the most common cuneiform signs in a variety of lapidary and cursive contexts. Many of the texts that are covered are a variety of dedicatory inscriptions from the time of Gudea (ca. mid-twenty-second century BCE) and the subsequent Ur III dynasty (ca. twenty-first century BCE), but other genres and time periods are sampled as well. This study of the Sumerian language also includes some background on the culture and history of the Sumerians. Course to be taught by Dr. Anna Glenn.

FAS: Meets Foreign Lang Req: Sumerian

FAS Divisional Distribution: None

SUMERIAN AB

Course ID: 159864
2026 Spring (4 Credits)

Introductory Sumerian II

TR 0900 AM - 1015 AM

Anna Glenn

Students are further familiarized with a variety of genres, including economic texts, incantations, legal texts, letters, and literary works. This familiarization with more difficult texts highlights many of the debatable and challenging features about Sumerian while also providing important insights into the history and culture of the Sumerians. Students also strengthen their familiarity with the cuneiform system, enabling further study in Sumerian as well as in Akkadian and other cuneiform-based languages.

2026 Spring (4 Credits)

The Materiality of Writing in the Ancient World: Sumerian, Cuneiform, and Beyond

W 0900 AM - 1145 AM

Anna Glenn

Cuneiform, the world's earliest writing system, was invented over 5,000 years ago in Mesopotamia (ancient Iraq). It was originally used to write the Sumerian language, a language that continued to be written for over 3 millennia and produced a corpus of well over 100,000 preserved texts. The act of writing—a means of externalizing and

visually representing language—has an inherent materiality to it, one that was new and innovative in the ancient world. In this class, we will explore the relationship between the Sumerian language and the materiality of its writing. Topics will include: How did the cuneiform script develop from visual depictions of material objects to abstract, polysemous signs? How were clay tablets made? How were they prepared for writing? What was the process of inscribing Sumerian on other materials? How did formatting of the tablet develop to provide additional information beyond the text itself? How was text used in conjunction with other types of visual representation (e. g., maps, sketches, floor plans)? What roles did Sumerian inscriptions play on monumental works of art? What do self-referential inscriptions tell us about the objects on which they were inscribed? What functions could Sumerian writing serve beyond conveying linguistic content? A second major component of the course will focus on the materiality of texts as objects preserved in a museum collection. The class will meet in the Harvard Museum of the Ancient Near East and will make extensive use of its cuneiform tablet collection.

FAS: Meets Foreign Lang Req: Sumerian

SUMERIAN 144

History's Oldest Religion In Sumerian Texts

M 0900 AM - 1145 AM

Anna Glenn

Course ID: 225850
2026 Spring (4 Credits)

In this course, we will examine the religions practiced in ancient Mesopotamia (modern Iraq) and the broader Near East through the lens of Sumerian texts. Case studies focused on various groups of Sumerian texts will serve as the basis for discussion of many different aspects of Mesopotamian religious life. The civilization of Sumer is the oldest civilization in recorded history; the first texts known to humankind were written in Sumer over 5,000 years ago. From the start of writing, and continuing over next three millennia, Sumerian texts offer a multifaceted wealth of insight into religious practices and beliefs of the ancient world. From these texts, we learn about ancient conceptions of creation, the universe, and humanity; myths about gods, goddesses, and demons; the performance of rituals and cultic rites; the construction and provisioning of cult statues; the day-to-day functioning of ancient temples; and much more. Elements of Sumerian religion can be traced through subsequent and surrounding cultures and traditions, both in Assyria and Babylonia, and further afield in the Hittite, Israelite, and Greco-Roman worlds. The study of ancient religions is not only integral to understanding these societies and civilizations to which they belonged, but it also serves as an invaluable point of reference for reflecting on modern-day religions and worldviews. Sumerian texts will serve as the basis for exploring all the topics mentioned above. Primary texts will be provided in transliteration and translation; students will read the texts in translation while making frequent reference to the original Sumerian. Prior knowledge of the language is not required.

HEBREW 131

The Book of Daniel

T 0300 PM - 0500 PM

Andrew Teeter

A critical and exegetical study of Book of Daniel, based on a close reading of the text in Hebrew and Aramaic. Special attention will be given (1) to compositional poetics (i.e., large-and small-scale compositional strategies, principles of literary organization, textual logic, and analogical patterns); and (2) to inner-scriptural relationships, and to the nature and function of allusion and analogy within this book. This will be undertaken with a view toward understanding the overall expectations made of readers, ancient and modern. The text of Daniel and its underlying principles of design will be considered in the context of major critical debates within the current state of the field. The course presumes basic proficiency with Biblical Hebrew. Minimum of one year of Hebrew required. No previous knowledge of Aramaic required.

Minimum one year Classical Hebrew

The Language of the Pharaohs: Introduction to Egyptian Hieroglyphs I

TR 1030 AM - 1145 AM

Peter Manuelian

This language course explores the fundamentals of Middle Egyptian, the classical stage of Egyptian hieroglyphs used throughout much of ancient Egyptian history. Lessons in the Egyptian writing system, grammar, and culture, with weekly vocabulary and exercises, will introduce the language and verbal system in a systematic fashion. By the end of the semester, students may begin to read selections from Egyptian classic stories and historical texts. Visits to the Harvard Museum of the Ancient Near East and the Museum of Fine Arts, Boston, in order to read ancient hieroglyphic inscriptions on the original monuments, may also be included. This course is supervised by Dr. Manuelian but taught by instructional staff.

Course Note: Continues as Egyptian Ab. Offered jointly with the Divinity School as 4120.

Critical Readings in Egyptology

No meeting time listed

Peter Manuelian

Course ID: 218196
2025 Fall (4 Credits)

Instructor Permission Required

A weekly seminar for undergraduates and graduates in which we read and discuss a selection of important "classic" and key new books (and a few selected articles) relevant to the field of Egyptology (including Egyptomania and more recent "decolonizing" literature). The seminar targets students in Egyptology, but those in Assyriology, Classics, Divinity, History, Hebrew Bible, Religion, and other fields might also find it interesting and relevant. We will rehearse skills in critical reading, writing scholarly reviews, debating, and will engage with relevant literature, largely selected by students themselves, that we would not otherwise find the time to read.

ISLAMCIV 113

**The History of the Moriscos: from the Iberian Peninsula to the Diaspora
(16th-18th c.)**

M 1245 PM - 0245 PM

Course ID: 226541
2025 Fall (4 Credits)

This course offers an examination of the history of the Moriscos, a population of Muslims in the Iberian Peninsula who have been forced to convert to Christianity since the early sixteenth century. The course begins with an examination of the genesis of the Morisco community, placing it in the context of the Muslim presence in the Iberian Peninsula and the historical trajectory of the "Reconquista period". Students will gain insight into the cultural, economic, and religious practices that shaped Morisco identity during this transformative period. The course will examine the challenges faced by the Moriscos in preserving their cultural and religious identity while living in a predominantly Christian society. The expulsion of the Moriscos from Spain in 1609 represents a pivotal moment in their history, and this course will provide an in-depth analysis of its causes, consequences, and global impact. The Diaspora section will examine the migration of the Moriscos beyond Spain's borders, with a particular focus on their settlement in North Africa. Using an interdisciplinary approach, students will examine the Moriscos' contributions to art, literature, science, and philosophy in their new environment, as well as the challenges they faced in maintaining their distinct identity. Students will engage with scholarly articles and contemporary accounts to develop a nuanced understanding of the historical trajectory of the Moriscos. By the end of the course, students will have acquired a comprehensive knowledge of Morisco history and its enduring impact on the broader cultural and historical landscape of the Mediterranean and beyond.

The Quran through the ages: Transmission and Reception

W 1200 PM - 0245 PM

Shady Nasser

Course ID: 160949
2026 Spring (4 Credits)

The course provides a comprehensive introduction to the Quran, with a focus on its origins, form, reception, and transmission history, while also considering its contemporary role in Muslim societies. Prior knowledge of Arabic or Islam is not required. Topics covered will include oral and written transmissions, the collection and codification of the Quran, Quranic recitation, Quranic manuscripts, calligraphy, and material culture related to Quranic elements. Additionally, the course will address major themes linked to specific disciplines within Quranic studies, such as exegesis and prophetic traditions. Students are required to submit response papers (1-2 pages) on a weekly basis.

Ancient Near East

ANE 115

Archaeology of the Levant

T 1200 PM - 0245 PM

Andrew Danielson

This course examines past societies of the ancient Levant through the archaeological record from the Neolithic through to the end of the Persian period (c. 9750–332 BCE). Artifacts and archaeological remains will be discussed in the context of past societies and contemporary interpretations. Specific topics include archaeological methods, the development of agrarian societies, urbanism, social hierarchies, technological innovations, diplomacy, economic interconnections, state formations, environmental change, colonialism, and state/household ritual. Specific focus will be given to the periods of the Late Bronze and Iron Age in the Levant, examining the formation and dissolution of Bronze Age city-states, and the rise and fall of Iron Age kingdoms including ancient Israel, Moab, and Edom. As a part of the course, students will interact with archaeological material culture at the Harvard Museum of the Ancient Near East.

Course Note: Course to be taught by Dr. Andrew Danielson.

FAS Divisional Distribution: Social Sciences

ANE 116

Age of Empires: Violence, Ideology, and the Making of Ancient Near Eastern Societies

T 1200 PM - 0245 PM

Andrew Danielson

What is empire? Why and how are some political collectives more successful than others in achieving dominance over diverse geographic locales and social groups? What role does violence and ideology play in the imperial project? And what strategies do communities employ to negotiate their position under non-local rule? This course explores the range of answers to such questions by surveying the rise and fall of several major Bronze and Iron Age empires of ancient southwest Asia, including New Kingdom Egypt, the Hittites, Assyria, Babylon, Achaemenid Persia, and the arrival of Hellenism under Alexander of Macedon. In concert with investigating the structure, ideologies, and characteristics of expansion of these imperial powers, the archaeological, visual, and epigraphic record will be engaged to give equal focus to the diverse experiences of peoples subjected to such structures of domination. Specific focus is placed on the region of the ancient Levant and the communities therein, exploring their reaction to these imperial programs throughout the late second through first millennium BCE. In doing so, we will investigate how the intersection of imperial objectives dovetailed with local strategies of resistance and/or adaptation, resulting in the making of ancient Near Eastern societies.

ANE 120A

Introduction to the Hebrew Bible/Old Testament 1: Pentateuch and Former Prophets

TR 1030 AM - 1145 AM

Andrew Teeter

A critical introduction to the literature and theology of the Hebrew Bible, considered in light of the historical contexts of its formation and the interpretive contexts of its reception within Judaism and Christianity. The course, the first part of a divisible, year-long sequence, will focus on the major biblical narrative traditions, the Pentateuch and Former Prophets.

Course Note: Offered jointly with the Divinity School as 1102.

Andrew Danielson

Course ID: 225812
2026 Spring (4 Credits)

Instructor Permission Required

This course examines past societies of the ancient southern Levant through the archaeological record of the Iron Age (ca. 1175–550 BCE). The course focusses on the kingdoms and cultures of Israel, Judah, Philistia, Ammon, Moab and Edom, engaging with the periods prior to their formation, the processes that shaped them, and the aftereffects of their demise. Specific course topics include state formation, nomadism, cross-cultural interaction, identity, economies, power in society, empire, resistance, refugees, and religion. This course will involve the Harvard Museum of the Ancient Near East, making use of the exhibits, and especially the archaeological material culture in its storerooms. Students will regularly engage with this material culture, forming research projects and presentations in relation to it.

Introductory Akkadian I

MW 1200 PM - 0115 PM

Celine Deboutse

An introduction to the Semitic language of Akkadian, primarily through the Old Babylonian dialect and cuneiform writing system as used during the time of Hammurabi (c. 1750 BCE). Students learn the fundamentals of grammar and the writing system, as well as the most common cuneiform signs in official and cursive script. Readings span a variety of genres, including private letters, judicial documents, literary and religious texts, divinatory compendia, legal code, and royal inscriptions. The course also briefly introduces students to examples of texts from other periods and dialects of the Akkadian language for cultural and comparative purposes. This course is supervised by Dr. Deboutse but taught by instructional staff.

TR 1030 AM - 1145 AM

Katie Quast, Naoshige Uchida

Course ID: 207476

2025 Fall (4 Credits)

An introduction to the ways in which the brain controls mental activities. The course covers the cells and signals that process and transmit information, and the ways in which neurons form circuits that change with experience. Topics include the neurobiology of perception, learning, memory, emotion, and neurologic disorders. This year we are combining interactive, didactic lecture videos with live Tuesdays and Thursdays featuring guest lectures, hands-on demonstrations, and review sessions in addition to small discussion sections.

This course requires students to choose timed sections during registration. The course is open to students with little formal training in biology.

Comparative neuroscience and brain circuits across species

2025 Fall (4 Credits)

W 0300 PM - 0500 PM

Instructor Permission Required

Anqi Zhang

Rapid advances in neuroscience have given us a precise understanding of how specific brains solve specific problems, from spatial navigation in rodents to object recognition in macaques. One important question is how general these findings are across animal species, and particularly in comparison to human brains. In this course, we will discuss and assess scientific literature that tackles this question through the lens of how understanding of the brain can benefit from comparing across diverse species. How do different animal model species contribute uniquely to our understanding of neural circuit processing? How do studies in and comparison across non-human species help to discover fundamental insights that can have human or clinical relevance? We will use these questions to gain greater insight into neural mechanisms and ask how neuroscience can leverage animal diversity to learn core principles about the brain. We will discuss generalized and specialized neural mechanisms and examine what we have learned about neural computations by comparing findings across species.

Enrollment for this course will be via lottery with preference given to junior Neuroscience concentrators. Lottery instructions, deadlines, and a link to the google form can be found here: <https://www.mcb.harvard.edu/undergraduate/neuroscience/neuro-courses/?course-button=tutorials>

Dopamine: A Systems Neuroscience Perspective

T 0345 PM - 0545 PM

Mark Burrell, Malcolm Campbell

Course ID: 226359

2025 Fall (4 Credits)

Instructor Permission Required

In this tutorial, we will explore dopamine's diverse roles in reward, motivation, learning, and movement along with how its dysfunction contributes to conditions such as addiction. Drawing on recent systems neuroscience research, we will assess key conceptual frameworks, dissect seminal findings, and highlight unresolved controversies. Students will develop their ability to critically analyze primary literature and design an original research proposal that addresses a fundamental gap in our understanding of dopamine.

Enrollment for this course will be via lottery with preference given to junior Neuroscience concentrators. Lottery instructions, deadlines, and a link to the google form can be found here: <https://www.mcb.harvard.edu/undergraduate/neuroscience/neuro-courses/?course-button=tutorials>

Prerequisite: MCB/Neuro 80.

NEURO 101EE

Neuroscience of Psychedelic Experiences

R 0600 PM - 0800 PM

Chloe Jordan

Course ID: 226361

2025 Fall (4 Credits)

Instructor Permission Required

During a psychedelic experience, people report profound alterations in their sensation, perception, and consciousness, ranging from visual distortions to a loss of the sense of self to a feeling of "oneness" with the universe. While the psychedelic experience may last only minutes to hours, many people with these experiences report long-lasting changes in their thought patterns and perspectives for weeks to months afterwards. Psychedelic experiences can be induced by use of substances such as psilocybin, LSD, and ayahuasca, as well as by practices such as breathwork or meditation. How do psychedelic substances and other practices produce such impactful changes in the brain and in daily experience? We will discuss the neuroscience of psychedelic experiences, including neural substrates and circuitry underlying psychedelic substances, how psychedelic experiences may shape brain network activity through neuroplasticity, and the latest scientific developments investigating the utility of psychedelic experiences as treatments for other mental health conditions.

Enrollment for this course will be via lottery with preference given to junior Neuroscience concentrators. Lottery instructions, deadlines, and a link to the google form can be found here: <https://www.mcb.harvard.edu/undergraduate/neuroscience/neuro-courses/?course-button=tutorials>

Prerequisite: MCB/Neuro 80.

NEURO 101FF

Building a Human Brain: Cortical Development from Cells to Circuits

W 0600 PM - 0800 PM

Rahel Kastli

Course ID: 226363

2025 Fall (4 Credits)

Instructor Permission Required

This seminar offers an in-depth exploration into the development of the cerebral cortex, focusing on foundational and recent research that unveils the intricate processes shaping cortical architecture. The course is structured around three main thematic areas: neurogenesis of excitatory neurons, origin and integration of inhibitory neurons, and the formation of neuronal circuits.

Enrollment for this course will be via lottery with preference given to junior Neuroscience concentrators. Lottery instructions, deadlines, and a link to the google form can be found here: <https://www.mcb.harvard.edu/undergraduate/neuroscience/neuro-courses/?course-button=tutorials>

Prerequisites: Ls1a (or LPSA or LS 50) and MCB/Neuro 80.

The Neuroscience of Artificial Neural Networks: From Inspiration to Analysis

R 0345 PM - 0545 PM

Andy Keller

Course ID: 226364
2025 Fall (4 Credits)

Instructor Permission Required

How "neural" are artificial neural networks? Drawing on foundational and modern research, this course explores the conceptual and mathematical parallels between biological and artificial neurons, tracing their intertwined histories from early perceptrons to today's large-scale deep networks. We will investigate fundamental similarities and key divergences—such as with neural selectivities, large scale organization, and learning rules—and discuss how neuroscience methods are being used to interrogate the internal structure of deep vision and language models today. By examining seminal and contemporary literature, students will build an intuition for how brain-inspired principles have shaped modern AI, the role of neuroscience in AI development today, and how neuroscientific techniques can offer unique insights into the behavior and organization of complex computational systems.

Enrollment for this course will be via lottery with preference given to junior Neuroscience concentrators. Lottery instructions, deadlines, and a link to the google form can be found here: <https://www.mcb.harvard.edu/undergraduate/neuroscience/neuro-courses/?course-button=tutorials>

Prerequisites: MCB/Neuro 80 and Math 1b. Familiarity with differential equations, multivariable calculus, statistical inference, and linear algebra is recommended, but not required. Brief reviews of core mathematics will be provided during lectures before the associated readings.

Sculpting Activity: Neural Inhibition in Health and Disease

T 0300 PM - 0500 PM

Saad Hannan

Course ID: 220865
2025 Fall (4 Credits)

Instructor Permission Required

Although the vast majority of neurons in the mammalian brain are excitatory, inhibitory neurons working via GABA inhibition shape excitability to play crucial roles in normal brain function. Consequently, GABAergic dysfunction features prominently in various neurological and neuropsychiatric disorders. This course explores molecular, cellular, neural circuit and behavioral mechanisms underlying brain disorders along with treatment strategies targeting this essential synapse.

Enrollment for this course will be via lottery with preference given to junior Neuroscience concentrators. Lottery instructions, deadlines, and a link to the google form can be found here: <https://www.mcb.harvard.edu/undergraduate/neuroscience/neuro-courses/?course-button=tutorials>

Prerequisites: Ls1a (or LPSA or LS 50) and MCB/Neuro 80

FAS Divisional Distribution: Science & Engineering & Applied Science

How do we make meaning out of sound? Guided by classic and contemporary experimental literature, we will explore the neural basis of hearing and auditory perception. Topics will include speech, music, voice, attention, hearing loss, neural prosthetics, brain damage, animal communication, development and aging, and learning and plasticity.

Enrollment for this course will be via lottery with preference given to junior Neuroscience concentrators. Lottery instructions, deadlines, and a link to the google form can be found here: <https://www.mcb.harvard.edu/undergraduate/neuroscience/neuro-courses/?course-button=tutorials> The instructor for this course is Sara Beach, sara_beach@mail.harvard.edu.

Prerequisite: MCB/Neuro 80

FAS Divisional Distribution: Science & Engineering & Applied Science

Dominika Burek

This course explores the genetic, molecular, and physiological mechanisms that determine how our brains respond to stressors. Focusing on preclinical and animal models, we learn to read and interpret high-impact, primary research articles that use cutting-edge neuroscience methods and techniques such as RNA-sequencing, epigenetic profiling, optogenetics, chemogenetics, and calcium imaging.

Enrollment for this course will be via lottery with preference given to junior Neuroscience concentrators. Lottery instructions, deadlines, and a link to the google form can be found here: <https://www.mcb.harvard.edu/undergraduate/neuroscience/neuro-courses/?course-button=tutorials>

Ls1a (or LPSA) and MCB/Neuro 80.

FAS Divisional Distribution: Science & Engineering & Applied Science

Florian Engert, Yasuko Isoe

The neuronal basis of sensory processing and animal behavior will be explored in many different model systems as diverse as honeybees, weakly electric fish, and humans. Special emphasis is placed on the role of activity dependent modulation of neuronal connections in the context of learning, memory, and development of the nervous system.

Requires: Pre-requisite: MCB/NEURO 80 or Instructor Approval.

FAS Divisional Distribution: Science & Engineering & Applied Science

Kristina Penikis

There are 100 billion neurons and over 100 trillion synaptic connections in the human brain. Learning how these neurons interact to recall an old memory, construct sensory perception, and motivate behavior is no trivial venture. Computational techniques have expanded our understanding of the complex systems underlying functions of the brain. In this course, students will be introduced to a variety of tools from fields such as mathematics, physics, and computer science that have been adapted to investigate the principles of neural function. Students will learn concepts and practice skills through lectures, in-class activities, programming assignments, and a final project. Topics covered include biophysical models of neurons, sensory information processing, neural population dynamics, memory, deep learning, reinforcement learning, and techniques to analyze experimental data, among others. Tools will be applied across levels of analysis, from individual neurons to neural population dynamics. Familiarity—but not expertise—with coding and linear algebra will be assumed.

Prior experience with numerical programming (python or matlab) is required for success in this course. Exposure to linear algebra, differential equations, and dynamical systems at the level of Math 21B/22A is strongly recommended.

Requires: Pre-Requisite: NEURO 80 OR MCB 80 must be taken.

FAS Divisional Distribution: Science & Engineering & Applied Science

NEURO 125

Molecular Basis of Behavior

TR 0130 PM - 0245 PM

Catherine Dulac

Modern molecular genetic approaches are teaching us a great deal on how the brain controls behaviors. This course will cover newly developed experimental strategies of molecular neuroscience, and how they have helped uncover the nature and identity of behavior circuit components. How genes and molecules affect behaviors will be investigated through key examples of mammalian behaviors with an emphasis on instinctive and social behaviors, their expression, development, and associated mental disorders.

Prerequisite: MCB/NEURO 80 or equivalent, Life Science 1a or equivalent, or Instructor Approval.

2026 Spring (4 Credits)

NEURO 141

The Physics of Sensory Systems in Biology

Course ID: 121885
2025 Fall (4 Credits)

Aravinthan Samuel

Living organisms use sensory systems to inform themselves of the sights, sounds, and smells of their surrounding environments. Sensory systems are physical measuring devices, and are therefore subject to certain limits imposed by physics. Here we will consider the physics of sensory measurement and perception, and study ways that biological systems have solved their underlying physical problems. We will discuss specific cases in vision, olfaction, and hearing from a physicist's point of view.

Math 21a and 21b or the equivalent.

Requires: Anti-Requisite: Cannot be taken for credit if NEURO 141 already complete.

FAS Divisional Distribution: Science & Engineering & Applied Science

NEURO 146

Course ID: 212831

Experience-Based Brain Development: Causes and Consequences

2025 Fall (4 Credits)

TR 0300 PM - 0415 PM

Instructor Permission Required

Takao Hensch

At no time in life does the surrounding environment so potently shape brain function as in infancy and early childhood. This course integrates molecular/cellular biology with systems neuroscience to explore biological mechanisms underlying critical periods in brain development. Understanding how neuronal circuits are sculpted by experience will motivate further consideration of the social impact on therapy, education, policy, and ethics.

Prerequisite: PreLs1a or LPSA and MCB/Neuro 80 or instructor approval.

FAS Divisional Distribution: Science & Engineering & Applied Science

Course ID: 207770

Brain Invaders: Building and Breaking Barriers in the Nervous System

2026 Spring (4 Credits)

MW 0130 PM - 0245 PM

Instructor Permission Required

Laura Magnotti

The brain has evolved a unique but very effective system to protect itself from invaders. In this course, we will explore the specific defenses that the nervous system uses to protect itself. We will also examine how some pathogens evade or breach those defenses and the impact of those invasions. Finally, we will explore how scientists have been able to translate their understanding of these pathogenic mechanisms into technologies for research and therapeutic applications.

Prerequisite: (LPS A OR LS 1a) AND MCB/NEURO 80 or Instructor Approval.

FAS Divisional Distribution: Science & Engineering & Applied Science

NEURO 175

Course ID: 218679

Principles of Cell Physiology

2025 Fall (4 Credits)

MW 0130 PM - 0245 PM

Nicholas Bellono

How do cells communicate and respond to their environment? How do cells communicate and respond to their environment? MCB175 explores foundational principles in cell physiology using biological extremes to provide insights into core fundamental concepts. We exploit unusual sensory receptors, venomous animals, peculiar unicellular organisms, plants, and diseases as examples of specialized signaling mechanisms in diverse cell types, organismal states, and evolutionary adaptations. Through reading and discussing primary literature and scientific writing and presentation assignments, students strengthen skills in critical thinking, interpretation of data, and experimental strategy to ask biological questions.

MCB 60 or MCB/Neuro 80

FAS Divisional Distribution: Science & Engineering & Applied Science

Computational Neuroscience

MW 0300 PM - 0415 PM

Haim Sompolinsky

Follows trends in modern brain theory, focusing on local neuronal circuits as basic computational modules. Explores the relation between network architecture, dynamics, and function. Introduces tools from information theory, statistical inference, and the learning theory for the study of experience-dependent neural codes. Specific topics: computational principles of early sensory systems; adaptation and gain control in vision, dynamics of recurrent networks; feature selectivity in cortical circuits; memory; learning and synaptic plasticity; noise and chaos in neuronal systems.

Course Note: Also offered as Neuro 231 and MCB 231. Cannot be taken for credit as Physics 231 if Neuro 231 or MCB 231 is already complete.

Basic knowledge of multivariate calculus, differential equations, linear algebra, and elementary probability theory. Requires: Anti-Requisite: Cannot be taken for credit if MCB 131 already complete.

FAS Divisional Distribution: Science & Engineering & Applied Science

Computational Cognitive Neuroscience: Building Models of the Brain

MW 1200 PM - 0115 PM

*Instructor Permission Required**Samuel Gershman*

"What I cannot create, I do not understand." This course applies Richard Feynman's dictum to the brain, by teaching students how to simulate brain function with computer programs. Special emphasis will be placed on how neurobiological mechanisms give rise to cognitive processes like learning, memory, attention, decision-making, and object perception. Students will learn how to understand experimental data through the lens of computational models, and ultimately how to build their own models.

Course Note: Anti-Requisite: Cannot be taken for credit if Neuro 1401 already complete.

Students be comfortable with a numerical programming language (e.g., Python, Matlab, R). Psychology concentrators should have taken Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 14, PSY 15, PSY 16, PSY 18, MCB/NEURO 80 or MCB 81 before enrolling in this course; or permission of instructor.

Topic: Adams House

Independent Study is designed to provide credit for field research, academic study not available in regular course work, or practice or performance in the arts. What distinguishes a suitable project is the application of analytical skills to the object of Independent Study. Any sophomore, junior, or senior whose previous record is satisfactory may petition to undertake Independent Study for non-letter-graded credit. Students may access the petition for Independent Study on the Office of Undergraduate Education website.

Course Note: A student may petition to take up to a total of four, four-credit courses of Independent Study. Independent Study courses are subject to the same rules for dropping and withdrawing as any other course. The petition requires the signatures of a qualified adviser and the student's resident dean, as well as an outline of the student's proposed project. It must be submitted to the Allston Burr Resident Dean for approval, ordinarily in the first week of the term.

Organismic and Evolutionary Biology

Organismic & Evolutionary Biol

OEB 10	Course ID: 144594
Foundations of Biological Diversity	2025 Fall (4 Credits)

MWF 1030 AM - 1145 AM

Peter Girguis, Mansi Srivastava, Elena Kramer, Oggenka Avramovska, Oggenka Avramovska

An integrated approach to the diversity of life, emphasizing how chemical, physical, genetic, ecological and geologic processes contribute to the origin and maintenance of biological diversity. Topics to be covered include the evolution of metabolic pathways, multicellularity and structural complexity; causes and consequences of differences in diversity over space and time; the role of species interactions (including symbioses) as an evolutionary force; and the evolution of humans and their impact on the environment.

This course requires students to choose timed sections during registration.

Knowledge of introductory molecular, cellular biology, and genetics is recommended.

FAS Divisional Distribution: Science & Engineering & Applied Science

OEB 50	Course ID: 130236
Genetics and Genomics	2025 Fall (4 Credits)

TR 1030 AM - 1145 AM

Daniel Hartl, Robin Hopkins

Fundamental concepts in genetics and genomics forming a critical foundation for biology approached from two perspectives: (1) as a body of knowledge pertaining to genetic transmission, function, mutation, and evolution in eukaryotes and prokaryotes; and (2) as an experimental approach providing a toolkit for the study of biological processes such as development and behavior. Topics include structure, function, transmission, linkage, mutation, and manipulation of genes; genetic approaches in experimental studies of biological processes; and analysis of genomes in individuals and populations. Related ethical issues also discussed include genetically modified organisms, gene therapy, genetic testing, personalized medicine, and genetic privacy.

OEB 51

Biology and Evolution of Invertebrate Animals

MWF 1030 AM - 1145 AM

Cassandra Extavour, Gonzalo Giribet

Course ID: 144597

2026 Spring (4 Credits)

Instructor Permission Required

Introduction to invertebrate diversity, will cover the development, adult anatomy, biology and evolutionary relationships of the main animal phyla including sponges, mollusks, annelids and arthropods among others. Special emphasis is placed on understanding the broad diversity of animal forms and their adaptations to different ecosystems and how these phenomena shape animal evolution. Lectures will be complemented with a mandatory weekly lab, and the course includes a field trip to different areas of outstanding marine diversity in the Caribbean.

Course Note: Optional field trip to the Caribbean for research during spring break. Mandatory Lab component: Wednesdays, 3:00-5:45 PM.

LS1b, OEB 10, OEB 53 or permission of instructor required.

OEB 52

Biology of Plants

TR 0900 AM - 1015 AM

Noel Holbrook, Elena Kramer

Course ID: 131579

2026 Spring (4 Credits)

Introduction to the structure, diversity, and physiology of plants with an emphasis on evolutionary relationships and adaptations to life on land. Topics include growth, resource acquisition, interactions with other organisms (i. e., fungi, bacteria, insects), reproduction, and survival in extreme environments. Laboratory sessions provide an overview of plant and diversity and an introduction to basic physiological processes.

FAS Divisional Distribution: Science & Engineering & Applied Science

OEB 53

Evolutionary Biology

MWF 0130 PM - 0245 PM

Andrew Berry

Course ID: 142224

2025 Fall (4 Credits)

The course covers micro- and macro-evolution, ranging in its focus from population genetics through molecular evolution to the grand patterns of the fossil record. Topics emphasized include both natural and sexual selection, the ecological context of adaptation, genomic and developmental mechanisms of evolutionary innovation, speciation, phylogenetics, and evolutionary approaches to human problems.

Life Sciences 1B or permission of the instructor.

FAS Divisional Distribution: Science & Engineering & Applied Science

OEB 55

Ecology: Populations, Communities, and Ecosystems

TR 0130 PM - 0245 PM

Andrew Davies, Benton Taylor

Course ID: 132206

2025 Fall (4 Credits)

This course examines the relationships of organisms to their environment at the individual, population, and community level. The course covers topics in both pure and applied ecology including: adaptations to the physical environment, population dynamics, competition, predator-prey interactions, community ecology, ecosystem structure, stability, and function, the ecology of infectious diseases, and natural resource management.

Mathematics 1a or 1b.

OEB 56

The History and Evolution of Life on Earth

MW 1030 AM - 1145 AM

Javier Ortega-Hernandez, Nadja Drabon

Course ID: 130331

2026 Spring (4 Credits)

Instructor Permission Required

Within our solar system, Earth is distinguished as the planet with life. Living organisms are complex entities that originated from planetary processes, have been sustained by the same processes for approximately four billion years, and have fundamentally affected the functioning and composition of the Earth's surface and atmosphere. In this course we will investigate the ways that Earth and life interact with each other, focusing on the biogeochemical cycles of major elements, and the interplay between complex organisms and their ever-changing environment. This will provide a framework for interpreting the fascinating history of life reconstructed from a comprehensive understanding of the rock record, the diversity of life through time, and evolutionary biology.

Course Note: Course includes a weekly three-hour lab to be arranged and one domestic or international field trip during the Spring Break. OEB 56 is also offered as EPS 56. Students may not take both for credit. This course fulfills the EPS sub-discipline requirement of Earth History and Geobiology.

EPS 10, OEB 10, or Life Sciences 1b, or permission of instructor.

FAS Divisional Distribution: Science & Engineering & Applied Science

OEB 57

Animal Behavior

TR 1030 AM - 1145 AM

Bence Olveczky, Naomi Pierce

Course ID: 131446

2026 Spring (4 Credits)

A review of the behavior of animals under natural conditions, with emphasis on both mechanistic and evolutionary approaches. Topics include classical ethology; behavioral endocrinology; behavioral genetics; learning and memory; communication; orientation, migration and biological rhythms; optimal foraging; evolutionary stable strategies; sexual selection; parental investment and mating systems; selfishness, altruism, and reciprocity; and sociality in vertebrates and invertebrates.

FAS Divisional Distribution: Science & Engineering & Applied Science

OEB 91R

Supervised Reading

No meeting time listed

David Haig

Course ID: 156955

2025 Fall (4 Credits)

Supervised reading on topics not covered by regular courses. For OEB concentrators, work may be supervised by faculty in other departments, provided it is co-sponsored by an OEB faculty member. For non-concentrators, work must be directed by an OEB faculty member. Students must submit a registration request to the OEB Undergraduate Office before enrollment. Students cannot take OEB 91r and 99r simultaneously with the same director.

Biology of Mammals

2026 Spring (4 Credits)

No meeting time listed

David Haig

An introduction to the biology of mammals. Lectures and laboratories examine the morphology, systematics, natural history, behavior, ecology, evolutionary relationships, and biogeography of all major taxa.

Course Note: First-year students admitted only under exceptional circumstances.

LS 1b or OEB 10 recommended; students who haven't taken either course may require additional study on topics with which they are unfamiliar.

OEB 101 will also include weekend field trips for whale watching and to the zoo.

FAS Divisional Distribution: Science & Engineering & Applied Science

OEB 104

Course ID: 161184

The Mouse in Science and Society

2025 Fall (4 Credits)

TR 0900 AM - 1015 AM

Instructor Permission Required

Kathleen Pritchett-Corning

Mice remain the most popular vertebrates used in biomedical R&D today, with tens of millions of lab mice produced annually in the United States alone. At the same time, mice are commonly studied for their own characteristics that continue to enhance our knowledge about innate mammalian behavior, predator-prey dynamics in changing ecosystems, and reservoir hosts for emerging diseases, to name a few. This course intends to provide a strong foundation in mouse biology, both basic and applied, as well as exposure to cultural and political aspects of the current impact of mice (real or fictitious) on contemporary societal values.

No required preparation. LIFESCI 1A, LIFESCI 1A+1B, LIFESCI 50A, or LIFESCI 50A + 50B recommended.

FAS Divisional Distribution: Science & Engineering & Applied Science

OEB 106

Course ID: 148122

Plant Development and Differentiation

2025 Fall (4 Credits)

TR 0900 AM - 1015 AM

Elena Kramer

A comprehensive lecture course on the developmental biology of plants from fertilization through all phases of vegetative and reproductive growth. Material includes both morphological and genetic studies. Although the main focus of the course is angiosperms, examples are drawn from other lineages of land plants as well. Additional topics include control of cell division and elongation, signal transduction, and hormone response.

Life Sciences 1b and OEB 52 or permission of the instructor.

FAS Divisional Distribution: Science & Engineering & Applied Science

OEB 114

Vertebrate Viviparity

MW 0300 PM - 0415 PM

David Haig

Viviparity has evolved many times in vertebrate phylogeny. The course reviews the diversity of parental care in vertebrates and explores the selective forces that have favored the evolution of live-bearing. The evidence for intergenerational conflicts is considered.

Life Sciences 1b or permission of instructor.

FAS Divisional Distribution: Science & Engineering & Applied Science

Course ID: 142192
2025 Fall (4 Credits)

OEB 119

Deep Sea Biology

TR 1030 AM - 1145 AM

Peter Girguis

The oceans contain 97% of Earth's water, and host the most disparate ecosystems on the planet. This course provides an introduction to deep ocean habitats, macrofauna and microorganisms. Emphasis is placed on the physiological adaptations of organisms to their environment, as well the role of microbes in mediating oceanic biogeochemical cycles.

Course Note: Lab component.

FAS Divisional Distribution: Science & Engineering & Applied Science

Course ID: 145140
2025 Fall (4 Credits)

OEB 137

Experimental Design and Statistics for Ecology

TR 1030 AM - 1145 AM

Benton Taylor

Experimental Design and Statistics for Ecology provides a practical "how to" introduction to conducting ecological research. Students gain hands-on experience forming testable questions and hypotheses, designing experiments to test these questions, implementing experimental designs, taking and managing data, and conducting an array of statistical analyses in R statistical software.

Course Note: This course is geared toward senior undergrads and early graduate students.

Course ID: 216474
2025 Fall (4 Credits)

Instructor Permission Required

OEB 140**Speciation: How Do Species Evolve?**

MW 0945 AM - 1145 AM

James Mallet

Speciation, or the origin of species, has been a controversial topic ever since Darwin's 1859 book. Even in the genomic era we are now experiencing, speciation is a frequent topic that demands attention. In this course, we will cover in approximate order: History of ideas in speciation; pre-Darwin, Darwin & Wallace, 1930-1940s, recent. What are species? Species concepts and species delimitation. What is needed to understand speciation? The population genetics of gene flow, and genetic divergence via mutation, drift, and selection The concept of reproductive isolation Brief introduction to coalescent theory and the multi-species coalescent The geography of speciation, including allopatric, parapatric, and sympatric speciation Ecological "races" and ecological speciation Behavioral divergence and mate choice, including "reinforcement" Hybrid inviability and hybrid sterility between species Idealized population genetic models of speciation Chromosomal evolution, genomic rearrangements, and speciation Speciation: caused by natural selection or by genetic drift? Beyond the species: macroevolution and diversification

None. However, LS1B Genetics, OEB 53 Evolutionary Biology, or equivalents may be helpful. Feel free to ask Instructor if in doubt. Instructor will cover relevant biology in case of lack of prior biology background.

FAS Divisional Distribution: Science & Engineering & Applied Science

OEB 141**Biogeography**

TR 0900 AM - 1015 AM

Gonzalo Giribet

Biogeography aims to explain distributions of organisms through historical and ecological factors. This course will focus on the history of biogeographic research, developments in the area of historical biogeography, and on ecological processes that affect distributions of whole clades. Topics include plate tectonics and earth history, vicariance and dispersal, areas of endemism, phylogenetic niche conservatism, latitudinal gradients in species richness, and the theory of island biogeography. Software for biogeographical analysis will be discussed and evaluated.

Two following courses: Life Sciences 1b, OEB 10, OEB 51, OEB 52, OEB 53, OEB 54, OEB 55, OEB 181, or permission of the instructor. There will also be a lab component in addition to the lecture component of the course.

FAS Divisional Distribution: Science & Engineering & Applied Science

OEB 145**Genes and Behavior**

TR 0130 PM - 0245 PM

Yun Zhang

Behavior is inheritable and regulated by genes. This lecture course explores causal links between genes and behavioral traits, aiming to provide mechanistic understanding of how gene products control and influence behavioral outputs. The course will start with discoveries of genes whose mutations contribute to neurological diseases and psychiatric disorders, followed by main research approaches used to investigate genetic basis of behavior and brain function. The class will then have in-depth lectures and discussion on genes that regulate several behavioral traits including olfaction, itch and pain, circadian rhythm, sexual behavior, sleep, learning and memory.

OEB 155R

Biology of Insects

WF 0130 PM - 0245 PM

Naomi Pierce

Course ID: 142688

2025 Fall (4 Credits)

Instructor Permission Required

An introduction to the major groups of insects. The life history, morphology, physiology, and ecology of the main taxa are examined through a combination of lecture, lab, and field exercises. Topics include the phylogeny of terrestrial arthropods with a review of the extant orders, an analysis of abiotic and biotic factors regulating populations, including water balance, temperature, migration, parasitism, mutualism, sociality, insect/plant interactions, medical entomology, and the use of insects in biological control.

FAS Divisional Distribution: Science & Engineering & Applied Science

OEB 172

Remote Sensing for Biodiversity and Ecology

TR 1200 PM - 0115 PM

Paul Moorcroft, Jeannine Cavender-Bares

Course ID: 226587

2025 Fall (4 Credits)

Instructor Permission Required

This course will examine how new forms of remote sensing measurement technologies can advance the study of plant biodiversity, ecosystem function and ecology. Topics covered will include: measuring taxonomic and functional biodiversity of land and ocean ecosystems, plant canopy structure via active remote sensing measurements, estimating ecosystem productivity, estimating plant and soil moisture, and linking remote-sensing measurements with ground-based ecosystem measurements.

An undergraduate course in ecology and/or plant biology, or permission of the instructors.

OEB 190

Biology and Diversity of Birds

TR 1200 PM - 0115 PM

Scott Edwards

Course ID: 143846

2026 Spring (4 Credits)

Instructor Permission Required

An introduction to the biology of birds. Covers the fossil record and theories for avian origins, physiology and anatomy, higher-level systematics and field characters of the ~27 orders, speciation processes, nesting and courtship behavior, vocalizations, mating systems and sexual selection, cooperative breeding, demography and conservation. Optional field trip during spring break. Laboratories will consist of gross anatomy, bird watching excursions in the Cambridge area, field techniques and specimen preparation, and systematic study of avian groups using the collections of the Museum of Comparative Zoology.

Course Note: OEB 10 or OEB 53 or permission of the instructor. Students in their third and fourth years are encouraged to enroll in the course.

Comparative Genomics: Phylogenetic Approaches to Linking Genomes and Phenotypes

T 1200 PM - 0245 PM

Scott Edwards

Course ID: 143845

2025 Fall (4 Credits)

Instructor Permission Required

The course will review the recent literature on so-called "comparative methods" in evolutionary biology – methods examining interspecific patterns of variation in traits, their relationship to rates of speciation and links to variation in the genome. After a series of introductory lectures reviewing phylogenetic analysis, basic models of trait evolution and relevant topics in genome evolution, we will discuss recent efforts to link genomic and phenotypic variation (the "PhyloG2P" paradigm – see Smith et al. 2020, Trends Ecol. Evol. 35: 415-425). Weekly sessions will consist of discussions led by students and by local or remote topic experts, including hands-on sessions working with state-of-the-art software. A final written and analysis project will allow enrollees to apply knowledge and methods to real data sets. Graduate students and undergraduates must enroll; auditing will be allowed only for postdoctoral fellows.

Course Note: Participants should have an account on the FAS Research Computing Odyssey cluster prior to course beginning.

OEB 53, OEB 181, OEB 125 or equivalent, or permission of the instructor.

OEB 290

Microbial Sciences: Chemistry, Ecology and Evolution

F 0945 AM - 1145 AM

Peter Girguis

This is an interdisciplinary graduate-level and advanced undergraduate-level course in which students explore topics in molecular microbiology, microbial diversity, host-microbe associations in health and disease, and microbially-mediated geochemistry in depth. This course will be taught by faculty from the Microbial Sciences Initiative. Topics include the origins of life, biogeochemical cycles, microbial diversity, and ecology. Course will limit enrollment to 20 students.

Course Note: Offered as OEB 290 and MICROBI 210

For graduate and advanced undergraduate students, Life Sciences 1a and 1b or their equivalent are required, or permission of instructor. MCB 60 or equivalent is recommended.

Evolutionary Human Physiology and Anatomy

MWF 1200 PM - 0115 PM

Stephanie Pierce, Joanne Clark-Matott, Andrew Yegian, Rachel Carmody, Rachel Carmody

Why is the human body the way that it is? This course explores human anatomy and physiology from an integrated framework, combining functional, comparative, and evolutionary perspectives on how organisms work. Major topics, which follow a life-course framework, include embryogenesis, metabolism and energetics, growth and development, movement and locomotion, food and digestion, stress and disease, and reproduction. Also considered is the relevance of human biology to contemporary issues in human health and biology.

Course Note: This course includes a weekly 3-hour lab. This course may not be taken Pass/Fail.

LIFESCI 1A or permission of instructor.

PHIL 9

Empiricists, Scientists, and Charlatans: An Introduction to the Philosophy of Science

TR 1030 AM - 1145 AM

Jeffrey McDonough

Science has become a defining feature of modern life. But what is science? How did it arise? What are its foundations and implications? In this introductory-level course, students will explore key philosophical ideas such as empiricism, evidence, induction, naturalism, realism, and explanation, as well as the relationships between science, philosophy, and society. They will emerge with a deeper, more nuanced understanding of the nature of modern science and be positioned to form considered views concerning its presuppositions, commitments, and consequences.

FAS Divisional Distribution: Arts and Humanities

PHIL 16

Sex, Love, and Friendship

TR 1030 PM - 1145 PM

This course is about love, sex and friendship. Philosophers spend a lot of time thinking about the structure of thought, language, and reasons. They have, at least in the western tradition, paid less attention to the more visceral and emotional aspects of human experience. In this course, we'll use some of the tools developed in philosophy to examine questions central to most of our lives: what makes a relationship a friendship?; what do we owe our friends, and how can we be good friends?; what is love, and why is it such an important feature of human life?; when is love bad, and when is it good?; what is sex?; when is sex wrong, and when is it good?; can friends be lovers?

PHIL 18

Human Ethics: A Brief History

MW 0300 PM - 0415 PM

Seth Robertson

Course ID: 141608

2026 Spring (4 Credits)

Instructor Permission Required

Does might make right? Should a person focus on achieving immortality or on living a simple, happy mortal life? Is morality simply a matter of convention? Why be moral when being immoral could provide access to more wealth, fame, and power? What is the relationship between etiquette and morality? What do people owe a society that has failed in its obligations to its people? How can we identify and resist oppression, marginalization, and injustice? Human beings all over the world have been thinking about, discussing, and debating questions like these for thousands of years. This course aims to look at this history of ethics and moral philosophy from a genuinely inclusive perspective by focusing on ethical thought both from all over the world, with special emphasis on that of members of traditionally marginalized groups and from areas of the world that typically receive much less attention in academic philosophy and ethics.

PHIL 109

Early Chinese Ethics

MW 0430 PM - 0545 PM

Seth Robertson

Early (Pre-Qin era) China was a hotbed of philosophical activity: scholars developed careful and fascinating ethical views in the context of serious philosophical debates between major schools of thought. This course focuses on some of these ethical debates between Confucian, Mohist, Daoist, and Legalist philosophers in early China. We'll read both classical texts such as the Analects of Confucius, Mengzi, Xunzi, Mozi, and Zhuangzi and important contemporary scholarship on these texts. Several moral questions will be of particular importance:

What is the relationship between etiquette and morality? What are the most important virtues to acquire? Should we think of morality and moral development as something natural or artificial? Are we justified in caring more about some people (our closest friends and family) than others? We will have a special focus on three important interpretive themes for the course: (1) How can understanding the particular contours of the debates each scholar is engaged in help us understand their overall views? (2) How does each philosopher's view of human psychology and epistemology constrain, guide, and support their moral theorizing? (3) How can an understanding of early Chinese ethical thought, theory, and debate help enrich contemporary discussions in ethics and moral philosophy? No previous experience or coursework in Chinese philosophy is required for this course.

PHIL 138

Heidegger's Being and Time

TR 0900 AM - 1015 AM

Peter Gordon

Martin Heidegger's famous first book, *Being and Time*, is one of the most important philosophical works of the twentieth century. It existentializes Aristotle's ontology, systematizes the existential insights of Kierkegaard and Nietzsche, and on that basis offers a radical critique of Husserl's phenomenological account of intentionality. The result is a dramatically original and compelling interpretation of the human condition. This interpretation leads, in turn, to an account of the nature of philosophical and scientific inquiry, as well as their limitations. *Being and Time* has important implications for all those disciplines that study human beings. In this course we will explore major themes of this often bewildering work, with an emphasis on charitable interpretation: What is the 'question of Being'? What is the relationship between theoretical knowledge and understanding-by-doing? What is the nature of our social being? What does it mean to be 'inauthentic' or 'authentic,' and what are the implications of human finitude? Finally, what is the 'Question of Being'?

Course Notes: This course is equivalent to Phil. 138. Credit may be earned for History 83 or Phil. 138, but not both. This course meets the "Beyond North America" History Concentration requirement. Class Notes: This class requires students to enroll in an untimed, placeholder section during registration and to submit time preferences. Sections will be assigned immediately after registration based on student interest and preferences.

FAS Divisional Distribution: Arts and Humanities

PHIL 143

Mathematical Logic I: Logic -- Completeness

WF 1030 AM - 1145 AM

Peter Koellner

An introduction to first-order logic (the basis of mathematical reasoning) from a meta-mathematical point of view. Topics include: The axiomatic method, the principles of first-order logic, the meta-mathematical point of view, the central theorems (soundness and completeness), and the expressive limitations (Löwenheim-Skolem).

Requires: Anti-requisite: Cannot be taken for credit if MATH 141A or MATH 143 already complete or in progress.

FAS Divisional Distribution: Arts and Humanities

PHIL 144

Mathematical Logic II: Mathematics -- Incompleteness

WF 1030 AM - 1145 AM

Peter Koellner

An introduction to limitative results in mathematics from a meta-mathematical point of view. Topics include: Gödel's incompleteness theorems, Turing's analysis of computability, and the hierarchy of mathematical systems as ordered under interpretability.

Requires: Anti-requisite: Cannot be taken for credit if MATH 144 already complete or in progress.

PHIL 146

Formal Methods in Philosophy

MW 0130 PM - 0245 PM

Ned Hall, Mark Richard

A survey, with applications, of key formal methods in philosophy: logic, possible worlds semantics, probability

Course ID: 000138

2025 Fall (4 Credits)

Course ID: 137008

2025 Fall (4 Credits)

2025 Fall (4 Credits)

theory, decision theory, selected others (time permitting). Students will gain a solid understanding of and ability to work with these tools, both through problems sets and through examination of their successful and unsuccessful deployment in the literature. Undergraduate students must have completed PHIL 4 or equivalent material before taking this course.

FAS Divisional Distribution: Arts and Humanities

PHIL 151

Philosophy of Quantum Theory

TR 0130 PM - 0245 PM

Jacob Barandes

Course ID: 119414
2026 Spring (4 Credits)

Instructor Permission Required

Quantum theory is our most empirically successful scientific framework. The theory reliably accounts for the measurement results of atomic clocks and particle accelerators to many decimal places, and much of our modern technology relies on it. However, the theory's axiomatic foundations are arguably either inconsistent or incomplete, and there is still no consensus over what the theory entails about the world. This course will cover the century-long effort to resolve these mysteries and others, a story that features fantastical notions like parallel universes, pilot waves, quasi-probabilities, alive-and-dead cats, and spooky action at a distance. Throughout the course, we will engage with many relevant questions in philosophy, from determinism and causation to epistemology and the meaning of probability. Assessments: The course will have weekly homework assignments consisting of a mixture of primary-source readings, short essays, and mathematical exercises. The course will not have any exams. We will conclude with a final paper on a topic that students can choose from a list of available prompts.

Required Prep: Students should be comfortable with algebra at a level covered in most high schools. A prior experience with single-variable calculus may also be helpful.

FAS Divisional Distribution: Arts and Humanities

PHIL 156

Philosophy of Mind

TR 0130 PM - 0245 PM

Cheryl Chen

Course ID: 113339
2026 Spring (4 Credits)

A philosophical examination of the mind and its relation to the natural world. Topics include: the mind – body problem, consciousness, other minds, animal cognition, and artificial intelligence. Readings will consist primarily of influential papers from the latter half of the 20th Century.

FAS Divisional Distribution: Arts and Humanities

PHIL 158C

The Spontaneous Flow of Thought

No meeting time listed

Susanna C. Siegel

Course ID: 224601
2026 Spring (4 Credits)

Instructor Permission Required

Topics to be examined include perception, mind-wandering, roles for attention in dynamics of thought, and the psychological dimensions of inquiry.

FAS Divisional Distribution: Arts and Humanities

PHIL 159

Epistemology

TR 1200 PM - 0115 PM

Selim Berker

Course ID: 114155
2025 Fall (4 Credits)

An introduction to the theory of knowledge. Topics include skepticism about the external world, the analysis of knowledge, sensitivity and safety, the regress of reasons, foundationalism vs. infinitism vs. coherentism, and internalism vs. externalism.

PHIL 159S

Skepticism

R 1245 PM - 0245 PM

Susanna Rinard

Course ID: 156126
2026 Spring (4 Credits)

Instructor Permission Required

This course will primarily focus on attempts to develop a workable skeptical philosophy. Much effort has been, and continues to be, expended in trying to defeat, or argue against, or undermine, skepticism. Here we will look at what happens if we take seriously the possibility that skepticism is actually true. How can we build a philosophy, and a life, that acknowledges the truth of skepticism? We will look at a number of different attempts to do this from a wide range of times. We will pay particular attention to the Ancient Greek Pyrrhonians and the Ancient Chinese philosopher Zhuangzi, reading both the original texts and later commentaries on them. Note: This course is in the process of being re-designed and some readings and topics may change substantially.

This is a challenging, high-level class only suitable for those with substantial background in philosophy. Students will be admitted to the course on a case-by-case basis, if the instructor deems they have sufficient background.

FAS Divisional Distribution: Arts and Humanities

PHIL 164

Metaphysics

TR 0130 PM - 0245 PM

Quyen Pham

Course ID: 156025
2025 Fall (4 Credits)

Metaphysics is the branch of philosophy that asks and seeks to answer questions about the most fundamental aspects of reality: What kinds of things are there? When do two things make up another thing? What does it mean for one thing to be like another? How do things change while still being themselves? This course will introduce you to some of the most basic concepts and tools of metaphysics that will enable you to understand questions such as these and attempts to answer them, and ultimately to pose your own questions and craft your own answers. We will begin by investigating the nature and structure of ordinary objects, such as tables and chairs. We will then turn to questions concerning objects in space and time, as well as the nature and structure of space and time themselves. Along the way, we will also consider more curious entities such as holes and clouds, and explore connections to physics and science fiction, from the idea of extra spatial dimensions to the possibility of time travel.

FAS Divisional Distribution: Arts and Humanities

PHIL 165

The Structure of the Social World

W 0300 PM - 0500 PM

Quyen Pham

Course ID: 212884
2025 Fall (4 Credits)

Instructor Permission Required

Philosophy is taking an exciting social turn. This course will take you on a tour through the vast and quickly expanding field that is social ontology—from social entities, such as clubs, teams, families, and businesses, to social identities such as particular races, genders, and disabilities, and finally to social phenomena as varied as art, food, and money. We will examine the reality and nature of these elements of the social world in the context of foundational metaphysical questions such as identity, composition, and persistence, while considering the significance of different answers to these questions for related ethical and political issues such as agency, responsibility, and justice.

FAS Divisional Distribution: Arts and Humanities

PHIL 165S

Gender, Race, and Social Reality

W 0345 PM - 0545 PM

Quyen Pham

Course ID: 226424
2026 Spring (4 Credits)

Instructor Permission Required

What is gender, and how is one's gender distinct from one's sex? What is race, and how is it different from ethnicity? How many sexes and genders are there? Do races exist, and if so, what are they like? This course will

introduce you to major connected themes and philosophical perspectives in classic and contemporary discussions about gender and race, through foundational questions about their reality, nature, and intersection, as well as practical issues concerning morality, personal identity, and social justice.

PHIL 171L

Course ID: 226344

Love

2025 Fall (4 Credits)

W 1200 PM - 0245 PM

Instructor Permission Required

Patrick White

What is love? What, if any, reasons do we have to love others? And what is the connection (or tension) between love, on the one hand, and morality on the other? This course will use love to explore questions about the nature of reasons, moral psychology, partiality, impartiality and the foundations of ethics. The course will draw on both historical and contemporary authors— in exploring love and its place in a life well-lived. Permission is required to enroll in this course.

FAS Divisional Distribution: Arts and Humanities

PHIL 172M

Course ID: 222547

The Many and The Few

2026 Spring (4 Credits)

MW 0130 PM - 0245 PM

Patrick White

This course explores the tensions between our moral obligations to the many and the place of the few who have some special place in a life well lived—friends, family, fellow students, etc. We will consider the nature and justification of partiality; the challenges of squaring partiality with the impartial demands of morality; objections to moral theory based on its inability to accommodate partiality; whether, when and how aggregation is appropriate; and the place of love in ethics.

FAS Divisional Distribution: Arts and Humanities

PHIL 173E

Course ID: 225918

Is Ethics Objective?

2026 Spring (4 Credits)

This course is an introduction to contemporary metaethics. It will address questions like the following: Does the existence of widespread ethical disagreement mean that there can't be any objective facts and it's all just a matter of opinion? Can we reconcile the idea of an objective ethical reality with evolutionary and sociological arguments that explain how we developed our beliefs? Is it strange that there can be facts that tell you what to do? We will begin by examining three famous arguments for an "anti-realist" metaethics: J.L. Mackie's arguments from disagreement and from "queerness", and Sharon Street's "Darwinian dilemma". All three arguments challenge the idea that our ethical beliefs reflect some kind of mind-independent facts. We will begin to develop philosophical skills through close analysis of these arguments, identifying their logical structure and the places where they could be challenged. We will then apply these skills to a series of texts defending alternative metaethical views, including reductive and non-reductive naturalism, quasi-realism, and constructivism. We will explore those four positions and the main challenges for each of them. Throughout, we will ask whether our ethical beliefs are on surer footing than some other kinds of normative beliefs, especially beliefs about aesthetics, beliefs about rationality, and – most importantly – beliefs about what we should believe.

FAS Divisional Distribution: Arts and Humanities

PHIL 178P

Course ID: 226295

Praise and Blame

2025 Fall (4 Credits)

TR 1200 PM - 0115 PM

Instructor Permission Required

Zoe Johnson King

If I teach an amazing course, then you might feel gratitude and fill out a positive course evaluation. But if I agree

to meet with you at a certain time and never show up, then you might feel resentment and complain to your friends -- especially if it turns out that I had no good reason for not showing up and I simply didn't feel like talking to you. These are examples of praise and blame, respectively. Praise and blame are ubiquitous parts of our interpersonal lives. But what, exactly, are these attitudes? (Hold on a minute, are they attitudes or behaviors?) And when, exactly, are they merited or deserved? In this course, we will examine some of the philosophical literature on agency and responsibility that underpins attributions of praiseworthiness and blameworthiness. We will discuss free will and moral luck; cognitive, affective, and motivational theories of blame; the epistemic condition and the control condition on responsibility; the standing to blame; forgiveness and repair; and the kinds of motivations that make people praiseworthy.

FAS Divisional Distribution: Arts and Humanities

PHIL 185

Philosophy and Architecture

W 0900 AM - 1145 AM

Remei Capdevila Werning

Course ID: 000185
2025 Fall (4 Credits)

Instructor Permission Required

This seminar examines the main issues discussed in the philosophy of architecture: What is architecture? Is architecture an art? Do buildings have a meaning? If so, what is it and how is it conveyed? What is the aesthetic experience of architecture? How does architecture determine the way we live and how we ought to behave? Does architecture have a political function? By reading analytical and continental authors, this course proposes a critical overview of the most relevant metaphysical, epistemological, aesthetic, phenomenological, ethical, and political questions concerning architecture. We will also reflect on the intricacies of the discipline of philosophy of architecture as such. We will reflect upon assigned readings by addressing actual buildings and other architectural works from drawings, renderings, and plans to artworks representing architecture. Prerequisite: One course in philosophy OR one course in architecture OR one course in history of art and architecture.

FAS Divisional Distribution: Arts and Humanities

PHIL 186

Feminism in Arts and Sciences

MW 1200 PM - 0115 PM

Remei Capdevila Werning

Course ID: 136603
2026 Spring (4 Credits)

Instructor Permission Required

This course addresses underlying philosophical assumptions in the arts and sciences from the perspective of feminist theories and approaches. Through readings of texts by contemporary feminist philosophers, examinations of scientific and artistic practices, including scientific case studies and artworks from the Harvard Art Museums, we will address the central issues raised by feminist epistemology, philosophy of science, and aesthetics. These issues include: systematic gender bias, situatedness, standpoint theories, objectivity, neutrality and impartiality (or lack thereof), epistemic and non-epistemic values in the sciences; conceptions of art versus crafts, the canon, genius, autonomy, beauty, sublime, the body and gaze in the arts. We will also participate in the yearly Art+Feminism Wikipedia Edit-a-Thon where we will contribute in shaping public discourse on feminism and arts.

FAS Divisional Distribution: Arts and Humanities

PHIL 233

Topics in Early Modern Philosophy

R 0945 AM - 1145 AM

Alison Simmons

Course ID: 118753
2025 Fall (4 Credits)

Instructor Permission Required

The Cartesian Mind. Descartes is supposed to have invented the modern conception of mind as a subject of consciousness. This class will explore this (allegedly) newfangled conception of mind, both in general (how, exactly, does Descartes conceive the mind?) and through a number of its notable features and operations, including consciousness, intentionality, representation, sensory perception, imagination, intellection, will, passions, and embodied experience.

PHIL 248B

Beauty

W 1245 PM - 0245 PM

Eric Maskin, Barry Mazur, Amartya Sen

Course ID: 226349

2025 Fall (4 Credits)

Instructor Permission Required

The course is about the concept of "beauty" and is open to students of all levels. Although the idea of beauty is easily invoked, there are quite different ways of understanding it, varying between a characteristic of an object, or the perception of an object by persons, or even (as David Hume proposed) as "something that exists merely in the mind." There are other understandings that are not so obvious, such as John Keats's belief that "beauty is truth." Other than critically examining different understandings of beauty, we will be concerned with ideas of beauty that come from different fields of study or from distinct areas of interest. Those who would like to take our course should send us a transcript of their grades and a brief note saying how they might think about engaging with general ideas of beauty, or about specific insights that come from their own areas of interest. We will try to relate the syllabus of our course to the fields of interest of the accepted students. Prerequisites: No formal course requisites, but participants should be comfortable with formal reasoning and high-school level mathematics

Prerequisites: No formal course requisites, but participants should be comfortable with formal reasoning and high-school level mathematics.

PHIL 274F

The Good and the Fitting

W 0300 PM - 0500 PM

Christine Korsgaard, Selim Berker

Course ID: 226806

2026 Spring (4 Credits)

Instructor Permission Required

Some things are good, whereas others are bad, and some emotional responses to those things are fitting, whereas others are unfitting. We will consider recent and historical work on these two pairs of categories (good/bad, fitting/unfitting), as well as their interrelation. Questions to be considered may include: What is the relation between either goodness or fittingness and a thing's nature? Can goodness be analyzed in terms of fitting attitudes? What is the relation between being good and being good for someone, and can a parallel distinction can be drawn for fittingness? Is badness simply a lack of goodness, or unfittingness a lack of fittingness? Can we aggregate goodness across lives, and fittingness across respects? What kinds of things (people, animals, plants, ecosystems?) have a good that matters morally, and what types of reactions (admiration, blame, pride, envy?) are fitting in a way that has genuine normative significance?

PHIL 274M

Recent Work in Metaethics

W 1200 PM - 0245 PM

Jeffrey Behrendts

Course ID: 226336

2025 Fall (4 Credits)

Instructor Permission Required

In this seminar, we will read and evaluate two recent monographs in metaethics. The first is *The Moral Universe* (OUP 2024), by John Bengtson, Terence Cuneo, and Russ Shafer-Landau, which defends a version of non-naturalist moral realism. Students will be encouraged, though not required, to attend a workshop hosted at Harvard in late October 2025 in which a series of new papers from leading scholars addressing that book are presented, and at which the authors of the book will be present. The second monograph is TBD, but will likely be either David Copp's *Ethical Naturalism and the Problem of Normativity* (OUP 2024) or Sarah McGrath's *Moral Knowledge* (OUP 2019). Once the course website is available on Canvas, please check there for updates. The course is intended for PhD students in Philosophy or other students with advanced coursework relevant to the seminar topic.

FAS Divisional Distribution: Arts and Humanities

PHIL 277L

Law and Philosophy Workshop

W 0345 PM - 0545 PM

Benjamin Eidelson

Course ID: 225826
2025 Fall (2 Credits)

Instructor Permission Required

This workshop will examine new ideas at the intersection of law and philosophy. The workshop will meet weekly and will focus on discussion of pre-circulated working papers presented by their authors. Open to HLS students as well as graduate students in philosophy, political theory, or related fields. Admission is by permission of the instructor, but students with and without prior training in philosophy are encouraged to apply. Applicants should submit a CV and a very brief statement of interest, noting relevant background or interests, to Maureen Worth (mworth@law.harvard.edu). The recommended deadline for consideration is July 29th, but applications may be considered on a rolling basis. The course will meet on the HLS campus.

Instructors: Benjamin Eidelson and Ryan Doerfler.

PHIL 286

Topics in Feminist Philosophy

W 0300 PM - 0545 PM

Gina Schouten

Course ID: 226329
2025 Fall (4 Credits)

Instructor Permission Required

In this seminar, we'll explore topics in Feminist Philosophy. Students are invited to reach out to discuss their own learning priorities for the course, which will be taken into consideration in finalizing the syllabus. Likely topics will include oppression; objectivity and emotion in knowledge; gendered embodiment and public space; caregiving, labor, and injustice; and bodily commodification. We'll also wade into some social ontology, which I'll be learning alongside you. Assignments will likely include short argument presentations, discussion memos, and a short paper and rewrite.

PHIL 311
Workshop in Moral and Political Philosophy

R 0300 PM - 0500 PM
Selim Berker

Course ID: 115778
2025 Fall (4 Credits)

Instructor Permission Required

A forum for the presentation and discussion of work in progress by students in moral and political philosophy.
Open only to graduate students in the Philosophy Department or by invitation of the instructors.

FAS Divisional Distribution: None

PHIL 311
Workshop in Moral and Political Philosophy

R 0300 PM - 0500 PM
Gina Schouten

Course ID: 115778
2026 Spring (4 Credits)

Instructor Permission Required

A forum for the presentation and discussion of work in progress by students in moral and political philosophy.
Open only to graduate students in the Philosophy Department or by invitation of the instructors.

Embedded EthiCS Teaching Lab

No meeting time listed

Matthew Kopec

Course ID: 213558

2025 Fall (4 Credits)

Instructor Permission Required

The Embedded EthiCS Teaching Lab is a forum for advancing work related to the creation, implementation, revision, and distribution of ethics modules to be used in Computer Science courses and shared on the Embedded EthiCS website. Graduate Fellows workshop their modules in development with all members of the lab, and also consult directly with Postdoctoral Fellows and faculty in philosophy and computer science.

Course Note: The teaching lab will be scheduled based on availability of its participants.

Physics

Physics

PHYSICS 15A

Introductory Mechanics and Relativity

TR 1200 PM - 0115 PM

Anna Kales, Stephen Adams

Course ID: 111164

2025 Fall (4 Credits)

Physics 15a is an introduction to the topics of Newtonian mechanics and special relativity, but it is also an introduction to what it means to be a physicist—formulating theoretical models to describe the natural world and

testing those models for consistency with data. Topics include: vectors; kinematics in three dimensions; Newton's laws; force, work, power; conservative forces, potential energy; momentum, collisions; rotational motion, angular momentum, torque; static equilibrium, simple harmonic motion, damped and driven oscillations; gravitation; fictitious forces; fluids; special relativity; experimental methods and tools including: basic programming, experimental design and data acquisition, model testing and error analysis; scientific communication.

Course Note: Principles of Scientific Inquiry (PSI) is the laboratory component of Physics 15a. Topics include experimental design, model testing, error analysis, basic programming, and oral presentations. PSI will meet weekly throughout the semester.

Physics 15a/16 has a lab component. You must join the lab on this Canvas site: <https://self-enroll.tlt.harvard.edu/7cffd320-de53-43f6-a047-082f969b6d3a> Available lab times are: T 3-5T 6-8W 12:45-2:45R 3-5R 6-8F 9:45-11:45F 12:45-2:45

Mathematics preparation at least at the level of Mathematics 1b concurrently is required. However, some elementary ideas from multivariable calculus may be used and students are encouraged to take Mathematics 21a concurrently.

FAS Divisional Distribution: Science & Engineering & Applied Science

Quantitative Reasoning with Data: Yes

PHYSICS 15A

PHYSICS 15B

Introductory Electromagnetism

Course ID: 111896
2025 Fall (4 Credits)

TR 1200 PM - 0115 PM

Louis Deslauriers, Mara Prentiss

This course is an undergraduate-level course on electromagnetism. Topics include electrostatics, electric currents, magnetic field, electromagnetic induction, Maxwell's equations, electromagnetic radiation, magnetic fields in materials, and some basic notions in kinetic theory, entropy, temperature, and phase transition associated with electricity and magnetism.

Course Note: Principles of Scientific Inquiry (PSI) is the laboratory component of Physics 15b. The labs are designed to enhance your understanding of material presented in lectures. They also present applications of electricity and magnetism, as well as offering opportunities to build simple circuits and develop experience using measuring instruments, including oscilloscopes.

We recommend that you take Physics 15a, Physics 16, or Physics 19 (or you have written permission from the Head Tutor in Physics). Mathematics preparation at least at the level of Math 21a is a prerequisite. Students wishing to take Math 21a concurrently must obtain written permission from the instructor. Vector calculus (divergence, gradient, curl) is used extensively in this course.

Quantitative Reasoning with Data: Yes

PHYSICS 15B**Introductory Electromagnetism**Course ID: 111896
2026 Spring (4 Credits)

MW 1030 AM - 1145 AM

Stefan Knirck, Xing Fan

Forced oscillation and resonance; coupled oscillators and normal modes; Fourier series; Electromagnetic waves, radiation, longitudinal oscillations, sound; traveling waves; signals, wave packets and group velocity; two- and three-dimensional waves; polarization; geometrical and physical optics; interference and diffraction. Optional topics: Water waves, holography, x-ray crystallography, solitons, music, quantum mechanics, and waves in the early universe.

Course Note: Principles of Scientific Inquiry (PSI) is the laboratory component of Physics 15c. Topics include experimental design, model testing, error analysis, basic programming, oral presentations, and scientific writing. PSI will meet weekly throughout the semester.

Physics 15a and 15b or Physical Science 12a-b or equivalent. Mathematics at least at the level of Math 21b. Mathematical topics introduced during lectures will include matrix calculus, complex numbers, differential equations, and Fourier analysis.

PHYSICS 16

Course ID: 111197

Mechanics and Special Relativity

2025 Fall (4 Credits)

TR 1200 PM - 0115 PM

Norman Yao, Stephen Adams

Newtonian mechanics and special relativity for students with good preparation in physics and mathematics at the level of the advanced placement curriculum. Topics include oscillators damped and driven and resonance (how to rock your car out of a snow bank or use a swing), an introduction to Lagrangian mechanics and optimization, symmetries and Noether's theorem, special relativity, collisions and scattering, rotational motion, angular momentum, torque, the inertia tensor (dynamic balance), gravitation, planetary motion and a little glimpse of quantum mechanics.

Course Note: Principles of Scientific Inquiry (PSI) is the laboratory component of Physics 16. Topics include experimental design, model testing, error analysis, basic programming, oral presentations, and scientific writing. PSI will meet weekly throughout the semester. Emphasis is placed on collaborative teaching and learning. Many class materials are Mathematics notebooks.

Physics 15a/16 has a lab component. You must join the lab on this Canvas site: <https://self-enroll.tlt.harvard.edu/7cfd320-de53-43f6-a047-082f969b6d3a> Available lab times are: T 3-5T 6-8W 12:45-2:45R 3-5R 6-8F 9:45-11:45F 12:45-2:45

Score of 5 on the mechanics section of the Physics C Advanced Placement exam, or equivalent. Mathematics preparation at least at the level of Mathematics 21a taken concurrently is required. Thorough knowledge of calculus of one variable and vectors plus some mathematical sophistication. The mathematical level will be significantly higher than that of Physics 15a. If in doubt, check the Canvas site ahead of time, or email the professor at nyao@fas.harvard.edu, or just shop.

PHYSICS 19

Course ID: 207005

Introduction to Theoretical Physics

2025 Fall (4 Credits)

MWF 0300 PM - 0415 PM

Jacob Barandes, Stephen Adams

Physics 19 is a comprehensive introduction to the foundations of theoretical physics, with a first-principles approach to its five main areas: analytical mechanics, thermodynamics, fields, relativity, and quantum theory. The course is aimed primarily at students who are considering pursuing advanced study of physics in the concentration, as an option alongside Physics 15A and Physics 16. (Most physics concentrators start by taking either Physics 15A, 16, or 19.) The course is also open to undergraduate and graduate students in other fields of study—such as math, philosophy, astronomy, biology, chemistry, computer science, and engineering—who are interested in developing a better understanding of physics either to serve the needs of their own academic work or as a first step toward switching their area of study to physics. The purpose of the course is to present the foundations of modern theoretical physics in a welcoming setting for students from a variety of backgrounds. The course is intended to present a clear, faithful picture of what theoretical physics looks like. We will derive nearly everything from scratch in as self-contained a manner as possible—with occasional exceptions for special cutting-edge examples. We will also introduce all the necessary mathematics along the way. Specific topics will include Newtonian mechanics, chaos, perturbation theory, orbital mechanics, the Lagrangian and Hamiltonian formulations, the connection between symmetries and conservation laws, statistical physics and thermodynamics, electromagnetism, special relativity, relativistic gravitation, black holes, and an extensive introduction to quantum theory. In-class discussions will regularly address relevant issues in the history and philosophy of physics, as well as the conceptual implications of our modern physical theories for making sense of the world around us. Cooperation and diversity strengthen our academic community, so the course will prioritize collaboration and aim to provide a welcoming and inclusive environment for students with diverse identities and backgrounds. The instructor will help students form study groups as needed.

Course Note: For students intending on concentrating in physics, please note that the laboratory component of Physics 19, called Principles of Scientific Inquiry (PSI), is a departmental requirement. (For students in Physics 19 who are not planning on concentrating in physics, PSI is not required.) Sign-ups for PSI will be arranged at the beginning of the semester. PSI topics will include experimental design, model testing, measurements, data collection, data and error analysis, basic programming, oral presentations, and scientific writing. PSI will meet weekly throughout the semester, and will emphasize collaborative teaching and learning.

Physics 19 has a lab component available for physics concentrators, but the lab component is not required for the course. You can join the lab on this Canvas site: <https://self-enroll.tlt.harvard.edu/7cfd320-de53-43f6-a047-082f969b6d3a> The available lab times are: T 3-5T 6-8W 12:45-2:45R 3-5R 6-8F 9:45-11:45F 12:45-2:45

Physics 19 is mathematically intensive. The course will assume a working knowledge of single-variable differential and integral calculus at least at the level of Mathematics 1A, as well as a high comfort level with abstract concepts, but will not assume previous coursework in physics or multivariable calculus. Mathematics 1A is not a strict requirement, and students who are unsure whether they have adequate background should contact the instructor. The course will cover relevant topics from vector calculus, complex analysis, linear algebra, and other areas of mathematics as needed, so a prior familiarity with these subjects, while helpful, will not be required.

FAS Divisional Distribution: Science & Engineering & Applied Science

PHYSICS 20

Introduction to Computational Physics

Course ID: 220605
2025 Fall (4 Credits)

TR 1030 AM - 1145 AM

Logan McCarty

This course is a systematic introduction to computing with python and jupyter notebooks designed for concentrators in physics and related fields. The course consists of two parts: 1. Basics: essential elements of computing, including types of variables, lists, arrays, iteration and control flow (for, while loops, if statement), definition of functions, recursion, file handling and simple plots, plotting and visualization tools in higher dimensions. 2. Applications: development of computational skills for problem solving, including numerical and machine learning methods, and their use in deterministic and stochastic approaches; examples include numerical differentiation and integration, fitting of curves and error analysis, solution of simple differential equations, random numbers and stochastic sampling, and advanced methods like neural networks and simulated annealing for optimization in complex systems. Course work consists of attending lectures and labs, weekly homework assignments, a mid-term project and a final project; while work is developed collaboratively, coding assignments are submitted individually.

Course Note: Lectures meet concurrently with APMTH 10, although sections, homework and project assignments are different between the two courses.

Multivariable calculus (e.g. Mathematics 21a) is a prerequisite. Introductory courses in physics, such Physics 15a, 16 or higher are useful for better understanding of the applications. The course provides an introduction to programming using python, and starts from the level of a complete beginner.

Topics in Current Research

Course ID: 111967
2026 Spring (4 Credits)

M 0300 PM - 0415 PM

Instructor Permission Required

Eric Mazur

This tutorial is based on the Tuesday Night Seminars. Each Tuesday night, one or two Harvard faculty members introduce their research at an accessible level, to undergraduates enrolled in the course, as well as graduate students who would like to learn about the topics investigated. The seminars illustrate how research is done, and provide examples of research projects graduate students might study if they join the faculty member's group. Before each seminar, the enrolled students read articles concerning the subject of the seminar and in the Monday class, they present and discuss the concepts. Students learn how to express scientific concepts verbally, and in writing for their final report. The course is aimed at juniors and seniors who are familiar with the basics in classical mechanics, electricity and magnetism, and quantum mechanics. Before each seminar enrolled students meet with the faculty presenter and discuss the career trajectory.

Course Note: Primarily for junior and senior concentrators, however interested sophomores are welcome.

Instructor Permission Required

PHYSICS 123

Laboratory Electronics

TR 0130 PM - 0530 PM

Kathryn Ledbetter

An introduction to electronic circuit design intended to develop circuit intuition and debugging skills through daily design exercises, discussion and hands-on lab exercises. The approach is intensely practical, minimizing theory. Moves quickly from passive circuits to discrete transistors, then concentrates on operational amplifiers, used to make a variety of circuits including integrators, oscillators, regulators, and filters. The digital half of the course treats analog-digital interfacing, emphasizes the use of microcontrollers and programmable logic devices (PLDs).

HARVARD UNIVERSITY 1374 of 1792

Course ID: 124108

2025 Fall (4 Credits)

Instructor Permission Required

Course Note: Physics 123 is the same course as Physics 223; if you are a graduate student, please enroll in 223. Limited to 20 students.

Some prior experience with computer programming, especially C or Arduino is helpful.

FAS Divisional Distribution: Science & Engineering & Applied Science

PHYSICS 125

Course ID: 120167
2025 Fall (4 Credits)

Widely Applied Physics

TR 1200 PM - 0115 PM

David Morin

Uses physics to analyze important technologies and real-world systems. Stresses estimation and "back of the envelope" calculations, as are commonly used by research physicists. New physical concepts are introduced as necessary. Example topics: energy production and storage, nuclear physics, nuclear power and weapons, health effects of radiation, risk analysis, airplanes, spy satellites, rockets, fluids, water waves, mechanical design and failure, global warming, and cosmology. Emphasis is on developing physical intuition and the ability to do order-of-magnitude calculations.

Physics 15a, b, c, and mathematics at the level of Mathematics 21a. Physics 143a and 181 are very helpful, and may be taken concurrently.

FAS Divisional Distribution: Science & Engineering & Applied Science

PHYSICS 137

Course ID: 218289
2026 Spring (4 Credits)

Philosophy of Quantum Theory

TR 0130 PM - 0245 PM

Instructor Permission Required

Jacob Barandes

Quantum theory is our most empirically successful scientific framework. The theory reliably accounts for the measurement results of atomic clocks and particle accelerators to many decimal places, and much of our modern technology relies on it. However, the theory's axiomatic foundations are arguably either inconsistent or incomplete, and there is still no consensus over what the theory entails about the world. This course will cover the century-long effort to resolve these mysteries and others, a story that features fantastical notions like parallel universes, pilot waves, quasi-probabilities, alive-and-dead cats, and spooky action at a distance. Throughout the course, we will engage with many relevant questions in philosophy, from determinism and causation to epistemology and the meaning of probability. Assessments: The course will have weekly homework assignments consisting of a mixture of primary-source readings, short essays, and mathematical exercises. The course will not have any exams. We will conclude with a final paper on a topic that students can choose from a list of available prompts.

Course Note: This course is cross-listed as Philosophy 151 and Physics 137. When taken as Philosophy 151, this course satisfies a divisional distribution in Arts and Humanities. When taken as Physics 137, this course satisfies a divisional distribution in Science & Engineering & Applied Science. Either way, this course counts toward the concentration requirements for the physics concentration.

Students should be comfortable with algebra at a level covered in most high schools. A prior experience with single-variable calculus may also be helpful.

FAS Divisional Distribution: Science & Engineering & Applied Science

PHYSICS 141

Course ID: 121885
2025 Fall (4 Credits)

The Physics of Sensory Systems in Biology

TR 0900 AM - 1015 AM

Instructor Permission Required

Aravinthan Samuel

Living organisms use sensory systems to inform themselves of the sights, sounds, and smells of their surrounding environments. Sensory systems are physical measuring devices, and are therefore subject to certain limits imposed by physics. Here we will consider the physics of sensory measurement and perception, and study ways that biological systems have solved their underlying physical problems. We will discuss specific cases in vision, olfaction, and hearing from a physicist's point of view.

Math 21a and 21b or the equivalent.

Requires: Anti-Requisite: Cannot be taken for credit if NEURO 141 already complete.

One can consider this course as a general introduction and overview to theoretical physics, even though it centers on the theoretical aspects of classical mechanics. We will study problems in the mechanics of particle motion and also problems in continuum mechanics, including classical field theory. We will consider linear systems and non-linear ones. We stress the role of conserved quantities in studying the laws of physics, and emphasize the relation between conserved quantities and symmetry. We study Lagrangian and Hamiltonian mechanics from the point of view of their relation to different fields of physics, including quantum theory. We discuss soliton solutions to some non-linear classical equations. Time permitting, we will discuss other non-linear phenomena that are important in physics.

PHYSICS 191

Advanced Laboratory

TR 0130 PM - 0530 PM

Melissa Franklin, Amir Yacoby, Jieping Fang, Joseph Peidle, Joseph Peidle

Students will engage in the practice and discussion of experimental science by completing three projects, drawn from the fields of condensed matter, atomic, optical, nuclear, and/or particle physics. Laboratory techniques, theoretical understanding, data analysis methods, and scientific reading and writing skills are developed in collaboration with a lab partner, and with guidance from a team of experimental physics faculty and staff. Students will learn to write the results of each project in a format that is appropriate for a peer-reviewed journal. Available experiments range from classics of the twentieth century such as relativistic mass of the electron, lifetime of the muon, superfluid helium, and the quantum Hall effect, to topics of current interest such as slow light, nitrogen-vacancy centers in diamond, superconductivity and the Meissner effect, optical tweezers, and ultrafast optical spectroscopy.

Course Note: A substantial amount of outside reading is expected. Physics 191 is the same course as Physics 247; if you are a graduate student, please enroll in 247.

Physics 15a or 16, 15b, 15c. Physics 143a is highly recommended; 181 is also useful.

Students will learn to write the results of each project in a format that is appropriate for a peer-reviewed journal. Available experiments range from classics of the twentieth century such as relativistic mass of the electron, lifetime of the muon, superfluid helium, and the quantum Hall effect, to topics of current interest such as slow light, nitrogen-vacancy centers in diamond, superconductivity and the Meissner effect, optical tweezers, and ultrafast optical spectroscopy.

Course Note: A substantial amount of outside reading is expected. Physics 191 is the same course as Physics 247; if you are a graduate student, please enroll in 247.

Physics 15a or 16, 15b, 15c. Physics 143a is highly recommended; 181 is also useful.

FAS Divisional Distribution: Science & Engineering & Applied Science

PHYSICS 195A**Introduction to Solid State Physics**

MW 0300 PM - 0415 PM

Jenny Hoffman

Course ID: 112107

2025 Fall (4 Credits)

The physics of crystalline solids and their electric, magnetic, optical, and thermal properties. Designed as a first course in solid-state physics. Topics: free electron model; Drude model; the physics of crystal binding; crystal structure and vibration (phonons); x-ray diffraction; electrons in solids (Bloch theorem) and electronic band structures; metals and insulators; semiconductors (and their applications in pn junctions and transistors); magnetism; superconductivity.

Course Note: Physics 195a is also offered as Applied Physics 195a. Students may not take both for credit.

Physics 15a, 15b and 15c or the equivalent. Physics 143a. Physics 181 and Physics 143b (taken concurrently) helpful but not required.

FAS Divisional Distribution: Science & Engineering & Applied Science

PHYSICS 195B**Introduction to Quantum Materials and Devices**

MWF 0300 PM - 0415 PM

Robert Westervelt

Course ID: 218288

2026 Spring (4 Credits)

This course provides an introduction to quantum materials and devices, including low-dimensional materials, single and double quantum dots, Josephson junctions, and graphene. Their behavior is explained using quantum and semiclassical transport, the Coulomb blockade, and superconductivity. Quantum devices offer new approaches for electronics and photonics.

Course Note: Formerly ENGSCI 171. Physics 195b is also offered as Applied Physics 195b. Students may not take both for credit.

Applied Physics 195A or Physics 195A, and Physics 143A or ES 170.

FAS Divisional Distribution: Science & Engineering & Applied Science

PHYSICS 201**Data Analysis for the Physical Sciences**

MWF 1030 AM - 1145 AM

Vinothan Manoharan

Course ID: 161201

2026 Spring (4 Credits)

This course covers methods for analyzing experimental data. Students will learn a Bayesian framework for statistical inference, modern computational methods such as Markov-chain Monte Carlo techniques, and the application to problems in particle physics, biophysics, condensed matter, applied physics, astrophysics, and other fields. The course emphasizes an intuitive, principled approach to data analysis and will involve discussions of ethics and reproducible research.

Course Note: This course is suitable for students with limited or rusty programming skills. Students with more advanced programming skills may wish to take APMTH 207 or ENG-SCI 255.

Research experience commensurate with that of a first-year (or higher) PhD student in experimental physics. Students without such experimental experience must have taken Physics 191 or Physics 247 (or equivalent) first.

FAS Divisional Distribution: None

Quantitative Reasoning with Data: Yes

PHYSICS 210

General Theory of Relativity

MWF 0300 PM - 0415 PM

Jordan Cotler

An introduction to general relativity: the principle of equivalence, Riemannian geometry, Einstein's field equation, the Schwarzschild solution, the Newtonian limit, experimental tests, black holes.

Physics 143a (quantum mechanics), 151 (mechanics) and 153 (electromagnetism), and Mathematics 21 (multivariable calculus) or equivalents.

FAS Divisional Distribution: Science & Engineering & Applied Science

PHYSICS 211BR

Introduction to Classical and Quantum Black Holes

W 0315 PM - 0515 PM

Andrew Strominger

A modern introduction to the theory of black holes, including the causal structure of Kerr, photon rings, the laws of black hole thermodynamics, energy extraction, Hawking radiation, the information paradox, black holes in two and three dimensions and holography.

Quantum Field Theory and General Relativity.

PHYSICS 212

Cosmology

TR 1030 AM - 1145 AM

Cora Dvorkin

Graduate course on Physical Cosmology. Topics will include: the physics of Inflation, Cosmic Microwave Background anisotropies, evidence for Dark Matter, discovery of the accelerated expansion of the Universe, primordial gravitational waves, gravitational lensing, likelihood analysis, structure formation.

FAS Divisional Distribution: Science & Engineering & Applied Science

PHYSICS 218

Quantum Chaos and Localization

TR 1030 AM - 1145 AM

Eric Heller

The important subject of quantum ergodicity and thermalization is under active investigation. This course is designed to address the questions that arise, developing the fundamental tools right up to the research frontier. Chaos theory, Anderson localization, scarring, random matrix theory, decoherence, entanglement, and measurement theory are considered. As much as possible, this course will adopt a seminar format, with student discussion and presentations becoming more important as the term progresses.

Course ID: 114266
2026 Spring (4 Credits)

PHYSICS 223

Electronics for Scientists

TR 0130 PM - 0530 PM

Kathryn Ledbetter

Course ID: 109346

2025 Fall (4 Credits)

Instructor Permission Required

An introduction to electronic circuit design intended to develop circuit intuition and debugging skills through daily design exercises, discussion and hands-on lab exercises. The approach is intensely practical, minimizing theory. Moves quickly from passive circuits to discrete transistors, then concentrates on operational amplifiers, used to make a variety of circuits including integrators, oscillators, regulators, and filters. The digital half of the course treats analog-digital interfacing, emphasizes the use of microcontrollers and programmable logic devices (PLDs).

Course Note: Physics 223 is the same course as Physics 123; if you are an undergraduate student, please enroll in 123. Limited to 20 students.

Some prior experience with computer programming, especially C or Arduino is helpful.

FAS Divisional Distribution: Science & Engineering & Applied Science

PHYSICS 231

Computational Neuroscience

MW 0300 PM - 0415 PM

Haim Sompolinsky

Course ID: 217838

2026 Spring (4 Credits)

Follows trends in modern brain theory, focusing on local neuronal circuits as basic computational modules. Explores the relation between network architecture, dynamics, and function. Introduces tools from information theory, statistical inference, and the learning theory for the study of experience-dependent neural codes. Specific topics: computational principles of early sensory systems; adaptation and gain control in vision, dynamics of recurrent networks; feature selectivity in cortical circuits; memory; learning and synaptic plasticity; noise and chaos in neuronal systems.

Course Note: Also offered as Neuro 231 and MCB 231. Cannot be taken for credit as Physics 231 if Neuro 231 or MCB 231 is already complete.

Basic knowledge of multivariate calculus, differential equations, linear algebra, and elementary probability theory.

Requires: Anti-Requisite: Cannot be taken for credit if MCB 131 or Neuro 131 already complete.

FAS Divisional Distribution: Science & Engineering & Applied Science

PHYSICS 232

Advanced Electromagnetism

MW 0300 PM - 0415 PM

David R. Nelson

Course ID: 112263

2026 Spring (4 Credits)

Maxwell's equations, conservation laws, Green's functions, time-dependent solutions and radiation, scattering and diffraction, and gauge and Lorentz invariance. Time permitting: negative refractive index materials and radiation from rapidly accelerating charges.

Physics 153 and Applied Mathematics 105a, 105b, or equivalent.

FAS Divisional Distribution: Science & Engineering & Applied Science

PHYSICS 233

Special Topics in Electricity and Magnetism

MW 0300 PM - 0415 PM

David R. Nelson

Course ID: 226478

2025 Fall (4 Credits)

Special topics in electricity and magnetism, beyond subjects usually covered in a one semester graduate course such as P232. The course will start by reviewing the electrodynamics of continuous media and then move on to natural focusing and the fine structure of light, magnetohydrodynamics and the electromagnetic properties of superconductors.

PHYSICS 245

Particle Physics

WF 0130 PM - 0245 PM

Carlos Arguelles Delgado

Foundations of particle physics with emphasis on fundamental concepts. Basic structures of quantum electrodynamics, quantum chromodynamics, and electroweak interactions will be covered.

Two terms of quantum mechanics, e.g., Physics 143a, b or equivalent.

FAS Divisional Distribution: Science & Engineering & Applied Science

Course ID: 133281

2025 Fall (4 Credits)

PHYSICS 247

Laboratory Course in Contemporary Physics

TR 0130 PM - 0530 PM

Melissa Franklin, Amir Yacoby, Jieping Fang, Joseph Peidle, Joseph Peidle

Students will engage in the practice and discussion of experimental science by completing three projects, drawn from the fields of condensed matter, atomic, optical, nuclear, and/or particle physics. Laboratory techniques, theoretical understanding, data analysis methods, and scientific reading and writing skills are developed in collaboration with a lab partner, and with guidance from a team of experimental physics faculty and staff. Students will learn to write the results of each project in a format that is appropriate for a peer-reviewed journal. Available experiments range from classics of the twentieth century such as relativistic mass of the electron, lifetime of the muon, superfluid helium, and the quantum Hall effect, to topics of current interest such as slow light, nitrogen-vacancy centers in diamond, superconductivity and the Meissner effect, optical tweezers, and ultrafast optical spectroscopy.

Course Note: A substantial amount of outside reading is expected. Physics 247 is the same course as Physics 191; if you are an undergraduate, please enroll in 191.

FAS Divisional Distribution: Science & Engineering & Applied Science

Course ID: 145024

2025 Fall (4 Credits)

Instructor Permission Required

PHYSICS 247

Laboratory Course in Contemporary Physics

TR 0130 PM - 0530 PM

Matteo Mitrano, Amir Yacoby, Jieping Fang, Joseph Peidle, Joseph Peidle

Students will engage in the practice and discussion of experimental science by completing three projects, drawn from the fields of condensed matter, atomic, optical, nuclear, and/or particle physics. Laboratory techniques, theoretical understanding, data analysis methods, and scientific reading and writing skills are developed in collaboration with a lab partner, and with guidance from a team of experimental physics faculty and staff. Course ID: 145024

2026 Spring (4 Credits)

Instructor Permission Required

PHYSICS 251A

Advanced Quantum Mechanics I

WF 0130 PM - 0245 PM

Eslam Khalaf

Basic course in nonrelativistic quantum mechanics. Review of wave functions and the Schrödinger Equation;

Course ID: 111314

2025 Fall (4 Credits)

Hilbert space; the WKB approximation; central forces and angular momentum; spins and their addition, measurement theory; the density matrix; perturbation theory.

Physics 143a, b or equivalent, or permission of instructor.

FAS Divisional Distribution: Science & Engineering & Applied Science

PHYSICS 251B

Advanced Quantum Mechanics II

TR 0130 PM - 0245 PM

Eslam Khalaf

Path integrals; relativistic quantum mechanics and quantum fields; identical particles; scattering theory; quantum information theory.

Physics 251a.

FAS Divisional Distribution: Science & Engineering & Applied Science

Course ID: 111876
2026 Spring (4 Credits)

PHYSICS 253A

Quantum Field Theory I

TR 0130 PM - 0245 PM

Matthew Schwartz

Introduction to relativistic quantum field theory. This course covers quantum electrodynamics. Topics include canonical quantization, Feynman diagrams, spinors, gauge invariance, path integrals, ultraviolet and infrared divergences, renormalization and applications to the quantum theory of the weak and gravitational forces.

Physics 143a, b or equivalents.

FAS Divisional Distribution: Science & Engineering & Applied Science

Course ID: 122930
2025 Fall (4 Credits)

PHYSICS 253B

Quantum Field Theory II

WF 0130 PM - 0245 PM

Matthew Schwartz

A continuation of physics 253a. Topics include non-renormalizable theories, infrared divergences, the renormalization group, non-Abelian gauge theories, spinor helicity methods, spontaneous symmetry breaking, weak interactions, anomalies and quantum chromodynamics. Additional or alternative topics may be covered depending on time and interest.

Physics 253a.

FAS Divisional Distribution: Science & Engineering & Applied Science

Course ID: 115442
2026 Spring (4 Credits)

PHYSICS 253CR

Quantum Field Theory III

TR 0130 PM - 0245 PM

Matthew Reece

Advanced topics in quantum field theory, with an emphasis on nonperturbative aspects of gauge theory. Topics will include topological aspects of gauge theories, magnetic monopoles, instantons, theta terms, Chern-Simons terms, bosonization, generalized global symmetries, anomalies, and confinement.

Quantum field theory including nonabelian gauge theory (Physics 253a, 253b)

FAS Divisional Distribution: Science & Engineering & Applied Science

Course ID: 118459
2025 Fall (4 Credits)

Familiarity with quantum field theory and the Standard Model (e.g., 253a, 253b and/or 254) is necessary. Familiarity with basics of cosmology and of algebraic topology would be ideal, but we will recommend reading material as we go along.

FAS Divisional Distribution: Science & Engineering & Applied Science

Theory and phenomenology of axion fields. First, we review the QFT toolkit needed to understand the Strong CP problem and axions (e.g., instantons, theta terms, Chern-Simons terms, the chiral anomaly, the chiral Lagrangian). We will discuss axion models with an emphasis on the axion quality problem and extra-dimensional axions; phenomenological aspects of axion physics (axion cosmology, axion dark matter, laboratory searches, astrophysical constraints); and theoretical developments related to axions (anomaly inflow, generalized symmetries).

Familiarity with quantum field theory and the Standard Model (e.g., Physics 253a, 253b and/or 254) is necessary. Some familiarity with cosmology would be useful, but we will review the basics.

Introduction to quantum information science and quantum computation. Emphasis on fundamental concepts including qubits and quantum operations, the nature of entanglement and its manipulation, quantum error correction, and various implementation models. Topics include: basics of quantum information, different models of quantum computing, fundamental quantum algorithms, quantum error correction, and fault tolerance; as well as experimental implementations. Recent developments in the field will be discussed.

Course Note: Physics 260b is also offered as QSE-210b. Students may not take both for credit.

Physics 260a or QSE 210a.

Basic principles of statistical physics with applications including: the equilibrium properties of classical and quantum gases; phase diagrams, phase transitions and critical points, as illustrated by the gas-liquid transition and simple magnetic models; Bose-Einstein condensation.

Course Note: Also offered as Applied Physics 284. Either course can be used to satisfy the statistical mechanics requirement in the Physics PhD program or the Applied Physics model PhD program.

Physics 143a and Physics 181 or Engineering Sciences 181.

FAS Divisional Distribution: Science & Engineering & Applied Science

W 0300 PM - 0545 PM

Ashvin Vishwanath

This is a special topics course on quantum systems of many particles, i.e. quantum matter. Primarily, we will be interested in condensed matter systems such as electrons in solids or ultra-cold atoms in optical lattices, although the concepts covered will have broader applicability. We will study well defined microscopic models but aim to understand the physics at much longer scales, where rich phenomena such as new excitations described by universal laws emerge. Often, (but not always) we will use quantum field theory to describe this physics, which may also help demystify the origin of quantum field theory in a physical setting free from infinities. Topics: 1. The 1+1D transverse field Ising model – Kramers Wannier duality, fermionization, chiral symmetry. Experimental realization in CoNb₂O₆. 2. Symmetry Protected Topological Phases and Matrix Product States. 3. Continuous symmetry breaking in 2+1D. Goldstone modes and the Anderson Tower. Non-perturbative approaches such as dualities and large N expansions. 4. Emergent Gauge Theories and topological order. Confinement and topological order. Fractional quantum Hall states and gapped quantum spin liquids. Chern-Simons theories. Toric code and higher form symmetries. Emergent electromagnetism in quantum magnets and quantum spin-ice. 5. Entanglement properties of quantum phases of matter. 6. Time permitting: Deconfined criticality, gapless Dirac spin liquids and QED₃

A strong background in quantum mechanics and statistical physics, such as Phy 143A, B and Phy 181 or equivalent.

FAS Divisional Distribution: Science & Engineering & Applied Science

PHYSICS 272

Quantum Learning Theory

MW 0300 PM - 0415 PM

Jordan Cotler, Sitan Chen

How can we use quantum computation to learn properties of quantum systems? Answering this question helps us understand the power of quantum computers in assisting experimental physicists with studying quantum materials, while also providing valuable tools for quantum ML to develop algorithms based on quantum data. Quantum learning theory has become a core subject in quantum information and computation, and this course is one of the first to present the subject in its entirety. Topics include the theory of learning quantum states and dynamics, the role of quantum memory, random and pseudorandom quantum circuits, and learning quantum many-body systems.

Course Note: Physics 272 is also offered as COMPSCI 2233. Students may not take both for credit.

Stat 110 and familiarity with quantum mechanics / quantum computing at the level of Physics 143A (quantum mechanics I) or Physics 160 (quantum information) is very strongly recommended.

FAS Divisional Distribution: Science & Engineering & Applied Science

PHYSICS 283B

Beyond the Standard Model

W 0300 PM - 0530 PM

Lisa Randall

We will study beyond the Standard Model theories with an eye both to phenomenological consequences and to connections to high energy theory. We will study supersymmetry as well as extra-dimensional theories. If time permits we will also study light axion-like particles and ways of detecting them.

The material will be largely self-contained, but some familiarity with the basics of special relativity and quantum mechanics may be useful.

FAS Divisional Distribution: Science & Engineering & Applied Science

PHYSICS 283C

Quantum Gravity

WF 0130 PM - 0245 PM

Daniel Jafferis

Topics in quantum gravity including path integral methods, AdS/CFT and bootstrap methods, connections to quantum information theory, black hole information, Lorentzian wormholes, euclidean wormholes, and de Sitter

Course ID: 226488

2025 Fall (4 Credits)

2025 Fall (4 Credits)

Course ID: 226479

2025 Fall (4 Credits)

spacetime.

FAS Divisional Distribution: Science & Engineering & Applied Science

PHYSICS 285B

Modern Atomic and Optical Physics II

MW 1030 AM - 1145 AM

Mikhail Lukin

Introduction to quantum optics and modern atomic physics. The basic concepts and theoretical tools will be introduced. Topics will include coherence phenomena, non-classical states of light and matter, atom cooling and trapping and atom optics. The second of a two-term subject sequence that provides the foundations for contemporary research.

Course Note: Also offered as QSE 285B. Students may not take both for credit

A course in electromagnetic theory (Physics 232a or equivalent); one half-course in intermediate or advanced quantum mechanics.

FAS Divisional Distribution: Science & Engineering & Applied Science

PHYSICS 286

Inference, Information Theory, Learning and Statistical Mechanics

TR 0130 PM - 0245 PM

Sharad Ramanathan

Course ID: 138516

2025 Fall (4 Credits)

Instructor Permission Required

This course focuses on the modern applications of Statistical Mechanics. We will learn the basics of information theory, coding and compression. We will next learn about Bayesian Inference, priors and maximizing entropy, which will naturally lead us to regularization and compressed sensing. We will then cover learning: support vector machines, vc dimension, supervised, reinforcement and unsupervised learning. These topics, which build on each other, will be taught using examples in the primary literature with an emphasis on applying the framework we develop. Applications will be taught through problems in genomics, neuroscience, geophysics and engineering.

Course Note: Physics 286 is also offered as Applied Physics 286. Students may not take both for credit.

Comfort with Linear Algebra, Calculus is necessary. Undergraduate Statistical Mechanics would be useful but not necessary.

FAS Divisional Distribution: Science & Engineering & Applied Science

PHYSICS 287A

Introduction to String Theory

TR 1200 PM - 0115 PM

Xi Yin

Course ID: 111191

2025 Fall (4 Credits)

An introduction to the perturbative formulation of string theory, including lightcone and BRST quantization of bosonic and superstrings, the string S-matrix, supergravity, and D-branes.

Physics 253a, b or equivalent.

FAS Divisional Distribution: Science & Engineering & Applied Science

PHYSICS 287BR

Topics in String Theory

F 0900 AM - 1200 PM

C. Vafa

Course ID: 114008

2026 Spring (4 Credits)

A selection of topics in string theory with emphasis on geometric aspects of string compactifications and the resulting quantum systems in diverse dimensions.

PHYSICS 289R

Topics in Mathematical Physics

TR 0130 PM - 0245 PM

Arthur Jaffe

Over the past few years, the development of new mathematical picture languages led to insights in several fields, including quantum information, entanglement, entropy, error correction, uncertainty principles, Fourier analysis, and fusion algebras. This course will overview a number of these directions and develop several of these topics from scratch and in depth, relating them to statistical mechanics models and to quantum field theory.

Physics 253a.

FAS Divisional Distribution: Science & Engineering & Applied Science

Course ID: 118733
2026 Spring (4 Credits)

PHYSICS 294

Superconductivity and superconducting devices

TR 0130 PM - 0245 PM

Philip Kim

This course focuses on the electromagnetic and quantum phenomena associated with superconductivity, as well as their applications. Topics include a phenomenological description of superconductivity, a brief survey of BCS theory, the Ginzburg-Landau theory of superconductivity, magnetic vortices, the Josephson effect, Bogoliubov-de Gennes description, superconducting qubits, and unconventional superconductivity.

One course on graduate quantum mechanics and one course on graduate statistical mechanics. Undergraduate course on solid state physics helpful, but not necessary.

Course ID: 226799
2026 Spring (4 Credits)

PHYSICS 295A

Introduction to Quantum Theory of Solids

MWF 1200 PM - 0115 PM

Philip Kim

Lattices and symmetries. Electronic Structure of Crystals. Semiclassical Transport Theory. Semiconductors. Localization. Integer Quantum Hall effect. Topological Insulators. Phonons. Additional topics from the theory of interacting electrons, including introduction to magnetism and superconductivity.

Course Note: Also offered as Applied Physics 295a. Students cannot take both for credit.

One course on graduate quantum mechanics and one course on graduate statistical mechanics. Undergraduate course on solid state physics helpful, but not necessary.

FAS Divisional Distribution: Science & Engineering & Applied Science

Course ID: 127980
2025 Fall (4 Credits)

PHYSICS 295B

Quantum Theory of Solids

W 0300 PM - 0545 PM

Ashvin Vishwanath

A course on the application of the principles of many-particle quantum mechanics to the properties of solids. The objective is to make students familiar with the tools of second quantization and diagrammatic perturbation theory, while describing the theory of the electron liquid, the BCS theory of superconductivity, and theory of magnetism in metals and insulators. Modern topics on correlated electron systems will occupy the latter part of the course.

Course Note: Physics 295b is also offered as Applied Physics 295b. Students may not take both for credit.

Physics 251a,b, an introductory course in solid state physics, or permission of instructor.

Course ID: 127979
2026 Spring (4 Credits)

PHYSICS 296**Mesoscale and Low Dimensional Devices**

TR 0130 PM - 0245 PM

Donhee Ham

Concepts of condensed matter physics are applied to the science and technology of beyond-CMOS devices, in particular, mesoscale, low-dimensional, and superconducting devices. Topics include: quantum dots/wires/wells and two-dimensional (2D) materials; optoelectronics with confined electrons; conductance quantization, Landauer-Buttiker formalism, and resonant tunneling; magneto oscillation; integer and fractional quantum Hall effects; Berry phase and topology in condensed matter physics; various Hall effects (anomalous, spin, valley, etc.); Weyl semimetal; topological insulator; spintronic devices and circuits; collective electron behaviors in low dimensions and applications; Cooper-pair boxes and superconducting quantum circuits.

Course Note: Also offered as Applied Physics 296 and as QSE 296. Students may only take one AP 296, Physics 296, or QSE 296 for credit.

Undergrad level condensed matter physics (AP/P195).

FAS Divisional Distribution: Science & Engineering & Applied Science

PHYSICS 297**Professional Writing for Scientists and Engineers**

W 0300 PM - 0500 PM

Suzanne Smith, Jenny Hoffman

This class leads students to develop their skills in the critical reading and writing of science and engineering. Genres will include research articles, grant proposals, school/fellowship/job applications, or lay abstracts & press releases for the non-scientific public. Crucially, students will be empowered not only to achieve their own writing goals, but also to break down these learned skills and impart them to others, as effective collaborators and mentors of younger students.

PHYSICS 306B

Experimental Physics in Quantum Materials

No meeting time listed

Julia Mundy

Dissertation research. Not a lecture or seminar course.

Course ID: 211048
2025 Fall (4 Credits)

Instructor Permission Required

FAS Divisional Distribution: None

PHYSICS 306B

Experimental Physics in Quantum Materials

No meeting time listed

Julia Mundy

Dissertation research. Not a lecture or seminar course.

Course ID: 211048
2026 Spring (4 Credits)

Instructor Permission Required

FAS Divisional Distribution: None

PHYSICS 307A

Atomic/Bio-physics, Quantum Optics

No meeting time listed

Lene Hau

Course ID: 114638
2025 Fall (4 Credits)

Instructor Permission Required

PHYSICS 307A

Atomic/Bio-physics, Quantum Optics

No meeting time listed

Lene Hau

Course ID: 114638
2026 Spring (4 Credits)

Instructor Permission Required

PHYSICS 307B	Course ID: 114639
Atomic/Bio-physics, Quantum Optics	2025 Fall (4 Credits)
<i>No meeting time listed</i>	<i>Instructor Permission Required</i>
<i>Lene Hau</i>	
Dissertation research. Not a lecture or seminar course.	
FAS Divisional Distribution: None	

PHYSICS 307B	Course ID: 114639
Atomic/Bio-physics, Quantum Optics	2026 Spring (4 Credits)
<i>No meeting time listed</i>	<i>Instructor Permission Required</i>
<i>Lene Hau</i>	
Dissertation research. Not a lecture or seminar course.	
FAS Divisional Distribution: None	

PHYSICS 308A	Course ID: 215745
Experimental Astrophysics and Cosmology	2025 Fall (4 Credits)
<i>No meeting time listed</i>	<i>Instructor Permission Required</i>
<i>John Kovac</i>	

PHYSICS 308A	Course ID: 215745
Experimental Astrophysics and Cosmology	2026 Spring (4 Credits)
<i>No meeting time listed</i>	<i>Instructor Permission Required</i>
<i>John Kovac</i>	

PHYSICS 308B	Course ID: 215746
Experimental Astrophysics and Cosmology	2025 Fall (4 Credits)
<i>No meeting time listed</i>	<i>Instructor Permission Required</i>
<i>John Kovac</i>	
Dissertation research. Not a lecture or seminar course.	
FAS Divisional Distribution: None	

PHYSICS 308B	Course ID: 215746
Experimental Astrophysics and Cosmology	2026 Spring (4 Credits)
<i>No meeting time listed</i>	
<i>John Kovac</i>	
Dissertation research. Not a lecture or seminar course.	
FAS Divisional Distribution: None	

PHYSICS 309A	Course ID: 114009
Introduction to String Theory	2025 Fall (4 Credits)
<i>No meeting time listed</i>	<i>Instructor Permission Required</i>
<i>C. Vafa</i>	

PHYSICS 309A
Introduction to String Theory
No meeting time listed
C. Vafa

Course ID: 114009
2026 Spring (4 Credits)
Instructor Permission Required

PHYSICS 309B
Topics in Elementary Particle Theory
No meeting time listed
C. Vafa

Course ID: 114014
2025 Fall (4 Credits)
Instructor Permission Required

Dissertation research. Not a lecture or seminar course.

FAS Divisional Distribution: None

PHYSICS 309B
Topics in Elementary Particle Theory
No meeting time listed
C. Vafa

Course ID: 114014
2026 Spring (4 Credits)
Instructor Permission Required

Dissertation research. Not a lecture or seminar course.

FAS Divisional Distribution: None

PHYSICS 310A
Experimental Condensed Matter Physics and Biophysics
No meeting time listed
Hongkun Park

Course ID: 215747
2025 Fall (4 Credits)
Instructor Permission Required

PHYSICS 310A
Experimental Condensed Matter Physics and Biophysics
No meeting time listed
Hongkun Park

Course ID: 215747
2026 Spring (4 Credits)
Instructor Permission Required

PHYSICS 310B
Experimental Condensed Matter Physics and Biophysics
No meeting time listed
Hongkun Park

Course ID: 215748
2025 Fall (4 Credits)
Instructor Permission Required

Dissertation research. Not a lecture or seminar course.

FAS Divisional Distribution: None

PHYSICS 310B
Experimental Condensed Matter Physics and Biophysics
No meeting time listed
Hongkun Park

Course ID: 215748
2026 Spring (4 Credits)
Instructor Permission Required

Dissertation research. Not a lecture or seminar course.

FAS Divisional Distribution: None

PHYSICS 311A	Course ID: 148189
Experimental Atomic, Molecular, and Low-Energy Particle Physics	2025 Fall (4 Credits)
<i>No meeting time listed</i>	<i>Instructor Permission Required</i>
<i>John Doyle</i>	

PHYSICS 311A	Course ID: 148189
Experimental Atomic, Molecular, and Low-Energy Particle Physics	2026 Spring (4 Credits)
<i>No meeting time listed</i>	<i>Instructor Permission Required</i>
<i>John Doyle</i>	

PHYSICS 311B	Course ID: 143819
Experimental Atomic, Molecular, and Low-Energy Particle Physics	2025 Fall (4 Credits)
<i>No meeting time listed</i>	<i>Instructor Permission Required</i>
<i>John Doyle</i>	

Dissertation research. Not a lecture or seminar course.

FAS Divisional Distribution: None

PHYSICS 311B	Course ID: 143819
Experimental Atomic, Molecular, and Low-Energy Particle Physics	2026 Spring (4 Credits)
<i>No meeting time listed</i>	<i>Instructor Permission Required</i>
<i>John Doyle</i>	

Dissertation research. Not a lecture or seminar course.

FAS Divisional Distribution: None

PHYSICS 312A	Course ID: 215749
Topics in Statistical Physics	2025 Fall (4 Credits)
<i>No meeting time listed</i>	<i>Instructor Permission Required</i>
<i>Michael P. Brenner</i>	

PHYSICS 312A	Course ID: 215749
Topics in Statistical Physics	2026 Spring (4 Credits)
<i>No meeting time listed</i>	<i>Instructor Permission Required</i>
<i>Michael P. Brenner</i>	

PHYSICS 312B	Course ID: 215750
Topics in Statistical Physics	2025 Fall (4 Credits)
<i>No meeting time listed</i>	<i>Instructor Permission Required</i>
<i>Michael P. Brenner</i>	

Dissertation research. Not a lecture or seminar course.

FAS Divisional Distribution: None

PHYSICS 312B	Course ID: 215750
Topics in Statistical Physics	2026 Spring (4 Credits)
<i>No meeting time listed</i>	<i>Instructor Permission Required</i>

Michael P. Brenner

Dissertation research. Not a lecture or seminar course.

FAS Divisional Distribution: None

PHYSICS 313A

Experimental Condensed Matter Physics

No meeting time listed

Amir Yacoby

Course ID: 122839

2025 Fall (4 Credits)

Instructor Permission Required

PHYSICS 313A

Experimental Condensed Matter Physics

No meeting time listed

Amir Yacoby

Course ID: 122839

2026 Spring (4 Credits)

Instructor Permission Required

PHYSICS 313B

Experimental Condensed Matter Physics

No meeting time listed

Amir Yacoby

Course ID: 122840

2025 Fall (4 Credits)

Instructor Permission Required

Dissertation research. Not a lecture or seminar course.

FAS Divisional Distribution: None

PHYSICS 313B

Experimental Condensed Matter Physics

No meeting time listed

Amir Yacoby

Course ID: 122840

2026 Spring (4 Credits)

Instructor Permission Required

Dissertation research. Not a lecture or seminar course.

FAS Divisional Distribution: None

PHYSICS 314A

Ultrafast dynamics of quantum materials

No meeting time listed

Matteo Mitrano

Course ID: 216655

2025 Fall (4 Credits)

Instructor Permission Required

PHYSICS 314A

Ultrafast dynamics of quantum materials

No meeting time listed

Matteo Mitrano

Course ID: 216655

2026 Spring (4 Credits)

Instructor Permission Required

PHYSICS 314B

Ultrafast dynamics of quantum materials

No meeting time listed

Matteo Mitrano

Course ID: 216656

2025 Fall (4 Credits)

Instructor Permission Required

Dissertation research. Not a lecture or seminar course.

PHYSICS 314B

Ultrafast dynamics of quantum materials

No meeting time listed

Matteo Mitrano

Dissertation research. Not a lecture or seminar course.

Course ID: 216656

2026 Spring (4 Credits)

Instructor Permission Required

FAS Divisional Distribution: None

PHYSICS 315A

Topics in Theoretical Atomic, Molecular, and Condensed Matter Physics

No meeting time listed

Eric Heller

Course ID: 121332

2025 Fall (4 Credits)

Instructor Permission Required

PHYSICS 315A

Topics in Theoretical Atomic, Molecular, and Condensed Matter Physics

No meeting time listed

Eric Heller

Course ID: 121332

2026 Spring (4 Credits)

Instructor Permission Required

PHYSICS 315B

Topics in Theoretical Atomic, Molecular, and Condensed Matter Physics

No meeting time listed

Eric Heller

Dissertation research. Not a lecture or seminar course.

Course ID: 145282

2025 Fall (4 Credits)

Instructor Permission Required

FAS Divisional Distribution: None

PHYSICS 315B

Topics in Theoretical Atomic, Molecular, and Condensed Matter Physics

No meeting time listed

Eric Heller

Dissertation research. Not a lecture or seminar course.

Course ID: 145282

2026 Spring (4 Credits)

Instructor Permission Required

FAS Divisional Distribution: None

PHYSICS 316A

Topics in biophysics and physical chemistry

No meeting time listed

Adam Cohen

Course ID: 215741

2025 Fall (4 Credits)

Instructor Permission Required

PHYSICS 316A

Topics in biophysics and physical chemistry

No meeting time listed

Adam Cohen

Course ID: 215741

2026 Spring (4 Credits)

Instructor Permission Required

PHYSICS 316B

Topics in biophysics and physical chemistry

No meeting time listed

Adam Cohen

Dissertation research. Not a lecture or seminar course.

Course ID: 215742

2025 Fall (4 Credits)

Instructor Permission Required

FAS Divisional Distribution: None

PHYSICS 316B

Topics in biophysics and physical chemistry

No meeting time listed

Adam Cohen

Dissertation research. Not a lecture or seminar course.

Course ID: 215742

2026 Spring (4 Credits)

Instructor Permission Required

FAS Divisional Distribution: None

PHYSICS 317A

Topics in Biophysics

No meeting time listed

Xiaowei Zhuang

Course ID: 119763

2025 Fall (4 Credits)

Instructor Permission Required

PHYSICS 317A

Topics in Biophysics

No meeting time listed

Xiaowei Zhuang

Course ID: 119763

2026 Spring (4 Credits)

Instructor Permission Required

PHYSICS 317B

Topics in Biophysics

No meeting time listed

Xiaowei Zhuang

Dissertation research. Not a lecture or seminar course.

Course ID: 119764

2025 Fall (4 Credits)

Instructor Permission Required

FAS Divisional Distribution: None

PHYSICS 317B

Topics in Biophysics

No meeting time listed

Xiaowei Zhuang

Dissertation research. Not a lecture or seminar course.

Course ID: 119764

2026 Spring (4 Credits)

Instructor Permission Required

FAS Divisional Distribution: None

PHYSICS 318A

High-Energy Neutrino Physics

No meeting time listed

Carlos Argüelles Delgado

Course ID: 216657

2025 Fall (4 Credits)

Instructor Permission Required

PHYSICS 318A
High-Energy Neutrino Physics

No meeting time listed
Carlos Arguelles Delgado

Course ID: 216657
2026 Spring (4 Credits)

PHYSCI 2 (1001)

Mechanics, Elasticity, Fluids, and Diffusion

TR 0900 AM - 1015 AM

Gregory Kestin, Stephen Adams

An introduction to classical mechanics, with special emphasis on the motion of biological systems, from proteins to people. Topics covered include: kinematics, Newton's laws of motion, oscillations, elasticity, random walks, diffusion, and fluids. Examples and problem set questions will often be drawn from the life sciences and medicine.

Physical Sciences 1 (or Chemistry 7), Mathematics 1b, or the equivalent.

FAS Divisional Distribution: Science & Engineering & Applied Science

Course ID: 122575
2025 Fall (4 Credits)

PHYSCI 3

Electromagnetism, Circuits, Waves, Optics, and Imaging

TR 0900 AM - 1015 AM

Louis Deslauriers

This course is an introduction to electromagnetism, waves, optics and sound. Topics covered include: electric and magnetic fields, electrical potential, circuits, simple digital circuits, wave propagation in various media, microscopy, sound and hearing. The course will draw upon a variety of applications to the biological sciences and will use real-world examples to illustrate many of the physical principles described. There are six required laboratory sessions, and a weekly asynchronous discussion section.

Course Note: This course is part of an integrated introduction to the physical sciences intended for students who plan to pursue a concentration in the life sciences and/or satisfy pre-medical requirements in Physics. May not ordinarily be taken for credit in addition to Physics 15b.

Physical Sciences 2, Mathematics 1b, or equivalent.

FAS Divisional Distribution: Science & Engineering & Applied Science

Course ID: 122576
2026 Spring (4 Credits)

PHYSCI 12A

Mechanics and Statistical Physics from an Analytic, Numerical and Experimental Perspective

MWF 0900 AM - 1015 AM

This is the first term of a two-semester introductory course in physics. The focus is on quantitative scientific reasoning, with the first term exploring Newtonian mechanics. Topics include kinematics, linear and rotational motion, forces, energy, momentum, collisions, gravitation, oscillations, and waves, with a brief introduction to statistical physics. Examples are drawn from across the physical sciences and engineering. Students will gain competence in both analytic (pencil and paper) and computational tools (programming in Python) used by scientists to model simple physical systems and analyze experimental data, including problem solving, basic programming, measurement of physical quantities, and chi squared model testing and curve fitting. The course is aimed at first year students who have an interest in pursuing a concentration in the sciences or engineering. The course includes lecture, laboratory, and discussion components.

Students should be comfortable performing basic derivatives and integrals of a single variable. This course presumes no prior experience with calculus-based physics or programming.

Quantitative Reasoning with Data: Yes

PHYSCI 12B

Electromagnetism from an Analytic, Numerical and Experimental Perspective

Course ID: 109457
2025 Fall (4 Credits)

MWF 0900 AM - 1015 AM

Gregorio Ponti, Anna Wang-Holtzen

This is the second term of a two-semester course sequence of introductory physical science and engineering. The focus is on quantitative scientific reasoning, with the second term exploring classical electricity and magnetism. Topics include electrostatics and magnetostatics, analog circuits, electromagnetic fields, and optics. Examples are drawn from across the physical sciences and engineering. The course assumes familiarity with mechanics, experimental physics, and computational techniques covered in Physical Sciences 12a offered during Spring Term (see course description). Students will further develop competence in both analytic (using pencil, paper, and multi-variable calculus) and numerical methods (using the Python programming language) to model simple physical systems and to analyze experimental data. The course is aimed at second year students who have an interest in pursuing a concentration in the sciences or engineering. The course includes lecture, laboratory, and discussion components.

Course Note: May not be taken for credit by students who have passed Physics 15b or Physics 15c.

Requires: Pre-Req: PS12A OR APMTH 10 OR Co-Req: APMATH 10

Quantitative Reasoning with Data: Yes

FAS Divisional Distribution: Science & Engineering & Applied Science

PHYSICI 70

Introduction to Digital Fabrication

TR 0300 PM - 0415 PM

Nathan Melenbrink

Course ID: 215717

2025 Fall (4 Credits)

Instructor Permission Required

An immersive introduction to rapid prototyping, fusing physics, design, computer science, engineering, and art. Students will learn to safely use software and hardware to fabricate programmable projects. Tools and topics will include programmable microcontrollers, 3D CAD/CAM, electronic circuit design, and wireless networking (Internet of Things). Additionally, students will learn operational principles for techniques such as laser cutting, 3D printing, and computer-controlled milling. The course will culminate with an individual final project of the student's own conception, integrating as many of the weekly topics as possible. The course emphasizes self-directed learning, and supports students in accessing resources to help advance the development of their unique projects. Applications may include personal fabrication, product prototyping, fine arts, and the creation of scientific research tools. Students will document work on each weekly topic in a personal website, thereby finishing the course with an online portfolio that not only illustrates their new skill sets, but also contributes to a collective repository of knowledge that serves as a foundation for continued learning. Course website: <https://tinyurl.com/tasr7b6> Related Sections: In addition to class times, students enroll in a lab section where they will interact with course staff for hands-on assignment work. The shop will also remain open to enrolled students at additional times throughout the week.

Course Note: Attendance is mandatory since safety training will occur during class times. Class will meet twice each week. The first meeting will consist of a brief review of the previous week's assignment, followed by a short introduction to the current week's topic and assignment. The second meeting will primarily focus on a hands-on training session for the accompanying assignment. Meetings may also include appearances by guest presenters or experts on a particular topic.

There are no formal prerequisites for this course. Students are expected to provide their own laptop computer (tablets and Chromebooks are not sufficient for some of the software required for this course, but workarounds may be available -- please contact course staff with concerns). This course is accessible to those with no prior experience. For students already familiar with some of the topics, it will be an opportunity to explore further.

The second meeting will primarily focus on a hands-on training session for the accompanying assignment. Meetings may also include appearances by guest presenters or experts on a particular topic.

There are no formal prerequisites for this course. Students are expected to provide their own laptop computer (tablets and Chromebooks are not sufficient for some of the software required for this course, but workarounds may be available -- please contact course staff with concerns). This course is accessible to those with no prior experience. For students already familiar with some of the topics, it will be an opportunity to explore further.

Quantitative Research Methods in Population Health Sciences I

MTR 1130 AM - 0100 PM

Jarvis Chen

Course ID: 203329

2025 Fall (4 Credits)

Instructor Permission Required

This is part one of a two part core year-long quantitative methods course for the Population Health Science PhD students at the School of Public Health. The course integrates methods and concepts from the various disciplines represented by Population Health Sciences to equip students with the methodological tools to conduct their own research as well as collaborate across fields of study and areas of specialization. PHS2000A covers foundational statistical methods including linear and logistic regression, generalized linear models, survival analysis, longitudinal data analysis, and multilevel modeling. Discussion will be given to important concepts including sampling, measurement, model specification, interpretation, estimation, and diagnostics. Coursework will consist of two weekly lectures and a weekly lab session, problem sets, and exams. R is the main statistical computing software that will be used in the course.

Course Note: This course is reserved for first-year PhD students in Population Health Sciences. Population Health Sciences PhD students are required to register for both semesters of this course and to achieve a final average grade of B or higher.

Requires: Requisite: Course open to First Year GSAS (G1) Students Only

Full Year Course: Divisible Course

2026 Spring (4 Credits)

This is part two of a two part core year-long quantitative methods course for the Population Health Science PhD students at the School of Public Health. The course integrates methods and concepts from the various disciplines represented by Population Health Sciences to equip students with the methodological tools to conduct their own research as well as collaborate across fields of study and areas of specialization. Part two of the course focuses on scientific inference and causal reasoning in the population health sciences and will provide an overview of methods for sensitivity analysis, interaction, mediation, propensity scores, time-varying exposures, measurement and correction for measurement error, instrumental variables, regression discontinuity designs, difference-in-difference methods, time series, missing data, multiple testing, replication, and meta-analysis. Emphasis will be placed on understanding the basic definitions, assumptions, and methodology. Students will be referred to further readings and courses to gain more detailed understanding. Coursework will consist of two weekly lectures and a weekly lab session, problem sets, and exams. Various software resources will be used throughout the course, with R being the main statistical computing platform used. The course will prepare students to critically read through the empirical population health science literature, and to implement a number of different methods in their own research.

Course Note: This course is reserved for first-year PhD students in Population Health Sciences. Population Health Sciences PhD students are required to register for both semesters of this course and to achieve a final average grade of B or higher.

Cognition: How the Mind Works

MW 1030 AM - 1145 AM

Elika Bergelson

Course ID: 224144
2026 Spring (4 Credits)

This course focuses on the impressive human cognitive capacity, asking what a mind is and how we can find out. We will cover great debates, methods, and foundational topics within Cognitive Science and Cognitive Psychology, spanning questions like how we think, decide, remember, talk, perceive, and make meaning. Students in this course will gain experience (a) reading and evaluating classic texts, cutting-edge empirical research, and popular science, and (b) learning analytic skills they can apply to understanding basic cognitive phenomena, and how they can be measured, described, or predicted at different levels of representation. This is a lecture course intended as a foundational course for Psychology concentrators but also intentionally accessible for the Cognitive Science-curious in related areas like linguistics, philosophy, computer science, neuroscience, education, and anthropology.

Course Note: This course counts toward foundational requirements for Psychology and should be taken before courses at the 1000 level or higher.

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) before enrolling in this course; or permission of instructor.

Requires: Pre-requisite: SLS20 or PSY1 or Psychology AP=5 or Psychology IB=7 or Psyc S-1

2025 Fall (4 Credits)

WF 1200 PM - 0115 PM

Ashley Thomas

Humans are children for longer than any other species on the planet. We are born especially helpless and dependent on others. We start unable to walk, talk, or even grasp objects. Yet, somehow we become people who invent things like airplanes or democracy. In this class, we will consider what happens to our minds throughout development. We will focus on infancy and childhood. We will answer questions such as: what is the experience of a baby? – do they experience their environment as "one great blooming, buzzing confusion.", as William James proposed? Or do they come to the world with knowledge that gives structure to their experience? How do children become experts in their language? How are the minds of children and infants similar to adults and how are they different? This is a communication and analytical thinking intensive course. You will learn about the different ways that scholars have approached these questions and get hands-on experience thinking through them yourself.

Course Note: This course counts toward foundational requirements for Psychology and should be taken before courses at the 1000 level or higher.

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB=7 or Psyc S-1) before enrolling in this course; or permission of instructor. Not open to students who have taken SciLivSys 15.

Adapting to Adversity

W 0345 PM - 0545 PM

Jill Hooley, Katherine Powers

Course ID: 226419

2026 Spring (4 Credits)

Instructor Permission Required

Approximately 70% of people will experience a traumatic event in their lifetime. Yet, while some individuals will recover naturally, others will experience lasting effects on how they think, feel, and behave. Together we will explore the many ways humans adapt to adversity and consider reconceptualizing disorders that arise from traumatic and stressful events (e.g., trauma- and stressor-related disorders, personality disorders, anxiety, depression, substance use, and more). The course will also provide an expansive view of how people adapt to adversity, including natural recovery and post-traumatic growth. We will take a deep dive into understanding diagnostic criteria of trauma-related disorders (and the application of criteria across cultural groups) and explore why some people are more vulnerable to developing traumatic stress. We will also consider factors impacting recovery, evidence-based treatments for trauma-related disorders, and related controversies in the field.

The instructor of this course is Annie Joseph, annielorijoseph@fas.harvard.edu.

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and PSY 18 or PSY 1861 before enrolling in this course; or permission of instructor.

PSY 980AD

Psychopathology and the Family

R 1200 PM - 0200 PM

Jill Hooley, Katherine Powers

Course ID: 212743

2025 Fall (4 Credits)

Instructor Permission Required

In this course, we will explore how the family impacts psychopathology, including relapse, recovery, and resilience, for a member with a mental disorder. We will examine the relationship between the family and mental health conditions like anxiety, autism, depression, personality disorders, and schizophrenia from a life course and a family systems perspective. We will also examine these relationships by discussing the biopsychosocial features of the family that impact child and adolescent psychopathology. The course will focus on contemporary approaches to family life (e.g., dual-earner families, gender equality, LGBTQ+ families, etc.), and the role these approaches play in family functioning.

The instructor of this course is John Knutsen, john_knutsen@g.harvard.edu.

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and one of PSY 18 or PSY 1861 before enrolling in this course; or permission of instructor.

PSY 980CL

Psychology and Criminal Law

T 0300 PM - 0500 PM

Jill Hooley, Katherine Powers

Course ID: 220475

2026 Spring (4 Credits)

Instructor Permission Required

Why do eyewitnesses often identify the wrong suspect? Why would an innocent person confess to a crime they did not commit? Can we predict who will commit a violent crime in the future? This course examines how behavioral science can be used to answer these and other questions central to the legal system. Psychologists

with expertise at the intersection of psychology and criminal law conduct empirical research, interpret study findings and provide explanations to judges and juries, evaluate the mental states of criminal defendants and victims, consult with attorneys and law enforcement agencies, and serve in a variety of roles to help improve the fairness of our criminal justice system. Drawing on key areas of research from clinical and social psychology, we will delve into theories of criminal behavior, forensic evaluation, the role of bias in the courtroom, false confessions, eyewitness testimony, and deception. Research will be applied to real-world cases.

The instructor is Lindsey Davis, lindsey_davis@williamjames.edu.

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 11, PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

PSY 980JL

Clinical Psychology in Everyday Life

M 0945 AM - 1145 AM

Jill Hooley, Katherine Powers

Course ID: 207581
2026 Spring (4 Credits)

Instructor Permission Required

The goal of this course is to give you exposure to the types of evidence-based psychological interventions available for many clinical and non-clinical conditions, such as sadness, anxiety, substance use, and arguments with your significant other. Through this seminar, you will learn to notice and apply principles of psychological intervention to the world around you, not only in theory but also in practice. The seminar is not a self-help program or a training program for providing therapeutic services to others. Instead, the weekly discussions, exercises, and assignments will help you view the world through the lens of a scientist-practitioner – and apply those insights to everyday life in a scientific manner.

Course Note: This is the same course as PSY 1852 Clinical Psychology in Everyday Life, which has been offered previously. Students who have taken 1852 cannot enroll in this course.

The instructor is Lauren Santucci, lsantucci@fas.harvard.edu.

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and one of PSY 18 or PSY 1861 before enrolling in this course; or permission of instructor.

PSY 980PS

Psychosis

F 1200 PM - 0200 PM

Jill Hooley, Katherine Powers

Course ID: 224349
2026 Spring (4 Credits)

Instructor Permission Required

Psychosis is among the most mysterious states of the human mind. When someone experiences psychosis they can struggle to tell the difference between what is real and what is not. Psychosis, which can result from mental illness, exposure to trauma, stress, illness, substance use and even surgery, impairs overall functioning and may leave a person confused and distressed. In this course, we will gain a comprehensive understanding of this dynamic area of clinical science research by focusing on the following topics: 1) the psychological and neurological characteristics of psychosis; 2) the biological and environmental contributions to psychosis as well as its developmental trajectory; 3) the epidemiology, diagnosis, and treatment of psychosis; 4) the impact of psychosis, including discussion of stigma, quality of life, policy, and advocacy; and 5) the continuing debate as to how the range or spectrum of psychotic disorders should be regarded.

The instructor of this course is John Knutsen, john_knutsen@g.harvard.edu.

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and either PSY 18 or PSY 1861 before enrolling in this course; or permission of instructor.

Psychology of Women

TR 0945 AM - 1145 AM

Nicole Noll

Course ID: 110216

2026 Spring (4 Credits)

Instructor Permission Required

How does being a woman affect our behavior, our evaluations of ourselves, and our interactions with others? This course examines psychological science on women and girls in western industrialized societies, addressing such topics as gender stereotypes, girlhood, women and work, relationships, pregnancy and motherhood, mental health, violence against women, and women in later adulthood. We will consider these topics through an understanding of gender as a social construction, being mindful of the intersections of gender, sexuality, class, and race. Although focused on women's lives and experiences, this course is highly relevant to people of all genders.

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 11, PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

The Science and Psychology of Music

TR 0130 PM - 0245 PM

Mayron Pereira Piccolo Ribeiro

Course ID: 218517

2025 Fall (4 Credits)

Instructor Permission Required

Music is an important ally when we feel like celebrating and when we are feeling down. It can distract us, make us forget or remember things more easily. Why do songs like "The Scientist" give us a sad vibe while songs like "I Got a Feeling" set the stage for a fun night ahead? Is music training like CrossFit for the brain? How can music engagement (i.e., passive listening or active making of music) support well-being? In this course, we will explore how music modulates our thoughts, feelings, and behaviors through the lens of psychological science. We will look at how the brain experiences music and the impact of music and musical training on brain plasticity throughout different stages of development. Finally, using empirical research and case studies, we will discuss how music is applied to daily life and how it has benefited premature babies, individuals with mental disorders (such as depression), as well as conditions such as Alzheimer's disease and Parkinson's disease.

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 11, PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

The Mind-Body Connection: Exploring the Intersection between Psychology and Physical Health

T 0345 PM - 0545 PM

Mark Blanchard

Course ID: 224429
2026 Spring (4 Credits)

Instructor Permission Required

What is the connection between physical and mental health? How does this relationship affect our potential for disease development and overall wellness? How does it affect our ability to learn, work, exercise, socialize, and experience personal growth? Drawing on research from historical, philosophical, psychological, and medical perspectives, this course explores the intricate relationship between the mind and body by investigating how psychological well-being and physical health impact one another. Students will engage in discussions on lifestyle and personality factors, stress management, mindfulness, chronic pain, somatic disorders, biofeedback, health disparities, and the influence of emotions on overall health. As we explore these concepts, be prepared to gain an enhanced understanding and appreciation of the mind-body network as well as practical tools to enhance your well-being and resilience in the face of life's challenges. This course is designed for students interested in psychology, health science, disease prevention and management, and holistic wellness.

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 11, PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

Political Psychology

TR 1200 PM - 0115 PM

Hanh Annie Vu

Course ID: 224463
2025 Fall (4 Credits)

Instructor Permission Required

What drives political attitudes and behaviors? Are political attitudes and behaviors rational or emotional? Are all political attitudes and behaviors influenced by identity? Does personality play a role in political attitudes and behaviors? Are there psychological differences between liberals and conservatives? These are some of the questions that political psychology researchers investigate which will be covered in this course. We will take a comprehensive look at the field of political psychology by learning its history, research methodologies, major theoretical frameworks, and most up-to-date findings on individual and contextual factors that shape political ideologies, attitudes, and behaviors. We will use this knowledge to critically analyze past and current local, national, and global political issues that are impacting our daily lives.

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 11, PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

PSY 1060

The Science of Happiness

TR 0130 PM - 0245 PM

Jason Mitchell

Course ID: 220086

2025 Fall (4 Credits)

Recent research in the cognitive sciences—especially psychology, economics, and neuroscience—has begun to examine the factors that promote personal well-being and happiness. One surprising, but consistent, observation has been that many of the things that are widely believed to be crucial for our happiness—wealth, material possessions, "not missing out", even good grades—not only fail to make many people happy but can actively undermine the sense of well-being. The course begins by introducing some misconceptions that many people might have about what makes for a satisfying life. We will then examine the psychological biases and other mental quirks of our mind that make it hard for us to identify what actually makes us happy, and we will then discuss what recent research reveals about factors that promote happiness. Importantly, throughout the course, students will be invited to apply these strategies in everyday life. In other words, we will both discuss what new results in cognitive science suggest to anyone interested in better understanding the factors that promote happiness, and also actively put these scientific findings into practice. Along the way, we will review historical and cross-cultural views on the meaning of "happiness", discuss the limitations of scientific approaches to the topic, and identify aspects of modern life (especially modern life at Harvard) that make it difficult to develop habits that support happiness. Finally, we will also discuss how to apply the new science of happiness beyond our own lives to improve our communities and our planet too.

Requires: Cannot take for credit if GENED 1154 already completed.

PSY 1201

Your Brain on Drugs: Psychopharmacology

T 1200 PM - 0245 PM

Scott Lukas

Course ID: 122224

2025 Fall (4 Credits)

An introduction to how psychoactive drugs affect mood, sensation, consciousness, and other psychological and behavioral functions in both healthy people as well as individuals suffering from drug abuse or psychiatric disorders. Introduces concepts in the neuropharmacology and pharmacokinetics of drugs and blends psychology, neuroscience and pharmacology together to understand how drugs work and are used to treat disease states. The course covers the mechanism of action and treatment options of many CNS drugs including those used to treat depression, bipolar disorder, psychosis, ADHD, autistic spectrum disorder, anxiety as well as drugs of abuse such as alcohol, nicotine/tobacco, cannabis, opiates, inhalants, amphetamine/cocaine, hallucinogens, and steroids. Special topics on vaping, drug interactions, sleep disorders, over the counter drugs,

and selecting generic medications are covered. During the last two lectures students will participate in debates on controversial topics such as novel treatments for psychiatric disorders, ethical use of placebos, diagnosing ADHD, cannabis legalization, and needle exchange programs. Enrollment Instructions: Only Juniors and Seniors who have passed the pre-requisite courses will be permitted to enroll. If you do not have all of the pre-requisites, but have other experiences (such as AP courses in High School, hands on work or intern experience, other related coursework, etc.) you may petition to enroll via My.Harvard. Also, students who are non science concentrators (e.g., economics, math, computer science, government) may petition to enroll Pass/Fail. All petitions, regardless of your concentration, must be completed by following the detailed instructions provided in the uploaded FAQ document in the Files folder on this site. Incomplete or blank petitions will be denied.

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 14, PSY 18, MCB/NEURO 80, MCB 81 or Psyc S-1240 before enrolling in this course; or permission of instructor.

Decisions Big and Small: The Cognitive Science of Making Up Your Mind

Course ID: 212749
2026 Spring (4 Credits)

TR 1030 AM - 1145 AM

Tomer Ullman

Life is full of decisions, but not all decisions are made equal. Choices can be big and consequential (should I focus on my success, family, or passion), or small and everyday (going out, or staying in). This course will introduce you to the cognitive science of judging and choosing. You will learn about 1) Rational planning, the kind a perfect intelligence might carry out 2) Common simplifications and shortcuts that non-perfect humans use, and how these may actually be appealing approximations for any decision-making system 3) Regret over choices taken and not taken 4) Making decisions with others 5) Transformative decisions, the ones that change who you are as a person. As we cover these topics, we will consider how to apply the insights from the psychology of decision making to your own ordinary and extraordinary choices.

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 11, PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

Requires: SLS20 or PSY1 or Psychology AP=5 or Psychology IB=7 or Psyc S-1 AND PSY11 or PSY14 or PSY15 or PSY16 or PSY18

PSY 1325

The Emotional, Social Brain

Course ID: 216792
2026 Spring (4 Credits)

M 0945 AM - 1145 AM

Instructor Permission Required

Elizabeth Phelps

Emotions color our lives, and even everyday variation in emotional experience can influence how we think, perceive and decide. Many of our emotions stem from our experiences with others. In this seminar we will examine the science behind the influence of emotion and social interaction on human brain function and behavior. We will examine questions such as: How does the brain process threats, and how do we learn about potential threats from others? How, and why, do our memories for emotional events differ from memories for mundane events? How does the brain process rewards, and respond to social rewards such as trust? What can we learn about implicit social biases from understanding their representation in the brain? What can we learn about the brain systems of human emotion and social interactions from studying other animals? Building on this foundational knowledge, we will explore how advances in human brain science might inform larger societal issues, including legal decisions, clinical interventions for the treatment of anxiety, and racial bias.

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 11, PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

Maximizing your Memory

2025 Fall (4 Credits)

MW 0130 PM - 0245 PM

Instructor Permission Required

Can mint gum help you ace an exam? Is it better to pull an all-nighter to study or go to sleep? Could creating a daily drawing journal improve your memory for special moments? The ability to remember, and consequences of forgetting, deeply impact how we experience and interact with the world around us. In this course, we will draw from literature in educational psychology, applied cognitive psychology, and neuroscience to examine how to optimize the encoding, storage, and retrieval of memory. Throughout the semester, there will be a focus on investigating specific empirically-backed strategies to boost memory, and you will have the opportunity to apply these strategies to your own life and reflect on their effectiveness.

For questions about course format and content, please reach out to the instructor, Anna McCarter (acmccarter@umass.edu). For questions about course registration (enrollment, lotteries, petitions, etc.), please reach out to the Psychology Undergraduate Office (psyenrollment@fas.harvard.edu).

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 11, PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

FAS Divisional Distribution: Social Sciences

The Truth Behind Amnesia

2026 Spring (4 Credits)

W 0300 PM - 0500 PM

Instructor Permission Required

In popular books and movies, amnesia is often depicted in dramatic, yet unrealistic ways — whether it's the daily memory loss in "50 First Dates" or the quick recovery of highly specialized skills in "The Bourne Identity" — but these fictional representations often fall short of capturing the true complexity of this condition and how memory works in real life. In this course, we will read neuroscience and cognitive psychology research articles as well as patient reports to explore the real causes, brain damage, and symptoms associated with different types of amnesia. We will discuss what types of memory are intact and impaired in different cases and what these profiles reveal about the underlying neural functioning and the patient's abilities. We will then use this foundational knowledge to critique portrayals of amnesia in books, movies, and television shows and consider how the misconceptions these stories perpetuate can have negative repercussions for science. For the final project, you will write a script or short story that both accurately and compellingly portrays amnesia.

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 11, PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

Imagination, Pretense, and Make-Believe Worlds

2025 Fall (4 Credits)

T 0945 AM - 1145 AM

Instructor Permission Required

Tomer Ullman

People spend much of their time in make-believe worlds: children pretend, adults daydream, and both immerse themselves in movies and novels. The imagination plays a large role in our mental lives, different from perception and memory. This seminar will examine imagination, simulation, and pretense from the perspective of modern psychology and cognitive science. We will consider imagination from its infancy in children's play, through its use and abuse in adulthood, up to recent attempts to give machines the ability to imagine and dream.

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 11, PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

FAS Divisional Distribution: Social Sciences

What has the study of a three pound mass of cells taught us about the complexity of the human mind? In this seminar, we will discuss the past and present of brain measurement, how the brain's structure and function create healthy and diseased states, and how long-term changes (like aging) and short-term changes (like sleep) impact the brain and therefore our behavior. We will discuss cutting edge research and open puzzles in the study of the mind-body connection, as well as ethical dilemmas that arise from our study of the brain.

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) before enrolling in this course; or permission of instructor.

Cognitive control, also known as executive function, is our ability to behave flexibly and not simply respond automatically to stimuli in our environment. It explains why you're able to avoid answering your phone while driving or concentrate on finishing your homework in a crowded cafe, but also why you might catch yourself walking to last semester's classes when the term changes, or find yourself opening social media apps on your phone without even realizing it. In this course we will dive into important topics in the study of control, discussing multitasking and task-switching; how we stop automatic actions and habits; how attention works; the ways that cognitive control changes over the lifespan, and how it is impacted by illness; whether brain training games make you smarter; how control interacts with short- and long-term memory; what role these processes play in COVID-19 brain fog; and much more.

For questions about course format and content, please reach out to the instructor, Haley Keglovits (haley_keglovits@brown.edu). For questions about course registration (enrollment, lotteries, petitions, etc.), please reach out to the Psychology Undergraduate Office (psyenrollment@fas.harvard.edu).

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 11, PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

FAS Divisional Distribution: Social Sciences

Samuel Gershman

"What I cannot create, I do not understand." This course applies Richard Feynman's dictum to the brain, by teaching students how to simulate brain function with computer programs. Special emphasis will be placed on how neurobiological mechanisms give rise to cognitive processes like learning, memory, attention, decision-making, and object perception. Students will learn how to understand experimental data through the lens of computational models, and ultimately how to build their own models.

Course Note: Anti-Requisite: Cannot be taken for credit if Neuro 1401 already complete.

Students be comfortable with a numerical programming language (e.g., Python, Matlab, R). Psychology concentrators should have taken Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 14, PSY 15, PSY 16, PSY 18, MCB/NEURO 80 or MCB 81 before enrolling in this course; or permission of instructor.

Requires: Pre-requisite: SLS20 or PSY1 or Psychology AP=5 or Psychology IB=7 or Psyc S-1 AND PSY14 or PSY15 or PSY16 or PSY18 or MCB80 or NEURO80 or MCB81

Anti-requisite: Cannot be taken for credit if NEURO 1401 already completed

Represent the Visual World

F 0900 AM - 1145 AM

George Alvarez, Talia Konkle

Someday, perhaps very soon, artificial intelligence will enable machines to perceive the world around us better than humans do. Whether AI systems will do so by emulating human perception, or by becoming supra-human and circumventing biological constraints entirely, is yet unknown. In this course, we will survey research on human and machine perception, with an emphasis on vision: How do humans and machines represent the visual world? What does human vision do that artificial neural networks don't (yet)? How can we understand human perception better by focusing on artificial neural networks, and vice versa? By focusing on this intersection between biological and artificial visual systems, we will learn what makes humans fundamentally unique and special, while simultaneously learning about cutting edge discoveries in both fields.

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 11, PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

Requires: SLS20 or PSY1 or Psychology AP=5 or Psychology IB=7 or Psyc S-1 AND PSY11 or PSY14 or PSY15 or PSY16 or PSY18

FAS Divisional Distribution: Science & Engineering & Applied Science

The Psychology of Large Language Models

W 0945 AM - 1145 AM

Instructor Permission Required

How was ChatGPT inspired by your brain? As the use of large language models (LLMs) grows in popularity and applicability to academics, and as we grapple with how and when to incorporate them into the research process, having a foundational understanding of LLMs is critical to ensuring we are careful interpreters of these new, powerful tools. In this course, we will study the development of LLMs and how they were inspired by findings in psychology, linguistics, and cognitive neuroscience. After delving into LLM architecture and functioning, we will debate practical and ethical questions about using LLMs in psychological research for coding, writing, summarizing papers, as well as the broader societal applications (e.g., whether using LLMs to teach content in primary schools will lead to a larger or smaller educational disparities). This course is not designed to teach you to code an LLM, but rather to help you understand the networks at a mechanistic level. We will use some code to illustrate theoretical concepts, but prior coding experience is not required.

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 11, PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

Neuroscience Fiction: An Introduction to Cutting Edge Neuroscience through the Lens of Film and Tele

M 0300 PM - 0545 PM

Instructor Permission Required

George Alvarez

Film and television shows often capture the cutting edge of science, and they sometimes even anticipate future scientific advances. We'll use examples from film and television as an introduction to several hot topics in the field of neuroscience, such as Mind Control, Mind Reading, Smart Pills, and Brain Machine Interfaces, which are all getting closer to reality. Will neuroscientists ever be able to control a person's thoughts, or to know what a person is thinking? Can taking a pill really awaken untapped brain power? Will you ever be able to drive a car without touching a steering wheel? In this course, we will cover the state of the art and the future of these exciting areas of neuroscience (and entertainment). Because these are not textbook topics, this is an advanced course that will focus on reading and discussing the primary literature.

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 14 or MCB/NEURO 80 before enrolling in this course; or permission of instructor.

PSY 1534

Personal and Societal Wellbeing

T 1200 PM - 0200 PM

Hanh Annie Vu

Course ID: 224464
2026 Spring (4 Credits)*Instructor Permission Required*

How do individual pursuits of happiness, self-esteem, positive emotions, and meaning in life shape attitudes toward social issues? What personal well-being strategies benefit the greater good of society, and which may hinder societal progress? Is ignorance bliss? In this course, we will delve into psychological research at the intersection of positive psychology and social justice to explore these questions across prominent socio-political issues including climate activism, gender equality, and racial justice. First, we will discuss major theoretical frameworks and perspectives in social and political psychology that have implications for individual wellbeing. Then, we will take a comprehensive look at key components of wellbeing, wellbeing strategies, and their complex relations with a variety of socio-political attitudes. Throughout the course, we will critically analyze the ways in which we can meaningfully pursue both our own happiness and the greater good of society.

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 11, PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

Regional Psychology: An Atlas of our Social World

M 1200 PM - 0200 PM

Course ID: 226305
2025 Fall (4 Credits)*Instructor Permission Required*

Common stereotypes suggest that Southerners are particularly hospitable, Minnesotans are extra nice, New Yorkers are unusually impatient, and Portlanders are artsy hipsters. But is there any evidence to support these stereotypes? In this course, we will dive into the emerging field of regional psychology and explore our social environment by taking the novel approach of focusing on geographic places as the primary unit of analysis rather than individuals. We will cover topics such as the mechanisms that drive regional differences across a range of psychological constructs, as well as how these regional differences relate to important societal outcomes and disparities. Through readings, discussions, and a hands-on mapmaking project, this course will prepare you to think critically about the relationship between people's psychological characteristics and the features of the places in which they live.

For questions about course format and content, please reach out to the instructor, Liz Wilson (liz.wilson@ucr.edu). For questions about course registration (enrollment, lotteries, petitions, etc.), please reach out to the Psychology Undergraduate Office (psyenrollment@fas.harvard.edu).

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 11, PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

PSY 1548

Breaking Barriers: The Psychology of Prejudice and Its Consequences

W 1245 PM - 0245 PM

Course ID: 226312
2026 Spring (4 Credits)

Instructor Permission Required

This course examines the social psychological underpinnings of stereotyping, prejudice, and discrimination. We will examine these topics from several perspectives, including sociocultural, motivational, and cognitive approaches. We will cover topics such as the origins of stereotyping, prejudice, and discrimination; the ways in which they are maintained and perpetuated; the ways in which they may be changed; the extent to which their expression is intended and controllable; and how they may be reduced. Through readings, discussions, activities, and civic engagement, we will explore theoretically grounded interventions and strategies for reducing prejudice, and connect course content to the various equity promoting actions that occur within our own communities.

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 11, PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

PSY 1560

Science of Relationships in Fiction and Film

R 1200 PM - 0245 PM

Ashley Thomas

Course ID: 226404
2026 Spring (4 Credits)

Instructor Permission Required

In some ways, psychology and fiction have similar goals. While fiction is, by definition, not true, it often reveals deep truths about human nature. Psychological research sometimes creates fiction to test scientific hypotheses, and, if all goes well, it too reveals deep truths about human nature. In this course, we will use literature and film to introduce topics on the science of social relationships, including how humans think about love, status, power, and social bonds. We will read two contemporary books, *Still Life* by Sarah Winman and *Pachinko* by Min Jin Lee. These books will be supplemented by films. Both books span several decades and are, most simply, stories about human relationships over time. *Still Life* explores the psychology of love across different types of relationships: family, friendship and romantic relationships. *Pachinko* explores how relationships are changed in societies with racial prejudice. They are both rich with hypotheses about the psychology of social relationships. In addition to reading fiction you will get practice on how to read, dissect, and critique scientific papers on these topics. You will get hands-on experience with designing scientific studies to answer questions about the psychology of social relationships. The final project will be to use hypotheses from the books or films in the course to design an original experiment that investigates the cognition of relationships.

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 11, PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

Family, School, and Society: Shaping the Developing Child

MW 0300 PM - 0415 PM

Selva Lewin-Bizan

Course ID: 218513
2026 Spring (4 Credits)

Instructor Permission Required

What obstacles do single, low-income fathers face to becoming and staying involved in the lives of their children? Why are students in poor schools at increased risk of entering adulthood without all the skills they need to succeed in the workforce and life? Why do children in poverty have higher chances for serious health issues than wealthier children? What difference do kinship versus non-kinship care arrangements make in the lives of children who are in foster care? Why are children subjected to harsh discipline policies at school more likely to go to jail or prison later in life than those who are not? How do strengths and resiliencies of immigrant children go unnoticed in the face of their many challenges? How important are affirming relationships with family and school

practices for successfully navigating stigma and bullying of LGB youth? Using theory, research findings and other data sources, and current news, this course focuses on the complex social issues that America's children and adolescents face both in their immediate settings of family and school, and with broader societal values, customs, and laws, and the effects of these issues on their psychological development and wellbeing.

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 11, PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

Emerging Adulthood: Challenges and Possibilities

2025 Fall (4 Credits)

MW 0430 PM - 0545 PM

Instructor Permission Required

Selva Lewin-Bizan

I don't know about you, but I'm feeling 22! Over the past fifty years or so, the typical experiences of people aged 18-29 in developed countries have undergone significant changes. Many now delay marriage and parenthood, while dedicating more time to education. They focus on personal development and tend to be highly optimistic about their future careers and relationships. This developmental stage, known as emerging adulthood, differs from late adolescence and young adulthood in that individuals are less reliant on their parents, no longer considered minors by law, but have not yet fully settled into adult roles. This course offers a critical evaluation of theory and research on several topics relevant to the "in-between" stage of emerging adulthood. These include identity exploration in areas such as love (sex, dating, and long-term relationships), work, and worldviews (political beliefs and civic engagement); evolving relationships with parents, siblings, and grandparents; and structural influences on the transition to adulthood, such as discrimination based on sexual orientation, sexual violence on college campuses, and mental health challenges. The course also emphasizes cultural variations and highlights the unique patterns of experiencing emerging adulthood, even within American society.

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 11, PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

Language and the Mind

2025 Fall (4 Credits)

MW 0300 PM - 0500 PM

Jesse Snedeker

This class focuses on the big questions: How did human language evolve? Do animals have languages? At what age do we begin to lose our remarkable capacity for language acquisition? How is the human language capacity similar to (and different from) large language models? Do speakers of different languages conceptualize the world in fundamentally different ways? What happens in our brain as we change speech (or sign) into meaning? How do two or more languages fit together in a single mind? What are the advantages of bilingualism and are there any disadvantages? We will explore these questions and others integrating the perspectives of psychology, linguistics, and cognitive science.

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 11, PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

Requires: SLS20 or PSY1 or Psychology AP score of 5 or Psychology IB score of 7 or Psyc S-1 AND PSY11 or PSY14 or PSY15 or PSY16 or PSY18. Cannot be taken for credit if PSY 1605 already complete.

Science of Play

2025 Fall (4 Credits)

TR 0300 PM - 0415 PM

Instructor Permission Required

Play is serious business. Ever wonder why play is so important for growing minds and how it shapes the way children learn, connect, and navigate the world? This course explores how play drives social, emotional, and cognitive development across childhood, using insights from developmental psychology, neuroscience, and clinical research. From the imaginative worlds of toddlers to the structured games of older children, students will examine how play builds essential skills like problem-solving, self-regulation, and social bonding. The course also addresses the neurobiological underpinnings of play, such as its role in stress regulation and neural plasticity, and explores its applications in fostering resilience and addressing developmental challenges. Students will investigate how disruptions to play—due to socioeconomic, environmental, or neurodevelopmental factors—affect overall development, while also considering how cultural contexts shape play experiences and inform inclusive, equitable practices. Students will also have opportunities to observe and analyze children's play behaviors in everyday settings, such as children's museums or daycares. By combining cutting-edge research with real-world applications, this course invites students to think creatively and critically about the profound power of play.

For questions about course format and content, please reach out to the instructor, Sarah Lynch (lynchsf@bu.edu). For questions about course registration (enrollment, lotteries, petitions, etc.), please reach out to the Psychology Undergraduate Office (psyenrollment@fas.harvard.edu).

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 11, PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

Friend or Foe? The Power of Peer Groups

R 0300 PM - 0500 PM

Course ID: 226315

2026 Spring (4 Credits)

Instructor Permission Required

Do your peers lift you up or hold you back? The answer may shape your future more than you think. This course examines the dual impact of peer group dynamics, exploring how positive peer interactions promote resilience, social competence, and emotional well-being, while negative dynamics—such as gossip, bullying, and exclusion—can disrupt development and increase risk for long-term challenges. Students will analyze the psychological mechanisms behind cliques, peer hierarchies, and victimization, focusing on how these dynamics shape social power, group cohesion, and individual behavior. The course will also explore how factors like cultural norms, socioeconomic status, and group structure influence peer relationships. Through empirical research, real-world case studies, and discussions, students will investigate critical questions such as how peers drive risk-taking behaviors, what makes certain group dynamics toxic or protective, and how peer experiences shape mental health, academic outcomes, and long-term social development. In addition, students will explore recent research on interventions designed to improve peer dynamics, including peer mentoring programs and school-based initiatives aimed at reducing exclusion. By examining these topics in depth, this course highlights the lasting power of peers to influence development during childhood and adolescence, for better or worse.

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and at least one foundational course from PSY 11, PSY 14, PSY 15, PSY 16, and PSY 18 before enrolling in this course; or permission of instructor.

Psychology of Personality

Course ID: 218509
2026 Spring (4 Credits)

TR 0130 PM - 0245 PM

What is personality? Are we born with it? Can we change it? Are some personalities better than others? Are we good judges of other people's personality? The answer to these questions (and more) is ... it depends! This course will provide you with an introduction to personality psychology – the study of the characteristic patterns of thought, emotion, and behavior, together with the psychological mechanisms – hidden or not – behind those patterns. This course considers the major theoretical, application, research, and assessment issues in the study of individual differences. We will also explore some of the more commonly used personality assessment

measures and cultural influences on personality theory. Through readings and activities, you will gain a deeper understanding of the psychological forces that contribute to the uniqueness of each person, and hopefully, learn more about yourself in the process.

Mechanisms and Markers of Mental Illness

M 1200 PM - 0200 PM

Mayron Pereira Piccolo Ribeiro

Course ID: 218525

2026 Spring (4 Credits)

Instructor Permission Required

This course integrates clinical psychology and cognitive neuroscience to explore the biological underpinnings of mental illness. We will adopt a systems-level approach, examining the relationship between the function and dysfunction of specific brain circuits and networks and their contribution to mental health disorders. For instance, the brain's reward system has been linked to diagnoses such as addiction, disordered eating, depression, anxiety, post traumatic stress disorder, and psychosis. Understanding this common neural foundation provides insights into how these disorders are interconnected and how this knowledge can advance treatment options. Throughout the course, we will draw on both traditional and cutting-edge methodologies that have produced critical insights and key breakthroughs. Additionally, you will create resources aimed at individuals suffering from specific psychiatric disorders to support them as they await treatment. By the end of this course, you will be able to:

- Describe the brain's reward system and its involvement in psychopathology.
- Relate symptoms in psychopathology to specific brain mechanisms and regions.
- Describe various methodologies used to connect mental illness symptoms to brain mechanisms.
- Responsibly translate scientific research into

accessible information for the general population. In addition to gaining these insights, you will also have the opportunity to improve your writing and communication skills through the creation of practical, psychoeducational resources.

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and one of PSY 18 or PSY 1861 before enrolling in this course; or permission of instructor.

Stigma, Discrimination, and Health

MW 0130 PM - 0245 PM

Mark Hatzenbuehler

Course ID: 216272
2025 Fall (4 Credits)

What is stigma? How do stigmatized identities and conditions differ from each other? Why do we stigmatize? What are the consequences of stigma for cognitions and emotions, for social relationships, and for health? Through what mechanisms—individual, interpersonal, and structural—does stigma operate to produce adverse health outcomes? How do stigmatized individuals cope with and resist stigma? How can we reduce stigma and its negative effects? In this course we will consider stigma as a fundamental cause of health inequalities across a broad range of phenomena, including (but not limited to) mental illness, sexual and gender diversity, weight, disability, aging, poverty, and immigration status. Students can expect to examine stigma as a predicament that affects nearly all individuals at some point in the life course, and to develop expertise in an individual stigma that is relevant to their personal, academic, and professional interests through a series of focused course assignments.

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) before enrolling in this course; or permission of instructor.

Requires: Pre-requisite: SLS20 or PSY1 or Psychology AP=5 or Psychology IB=7 or Psyc S-1

The Social World of the Developing Psychopath

W 1200 PM - 0200 PM

Course ID: 226317
2026 Spring (4 Credits)

Instructor Permission Required

Some kids break the rules. Others don't seem to care they exist. Why do some grow into empathetic, socially responsible adults while others develop traits like manipulation, fearlessness, and a lack of remorse? This seminar dives into one of the most unsettling questions in developmental psychology: How do early social experiences shape the trajectory toward psychopathy? Students will explore how risk factors such as insecure attachment, harsh parenting, and deviant peer influences contribute to the development of callous-unemotional (CU) traits and severe antisocial behavior. Through a blend of case studies, cutting-edge research, and seminar-style discussions, we'll examine how children with CU traits regulate emotions, navigate peer relationships, and respond (or fail to respond) to traditional interventions. We'll critically evaluate why common treatment approaches often fall short and investigate emerging interventions designed to improve emotion regulation and reduce aggression. This course challenges students to engage with complex issues, explore innovative solutions, and consider how the field of developmental psychology can evolve to better address these difficult behaviors.
