The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and PSY 18 or PSY 1861 before enrolling in this course; or permission of instructor.

PSY 1900

Introduction to Statistics for the Behavioral Sciences

TR 1030 AM - 1145 AM

Course ID: 118254
2025 Fall (4 Credits)

Provides an introduction to statistics used in psychology and other behavioral sciences, with applications to industry-facing data science roles. Emphasizes conceptual understanding of key statistical principles and develops hands-on data analysis skills using the statistical programming language R. Topics include measures

of central tendency and variability, probability and distributions, as well as hypothesis testing and data exploration (including chi-square tests, t-tests, correlation, analysis of variance, and regression). Includes a lab section focused on applying these methods to behavioral data.

Quantitative Reasoning with Data: Yes

PSY 1901

Methods of Behavioral Research

M 1200 PM - 0115 PM

Mina Cikara

This is a lecture course with a laboratory component. Our goal is for you to master the essentials of behavioral experimentation through a succession of projects, starting with a small number of fundamental skills that can be used in many areas of psychology, culminating with a larger final group project. Emphasis will be on understanding causal inference and acquiring practical laboratory skills. Basic aspects of data exploration and analysis will be covered. We will place a high value on discussion participation in lecture and lab and the communication of results through effective visual graphics, oral presentations, and written reports.

Course Note: There is a required lab session in addition to lecture.

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB=7 or Psyc S-1) and PSY 1900 or the equivalent (e.g., STAT 100, 101, 102 or 104) before enrolling in this course.

Requires: Pre-requisite: SLS20 or PSY1 or Psychology AP=5 or Psychology IB=7 or Psyc S-1 AND PSY 1900 or STAT 100 or STAT 102 or STAT 104

Programming for Psychologists

T 0300 PM - 0545 PM

Garth Coombs, Susan Buck

Course ID: 213336

2025 Fall (4 Credits)

Instructor Permission Required

Programming is an essential skill in psychological research, allowing you to design and run behavioral experiments and surveys, analyze and visualize data, and more. This course will teach you the foundational coding skills needed to achieve these goals using the open-source languages JavaScript and R. Throughout the semester, we'll explore core programming concepts related to code design and troubleshooting as well as creating clear and reproducible approaches to study design and analysis. We'll begin by establishing a research workflow that is both streamlined and aligned with open science practices, incorporating tools like Git for version control. We will then further explore programming in JavaScript before applying our newly developed coding skills to create online behavioral experiments using the jsPsych library. Finally, we'll continue to strengthen our programming skills as we transition from JavaScript to R and switch our focus to wrangling and exploring datasets. This introductory course requires no prior programming or statistical experience beyond what is covered in PSY 1900 or equivalent. While the examples are psychology-focused, the skills you'll gain are valuable across the social and behavioral sciences. The course may be particularly beneficial for students considering or starting a thesis, those interested in graduate school, and those exploring careers in industry or data science.

The Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) and PSY 1900 or the equivalent of introductory statistics before enrolling in this course; or permission of instructor.

PSY 1950

Applied Statistical Data Analysis in Psychology I

TR 0900 AM - 1015 AM

Patrick Mair

Course ID: 121738

2025 Fall (4 Credits)

Instructor Permission Required

The primary goal of this course is to offer intense, foundational exposure to psychological statistics, focusing heavily on applications and computation using the R environment for statistical computing. The methodological core of the first part of the course is the linear model which includes methods such as regression, t-test, analysis of variance (ANOVA), and others. The second part of the course focuses on extensions in terms of linear mixed-effects models (aka multilevel models) and generalized linear mixed-effects models for modeling longitudinal and hierarchical data structures. Students will be exposed to the Frequentist as well as the Bayesian inferential framework.

Course Note: Required of doctoral students in Psychology.

One of Psychology 1900, Statistics 100, 101, 102, 104, or the equivalent.

Applied Statistical Data Analysis in Psychology II

MW 1030 AM - 1145 AM

Patrick Mair

Course ID: 117879

2026 Spring (4 Credits)

Instructor Permission Required

This PSY 1950 follow-up course continues with the exposure to state-of-the-art Bayesian and Frequentist statistical modeling techniques. We start with showing how the models we have learned in PSY 1950 can be used for prediction. The next two units tackle power analysis (including simulations for mixed-effects setups) followed by two units elaborating on what to do with missing values. Subsequently, we introduce model comparison including segmented and polynomial regression, followed by a modern framework for modeling the effects of predictors in a truly nonlinear fashion: generalized additive models (GAM). GAM can be seen as an extension of the GLMM framework. The same applies to regression shrinkage techniques like lasso and ridge which incorporate penalties into regression and can be used for predictor selection or multicollinearity scenarios. Next up are path models which give us possibilities for structural regression extensions that go beyond standard "multiple IVs, single DV" settings. A popular example of such a structural extension is mediation models which we cover in great detail, including longitudinal mediation. This is followed by causal inference which is all about making causal statements of the effect of one variable onto another. We cover the potential outcomes framework, and revisit mediation within this context. Finally, we take a deeper dive into Bayesian inference including

some probability theory geared towards Bayes theorem, ROPE testing, and MCMC convergence checks. Finally we learn how to define our own priors.

The Psychology Department requires completion of PSY 1950 or equivalent.

Modern Psychometric Theory and Methods

R 1245 PM - 0245 PM

Instructor Permission Required

Patrick Mair

By its classical definition, Psychometrics is concerned with the theory and techniques of psychological measurement. In this class we will cover a wide variety of modern psychometric methods; a big portion of them going beyond the classical psychometrics definition boundaries. The first half of the class covers a variety of exploratory scaling (unsupervised learning) methods. The aim is to scale and visualize association patterns in complex, multivariate datasets. Such techniques include principal components analysis (PCA), correspondence analysis (CA), Gifi methods, multidimensional scaling (MDS), and (social) networks. The second half of the class deals with parametric psychometric methods. We start with basic elaborations on measurement and reliability, before moving on to latent variable models. Within this context we cover exploratory and confirmatory factor analysis, and structural equation models which allow us to model complex relationships among (latent) variables. Finally we introduce item response theory, a measurement framework for categorical data. One overarching goal of these latent variable units is to replace a naive sum score by something more sophisticated. The last unit (psychometric theory) will be held by Richard McNally where he will talk about validity, and will cover theories of intelligence, personality, and behavior genetics fundamentals. All topics covered will be supported by corresponding computations and illustrations in R, and supported by lab sections.

The Psychology Department requires that both Harvard graduate and undergraduate students have completed Psych 1950 (or an equivalent course), as well as having basic R knowledge.

Lab in Early Language and Cognitive Development

No meeting time listed

Instructor Permission Required

Elika Bergelson

In this lab course, students participate in research asking how we learn language in the first few years of life, and how this connects to our broader cognitive abilities to think, interact, and learn. Each undergraduate student will contribute to one or more ongoing projects and work closely with a grad and/or postdoctoral mentor. All enrollees will get front row exposure to and training in psychological research, including how experiments and observational analyses are designed, how data is collected, cleaned, and analyzed, open science practices, and how research goes from an idea to a published paper. Weekly lab meeting to discuss student projects and readings relevant to them. Each enrollee will have the opportunity to present lab or lab-relevant research once per semester. Ten hours a week commitment (includes lab meeting).

Course Note: Open to graduate and undergraduate students working in the instructor's laboratory. To express interest in enrollment, please email the lab manager, Lilli Richter, at larichter@fas.harvard.edu.

For undergraduates, the Psychology Department requires completion of Science of Living Systems 20 or Psychology 1 or the equivalent of introductory psychology (e.g. Psych AP=5 or IB =7 or Psyc S-1) or prior coursework in Linguistics before enrolling in this course; or permission of instructor.

Laboratory Research on the Biopsychosocial Effects of Stigma	2025 Fall (4 Credits)

No meeting time listed

Instructor Permission Required

Mark Hatzenbuehler

Our lab uses a range of methods to examine the biological, psychological, and social consequences of stigma as applied to a broad range of phenomena, including (but not limited to) mental illness and addiction, sexual and gender diversity, weight, race, and immigration status. The course involves readings, seminar discussion, and research on these topics.

Course Note: To express interest in enrollment, please email the instructor, Prof. Mark Hatzenbuehler, at markhatzenbuehler@fas.harvard.edu.

Diagnostic Interviewing	2025 Fall (4 Credits)

T 0945 AM - 1145 AM

Instructor Permission Required

Rebecca Shingleton

In this course, we will focus on basic clinical and diagnostic interviewing skills. Particular attention will be devoted to the Structured Clinical Interview for DSM (SCID-5) with some exposure to other structured interviews (e.g. ADIS, K-SADS). The aim of the course is to provide students with the skills needed to make reliable diagnostic assessments for research and clinical purposes.

Course Note: Must be a Harvard graduate student in the clinical psychology program.

Laboratory on Complex Thought and Cooperation

T 0130 PM - 0245 PM

Joshua Greene

In this hands-on lab course, students have the opportunity to participate in all aspects of psychological research, including experimental design, data collection, and data analysis. Each student will work closely with a graduate student or post-doctoral mentor. Topics of research are divided across cognitive and social psychology.

Cognitive projects focus on the neuroscience of complex thought: Humans can understand and reason about an effectively infinite number of different ideas. How do our brains accomplish this? Social projects are applied work focused on promoting cooperation, conflict resolution, and improved social decision-making. Methods include fMRI, neural network modeling, and online and in-lab behavioral experiments.

Course Note: To express interest in enrollment, please email the lab manager, Isobel Munday, at imunday@fas.harvard.edu.

Ghosts in the Machine's Mind: Cognitive and Social Signatures of Large Language Models

T 1245 PM - 0245 PM

Mahzarin Banaji

Course ID: 226476

2025 Fall (4 Credits)

Instructor Permission Required

It is unquestionably hopeful to imagine a world in which AI can help cure diseases, solve the disasters wrought by climate change, and wipe out age-old inequalities. It is also clear that the power of AI today is at an inflection point. The rise of deep learning architectures like the Transformer has yielded models capable of an array of impressive tasks, from seamless human-like conversation to composing symphonies. While these advances incorporate specialized machine learning models, the advent of Large Language Models (LLMs) present a broad array of possibilities. LLMs have surprised the scientific community and even their creators by exhibiting emergent abilities once thought to be uniquely human, such as fairly advanced cognition and reasoning, although the full extent of these accomplishments is debated. Yet, despite this excitement, substantive efforts at testing the cognitive and social abilities of general-purpose AI models is in its early stages. The technology behind ChatGPT, for example, while impressive, is not without problems, and even dangers. Research has shown that these models can amplify patterns of bias in their training corpus. While capable of passing standardized tests in varied domains, these models are strikingly poor at solving mathematical problems and transformers are more generally less successful in solving problems external to their training data. Despite these shortfalls, the promise of this technology – still in its infancy – is enormous. Because "[t]he purpose of science is to develop, without prejudice or preconception of any kind, a knowledge of the facts, the laws, and the processes of nature" we will apply this commitment to understanding the cognitive and social features revealed in ongoing discoveries (i.e., unpublished research) about LLMs by the participants in the course. This course is geared towards graduate students (and some qualified undergraduates) from various disciplines, especially psychology, computer science and related fields. Students will present their ongoing research to the class and as such, this course is only for students already engaged in research on the cognitive and social aspects of LLMs. This course will be organized like a lab meeting, with the weekly topics being constructed out of the projects of the participating students. The hope is that in this moment of rapid testing and learning, students will benefit from learning about the challenges each confronts and the advances each is making, to reduce the problem of each student reinventing the wheel.

It is advisable to contact the instructor prior to registering for this course to discuss the value of the course to the student and the student to the course. Please reach out to mahzarin_banaji@harvard.edu. This is Professor Banaji's last course to be taught at Harvard University.

Quantum Science & Engineering

Quantum Sci and Engineering

QSE 200

Advanced Engineering Quantum Mechanics

MW 0300 PM - 0415 PM

Marko Loncar

Course ID: 220210
2025 Fall (4 Credits)

The focus of this course is on the basic principles involved in the control of quantum systems and assumes knowledge of undergraduate quantum mechanics. Schrödinger, Heisenberg and interaction representations. Eigenvalue and time dependent problems, wave packets, coherent states. Harmonic oscillators. Quantization of the EM field. Tunneling; periodic potentials; Bloch's theorem. Perturbation theory. WKB approximation. Transfer matrix methods. Variational methods. Rotation generators and angular momentum. Magnetic moment and spin; Stern Gerlach experiment. Spin states, Pauli matrices. Pauli equation. Dynamics of spins in a static and a transverse time dependent magnetic field; dynamics in a rotating frame; Rabi oscillations. Coherent dynamics of two-level atoms. Rotating-wave and dipole approximations. Mixed states and density matrix. T1 and T2 relaxation times. Bloch equations. Identical particles: Bosons and Fermions. Slater determinant. Entanglement; singlet and triplet states. Hydrogen molecule. Clebsch-Gordan coefficients. Exchange energy. Elements of quantum information (qubits, no-cloning theorem, teleportation, quantum circuits).

Course Note: This course is also offered as ENG-SCI 200 and Chem 200. Students may only take one of ENG-SCI 200, QSE 200, and Chem 200 for credit

FAS Divisional Distribution: Science & Engineering & Applied Science

QSE 210B

Introduction to Quantum Information Science II

Course ID: 220214
2026 Spring (4 Credits)

No meeting time listed

Mikhail Lukin

Introduction to quantum information science and quantum computation. Emphasis on fundamental concepts including qubits and quantum operations, the nature of entanglement and its manipulation, quantum error correction, and various implementation models. Topics include: basics of quantum information, different models of quantum computing, fundamental quantum algorithms, quantum error correction, and fault tolerance; as well as experimental implementations. Recent developments in the field will be discussed. Preparation: One semester of quantum mechanics [QSE200, PHY143a, or PHY251A], or MATH 21b (or equivalent) and permission of the instructor.

FAS Divisional Distribution: Science & Engineering & Applied Science

QSE 216

Quantum and Classical Electromagnetic Interaction with Matter

MW 0130 PM - 0245 PM

Course ID: 225867
2026 Spring (4 Credits)

The first half of the course will cover the interaction of quantized atoms with electromagnetic fields, introducing a number of basic concepts such as coherent Rabi transitions vs. rate-equation dynamics, stimulated & spontaneous transitions, and energy & phase relaxations. These will be then used to study a range of applications of atom-field interactions, such as nuclear magnetic resonance, molecular beam and paramagnetic masers, passive and active atomic clocks, dynamic nuclear polarization, pulse sequence techniques to coherently manipulate atomic quantum states, and laser oscillators with applications. We will also touch upon the interaction of quantized atoms with quantized fields, discussing the atom + photon (Jaynes-Cummings) Hamiltonian, dressed states, and cavity quantum electrodynamics. The second half will cover the classical interaction of electromagnetic fields with matter, with special attentions to collective electrodynamics in particular, magnetohydrodynamics and plasma physics with applications in astrophysics, space physics, and Bloch electrons in crystalline solids.

Undergraduate-level electromagnetism and quantum mechanics are recommended.

QSE 245

Quantum Chemistry: Theory and Practice

TR 1200 PM - 0115 PM

Joonho Lee

Course ID: 223985
2026 Spring (4 Credits)

Instructor Permission Required

This course will cover theoretical and computational approaches to electronic structure problems of molecules and materials. The foundation of Hartree-Fock, density functional theory, perturbation theory, configuration interaction, coupled cluster theory, quantum Monte Carlo, and matrix product states will be covered. Graduate-level quantum mechanics knowledge is assumed. The course will involve a computational project with Q-Chem. This course will cover theoretical and computational approaches to electronic structure problems of molecules and materials. The foundation of Hartree-Fock, density functional theory, perturbation theory, configuration interaction, coupled cluster theory, quantum Monte Carlo, and matrix product states will be covered. Graduate-level quantum mechanics knowledge is assumed. The course will involve a computational project with Q-Chem.

Course Note: This course is also offered as Chem 245. Students may only take one of QSE 245 and Chem 245 for credit.

QSE 276

Platforms for Quantum Science

TR 1200 PM - 0115 PM

Course ID: 225865
2026 Spring (4 Credits)

The course introduces various aspects of quantum science, including quantum computing, quantum simulation, quantum communication and quantum metrology. It will particularly focus on the presentation of different experimental platforms currently used in the field and include superconducting qubits, trapped ions, neutral atoms, defects in solids, photons, among others. The course will cover an introduction of the general goals and essential prerequisites for these platforms; it will elucidate their operational principles and highlight some of their most significant and recent achievements, as well as the main challenges in their development.

QSE 285B	Course ID: 223843
Modern Atomic and Optical Physics II	2025 Fall (4 Credits)
MW 1030 AM - 1145 AM	
<i>Mikhail Lukin</i>	
Introduction to quantum optics and modern atomic physics. The basic concepts and theoretical tools will be introduced. Topics will include coherence phenomena, non-classical states of light and matter, atom cooling and trapping and atom optics. The second of a two-term subject sequence that provides the foundations for contemporary research.	
<i>Course Note: Also offered as Physics 285B. Students may not take both for credit.</i>	
<i>A course in electromagnetic theory (Physics 232a or equivalent); one half-course in intermediate or advanced quantum mechanics.</i>	
FAS Divisional Distribution: Science & Engineering & Applied Science	

QSE 296	Course ID: 220212
Mesoscale and Low Dimensional Devices	2025 Fall (4 Credits)
TR 0130 PM - 0245 PM	
<i>Donhee Ham</i>	
Concepts of condensed matter physics are applied to the science and technology of beyond-CMOS devices, in particular, mesoscale, low-dimensional, and superconducting devices. Topics include: quantum dots/wires/wells and two-dimensional (2D) materials; optoelectronics with confined electrons; conductance quantization, Landauer-Buttiker formalism, and resonant tunneling; magneto oscillation; integer and fractional quantum Hall effects; Berry phase and topology in condensed matter physics; various Hall effects (anomalous, spin, valley, etc.); Weyl semimetal; topological insulator; spintronic devices and circuits; collective electron behaviors in low dimensions and applications; Cooper-pair boxes and superconducting quantum circuits. Preparation: Foundations of Quantum Mechanics (or equivalent), Physics 195 (undergraduate solid-state physics)

A Practical and Effective Toolkit for Teaching and Research
TR 0430 PM - 0545 PM
Evelyn Hu, Nishant Sule

Course ID: 222018
2025 Fall (4 Credits)

Instructor Permission Required

This course is designed for first-year graduate students in the Quantum Science and Engineering (QSE) program. It aims to help students develop their toolkits for successfully navigating their academic life at Harvard and beyond. The course will discuss approaches, ideas, and most importantly practical skills focused on effective presentation and communication, both verbal and written, organizing thoughts, with sensitivities to colleagues, and audiences, all in the context of teaching and research. The course will meet twice a week, integrating concepts of pedagogy and communications through student contributions of oral and written communications for different contexts. The course will also emphasize and discuss creating and sustaining a diverse and inclusive environment in the classroom and lab. Guest speakers will be invited to share their perspectives on pedagogy, writing, lab and research skills, and other useful tips for graduate students.

RELIGION 16 (1)

Religious Dimensions in Human Experience

TR 1030 AM - 1145 AM

David L. Carrasco

Course ID: 116585
2025 Fall (4 Credits)

What is Religion? Why does it show up everywhere? Using archaeology, religious studies and social thought, this course will study the major themes in the history of religions including 'encountering the holy', 'sports and ritual', 'crossing borders', 'sacrifice as creation', 'pilgrimage and sacred place', 'suffering and quest for wisdom', 'music and social change', 'violence and cosmic law'. Readings from Native American, African American, Latinx/+, Jewish, Buddhist, Christian, Hindu traditions. Focus on the tension between individual encounters with

the holy and the social construction of religion. Readings from Gloria Anzaldua, Toni Morrison, Judith Sherman, Arthur Kleinman, Popul Vuj, Mircea Eliade, Michael D. Jackson. Jointly offered in Harvard Divinity School as HDS3160.

Course Note: Offered jointly with the Divinity School as 3160.

FAS Divisional Distribution: Arts and Humanities

RELIGION 26 (1)

Art, Idolatry, and Aesthetics in Jewish Thought

T 0300 PM - 0500 PM

Ido Ben Harush

This course explores the often conflicted role of images in Jewish thought. From the biblical ban on images to contemporary debates on Jewish art and identity, visual representations have often been viewed with suspicion. Why are some religious traditions so afraid of images, and how does the power of representation challenge or reinforce religious commitments? What is the difference between an image and an idol? And how have artists and thinkers turned prohibition into creativity? Is there such a thing as a Jewish aesthetic? Students will engage with a range of textual and visual sources, from Talmudic discussions and medieval philosophy to modern Jewish critical theory, literature, and artistic movements. Readings include works by Maimonides, Kant, Hermann Cohen, Freud, Joseph Soloveitchik, Cynthia Ozick, and Vilém Flusser, alongside artworks by Itzhak Danziger, Dani Karavan, and others. By the end of the course, students will become familiar with foundational concepts, key texts, and major philosophical approaches to the problem of the image in Jewish tradition.

Course instructor and meeting pattern will be updated in the summer.

2025 Fall (4 Credits)

RELIGION 32

Introduction to Indigenous Pacific Religion

TR 1030 AM - 1145 AM

Therese Lautua

This course offers an introduction to the complex relationship between Christianity and Indigenous spiritualities in the Pacific, the 'Blue Continent' which covers one third of the Earth's surface. Texts in the course will focus on the significance of relationality through the connection between Moana (ocean), Fanua (land), Tagata (people), and Atua (God), and how colonization has impacted understandings of these key aspects of life in the islands and diaspora communities. Students will be invited to consider how solidarity with Indigenous Pacific peoples might affect their own contexts.

RELIGION 40 (1)

Incarnation and Desire: An Introduction to Christianity

TR 0130 PM - 0245 PM

Courtney Lamberth

This course offers an introduction to Christianity by considering major texts, figures and ideas from the first century to the present. Readings focus on several interrelated themes: changing conceptions of what it means to be human (body, soul, spirit, flesh); notions of free will, desire and sin in relation to divine grace; the meaning of Jesus Christ as "incarnate word," that is, the Word made flesh; and how people have understood what it means to live life following Jesus's teachings and ministry. Texts include canonical and non-canonical early Christian literatures, selected Patristic and medieval texts, Reformation theologies, as well as modern and contemporary authors. Students will develop a sense of the distinguishing features of Christian worldviews, while gaining an appreciation for the significant diversity across the tradition.

The course introduces students to theories and methods in the academic study of religion, including significant themes and arguments that have defined the field over time. Students will examine some key works that helped to shape the discipline as it emerged in the nineteenth and twentieth centuries, and also consider recent work drawing on various disciplines that scholars have used in the study of religion, including philosophy, psychology, sociology, anthropology, and history. The course will take up questions such as these: What does it mean to call something "religious"? Is the category of "religion" a universal feature in human life, or more historically specific? What is at stake in defining this category in one way or another? How do claims about religion relate to claims about politics, economics, culture, and society? The course will also enable students to evaluate the choices that scholars make about what to privilege in their investigations. The course emphasizes critical reading and thinking skills, as well as thoughtful participation in discussion and the refinement of students' academic writing.

Course Note: Required of all concentrators, and recommended for Secondary Field students. Enrollment open to other students with instructors' permission.

The Body in Indian Medicine and Myth

W 0300 PM - 0545 PM

Martha Selby

Course ID: 226458
2025 Fall (4 Credits)

Instructor Permission Required

What does it mean to inhabit a body in India? This is the primary question that we will attempt to answer during the course of the semester in this seminar. The readings and discussion over the course of the term will parallel the development of the human being from conception, infancy and childhood, adulthood and sexuality, and will end with aging and death. We will take an interdisciplinary approach, and will examine textual materials from an extensive range of sources and time periods. Sources will include selections in translation from medical literature from India's Āyurvedic traditions as well as readings from religious narratives that deal directly with issues of embodiment and provide powerful metaphors for it. We will also be drawing largely on sociological and anthropological studies of the different forms that embodiment takes, from metaphysical issues on what it means to be "alive" or "dead" and the human body's connection to land and landscape to careful explorations of the body's outer surfaces in terms of ritual, ascetic, and strictly sartorial concerns with adornment and fashion. We will also explore the fascinating interfaces between bodybuilding and nation building in India.

Course ID: 120991
2025 Fall (4 Credits)

Instructor Permission Required

Kimberley Patton

Long Description: This comparative course will focus on the symbolic, ritual, and ideological dimensions of animal lives in religious worlds. Using particular cultural histories as paradigms, we will consider themes such as cosmogony, apocalypse, species hierarchy and reversal, metamorphosis, prophecy, consciousness and subjectivity, mimesis, magic, hunting, sacrifice, commodification, and the role of fantastic creatures. Central to our work will be the question of how animals have been theorized both in the history of religion and in contemporary discourse about animals in religion. Conference course: Limited to 30. Please write to Prof. Patton to request an application: kpatton@hds.harvard.edu

RELIGION 1052 (1)

Apocalyptic Grief

R 1200 PM - 0245 PM

Matthew Potts

Human caused climate change has already irreparably altered the earth's natural environment, and in the coming years these changes are certain to accelerate into routine and unrelenting catastrophe. In noting that religion often attends to the dying through practices of mourning and grief, this course will seek to consider how categories of apocalypse, pastoral care, lament, ritual, and the creative arts might be crucial to our common future. Readings and film screenings will focus upon depictions of apocalypse and dystopia in recent art, as well ethical and theoretical considerations of the end of the world in critical and theological writings.

African American Religious History

T 1200 PM - 0200 PM

Ahmad Greene-Hayes

This seminar course provides a critical survey of and introduction to major themes, debates, and trajectories in the field of "African American Religions" with attention to Christian denominational histories and extra-church, non-Christian, and quasi-Christian religious formations and interventions among people of African descent in the United States. To do so, students will be introduced to key historical events, prominent and unsung religious actors and institutions, and a diversity of theoretical and methodological approaches to investigating, analyzing, and narrating the archives of African American religious life and culture.

FAS Divisional Distribution: Arts and Humanities

RELIGION 1092 (1)

Religion, Theory, and the Archive

T 0300 PM - 0500 PM

Ahmad Greene-Hayes

Black and indigenous scholars have long argued that archives are often violent and dismembering, especially as the universities which house them preserve the physical and immaterial remnants of slavery and colonialism. Religious studies scholars, especially historians of religion, have attended to this quandary while sifting through archives of slavery, colonialism, conquest, and sexual violence. At Harvard, this conversation has re-emerged in unique ways through Harvard & the Legacy of Slavery: Reckoning with the Past to Understand the Present, and the question of what lies in university archives has taken center stage. This course examines these archival dilemmas and the violent hauntings of the past with an eye towards the historical study of religion in the Americas. We will read work by such scholars as Saidiya Hartman, Christina Sharpe, Robert Orsi, Solimar Otero, Toni Morrison, and more.

The Jewish Library: Four Jewish Classics

M 1200 PM - 0245 PM

David Stern

Course ID: 226456

2025 Fall (4 Credits)

Instructor Permission Required

Judaism is a famously text-centric religious culture, founded not only on a single book, the Hebrew Bible, but profoundly involved in the study and ritual use of other classic texts like the Babylonian Talmud, the Prayerbook, Biblical commentaries like that of Rashi, and the Passover Haggadah. This course will study the development of these four books and their transformation from texts into books with distinct physical and material features. In the case of each book, the text will be studied historically— "excavated" for its sources and roots, and its subsequent development over the centuries—and holistically, as a canonical document in Jewish tradition. Class time will be devoted primarily to learning to read the primary sources in translation; supplementary secondary readings will provide historical and cultural context. The seminar will also include regular visits to Houghton Library to look at manuscripts, early printed editions, and facsimiles of these books in order to study the changing shapes these books have taken as a key to understanding how they were studied and used, and to consider the relationship of materiality to textuality. While each book will raise its own set of issues, we will repeatedly deal with three basic questions: What makes a "Jewish" text? How do these books represent different aspects of Jewish identity? What can these books tell us about the canonical books of other religious traditions? No previous background in either Judaism or Jewish history is required. All readings in English translation. While this course is not a formal introduction to Judaism, it does aim to introduce students to Judaism and Jewish culture from inside its classic texts.

RELIGION 1319 (1)

Daemons in Ancient Greece

T 0300 PM - 0500 PM

Charles Stang

Course ID: 226466

2025 Fall (4 Credits)

Instructor Permission Required

In ancient Greece, a daimôn or "daemon" was understood sometimes as a god, sometimes as an intermediary divine being, perhaps allotted to a specific individual (most famously, Socrates), and sometimes (due to the increasing influence of Judaism and Christianity) as an evil spirit or "demon." This course will survey the history of the daemon from the archaic period (e.g. Homer), through the classical and Hellenistic periods, to late antiquity, with a focus on Platonism's evolving interpretation of Socrates' own daemon and, more broadly, the relevance of daemons for the pursuit of philosophy. We use "daemon" to distinguish this wide tradition from the early Christian "demonization" of these intermediary beings. All readings will be done in translation, with opportunities for those who have Greek to read the sources in the original language. There are no prerequisites, although some knowledge of the ancient Mediterranean world is recommended.

RELIGION 1400 (1)

Introduction to the New Testament

T 1200 PM - 0200 PM

Benjamin Dunning

Course ID: 111138

2025 Fall (4 Credits)

This course will provide a basic historical introduction to critical issues in the study of the New Testament. What are the contents of these texts that make up the second portion of the Christian Bible? In what ways do they reflect the major issues, concerns, and struggles that were taking place among the earliest Christ-followers? How did they get to be grouped together in a single book called the "New Testament"? In addition to these historical questions, we will also attend to the New Testament's ongoing role as Christian scripture to consider the following: what does it mean to study a religious text critically? How might the study of the New Testament's

social and historical context relate to its ongoing role as sacred and/or authoritative in the Christian tradition? And what are some of the diverse ways that contemporary readers bridge the gap between the New Testament's ancient Greco-Roman context and their own interpretation and application? We will explore these questions through careful study of the New Testament texts themselves, while also attending to issues of historical context, methodology, and hermeneutics. No previous study in religion or ancient history is assumed, and there are no prerequisites for enrolling in the course. For a final assignment, students will have the option of choosing between a final exam and a research paper.

Course ID: 123203

Sex, Gender, and Sexuality in the New Testament and Early Christianity

2025 Fall (4 Credits)

T 0300 PM - 0500 PM

Instructor Permission Required

Benjamin Dunning

This course will explore the place of the New Testament and early Christianity in the history of gender and sexuality. Through a close examination of relevant primary literature, we will seek to understand how the early Christian tradition was shaped by the sex and gender protocols of the ancient Mediterranean world; how it, in turn, reshaped that world; and how the texts and practices in question have played a foundational role in the history of Western thought, and continue to impact cultural and religious debates today. We will also work to become familiar with the increasingly developed (and complex) scholarly conversation surrounding these issues. This is a limited enrollment course. Please email the instructor (bdunning@hds.harvard.edu) with a short introduction including relevant background and reasons for wanting to enroll in the course. Students will be notified of acceptance before the enrollment deadline.

Course Note: Offered jointly with the Divinity school as 1505.

What's Love Got to Do With It: Love Poetry of the Middle Ages and Early Modernity

2025 Fall (4 Credits)

W 0900 AM - 1145 AM

Instructor Permission Required

Luis Giron Negron

Does love have a history? This course will explore a particularly rich, multiseular episode in the literary history of this emotion: the efflorescence and varieties of love poetry, both lyrical and narrative, in Europe and the Middle East from the Middle Ages through the 16th century. Weekly discussions will center on close readings of selected love poems and versified narratives from a variety of literary traditions, including: Provençal troubadour lyric; French chansons, the Germanic Minnesang and the Galician-Portuguese cantigas (the question of amour courtois); Ibero-Romance and colloquial Arabic jarchas; the Italian dolce stil novo; the Petrarchan sonnet and its early modern heirs in Portugal, England and Spain; Arabo-Andalusian and Hispano-Jewish qaṣā'id and muwashshahāt, medieval Latin love lyric; Persian Sufi and Christian mystical love poetry; Dante's Vita nuova; and selections from two other erotological classics in narrative verse, Libro de buen amor and Roman de la Rose. Discussions will be framed by an overview of both premodern discussions on love – how love is conceptualized at the intersection of philosophy, theology and medicine by Jewish, Christian and Muslim thinkers– and contemporary scholarly debates on the origins and development of medieval love literature. Jointly offered in the Faculty of Arts and Sciences as Comparative Literature 193.

Mystical Theology

2025 Fall (4 Credits)

W 0100 PM - 0300 PM

Amy Hollywood

This course will examine the history of mystical theology in early and medieval traditions of Christianity. Through a close reading of primary texts in translation students will engage questions of divine mystery, transcendence, and hiddenness; the practice of affirmation (kataphasis) and negation (apophasis); mystical union; and the limits of language. Jointly offered in the Divinity School as HDS 2003.

RELIGION 1480 (1)

Religion and Liberation Around Toni Morrison and Gabriel García Márquez

T 0100 PM - 0300 PM

David L. Carrasco

Course ID: 226455

2025 Fall (4 Credits)

Instructor Permission Required

In 1995 Toni Morrison and Gabriel García Márquez met for the first time in Mexico City and spoke about their writings, editors, lives and literary influences. The Colombian writer showed his deep knowledge of Morrison's novels and Morrison thanked him as a resource for religious themes in her writings. Later, in an interview with Professor Carrasco, Morrison stated, "When I read his book *One Hundred Years of Solitude*, I literally said, "Oh, my God, you can do this"—meaning magic, strange stuff—and be deadly serious. So, that freed me up in my writing. Reading him unlocked something important for me. "This course is a comparative and critical study of the religious dimensions in their writings and lives with special attention to the themes of religious experience, homeland and quests, Africa and Latin America, "rememory" and myths, goodness and the literary imagination. We engage with four types of "texts" and link them together to decipher the ties between the writer's lives, countries, politics, liberation movements and their writings; autobiographical fragments, novels, film, critical reflections. For Morrison we will use the film "Toni Morrison: The Pieces I Am" and interviews as autobiographical fragments. For García Márquez we will read his autobiography, *Living to Tell the Tale* and interviews. Novels include *Song of Solomon*, *Beloved*, *Home*, *A Mercy*, *One Hundred Years of Solitude*, *Chronicle of a Death Foretold*. This course will not be open to auditors. Students have the opportunity to write a research paper, take a final written exam or do a creative project.

Students should write a 100 word statement as to why they want to take the course and what goals they bring to it.

Makers of the (Catholic) Tradition: Vatican II: History and Theology

R 0300 PM - 0545 PM

Raúl Zegarra

Course ID: 226464

2025 Fall (4 Credits)

Instructor Permission Required

"Makers of the (Catholic) Tradition" is a series devoted to the study of key themes and authors that have shaped Roman Catholic Theological Studies. Each iteration of this course introduces students to different themes and authors through a combination of lectures and class discussion whose goal is gaining in-depth knowledge of the Catholic tradition, while engaging authors and sources beyond Catholicism. In this iteration of the course, we will focus on Vatican II (1962-1965), one of the most influential gatherings of bishops in the history of the Catholic Church. We will start by studying the ecclesial and social context that preceded Vatican II, paying special attention to the immediately prior and radically different gathering of bishops in Vatican I. Then we will turn to the specifics of Vatican II by reading both about the council and the central documents produced by the council. Lastly, we will focus on the key theologians that shaped Vatican II or whose projects develop inspired by the council, trying to identify their ideas in the documents of Vatican II and in its aftermath. This seminar offers students an opportunity to write a research paper. No prerequisites.

The House of Allāh: Origin and History of the Meccan Sanctuary

2025 Fall (4 Credits)

R 0400 PM - 0600 PM

Instructor Permission Required

Mohsen Goudarzi

The Meccan Sanctuary, also known as the Ka'ba, is a focal point of worship for Muslims, who pray towards it daily and strive to make a pilgrimage to it at least once in their lifetime. This course is an advanced graduate seminar centered on a host of primary sources (in Arabic) which provide information about Mecca and its shrine in the pre-Islamic and early Islamic periods. We will read sources in the genres of historiography, geography, exegesis, law, hadith, and poetry. We will also engage with secondary academic literature on Mecca, the Ka'ba, and West Arabia's other sacred spaces and festivals. Requirement: advanced knowledge of classical Arabic (3 years).

Requirement: advanced knowledge of classical Arabic (3 years).

Exploring the Quran

2025 Fall (4 Credits)

T 0300 PM - 0600 PM

Mohsen Goudarzi

This course explores the contents of the Quran and probes its place in the history of human civilization. Students will learn about and critically reflect on the following subjects: 1) the Quran's core ideas, stories, laws, parables, and arguments; 2) the historical context in which the Quran was first promulgated and codified; 3) the relationship between the Quran and the preceding literary traditions of the ancient world, in particular the Bible and post-biblical Jewish and Christian writings; and 4) Muslim utilization of the Quran towards religious, intellectual, social, and cultural ends. To meet these goals, we will read a substantial portion of the Quran in translation and draw extensively on modern academic scholarship on the Quran. In addition, lectures will contextualize and complement our encounter with the Quranic text and secondary scholarship. By the end of the semester, students should have the ability to utilize various resources and concordances in order to independently conduct further investigations and critically evaluate claims made about the Quran. Jointly offered in the Harvard Divinity School as HDS 3339.

The History of the Study of Religion

2025 Fall (4 Credits)

M 0300 PM - 0500 PM

Instructor Permission Required

Amy Hollywood

An examination of the study of religion from early modernity to the present, with attention to key thinkers, methods, and theories. Required common doctoral seminar for first-year PhD candidates in the Study of Religion or an affiliated department (in the latter case, must have express permission of the Instructor.)

Pedagogy in the Study of Religion

M 0300 PM - 0545 PM
Mohsen Goudarzi

Course ID: 219979
2026 Spring (2 Credits)

Instructor Permission Required

This course is designed for graduate students in the Committee on the Study of Religion, and is open to students in related fields who teach courses pertaining to religion. The course aims to equip students with skills to be effective Teaching Fellows at Harvard and to develop their own approaches to pedagogy as independent instructors in the field of religion. Classes will be workshop-style and will cover various teaching methods, course design, and professional development topics. They will also provide a space to discuss day-to-day success stories and challenges in the classroom.

Course Note: This course must be taken Sat/Unsat and is designed to minimize work outside class time. Classes will take place on 6 Mondays: Jan 27, Feb 17, March 10, March 21, March 14, March 28

MTWR 0900 AM - 1015 AM

Maria Parra-Velasco

Course ID: 124982

2025 Fall (4 Credits)

Instructor Permission Required

Spanish 10 is the first course in the Beginning Spanish sequence (SPAN 10-SPAN 11). This course is designed for students with little or no previous experience in Spanish. Through interactions with peers, instructors, and native Spanish-speakers around the world, students in this class discuss and analyze authentic multimodal texts (e.g., written, audio, audiovisual, visual) from various sources (e.g., social media, newspapers, museums). Through these interactions and analyses, students learn frequent vocabulary and develop a wide array of linguistic functions, such as the ability to make basic descriptions or to narrate in the present tense. By the end of the semester, students: a) will have developed basic linguistic competence in Spanish, and b) will have gained some understanding of the cultures and worldviews of Spanish-speaking communities in the United States, Latin America, and Spain.

Course Note: Conducted in Spanish. Open to students who have not previously studied Spanish or who have scored below 300 on the Harvard placement test. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students. Not open to auditors. Students who have studied Spanish for two years or more in secondary school must begin at Spanish 11 or higher.

This course is taught by members of the Department.

FAS Divisional Distribution: None

SPANSH 11

Introduction to the Spanish-speaking World II: Social, Cultural, and Sustainability Topics

Course ID: 125058
2025 Fall (4 Credits)

MWF 0900 AM - 1015 AM

Instructor Permission Required

Maria Parra-Velasco

Spanish 11 is the second course in the Beginning Spanish sequence (SPAN 10-SPAN 11). In this course, students explore a host of social, cultural, and environmental sustainability issues that have historically impacted the lives and livelihoods of local and foreign Spanish-speaking communities. Throughout the semester, students interact constantly with instructors, peers, and native Spanish speakers around the world as they explore culturally and linguistically rich content. Through discussions and critical analyses of authentic multimodal texts (e.g., written, audiovisual, visual) from many different sources (e.g., social media, newspapers), students develop a wide array of linguistic functions, such as the ability to make detailed descriptions or to narrate in different time frames. By the end of this class, students a) will have further advanced their linguistic competence, and b) will have deepened their understanding of the cultures and worldviews of Spanish-speaking communities in the United States, Latin America, and Spain.

Course Note: Conducted in Spanish. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students. Not open to auditors. Students who have studied Spanish for two years or more in secondary school must begin at Spanish 11 or higher. Upon the recommendation of the course head, students who have performed at a superior level in this course may enroll in any course for which they are linguistically prepared. This course is taught by members of the Department.

A score between 301-450 on the SAT II test or on the Harvard Placement Test, Spanish 10, or permission of course head.

In this course, students explore a host of social, cultural, and environmental sustainability issues that have historically impacted the lives and livelihoods of local and foreign Spanish-speaking communities. Throughout the semester, students interact constantly with instructors, peers, and native Spanish speakers around the world as they explore culturally and linguistically rich content. Through discussions and critical analyses of authentic multimodal texts (e.g., written, audiovisual, visual) from many different sources (e.g., social media, newspapers), students develop a wide array of linguistic functions, such as the ability to make detailed descriptions or to narrate in different time frames. By the end of this class, students a) will have further advanced their linguistic competence, and b) will have deepened their understanding of the cultures and worldviews of Spanish-speaking communities in the United States, Latin America, and Spain.

Course Note: Conducted in Spanish. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS

students. Not open to auditors. Students who have studied Spanish for two years or more in secondary school must begin at Spanish 11 or higher. Upon the recommendation of the course head, students who have performed at a superior level in this course may enroll in any course for which they are linguistically prepared. This course is taught by members of the Department.

A score between 301-450 on the SAT II test or on the Harvard Placement Test, Spanish 10, or permission of course head.

Intermediate Spanish: Language and Culture in the Hispanic World

MWF 1030 AM - 1145 AM

Instructor Permission Required

Adriana Gutierrez

An intermediate language and culture class that aims to consolidate and expand the skills of listening comprehension, speaking, reading and writing in Spanish. Includes a comprehensive review of the grammar and reinforces linguistic acquisition through texts, movies, art and multi-media projects to acquaint students with cultural issues relevant to the Spanish-speaking world.

Course Note: Conducted in Spanish. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students. Not open to auditors. Upon the recommendation of the course head, students who have performed at a superior level in this course may enroll in any course for which they are linguistically prepared. This course is taught by members of the Department.

Spanish Ab, Acc, 451-600 on the SAT II test or on the Harvard Placement Test, or permission of course head.

SPANSH 49H

Linguaging and the Latinx identities

Course ID: 109820
2025 Fall (4 Credits)

TR 1200 PM - 0115 PM

Instructor Permission Required

Maria Parra-Velasco

This course builds on students' knowledge of Spanish to explore the relationship between their languaging practices and their Latinx identities. Understanding languages as a way of knowing and meaning making, we use a variety of texts, genres, music, videos, films and visual arts to engage in discussions about family heritage, migration, and Latinx cultural and linguistic traditions and innovations. Students will strengthen their oral and written abilities, expand their interpersonal, interpretive and performative resources for languaging in informal and academic contexts.

Course Note: Spanish 49h was formerly Spanish 35; therefore, students cannot take 49h if they've already taken 35. Spanish 49h should be a prerequisite for 59h (or permission of the instructor).

SPANSH 70

Introduction to Latin American Studies: Aesthetics, Politics, and Anxieties

TR 1200 PM - 0115 PM

Alejandra Vela Martinez

Course ID: 116263

2025 Fall (4 Credits)

Instructor Permission Required

The photographic installations of the Mothers of the Plaza de Mayo, the debates sparked by the farcical intervention in images of national heroes like Emiliano Zapata, or even the hyper-aestheticization of narco culture on social media, in films, and series, all serve as evidence that the politics of a region cannot be understood without its art, literature, and culture. In the recent history of Latin America, there are multiple instances where aesthetics and politics have intertwined in order to create and find new meanings for the issues plaguing the region. If a citizen participates in both the action of being governed and the action of governing, there is no doubt that aesthetics, understood as the formal exploration of the distribution of the sensible, as Rancière would say, is a productive space for analysis to understand Latin American intellectual and political traditions. In this course, we will panoramically explore the relationship between aesthetics and politics throughout the 19th, 20th, and 21st centuries in Latin America. By studying cinema, literature, art, music, and more, the objective is to offer students an approach to how art and culture bear witness, often in a more visceral and affective way than is possible from a purely historiographical or sociological approach, to what politics cannot resolve. We will analyze and discuss Latin American productions based on key aesthetic concepts (manifesto, declamation, performance, documentary, etc.), in order to trace and outline the anxieties plaguing both art and contemporary Latin American criticism.

Course Note: Conducted in Spanish.

WF 1030 AM - 1145 AM

Instructor Permission Required

Raquel Vega-Duran

This course introduces students to the literature, history, and visual culture of contemporary Spain (from the 19th century through the first twenty years of the 21st century). We will study representative short stories, poems, plays, novellas, essays, paintings, photographs, and films from the Spanish War of Independence, the "disaster" of 1898, the Surrealist movement (with a visit to the Fogg Museum), the Spanish Civil War and the Republican Exile, Franco's Dictatorship and the Transition to Democracy, the "Movida Madrileña," and the literature of immigrants and "new" Spaniards. Through visual and written works by Goya, Bécquer, Pardo Bazán, Unamuno, Lorca, Campoamor, Machado, Dalí, Buñuel, Picasso, Laforet, Aub, Almodóvar, Zhou Wu, El Hachmi, and others, students will gain a general knowledge and appreciation for main works, periods, and authors of contemporary Spain, and will appreciate the uniqueness and diversity of Spanish culture by establishing transnational relations between Spain and Latin America, North Africa, Asia, and Europe. All readings will be in Spanish, although we will look at texts originally written in Spanish, Catalan, Galician, and Basque.

Course Note: Taught in Spanish.

SPANSH 143

Historiographical Fictions: History as Literature in 19th Century Latin America

R 0945 AM - 1145 AM

Alejandro Quintero Machler

Course ID: 226308

2025 Fall (4 Credits)

Instructor Permission Required

Latin American Historiography was born, properly speaking, in the first decades of the 19th century. Having achieved independence from the Spanish crown, the newfangled republics were in dire need of a unifying discourse capable of weaving together history, identity, and political legitimacy. Each post-colonial state endeavored to articulate a coherent narrative that would cement its status as a nation, recognizable across the ages. The difficulties entailed in erecting such 'foundational fictions' were daunting, and Latin American historians, regardless of their ideology, drew on their ample literary skills to solve them. Their oeuvre, often epic in style and overwhelming in scholarship, offers a window into that nation-building era in which the boundaries between history and literature were still porous and undefined. This course serves as an introduction to 19th century Latin American historiography and its intimate but problematic relationship with literature. In analyzing these historical masterpieces, students will become acquainted with their virtues, shortcomings, and lasting impact while discovering the complicated history they portray. In order to do so, the course will combine close-readings of the historiographical canon with pertinent secondary literature on the topic, such as Karl Löwith, Hayden White, Ivan Jablonka, and Germán Colmenares, among others.

Migration and Border-Crossing in Film and Photography

WF 1200 PM - 0115 PM

Raquel Vega-Duran

From an interdisciplinary perspective, this course explores the ways in which film and photography recount past and present human migrations, and how they contribute to and question the construction of the social imaginary of the migrant. Focusing on migrations particularly related to Spanish-speaking countries, we will examine themes such as "global" vs. "local"; conceptions of hybridity, otherness, belonging, border, assimilation, and neo-racism; the paradoxical nature of the "migrant"; the role of history, language, religion, and culture in the acceptance and rejection of foreigners; the relationship between border and identity; the feminization of migrations; the use of the term "illegal" in relation to migrations; and the emergence of "new" identities; among others. We will learn how to analyze the complexities of film and photography, considering movies, documentaries, photographs, and other visual materials which cover past and present migrations from Africa, America, Asia, and Europe. We will also study the history of migrations, and will examine the intricacies of the concept of migrant (as both emigrant and immigrant), paying particular attention to the different stages of migrants' journeys (the departure from the home country; the crossing of transit countries and borders; the arrival; and the settlement or forced deportation). No previous knowledge of film or photography required.

Course Note: The course will be conducted in Spanish.

Eloquent Instruments of God: Catholic Intellectuals in Latin America*No meeting time listed**Instructor Permission Required**Alejandro Quintero Machler*

In the course of five hundred years, the region now referred to as Latin America went from being the target of one of the most comprehensive evangelizing projects ever attempted, to becoming the Catholic Church's strongest bastion. Far from static or monolithic, the richness, variety, and controversial character of such a long-lasting presence is reflected in the history of Latin American thought: among the many intellectuals influenced by Catholicism, one finds prophetic crusaders, poetic nuns, pious indigenists, radical liberals, reactionary antimoderns, authoritarian politicians, conservative feminists, ecclesiastical fascists, left-wing revolutionaries, and even a Pope. Catholicism has been, throughout the centuries, a never-ending source of inspiration for all sorts of intellectual traditions in the region. The objective of this course is to introduce students to Catholicism's deep and lingering imprint in Latin America by means of a close-reading approach to some of its main intellectual figures, from the 15th century to the 21st. More than an institutional history of the Church, the course offers a survey of Latin American Catholic thought across the ages, focusing on its unceasing dynamism and intellectual heterogeneity. In terms of assigned readings, in-depth analysis of primary sources will be accompanied by contextualizing secondary literature.

Narratives of Environmental Crisis: Eco-Affective Imaginings in Contemporary Latin America

T 0300 PM - 0500 PM

Can narrative imagination affect our relationship with the world we inhabit? In the face of the global socio-environmental crisis caused by extractivist policies and the manipulation of the temporalities of nature, contemporary Latin American novels represent instances of resistance to capitalist exploitation and alternative ways of relating with the environment. In order to explore what I call eco-affective imaginings, we will read novels written and published in Argentina, Uruguay, and Chile whose central characters confront, domesticate or reconcile with nature (from Samantha Schweblin's *Distancia de rescate* and Mike Wilson's *Leñador* to Fernanda Trias' *Mugre Rosa* and Gabriela Cabezón Cámara's *Las Aventuras de la China Iron*, and *Las niñas del naranjel*). Our interdisciplinary approach to the political nature of these fictions will allow us to foreground literature's potential to activate eco-affective practices, imagine new ways of inhabiting the world, explore the power of critical thought to intervene in contemporary societal debates and engage in the collective construction of the present.

Course Note: This course will be taught in Spanish.

This course will be taught by Prof. Alejandra Laera.

SPANSH 237

Mining the Archive: Critical Obsolescence in Contemporary Latin American Literature

M 0300 PM - 0500 PM

Alejandra Vela Martinez

In the fast-paced world of literary production and reception, a work may be considered intellectually "consumed" almost as soon as it is published. In this course we'll look at recent Latin American literature that establishes a sometimes productive, other times disruptive relationship with archives and criticism, in contrast to previous works that have delved into the archives for their literary production. Delving into the pressures and challenges faced by contemporary Latin American authors such as Jazmina Barrera, Mariana Enriquez, Fernando Vallejo, among others, as they navigate the dual demands of producing literature that is both critically relevant and culturally resonant, amidst the backdrop of archival extractivism and a fast-evolving literary landscape, the course will offer a panoramic approximation to how intertwined literary production and literary criticism can be, and the consequences this has on both the literary field and academia. The combined concepts of critical obsolescence and archival mining aim to explore how these forces impact the creation, reception, and interpretation of literature in Latin America. Authors seem to find themselves negotiating between the vast historical and cultural tapestries available through the regions' archives and the demands for fresh, relevant narratives in a global literary market. This places a particular type of pressure on authors and critics in Latin America to continuously innovate or react to new developments, which can render previous interpretations quickly obsolete, but that also assume certain tightness in regard to the possibilities of the hermeneutical process itself.

Beginning French I: Cross-Cultural Encounters in French

MTWR 0900 AM - 1015 AM

Instructor Permission Required

Nicole Mills

This beginning French course addresses the theme of cross-cultural encounters in French through engagement in the discussion and interpretation of texts, art, images, and film. You will gain an introduction to the French language with emphasis on interpersonal communication and the interpretation and production of language in written and oral forms. You will engage in interactive communicative activities that provide rich exposure to the French language and francophone culture(s). Class sessions will be filled with ample opportunities for interaction and communication and online assignments will develop your interpretive and presentational skills in French on various platforms.

Course Note: French 10 is an elementary French course for students with little or no knowledge of French. French 10 may count toward the language requirement. Open to students who have not previously studied French or who have scored below 250 on the Harvard placement exam. Students who have studied French for two years or more in secondary school must begin at French 11 or higher. May not be taken Pass/Fail. Not open to auditors. Graduate students may take the course Sat/Unsat with permission of course head. French 10 is taught by members of the Department.

Beginning French II: Paris in Virtual Reality

2025 Fall (4 Credits)

MWF 1200 PM - 0115 PM

Instructor Permission Required

Nicole Mills

This second course in the Beginning French sequence will immerse you in the French language and Parisian life. You will discuss what it means to be Parisian from the point of view of diverse Parisians and compare real versus imagined perceptions of Paris through immersive virtual reality experiences and interactive discussions with native French speakers. Through the exploration of various course themes centered around Parisian

culture, you will begin to be able to speak and write in the past, present, and future tenses, make suggestions, express emotions, express opinions, extend, accept, and refuse invitations, give advice, and express hypothetical situations. Class sessions will be filled with ample opportunities for interaction and communication and online assignments will develop your interpretive and presentational skills in French.

Course Note: French 11 may count towards the language requirement. May not be taken Pass/Fail. Not open to auditors. Graduate students may take the course Sat/Unsat with the permission of course head. This course is taught by members of the Department.

Completion of French 10, or a score no lower than 251 and no higher than 300 on the Harvard placement exam.

Reading, Understanding and Translating Written French for Research

TR 0900 AM - 1015 AM

Nicole Mills

Course ID: 111933
2025 Fall (4 Credits)

Instructor Permission Required

French 16 offers an introduction to reading and translating academic French texts for students who require a basic knowledge of French for research purposes. The course presents vocabulary and the principal structures of French grammar in a systematic and coherent order. The course begins with simple texts and advertisements, then moves to academic texts with more complex structures, and ends with the translation and analysis of literary works and philosophical texts. Students discuss the complexities of translation, consider what makes a "good translation," and experiment thoughtfully with AI tools. Course assignments are discipline-specific to accommodate students' research needs.

Course Note: Conducted in English. Not open to students with a score of 300 or above on the Harvard placement exam or 500 or above on the SAT II French exam, to those with more than one year of undergraduate French, or to auditors. May not be used to fulfill the language requirement and may not be taken Pass/Fail but may be taken Sat/Unsat by graduate students with permission from the course head. This course is taught by members of the Department. Course site: <https://locator.tlt.harvard.edu/course/colgsas-111933/2023/spring/16998>

Some previous study of a Romance language helpful but not necessary. Fluency in English required.

Intermediate French: Francophone Culture in Local Communities

2025 Fall (4 Credits)

MWF 1030 AM - 1145 AM

Instructor Permission Required

Karen Turman

In this intermediate-level language course we will explore cultural topics such as music, dance, and cuisine in French-speaking countries around the world. We will in turn expand our discovery of Francophone cultures through conversations with online language partners, interactive discussions with French-speaking guests, and exploration of local Francophone communities. Themes such as family life in West Africa, sustainability in the French-speaking Pacific, and artist identity in Quebec will be broached through communicative activities in order to build on oral, written, and intercultural competences. Using various texts, films, and multimedia resources as a basis for discussion, we will also build vocabulary and review and refine various grammatical structures. This course will also include online partner conversations through the Boomalang platform.

*Course Note: Conducted in French. May count toward the language requirement. May not be taken Pass/Fail but may be taken Sat/Unsat by GSAS students. Not open to auditors. This course is taught by members of the Department. To engage with online Francophone partners through the Boomalang platform, students will be required to purchase an access code for \$40-50, as part of the course materials. **Students must complete the online information survey on Canvas before registering for the course.*

Prerequisite: Either a score between 301 and 350 on the Harvard placement exam, or between 451 and 600 on the SAT II French exam, or 3 years of French in high school, or completion of French 11 or 15.

Upper level French : Current Events and Media in the Francophone World

HARVARD UNIVERSITY 1571 of 1792

Claire-Marie Brisson

This course explores the theme of identity and representation in francophone media through various types of media, from the written press to social media, while revisiting French grammatical structures and refining speaking and writing skills. Through spontaneous exchange, collaboration, and presentational discourse, this course will examine current events in the Francophone world as represented in newspaper articles, music, images, film, and advertisements from places as diverse as Montreal, Port-au-Prince, Djibouti, Brussels, Kinshasa, and Paris. Course materials will include links to digital news, films, websites, podcasts, literary texts, and visual media, among other resources. Course themes include an analysis of stereotypes and identity markers of Francophones, social life through social media, diverse francophone perspectives in trending media, and questions of truth and justice as represented through digital media. Course assignments include journalistic writing and the development of podcast episodes that will contribute to Harvard University's French-language podcast. You will engage in various interactive communicative activities throughout the course, concluding with a live journalistic panel and debate with an invited panel of Francophone journalists and podcasters.

Course Note: Conducted in French. May not be taken Pass/Fail but may be taken Sat/Unsat by graduate students. Not open to auditors. This course is taught by members of the Department.

A score no lower than 351 and no higher than 400 on the Harvard placement exam or no lower than 601 and no higher than 680 on the SAT II French exam; French 20; or permission of course head.

This course explores the theme of identity and representation in francophone media through various types of media, from the written press to social media, while revisiting French grammatical structures and refining speaking and writing skills. Through spontaneous exchange, collaboration, and presentational discourse, this course will examine current events in the Francophone world as represented in newspaper articles, music, images, film, and advertisements from places as diverse as Montreal, Port-au-Prince, Djibouti, Brussels, Kinshasa, and Paris. Course materials will include links to digital news, films, websites, podcasts, literary texts, and visual media, among other resources. Course themes include an analysis of stereotypes and identity markers of Francophones, social life through social media, diverse francophone perspectives in trending media, and questions of truth and justice as represented through digital media. Course assignments include journalistic writing and the development of podcast episodes that will contribute to Harvard University's French-language podcast. You will engage in various interactive communicative activities throughout the course, concluding with a live journalistic panel and debate with an invited panel of Francophone journalists and podcasters.

Course Note: Conducted in French. May not be taken Pass/Fail but may be taken Sat/Unsat by graduate students. Not open to auditors. This course is taught by members of the Department.

A score no lower than 351 and no higher than 400 on the Harvard placement exam or no lower than 601 and no higher than 680 on the SAT II French exam; French 20; or permission of course head.

Instructor Permission Required

Claire-Marie Brisson

In this advanced French language and culture course, you will explore Francophone cultures through contemporary films to build interpretive, interpersonal, and presentational modes of communication while activating analytical and creative thinking. Course materials include French-language films and corresponding literary texts, images, and supporting authentic materials such as posters and advertisements that will help you develop oral and written communication skills through close readings and cultural analysis. Course themes investigate contemporary issues at the heart of Francophone societies today, including deportation and (non) belonging, policing, ableism, education, Blackness, sexuality and transgender identity, as well as the role of the family. The structure of class will promote spontaneous exchange about films and topics studied, real-and real-time collaboration with classmates. Creative assignments include interactive writing assignments, short compositions, scripts, and a short film. No previous familiarity with film study is necessary.

Course Note: Conducted in French. May not be taken Pass/Fail but may be taken Sat/Unsat by graduate students. Not open to auditors. This course is taught by members of the Department.

French 30, 401-450 on the Harvard placement exam, or 681-720 on the SAT II French exam; or permission of course head.

Through the lens of social justice issues in France and the Francophone world, this class will focus on language and civic engagement. We will interrogate topics such as colonialism, islamophobia, immigration, and sexism by studying a range of creative, analytical, and polemical texts and images. This course builds on the interpersonal, interpretive, and communicative skills acquired in French 40, with a particular emphasis on developing oral and written proficiency. In addition to creative and analytical projects ranging from a written portrait to a manifesto, you will also engage in volunteer work with local francophone communities* and intercultural conversation exchanges with Francophone language partners on Boomalang.co.*The community engagement project will vary depending on availability during the semester.

Course Note: Conducted in French. Students must complete an online information survey on Canvas before registering for the course. May not be taken Pass/Fail but may be taken Sat/Unsat by GSAS students. Not open to auditors. Students do not need to purchase a textbook for this course, but they will need to purchase an online access code for four 30-minute conversation sessions with Boomalang.co (\$40-50).

Prerequisite: French 40; a score of 721-750 on the SAT II French exam or 451-490 on the Harvard placement exam.

Exploring Sustainable Practices in French Industry: Fashion, Cuisine, and Music

TR 1200 PM - 0115 PM

Instructor Permission Required

Karen Turman

In this advanced French language and culture course we will explore iconic French industries through the lens of sustainability. Beginning in the Industrial Revolution, we will interrogate themes such as class, space, labor, and cultural appropriation in France and subsequently focus on the evolution of the sustainable practices of each industry today. By contextualizing examples ranging from thrifting in department stores on Boulevard Haussmann to French hip-hop and cabaret culture in Montmartre, we will evaluate the cultural legacy of fashion, cuisine, and music in France today. To this end, we will analyze videos, articles, literary texts, and images as well as engage with guest speakers from France. In addition to participating in a conversation exchange with university students in France studying Business English, course work will include daily readings and exercises, in-class and online written assessments, a video presentation, and a final written project evaluating the sustainable and ethical practices of a French company of your choice.

Course Note: Conducted in French. Students must complete an online information survey on Canvas before registering for the course. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students.

Prerequisite: Harvard placement exam score between 491 and 530 or French SAT II score between 751 and 780.

2025 Fall (4 Credits)

TR 1030 AM - 1145 AM

Instructor Permission Required

Claire-Marie Brisson

In this advanced French language and culture course, students will refine their French language skills as they learn about and discuss the cultural landscape of Francophone North America. Students will journey through Québec, Ontario, across the Great Lakes, down the Mississippi to Louisiana, and circle back to New England as we investigate themes such as identity, visibility, and cultural hybridity, past and present. Through fiction, poetry, art, historic and modern images, films, and music, students will master complex grammatical structures and learn specialized vocabulary through supported opinion, argumentation, and hypothesis based on their interactions with authentic materials. The course includes guest speakers from around French-speaking North America and creating episodes for a student-produced podcast, Le Cramoisi, "The Crimson."

Course Note: Conducted in French. Students must complete an online information survey on Canvas before registering for the course. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students.

The Bad Place: Dystopia à la française

No meeting time listed

Annabel Kim

The French novelist Stendhal once described the novel as "un miroir qu'on promène le long d'un chemin," a mirror we carry along the road. This course examines dystopian French novels (and some films) in order to explore what sort of reflection of reality such narratives of catastrophe, corruption, destruction, and dysfunction reveal to us. What does it mean to write the dystopian from within dystopia? What does it mean to be human at a moment in history where we are constantly poised at the edge of the end of humanity? What can and does literature (and the imagination) do for us?

Course Note: Conducted in French.

FRENCH 80MP

Making Poetry Matter

TR 0900 AM - 1015 AM

This course will provide an introduction to poetry in French by focusing on poetic "practice" – the practice of reading/saying/hearing poetry, the practice of composing poetry, the practice of materializing poetry on the page – and how and why it matters to our everyday lives. As we explore diverse poetic practices, ranging from the Middle Ages to the present day, we will consider how poetry has served as a vital form of embodied expression with unique capacities to enchant, impart knowledge, provoke meaningful experiences, and foster new forms and terms of communicating with the world in order to effect change. Not only will we engage in close and creative readings with French and Francophone poetry, placing voices across the centuries in conversation with one another, but we will also cultivate our own poetic practices through collection, composition, and exchange to be materialized in a final personal poetic anthology.

*Course Note: This course will be taught in French.
This course will be taught by Dr. Elizabeth Harper.*

Care Crisis: Late Medieval Vulnerabilities

TR 0300 PM - 0415 PM

Course ID: 226500
2025 Fall (4 Credits)

In the period known as the long fourteenth century, the French kingdom and its people suffered unprecedented violence, corruption, and loss. Imbricating vulnerabilities exposed by plague, the Hundred Years' war, civil war, pillaging, famine, mental illness, and greed created an increasingly untenable crisis of care. Equally unprecedented was the sensitivity of late medieval literary writers to these events. Far from serving as mouthpieces to the powerful or entertainers who distract from reality, the literary community spoke out, whether by constructing alternative narratives, meditating on experiences of fragility and trauma, exposing hidden inequities that target the most vulnerable, or cultivating cultures of care. What can the literature of this period tell us about what it means to be vulnerable? Or what it means to encounter vulnerability with care? Can the intimate activities of writing and reading become a means of expressing, exposing, soliciting, enacting, or provoking such encounters? In this course we will explore these questions through selected works of poetry, prose, music, manuscript documentary evidence, and modern criticism to discover a shared commitment among late medieval literary writers to challenge dominant discourses of power and resiliency, asserting the value of different forms of vulnerability and calling for urgently needed ethics and politics of care.

This course will be taught by Dr. Elizabeth Harper.

FRENCH 128

Growing Pains: The Coming-of-Age Novel

MW 1030 AM - 1145 AM

Annabel Kim

Course ID: 203381
2025 Fall (4 Credits)

Instructor Permission Required

What does it mean to grow up, to become oneself? How does confronting the world shape who you are as well as the world itself? Who learns what in a roman d'apprentissage (coming-of-age novel) and in the reading of such novels? In this course, we will read romans d'apprentissage that span the twentieth century into the twenty-first century and see how the novel develops, just as protagonists do, as writers confront the political, social, and intellectual volatility and instabilities of a modern world. In doing so, we will see how the relation between fiction and reality, between the text and the world, is anything but simple, or merely reflective. By reading closely in conversation with each other, we will discover and experience what it means to be readers—to be caught up at the intersection where fiction and reality become each other.

Course Note: Conducted in French.

FAS Divisional Distribution: Arts and Humanities

FRENCH 159

Sex Work: Epistemology of the Prostitute

No meeting time listed

Hannah Frydman

Course ID: 226257
2026 Spring (4 Credits)

Beginning in the nineteenth century, prostitution became a central theme in canonical French literature and a central target of social scientific inquiry. Knowledge about the world seemed to flow through the figure and the body of the "prostitute." In this course, we will situate this knowledge production within the histories of prostitution, social investigation, the city of Paris, and the novel in order to understand why this was the case. In

the process, we will pay close attention to the many things the prostitute symbolized from the nineteenth century to the present—from an embodiment of society's ills to a searing critique of the social order itself.

Course Note: Conducted in French.

FAS: Meets Foreign Lang Req: French

FRENCH 218

Plantations, Gardens, Forests: De/Colonial Ecologies

Course ID: 226264
2026 Spring (4 Credits)

No meeting time listed

Usha Rungoo

In this course, we will explore the imbrication of colonialism and environmentalism by focusing on "green" spaces such as plantations; botanical gardens where plants were studied to be mass produced for empire's profit; and green spaces such as safaris and nature reserves monopolized by the tourism industry and inaccessible to local communities. Conversely we will investigate ecological resistance, such as the Creole gardens historically nurtured by enslaved communities to counter food scarcity on plantations, or the mangrove forests on and around which diasporic communities continue to live and live from. In this literature course, rather than focusing on history, we will look at how, on one hand, green spaces have been transformed into systems of oppression, and on the other, they can be read for alternative forms of knowledge and resistance.

FRENCH 243

New Directions in the Study of Gender and Sexuality

Course ID: 226255
2025 Fall (4 Credits)

T 1245 PM - 0245 PM

Instructor Permission Required

Hannah Frydman

How does literature uphold and/or deconstruct the gender binary? What is the relationship between sexuality and political consciousness? How did gender become such a political football? Taking the Francophone world as a case study, in this course we will explore cutting edge work on gender and sexuality across the humanities and humanistic social sciences that takes up these questions and many others, allowing us to grapple with the productive problems—definitional, epistemological, empirical, theoretical, etc.—studying sexuality and gender brings into view.

Portuguese

PORTUG 10

Course ID: 120398
2025 Fall (4 Credits)

Beginning Portuguese I: From Cambridge to Copacabana

MTWR 0900 AM - 1015 AM

Cristiane Soares

Portuguese 10 is the first course in the Beginning Portuguese sequence for students with little or no prior experience in Portuguese. You will be introduced to the Portuguese language and Lusophone (Portuguese-speaking) cultures in a practical and meaningful way through communicative tasks. Authentic materials (e.g. short texts, music, video clips, visuals) from various sources (e.g. social media, newspapers, TV programs, YouTube) will allow you to develop basic communicative skills in written and oral forms. By the end of the semester, you will develop basic linguistic and cultural competence in Portuguese and be able to engage in simple conversations with Portuguese speakers.

Course Note: Conducted in Portuguese. May not be taken Pass/Fail but may be taken Sat/Unsat by GSAS students. Not open to auditors. Students with advanced knowledge of Spanish should enroll in Portuguese 10S instead of Portuguese 10.

Beginning Portuguese for Spanish Speakers I: Português Beyond Português

MWF 1200 PM - 0115 PM

Cristiane Soares

This beginning Portuguese course is designed for students with a strong background in Spanish (Spanish 40 or equivalent is recommended). The course presents the linguistic structures necessary for basic communication and emphasizes the most challenging features of the Portuguese language for Spanish Speakers including pronunciation, idioms, and grammatical structures unique to Brazilian Portuguese. You will use your knowledge in Spanish as a starting point to quickly develop basic vocabulary to ask questions, plan events, talk about your daily routine, and give information about yourself and others. You will engage in communicative and interpretive tasks, while exploring a variety of authentic material (e.g. short texts, music, videos, visuals) from various sources (e.g. social media, TV programs, YouTube videos). By the end of the semester, you will have developed the linguistic and cultural competence sufficient to express yourself, participate in conversations on familiar topics, and handle short social interactions in Portuguese. Speakers of other Romance languages are encouraged to take Portuguese 10.

Course Note: Conducted in Portuguese. Requires a solid knowledge of but not necessarily native proficiency in Spanish. May not be taken Pass/Fail but may be taken Sat/Unsat by GSAS students. Not open to auditors.

Prerequisite: 750 on the Spanish SAT II or the Harvard Placement test; 5 on the Spanish AP test; a 40s level Spanish course; or permission of Course Head.

Intensive Beginning Portuguese: A Pathway to Luso-Brazilian Cultures

No meeting time listed

Instructor Permission Required

Cristiane Soares

This intensive Beginning Portuguese course provides an accelerated introduction to Portuguese with emphasis on interpersonal communication and interpreting and producing language in written and oral forms. Goals include building students' vocabulary, fluency, proficiency, and confidence. Students will experience Brazilian Portuguese and culture through music, cinema, and various media sources. The course covers the equivalent of a full first-year of Portuguese language study.

Course Note: This course requires an average seven contact hours per week. To supplement the scheduled 6.25 hours, a weekly online component will be arranged. May not be taken Pass/Fail or Sat/Unsat. Not open to auditors. Students must participate in an interview with the Portuguese 15 course head and receive permission

to enroll in the course.

An advanced knowledge of at least one other foreign language but no knowledge of Portuguese.

PORTUG 30
Upper-level Portuguese: Traditions, Culture, and Current events through Brazilian folklore

Course ID: 114944
2026 Spring (4 Credits)

MW 0130 PM - 0245 PM

Cristiane Soares

PORTUG 30 engages students in the exploration of Brazil's five geographic regions, while examining the role of Brazilian folklore and traditions in contemporary society. Students learn about cultural elements (as folk tales,

celebrations, practices, and beliefs) peculiar to each region and analyze how these traditions are connected to the Brazilian history and natural environment. Readings and discussions with guest speakers help students to connect these traditions to current events, as environmental challenges, indigenous and African-Brazilian communities struggles, among others. Through the interpretation and analysis of authentic texts (YouTube videos, documentaries, newspaper articles, and literature), students continue to build vocabulary and review and refine various grammatical structures. Students also build on oral, written, and intercultural competences through communicative activities and interactive discussions with Portuguese-speaking guests.

Course Note: Conducted in Portuguese. May not be taken Pass/Fail but may be taken Sat/Unsat by GSAS students. Not open to auditors.

PORTUG 40
Advanced Portuguese I: Images of Brazil through Contemporary Cinema

Course ID: 124524
2025 Fall (4 Credits)

No meeting time listed

Cristiane Soares

In this advanced Portuguese language and culture course, you will explore Brazilian culture(s) through contemporary films. The course examines major Brazilian films in their historical, political, and social context. You will become familiar with relevant concepts in cultural studies and explore different modalities of Brazilian film in relation to the already established tradition of the 1960s "Cinema Novo". Students will have various opportunities to engage in interactive communicative activities, participate in discussions, develop their interpretive and presentational skills in Portuguese and participate in creative assignments, including a short film by the end of the semester. No previous experience with film study is necessary. This course is conducted entirely in Portuguese and films are shown in Portuguese with English subtitles.

Course Note: This course meets regularly on Tuesdays and Thursdays, with additional asynchronous components. Conducted in Portuguese. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students. Not open to auditors. This course is taught by members of the Department.

PORTUG 52

Advanced Portuguese II: Sounds of Brazil: Writing Through Music

Course ID: 222831
2026 Spring (4 Credits)

TR 1200 PM - 0115 PM

Cristiane Soares

Portuguese 52 explore the Brazilian music as a powerful expression of the Brazilian experience and a means of civic engagement and social change. The course presents some of the main musical styles in Brazil (as samba, baião, choro, bossa nova, rap paulista, and funk carioca) connecting them to specific historical periods and events. Students refine speaking and writing skills by listening, analyzing, and discussing a wide range of texts, songs, and films. This course builds on the communicative competence acquired in Portuguese 40, with a particular emphasis on developing students' writing proficiency through creative and analytical writing projects such as lyrics, music articles, album reviews, and essays. By the end of the course, students will recognize different genres of music and identify features of language including differences in register.

Course Note: Conducted in Portuguese. Requires a solid knowledge of but not necessarily native proficiency in Spanish. May not be taken Pass/Fail but may be taken Sat/Unsat by GSAS students. Not open to auditors.

Prerequisite: PORT 40 OR permission of Course Head.

PORTUG 62

Women's voices in Brazilian culture(s)

Course ID: 220167
2026 Spring (4 Credits)

TR 0130 PM - 0245 PM

Cristiane Soares

In this advanced language and culture course, students learn how Brazilian women have overcome prejudice and gender bias and adopted a leading role in the Brazilian culture and society. Through a range of texts (e.g. paintings, songs, movies, short stories, novels, TV shows) students will master complex grammatical structures and build on the communicative competence acquired in previous levels, with a particular emphasis on developing their analytical skills and writing proficiency. Students engage critically with themes regarding the representation of gender, race, and sexuality within the Brazilian culture and develop their language skills through class discussions, oral presentations, short essays, and creative writing. This course also includes interactive discussions with Portuguese-speaking guests.

Course Note: Conducted in Portuguese. May not be taken Pass/Fail but may be taken Sat/Unsat by GSAS students. Not open to auditors.

PORTUG 183

Pessoa and the Poetry of the Selves

R 1245 PM - 0245 PM

Josiah Blackmore

Course ID: 218498
2025 Fall (4 Credits)

This course considers the writings of Fernando Pessoa and a company of authors in a wide-ranging study of Portuguese modernism. We will study poetry, prose, and visual culture in order to grasp modernist understandings of the individual in the world, gender, sexuality, national identity, and the emergence of feminism in Portugal. Pessoa and his contemporaries left a lasting legacy in Portuguese culture and in western letters, and we will see how such a legacy was forged in the first decades of the twentieth century. In addition to Pessoa, we will read other modernist writers, including (but not limited to) Mário de Sá-Carneiro, Florbela Espanca, António Botto, Judith Teixeira, Almada Negreiros, Violante de Cysneiros, and Adolfo Casais Monteiro.

Reading knowledge of Portuguese required.

FAS Divisional Distribution: Arts and Humanities

PORTUG 184

Literature of Colonial Brazil

No meeting time listed

Josiah Blackmore

Course ID: 226267
2026 Spring (4 Credits)

This course studies the literature of colonial Brazil. We will consider how texts and writing participate in empire and colonialism, and explore a range of primary texts that engage with the lands, resources, peoples, and legends of Brazil. We will also scrutinize the rhetorical strategies and implicit ideologies embedded in these writings. In our studies we will also consider relevant theoretical writings on early modern empire and Brazil. Topics studied include first encounters, Brazilian nature, the Brazilian indigene, cartography, cannibalism, and monsters.

PORTUG 185

Sea Theory

T 1245 PM - 0245 PM

Josiah Blackmore

Course ID: 226266
2025 Fall (4 Credits)

This course explores the sea as a principle of literature, culture, and history in medieval and early modern Portugal and Brazil. It covers a broad range of textual genres and cultures of writing to understand how the sea, the oceanic, and the aquatic functioned as the basis for understanding and shaping real and imagined experiences, encounters with the new and the unknown, and history and time. From poets to chroniclers and from cosmographers to geographers, we will collectively explore how the sea was construed as a basis of seeing and understanding the world, and how a maritime manner of interpreting realities emerged as a result of overseas voyaging and oceanic expansion.

ITAL 10

Beginning Italian I - Parliamo Italiano! Pathways to Italy

MTWR 0900 AM - 1015 AM

Chiara Trebaiocchi

Course ID: 113814
2025 Fall (4 Credits)

This is a first semester beginning course designed for students with little or no knowledge of Italian. Through the explorations of six targeted urban areas and various aspects of Italian daily life (the university, home environments, currency, shopping habits, pop songs, and regional cuisines), this course will give you the language you need to communicate simply, but effectively in Italian and to get ready for future adventures in il bel paese. You will learn to talk about personal preferences and daily life; handle basic social exchanges; plan events; and engage in pleasantries, information-sharing, and personal storytelling (about present and past events). Assignments include the exploration of cultural texts (poems, songs, commercials, graffiti), visual tasks (both online and at the Harvard Art Museum), short creative writing assignments (postcards, brief personal essays) and oral projects.

Course Note: Conducted in Italian. Students whose placement score does not entitle them to enter a more advanced course are assigned to Italian 10. Students who have studied Italian for two years or more in secondary school must begin at Italian 11 or higher. May not be taken Pass/Fail but may be taken Sat/Unsat by GSAS students. Not open to auditors. This course is taught by members of the Department.

Chiara Trebaiocchi

Course ID: 113814
2025 Fall (4 Credits)

This is a first semester beginning course designed for students with little or no knowledge of Italian. Through the explorations of six targeted urban areas and various aspects of Italian daily life (the university, home environments, currency, shopping habits, pop songs, and regional cuisines), this course will give you the language you need to communicate simply, but effectively in Italian and to get ready for future adventures in il bel paese. You will learn to talk about personal preferences and daily life; handle basic social exchanges; plan events; and engage in pleasantries, information-sharing, and personal storytelling (about present and past events). Assignments include the exploration of cultural texts (poems, songs, commercials, graffiti), visual tasks (both online and at the Harvard Art Museum), short creative writing assignments (postcards, brief personal essays) and oral projects.

Course Note: Conducted in Italian. Students whose placement score does not entitle them to enter a more advanced course are assigned to Italian 10. Students who have studied Italian for two years or more in secondary school must begin at Italian 11 or higher. May not be taken Pass/Fail but may be taken Sat/Unsat by GSAS students. Not open to auditors. This course is taught by members of the Department.

ITAL 11

Beginning Italian II - Parliamo Italiano! The Art & Craft of Italy

MWF 1030 AM - 1145 AM

Chiara Trebaiocchi

This second semester beginning-level Italian course will engage you in interactive communicative activities that provide rich exposure to the Italian language and culture(s). In this class, you will continue to develop and strengthen oral and written competence, as well as reading and comprehension skills, building your vocabulary and learning the grammar points necessary for more analytical conversations (using hypotheticals, the conditional, the subjunctive, and indirect discourse). Specifically, you will be able to: describe and narrate simple events in the past and in the future, make comparisons, express opinions and possibilities, and engage in discussions. You will explore six targeted urban areas in Italy while discussing cultural topics, telling stories about travel, and engaging with Italian literature, cinema, music, and pop culture. In the second half of the semester, you will watch an award-winning movie, *La meglio gioventù*, that will provide ample opportunities to discuss the history of modern Italy and to learn more about Italian politics and contemporary issues. Course work will include individual and in group presentations and short creative writing and oral assignments, based on authentic texts and artifacts. In-class assignments will be supplemented with individualized conversations with native speakers of Italian to further enhance your understanding of the diversity of cultural perspectives within Italian communities.

Course Note: May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students. Not open to auditors. This course is taught by members of the Department.

Italian 10, or a score of 301-450 on the SAT II test or the Harvard Placement test, or a score below 3 on the Italian AP exam, or two years of high school Italian, or permission of course head.

Intensive Beginning Italian: Gateway to Italy

MTWRF 0130 PM - 0245 PM

Chiara Trebaiocchi

Course ID: 112340
2025 Fall (8 Credits)

This is an intensive and complete first-year course in one term for students with no knowledge of Italian, focused on developing all four communicative skills. You will learn how to talk about personal topics, likes and dislikes, and your immediate environment (such as family, school, friends, daily routine); handle basic social exchanges (such as eating out or planning events); describe and narrate simple events in the present, past, and future; make comparisons; express possibility; present your point of view; and engage in discussions. By the end of this course, you will have the linguistic and cultural foundations necessary for your adventures all'italiana. You will be introduced to contemporary Italian culture through a variety of topics from everyday life (family, shopping, food, fashion) to the arts (music, literature, cinema). Materials include films such as *La meglio gioventù* and cultural readings that explore the history of modern Italy (i.e., 1968, Italian Terrorism, the mafia, etc.). Assignments include short creative writing and oral projects, cooking activities, and multimedia presentations. In-class assignments will be supplemented with individualized conversations with native speakers of Italian to further enhance your understanding of the diversity of cultural perspectives within Italian communities.

Course Note: Not open to auditors. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students.

An advanced knowledge of at least one foreign language, preferably a modern Romance language, but no previous study of Italian.

Reading, Understanding and Translating Written Italian for Research

2025 Fall (4 Credits)

MW 0130 PM - 0245 PM

Instructor Permission Required

Chiara Trebaiocchi

This beginning level Italian course, for undergraduate and graduate students, will prepare you to read, understand, and translate academic and literary Italian texts for research. Materials will be selected in accordance with the needs and interests of enrolled students. You will develop individualized reading/research goals in your academic field of interest, such as translating a 16th-century Italian treatise on architecture or reading a novel in Italian by Elena Ferrante. Group discussion sessions will facilitate discussion of targeted reading strategies and individualized meetings will be regularly scheduled to respond to your personal translation needs.

Course Note: Taught in English. Not open to auditors. May not be used to fulfill the language requirement. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students.

Some previous study of a Romance language helpful but not necessary. Fluency in English required.

Intermediate Italian: The Colors of Italian Pop Lit

2025 Fall (4 Credits)

MWF 1200 PM - 0115 PM

Instructor Permission Required

Chiara Trebaiocchi

In this intermediate Italian course, inspired by the "colors" of Italian pop literature and culture, you will strengthen previously learned grammatical structures and master more challenging ones that will allow you to handle various communicative tasks, both in writing and in spontaneous conversation, such as: expressing and comparing preferences and experiences on various topics; narrating stories; presenting opinions and debating the opinions of others; formulating hypotheses; comparing situations. Through the exploration of a variety of authentic Italian materials (from romance to crime stories to graphic novels and even the Spaghetti Westerns movies) and a structured review of grammar, you will increase your language proficiency and broaden your vocabulary in a communicative and meaningful context. Targeted assignments throughout the semester will give you ample opportunities to practice your written Italian (letters, short essays, brief film reviews, summaries) as well your oral competence (recordings, in group discussions). In-class assignments will be supplemented with individualized conversations with native speakers of Italian to further expand your cultural awareness of *il bel paese* and to explore the diversity of cultural perspectives within Italian communities.

Course Note: Conducted in Italian. May count toward the language requirement. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students. Not open to auditors. This course is taught by members of the Department.

A score of 451-600 on the SAT II test or the Harvard Placement test, or a score of 3 on the Italian AP Exam; Italian 11 or 15; or permission of course head.

Upper-Level Italian: Italiano in Verde: Sustainability Issues in the Italian Classroom

TR 0130 PM - 0245 PM

Chiara Trebaiocchi

This course revisits structures, refines speaking and writing skills, and advances critical linguistic exchanges through the discussion of environmental, cultural, economic, and social issues of sustainability. Through the interpretation of films, novels, short stories, newspaper articles, podcasts, maps, and comics, you will be empowered to discuss such topics, relevant both for the Italian discourse and on a global scale, while revisiting and expanding vocabulary and reviewing grammar in context. Class discussions will encourage the interpretation, analysis, and discussion of current media (advertisements, documentaries, social media, and articles) on climate change, the slow food movement, environmental justice, sustainable tourism, migration and activism. Assignments (oral presentations, weekly written essays, short video recordings) are designed to advance discussions of Italian culture, introduce you to contemporary spoken and written Italian language (i.e., colloquial language), and refine fluency and pronunciation.

Course Note: Conducted in Italian. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students. Not open to auditors. This course is taught by members of the Department.

Italian 20; a score of 601-680 on the SAT II test or the Harvard Placement test, or a score of 4 on the Italian AP exam; or permission of course head.

Advanced Italian II: Advanced Written Expression - Writing for Social Justice

Course ID: 127889
2026 Spring (4 Credits)

TR 1200 PM - 0115 PM

Chiara Trebaiocchi

Italian 50 will focus on writing as a form of civic engagement through the lens of social justice in Italy. This theme-based course is designed to develop advanced competence in written expression through guided examination of stylistics and pragmatics. It will revisit grammatical structures, refine speaking and writing skills, and advance critical and meaningful exchanges through the discussion of social justice themes in Italy. The course will include the exploration of both literary and non-literary genres and authentic texts (films, novels, newspaper articles, podcasts, etc.) that will help students perfect their personal style in Italian. Students will investigate themes such as LGBTQ+ activism and civil right movements in Italy, prison education, sexism and gender in Italian literature, culture, and society, among others, by analyzing a wide range of authentic texts, films, documents, and materials. By the end of the course, students will be able to: recognize and produce different genres of written and spoken Italian; identify features of language including differences in register; and write more confidently in academic Italian. Students will enhance their writing proficiency and develop their academic language by practicing different types of creative and analytical writing assignments (movie and book reviews, social media posts, subjective and objective descriptions, argumentative essays, among others).

Course Note: Conducted in Italian. Appropriate for concentrators electing the Italian Studies or Romance Studies track. May not be taken Pass/Fail, but may be taken Sat/Unsat by GSAS students. Not open to auditors.

The Italian Sonnet*No meeting time listed**Ambrogio Camozzi Pistoja*

This course offers a concise yet complete survey of the most transformative poetic forms in Italian and Western literature, the sonnet. We will trace its evolution chronologically and thematically, using an anthology of approximately 70 sonnets to understand how this fourteen-line structure became a powerful medium of poetic exchange across historical, geographical, social, and linguistic boundaries. Analyzing which sonnets were taught in schools at various times will shed light on shifting cultural values and national identity. Engaging with Italian metrics, translation studies, and gender perspectives, students will complete short critical and creative assignments—both individually and in groups—to perfect their oral and written skills in Italian. We will explore topics such as feminist rewritings, the performative use of poetry, and postmodern experimentation—to fully appreciate the enduring vitality of this form. More practically, students will learn how to precisely analyze the prosodic elements of Italian, including syllable counts, accentual patterns, and rhythmic structures, thereby acquiring advanced skills in literary analysis, poetic composition, and linguistic proficiency. Weekly assignments include short commentaries, and memorization and recitation of selected texts. ITAL 106

Boccaccio from Cover to Cover

TR 0600 PM - 0715 PM

Ambrogio Camozzi Pistoja

Giovanni Boccaccio stands at the confluence of two epochs in European and Mediterranean cultural history, cleaved apart by the Black Death (ca. 1348). He lived and thrived amid the world's most dynamic crossroads of cultures, languages, and trade routes of his era. Boccaccio is a walking archive of the medieval orders and a herald, anarchic and experimental, of the Renaissance. He is literature—literature as storytelling, healing, and pastime—but also as a means of manufacturing affective communities and preserving collective memory. He was a restless scribe who spent his life, to the very last days, salvaging stories of others, amassing fragments of historical, geographical, and mythological information, redefining each of these domains in the process. This course centers on his vernacular masterpiece, the *Decameron*: 100 tales spun over 10 days by 7 young women and 3 young men fleeing plague-ravaged Florence. We will discuss gender dynamics—the book's dedication to women and its misogynistic portrayals—Boccaccio's narrative recombination, a storytelling method that changed European literary history and prefigures modern generative AI.

The Italian Constitution: Foundations of a Republic (art. 1-12)

TR 1200 PM - 0115 PM

*Ambrogio Camozzi Pistoja*Course ID: 226332
2025 Fall (4 Credits)

This seminar examines the fundamental principles of the Italian Constitution (Articles 1-12), dedicating one article per week to an in-depth study. Students will memorize these articles by semester's end, mastering their text and significance. Each week, lectures and readings draw from the Constituent Assembly's records—oral interventions and written documents from the body that shaped the newly formed Italian Republic in 1946-1948. Socio-cultural explorations will contextualize key themes: work as the Republic's foundation (Article 1), gender equality (Article 3), Church-State relations (Article 7), freedom of religion (Article 8), cultural heritage and environmental protection (Article 9), rights of foreigners, refugees, and immigrants (Article 10), the rejection of war (Article 11), and the symbolism of the Italian flag (Article 12). Students will uncover the principles defining modern Italy, engaging relevant areas of interest such as environmental justice, gender equality, migration policy, and European integration.

ITAL 238

Alchemy and Literature*No meeting time listed**Ambrogio Camozzi Pistoja*Course ID: 226179
2026 Spring (4 Credits)

Matter—pure potency, pure capacity for being—has consistently eluded humanity's intellectual and experimental efforts. From the shores of Ningbo to the deserts of Los Alamos, though its names have changed, its essence remains the same. It is Hesiod's chaos, the tehom of Genesis (1:2), Plato's chōra, Aristotle's prote hyle, the silva of Latin hylomorphism, the alchemical lapis, and the sterile neutrino. Prime matter is the gateway to manipulating the very fabric of the physical world, to obtain gold, eternal youth, healing, perpetual energy, a new or meta-universe, or the crafting of the greatest literary masterpiece of all time. The ancient mythographers did not surrender to the resigned conclusions of logic, but instead depicted matter in the form of a god. They named it Proteus, proto-theos, the azure entity capable of becoming anything, the inkwell into which any pen that writes of transmutation and change has been dipped. This advanced seminar offers students the possibility to reassemble an intergenerational conversation on the concept of pure matter with original, comparative readings of the Proteus myth as it appears in Homer, Virgil, Plutarch, the Carolingians, Jean du Meun, Dante, Ariosto and Tasso— while also adumbrating its continuation in the writings of Giordano Bruno, Goethe, Shelley, and Primo Levi. Particular attention will be paid to both Bibelalchemie and mythoalchemie.

Haiti, Cuba, Martinique: Plotting Resistance in Fiction and Film

TR 1030 AM - 1145 AM

Kathy Richman

What makes a novel moving, a film disturbing? How does humor work, even in the grimmest context? "Haiti, Cuba, Martinique" explores these aesthetic questions in works that engage slavery and its legacies, resistance and revolution, and paths to "development." We will consider historical context and discuss categories like "genre" fiction, didactic writing, realism, romanticism, and la littérature engagée, or "committed" literature. Includes works by Alejo Carpentier, Chamoiseau, Condé, Guillén, Gutiérrez Alea, Lahens, and Roumain.

Course Note: Taught in English. For concentration and secondary credit in Romance Languages and Literatures, readings and written work must be done in French or Spanish.

Pedagogies of Liberation: Race, Gender, and Class(rooms)

T 1200 PM - 0200 PM

Adriana Gutierrez, Doris Sommer

This course is meant as preparation and accompaniment for new teachers of language and literature. It is designed for anyone dedicated to developing a pedagogical praxis that alternates between theory and implementation. The objective is to achieve a rigorous theoretical framework for the formative work of language instruction that supports literary analysis. The exemplary teachers featured in this course display a remarkable coherence of good practices that remain "alternative" to normalized approaches that are less effective intellectually and less supportive socially. For the final project, students will present a potential series of lessons inspired by one or more of the featured theorists. For graduate students of literature in RLL, language arts are the featured vehicle for language instruction. Learning and teaching Romance languages combines technical mastery with creative and critical skills. To develop this interlocking range of skills we count on foundational pedagogies from Romance Language territories and beyond. Our pedagogical pioneers share a mission to democratize societies marked by legacies of slavery, extractionism, and patriarchy.

There will be an additional 1-hour clinic with Dr. Gutierrez, time to be arranged.

Language Pedagogy: Theories, Approaches, and Practices

W 0300 PM - 0500 PM

Instructor Permission Required

Nicole Mills

This course is designed for TFs and TAs in the department of Romance Languages and Literatures who are teaching a Romance language at Harvard for the first time, or those who are interested in foreign language learning and teaching. It introduces TAs and TFs to theories of second language acquisition (SLA) and explores their implications for the teaching of foreign language, culture, and literature. The course provides opportunities for students to learn to enact the specific pedagogical practices deemed essential to foreign language teaching. The intensive week before the start of classes includes reports on and discussion of general SLA theories and demonstrations and analysis of varied instructional approaches.

Course Note: ROM-LANG 210 is the required course for graduate students who will be teaching a language course in the Department of Romance Languages and Literatures for the first time.

Students are required to attend the pre-service seminar before classes begin. Students who do not attend the pre-service seminar will not be permitted to enroll in the course. For details and further information, please contact the Course Heads. May be taken SAT/UNS. Permission of Course Head required.

Teaching Languages, Cultures and Literatures

No meeting time listed

Maria Parra-Velasco

This course is addressed to experienced TFs and TAs who are currently teaching foreign languages, literatures and cultures at Harvard. It will present and use theories coming from the disciplines of language pedagogy, relevant applied linguistic research, socio-linguistics, anthropology, and literary criticism, applied to classroom experience whether online or in situ. The course is conceived as a space of open and structured discussion among humanists and social scientists specializing in different fields, teachers at different stages of their careers, and individuals coming from diverse linguistic, cultural and social backgrounds. We will learn from each other through comparing theories, practices, and stories.

Course Note: This course fulfills one of the requirements of the Bok Certificate in Teaching Language and Culture (in collaboration with the Bok Center for Teaching and Learning).

FAS Divisional Distribution: None

RLL Prospectus Workshop*No meeting time listed**Annabel Kim*

The main objective of this workshop is to help doctoral students in RLL develop their prospectus. The course is designed for G3s to help them draft the prospectus, which, as described in the Graduate handbook, should delineate what topic and area the dissertation will explore; discuss why this topic and area merit such exploration; and include a provisional chapter outline. The outline, which can be in narrative form, should be as precise as possible, even if it is likely to be modified in the course of writing the dissertation. Throughout the semester, we will deconstruct the process into smaller pieces, to make the task of writing the prospectus less daunting and to make sure that students include everything needed for a successful presentation of their project to their respective committees. By the end of the semester, they should all have a finalized version of their prospectus and be able to advance to candidacy.

Article Publication Workshop

M 1245 PM - 0245 PM

*Instructor Permission Required**Annabel Kim*

A reading and writing intensive workshop aimed at doctoral students done with coursework, and postdocs affiliated with the department. Through workshoping (both as a class and in smaller groups), participants will go through two intensive rounds of revision to produce an article ready to submit to peer-reviewed journals at the end of the semester. We will begin with preliminary discussions of the nuts and bolts of writing and publication: reading essays and articles on how to write well; identifying journals that are a good fit for publication; reading sample abstracts and writing and revising one's own; analyzing sample readers' reports (from the generous and intelligent to the brutish and mean) to think through how to respond to feedback; etc.

Reading Tolstoy's War and Peace

2026 Spring (4 Credits)

No meeting time listed

Julie A. Buckler

Leo Tolstoy's War and Peace (1865-69) is a magnificent work of art by a world-class writer tackling life's "big questions" and it is also a pleasure to read. We will go through War and Peace closely together, savoring the details, while exploring Tolstoy's artistic biography and the larger cultural and historical contexts for classic Russian novels. We will also consider the significance of the Napoleonic Wars (1803-1815) in Russian history. How many different ways are there to interpret Tolstoy's work? What issues arise in translation? How does the

pacing of the novel relate to nineteenth-century conceptions of time, space, narrative, and genre? What are the problematic distinctions between history and literature that the novel raises?

Course Note: No knowledge of Russian required.

FAS Divisional Distribution: Arts and Humanities

SLAVIC 121

Ballet, Past and Present

No meeting time listed

Daria Khitrova

This course explores the history of ballet, classical and beyond. We will view and discuss ballets to help us think about what ballet is, and why it has been such an enduring art form in different eras and cultures. Why is it mute and does it have to be? What kind of stories can it tell and how should we read them? How do ballets survive and how do they change in the process? Who makes a ballet: a choreographer or dancers? Or is it, perhaps, a composer, designer, or story writer? Does ballet technique confine the body, as the pioneers of modern dance used to assert, or is it a form of idealist philosophy, the ultimate expression of human freedom, as twentieth-century theorists of ballet have suggested? The works to be studied include Giselle, Sleeping Beauty, Swan Lake, Rite of Spring, Les Noces, Apollo, and others. The course is classroom-only (no dancing component; only watching, reading, and discussing) but, if pandemics permit, will also include a visit to the theater as well as to a ballet class and, possibly, rehearsals. No pre-requisites.

Course Note: This course satisfies the "Critical" requirement for TDM concentrators and Secondary Field students.

FAS Divisional Distribution: Arts and Humanities

SLAVIC 132

Russia's Golden Age: Literature, Arts, and Culture

TR 0130 PM - 0245 PM

Julie A. Buckler

Explores major works of imperial Russian culture (1703-1917), including literature, drama, opera, ballet, music, visual arts, and architecture. At the center of this course stand the works themselves, their artistic qualities, and cultural-historical contexts, as well as the intentions of their creators, and the responses of their initial audiences. What mythologies of national identity did these works propose? In what ways were these works radical: formally, aesthetically, ideologically? How did these now-famous works achieve canonical status beyond their own time? How have these works been variously reinterpreted since then? Works by Pushkin, Gogol, Tolstoy, and others.

Course Note: All readings in English. Students who wish to read Russian texts in the original may attend a special weekly section with the instructor.

FAS Divisional Distribution: Arts and Humanities

SLAVIC 160

Contemporary Ukraine 101: Literature, Film, Music

M 1200 PM - 0200 PM

Bohdan Tokarskyi

Ukraine has been in the global spotlight in recent years, but its cultural landscape remains less widely known. This course offers an introduction to contemporary Ukrainian culture, spanning literature, film, music, and visual arts from the post-1991 period. Through engagement with artistic and intellectual works, we will explore themes of identity, memory, resistance, and transformation, placing contemporary developments in dialogue with Ukraine's deeper historical currents. No prior knowledge of Ukraine is required—just curiosity and a willingness to engage with a vibrant and dynamic cultural space.

Course Note: All readings in English.

Verbal and Visual Encounters in Medieval and Early Modern Eastern**Europe**

TR 1200 PM - 0115 PM

Maria Grazia Bartolini

This course explores the intimate relationship between culture, religion, literature, and the visual in the territories of today's Belarus', Russia, and Ukraine in the medieval and early modern periods. Topics to be explored include the development of image veneration, the cult of saints, the political use of images, the rise of cartography, and the production of new Western-inspired emblematic prints for devotional use. The class features close analysis of icons and frescoes, printed images, rituals, literary texts, and history. We will explore how East Slavic culture interacts with a great diversity of traditions, including the Byzantine empire, the Hanseatic League, and Renaissance Europe. We will also investigate the transfer of ideas and forms from Western Europe to the East Slavs, and their relations with neighboring Slavic cultures, especially Poland.

Course Note: Some knowledge of Church Slavonic and/or Old Ukrainian is welcomed but not required. All materials are in English.

This course will be taught by Associate Visiting Professor Maria Grazia Bartolini.

FAS Divisional Distribution: Arts and Humanities

The Holocaust in Polish Memory and Culture*No meeting time listed**Aleksandra Kremer*

Hitler's plan to destroy European Jewry was carried out by the Nazis mostly on the territory of occupied Poland, where three million Jews had lived before World War II. The Poles' position has often been described as that of bystanders; nevertheless, Polish behavior also encompassed more direct involvement—whether complicity and murder, or attempts at rescuing Jews. How is this time remembered in Poland? How is it represented in Polish and Polish-Jewish literary texts? What is the relation between the Holocaust memory and Polish wartime history? What do we know about German and Soviet occupations of the country? How was the memory of the Holocaust and World War II shaped and used by communist Poland? What happens to this memory today? We will look for answers in different short stories, novels, poems, memoirs, and films created between the 1940s and the present day, and confront them with recent scholarship. Note: All readings in English.

Course Note: All readings in English. No background in Polish literature is required.

FAS Divisional Distribution: Arts and Humanities

The Political Novel*No meeting time listed**Jonathan Bolton*

No novel can be reduced to a set of political beliefs, and yet we often feel that novels speak to our political theories and practices. What makes a novel "political"? Can the novel make a contribution to political theory? How does our understanding of political power change when we imagine detailed and dramatic confrontations between individuals and the state, individuals and empire, or individuals and global ideologies? How does narrative form reinforce or undermine ideology? What archetypal dramas—protest against authority, the loss of political innocence, the battle between tolerance and conviction—have shaped the political novel in its various traditions from the nineteenth century to the present? We will consider these questions through some classic and lesser-known political novels from the nineteenth century to the present day, with readings from Alexander Pushkin, Fyodor Dostoevsky, Ivan Olbracht, Arthur Koestler, Ursula K. Le Guin, Nadine Gordimer, Milan Kundera, Don Delillo, Léonora Miano, and others. Although we will have occasional short readings in theory, our main focus will be on the attentive reading of complex literature that cannot be reduced to allegories of political conflict or unlocked through primarily "ideological" reading.

Course Note: All readings in English.

FAS Divisional Distribution: Arts and Humanities

History of the Soviet Union Through Film and Literature

W 0300 PM - 0500 PM

Justin Weir, Terry Martin

The course introduces students to Soviet history through several famous works of literature and film. Key periods and events include the Bolshevik Revolution, Civil War, WWII, the post-Stalin Thaw, the Brezhnev years, Glasnost' and Perestroika, and the dissolution of the Soviet Union. Along with short historical readings, we will examine works of popular culture, as well as book and films that were unable to be published and shown until Glasnost' and the post-Soviet period. Among the readings will be Babel's Red Cavalry, Bulgakov's novel The Master and Margarita, and works by Zamyatin, Solzhenitsyn, Alexievich, and others. Films include, for example, works by Vertov, Eisenstein, Tarkovsky, Kalatozov, and Balabanov.

Course Note: This course is equivalent to HIST 1956. Credit may be earned for Slavic 190 or History 1956, but not both. Open to undergraduates. Open to graduate students with permission of instructors.

FAS Divisional Distribution: Arts and Humanities

SLAVIC 191

Silent Film

M 0300 PM - 0500 PM

Daria Khitrova

Course ID: 222825

2025 Fall (4 Credits)

Today, we take it for granted that motion pictures talk. For some thirty-plus years from cinema's invention they did not—yet no contemporary complained the art of film was inarticulate. Did filmmakers and filmgoers that lived one hundred years ago perceive the silence of films as a hindrance, or, perhaps, as cinema's advantage over other arts? Was cinema admired despite, or on the strength of having been mute? The aim of this course is to introduce students to what was singular about the art and craft of silent film. Our general outline is chronological; we will discuss both national and international schools and trends of filmmaking. Within the general framework of film history, we will trace individual aspects of production (like lighting, acting, camera work, editing, etc.), and follow these evolve into a unique system of visuals to become known as silent film style.

FAS Divisional Distribution: Arts and Humanities

SLAVIC 192

The Cinema of Stanley Kubrick

T 0600 PM - 0800 PM

Justin Weir

Course ID: 226527

2026 Spring (4 Credits)

This course reviews the influential major films of Stanley Kubrick—Paths of Glory (1957), Lolita (1962), Dr. Strangelove (1964), 2001: A Space Odyssey (1968), A Clockwork Orange (1971), Barry Lyndon (1975), The Shining (1980), Full Metal Jacket (1987), and Eyes Wide Shut (1999), among other earlier films and his unfinished project A.I. Artificial Intelligence (dir. Spielberg 2001). The films will be considered in their historical, cultural, and film studies contexts. Topics include Cold War politics, literary adaptation, the depiction of violence on screen, and the relationship between popular culture and scholarship. We will pay special attention to Kubrick's interest in war, science fiction, and technology, including artificial intelligence.

Course Note: 35mm screenings of the films will be held at the Harvard Film Archive as part of this course.

SLAVIC 254

Old Church Slavonic

TR 0300 PM - 0415 PM

Maria Grazia Bartolini

Course ID: 226367

2025 Fall (4 Credits)

This course offers a thorough introduction to the history and grammar of the first Slavic literary language. Students learn the Old Church Slavonic writing system and the fundamentals of phonology, morphology, syntax, and vocabulary. Readings include select passages of canonical texts, mainly from the New Testament. In the last segment of the course, examples of texts from later periods and regional variants of the Church Slavonic language will be introduced for cultural and comparative purposes. The course will also provide students with the opportunity to explore themes in the religion and culture of the medieval Slavs and to reflect on their importance for understanding later cultural and linguistic developments in the Slavic area.

This course will be taught by Associate Visiting Professor Maria Grazia Bartolini.

GRGN AR

Elementary Georgian

MWF 1030 AM - 1145 AM

Mzia Shanava

Course ID: 220698
2026 Spring (4 Credits)

Individualized study of the Georgian language at the Elementary level. Conducted as a tutorial. A two semester introductory course in modern Georgian language and culture, designed for students without previous knowledge who would like to speak Georgian or use the language for reading and research. All four major communicative skills (speaking, listening comprehension, reading, writing) are stressed. Students are exposed to Georgian culture through work with film, journalism, and literature as they learn to use the language both as a means of communication and as a tool for reading and research. Georgian Ar over two semesters satisfies the foreign language requirement and prepares students for continued study of Georgian in intermediate-level courses and for study or travel abroad in Georgia.

Course Note: This tutorial will be offered MWF with 75 min class meetings. The department will make an effort to schedule the tutorial based on the availability of interested students. Please contact the Director of the Slavic Language Program (Steven Clancy) with any questions. For information on meetings during the first week of classes, please see <https://slavic.fas.harvard.edu/language-courses>.

Students are strongly encouraged to enroll in Georgian Ar in the fall and in the spring within the same academic year. - - - See language course notes on the Slavic Department website for information about sectioning, pass/fail, satisfactory/unsatisfactory, and auditing: <https://slavic.fas.harvard.edu/language-course-notes>.

Departmental languages in the tutorial program are offered when there is demonstrated curricular or academic need on the part of the student. Please contact the Director of the Slavic Language Program, Steven Clancy (sclancy@fas.harvard.edu), with any questions. Interested students should consult with the Georgian course instructor and prepare a coherent plan for the course based on the information provided in the "Note on independent language tutorials ("R" Courses)" found at: <https://slavic.fas.harvard.edu/pages/language-study>.

RUSS AA

Course ID: 122907
2025 Fall (4 Credits)

Elementary Russian I

MWF 1030 AM - 1130 AM

Steven Clancy

Part one of a two part introductory course in modern Russian language and culture, designed for students without previous knowledge of Russian who would like to speak Russian or use the language for reading and research. All four major communicative skills (speaking, listening comprehension, reading, writing) are stressed. Students are introduced to Russian culture and the etiquette of social exchanges, and expand their knowledge of grammar and vocabulary through readings (including stories, biography, and poetry), videos, and class discussions.

Course Note: Part one of a two-part series. Students are strongly encouraged to enroll in Russian AA in the fall and Russian AB in the spring within the same academic year.

This course will also meet for two additional hours of speaking practice on Tuesdays and Thursdays. Meeting times for the TuTh small-group conversation and practice sessions will be scheduled after the semester begins, based on the availability of students and instructors. See language course notes on the Slavic Department website for information about sectioning, pass/fail, satisfactory/unsatisfactory, and auditing: <https://slavic.fas.harvard.edu/language-course-notes>

Russian AA together with Russian AB or Russian ATB (Elementary Russian through Authentic Texts II) satisfy the foreign language requirement. Any of the elementary (A-level) level Russian courses (A, AAB, and AT) prepare students for continued study of Russian in intermediate (B-level) courses (B, BAB, or BTA) and for study or travel abroad in Russian-speaking countries.

No prior knowledge of Russian is required.

RUSS AAB

Course ID: 113925
2025 Fall (8 Credits)

Elementary Russian (Intensive)

MTWRF 0900 AM - 1000 AM

Jenya Mironava

An intensive version of Russian AA: Elementary Russian I and Russian AB: Elementary Russian II, covering the same material in a single semester. Class meets five days per week with five hours of the main section and three hours of small group speaking practice each week (8 hours per week total).

Course Note: This course will meet five days a week (Monday through Friday) from 9:00am to 10:00am. In addition, students will be required to attend three additional one-hour speaking practice sections each week on Mondays, Wednesdays, and Fridays. Meeting times for the MWF small-group conversation and practice sessions will be scheduled after the semester begins, based on the availability of students and instructors.

Russian Aab as an 8-credit course satisfies the foreign language requirement in one-semester.

See language course notes on the Slavic Department website for information about sectioning, pass/fail, satisfactory/unsatisfactory, and auditing: <https://slavic.fas.harvard.edu/language-course-notes>

No prior knowledge of Russian is required.

Course ID: 113925
2026 Spring (8 Credits)

Elementary Russian (Intensive)

MTWRF 0900 AM - 1000 AM

An intensive version of Russian AA: Elementary Russian I and Russian AB: Elementary Russian II, covering the same material in a single semester. Class meets five days per week with five hours of the main section and three hours of small group speaking practice each week (8 hours per week total).

Course Note: This course will meet five days a week (Monday through Friday) from 9:00am to 10:00am. In addition, students will be required to attend three additional one-hour speaking practice sections each week on Mondays, Wednesdays, and Fridays. Meeting times for the MWF small-group conversation and practice sessions will be scheduled after the semester begins, based on the availability of students and instructors.

Russian Aab as an 8-credit course satisfies the foreign language requirement in one-semester.

See language course notes on the Slavic Department website for information about sectioning, pass/fail, satisfactory/unsatisfactory, and auditing: <https://slavic.fas.harvard.edu/language-course-notes>

No prior knowledge of Russian is required.

FAS: Meets Foreign Lang Req: Russian

FAS Divisional Distribution: None

RUSS AB

Elementary Russian II

MWF 1030 AM - 1130 AM

Course ID: 159620

2026 Spring (4 Credits)

Instructor Permission Required

Part two of a two part introductory course in modern Russian language and culture, designed for students without previous knowledge of Russian who would like to speak Russian or use the language for reading and research. All four major communicative skills (speaking, listening comprehension, reading, writing) are stressed. Students are introduced to Russian culture and the etiquette of social exchanges, and expand their knowledge of grammar and vocabulary through readings (including stories, biography, and poetry), videos, and class discussions.

Course Note: Part two of a two-part series. Students are strongly encouraged to enroll in Russian AA in the fall and Russian AB in the spring within the same academic year.

This course will also meet for two additional hours of speaking practice on Tuesdays and Thursdays. Meeting times for the T-Th practice sections are subject to adjustment based on students' availability. See language course notes on the Slavic Department website for information about sectioning, pass/fail, satisfactory/unsatisfactory, and auditing: <https://slavic.fas.harvard.edu/language-course-notes>

Russian AA together with Russian AB or Russian ATB (Elementary Russian through Authentic Texts II) satisfy the foreign language requirement. Any of the elementary (A-level) level Russian courses (A, AAB, and AT) prepare students for continued study of Russian in intermediate (B-level) courses (B, BAB, or BTA) and for study or travel abroad in Russian-speaking countries.

Requires: Prerequisite: Elementary Russian I

Full Year Course: Divisible Course

FAS Divisional Distribution: None

FAS: Meets Foreign Lang Req: Russian

RUSS BA

Intermediate Russian I

MWF 1030 AM - 1130 AM

Dmitrii Pastushenkov

Course ID: 112823

2025 Fall (4 Credits)

Instructor Permission Required

Part one of a two part intermediate course in modern Russian language and culture for students with previous study of the language. Further development of vocabulary and oral expression within a comprehensive review of Russian grammar. All four major communicative skills (speaking, listening comprehension, reading, writing) are stressed as students learn to use the language both as a means of communication and as a tool for reading and research. Systematic study of word formation and other strategies are taught to help free students from excessive dependence on the dictionary and develop confidence in reading. Vocabulary is thematically organized to include such topics as self and family, education, work, human relationships, politics, and national attitudes and is reinforced through film and the reading of classical and contemporary fiction and history. Practice in the etiquette of common social situations (sociolinguistic competence). Computer exercises on selected topics.

Course Note: Interested students should contact the course instructor or the Director of the Slavic Language Program (Steven Clancy <sclancy@fas.harvard.edu>) with any questions regarding scheduling conflicts.

Part one of a two-part series. Students are strongly encouraged to enroll in Russian BA in the fall and Russian BB in the spring within the same academic year. - - -

This course will also meet for two additional hours of speaking practice on Tuesdays and Thursdays. Meeting times for the TuTh small-group conversation and practice sessions will be scheduled after the semester begins, based on the availability of students and instructors. See language course notes on the Slavic Department website for information about sectioning, pass/fail, satisfactory/unsatisfactory, and auditing: <https://slavic.fas.harvard.edu/language-course-notes>. - - -

Any full course in Russian at the B-level (Russian Ba-Bb, Russian BTA-BTB, or Intensive Russian BAB) will prepare students for continued study of Russian at the advanced level (Russian 101) and for study or travel abroad in Russian-speaking countries. Russian Ba and Bb count as two of the four required semesters of study for a citation in Russian.

Russian AA-AB, AAB, ATA-ATB, AH, or placement at the B-level. Familiarity with fundamentals of Russian grammar, particularly case endings, verb conjugation, and elementary competence in spoken Russian.

MWF 1030 AM - 1130 AM

Course ID: 223914
2026 Spring (4 Credits)

Instructor Permission Required

In this fourth-year advanced-level Russian language course, you will explore some of the most innovative areas of scientific study, while expanding your vocabulary in STEM domains and the language skills needed to share scientific information within your community. Focuses on developing advanced-level reading, speaking, listening, and writing skills through discussing STEM-related topics in technology and society, such as education, math and physics, development of internet technologies, and environmental issues. Students participate in class debates and discussions and create a final presentation on a topic of their professional interest. Course materials combine articles, book excerpts, films, interviews, and project-based tasks. Taught in Russian. The course meets 3 days/week without additional small-group speaking sections.

Prerequisites – Russian 103 or permission of the instructor.

Fourth-Year Russian: Russian and Post-Soviet Studies

MWF 1030 AM - 1130 AM

Course ID: 110859
2025 Fall (4 Credits)

Instructor Permission Required

This fourth-year advanced-level Russian language course emphasizes reading, analysis, and discussion of authentic Russian materials in a variety of disciplines, media, and genres, with an emphasis on close reading and listening along with the interpretation of cultural contexts. The course is structured as a train journey among cultures and peoples in post-Soviet Russia. It investigates the strengths and struggles of different cultural groups, tackling crucial current issues of (de)centralization, social identity, multilingualism, religion, and racism in the post-Soviet space. Making use of a variety of sources – including 19th-century classics of poetry and prose, articles from periodicals, interviews, art exhibits, as well as documentary and feature films – students virtually visit the Volga region and the Caucasus, while developing a broad range of vocabulary and reviewing complex grammatical structures. The course meets 3 days/week without additional small-group speaking sections.

Course Note: The fourth-year Russian courses are independent semester-long courses that may be taken in any order by students at the appropriate language level.

Prerequisites: RUSS 101-103, placement test, or permission of the instructor.

Part one of a two part introductory course in modern Czech language and culture, designed for students without previous knowledge who would like to speak Czech or use the language for reading and research. All four major communicative skills (speaking, listening comprehension, reading, writing) are stressed. Students are exposed to Czech culture through work with film and literature and gain some familiarity with the major differences between literary and spoken Czech as they learn to use the language both as a means of communication and as a tool for reading and research. Czech AA: Elementary Czech I (in the fall) and Czech AB: Elementary Czech II (in the spring) satisfy the foreign language requirement and prepare students for continued study of Czech in intermediate-level courses and for study or travel abroad in the Czech Republic.

Course Note: This course will be offered MWF with 75 min class meetings. The department will make an effort to schedule the course based on the availability of interested students. Please contact the course instructor or the Director of the Slavic Language Program (Steven Clancy <sclancy@fas.harvard.edu>) with any questions. For information on meetings during the first week of classes, please see <https://slavic.fas.harvard.edu/language-courses>. - - -

Part one of a two-part series. Students are strongly encouraged to enroll in Czech AA in the fall and Czech AB in the spring within the same academic year. - - -

See language course notes on the Slavic Department website for information about sectioning, pass/fail, satisfactory/unsatisfactory, and auditing: <https://slavic.fas.harvard.edu/language-course-notes>

Part one of a two part intermediate course in modern Czech language and culture for students with previous study of the language. Further development of vocabulary and oral expression within a comprehensive review of Czech grammar. All four major communicative skills (speaking, listening comprehension, reading, writing) are stressed as students learn to use the language both as a means of communication and as a tool for reading and research. Systematic study of word formation and other strategies are taught to help free students from excessive dependence on the dictionary and develop confidence in reading. Increased exposure to the differing registers of Czech in its literary and spoken forms. The two part course prepares students for continued study of Czech in advanced-level courses and for study or travel abroad in the Czech Republic.

Course Note: This course will be offered MWF with 75 min class meetings. The department will make an effort to schedule the course based on the availability of interested students. Please contact the course instructor or the Director of the Slavic Language Program (Steven Clancy <sclancy@fas.harvard.edu>) with any questions. Oral and written expression are further developed through a comprehensive review of BCS grammar, while reading and listening comprehension are furthered through an introduction to the highlights of BCS literary fiction and the viewing of popular contemporary BCS TV series. All four major communicative skills (speaking, listening comprehension, reading, writing) are stressed as

students continue learning to use the language both as a means of communication and as a tool for reading and research.

Course Note: This course will be offered MWF with 75 min class meetings. The department will make an effort to schedule the course based on the availability of interested students. Please contact the course instructor or the Director of the Slavic Language Program (Steven Clancy <sclancy@fas.harvard.edu>) with any questions. For information on meetings during the first week of classes, please see <https://slavic.fas.harvard.edu/language-courses>. - - -

Part one of a two-part series. Students are strongly encouraged to enroll in BCS BA in the fall and BCS BB in the spring within the same academic year. - - -

Introduction to Social Studies

T 1245 PM - 0245 PM

Course ID: 115470

2025 Fall (4 Credits)

Instructor Permission Required

This course offers an introduction to the foundations of modern social theory from the seventeenth to the nineteenth century. Our focus will be on the development of modern moral, political, and economic ideas, with special emphasis on empire, race, inequality, and the environment. Authors we will examine include, among others, Thomas Hobbes, Jean-Jacques Rousseau, Adam Smith, Ottobah Cugoano, Mary Wollstonecraft, Frederick Douglass, Charles Darwin, and Karl Marx.

Course Note: This course is limited to sophomores and Social Studies concentrators. This course is a prerequisite for sophomores applying to Social Studies. Students planning to take this class must attend the first lecture to be admitted.

Please sign up for the Thursday 12:45-2:45 section time. If you have a scheduling conflict, you may sign up for the TBD section time in order to register; however, we cannot guarantee an alternate section time.

Foundations of Social Science Research

No meeting time listed

Matt Reichert

Course ID: 213384
2026 Spring (4 Credits)

Instructor Permission Required

This course introduces students to the diversity of methods that social scientists use to answer questions about the social and political world. We survey both qualitative and quantitative approaches, and consider how to make the most of each at all stages of the research process, from exploring ideas, to collecting evidence, to communicating findings. Students learn how to conduct interviews and focus groups, use archives and primary sources creatively, and design interesting case studies. Students also learn how to conduct in-depth ethnographic observation, use an array of quantitative tools, run surveys, and understand the logic of experiments and causal inference. We consider how deeper epistemological commitments shape our methodological choices, and how politics and power shape the scientific communities in which we work. Course assignments help thesis-writers explore potential topics and prepare them to immediately conduct productive original research. Sectioning will be scheduled after enrollment. This class is designed for juniors concentrating in Social Studies; sophomores, seniors, and students from other concentrations should contact the instructor before petitioning to enroll.

Course Note: This course will be lotteried and is open to non-concentrators if space permits.

Making Sense of Methods for Theoretical and Historical Research

No meeting time listed

Charles Clavey, Sarah Greenberg

Course ID: 213383
2026 Spring (4 Credits)

Instructor Permission Required

This course has three interrelated aims. First, it will introduce students to the foundational questions of the philosophy of social science. How do social scientists and theorists interpret and explain the world around them? How are models and concepts created and applied? What does it mean to argue that one event causes another one? Second, the class will familiarize students with the range of theoretical and historical methods that could be used in a senior thesis. What are the established and cutting-edge paradigms of social-science research? Where do these disciplines converge and diverge? What topics and questions are best suited to each method? Third, the course will prepare juniors and first-semester seniors to undertake thesis research. Through a range of exercises and activities, students will shape their interests into precise questions and feasible projects. In deciding which approach might be the most apt for their theses, they will confront the stakes—practical, philosophical, and political—of methodological choices.

Course Note: This course will be lotteried and is open to non-concentrators if space permits.

Land, Space, and Politics

No meeting time listed

Benjamin Mueser

Course ID: 225845
2026 Spring (4 Credits)

Instructor Permission Required

After the Civil War, formerly enslaved and free black people maintained that their freedom required land of their own, an idea embodied in the Reconstruction era promise of '40 acres and mule.' Beginning in the 1950s, an American 'back-to-the-land' movement formed, insisting that restoring democracy required returning to agrarian lives. In November 1969, a group of Indigenous activists occupied Alcatraz Island, claiming that a 1851 treaty required retired federal lands to be returned to Indigenous peoples. Since early colonization and to the present, Americans have practiced 'squatting' to claim lands and spaces as their own, even without legal title. These are very different events, but they share a common theme. Each prompt us to consider the central importance of spatial belonging and situatedness to political life. What did the land mean to these people? What does it mean to us? What is it, exactly, that we are demanding when we demand a space for our own? This class will address these questions with interdisciplinary readings on the relationships we form toward the land. Our goal is to not isolate abstract scholarship, but instead to examine the connections between theory and praxis, and to highlight how we can apply the theories we discuss in class. Toward that end, the class will be organized around 5 modules, foregrounding present-day and historical movements, following by theoretical reflections. Our guiding principle will be that practice has more to teach theory than the other way around, and good applied theory takes a critical approach to each.

Course Note: This course will be lotteried and is capped at 12 students.

Law and American Society*No meeting time listed**Instructor Permission Required**Terry Aladjem*

At a time when the rule of law is imperiled, our democracy and equal rights of every kind under assault by multiple forces, the importance of understanding our constitutional system of rights and laws as essential to the fabric of the nation cannot be overstated. The course will examine law as a vehicle of political conflict and a defining force in American society in four dimensions: 1.) as it establishes individual rights, liberties, and the limits of toleration; 2.) as it attempts to resolve differences among competing constituencies; 3.) as it sets out terms of punishment and social control having effects on race and class, and 4.) as a source of informing images and ideological meaning. We will examine these themes with close attention to their historical roots and their constitutional and theoretical origins, to their manifestations in our current political discourse. We will take up issues at the level of jurisprudence or political theory, but also as they arise in public controversies, or are settled in legal cases by the courts—cases in which racial or gender equality are at stake, religious or sexual freedom, cases in which the nature and content of political speech are questioned, cases in which the imperatives of religious communities seem irreconcilable with public institutions, cases in which the nature and extent of punishment have been debated and the question of who deserves to be punished decided, and notorious public trials in which the national self-understanding has been shaped. Our aim is to bring theory to bear, and down to earth, in each consideration (we will read Foucault's *Discipline and Punish*, and also examine prisons and mass incarceration). This is a junior tutorial.

Course Note: This course will be lotteried and is open to non-concentrators if space permits.

FAS Divisional Distribution: Social Sciences

Art, Political Culture, and Civic Life

T 0300 PM - 0500 PM

*Instructor Permission Required**Kiku Adatto*

The seminar explores the interplay of the arts, political culture, and civic life. It will draw on studies in art, history, political philosophy, literature, sociology, and photography. Among the questions we will address are: How is historical memory constructed, and what are the competing forces that shape it? What is the significance of public apologies, and does solidarity create moral responsibilities for historical injustices? How is cultural domination exerted, and how is it resisted? In what ways does rhetoric shape politics, and what role does it play in national narratives? Why does the contest to control images loom so large in politics, the media, and in our everyday lives? This is a junior tutorial.

Course Note: This course will be lotteried and is open to non-concentrators if space permits.

FAS Divisional Distribution: Social Sciences

The Governance of Artificial Intelligence*No meeting time listed**Instructor Permission Required**Joan O'Bryan*

Are we about to be replaced? Some experts have predicted the rise of Artificial General Intelligence—and machines which could outperform humans at nearly every task—as soon as the end of this decade. What exactly is artificial intelligence, where is it headed, and what does it mean for us? This junior tutorial explores the most recent philosophical and policy challenges raised by this emerging technology, with the aim of enabling students to develop an original research project on an unanswered question concerning the impact of AI on human society. These questions may include: under what conditions do chatbots deserve legal personhood or protections? How should we regulate frontier models, and what are the guiding assumptions behind the AI safety movement? Do rich countries have a duty of justice to provide global access to advanced computer chips and open-source LLM code? Can big data improve democratic functioning, and if so, at what cost? And what should we do in the face of the "singularity"? Overall, students will develop an understanding of the technical basics of machine learning and the material conditions required to enable its development, examine a number of case studies on AI's current and prospective impacts, and critically engage with key debates in AI ethics and governance.

Globalization and the Nation State

T 0300 PM - 0500 PM

Nicolas Prevelakis

Course ID: 125982

2025 Fall (4 Credits)

Instructor Permission Required

As globalization faces challenges, the nation-state and nationalism have resurged, influencing global and local identities. This course examines why, focusing on the nature of nationalism, ethnic conflicts, the rise of populism and authoritarianism, and global issues such as inequality, migration, and climate change. Through theoretical texts and case studies from various regions, including the U.S., Europe, and China, students will explore the renewed importance of nationalism and the nation-state in the current global landscape. This is a junior tutorial.

Course Note: This course will be lotteried and is open to non-concentrators if space permits.

Asian Cities: Multiple Modernities and Global Connections

M 1245 PM - 0245 PM

Xinyu Guan

Course ID: 226282

2025 Fall (4 Credits)

Instructor Permission Required

What does studying Asian cities teach us about cities, and about Asia writ large? Through engaging with ethnographies and urban theories, we will explore themes such as (post)colonialism, multiple modernities, informality, neoliberalism, (post)socialism, migration, and diaspora. This course will be of interest to students with an interest in urban-related topics in general, with no background knowledge on Asia required. In addition to cities situated within Asia, we will examine diasporic urban spaces and communities physically outside of Asia. Alongside the course themes, we will analyze and learn how to conduct ethnography and interviews, in addition to analyzing maps and archival material. There will be an ethnographic assignment, where students will learn to conduct an in-person ethnographic observational exercise of an Asia-related space or community in the Boston area. For the culminating final assignment, students will pick one of the methods to conduct original research and write a 20-25-page paper. This is a junior tutorial.

Course Note: This course will be lotteried and is open to non-concentrators if space permits.

SOC-STD 98ND

Justice and Reconciliation after Mass Violence

No meeting time listed

Jonathan Hansen

Course ID: 128057

2026 Spring (4 Credits)

Instructor Permission Required

This seminar examines the problem of justice and reconciliation after mass violence: How does a nation sundered by genocide, civil war, or gross human rights violations reestablish the social trust and civic consciousness required of individual and collective flourishing? What is the proper balance between individual and collective responsibility? What is the role of trials, truth commissions, and apology in civil reconciliation? How do specific types of mass violence influence outcomes? What makes some reconciliations successful, others less so? The course engages these and other questions from historical and contemporary perspectives, exploring the legacy of mass violence going back centuries, while examining reconciliation projects across cultures, countries, and continents. This course comprises three units: 1) a typology of mass violence (civil war, genocide, state repression, for instance) and historical responses; 2) case studies of the U.S. Civil War (and its continuing legacy), the Troubles (N. Ireland), and the Rwandan genocide; and 3) a research and writing workshop emphasizing students own work. The goal of the course is to introduce students to the literature of mass violence from an interdisciplinary perspective (including but not limited to historical, sociological, and anthropological approaches), ultimately launching students on their own research projects. This is a junior tutorial.

Political Myth

W 0300 PM - 0500 PM

Benjamin Mueser

Course ID: 225033

2025 Fall (4 Credits)

Instructor Permission Required

Political myth, or ideologically-marked narratives that are essential to the identity of a social group, has often

been thought of as antithetical to political theory. By obscuring the truth in false narratives, or by communicating truths through narrative and arational means, myth has been interpreted as hostile to freedom, liberalism, rationalism, and deliberative democracy. And yet, despite Max Weber's claim that the modern world had become 'disenchanted,' the last century saw an explosion of political myths implicitly and explicitly driving mass political movements. Political myth prompts key questions about political theory: Is it possible or even desirable to have a politics without myth? If not, then what role exactly does myth play in politics? Can political myths be open to contestation and reevaluation? Under what conditions can political myth be a means of oppression, and under what conditions can it serve emancipatory ends? To address these questions, this class will examine the relationship between myth and politics through a series of major theoretical statements drawn mostly from European intellectual history followed by a series of case studies. This is a junior tutorial.

States, Empires, and Postcolonialism

W 0300 PM - 0500 PM

Yasemin Bavbek

Course ID: 224409

2025 Fall (4 Credits)

Instructor Permission Required

This seminar introduces major approaches to empires in social sciences, with a particular focus on the global and postcolonial turns and their critiques. We will discuss canonical works of postcolonialism, subaltern studies, and the Black Radical Tradition together with contemporary empirical work on empires. This seminar aims to 1) develop a comprehensive understanding of the conceptual toolkit of postcolonial thought and the Black Radical Tradition while addressing the sociopolitical contexts which gave rise to them, 2) compare postcolonial approaches to other major paradigms of anti-imperialist thought, and 3) survey approaches to empires and borderlands that do not conform to the categories of postcolonial thought. We will explore imperial legacies in social thought, political organization, and state formation from an interdisciplinary perspective. Some of the questions this seminar addresses are: How are racialization and empire related in different contexts? How can we apprehend the histories of (physical, epistemic, symbolic etc.) violence and extraction from a subaltern anti-imperial perspective? How do the metropolises and colonies relate to and constitute each other? Do empires learn from each other, and if so how? How do imperial relations structure contemporary politics, culture, and power relations? What forms does imperial domination and resistance against empire take? This is a junior tutorial.

The Critical Theory of the Frankfurt School

W 0945 AM - 1145 AM

Charles Clavey

Course ID: 156263

2025 Fall (4 Credits)

Instructor Permission Required

This course examines the distinctive critical theory created by members of the Institute for Social Research—better known as the Frankfurt School—from its origins in the interwar era to the present day. Over these decades, critical theory has used tools from philosophy, psychology, and sociology to grasp the pathologies of the present and to chart a path towards emancipation in the future. We will reconstruct the Frankfurt School's evolving theory through its connections to the most important themes of twentieth-century thought: capitalism, authoritarianism, individuality, bureaucracy, and alienation. Our goal is not only to gain a deep understanding of critical theory but also to assess its continued relevance to modern social and political thought. This is a junior tutorial.

Course Note: This course will be lotteried and is open to non-concentrators if space permits.

Race, Ethnicity, and Inequality

No meeting time listed

Christina Ciocca Eller

Course ID: 213256

2026 Spring (4 Credits)

Instructor Permission Required

The United States is more racially and ethnically diverse than at any point in its history. Yet racial and ethnic social categories remain persistent sources of inequality in American society. This tutorial will interrogate the relationships between race, ethnicity, and inequality, examining theoretical and empirical approaches across multiple social domains. Part I of the course focuses on the historical development and contemporary meanings of both "race" and "ethnicity" in the United States. Part II discusses the reproduction of social categories and the consequences of reproduction for inequality. Part III examines the relationship between race, ethnicity, and inequality in particular social domains, including neighborhoods, youth experiences, policing and mass incarceration, higher education, and the labor market. And Part IV dives deep into the issue of within-group inequalities by race and ethnicity, while also introducing global comparative approaches. We will discuss the implications for public policy through each of these case studies, focusing on strategies for reducing racial and ethnic inequality. This is a junior tutorial.

Statecraft and Sexuality

W 1245 PM - 0245 PM

Miriam Gleckman-Krut

Course ID: 224417

2025 Fall (4 Credits)

Instructor Permission Required

Sexuality is central to modern statecraft. This junior tutorial explores how – and why – states regulate sex, sexual violence, sexual taboos, sexual identities, and even talk of sex. Through attention to cases in North America and Southern Africa, we learn how sexuality is embedded in state formation, in the distribution of citizenship entitlements, and in efforts to maintain political legitimacy. Transnational comparisons elucidate generalizable features of sexuality and statecraft, as well as historical moments in which states learn from one another about how to deploy sexuality as a technology of power. Our examination of cases in the Global North and South exposes how these state processes operate in the context of global inequalities. This is a junior tutorial.

SOC-STD 98UD

Critical Theory of Knowledge, Technology and Power

No meeting time listed

Bo-Mi Choi

Course ID: 218523

2026 Spring (4 Credits)

Instructor Permission Required

This tutorial explores the role and impact of science and technology on society, culture, and politics from the perspective of critical theory. Building on the foundations of Marxian philosophy and the works of 20th-century critical theorists such as Lukács, Benjamin, Heidegger, Marcuse, and Foucault, we will explore more recent contributions in the philosophy and post-phenomenology of technology as well as social constructivism and feminist theory. While largely designed as a theory course, this tutorial takes a closer look at artificial intelligence, automation and robotics, surveillance capitalism, data feminism, and digital culture to investigate how these new technologies shape our social reality. The tutorial ends with a module on Afrofuturism as a potentially emancipatory form of techno-utopianism. Questions we will address along the way include: how do science and technology transform and mediate human experience and knowledge of the world? radically affect our political and social order? shape concepts of human subjectivity and regulate human behavior? And what kinds of political, ethical, and aesthetic consequences do we need to consider as we adopt new technology? Rather than conceptualizing science and technology in Promethean terms as "tools" of progress, we will closely examine how they are intrinsically constitutive of the ways we experience ourselves and the world around us. The aim is to collaboratively articulate, over the course of the semester, an amplified social theoretic framework that enables

us to critically engage with the existential challenges and potential dangers of new technology and normatively evaluate scientific and technological innovations from the standpoint of human flourishing.

Crime, Punishment, and Policing in an Unequal America

No meeting time listed

Adaner Usmani

Course ID: 222691
2026 Spring (4 Credits)

Instructor Permission Required

The United States imprisons more people per capita than any comparable society, past or present. It is alone among developed countries in annually killing hundreds of its citizens in police encounters. And it is also, by some distance, the most violent country in the developed world. These facts raise a range of difficult questions about what should be done about crime, incarceration and policing in today's United States. The aim of this course is to give students the tools to better understand the empirical and normative dimensions of these questions. Throughout, we will be using reasoning and methods from both the empirical social sciences and from analytic moral and political philosophy. Students will be pushed to develop the strongest possible arguments for positions they may not endorse, and to argue against the perspective of the instructor at every opportunity.

Inequality Under Capitalism

R 0345 PM - 0545 PM

Adaner Usmani

Course ID: 222692
2025 Fall (4 Credits)

Instructor Permission Required

All capitalist societies are characterized by significant forms of inequality. Some people and some groups have more of the things that we think make for a good life, while other people and other groups have less. But inequality is not static; not all societies are equally unequal. Social and political movements have transformed the distribution of well-being in numerous ways. This class ponders the empirical and normative questions raised by these facts. First, what explains inequality? Why do some people have more than others? Second, what should be done about these facts? What kinds of inequalities do we care about? What does justice require? And, given that only some of what justice requires is feasible, what should we demand?

The Politics of Health and Medicine in the United States

Course ID: 222714
2025 Fall (4 Credits)

Matt Reichert

How does politics shape our health? In this multidisciplinary class, students explore the historical origins of institutions like Medicare and Medicaid, the FDA, and the NIH. We seek to explain the politics of why American healthcare policy differs so dramatically from its peers, with narrowly targeted public programs and a dominant private insurance sector. Students learn how epidemiologists and clinicians today think about social determinants of health, especially racial disparities in care and outcomes. We conduct deep dives into topics like the sociology of mental illness, maternal mortality, the Affordable Care Act, Covid-19, and the medical ecosystem here in Boston. We consider normative questions, like how to balance cultural competency or patient autonomy with the medical mission to provide care and prevent harm. Finally, students also observe how public health researchers make use of social science methods, from the ethnographic case study to the clinical trial. This is a junior tutorial.

Climate Justice: The Politics of Decarbonization

2025 Fall (4 Credits)

M 0300 PM - 0500 PM

Instructor Permission Required

Jonathan Masin-Peters

Given the urgent need to shift societies away from carbon-based energy, how can such transitions occur so as not to reproduce existing injustices? Answering this question requires an interdisciplinary approach. Texts from historians and anthropologists will provide insight into how societies across time and space have made large-scale energy transitions. Political science scholarship will contribute knowledge about political transitions, which were widespread in the twentieth century, from socialist transitions in the early twentieth century to democratic transitions in the post-Cold War era. Texts by political theorists and philosophers will enable conceptual analysis of ideas like democracy, injustice, and nature. At the same time, work by sociologists will attune students to the forms of stratification and inequality energy transitions are likely to foster. Finally, literary and cultural criticism will provide insights into the interpersonal tensions, nuances, and lived experiences of people undergoing large-scale changes. Students will build their conceptual vocabulary, learn the strengths and limits of each disciplinary approach, and understand how to formulate compelling research questions and problems. This is a junior tutorial.

Infrastructure, Mediation, Sociality

2025 Fall (4 Credits)

M 0300 PM - 0500 PM

Instructor Permission Required

William Stafford

Infrastructures make their social significance felt in a variety of ways: through the technologies that mediate their use, the materials from which they are made, and their sensory and aesthetic presence in our everyday lives. How does database design impact how we buy and sell things? How is wood sourced and processed for the construction of housing stock? What might a bridge do besides facilitate a crossing? Each of these aspects of infrastructure can exert their influence at multiple scales and in multiple ways, often anchoring diverse landscapes of experience across populations, communities, and individuals. In this course, we will explore how the infrastructures that organize social life are formed, experienced, and interpreted as the "things and also the relations between things" (Larkin 2013) that give shape to gender, race, caste, colonialism, imperialism, commerce, environment, government, protest, and abolition. In turn, we will explore how the study of infrastructure offers a unique perspective for theorizing the "social" in social theory and how imaginations of what is "necessary" for social life mediate the demands we make on theory and our own research. Materials for the course will draw on a broad corpus of readings, films, television shows, games, and technical documents across the disciplines of anthropology, sociology, history, visual studies, media studies, and science and technology studies. Coursework will involve ethnographic experiments with the local built environment and digital artefacts, the production of individual research archives, and the completion of an empirically grounded research project. This is a junior tutorial.

Course Note: This course will be lotteried and is open to non-concentrators if space permits.

Tutorial in Sociological Theory

R 1245 PM - 0245 PM

Shai Dromi

Course ID: 115130

2025 Fall (4 Credits)

This course introduces students to the complicated, conflictual, and often contradictory theoretical origins of sociology as a discipline. We begin by reading the standard sociological "canon"—Marx, Weber, and Durkheim—and interrogating why their ideas were canonized over others. We then read scholars who have been historically "written out" of the social sciences to evaluate their important, yet historically underappreciated, contributions. By the end of the course, students should (1) master key concepts in classical sociological thought, (2) understand what it means to theorize, and what makes for good theory, and (3) learn to critically interrogate the relationship between power, standpoint, and the production of knowledge.

Course Note: Required of concentrators, ordinarily sophomores, and secondary concentrators.

Students should enroll in a timed section during registration. Students who enroll in the placeholder section (day and time TBA) will be contacted after registration ends for day/time preference. Students in the placeholder section are not guaranteed a space in the course.

Junior Tutorial: Deviance and Social Control

R 0945 AM - 1145 AM

Course ID: 226539
2026 Spring (4 Credits)*Instructor Permission Required*

This course examines how institutions construct, enforce, and justify social control, shaping notions of deviance and conformity across historical and social contexts. From legal authorities to medical experts, we will explore how knowledge and power intersect to define who or what is considered "deviant" and how those labeled as such resist and reshape these boundaries. Topics include criminalization, surveillance, and the role of moral panics in reinforcing or challenging dominant narratives of social order. Students will choose a research question related to these issues and conduct their own empirical project using qualitative methods such as in-depth interviews, ethnographic observations, or textual/media analysis.

SOCIOL 98GE

Junior Tutorial: Sociology of Immigration: Latinx

T 1200 PM - 0200 PM

*Meylin Gonzales Huaman*Course ID: 226201
2025 Fall (4 Credits)*Instructor Permission Required*

This junior tutorial examines Latinx immigrant incorporation from a sociological perspective that approaches migration as a lifelong process starting from the context of origin (Latin America) and continuing in the context of reception (the US). To this end, we will explore questions that consider elements of the history of Latin America as part of what shapes the trajectories of Latinx in the US. What are the lasting impacts of Spanish colonization in Latin America that shape immigration into the US? What are the origins of the Hispanic/Latino category? How are Latinxs' immigrants experiencing this identity and what are its implications to their social and political incorporation in the US? We will focus on three areas: (1) the legacies of the former Spanish colonies in Latin America; (2) the parallels between the categories of Hispanic/Latino in the US and Mestizo in Latin America; and (3) the social and political incorporation of Latinx populations in the United States, with particular attention to how the process of immigrant incorporation relates to immigrants' premigration experiences. Students will have the opportunity to develop an original research project on a topic relevant to this course. The methodological focus will be qualitative in-depth interviews from an inductive research approach. Accordingly, from the third week of the course, students will conduct 2-3 exploratory interviews on a broad topic they are interested in, which will then inform the research question that will guide their research question and subsequent data collection.

This course is only for Sociology concentrators and secondaries.

Junior Tutorial: Stigma and Social Recognition

T 1245 PM - 0245 PM

*Isabel Jijon*Course ID: 226353
2026 Spring (4 Credits)*Instructor Permission Required*

This class examines how stigma — how having a "spoiled identity" (Goffman 1963) — shapes the way people

act, interact, and make sense of the world. We will ask questions like: how do individuals or groups become stigmatized? How do people experience, cope with, or resist this stigma? How is stigma tied to discrimination, or the unequal access to resources and opportunities? And how might we reduce or challenge stigma? How can we promote its opposite, social recognition? Together, we will unpack the concept of stigma by diving into case studies. We will discuss the stigmas associated with dirty work, polluted relationships, illness, disability, poverty, criminal records, and more. We will also analyze the ways stigma intersects with class, race, gender, and sexuality. Our approach will be both micro-sociological — looking at individuals and social interactions — as well as meso-sociological — studying organizations, institutions, cultural scripts, and power. During the semester, you will also conduct your own research on stigma and recognition. You will learn to use and apply qualitative methods, either ethnography, participant observation, in-depth interviews, textual analysis, or archival work. You will also receive individualized support as you prepare your final project. By the end of the course, you will have a clearer sense of the mechanisms by which stigma contributes to social inequalities.

SOCIOL 1000Course ID: 220395
2026 Spring (4 Credits)**Introduction to Sociology**

TR 0130 PM - 0245 PM

Christina Ciocca Eller

What is society? What is the role of the individual in it? How can we change our societies? This course introduces students to the field of sociology. By surveying social theory as well as empirical studies, students acquire what C. Wright Mills calls the "sociological imagination": the ability to think beyond our personal lives and to connect the experiences of individuals with large social structures. We examine common-sense assumptions about culture, politics, history, and psychology, and empower students to replace them with evidence-based reasoning. This gateway course introduces students to the intellectual insights and analytical tools of Sociology across the subfields of race, class, gender, politics, violence, culture, and inequality. Students are trained to critically analyze the evidence and research methods used in sociological research, and to communicate sociological ideas powerfully and succinctly through effective policy writing. Whether you plan to become a doctor who understands the social determinants of health, an education expert seeking to improve US schools, a not-for-profit worker supporting community organization, or a corporate consultant looking to improve organizational efficiency, the foundational concepts and research practices of sociology will empower you to understand, analyze—and maybe even change—our social world.

SOCIOL 1023Course ID: 159779
2026 Spring (4 Credits)**Political Sociology**

MW 0900 AM - 1015 AM

Danilo Mandic

Politics is about power and authority. But the production, conservation and distribution of power and authority occur far beyond Capitol Hill: in families, neighborhoods, schools, foreign relations, welfare policies, social movements, nation-states and war. Why do people vote against their own interests? How do children rebel against their families? Why is growing up in a certain neighborhood associated with powerlessness? What kinds of governments are there, and could be? Why do civil wars start? In this course, we will examine such areas using the theoretical framework and analytic tools of political sociology. We will survey exemplar studies and consider different ways of conceptualizing power: from the micro level of the family to the macro level of geopolitics. Theoretical works are combined with practical applications and illustrations in specific national and historical contexts. Through quizzes and section discussions, students will acquire proficient knowledge of the central themes, methods and empirical concerns of political sociologists. They will also become aware of criticisms and debates within the broader social scientific field studying power.

Inequality Then and Now: The History of Human Suffering

MW 0430 PM - 0545 PM

Adaner Usmani

Why do some live in mansions while others languish in prison? Why do some work fulfilling jobs from home, while others toil in someone else's factories or fields? Why do some eat cake while others nibble on roti? Why, in other words, do some people have a lot but others so little? This course uses the tools of the social sciences to examine the distribution of human well-being, or inequality. Together, we will survey this distribution across three broad eras of human history: the pre-agrarian era (until about 5-10,000 years ago), the agrarian era (ca. 5-10,000 years ago to 200 years ago), and, especially, the modern world (ca. 200 years ago to the present). Our primary goal will be to answer empirical questions—to describe and explain these distributions—but we will also consider the normative challenges that lie behind them. What kinds of inequalities should we care about? And, given what we know about inequality today, what should we demand that people and governments do about them? Topics covered will include: the nature of early human societies, the origins of agriculture, the rise of the state, the birth of capitalism, the causes of racial inequality and patriarchy, and the transformation of capitalism by social and political movements.

Students should enroll in a timed section during registration. Students who enroll in the placeholder section (day and time TBA) will be contacted after registration ends for day/time preference. Students in the placeholder section are not guaranteed a space in the course.

Models of Social Science Research

MW 1200 PM - 0115 PM

Emily Fairchild

This course introduces students to core methodological concepts and strategies used in social science research. The course begins with considerations that apply across methods: the logic of project design, conceptualization, measurement, sampling, and research ethics. It then reviews common strategies for data collection: surveys, experiments, ethnography, in-depth interviewing, content analysis, and historical methods. Students will develop the analytical skills necessary to interrogate epistemological assumptions in published social science research and will practice obtaining data via observations, from asking people, and by analyzing text. Students should leave the course with the ability to design rigorous empirical research that answers questions about the social world.

Course Note: Required of Sociology concentrators and secondary concentrators. Normally taken sophomore year.

Contemporary Chinese Society

MW 1030 AM - 1145 AM

Ya-Wen Lei

This course will equip you with the basic literacy required to comprehend contemporary Chinese society, which

is an increasingly essential skill for informed citizens in our present global context. No prior knowledge or language proficiency is necessary to enroll in this class. We will delve into the profound transformations that have occurred during the post-1978 reform period, including China's shift to a market economy, the emergence of the digital economy, the implementation of population policy by the government, urbanization, rising inequality, and contentious politics. The course will analyze how these changes have influenced social relations and how they have been experienced and understood by individuals. From a sociological perspective, this course will address topics related to the state, development, market, population, migration, urbanization, inequality, gender, labor and work, civil society, the public sphere, and social movements. Although the course is listed in the sociology catalog, readings and topics covered in the course are situated at the intersection of sociology, political science, law, anthropology, and history.

Championing Change: Children's Rights, Youth Participation, and Social Movements

2025 Fall (4 Credits)

T 0945 AM - 1145 AM

Instructor Permission Required

Isabel Jijon

This course examines the origins, evolution, implementation, backlash, and transformation of the children's rights movement. We will discuss rights violations like child labor or child marriage, as well as positive rights, like the right to education and free expression. Students will learn about the complex social, political, economic, and cultural structures underpinning the fight for children's rights, as well as the ways children's rights have transformed these structures around the world. And we will consider how young people themselves take ownership of their rights. Looking at the cases of Greta Thunberg, Malala Yousafzai, and the children who defend child labor, we will discuss the opportunities and challenges of child and youth participation.

Sociology of Health and Medicine

2026 Spring (4 Credits)

MW 0130 PM - 0245 PM

David Showalter

This course introduces a sociological perspective on the topics of health and medicine. First, we discuss social determinants of health and the effects of intersecting inequalities on health disparities. Second, we investigate how knowledge about health and illness is influenced by social categories and social relations. Third, we explore how healthcare workers do their jobs and how their work is shaped by social context. Finally, we consider healthcare policies and politics, including how social movements address health and illness. This course is recommended for students considering careers in medicine and healthcare.

Race and Ethnicity in Global and Comparative Perspective

2026 Spring (4 Credits)

MW 0300 PM - 0415 PM

Ellis Monk

This course provides an introduction to the comparative study of "race and ethnicity" around the world. We focus here not on particular "ethnic" or "racial" groups, but rather, on particular cases which illustrate how "race" is used as a way in which to divide, sort, and rank human beings (i.e. a principle of social vision and division). In particular, we compare and contrast how different societies have constructed ethnoracial boundaries by focusing on several key forms of ethnoracial domination: categorization, discrimination, segregation, ghettoization, and exclusionary violence. Readings include sociological, historical, and anthropological studies of ethnoracial dynamics primarily in the U.S. and Brazil, but also South Africa, Asia, Western Europe, and Latin America.

SOCIOL 1170

Sociology of Childhood

TR 0300 PM - 0415 PM

Caitlin Daniel

What does it mean to be a child? What is it like to be a child? Drawing on the tools of sociology, we will see how children's lives and life chances are shaped by their social position, their social contexts, and the broad social structures in their society. Additionally, we will examine how the very notions of "childhood" and "adolescence" are socially constructed, varying across history and cultures rather than stemming from biology alone. We will consider why contemporary constructions of children are so contradictory—sometimes framing them as victims needing protection, and sometimes as deviants needing correction—and what these views say about broader societal anxieties. Next, we will examine several key influences on children's socialization, highlighting how class, gender and race shape children's experiences. Throughout, we will consider how children actively shape their own social worlds, and how their existence shapes society itself. We will close by examining several social issues related to children.

FAS Divisional Distribution: Social Sciences

SOCIOL 1176

Popular Culture and Social Theory: Critiquing Society through Television, Literature, and Comedy

MW 0600 PM - 0715 PM

Shai Dromi

Popular culture is one of the strongest tools we have for thinking through social phenomena outside of the conventions of academic writing. Television series such as *Black Mirror* can provoke our thinking on topics like alienation and racism; popular novels by authors like Stephen King can unpack issues like social isolation and role conflict; and stand-up comedy can deliver some of the fiercest critiques of economic and social inequality. In this course, we will use the insights that popular culture provides to gain proficiency in key current sociological theories. Each week, we will pair reading items from one contemporary theorist with one piece of popular culture, such as a movie, a sitcom, a short story, or a stand-up comedy routine. Course assignments will move from analyzing popular culture items to applying current sociological theory to real-world phenomena. Through these activities, students will familiarize themselves with theoretical frameworks such as field analysis, critical race theory, economic sociology, feminist sociology, and others.

example, civil rights laws prohibit workplace discrimination, but such laws are not always effectively enforced. This disparity between law-on-the-books and law-in-action has prompted social-legal scholars to closely examine the latter. This course adopts a law-in-action approach to explore the intricate relationship between law and society. We will explore major theoretical perspectives and empirical studies that analyze the dynamics between law, legal institutions, and their social, political, economic, and cultural contexts. Topics covered include, but are not limited to: (1) concepts and theories of law and society; (2) the experiences of various actors in the legal system, particularly lawyers, judges, jurors, and litigants; (3) the dispute resolution process and its intersection with culture, social class, race, and gender; (4) the impact of law on social change; (5) law, surveillance, and technology. To foster a global perspective, the course will not be confined to the US context but will include examples from other societies as well. Students are encouraged to actively participate in class discussions and learn from one another to cultivate a deeper understanding of the subject matter.

Students should enroll in a timed section during registration. Students who enroll in the placeholder section (day and time TBA) will be contacted after registration ends for day/time preference. Students in the placeholder section are not guaranteed a space in the course.

Refugees in Global Perspective

M 1200 PM - 0200 PM

Danilo Mandic

Course ID: 203272
2026 Spring (4 Credits)

Instructor Permission Required

What does it mean to lose your home? Who are refugees? Why are there so many of them? How are they displaced? Where do they go, and why? This course inquires into the nature, causes, and consequences of contemporary forced migration in our globalized world. Students survey regional dynamics in the Middle East, Africa, Asia, Europe, and the Americas. We examine the particularities of refugees compared to other migrants, and the changing nature of forced migration since the World Wars. Students explore historical precedents to contemporary forced migration, learn about different host society approaches to asylum, compare government and criminal mechanisms of forced migration, and examine why refugees are objects of suspicion and hostility around the world. Particular attention is paid to the connection between forced confinement and forced migration, the role of refugee camps and urban integration, and alternative strategies for global asylum management by bridge and destination countries.

SOCIOL 1190

Culture, Inequality and Inclusion in the United States and Beyond

TR 1030 AM - 1145 AM

Michele Lamont

Course ID: 218291
2026 Spring (4 Credits)

In the United States and beyond, various groups are making irreconcilable claims for greater recognition on the left and on the right. Against this background, how can we fashion more inclusive societies in a neoliberal context of growing inequality? How can we understand claims for dignity by those experiencing different types of insecurity and/or stigmatization? These questions will be explored through topics such as: 1) the role of dignity in relation to individual and collective well-being; 2) how people find hope in narratives when the future is especially uncertain; 3) how Gen Zs are dealing with the decline of upward mobility by embracing specific narratives; 4) how people bolster their dignity through work, environmental justice and politics; 5) how class cultures are changing at the top and at the bottom of the social ladder; and 6) how social movements and other agents of change provide cultural alternatives in the increasingly hybrid public sphere. We will look at the United States through comparative lenses to improve our understanding of the social and political world as we experience it today. Empirical cases will concern immigrant groups, indigenous people, LGBTQ+ communities, and professionals and workers in different national contexts and economic sectors.

SOCIOL 1197

Poverty in the United States

TR 0130 PM - 0245 PM

Joseph Wallerstein

Course ID: 220192
2025 Fall (4 Credits)

Nearly one in three residents of the United States lives close to the poverty line, and a growing number of people live in deep poverty, subsisting on less than \$2 per day. This course examines the social world of poverty in the

US today. It pays particular attention to the lived experiences of low-income people. It also examines the parallel sets of institutions low-income people must navigate—institutions that often perpetuate poverty, like low-wage jobs, systems of policing and surveillance, substandard schools and colleges, exploitative housing, and predatory financial services. The course places a heavy emphasis on firsthand experience and learning. We will have guest lectures from people whose work or life experiences relate to the course subject matter. Students will also complete several fieldwork assignments, doing things like observing eviction court, applying for food stamps, or interviewing someone making ends meet at a low-wage job.

Students should enrolled in a timed section during registration. Students who enroll in the placeholder section (day and time TBA) will be contacted after registration ends for day/time preference. Students in the placeholder section are not guaranteed a space in the course.

FAS Divisional Distribution: Social Sciences

SOCIOL 1203

Conspiracy Culture

MW 0130 PM - 0245 PM

Sarah Halford

In this class, we will explore conspiracy theories as sociocultural phenomena. Through the lens of the sociology of culture, we will examine how people create and disseminate conspiracy theories, as well as how people have used them as tools for analyzing power dynamics, creating distinctions between groups and ideas, and for making sense of some of the inexplicable and confusing realities of social life. Students will also learn about a few verified conspiracies and their consequences for institutional trust, critically examine the stigma that surrounds the "conspiracy theorist" label, and analyze conspiracy theories in popular culture. Tin foil hats not provided.

Students should enrolled in a timed section during registration. Students who enroll in the placeholder section (day and time TBA) will be contacted after registration ends for day/time preference. Students in the placeholder section are not guaranteed a space in the course.

SOCIOL 1204

Propaganda and Persuasion

M 0300 PM - 0500 PM

Sarah Halford

Course ID: 224597
2026 Spring (4 Credits)

Instructor Permission Required

Propaganda is a persuasive tool that has been used for centuries, but the continued development of communication technologies has exposed us to more of it than ever before. Propaganda is disseminated through forms of mass and social media, and it is used in political campaigns, during wartime, in advertising, art, film, music, journalism, and even in education. However, just because propagandists attempt to persuade you doesn't mean that it will work every time. A variety of factors, particularly other people in our social networks, can prime us for manipulation, but they can also protect us from being manipulated. The intimate connections we maintain with others and the kind of circles we run in may even predict which types of propaganda we will believe and why. In this class, we will take a sociological perspective to the study of propaganda and persuasion in media. This means that we will analyze uses of propaganda in the context of social conditions rather than focus on purely psychological factors that may lead to persuasion (though we'll look at those, too). You will learn about what propaganda is and its connection to communication technologies, techniques that propagandists have used to persuade the public, and you will even dabble in the dark arts of propaganda creation. While this class includes some important theoretical elements, we will ground the theoretical in the practical by analyzing real propaganda campaigns from the 20th and 21st centuries.

SOCIOL 1205

Crisis of Care

W 0300 PM - 0500 PM

Course ID: 226536
2026 Spring (4 Credits)

Instructor Permission Required

This course explores the multifaceted "crisis of care" in contemporary society, focusing on how caregiving, whether for children, the elderly, loved ones, and more, has become increasingly privatized, undervalued, and unequally distributed across gender, race, and class lines. We will examine how neoliberal economic policies have shifted the responsibility of care from state and community institutions to individuals and families, often intensifying burdens on women and marginalized communities. In addition to using a sociological lens to analyze

how care labor is shaped by capitalism, power dynamics, and public policies, we will also explore alternative care models and movements advocating for change.

SOCIOL 1218

Food Choice, Health, and Inequality

T 0300 PM - 0500 PM

Caitlin Daniel

Course ID: 221984
2025 Fall (4 Credits)

Instructor Permission Required

Food and diet-related health have become a pressing topic in research, policy and public discourse. This concern stems in part from the fact that disadvantaged groups tend to have poorer diets than their more advantaged peers. In order to understand socioeconomic and racial disparities in diet quality, we will examine how people's food choice is related to their material resources, to their social circumstances, and to the meaning that they attach to—and derive from—food. Additionally, we will consider how the public imagines that disadvantaged people eat and how these ideas themselves relate to social inequalities. In addressing these issues, we will consider several core questions: 1) How do patterns of food consumption reflect existing inequalities?, 2) How do patterns of food consumption contribute to social inequalities?, 3) How do cultural constructions of what people eat compound these inequalities?, and 4) How might we reduce food-related inequalities? While these questions focus on food, they will help us to think about structure, culture, agency, identity, and stigma more generally.

SOCIOL 1228

The Bureaucratic Machine: A User's Guide to Modern Society

MW 0900 AM - 1015 AM

Rakesh Khurana

Course ID: 226283
2025 Fall (4 Credits)

"We are all born originals - why is it so many of us die copies?" - Edward Young
Instructor: Rakesh Khurana
Department: Organizational Behavior (HBS), Department of Sociology (FAS)
This course addresses how bureaucratic organizations have come to dominate modern society and what this means for the individual. We first explore why bureaucracy proliferated since the late 19th century. Next, we look at the inner workings of bureaucratic organizations. Then, we look at what the proliferation of bureaucracy means for us as a society, especially young people, who are products and participants in these systems. Young people today navigate a world shaped by organizations, where institutional dependencies have replaced traditional sources of identity and support. Some of the most desired jobs college graduates chase are in large, complex organizations. This course invites us to examine the trade-offs between efficiency, control, and certainty versus creativity, ambiguity, and individuality in a society built on bureaucratic structures, values, and norms.

Students should enroll in a timed section during registration. Students who enroll in the placeholder section (day and time TBA) will be contacted after registration ends for day/time preference. Students in the placeholder section are not guaranteed a space in the course.

SOCIOL 1263

Community Organizing and Action

T 1200 PM - 0245 PM

Flavia Perea

Course ID: 224404
2025 Fall (4 Credits)

Instructor Permission Required

This course will explore the theory, processes, and strategies of community organizing and collective action, as well as pivotal moments and movements in organizing in the United States in the twenty-first century. Resistance, the role of protests and social movements will be discussed, but our focus will be learning how to work with others to harness human agency, coalesce around shared values, build consensus and community power in service of freedom and justice in society. Power and the structures of inequality are central themes. To learn how and why organizing works, we will explore the literature across the social sciences and discuss recent history to examine alliances, coalitions, grassroots movements, and direct action over the last 20 years. This will draw on successful, failed, and muted organizing efforts across the cultural and socio-political spectrum, including the controversial, to learn how to build momentum, nurture community agency and self-determination. A central characteristic of this course is applying theory and learning from the past and present to inform organizing and community action efforts to impact the future. Students will connect the course to relevant efforts currently underway. Students will have the option to connect their work in the course to the causes they

are interested in, student groups, external organizations or efforts they are involved with, or to an active grassroots community organizing effort in metro Boston focused on felony disenfranchisement. The course will use materials from various sources and perspectives, lecture, discussion, activities and class guests, and will culminate in a teach-in. All views are welcome in this course.

Students should enroll in the timed section. Students who enroll in the placeholder section (time and day TBD) will be contacted after registration ends for section day/time preference. Enrolling in the placeholder section does not guarantee a space in the course.

SOCIOL 1284

People and the Planet: How Societies Cause, Mitigate, and Adapt to Climate Change

TR 1030 AM - 1145 AM

Jason Beckfield

Course ID: 226402
2026 Spring (4 Credits)

People and the Planet is a one-semester course with lecture, discussion, and engagement components primarily for second- and third-year Harvard College students seeking to understand the social side of climate change. Understanding the social side of climate change means shifting our attention from particles to people. We address such questions as: What is it about modern social life that has caused climate change? Why have societies responded so slowly to the climate crisis? What do social movements for environmental justice and climate justice contribute to climate mitigation and adaptation? How can people use social processes and organizations to adapt to life on a changing planet? Along the way, we explore new research on surprising aspects of how humans as social animals relate to our environment. For instance: the place identity of wind turbines, the racial identity of electric vehicles, the gender of energy transitions, and the morality of climate projections. The overarching goal of the course, then, is to unveil the social causes and effects that are often hidden behind the geophysical models, climatological projections, and economic forecasts of conventional climate science. Specific goals include contributing to local community efforts to respond to climate change, understanding how climate science relates to climate politics, and evaluating quantitative and qualitative approaches to climate sociology.

Students should enroll in the placeholder section (time and day TBA). Students will be contacted at the end of registration for sectioning preferences.

SOCIOL 1297

Housing and Homelessness

M 1200 PM - 0200 PM

Joseph Wallerstein

Course ID: 224436
2025 Fall (4 Credits)

Instructor Permission Required

This course centers the sociological study of housing and homelessness, largely in the American context. The course is guided by three questions: (1) What is sociological about housing, and why should the study of housing be central to the discipline of sociology? (2) What have sociologists written about the long-term and day-to-day experiences of housing insecurity and homelessness? (3) How does housing inequality intersect with other dimensions of inequality? Through a combination of historical and contemporary readings, students will gain an understanding of the factors contributing to housing challenges, including a shrinking supply of affordable housing, inadequate wages and employment, discriminatory housing practices, and urban development. Students will also learn about how supply-side actors—such as landlords, real estate brokers, and building code inspectors—reproduce or exacerbate housing inequality; and why policy responses—like housing choice vouchers, emergency shelters, and supportive housing programs—do or do not seem to help.

M 0345 PM - 0545 PM

Mary Waters

Course ID: 207599
2025 Fall (4 Credits)

Instructor Permission Required

This course examines theories and empirical research on international migration. We concentrate on recent research in sociology, but we also include readings from across the social sciences. We examine immigration policy, and the integration of immigrants and later generations, paying particular attention to legal status and race and ethnicity. Limited to graduate students in sociology and related social sciences.

SOCIOL 2202

Intermediate Quantitative Research Methods

TR 0945 AM - 1145 AM

Samuel Donahue

Course ID: 119985
2025 Fall (4 Credits)

Instructor Permission Required

This course covers the fundamentals of descriptive and inferential techniques used in quantitative sociological research. Topics include (a) an introduction to probability, random variables, and statistical inference, (b) the linear regression model for continuous response variables, with a focus on assumptions and interpretation, and (c) the logit/probit model for binary response variables. Motivation, application, and presentation are stressed. The aim of this course is to develop the skills necessary to be both a consumer and a producer of quantitative sociological research.

This course is for PhD students in the Sociology department. Petitions from undergraduate students and PhD students in other departments will only be approved at the discretion of the instructor if space is available. Students will be contacted after registration ends for section day/time preference.

This course is required of and limited to first-year students in Sociology or in the joint Ph.D. programs between Sociology and other departments

SOCIOL 2203

Advanced Quantitative Research Methods

TR 0945 AM - 1145 AM

Xiang Zhou

Course ID: 112874
2026 Spring (4 Credits)

Instructor Permission Required

This course covers advanced descriptive and inferential techniques used in quantitative sociological research. Topics include statistical models for binary, count, ordinal, and multinomial data; bootstrapping methods; imputation methods; and causal inference with experimental and observational data. Motivation, application, and presentation are stressed. The aim of this course is to develop the skills necessary to be both a consumer and a producer of quantitative sociological research.

Course Note: This course is required of and limited to second-year graduate students in Sociology or in the joint Ph.D. programs between Sociology and other departments

This course is for PhD students in the Sociology department. Petitions from undergraduate students and PhD students in other departments will only be approved at the discretion of the instructor if space is available.

Sociology 2202 or basic course in regression analysis.

Course ID: 117877
2026 Spring (4 Credits)

Instructor Permission Required

Introduction to the formative ideas and socio-intellectual contexts of 19th and early 20th century sociological
HARVARD UNIVERSITY 1678 of 1792

theory. Course will explore social thought from the perspective provided by the problem of social order - and the roles different thinkers attributed to such factors as solidarity, power, and meaning as solutions to this problem. Consideration of the continuing significance of these ideas for contemporary social thought.

Course Note: This course is required of and limited to first-year students in Sociology or in the joint Ph.D. programs between Sociology and other departments

SOCIOL 2209

Qualitative Social Analysis: Seminar

W 0945 AM - 1145 AM

Michele Lamont

Course ID: 110551
2025 Fall (4 Credits)

Instructor Permission Required

This course covers basic techniques for collecting, interpreting, analyzing, and reporting interview and observational data. Focused on both theory and practice, the course aims to expose students to many different kinds of qualitative research to provide students a vehicle to produce a compelling paper based on qualitative data.

*Course Note: This course is required of and limited to first-year students in Sociology or in the joint Ph.D. programs between Sociology and other departments.
Students will be contacted after registration ends for section day/time preference.*

Computational Sociology

T 1245 PM - 0245 PM

Joscha Legewie

Course ID: 207693
2026 Spring (4 Credits)

Instructor Permission Required

This course provides an applied introduction to computational methods and data science for sociologists. The first part of the course focuses on programming skills for social scientists. The second part focuses on machine learning and applied causal analysis with concrete exercises that force students to apply the programming skills they learned in the first part of the semester. The course will combine short lectures, with class discussions, hand-on experiences and students own empirical projects.

This course is for PhD students in the Sociology department. Petitions from undergraduate students and PhD students in other departments will only be approved at the discretion of the instructor if space is available.

Ethnographic Research Methods

F 0300 PM - 0500 PM

David Showalter

Course ID: 222476
2026 Spring (4 Credits)

Instructor Permission Required

Ethnographers use direct observation and participation to study social life. This course guides students through the process of planning, carrying out, and writing up a research project using ethnographic methods. Topics include research questions and research design; research ethics; challenges during fieldwork; techniques for collecting and analyzing data; connections between theory and evidence; and approaches to writing and

publishing. Students must conduct observations during the semester to produce a final paper, and are strongly encouraged to consider potential research questions and sites before the course begins.

This course is intended to enhance the teaching skills of graduate students in the Sociology Department. Through a combination of classroom discussions and teaching simulations, the seminar challenges students to discover and hone their teaching styles, to develop a personal philosophy about teaching and learning, to develop self-confidence leading and facilitating small and large group discussions, to learn about the teaching resources that are available to them throughout the university, to experiment with designing engaging courses of study, and to discover that teaching can be a rewarding and stimulating element of an academic career.

Course Note: Required of and limited to graduate students in Sociology. Attendance at first meeting is required. Not repeatable for credit.

Workshop on Climate Sociology

W 0945 AM - 1045 AM

Jason Beckfield

Course ID: 226595

2025 Fall (4 Credits)

Instructor Permission Required

The graduate workshop on Climate Sociology offers a venue for discussing new research that takes a sociological perspective toward climate change. Such perspectives include Environmental Sociology as well as areas of the field that have tended to develop independently of the problems of climate change, such as Social Organization, Social Stratification, Culture, Gender, Immigration, Political Sociology, and Race and Ethnicity. We encourage such disciplinary breadth of engagement in the problems of climate change because of the urgency of the climate crisis, and because we believe all sociologists can contribute to human knowledge about the causes and effects of climate change. For instance, although the topic of energy transition has been dominated by the physical sciences and economics, sociological insight into the forms of organizational ownership and control, the relationship between the rules of the game and the distribution of winners and losers, and the social meanings that attach to physical structures like oil wells and wind turbines all lead to more effective action on climate change. We welcome qualitative, quantitative, mixed-method, and applied research.

The Body in Indian Medicine

2025 Fall (4 Credits)

W 0300 PM - 0545 PM

Instructor Permission Required

Martha Selby

What does it mean to inhabit a body in India? This is the primary question that we will attempt to answer during the course of the semester in this seminar. The readings and discussion over the course of the term will parallel the development of the human being from conception, infancy and childhood, adulthood and sexuality, and will end with aging and death. We will take an interdisciplinary approach, and will examine textual materials from an extensive range of sources and time periods. Sources will include selections in translation from medical literature from India's Āyurvedic traditions as well as readings from religious narratives that deal directly with issues of embodiment and provide powerful metaphors for it. We will also be drawing largely on sociological and anthropological studies of the different forms that embodiment takes, from metaphysical issues on what it means to be "alive" or "dead" and the human body's connection to land and landscape to careful explorations of the body's outer surfaces in terms of ritual, ascetic, and strictly sartorial concerns with adornment and fashion. We will also explore the fascinating interfaces between bodybuilding and nation building in India.

Course Note: No auditors will be permitted. Enrolled students must take the course for a letter grade.

Course ID: 225936

Introduction To The Hindu Calendar As A Lived Experience

2025 Fall (4 Credits)

MW 0300 PM - 0415 PM

Instructor Permission Required

Radha Blinderman

The purpose of this course is to acquaint someone completely new to the religious traditions of South Asia with Hinduism as a lived experience. It is meant to introduce students to ways of life that are informed by the most prominent sub-traditions of Hinduism today as they are reflected in the different versions of the Hindu calendar, also called Pañcāṅga or Pañjikā. Building on the history of different Hindu calendars, which consist of lunar dates (tithis), this course aims to give a broad overview of Hindu religious life as it revolves around festivals,

fasts, seasonal rituals and pilgrimages that comprise each version of the calendar. Students will begin this journey with the Lunar New Year of the Vikrama Samvat calendar, which coincides with the end of the Spring Festival of Nine Nights (Caitra Navarātri) dedicated to the feminine divine, Śakti. After exploring the many ways in which the same event is celebrated in different regions, students will progress through the calendar towards the end of the year, learning about other major Hindu festivals along the way. Because of the diversity of religious perspectives in the sub-traditions of Hinduism, often the same events on these lunar calendars are imbued with multiple meanings and celebrated in various ways, so this course will put a special emphasis on learning when and how religious events are tied to entirely different mythologies and theologies, and how that creates opportunities for pluralistic encounters. Furthermore, since not all traditions under the umbrella of 'Hinduism' agree on one New Year or one supreme deity, the course also delves into alternative New Year celebrations, the deities and mythologies honored by them, and the issues of caste reflected by them. Throughout the course, students will learn about the ways in which devotees structure their lives around sacred dates, such as the birthdays and anniversaries of their chosen deities of worship, as well as commemorations of other mythological events. In addition to this, they will gain a perspective on food, visual art, dance, and music as aspects of life regulated by the Hindu calendar. Finally, the course will highlight cross-religious experiences, as certain major festivals transcend religious boundaries and share a history with some non-Hindu festivals that coincide with them. Knowledge of Sanskrit, other South Asian languages, or prior background in South Asian religions is not required for this course.

Course Note: Must be taken for a letter grade. No auditors permitted.

SAS 109

Readings in Classical Tamil

W 0300 PM - 0545 PM

Martha Selby

This course will introduce students to classical forms of the Tamil language, through a graduated study of poetry. During this semester, we will read the Akattinaiyiyal, the chapter on poetic convention from the classical grammar Tolkappiyam. Students are required to have a minimum of two years of formal Tamil study (or equivalent)

Course Note: No auditors will be permitted. Enrolled students must take the course for a letter grade.

FAS Divisional Distribution: Arts and Humanities

SAS 110

Four Indian Epics

TR 0130 PM - 0245 PM

Martha Selby

This course will provide an introduction to the four epics of classical India, and will also include a detailed exploration of the forms that different epic narratives can take. We will begin with a study of the Ramayana and Mahabharata in their Sanskrit forms, and we will then branch off into retellings of these two epics in versions that have appeared over the centuries in the regional languages of India. The second half of the semester will be dedicated to close readings of the Tamil twin epics, Cilappatikaram and Manimekhalai. No auditors. Must be taken for a letter grade.

FAS Divisional Distribution: Arts and Humanities

SAS 111

Jaina and Hindu Perspectives on Selfish Desire and Selfless Love

MW 0300 PM - 0415 PM

Radha Blinderman

Is desire the same as love? Should one draw a distinction between the two? Is it an impediment to liberation? This course brings to light the overlapping and contrasting perspectives on "attachment" rāga, "desire" kāma, and "devotion" bhakti in the works of Hemacandra Sūri (13th cent. CE) and Jīva Gosvāmin (16th cent. CE), which were foundational for the Śvetāmbara Jaina and the Bengali Vaiṣṇava tradition respectively. After a preliminary overview of Jaina and Brahmanical approaches to kāma in general, the course will focus on translated primary sources, such as portions of Hemacandra's Triṣaṣṭīśālākāpuruṣacaritra and Jīva's Bhaktisandarbha and related works, while also delving into secondary literature to explore the growing presence

of bhakti as it is distinctively defined within each of these traditions No prior knowledge required. Must be taken for a letter grade.

SAS 172

Classical Indian Literature in Translation

TR 0130 PM - 0245 PM

Martha Selby

This course will provide you with a comprehensive overview of narrative literature and poetry composed in the three classical languages of India (Old Tamil, Sanskrit, and Prākṛit). We will begin with a survey of the languages of classical India and their literatures, and after a brief exploration of Vedic poetry, you will be introduced to the aesthetic conventions of the Sanskrit and Tamil literary worlds. First, we will examine rasa theory as it is spelled out in the Sanskrit Nāṭyaśāstra, and we will then move on to dhvani or "poetic resonance" as an analytical category described by the theoreticians Ānandavardhana and Abhinavagupta. We will then move on to the themes of land and landscape, which are typical of early Tamil poetry, paying special attention to poetic convention and generic taxonomies. This will give us the means to study poetry produced in India's classical period. In tandem with our explorations of literary convention, we will read a Sanskrit play, as well as a wide variety of poems from various collections from the Sanskrit and Prākṛit traditions. We will also read selections from the eight anthologies of classical Tamil that treat akam (romantic/erotic) and puram (heroic/ethical) themes. We will then move on to an exploration of epic and story literature from the Sanskrit and Tamil languages.

Course Note: No auditors will be permitted. Enrolled students must take the course for a letter grade.

SANSKRIT 102AR

Course ID: 114270
2025 Fall (4 Credits)

Intermediate Sanskrit I

MWF 1200 PM - 0115 PM

Parimal Patil

In the first two months of intermediate-level Sanskrit, students continue to develop foundational skills in reading comprehension and grammar analysis (alongside the supporting skills of writing, speaking, and listening). These include the recognition and formation of perfects, futures, gerundives, causatives, desideratives, and aorists. In addition to completing short assignments that refine these discrete skills, students interpret longer reading passages, including selections from the Rāmāyaṇa. The final month of the semester looks more like a traditional reading course. Using a dictionary to look up unfamiliar words, students read, analyze, and discuss the story of the encounter between Arjuna and Śiva in book 3 of the Sanskrit epic Mahābhārata. Students continue to read this story (and one of its poetic retellings, with commentary) in the spring semester. Overall, the intermediate-level Sanskrit course enables students to interpret Sanskrit texts in three major genres: epic, poetry, and scholarly prose. Students expand and strengthen the skills in reading comprehension, grammatical analysis, and vocabulary retention that they developed during the first year of study. Students will be able to dissect and describe nominal compounds, verbal forms, poetic meters, and morphological and syntactical features of Sanskrit words, sentences, and verses in greater detail. As a whole, the course prepares students to participate in Sanskrit language and reading courses at the advanced level. Most lessons involve collaborative work among students. No auditors will be permitted. Enrolled students must take the course for a letter grade. Please note that this course includes a required weekly review session with the Teaching Fellow at a time to be determined within the first two weeks of the semester.

Course Note: No auditors will be permitted. Enrolled students must take the course for a letter grade.

SANSKRIT 102BR**Intermediate Sanskrit II**

MW 1030 AM - 1230 PM

*Patrick Cummins*Course ID: 114395
2026 Spring (4 Credits)

Continuation of Sanskrit 102AR. In the spring semester of the Intermediate course, students learn advanced skills in syntax, morphology, compound analysis, and metrics. Students learn how to analyze *kṛt* and *taddhita* suffixes, recognize a variety of poetic meters, categorize and take apart compounds in greater detail, and determine the various senses in which *kāraṅkas* and *vibhaktis* are being used. In the final month of the course, students learn how to interpret commentarial and expository prose (*śāstra*). In addition to developing the discrete skills above, students read and discuss three different Sanskrit texts. We continue the story that we began in the fall semester—that of the encounter between Arjuna and Śiva in book 3 of the Sanskrit epic *Mahābhārata*. Then we study Bhāravi's *Kirātārjunīya*, a sixth-century *kāvya* (poetic) composition based on that epic story. Finally, students practice their commentary-reading skills by interpreting select portions of Mallinātha's *Ghaṇṭāpāṭha*, a fourteenth-century commentary on the *Kirātārjunīya*. Overall, the intermediate-level Sanskrit course enables students to interpret Sanskrit texts in three major genres: epic, poetry, and scholarly prose. Students expand and strengthen the skills in reading comprehension, grammatical analysis, and vocabulary retention that they developed during the first year of study. Students will be able to dissect and describe nominal compounds, verbal forms, poetic meters, and morphological and syntactical features of Sanskrit words, sentences, and verses in greater detail. As a whole, the course prepares students to participate in Sanskrit language and reading courses at the advanced level. Most lessons involve collaborative work among students. No auditors will be permitted. Enrolled students must take the course for a letter grade. Please note that this course includes a required weekly review session with the Teaching Fellow at a time to be determined within the first two weeks of the semester. Prerequisite: Sanskrit 102AR.

Course Note: No auditors will be permitted. Enrolled students must take the course for a letter grade.

SANSKRIT 200R**Advanced Philosophical Sanskrit**

TR 1030 AM - 1230 PM

*Patrick Cummins*Course ID: 113324
2025 Fall (4 Credits)

The central objective of this course is to enable students to analyze and interpret poetry (*kāvya*) in classical Sanskrit. Whether this is your first encounter with *kāvya* or the most recent of many, this course is here to help you practice and grow your skills as a reader. Most lessons involve students collaborating with their peers. What does it mean to "read" Sanskrit poetry? Depending on your experience with the language and the genre, these skills may involve: determining the grammatical and syntactic structures of a given verse; identifying the meter; noticing ambiguities in the text; registering new vocabulary; discussing themes and imagery; and considering technical aspects of literary ornamentation such as similes, metaphors, and other figures of speech. The course may involve some (limited, and supported) engagement with commentaries. Just as important, students will practice literary appreciation and criticism. We will discuss what makes a given composition beautiful, effective, insightful, and/or resonant. No auditors will be permitted. Enrolled students must take the course for a letter grade.

FAS Divisional Distribution: Arts and Humanities

FAS: Meets Foreign Lang Req: Sanskrit

SANSKRIT 201R**Advanced Literary Sanskrit**

TR 1030 AM - 1230 PM

*Patrick Cummins*Course ID: 121484
2026 Spring (4 Credits)

The central objective of this course is to enable students to analyze and interpret scholarly prose (*śāstra*) in

commentarial and expository styles. On a sentence- or paragraph level, students will explain the basic syntactical constructions and grammatical features of the (quite challenging!) texts they read. Along the way, students will develop the ability to recognize many of the conventions of scholastic Sanskrit. No matter which texts we decide to read, it's safe to say that students will have a good deal of practice working with abstract noun constructions. Students will strengthen their scholastic vocabularies in general; in addition to that, students will develop technical vocabularies related to the texts they read and the specific intellectual discipline(s) in which those texts are situated. On the level of the longer passage or indeed the text as a whole, students will be able to (at different points) summarize, describe in detail, and critique the ideas that are being communicated in the text. Many lessons will involve students collaborating with their peers. No auditors will be permitted. Enrolled students must take the course for a letter grade.

SANSKRIT 220

Nāgeśa on God's Linguistic Conventionalism

TR 1200 PM - 0115 PM

Radha Blinderman

Course ID: 226422

2025 Fall (4 Credits)

Often considered to be the last among influential new Pāṇinīya thinkers, Nāgeśa Bhaṭṭa does not only build on Bhartṛhari's non-dualism, but also accommodates the concept of an Īśvara within his own semantic theory. Unlike Kauṇḍa Bhaṭṭa, he also seeks to refute the old and new Naiyāyikas' position that Īśvara's desire is the basis for direct expression (śakti), which itself constitutes linguistic convention (saṅketa). By separating the two concepts, Nāgeśa carves out a unique space for Īśvara within a Pāṇinīya's philosophy of language, which otherwise was exclusively dominated by the concepts of Śabdabrahman and sphoṭa. This course will also focus on portions of the Dhātvartha chapter in Nāgeśa's larger version of the Mañjūṣā, where he connects the theory of action and deliberations on existence (sattā) with his concept of the world as an illusory transformation (vivarta) of Brahman. Requires at least two years of Sanskrit knowledge. No auditors. Must be taken for a letter grade

Richard Delacy

An Introduction to the modern standard form of the most widely spoken language in South Asia, Hindi-Urdu. Students are introduced to both writing systems: the Devanagari script of Hindi and the Nastaliq script of Urdu. The basic grammatical structures are presented and reinforced, and students are also exposed to the cultural and historical context in which Hindi-Urdu has existed over several centuries. The course also draws from the modern medium of film, in particular recent Bollywood songs, to reinforce structures and vocabulary. Students must complete both terms of this course (parts A and B) within the same academic year in order to receive credit.

Course Note: No auditors will be permitted. Enrolled students must take the course for a letter grade.

Intermediate Indonesian class develops conversational and presentational skills on familiar topics with some unexpected complications using a communicative approach to language learning based on student-centered activities. This level prepares students to use the language in organized ways and cope with various authentic texts. Advanced grammar and structure are taught and presented in real life contexts. As an important component of language learning, Various aspects of Indonesian culture are integrated into language instruction. No auditors will be permitted. Enrolled students must take the course for a letter grade

2025 Fall (4 Credits)

Instructor Permission Required

In Advanced Indonesian course, students will work to develop communication skills (interpretive, interpersonal, and presentational) on topics relating to community, public and personal interest. This course aims to prepare students to cope with unexpected complications as they deal with authentic texts and various communicative tasks, including describing or narrating complex situations and events. Students will also gain insights on Indonesian culture in the process of language learning. You will study both academic and non-academic texts, will engage in formal and informal discussion and writing, give presentations about Indonesian culture and society, and interview native speakers. No auditors will be permitted. Enrolled students must take the course for a letter grade

2025 Fall (4 Credits)

Elementary Tamil

MWF 0900 AM - 1015 AM

Jonathan Ripley

An interactive introduction to Tamil, the oldest of the Dravidian languages of South India with a literary tradition that spans millennia. It is designed for students with no previous background in Tamil and progressively introduces speaking, listening, reading and writing using textual and audio-visual materials. After taking the TAM 101 series, students will have a working knowledge of the fundamental grammatical structures necessary to navigate colloquial and literary modern Tamil and to begin reading older Tamil literature as well. No auditors will be permitted. Enrolled students must take the course for a letter grade.

Course Note: Not open to auditors.

Thai

THI 101A

Course ID: 107892
2025 Fall (4 Credits)

Introductory Thai I

TR 0130 PM - 0245 PM

Instructor Permission Required

Martha Selby

This course introduces the basic grammatical structures of modern Thai, enabling students to read and produce simple, standard prose as well as engage in basic conversation by the end of the first year. Thai is taught with a concern for the cultural context in which this language is spoken and written.

Course Note: Not open to auditors. Cannot be taken Pass/Fail.

Languages in the tutorial program are offered when there is demonstrated curricular or academic need on the part of the student, and when suitable instruction can be arranged. Please contact the department to learn more.

First Meeting times will be posted on the Department of South Asian Studies' website in shortly before the term begins: sas.fas.harvard.edu

This course is designed to equip learners of the basic skills in listening, reading, writing and speaking in Filipino, the national language of the Philippines. Along with vocabulary and basic grammar to facilitate language learning, this beginner's course will also include introduction to some concepts relevant to Philippine culture adding context to the linguistic inputs in the discussion. Utilizing a combination of communicative, functional-situational, and task-based instruction, this course will capacitate learners to express themselves in the target language and understand basic texts in familiar settings of family, school, and community. It will also help them participate in conversations relevant to daily lives or simple transactions. No auditors will be permitted. Enrolled students must take the course for a letter grade.

This course is designed to increase the communicative competency of the learners in Filipino, the national language of the Philippines. This aims to further develop the understanding of the students on the more complex sentence structures along with a range of texts relevant to Philippine culture, traditions, history, and other contemporary topics in the Filipino society. Building up on some basic skills acquired in the previous Filipino language courses or through exposure and experience as in the case of heritage learners, this course equips students in addressing daily needs with the use of the target language through a mix of communicative, content-based, task-based, and other relevant approaches. It also capacitates the students in participating in social transactions and in a variety of communicative situations ensuring that the language skills learned will be used for practical purposes. If an interested student has not yet taken a year of introductory Filipino class, a placement test administered by the instructor is needed before enrolling to ensure that the student meets the qualifications for the intermediate class. No auditors will be permitted. Enrolled students must take the course for a letter grade.

STAT 100

Introduction to Statistics and Data Science

MW 1030 AM - 1145 AM

James Xenakis, Julie Vu

Introduction to key ideas underlying statistical and quantitative reasoning, and the practice of data science.

Course topics include methods for organizing, summarizing and visualizing data; basics of probability; elements of study design; data ethics; parameter estimation and hypothesis testing in one- and two-sample problems; regression with one or more predictors; and basic analysis of categorical data. Students will learn a reproducible workflow for analyzing data in the statistics package R. No prior statistics or computing knowledge is assumed.

Course Note: Anti-Req: this course may not be taken for credit if STAT 102, STAT 104, STAT 111, STAT 139, STAT 149, or STAT 244 already complete.

This course requires students to choose timed sections during registration.

Introduction to Quantitative Methods for Economics

MW 0130 PM - 0245 PM

Kevin A. Rader

In a world where data is growing larger and more complex, it can be a challenge to turn an abundance of information into the knowledge from which sound decisions can be made. As a discipline, statistics aims to bridge the gap between knowledge and information. This course will motivate statistical methods through data analysis and visualization, in addition to discussing the underlying theory. We will discuss topics such as study design, descriptive statistics, probability, sampling distributions, hypothesis testing, linear regression, and Bayesian inference. A wide variety of applications from the economic and social sciences will be highlighted along with examples from biology, sports, politics, and more. Students with prior exposure to introductory statistics will find some overlap of material but be exposed to new applications and learn more advanced modeling techniques. This course makes use of the statistical programming language R, but no prior knowledge of computer science is required.

Course Note: Anti-Req: may not be taken for credit if STAT 100, STAT 102, STAT 111, STAT 139, STAT 149, or STAT 244 already complete.

Requires: Anti-Req: may not be taken for credit if STAT 111, STAT 139, STAT 149 or STAT 244 already complete.

2025 Fall (4 Credits)**Data Science 1: Introduction to Data Science**

MW 1030 AM - 1145 AM

Pavlos Protopapas, Kevin A. Rader

Data Science 1 is the first half of a one-year introduction to data science. The course will focus on the analysis of messy, real life data to perform predictions using statistical and machine learning methods. Material covered will integrate the five key facets of an investigation using data: (1) data collection - data wrangling, cleaning, and sampling to get a suitable data set; (2) data management - accessing data quickly and reliably; (3) exploratory data analysis - generating hypotheses and building intuition; (4) prediction or statistical learning; and (5) communication - summarizing results through visualization, stories, and interpretable summaries. Part one of a two part series. The curriculum for this course builds throughout the academic year. Students are strongly encouraged to enroll in both the fall and spring course within the same academic year.

Course Note: Only one of the following can be taken for credit: Stat 109a, Stat 121a, CS 109a, AC 209a.

Programming knowledge at the level of CS 50 or above, and statistics knowledge at the level of Stat 100 or above (Stat 110 recommended).

Requires: Not to be taken in addition to Computer Science 1090A or Applied Computation 209A.

STAT 109BCourse ID: 203102
2026 Spring (4 Credits)**Data Science 2: Advanced Topics in Data Science**

No meeting time listed

Pavlos Protopapas, Alex Young

Data Science 2 is the second half of a one-year introduction to data science. Building upon the material in Data Science 1, the course introduces advanced methods for statistical modeling, representation, and prediction. Topics include multiple deep learning architectures such as CNNs, RNNs, transformers, language models, autoencoders, and generative models as well as basic Bayesian methods, and unsupervised learning. Students are strongly encouraged to enroll in both the fall and spring course within the same academic year. Part two of a two-part series.

Course Note: Only one of the following can be taken for credit: Stat 109b, Stat 121b, CS 109b, AC 209b.

CS 109a, AC 209a, Stat 109a, or Stat 121a required.

Requires: Requisite: (Must take CS 1090A OR APCOMP 209A OR STAT 121A before taking STAT 109B) AND (Cannot take STAT 109B, if already taken STAT 121 OR CS 109B OR APCOMP 209B)

Full Year Course: Divisible Course

STAT 110

Introduction to Probability

TR 0130 PM - 0245 PM

Joseph Blitzstein

A comprehensive introduction to probability. Basics: sample spaces and events, conditional probability, and Bayes' Theorem. Univariate distributions: density functions, expectation and variance, Normal, t, Binomial, Negative Binomial, Poisson, Beta, and Gamma distributions. Multivariate distributions: joint and conditional distributions, independence, transformations, and Multivariate Normal. Limit laws: law of large numbers, central limit theorem. Markov chains: transition probabilities, stationary distributions, convergence.

Math 1b or equivalent or above

FAS Divisional Distribution: Science & Engineering & Applied Science

Course ID: 110766
2025 Fall (4 Credits)

STAT 111

Introduction to Statistical Inference

No meeting time listed

Joseph Blitzstein, Neil Shephard

Introduction to the principles and methods of statistical inference, as a framework for achieving the three main goals of statistics: describing data and a phenomenon of interest, predicting one variable using another variable, and drawing causal conclusions about the effect of one variable on another. Frequentist and Bayesian perspectives on model building, learning from data, and making decisions under uncertainty. A three-pronged approach is emphasized, combining theory, simulation, and data.

STAT 110

Quantitative Reasoning with Data: Yes

FAS Divisional Distribution: Science & Engineering & Applied Science

Course ID: 111036
2026 Spring (4 Credits)

STAT 117

Data Analysis in Modern Biostatistics

No meeting time listed

Giovanni Parmigiani

An Introduction to applied biostatistics via case studies. The course is based on a single large collection of gene expression data sets, which will be analyzed from many perspectives. Students will be engaged in two projects, class and canvas discussions and a final individual project.

Course Note: There is a cap of 30 students for this course. Preference is given to Statistics concentrators; all students wishing to take the course must send a request along with a list of statistics/computer science courses already completed to the professor at gp@jimmy.harvard.edu. Please put Stat 117 in the subject line of the email.

Prerequisites: Stat 110 and (AP Stat or 102 or 104) and 111 and 139. Recommended: 115

FAS Divisional Distribution: Science & Engineering & Applied Science

STAT 131 (1)

Introduction to Time Series & Prediction

No meeting time listed

Zheng Ke

Introduction to time series models and forecasting. Introduction to classical time series model: autoregressive, moving average, ARIMA models. Some concepts from stochastic processes: martingales, stationarity, Gaussian processes, Brownian motions, ergodic theorems. Some aspects of advanced time series: hidden Markov models, state space models, filtering, smoothing, Kalman filters, sequential Monte Carlo methods.

Course ID: 117131
2026 Spring (4 Credits)

Statistics 111 and 139 or equivalent.

Quantitative Reasoning with Data: Yes

STAT 139

Introduction to Linear Models

TR 1030 AM - 1145 AM

James Xenakis

An in-depth introduction to statistical methods with linear models and related methods. Topics include group comparisons (t-based methods, non-parametric methods, bootstrapping, analysis of variance), linear regression models and their extensions (ordinary least squares, ridge, LASSO, weighted least squares, multi-level models), model checking and refinement, model selection, cross-validation. The probabilistic basis of all methods will be emphasized.

Statistics 110 and Math 21a and 21b or equivalent (Math 21b can be taken concurrently). Statistics 111 and some familiarity with R are recommended.

FAS Divisional Distribution: Science & Engineering & Applied Science

Quantitative Reasoning with Data: Yes

STAT 143 (LEC)

Sports Analytics

No meeting time listed

Mark Glickman

Introduction to statistical approaches and methods for analyzing sports data. Students will be exposed to a variety of topics in sports analytics, including probability modeling of game outcomes for prediction and measuring ability, rating systems, valuing game states via Markovian analyses, optimal decision-making, tournament and league scheduling, streaks and the hot hand, and analysis of player tracking data. Emphasis will be on analyzing data and obtaining practical and interpretable results.

Prerequisites: Statistics 110, 111 and 139. Experience using R is required.

FAS Divisional Distribution: Science & Engineering & Applied Science

STAT 149

Introduction to Generalized Linear Models

No meeting time listed

Mark Glickman

Sequel to Statistics 139, emphasizing common methods for analyzing continuous non-normal and categorical data. Topics include logistic regression, log-linear models, multinomial logit models, proportional odds models for ordinal data, Gamma and inverse-Gaussian models, over-dispersion, analysis of deviance, model selection and criticism, model diagnostics, and an introduction to non-parametric regression methods.

Course Note: Examples will be drawn from several fields, particularly from biology and social sciences.

Statistics 139 or with permission of instructor.

Quantitative Reasoning with Data: Yes

2025 Fall (4 Credits)

outcomes we need to account for the fact that students are nested inside classes that are in turn nested inside schools. If we are watching students develop over time, we need to account for the dependence of measurements across time. If we do not, our inferences will tend to be overly optimistic and wrong. The course provides an overall framework, the multilevel and generalized multilevel (hierarchical) model, for thinking about and analyzing these forms of data. We will focus on specific versions of these tools for the most common forms of longitudinal and clustered data. This course will focus on applied work, using real data sets and the statistical software R. R will be specifically taught and supported. While the primary focus will be on the linear model with continuous outcomes (i.e., the classic regression framework) we will also discuss binary, categorical, and ordinal outcomes. We will emphasize how to think about the applicability of these methods, how they might fail, and what one might do to protect oneself in such circumstances. Applications of hierarchical (multi-level) models will include the canonical specific cases of random-slope, random-intercept, mixed effect, crossed effect, marginal, and growth-curve models.

Permission of instructor required. Prerequisite: S-052, Stat 139, or an equivalent. Jointly-offered in the Graduate School of Education.

Quantitative Reasoning with Data: Yes

FAS Divisional Distribution: Science & Engineering & Applied Science

STAT 171

Introduction to Stochastic Processes

Course ID: 113721
2026 Spring (4 Credits)

No meeting time listed

Subhabrata Sen

An introductory course in stochastic processes. Topics include Markov chains, branching processes, Poisson processes, birth and death processes, Brownian motion, martingales, introduction to stochastic integrals, and their applications.

Statistics 110 and Mathematics 21a and 21b, or equivalent

FAS Divisional Distribution: Science & Engineering & Applied Science

Statistics and Data Science of Networks

Course ID: 221694
2026 Spring (4 Credits)

No meeting time listed

Morgane Austern

An advanced undergraduate class that will explore how one can use statistics and machine learning to learn on graph and network data. This type of data is ubiquitous with examples that can be found in social studies, in biology, in economy, in chemistry etc. Examples of topics include: community detection, link prediction, node classification, graph embedding methods, graph models, stochastic block models, and fairness.

FAS Divisional Distribution: Science & Engineering & Applied Science

STAT 185

Introduction to Unsupervised Learning

Course ID: 213478
2025 Fall (4 Credits)

TR 1030 AM - 1145 AM

Alex Young

An introductory course in unsupervised learning with an emphasis on dimensionality reduction and clustering. Topics include principal component analysis, nonnegative matrix factorization, and spectral clustering. In this course we will study these techniques and others with a focus on high-dimensional geometry and insights provided by linear algebra. Numerous data example will be included throughout the course.

Required courses: STAT110; MATH 21a and 21b or equivalent. Basics of R programming and LaTeX are recommended

Requires: Prerequisite: STAT 110 AND MATH 21A AND MATH 21B

FAS Divisional Distribution: Science & Engineering & Applied Science

STAT 210

Course ID: 111696
2025 Fall (4 Credits)

Probability I

TR 1030 AM - 1145 AM

Joseph Blitzstein

Random variables, measure theory, reasoning by representation. Families of distributions: Multivariate Normal, conjugate, marginals, mixtures. Conditional distributions and expectation. Convergence, laws of large numbers, central limit theorems, and martingales.

Probability at the level of Stat 110, multivariable calculus, and linear algebra are required; real analysis at the level of Math 112 is recommended.

FAS Divisional Distribution: Science & Engineering & Applied Science

STAT 211

Course ID: 111130
2025 Fall (4 Credits)

Statistical Inference I

MW 0430 PM - 0545 PM

Morgane Austern

Foundations of frequentist and Bayesian inference, and decision theory. Likelihood, sufficiency, and ancillarity. Point estimation, unbiasedness, maximum likelihood, method of moments, minimum-variance. Parametric and non-parametric hypothesis testing, confidence intervals. Selective inference: multiple testing, familywise error rate, false discovery rate. Bayesian inference, conjugate priors, credible intervals. Admissibility, Stein's phenomenon, empirical Bayes. Time permitting: post-selection inference and the bootstrap.

Course Note: Formerly Stat 211a.

Required: Statistics 110 and 111 or equivalents. Recommended: comfort with proof-based math, especially real analysis (e.g., as provided by Stat 210).

FAS Divisional Distribution: Science & Engineering & Applied Science

STAT 212

Course ID: 156452
2026 Spring (4 Credits)

Probability II

No meeting time listed

Subhabrata Sen

A second graduate course in Probability: Advanced Martingales, Exchangeability and De-Finetti's Theorem, Brownian motion: construction, properties, path regularity, Strong Markov property, Ito formula, general theory for stochastic processes (existence, continuous modifications), concentration of measure and Stein method.

Course Note: Prerequisite: STAT 210

FAS Divisional Distribution: Science & Engineering & Applied Science

STAT 213

Course ID: 159802
2026 Spring (4 Credits)

Statistical Inference II

No meeting time listed

Pragya Sur

Stat 213 will build upon Stat 211, providing tools to study and validate statistical methods. A primary focus will be large-sample theory, specifically, inference for M- and Z- estimators under well-specified and mis-specified models, quadratic mean differentiability and its implications, local asymptotic analysis, contiguity, LeCam's lemmas, asymptotic analysis of tests including optimality, asymptotic normality of U-statistics, Bayesian large sample theory: consistency, Bernstein-von-Mises theorem; time and interest permitting, we will cover special topics in high-dimensional inference.

Stat 210, 211, 212 (Stat 210b)

FAS Divisional Distribution: Science & Engineering & Applied Science

Time Series

MW 1030 AM - 1145 AM

Neil Shephard

Time series centers around three main goals: describing data (e.g. seasonal adjustment, detrending), predicting future variables given the past data, and drawing causal conclusions about the effect of changing one variable on the future path of another. We will delve into principles and methods for all three of these goals. Due to the complexity of these problems, a three-pronged approach is often needed, combining theory, simulation, and data. Throughout problems from Economics and Finance will be used to illustrate time series methods. Likely topics covered include: martingales, theory of prediction, linear models and projection, control, reinforcement learning, causality (e.g. SVAR, local projection), hidden Markov models, stationarity and non-stationarity, spectral and wavelet methods.

Probability theory, Linear algebra, Multivariate Calculus, Statistical Inference.

FAS Divisional Distribution: Social Sciences

Linear and Generalized Linear Models

MW 0900 AM - 1015 AM

Mark Glickman

The theory and application of linear and generalized linear models, including linear models for normal responses, least-squares theory and inference, models for binary and multinomial data, log-linear models for count data, overdispersion and quasi-likelihood methods, model selection, and computational issues. Emphasizes the theory and development of methodology.

Strong statistics background required (at the second-year graduate level), Statistics 210 may be taken concurrently, Statistics 211 desirable.

FAS Divisional Distribution: Science & Engineering & Applied Science

Causal Inference with Applications

MW 0300 PM - 0415 PM

Kosuke Imai

Substantive questions in empirical scientific and policy research are often causal. Does voter outreach increase turnout? Are job training programs effective? Can a universal health insurance program improve people's health? This class will introduce students to both statistical theory and applications of causal inference.

As theoretical frameworks, we will discuss potential outcomes, causal graphs, randomization and model-based inference, sensitivity analysis, and partial identification. We will also cover various methodological tools including randomized experiments, regression discontinuity designs, matching, regression, instrumental variables, difference-in-differences, and dynamic causal models. The course will draw upon examples from political science, economics, education, public health, and other disciplines.

Stat 110, 111, and 139 or equivalent (probability, statistical theory, and linear models). Students who took Stat 186 in 2018 Fall and 2019 Fall should not enroll in this course.

FAS Divisional Distribution: Science & Engineering & Applied Science

Random High-Dimensional Optimization: Landscapes and Algorithmic Barriers

MW 0130 PM - 0245 PM

Mark Sellke

This course will focus on paradigmatic optimization problems with random objective functions. We will develop the tools needed to understand the geometric behavior of these complex random landscapes, and investigate how these behaviors are linked to the success and failure of efficient algorithms. Possible topics will include constraint satisfaction problems and spin glasses, the overlap gap property, critical point complexity, and implications for Markov chain sampling.

Required: STAT 210, STAT 212.

Stem Cell and Regenerative Biology

Stem Cell & Regenerative Biol

SCRB 10**Human Developmental and Regenerative Biology**

MWF 1200 PM - 0115 PM

William Anderson, Michael Segel

Fundamental concepts in developmental biology will be presented within the framework of the developing and regenerating mammal. Where possible, lectures will focus on humans.

Life and Physical Sciences A or Life Sciences 1a is required either prior to or concurrently with enrollment in SCRБ 10.

FAS Divisional Distribution: Science & Engineering & Applied Science

SCRB 50**Building a Human Body: From Gene to Cell to Organism**

MWF 1030 AM - 1145 AM

*Amie Holmes, Richard Lee, Jessica Whited, Jason Buenrostro, Jason Buenrostro*Course ID: 212882
2026 Spring (4 Credits)*Instructor Permission Required*

Through a series of lectures, application exercises and laboratory experiments, we will explore how the human body develops on a molecular level from gene to cell to organ. Ever wonder how you can make heart cells beat in a dish? Why can axolotls regenerate their limbs but humans cannot? How do neurites grow? Can we grow a brain in a cell culture dish? Come join us to discover the answers to these questions and more.

LS1a/LPSA is required; SCRБ 10 is recommended

SCRБ 91R**Introduction to Research***No meeting time listed**Amie Holmes*Course ID: 125804
2025 Fall (4 Credits)*Instructor Permission Required*

Laboratory Research for Honors Thesis

No meeting time listed

Amie Holmes

For honors candidates writing a thesis in Human Developmental and Regenerative Biology.

Course Note: Ordinarily may not be taken as a fifth course. Laboratory safety session required.

SCRB 99A is a required prerequisite.

Students intending to enroll in the fall are required to submit a written proposal to the Course Director. Students may enter the course at midyear only with the permission of the Course Director. The thesis proposal must be approved by the Course Director and Head Tutors prior to enrolling in SCRB 99.

Requires: Pre-requisite: SCRB 99A

FAS Divisional Distribution: Science & Engineering & Applied Science

SCRB 111

Course ID: 212688
2025 Fall (4 Credits)

Regeneration: Phenomena to Mechanisms

TR 0130 PM - 0245 PM

Jessica Whited

Multicellular organisms are all equipped with the ability to cope with injuries, but the extent to which they naturally replace entire missing structures varies greatly across species. This course will use both classical and current primary literature to explore the fascinating process of regeneration across phyla. Students will learn to distill questions into specific, key experiments; to design experiments with meaningful controls; and to use data to refine, reformulate, and develop new hypotheses. We will analyze both invertebrate and vertebrate examples from the animal kingdom. By the end of the course, students will be able to propose new experiments designed to illuminate outstanding questions in regenerative biology using modern techniques. Each student will lead a paper discussion once during the semester. The course will culminate in team-based projects focused on current topics in stem cell biology; these projects will be crafted over the course the semester with feedback from classmates and instructors. Projects will be created in collaboration with the Bok Center. The final products will be short videos that will be shared with the entire class, and we plan to feature them on a public-facing, NSF-supported website for students who grant us permission to do so.

Course Note: Students will be engaged in group work throughout the semester. As a final project, they will write and produce short videos centered on student-selected topics, and the course will culminate with a class-wide viewing event.

SCRB 10 or equivalent.

FAS Divisional Distribution: Science & Engineering & Applied Science

SCRB 120 (01)

Course ID: 220057
2026 Spring (4 Credits)

Biotech Ethics

MW 0130 PM - 0245 PM

This course examines the ethical challenges posed by technological advancements in healthcare and biotechnology, addressing their impact on personal ethical conduct and public policy-making. It begins with an introduction to key ethical theories and their application to biotech dilemmas. Students then analyze case studies, exploring real-world ethical issues faced by biomedical companies and research institutions, emphasizing the effects of emerging technologies on public health, individual rights, and social justice. The course concludes with students collaborating to create ethical frameworks for decision-making in biotech policy.

Course Note: Previous experience in biology and economics is helpful but not necessary.

May not be taken concurrently with Gov 1090. May not be taken for credit if Gov 1090 has already been taken. The course is open to both science and nonscience concentrators.

SCRB 135 (01)

Course ID: 218928
2026 Spring (4 Credits)

Reproductive Biology

MW 0900 AM - 1015 AM

Instructor Permission Required

Kara McKinley

This course focuses on the molecular and cellular basis for reproduction. We will learn about how the reproductive tracts develop and change over the lifespan and the processes that initiate and sustain the development of offspring. Topics include: the development of gametes; sex chromosomes; menstruation, pregnancy, and menopause; early development in natural and synthetic embryo systems; ethical considerations surrounding reproduction.

LS1a or LPSA, LS1b, SCRB 10, and SCRB 50 or MCB 60

SCRB 145

From Cells to Tissues, in Sickness and in Health

TR 1030 AM - 1145 AM

Ya-chieh Hsu

Course ID: 161207

2025 Fall (4 Credits)

Instructor Permission Required

Every cell is a part of a larger "community", working together to enable tissue function. This course will explore the principles of building complex tissues from cells. How do cells know what tissues to make and when to make them? How do cells communicate with one another? What diseases can arise when these principles go awry? How can we build tissues in the lab? In addition to lectures, students will engage deeply in primary literature.

One year of life sciences introductory sequence - either [LIFESCI 1A / LPS A and LIFESCI 1B] or LIFESCI 50; SCRB 10, SCRB 50 or MCB 60, or permission of the instructor.

FAS Divisional Distribution: Science & Engineering & Applied Science

SCRB 155

Epigenetics and Gene Regulation of Human Development and Disease

MWF 0300 PM - 0415 PM

Jason Buenrostro

Course ID: 126154

2026 Spring (4 Credits)

Are we destined to be our parents? In this course we will study topics in epigenetics and gene regulation to challenge some of Mendel's ideas on genetic inheritance. To do this, we will learn about the biochemical processes that control the expression of genes as cells change across human development, aging and disease. Together with genetics, we'll use science to discuss whether "nature or nurture" defines who we are. Finally, the human genome is huge, employing diverse mechanisms of epigenetic regulation, we'll learn about data rich experimental tools and work together to use computational methods to study epigenetic processes within cells

SCRB 157 (01)

A World of RNA: An RNA-centric view of life

TR 0130 PM - 0245 PM

Ryan Flynn

Course ID: 127565

2026 Spring (4 Credits)

Instructor Permission Required

RNA is one of the major biopolymers of life and may have indeed initiated life as we know it, yet much of the study of RNA is as a passive carrier of information. This course focuses on how RNA operates as a highly bioactive molecule in the natural world and how we leverage these activities for therapeutic benefit.

SCRB 164 (01)

Frontiers in Experimentation and Imaging

WF 0130 PM - 0415 PM

Fei Chen

Course ID: 220056

2025 Fall (4 Credits)

Instructor Permission Required

Frontiers in Experimental and Imaging is an interdisciplinary, laboratory-based course which seeks to explore the organization of cells and tissues using microscopy. Through a series of lectures, laboratory experiments, and student-designed research projects, students will learn experimental design, cutting edge methods (such as expansion microscopy), and data analysis. With microscopes in hand, we will venture from the fertilization of the zygote, to complex architecture of the brain, and to reversing the subcellular defects of aging. Join us for discovery and experimentation.

SCRB 167 (01)

Stem Cell Therapeutics: Exploring the Science and the Patient Experience

W 0900 AM - 1130 AM

Leonard Zon, David Breault

Course ID: 125200

2026 Spring (4 Credits)

Instructor Permission Required

Stem cells are the basis for tissue maintenance and repair, thus, are essential elements of normal organ and tissue physiology. Stem cells are also targets for disease processes and through transplantation are important therapeutic agents. This course will allow advanced undergraduates to explore how stem cells and tissue regeneration impact human disease pathogenesis and how stem cells might be exploited to advance new therapies for disease.

Life and Physical Sciences A or Life Sciences 1a; Life Sciences 1b; SCRB 10.

SCRB 177 (01)

Demystifying the Immune System

MW 1030 AM - 1145 AM

Ruth Franklin

Course ID: 217489

2025 Fall (4 Credits)

Instructor Permission Required

What happens during an infection? This course will follow the progression of an immune response while exploring the following questions: What is inflammation? How can it both protect us and contribute to disease? Which physiologic processes are regulated by immune cells? In addition to participation in lectures, discussions, and analysis of primary literature, each student will create an original piece of science communication to engage with the general public.

Course Note: Weekly section to be held during Friday lecture time.

SCRB 50 or MCB 60 or equivalent

FAS Divisional Distribution: Science & Engineering & Applied Science

SCRB 185

Brain Development, Risk of Mental Illness, and New Approaches to Treatment Development

TR 1200 PM - 0115 PM

Course ID: 222147

2026 Spring (4 Credits)

What is mental illness? How well can we distinguish illness from normal variation in cognition and behavior? Why in most cases do patients present with symptoms by age twenty? This course will explore mechanisms underlying neuropsychiatric disorders through the lens of autism spectrum disorder, which begins in early childhood, and schizophrenia, which begins during adolescence. In exploring vulnerability and pathogenesis, the course will weave together material that spans human genetics and environmental exposures, human brain development and neural circuit formation, and remodeling of brain circuits by experience. Given the complexity of the brain and its disorders and the limited access to living human brains, the course will also explore and evaluate our sources of knowledge, our model systems such as human brain organoid models, and our technologies such as brain-computer interfaces. The course will highlight experimental approaches poised to elucidate disease mechanisms and deliver much needed therapeutics for some of the most devastating pathologies of our time.

The Translational Science of Stem Cells: Present and Future

MW 0300 PM - 0415 PM

Lee Rubin

Information about the biology of stem cells and their uses in understanding and treating diseases -- particularly those that cannot be studied adequately in non-human model systems -- has increased enormously in the last decade. In this seminar/lecture course, students will learn about transplanting functional human cells (such as pancreatic beta cells or dopaminergic neurons) derived from pluripotent cells to treat disease. They will also discover how to use these cells to model diseases, such as neurodegenerative and cardiovascular diseases, with the goal of identifying more effective, possibly patient-specific, therapeutics. Students will hear about treatments, including small molecules (conventional medicines), whose therapeutic actions can be attributed to the regulation of tissue-specific stem cells that reside in key adult tissues including the bone marrow and brain, but, interestingly, not including the heart or pancreas. Finally, they will be exposed to relatively new work that demonstrates the possibility of creating new cells from old by using genetic methods to swap cell identities. A typical type of question that we will debate is: When should Parkinson's disease patients be treated with a drug to slow the death of neurons, with transplanted neurons made from pluripotent cells or with a viral vector that produces new neurons from existing glial cells in the brain? This course will highlight the theoretical, as well as the practical, aspects of drug development. How are therapies progressed from conception to patient (bench to bedside)? How can academic investigators commercialize research? Importantly, while this is a science course, not a health economics course, we intend to discuss ways of reducing drug costs. At the same time, we will introduce the new trend of treating rare (even N=1) genetic diseases and how this is or isn't accommodated within our existing healthcare framework. We believe that students with different backgrounds (biology, chemistry, engineering, business) and at different levels (undergraduate, graduate) can benefit from taking the course and will help enrich the discussions by providing different perspectives on topics that we'll cover. However, basic knowledge of cell and molecular biology will be needed to understand the course fully.

Course Note: Permission of the instructor is required to enroll for students who have not taken the courses below. Ability to work in a less structured environment will be essential, as will the ability to work with other students.

Frontiers in Therapeutics: Science of Health

MW 0130 PM - 0245 PM

Mark Fishman, Douglas Melton, Navid Ghaffari

We ask in this class how fundamental science can be harnessed to change human health. We explore fundamental biological pathways related to unsolved medical needs (such as addiction, pain, obesity, and schizophrenia), and think about how best to target these using a range of therapeutic approaches (such as chemicals, proteins, CRISPR, and gene therapy). Discussions are led by fundamental, medical, and biotechnological scientists. Students will learn to evaluate the credibility of proposed novel therapeutic opportunities.

Course Note: Prerequisites are Life and Physical Sciences A or Life Sciences 1a; Life Sciences 1b; MCB 60, SCRB 50, or permission of the instructor

SCRB 250QC (01)

Cell and Gene Therapies

R 1000 AM - 1130 AM

Fernando Camargo

Course ID: 226254
2025 Fall (2 Credits)

Cell and gene therapies are among the newest breakthroughs in health care that can address difficult-to-treat diseases with no other treatment options. This course covers the history, development, and implementation of cell and gene therapies. Class time will consist of guest lectures from Harvard faculty or industry experts, in addition to discussion on primary/secondary research articles, case studies, and/or popular press articles. Students will participate in a capstone group project that proposes a novel cell or gene therapy, based on an unmet clinical need with a clear gene/cell target. Evaluation for the capstone project will be based on oral presentations of the project and an individual written assignment.

Course Note: Undergraduates, MS/MBA in Biotechnology: Life Sciences, and HILS PhD students welcome.

Recommended Prep: Undergraduates: Life and Physical Sciences A or Life Sciences 1a; Life Sciences 1b; SCRB 10, SCRB 50, or MCB60.

SYSBIO 200
Introduction to Modern Systems Biology

TR 0300 PM - 0430 PM

Course ID: 116238
2025 Fall (4 Credits)

In this introductory graduate-level course, students will develop tools and follow canonical examples of understanding biological systems. We will focus on using the language of mathematics to clarify the problems to

be solved, and to approach their solution. We will use simple cases to start with, and then see how they play out in modern problems. We will cover emerging machine-learning methods to reverse-engineer dynamical systems, and connect stochastic biology to single cell analysis. In this introductory graduate-level course, students will develop tools and follow canonical examples of understanding biological systems. We will focus on using the language of mathematics to clarify the problems to be solved, and to approach their solution. We will use simple cases to start with, and then see how they play out in modern problems. We will cover emerging machine-learning methods to reverse-engineer dynamical systems, and connect stochastic biology to single cell analysis

Course Note: Students planning to take both quarter courses (SB303 and 304) must enroll in this as a half course on their study card as SysBio200 for now and in the future. Students who take one half of this quarter can NOT ever take the other half for credit.

Students who have no Python programming experience, or would like a refresher, are encouraged to take a Python programming workshop.

Science Communication: Presentation and Speaking Skills for Scientist

MWF 1000 AM - 1200 PM

Galit Lahav

Course ID: 220564
2026 Spring (2 Credits)

Instructor Permission Required

Communicating effectively is an essential scientific skill. Scientists with strong communication skills are better students, better teachers, and more persuasive advocates for science. The goals of this class are to get students comfortable presenting, teach skills essential for communicating ideas clearly, effectively and authentically. Students will learn how to communicate ideas in the context of problems relevant to their own research. Specifically, this class is designed to: Teach students how to develop and deliver effective oral presentations (with slides and chalk talks)· Get students to think about and cultivate on-stage personas · Increase comfort with controlling presentations while addressing interruptions and questions· Practice giving and receiving critical feedback· Cultivate a culture that embraces and nurtures diverse voices, styles and backgrounds. This course is taught in 6 sessions of 2hr each. Course time will be spent on hands-on exercises, interactive activities and group discussions, mostly aimed at getting feedback on assignments students complete outside of class.

The Lemann Program on Creativity and Entrepreneurs

Creativity and Entrepreneurshi

CE 10 (LEC)

StudioLab on Creativity and Entrepreneurship

W 0900 AM - 1145 AM

Course ID: 220632
2025 Fall (4 Credits)

Instructor Permission Required

Can we enact change to create a "better normal"? Using an interdisciplinary exploration of the liberal arts, CE 10 helps facilitate your development and application of transformative ideas to tackle today's societal challenges, such as racial injustice, climate change, and strained health and well-being. You will work to develop actionable solutions to pressing issues leveraging the UN Sustainable Development Goal (UN SDG) framework. You will learn to identify and holistically analyze a problem, work collaboratively to ideate and create an actionable approach, build an organizational strategy and business plan, network with experts to pressure-test your ideas, and persuasively communicate your ideas to build the requisite human capital and funding relationships to launch a venture. This class leverages activity-based learning, guest speaker workshops, and an active council of expert mentors to guide you through the design of your venture. This class counts towards your "Electives" graduation requirements. To enroll in the class, you must submit an application. Please visit the Canvas homepage for the application link and details. The classroom location can be found in the course syllabus, also available on the Canvas homepage.

CE 11

StudioLab on Creativity and Entrepreneurship

W 0900 AM - 1145 AM

Course ID: 220705
2026 Spring (4 Credits)

Instructor Permission Required

CE 11 is a 4-credit StudioLab designed for students with ventures and enterprises in the early stages of development with the goal of preparing to launch the venture/enterprise. The target student will have conceived and prototyped a solution to an intractable problem in an effort to create a "better normal" with social impact. Using an interdisciplinary exploration of the liberal arts, you will develop and apply transformative ideas to tackle today's societal challenges such as racial injustice, climate change, and strained health and well-being. You will work to execute your actionable solutions to pressing issues. You will learn to properly analyze your identified problem; work to collaboratively ideate and create an actionable plan of execution; build a scaling strategy and marketing plan; network with experts for fundraising advice; and persuasively communicate your venture to build the requisite human capital and funding relationships to launch your venture. This class will take advantage of activity-based learning, guest lecturers and speakers, and an active council of expert mentors to guide you through the launch of your venture. The term will culminate in a FounderCrush event where students will showcase their work and connect with others to move their projects along. This class counts towards your "Electives" graduation requirements. To enroll in the class, you must submit an application. Please visit the Canvas homepage for the application link and details. The classroom location can be found in the course syllabus, also available on the Canvas homepage.

Theater, Dance, and Media

Theater, Dance & Media

TDM CKR

Course ID: 205632
2025 Fall (4 Credits)

Introduction to Playwriting: Workshop

T 1200 PM - 0245 PM

Instructor Permission Required

Sam Marks

This workshop is an introduction to writing for the stage through intensive reading and in-depth written exercises. Each student will explore the fundamentals and possibilities of playwriting by generating short scripts and completing a one act play with an eye towards both experimental and traditional narrative styles. Readings will examine various ways of creating dramatic art and include work from contemporary playwrights such as Ayad Akhtar, Clare Barron, Aleshea Harris, Young Jean Lee, Taylor Mac, and Sanaz Toossi as well established work from Edward Albee, Caryl Churchill, Suzan Lori-Parks, and Harold Pinter.

Course Note: TDM CKR is the same course as ENGLISH CKR. Admission is based on submitted samples of writing. For information on specific application requirements, please see the English Department's Creative Writing web page.

This course satisfies the "Practical" requirement for TDM concentrators and Secondary Field students. Admission by application only. For information on specific application requirements and instructions, please see the full course listing on the English Department website. DEADLINE: for all Fall 2025 workshops, applications will open by March 24 and are due via Submittable by 11:59pm on Sunday, April 6. Students will be notified of admissions decisions by 5:00pm ET on Thursday, April 10, and must accept/claim their seats within 24 hours. Workshops will meet the first week of classes.

TDM 90BR

Course ID: 205031
2026 Spring (4 Credits)

Spring Production Studio: Making Horizontal Theater

M 0300 PM - 0545 PM

Instructor Permission Required

Spring Production Studio will be an original piece written by students in Making Horizontal Theater: Collaborative Playwriting and Songwriting Made from Interviews (TDM 195HT), offered in Fall 2025 by Visiting Lecturers Jay Stull and Ella Rose Chary. Students are not required to enroll in both TDM 195HT and TDM 90BR in order to participate in TDM 90BR; students can choose one or the other, or both. Further details about TDM 90BR and enrollment processes will be updated in Fall 2025.

Course Note: TDM production studios (TDM 90AR/BR/CR/DR) frame and involve participation in Theater, Dance & Media's professionally directed and designed productions. Additional evening rehearsals throughout the semester and final performances at the end of the semester are required; more details and schedule are on the Canvas course page.

Participation is limited to students involved with the production, either as performers or as members of the production team. Students who wish to be part of the production team should contact Artistic Producer James Stanley, jamesstanley@fas.harvard.edu.

2025 Fall (4 Credits)

Fall Dance Production Studio: Odd Couple: The Dancing Body in the Digital World

M 0300 PM - 0545 PM

Instructor Permission Required

Dance is the creative expression of bodies in space and time - a centuries old art form of immediacy and feeling. Interestingly, as our lives become more digitized and removed from IRL reality, dance has gained a "new life" in the virtual world, through videos on social media and streaming platforms. As stages are swapped for smartphones, what changes can be felt, for choreographers, performers and audiences? How are the experiences of attention, agency, effort, empathy, space and time different in both mediums? And perhaps most interestingly, what happens when the worlds collide, and video technology "invades" the physical stage? In this course, we will be examining these questions through an historical survey of dance in media, and direct embodied research, manifesting as weekly choreographic experiments. Starting from a place of no particular

presumed movement experience (ie. this class is equally for the ballet pro, breakdance influencer, and living room dancing queen) we will be investigating and inventing various methods of making, with and without technology. We will learn various techniques of capture (cameras) and display (monitors and projectors), which in turn will lead to experiments with incorporating video back into live performance. The culmination of the course will be an original multimedia public performance event, co-created with lecturers, Ali and Andy.

Course Note: Additional rehearsals are required as part of participation in this course. Full rehearsal schedule will be posted on Canvas.

All are welcome, no prior dance/movement background required.

This course satisfies the "Production Studio" requirement for TDM concentrators.

Please visit Canvas page for class calendar, rehearsal, tech+performance schedule. To enroll, complete Interest Form (on Canvas page) and submit petition in my.harvard. Anyone interested in exploring and experimenting with various methods of creating and performing dance is welcome. Prior dance experience, of any style and level is welcome, but not required. Ali Kenner Brodsky and Andy Russ have been artistic collaborators and producing partners for over a decade. Their shared interests in process and performance led them to be co-founders and co-directors of Motion State Arts based in Providence, RI, whose programming includes ScreenDance RoadShow, New England's only traveling dance film series, and Small Moves, Big Picture, an evening of live dancing on a tiny 4x4 foot stage, interwoven with dance films projected on a cinematic screen. They have taught at various academic institutions including Brown University, Roger Williams University, and Salve Regina University, and have been guest artists at Keene State University, Trinity College and Colby College.

TDM 91R

Course ID: 160980

Supervised Reading and Research

2025 Fall (4 Credits)

No meeting time listed

Instructor Permission Required

Laura Quinton

Supervised Reading and Research is a student-driven independent study advised by a faculty member on subjects of special interest that cannot be studied in courses currently offered by Harvard College. Students must submit a cover sheet (available on the TDM website) with a signature from the proposed faculty advisor along with a syllabus that includes an overview of the course, a schedule of materials covered at each meeting, and a description of assignments to be graded. The cover sheet and documents must be submitted to the DUS one week before the course registration deadline for the semester in which the student will take 91R. Thus, given prior term enrollment, the proposal must be submitted in the term before the student takes the course.

Course Note: Letter-graded only. TDM 91R is supervised by a member of TDM faculty member; however, the permission of the Director of Studies is required for these courses. May not be taken more than twice and only once for concentration credit.

Sophomore Tutorial: Foundational Concepts in Theater, Dance & Media

2026 Spring (4 Credits)

This course will introduce students to the fundamental issues in and methods of theatre and dance studies. We will engage a number of plays, essays, videos, and live performances to explore the potential of expressive forms, and ask, what can be experienced and known through performance and performing? In doing so, we will address key questions: What constitutes a theatrical event? What are its component parts? What is the relationship between written dramas, scripts, scores, and embodied performance on the stage and in everyday life? What responsibilities do the actors, dancers, directors, choreographers, designers and other members of the production team have to previous incarnation or to an author's expressed intentions? How does the spectator co-create the meaning of a given production? How does one situate performance historically and from a theoretical perspective? And how can performance become a critical tool to engage cultural, political, and philosophical issues? You will be encouraged to develop your ability to think about performance from many different perspectives and to defend your individual ideas with strong critical skills. Additionally, throughout the course of the semester we will define and demystify the complex terms that operate within this field. This course aims to give students a solid foundation to see, experience and think as performers, as artists, and as scholars of expressive behavior.

Course Note: Required of all, and limited to, concentrators.

This course satisfies the "Sophomore Tutorial" requirement for TDM concentrators.

Junior Tutorial

R 1200 PM - 0245 PM

James Stanley

Course ID: 160647

2025 Fall (4 Credits)

Instructor Permission Required

This course serves as a transition between the survey nature of the sophomore tutorial and the independent senior thesis in Theater, Dance & Media at Harvard. We engage with methods and forms of theater, dance and media which may provide inspiration for your future artistic and scholarly work. Our strategy is to identify a number of contemporary and historical performances and performance archives and critically consider how they might influence your evolving identity as an artist working in live media, dance, and performance. We will delve deeply into genres of arts practices that could help you to imagine a way forward in your own work. In doing so, the goal is to advance your transition into a professional life in theater, dance, and media, and the identify your key concerns (both artistic and pragmatic) regarding a professional practice. Throughout the semester we will discuss how your personal goals and concerns intersect with political, social, and individual contemporary preoccupations in those fields. This junior tutorial is designed to organize participants into a community of singular artist interlocutors who can also supportively engage with one another's projects. You will develop methods to articulate your own intentions and impulses with great specificity, offer appropriate feedback for the stage of development for your peer's projects, and acquire facility with terms of art in theater, dance & media. Our semester is oriented to gaining autonomy and independence in relation to your interests. For the first seven weeks of the semester, we will read and explore a number of topics and ideas regarding the development of a sustainable arts practice, all the while, developing a specific set of questions pertinent to each class member's interests in the concentration. At the end of the seven weeks, students will present (both in person and online) on a company or artist whose work you have been researching in depth (the options are outlined in week 7 of the syllabus). We then pivot to your topics brought up during the first half of the semester – in essence the class will be building and completing the syllabus for the last half of October and November and December, while discussing and workshopping the development of their thesis ideas.

Course Note: Required of all, and limited to, concentrators.

Embodied Dramaturgy

M 0300 PM - 0545 PM

Jeffrey Page

Theater and dance students will benefit from embodied dramaturgy by exploring how language, tone and physical action enlarge implicit and explicit themes. Students will analyze text through close readings and discuss the various aspects of its sociopolitical ramifications, and how those ideas are embodied in choreographic and gestural structures. Core to this course is the pairing of black playwrights with an embodied analysis to uplifting and clarifying creative and confrontational power.

Course Note: This course satisfies the "Critical" requirement for TDM concentrators and Secondary Field students.

Beginning Acting Through Scene Study and Monologue Work

HARVARD UNIVERSITY 1771 of 1792

Course ID: 207571

2025 Fall (4 Credits)

Marcus Stern

This is a beginning acting class designed both for students who have had no previous acting, performance, or any arts class experience, as well as for students who have had a fair amount of acting experience and are interested in pursuing a career in acting. The focus is on scene and monologue work using contemporary texts from theater, television and film. Core components of the class include the idea of navigating a situation as you actually would in real life, how to read a scene or monologue to figure out what your character might want from a situation, and "action-based acting" (how a person might go about getting what they want from the other person). We've designed the class around very tangible and concrete ideas and techniques, so that those who might be intimidated by the idea of an acting class, or an arts class in general, will feel exceedingly comfortable. We always have a lot of students from non-art concentrations who have had no previous art class experience. It is important to note that while the class is intentionally designed to be unthreatening, friendly and warm, the class does require a great deal of outside work. Students should expect to spend 4-6 hours per week outside of class.

Course Note: For those interested in taking the course, please submit a short (approximately) 2-3-minute Introduction Video by Monday, April 8th at 5pm. Students will be notified of their status by Thursday, April 11 at 5pm. More details about the submission process is on the Canvas course site.

This course satisfies the "Practical" requirement for TDM concentrators and Secondary Field students. For enrollment information/deadlines and course details, visit Canvas course page.

Acting Alone: The Monologue

2026 Spring (4 Credits)

No meeting time listed

Instructor Permission Required

Remo Airaldi

This course will focus on the selection, rehearsal and performance of monologues. The ability to work on a monologue--whether in the context of a play, film or as an audition piece-- is a foundational skill for all actors. We will explore various techniques to allow greater emotional, vocal and physical expressiveness in both classical and contemporary material. We'll study specific approaches to help students "act alone" creatively, honestly, and spontaneously. Students will also work on the presentation of a monologue in the context of an audition and will learn to create an effective self-tape.

Course Note: Enrollment determined by short interview/audition.

This course satisfies the "Practical" requirement for TDM concentrators and Secondary Field students.

Introduction to Voice and Speech

2025 Fall (4 Credits)

TR 1030 AM - 1145 AM

Instructor Permission Required

Erika Bailey

Whether one is performing in a play, pitching an idea, presenting research, or leading a group, the ability to use one's voice effectively is vital to the success of the performance. A resonant and varied voice enriches communication in any medium. Using several major techniques of voice training from the field of acting, students will learn the possibilities, nuances, and power of the human voice. We will explore how different modes of breathing and resonance impact effective communication. We will also explore voice and identity through discussion of regionalisms, gender and voice, and code shifting. Preference is given to Theater, Dance, and Media concentrators, but students with no previous voice or theater experience are welcome in this class.

Course Note: Admission to the course will be based on a short interviews. Please visit the class Canvas site for more details.

This course satisfies the "Practical" requirement for TDM concentrators and Secondary Field students. For enrollment information/deadlines and course details, visit Canvas course page.

Voice, Text, and the Performer

2026 Spring (4 Credits)

TR 1030 AM - 1145 AM

Instructor Permission Required

Erika Bailey

For students interested in working in theater, film, and television, this course applies advanced voice and speech skills to plays and other text written in heightened language. Building on foundational skills of breath release, resonance, and articulation, this class will integrate these skills with active and imaginative use of language structures in dramatic literature. We will investigate poetry and monologues by Euripides, Langston Hughes, Kate Hamill, George Bernard Shaw, Federico Garcia Loraa, William Shakespeare, among others. In parallel with the exploration of voice and language, we will examine different mediums in which actors might perform these texts, in outdoor performance venues, proscenium theaters, and in small spaces in front of cameras. We will experiment with the changing demands on our voices in these changing relationships with space and audience.

Course Note: TDM 119 or the equivalent is a suggested pre-requisite.

Enrollment will be determined by short interviews during registration period. Please visit the class Canvas site for more details.

This course satisfies the "Practical" requirement for TDM concentrators and Secondary Field students.

What's so Funny?: Introduction to Improvisational Comedy

2025 Fall (4 Credits)

T 0300 PM - 0545 PM

Instructor Permission Required

Remo Airaldi

Comedy has often been thought of as the poor relation to Drama but, as Lenny Bruce said, "the only honest art form is comedy because you can't fake it." We will attempt to take comedy seriously by engaging in committed, creative and collaborative "play" that will tap into each student's personal, individual sense of humor. The class will focus on the basics of improvisation: group games, narrative skills, object work, offers, spontaneity, agreement, using the space around you, building on-stage relationships and, eventually, scene work.

Course Note: Visit the Canvas course page for enrollment information and deadlines.

For enrollment information/deadlines and course details, visit Canvas course page. Auditions will take place on Thursday, 4/10 from 3 to 5pm and Friday, 4/11 from 2 to 4pm. Please visit Canvas page for details.

TDM 121K

Course ID: 215995

Ballet, Past and Present

2026 Spring (4 Credits)

No meeting time listed

This course explores the history of ballet, classical and beyond. We will view and discuss ballets to help us think about what ballet is, and why it has been such an enduring art form in different eras and cultures. Why is it mute and does it have to be? What kind of stories can it tell and how should we read them? How do ballets survive and how do they change in the process? Who makes a ballet: a choreographer or dancers? Or is it, perhaps, a composer, designer, or story writer? Does ballet technique confine the body, as the pioneers of modern dance used to assert, or is it a form of idealist philosophy, the ultimate expression of human freedom, as twentieth-century theorists of ballet have suggested? The works to be studied include *Giselle*, *Sleeping Beauty*, *Swan Lake*, *Rite of Spring*, *Les Noces*, *Apollo*, and others. The course is classroom-only (no dancing component; only watching, reading, and discussing) but, if pandemics permit, will also include a visit to the theater as well as to a ballet class and, possibly, rehearsals. No pre-requisites.

Course Note: This course satisfies the "Critical" requirement for TDM concentrators and Secondary Field students.

FAS Divisional Distribution: Arts and Humanities

TDM 121MV

Physical Approaches to Acting and Storytelling

M 1200 PM - 0245 PM

Peter Simpson

Course ID: 223829

2025 Fall (4 Credits)

Instructor Permission Required

This course will focus on introductory principles and practices of performative and material-generative movement. We will explore movement techniques foundational to: creating characters; generating scripts and narratives; economizing and grounding stage presence; fostering ensemble cohesion; sensitizing the body to its unique capabilities of expression. Utilizing principles from Richard Maxwell, James Donlon, Charlie Oates, Anne Bogart, Blue Man Group and other ensembles/artists, we will attempt to anatomize an idealized 'neutrality', investigating the meaning and application of physical/environmental 'neutrality' on stage. We will identify the roles personal idiosyncrasy and 'disfluency' can play in the pursuit of that neutrality, and the opportunities and challenges they present to the performer. We will investigate rudimentary components of story, uncovering along the way the most essential markers for perceiving story, emotion and thought in physical performance. We will explore the beginnings of creating character and story through gradual stages using both non-verbal and text-based story (solo body, body in relationship to object, bodies in interrelationship w/ each other). In the latter part of the semester, we will experiment with stylistic schools of physical performance, including mime, Blue Man Group, Charlie Oates sculpture work, clowning/acrobatics and Viewpoints, and will also investigate ensemble cohesion and material generation through games and improvisation. Throughout the semester's explorations, we will also develop basic familiarity with simple yoga flow sequences, Taoist tai chi and other body practices geared toward conditioning/lengthening/ strengthening the physical instrument. The class will be both rigorously physical and dialectical, will include several short solo and ensemble performance pieces throughout the semester and will culminate in both a full-ensemble long form piece, as well as short individual pieces.

Course Note: No prior acting/performance experience is necessary for this class! The class can become quite physical, so appropriate dress is strongly recommended (as is prior communication about any physical issues/pain that would effect your ability to move comfortably; alternatives to assigned movements that may cause issues can always be offered).

This course satisfies the "Practical" requirement for TDM concentrators and Secondary Field students.

TDM 122GM

Generative Movement

M 1200 PM - 0245 PM

Peter Simpson

Course ID: 224657

2026 Spring (4 Credits)

Instructor Permission Required

This course is a continuation of "Physical Approaches to Acting and Storytelling." Focus will continue to be on principles and practices of performative movement as it expands to include a compact survey of the global ritual underpinnings of movement performance (from the paleolithic era to present). Basic techniques will be introduced from selected performance traditions from Sanskrit, Kabuki, Kathakali theater traditions to Butoh dance, Grotowski's movement lab, Scott Graham's "Frantic Method" and Joshua Fried's headphone work. We will discuss how material may be generated through these performance methods (and will engage parallel discussion about the ethics of using quoted movement from cultural ritual and performance traditions). We will both investigate and physicalize the practices and methods of devised theater from the early 20th century to present (with a particular focus on the Dada and Futurist movements of 1910's-20's, as well as on the methods

of Bertolt Brecht). Short Futurist and Dadaist scripts will be analyzed and performed as spoken text becomes more prevalent in composing classwork. Students will write a short paper on three generative techniques covered in class and will research--or create--a fourth generative technique (from any art form) and present/discuss briefly in class (and possibly physicalize, depending on the nature of the technique). Utilizing deeper levels of Viewpoints work, Richard Maxwell and BMG's 6-Archeypye Wheel, the Frantic Method and contact improvisation we'll explore more complex qualities of character, identity, archetype, mannerism, linguistic disfluencies (verbal and non-verbal) and psychological subtext. We will shortly immerse in the world of comedy improv w/ a series of games and exercises designed to deepen intuitive 'play' impulses, deepen ensemble cohesiveness and provide more methods for material generation. We will also briefly explore Rasa Boxes as an improvisational tool. Daily class time will often involve some sort of performance or improvisation by individuals or assigned small groups, culminating in final performance projects at the end of the semester. Along the way, we will continue practice of simple yoga flow sequences, Taoist tai chi and other body practices geared toward conditioning/lengthening/ strengthening the physical instrument. The class will be both rigorously physical and dialogic...and often fun!

Course Note: No prior performance/acting/movement experience is necessary, though it is strongly encouraged to take the "Physical Approaches to Acting and Storytelling" (TDM 121MV) class first to set foundations for the vocabularies and concepts of this class.

This course satisfies the "Practical" requirement for TDM concentrators and Secondary Field students.

TDM 128MT

Mask Theater: Performing and Designing

M 1200 PM - 0245 PM

Kate Brehm

Course ID: 224396

2025 Fall (4 Credits)

Instructor Permission Required

The mask conceals as it reveals. This course explores the practical application of masks in theater performance for actors and puppeteers. Divided between mask construction and physical explorations, the course guides students through sculpting and rendering three separate masks, which are utilized in classroom performance exercises across the semester. Students study neutral mask, character mask, the counter mask, and complex character masks as it applies to acting without a mask. Object masks and full body creatures then take students into the realm of puppetry and mask theater where symbolic figures onstage offer opportunities for metaphor and distance from the particular. In the first half of the semester students build life masks and complex character masks in the workshop. Between these mask-making sessions, we practice physical technique. To begin, students study body isolations and expressive gesture for heightened kinesthetic awareness and movement analysis. Neutral mask work utilizes imaging and visualization techniques for identification with the four elements. Work with larval masks, life masks, and simple character masks takes us to midterm. Students present their completed complex character masks in a short performance as their midterm. In the second half of the semester we explore abstract 'creature' masks in ensemble scenes and encounters with objects. For the final, newly crafted masked creatures encounter the real world in an improvisation that moves across Harvard Yard. A supportive and collaborative culture is encouraged in the classroom to foster effective feedback among students who will work closely with one another.

Course Note: Visit the Canvas course page for enrollment information and deadlines.

This course satisfies the "Practical" requirement for TDM concentrators and Secondary Field students.

Before enrolling, please send answers to the below questions to kbrehm[at]fas.harvard.edu and select to enroll in the course on my.harvard. I will reach out over email. Please be on the lookout for that email. I will approve your spot in the course after a short email exchange. 1. What is your background in performance? 2. Why do you want to take this class? What are you hoping to get out of it? Does it fulfill a requirement for you? Course format: Most classes are similar in format to a dance class. Students stretch and warm up before participating in physical theater exercises and improvisations in masks. A select number of sessions are held in the workshop of Farkas Hall where we will work with clay, plaster, paper maché, and paint to fabricate our masks.

FAS Divisional Distribution: Arts and Humanities

TDM 129B

Performing Puppetry: Bringing Objects to Life

No meeting time listed

Kate Brehm

Course ID: 212802

2026 Spring (4 Credits)

Instructor Permission Required

This laboratory movement course teaches performers how to animate puppets and objects. Students develop a movement skillset different from that of the actor or dancer, specific to the puppeteer. While training students' bodies, the course expands their minds' ability to recognize the potential for liveness in all things and generate story without words. We work with simple objects, solo tabletop puppets, giant ensemble puppets, and bunraku-style dolls. Similar in format to a dance class, students begin each day with movement exercises training specific

puppeteer skills: manipulating energy inside and outside the body; harnessing momentum and suspension; moving body appendages separately from one another; and performing 'invisibly.' Exercises lead into improvisations. Students learn to devise original dramatic material with patterns and movement dynamics in every class. We begin with non-anthropomorphic, simple objects like spheres and sticks, followed by materials that can spontaneously transform into creatures, like newspaper. At midterm, students each devise a solo scene with a tabletop puppet, figurative or otherwise. The foundation movement skills provide a common vocabulary for giving and receiving feedback. This trains students' eyes for analysis and offers a path forward for revising their performances. The second half of the course focuses on multi-operator puppets where leading and creative following is key. Students learn to perform in a group, attend to all action onstage, and, in improvisation, react with the best choice for the whole. With bunraku-style puppets, we study how to convey a sense of gravity, the mechanics of puppet walking and running, puppeteer choreography, and what makes a puppet appear to think and feel. Movement work is supplemented with short readings that engender a conversation on the nature of puppets. What is or isn't a puppet and why? Who is the puppeteer within a scene? How can this unique relationship dynamically change to support the storytelling? How does the inanimate nature of a puppet inspire choreography as well as thematic content? What is a puppet stage and how is it central to story and liveness? The final project is a group scene performed for a live audience during reading week. Homework includes practice videos, rehearsals, short readings, viewings, and journal entries.

Directing

T 1200 PM - 0245 PM

Marcus Stern

Course ID: 123080

2025 Fall (4 Credits)

Instructor Permission Required

This is a directing class for students with no directing or any art class experience, as well as students who have a fair amount of directing experience and are interested in a career of directing in theater, or for television, film or online content. It's a class about the enjoyable process of creating and presenting stories. The emphasis is on telling stories that the student has some kind of personal connection to. The course helps students define for themselves what kinds of stories they might want to tell, then helps them figure out what the important story points are, and how to make that story impactful. Over the course of the semester each student directs 3 very short pieces (1-3 minutes) and then 3 longer pieces (5-8 minutes). Each student will make at least one of the three very short pieces a recorded and edited video, and one a live theater event. After that, for the rest of the semester, students can either choose to do all video work, all live work, or switch back and forth. Students may direct any type of material that is of interest to them, including writing their own stories if they'd like. Students will often choose to write their own stories to more closely reflect their lives and personal interests. The students create these stories outside of class (shooting and editing video or rehearsing with friends to create a story performed live). We watch all the stories together as a class, and then offer our thoughts based on trying to help each director refine the story they are trying to tell. No previous live theater or video experience is needed for this course. Students will use free video editing software to create their video work, and we provide links that help each student get a quick handle on basic video editing techniques. While we'll look at some ways that the camera and editing are used in the storytelling, this is not a technical film making class – no instructions on how to use a camera or edit is offered. Most students use their phones to record their videos. It's a very safe, relaxed and warm environment, but the class does require a great deal of work outside of class. Students should expect to spend 4-6 hours per week on their story making. Students' grades are only based on their individual effort and not in comparison to the work of other students in the class.

Course Note: Visit the Canvas course page for enrollment/application information and deadlines.

This course satisfies the "Practical" requirement for TDM concentrators and Secondary Field students.

The Actor / Director Collaboration

No meeting time listed

Brisa Areli Munoz

Course ID: 226754

2026 Spring (4 Credits)

Instructor Permission Required

In The Actor/Director Collaboration, Brisa Areli Muñoz will guide students through the dynamic relationship between actors and directors in both scripted and collaboratively created theater. Drawing from her extensive experience working with artistic professionals and non-professionals across sectors, as well as international collaborators, Brisa will create a space where students can explore the liberating potential of collaboration in all types of performance. Focusing on creative risk-taking and collective creation, students will engage in exercises

and rehearsals that examine how trust, communication, and flexibility build the solid foundations for a strong working relationship between actor and director. Throughout the course, students will learn how to navigate the process of bringing both written scripts and collaborative work to life. By the end of the semester, students will have a deeper understanding of how collaboration shapes the creation of theater and strengthens the work between director and performer.

Course Note: This course is open to all students, whether you're an artist or come from a different concentration and are simply eager to explore collaborative tools. No prior experience in theater is required—just a curiosity to learn how to work creatively and effectively with others. Whether you're looking to deepen your artistic practice or develop new skills for teamwork and communication in any field, this course offers valuable insights into the collaborative process.

This course satisfies the "Practical" requirement for TDM concentrators and Secondary Field students.

Dance Lineages

T 1245 PM - 0245 PM

Laura Quinton

Choreographers at the forefront of dance in the United States today keep returning to dance history and the past in order to create new work. In this course, we will explore how a wide range of contemporary choreographers are building on, rejecting, and transforming the formal techniques, concepts and ideas, and social and political projects of dance artists who came before them. How are today's choreographers using history to generate art that poses new questions, tests the boundaries of dance and performance, and resonates with audiences now? Each week, we will study the work of a contemporary choreographer side-by-side with that of a major figure in dance history who influenced them. Traversing a range of styles, we will learn about these artists' biographies, creative projects, and broader cultural contexts, and consider how they are in conversation across time and space. Examining dance films, images, memoirs, interviews with artists, and live performances, we will practice describing and analyzing movement as scholars and critics. Artists will include Justin Peck and Jerome Robbins, Jamar Roberts and Alvin Ailey, Pam Tanowitz and Merce Cunningham, Ayodele Casel and Juanita Pitts, and more.

Course Note: No prior experience with dance is necessary to enroll.

This course satisfies the "Critical" requirement for TDM concentrators and Secondary Field students.

TDM 141BD

Boston Goes Dancing

T 1245 PM - 0245 PM

Laura Quinton

Today, the city of Boston is pulsing with dance: from drag shows at Jacques Cabaret to ballets at the Opera House to salsa, samba, West African, and Bollywood classes in Cambridge. This course offers an introduction to studying and researching the wide range of dance styles that animate Boston's cultural life as well as the history of dance in our city and its influence beyond it. We will learn about major dance figures who passed through Boston's universities – among them the choreographers Gus Solomons Jr. (MIT) and Donald Byrd (Tufts), and the co-founder of New York City Ballet, Lincoln Kirstein (Harvard) – as well as how organizations such as the Institute of Contemporary Art have invited artists to test the boundaries of dance and visual arts. Further, we will examine how the city's LGBTQ+ communities and immigrant groups have used theatrical and social dancing to foster belonging and battle cultural exclusion. This is a seminar-style, discussion-based course. We will analyze a range of primary sources (dance films, photographs, reviews, interviews with artists, and more) and read essays by dance theorists as well as cultural histories of Boston to contextualize our observations and arguments.

Course ID: 226435

2025 Fall (4 Credits)

Instructor Permission Required

Additionally, we will meet with local artists and arts administrators and venture outside the classroom to see performances and historic sites. For the capstone final project, students will have the option to write an extended research paper or curate their own Boston dance festival. No prior experience with dance is necessary to enroll.

Course Note: This course satisfies the "Critical" requirement for TDM concentrators and Secondary Field students.

TDM 143

GAGA Movement

W 1245 PM - 0245 PM

Course ID: 204031

2025 Fall (4 Credits)

Instructor Permission Required

GAGA classes are predicated on a deep activation of the body and physical sensations. Instructions are deployed to increase awareness of and further amplify sensation, and rather than turning from one prompt to another, information is layered, building into a multisensory, physically challenging experience. While many instructions are imbued with rich imagery, the research of Gaga is fundamentally physical, insisting on a specific process of embodiment. Inside this shared research, the improvisational nature of Gaga's explorations invites movers to develop deeper connections with their own movement, both inside of, and beyond, the studio. The research of Gaga is in a continual process of evolution; classes vary and develop accordingly. Gaga classes at TDM will reflect the needs and wishes of movers present in the space.

Course Note: Late entry is not permitted. Mirrors are covered for these sessions. No background in dance techniques or Gaga is required. All are welcome.

This course satisfies the "Practical" requirement for TDM concentrators and Secondary Field students.

TDM 148P

Koteba: Bamana Performative Traditions

M 1200 PM - 0245 PM

Jeffrey Page

Course ID: 217582

2026 Spring (4 Credits)

Instructor Permission Required

The origin of blues music—and therefore gospel, jazz, and hip-hop—has been traced directly to Mali, West Africa. Within Malian ideology, dance is a culture and there is no separation between dance and theatrical practice. Koteba is a masquerade performance tradition that utilizes the theatrical elements of satire to comment on and confront civic injustices within the Bamana ethnic society. Koteba is a word that means "big snail" in the Bamana language, and like the snail, it carries the ideologies and cosmologies of the Bamana people on its back. There are nearly 20 rhythm and movement stylings situated within Koteba. In a multiday festival, these dances are traditionally performed in succession, and often executed with the dancers forming concentric circles, which gives this theater tradition its snail-like name. Traces of this masquerade tradition can be found throughout the Caribbean and the United States in the form of Carnival and Mardi Gras. This class will focus on unpacking four of the dance and rhythm stylings over the course of 12 weeks: (1) Forokotoba, (2) Tansole, and (3) Bara/Baradong. The traditions of Noh drama, Sanskrit theater, and Greek tragedy have informed the development of American dance and theatrical forms, and similarly, a deep investigation of Koteba masquerade performance traditions will offer students of theater and dance informative tools as theorists, practitioners and historians.

Course Note: Visit the Canvas course page for enrollment information and deadlines.

This course satisfies the "Practical" requirement for TDM concentrators and Secondary Field students.

TDM 150

Directorial Concepts and Set Design of the 20th and 21st Centuries

M 1200 PM - 0245 PM

Julia Smeliansky

Course ID: 110319

2025 Fall (4 Credits)

Instructor Permission Required

What are the similarities between Las Vegas pop diva concert design and performances at the Theater of Dionysus in 5th Century BCE Athens? How do theater architecture and design reflect changes in society? What is the process of designing an opera or a musical? This course will introduce students to some of the most influential 20th and 21st-century directors, designers, and performance artists. We will explore a range of artistic

movements that cross-pollinated the visual arts and theater over the past century and trace the artistic heritage of current theatrical experiments to their avant-garde roots. Examining how meaning in the theater is derived not only from a text but also from spatial composition, light, and overall design concepts, we will study a variety of approaches to storytelling in theater, dance, and opera. Working with primary sources in the Harvard Theatre Collection, students will develop and present short creative projects based on a wide range of theatrical texts. Students will also meet with guest artists to engage in a dialogue about contemporary design practices.

Course Note: Visit the Canvas course page for enrollment information and deadlines.

No background in theater design or directing is necessary to participate in this course. Love for theater, visual arts, and creative spirit are required.

This course satisfies the "Critical" requirement for TDM concentrators and Secondary Field students.

TDM 150VT

Your Responsive Eye: Visual Thinking and Creation for Theatremakers

T 0300 PM - 0545 PM

Jeff Adelberg

This course is about seeing and making, because theatre, dance, and media artists of all kinds must think visually with the same depth and precision they bring to text, story, and music. We begin by examining how the eye and brain interact—how we perceive, process, and assign meaning to visual information. From there, we will develop a rich vocabulary of visual design concepts, exploring how form and content shape attention, emotion, and narrative. On stage, the visual world must be treated as an active force in storytelling, as essential as the play itself. Through analysis, discussion, and hands-on exploration, we will train our responsive eye to see more deeply and create with intentionality. Drawing from nature, visual arts, media, architecture, everyday experience, and our individual and collective imaginations, we will compose striking, meaningful visuals and explore how they might evolve into theatrical environments. Scenery, costumes, light, projections/video, and movement will all be considered. By the end of the course, students will have developed a nuanced visual vocabulary, enabling them to craft onstage worlds where form and meaning converge to create striking, evocative experiences.

Course Note: This course satisfies the "Practical" requirement for TDM concentrators and Secondary Field students.

Course is open to all. For course details, visit Canvas course page.

FAS Divisional Distribution: Arts and Humanities

TDM 154

Designing with Light

No meeting time listed

Jeff Adelberg

This hands-on course serves as a foundation in the art and craft of creative lighting design. Students will explore the medium of light itself and its possibilities in storytelling and world-creation. Introductory exercises in perception and psychology will lead to intensive experimentation with various sources of light to create 2D images or 3D environments. Composition, form, color, time and movement will be explored, as well as the basics of lighting technology. Lighting Design has numerous applications and dimensions, and developing a degree of mastery with light as a medium is useful across many fields. While theatrical lighting equipment will be used in the course, and there will be some discussion of lighting design for performance, our focus will not be exclusively centered around design for the stage.

Course Note: This course is open to all, with instructor permission. Please email instructor explaining your interest and sharing any relevant experience.

This course satisfies the "Practical" requirement for TDM concentrators and Secondary Field students.

Backstage Blueprint: Operational Strategy & Production Leadership in Theater

MW 1030 AM - 1145 AM

Course ID: 226434

2025 Fall (4 Credits)

Timothy Sullivan

This course delves into the core elements of technical theater management, focusing on operational strategy, backstage infrastructure, and effective leadership. Students will gain practical knowledge in areas such as stage management, lighting, sound, technical direction, costumes, automation, and production coordination while also developing the language and communication strategies essential for managing teams and collaborating with creatives, performers, and production staff. Topics include backstage operations, managing production logistics, coordinating meetings, and problem-solving in live environments. Whether you're managing a production team or navigating complex technical systems, this course prepares you to drive successful productions with confidence and precision.

Course Note: This course satisfies the "Practical" requirement for TDM concentrators and Secondary Field students.

Introduction to Costume Design

M 1200 PM - 0245 PM

Dede Ayite

Course ID: 214575

2025 Fall (4 Credits)

Instructor Permission Required

An Introduction to Costume Design that embraces a global view. All levels are welcome to take this course. This class explores the design of clothing for the stage. How it can amplify, interpret and extend the message of the production to the viewer through delight, astonishment and provocation. Together we will explore how costume design can even assist in changing a cultural narrative. The instructor will first demonstrate the design process that a costume designer undertakes, from start to finish. Students will learn how to read and research existing dramatic text as a designer and how to manifest their vision through visual terms acting as director and designer. After carefully following the steps of a professional costume designer preparing for theatrical work, students in the class undertake an individual design project, from start to finish, under the supervision of the instructor. Students with prior experience will be challenged to further their character and conceptual development using critical thought, color, silhouettes, proportions and fabric.

Course Note: This course satisfies the "Practical" requirement for TDM concentrators and Secondary Field students.

For enrollment information/deadlines and course details, visit Canvas course page.

Playwriting: Ritual Practice and Curious Worlds

R 0300 PM - 0545 PM

Phillip Howze

Course ID: 207819

2025 Fall (4 Credits)

Instructor Permission Required

A play is a new world in and of itself. What sorts of strange, curious worlds are theater makers crafting today? What approaches are they taking to create these worlds? In this new playwriting course we will explore both text and non-texts, the wild (as well as the conventional) to discover what drives contemporary plays, devised works, and performance today. We will discuss the practices employed by various playwrights and directors—particularly women and artists of color—and try our own hand at some of these approaches. In addition, we will see live performances in realtime; engage special guest/visiting artists; collaborate with fellow classmates; and expand

our curiosities. Most importantly, we will write. This is an exploratory writing workshop with a focus on generating new material. By the end of the semester, you will have created a portfolio of new works, ideas, processes and rituals.

Course Note: This course satisfies the "Practical" requirement for TDM concentrators and Secondary Field students.

For enrollment information/deadlines and course details, visit Canvas course page.

Playwriting: Intersecting Americas

R 1200 PM - 0245 PM

Phillip Howze

Course ID: 211184

2026 Spring (4 Credits)

Instructor Permission Required

"Look around, look around at how lucky we are to be alive right now!", exclaim The Schuyler Sisters in Lin-Manuel Miranda's HAMILTON. History is happening. This inventive playwriting workshop will engage what is happening and what has happened by way of examining recent artistic projects—plays, digital media, and other texts—as stimulants towards your own original works that could live at a diversity of intersections. Weekly, we will draw inspiration from imaginative course-texts written by, primarily, contemporary writers of color across the Americas: North, Central and South American writers, as well as writers of the Caribbean. In addition, you'll also interrogate geographies & individual histories as material from which to draw generative, speculative, embodied, and process-oriented new writing practices. In this course we don't merely write. You'll also collide and collude. We'll continually make, activating alternative forms of interdisciplinary exploration through solo work, co-creation and collaboration. Across the semester, you'll be aroused to invoke the personal, the public, and the political, while exploring ideas in a variety of traditions and spaces. In addition to expanding your writing and reflective skills, you'll undertake several creative experiments in participation, spectatorship, entanglement, and somatic practice to question: how have modern theater makers been in conversation with their time and these times?

Course Note: Though there is no prerequisite for this course, this is a complementary class that can be taken along with Playwriting: Ritual Practice and Curious Worlds (TDM 164H).

This course satisfies the "Practical" requirement for TDM concentrators and Secondary Field students.

TV Writers Room

R 1200 PM - 0245 PM

Phillip Howze

Course ID: 222194

2025 Fall (4 Credits)

Instructor Permission Required

The television writers room is a unique organism. It's an occasional group, like an elected legislature — or an ephemeral society — that convenes for the sole function of collective storytelling. This exploratory writing and community-building course will examine the craft, skills and future of writing original works for televised media. Each week, we'll engage a series of practical, critical, and creative exercises. We'll also read, write, and co-create work together, in real-time. This is an intensive, highly collaborative course intended to serve as a bootcamp to those who want to write for television. The semester will consist of three modules: (1) a skills-building practicum to hone the tools of screenwriting craft and team-building, (2), a writers room simulation where you'll model positions, role-play, and collaborate with fellow writers, and (3) in-class encounters with working professionals from film and television. This is an advanced, upper-level writing workshop specifically geared towards those with a progressive, committed interest in dramatic writing, digital media development, and creative collaborations. Throughout the term, we'll read a variety of texts, screen several series, and fellowship together. In addition, as a collective we'll discuss, craft, and co-author an original new work in real-time. As in a genuine TV writers room, this class is centered around development, collaboration and co-creating in a group setting.

Course Note: Admission is by application only. Application details and deadline are posted on Canvas course page. This creative writing course is open to undergraduate students from all departments. Prospective enrollees are strongly encouraged to have previously completed at least one of the following prerequisite courses: AFVS 161L; ENGLISH CACF; ENGLISH CALR; ENGLISH CLR; ENGLISH CTV; FRSEMR 64Q; TDM 164H; TDM 165H; TDM 162B; TDM 169B; TDM/ENGLISH CKR; TDM/ENGLISH CAMR.

Dramatic Writing for Social Change

T 1200 PM - 0245 PM

Ricardo Perez-Gonzalez

Course ID: 226032

2025 Fall (4 Credits)

Instructor Permission Required

Stories are a fundamental unit of cultural communication. Our shared cultural mythology is how we disseminate communal values. This course is about harnessing that power as a way to inform, interrogate, and impact. In this workshop style class, students will survey modalities of dramatic writing (theatre, film and TV) as well as embodiment techniques (playback theatre, theatre of the oppressed, improvisation, etc.) in order to apply them within a healthcare context. Classes will alternate between focusing on the craft of writing one day and embodiment explorations the next. This is a practical course, and though underpinned by theory, students will produce a work of dramatic writing, and, taking into account their abilities, engage in physical theatre exercises.

Course Note: This course satisfies the "Practical" requirement for TDM concentrators and Secondary Field students.

Please contact the instructor at Ricardo_Perez-Gonzalez@hms.harvard.edu for enrollment details and course information.

TDM 169S

Singer + Song = Story

R 0300 PM - 0545 PM

Stew Stewart

Course ID: 215988

2025 Fall (4 Credits)

Instructor Permission Required

In Singer + Song = Story (Fall 2025), I am inviting students interested in writing songs and scenes to experiment with a unique approach to musical theater making, in a course which injects personally-political, free-spirited, DIY, Punk practices into the process of musical theater making. All this is done with an aim to shake up the show-tune and mess with the well-made-musical. Students will learn how to build "mini-musicals" as well as create their own "theater-pop-band" using a technique called "autobiographical myth-making." Students will be encouraged, not only to tell their own stories, but to "autobiographically mythologize" their personal narratives into Tales Worthy of Their Truths. Performing is encouraged but not at all mandatory. The Auto-Bio-Myth-Making approach also teaches techniques designed to help creators cast off the debilitating self-criticism that takes the fun out of creating.

Course Note: To be approved in the course, students must submit work samples of any kind: general writing, plays, lyrics/poems, music, etc. Students must submit at least one of the following, Ideally two, for consideration:

3 examples of songs or music they've written.

3 lyric writing examples

3 performance videos (on-stage or singing into your phone)

Visit the Canvas course page for enrollment information and deadlines.

This course satisfies the "Practical" requirement for TDM concentrators and Secondary Field students.

Performing Outside the Theater

T 0300 PM - 0545 PM

Tania Bruguera

Course ID: 221689

2025 Fall (4 Credits)

Instructor Permission Required

Artists can de-naturalize things that were always there. They can transform a modest action into an unforgettable experience. Discreet performances can liberate forgotten feelings. But, are we trained to "see" outside the theater? Could a bench on a park be the perfect place to experience a dramatic plot? Would your kitchen table be the best set for a scene? In this class, we are going to experience the displacement of theatrical constructions. We are taking the "frame" of theater and situate it in diverse environments and situations (from your living room to the street to a phone call to a post on social media). We'll experiment with duration (from a minute performance to a semester long performance) to understand the potential of our scripts.

Course Note: Please note application process and deadlines on Canvas course page.

This course satisfies the "Critical" or "Practical" requirement for TDM concentrators and Secondary Field students.

For enrollment information/deadlines and course details, visit Canvas course page.

TDM 174B

Creative Producing: How to Resource Artistic Vision

Course ID: 216360
2026 Spring (4 Credits)

No meeting time listed

Instructor Permission Required

Evan O'Brien

Producer. Curator? Fundraiser? Politician? Creator? The producer is all of those and more. This course explores traditional producing models in the theatre while also imagining ways to break boundaries and produce new, innovative performances. With a particular focus on nonprofit institutions and independent projects, this course will examine the role of the producer in facilitating creative development as well as resourcing projects sufficiently and responsibly. Students will learn about the history of theatrical producing and the evolution of the role of producer. Additional units will focus analyzing the mission and vision of nonprofit institutions, labor negotiations and collective bargaining agreements, financial analysis, commercial vs. nonprofit producing, and the role of the audience in performance.

Course Note: This course satisfies the "Practical" requirement for TDM concentrators and Secondary Field students.

FAS Divisional Distribution: Arts and Humanities

TDM 174PO

Performing the Orient

Course ID: 224593
2025 Fall (4 Credits)

W 0300 PM - 0545 PM

Magic carpets, glittering pagodas, harem fantasies...Orientalism dominated Europe's creative landscape and imagination since the 1700s, but what purpose did it serve? This class will explore over 300 years of "exotic" portrayals of "Orientals" on the Western ballet and opera stages, and geopolitics that impacted how we view Asian people and cultures to this day: from Genghis Khan, the Opium Wars, Chinese Exclusion, to Japanese Internment and #StopAsianHate. The course will also examine the creative process of shifting a Eurocentric work of art for a multiracial audience and provide practical frameworks for how to create art outside of your own cultural experience.

Course Note: The course welcomes all those interested to enroll. No prior experience or knowledge required. Open to undergraduate and graduate students.

This course satisfies the "Critical" requirement for TDM concentrators and Secondary Field students.

Trash Aesthetics

Course ID: 226520
2026 Spring (4 Credits)

No meeting time listed

Instructor Permission Required

James Stanley

"Trash" emerged as an aesthetic category in the 1950s and 60s in reference to the torrent of b-movies that Hollywood had pumped out quickly and cheaply over the previous decades. "Trash" referred not only to the

disposable nature of these films, but also to the values they represented (or undermined) in their representations of cheap melodrama, tawdry sex and sensational violence, and to the potential for their corrupting influence on a new category of disposable youth, the juvenile delinquent. In the 1960 and 70s, the aesthetics of "trash cinema" were adopted as an artistic strategy by queer, Black and other minoritarian artists not only in cinema, but also in theater, visual art, and the new and growing field of performance art, slyly claiming their place in American culture through the back door of the "low other." This course traces a history of "trash aesthetics," and the discourses surrounding them, from their emergence in the work of Jack Smith, Paul Morrissey, and John Waters in the 70s through punk, performance art and cinema of transgression in the 80s, avant-garde theater, drag and neo-burlesque in the 90s, the mainstreaming of trash culture through high fashion, tabloid talk shows and reality television in the 00s, and back into live theater, music and social media performance in the 10s and early 20s. In tracing this history, we'll explore the politics of transgression, abjection, taste and class, trash's relationship to camp, kitsch and irony, competing claims to "trash" status by the political left and right, and – alongside this – the long history of artists using actual garbage as both a medium and the subject of their work.

Course Note: This course satisfies the "Critical" requirement for TDM concentrators and Secondary Field students.

TDM 194

Course ID: 205365

The Making of a Musical: The Creative Process

2026 Spring (4 Credits)

No meeting time listed

Instructor Permission Required

Ryan McKittrick, Diane Paulus

This course introduces students to the collaborative process of creating a musical through an analysis of both revivals and new musicals. Through readings by historians, theorists and practitioners, and engagement with artists across the field, students will learn about the key components of a musical including: book and adaptation; music and lyrics; choreography; and visual design. There will also be a class devoted to the art of producing and the business of musical theater. Students will study a range of American musicals, including work in development at the American Repertory Theater (A.R.T.). In addition, the course will give students direct exposure to the development of the A.R.T.'s world premiere production of *Real Women Have Curves*, which will open at the Loeb Drama Center in December, 2023. Over the course of the semester, students will write a paper analyzing the process of adaptation from source material to musical on stage. They will also work collaboratively to develop a vision and "pitch" for their own musical theater project. Students will attend a workshop rehearsal of an A.R.T. musical in development in New York City and see a TBD production on Broadway.

Course Note: This course satisfies the "Critical" requirement for TDM concentrators and Secondary Field students.

The Show-Tune Canon Meets the No-Show Songbook

2026 Spring (4 Credits)

No meeting time listed

Instructor Permission Required

Stew Stewart

THE SHOW-TUNE CANON & THE NO-SHOW-SONGBOOK invites students to view the history of musical theater's greatest songs through a comparative lens which places the Show-Tune-Canon in dialogue with the "No-Show-Songbook" a songbook stretching from African- American blues & jazz all the way to rock and roll, disco, punk, and beyond. This course wants to take Company's Bobby for a walk on Lou Reed's wild side, or maybe find Lou waiting at Bobby's stage-door. The course asks many questions: What can we learn about musical theater by listening to the music that often informed it, but never made it to the stage in its authentic form? What can we learn about musical theater by listening to the popular music it influenced? What can we learn by creating radical conversations between ultra-modern pop and traditional show-tunes? What can we learn about the chosen subject matter of show-tunes vs no show tunes? What can we learn about race, class, gender, sexuality, capitalism and beyond by comparing how these subjects are framed in the show-tune realm vs the popular song realm? This course will help students locate what is dramatic about The Slits "Typical Girls" and what is punky about Elaine Strich's "Ladies Who Lunch." (When Strich sings "Everybody dies!!!" It has decidedly more to do with Siouxsie than Streisand).

Course Note: This course satisfies the "Critical" requirement for TDM concentrators and Secondary Field students.

FAS Divisional Distribution: Arts and Humanities

This workshop teaches the practices and politics surrounding what has been defined variously as "non-fiction," "documentary," "interview-based," or "investigative" theater. We call this theater "horizontal" because its text, source material, and process are multivariate, self-consciously non-hierarchical, and aspirationally democratic: generated by and with communities through interviews. In this workshop students will build and present a reading of a full-length piece of horizontal theater. They will collectively choose the topic and scope of the production, study existing models, and interrogate the design of live theater in order to develop an original aesthetic sensibility for a stage presentation. Students will determine by consensus whom to interview and about what subject of interest; they will conduct those interviews, record them, and transcribe them; and they will use verbatim language from those interviews to build lyrics, write songs, monologues, and dialogue, ultimately constructing a full-length play with music and/or a musical. In addition, students will examine existing models of horizontal theater and discuss the politics of representation and risks of appropriation that surface in this kind of work. Models of meaningful horizontal theater include (but are not limited to): Lynn Nottage's *Sweat*, Anna Deavere Smith's *Fires in the Mirror*, Tectonic Theater Project's *The Laramie Project*, and *The Civilians' Gone Missing*, and *In the Footprint*. Students will also engage with problems that arise from horizontal theater: first, the confusion that can attend horizontal theater when aesthetic demands conflict with journalistic ethics such as that generated by Mike Daisey's *The Agony and the Ecstasy of Steve Jobs*; second, the erasure caused by ignoring lineage, representation, membership, and appropriation, as represented by the conflict of rightful authorship between Tourmaline and David France over their respective documentaries about Marsha P. Johnson. This workshop has the spirit of a lab, wherein the aesthetics of horizontal theater are modeled, deconstructed, questioned, and ideally re-invented, where students think seriously about the identities of their subjects as well as their own, and where conversations about art-making, presentation, and politics are courageous, respectful, and never less than daring.

Course Note: For Fall 2025, TDM 195HT is generating material and content for the Spring Production Studio (TDM 90BR), taking place in Spring 2026. Students are welcome to enroll in either or both courses.

This course satisfies the "Practical" requirement for TDM concentrators and Secondary Field students. The course will be taught by Visiting Lecturers playwright/director Jay Stull and writer/performer Ella Rose Chary. For enrollment information/deadlines and course details, visit Canvas course page.

FAS Divisional Distribution: Arts and Humanities

Over the past few decades, audiences have grown increasingly enamored with the figure of the singer-songwriter. Listeners today crave the confessional and the direct address, modes of intimacy through which artists sell themselves as much as their music. In this course, we will explore the biographies and oeuvres of popular musicians who divulge their private lives—or at least seem to—for our pleasure. In particular, we will consider how the relationships between artists and audiences are constructed in the media, from democratized social media platforms to exploitative tabloids to the controlled narratives of production and industry. Surveying musicians from Joni Mitchell and James Taylor to Taylor Swift and Chappell Roan, we will disentangle the contradictory knots tying together authenticity, persona, labor, and profit in the music industry. How does identity inform production and consumption of popular music, from the gendered expectation that women perform "confessional" music, to racialization of genre in popular music? We will also confront our own culpability as consumers, exploring themes of parasociality, intimacy, and the expectations society places on celebrities.

Course Note: No prior knowledge or experience is required for this course.

This course satisfies the "Critical" requirement for TDM concentrators and Secondary Field students.

In this course, students will confront how themes of violence and gender inequality have shaped the politics and aesthetics of country music, from its origins in the early 20th century to its broad contemporary popularization.

From murder ballads—a subgenre normalizing violence against women—to recent declarations of political ideology, the genre has undergone a shift in what is considered acceptable for radio play. Since the 1980s, women artists including the Chicks, Martina McBride, and Reba McEntire have addressed issues of domestic violence in their music, paving the way for the graphic revenge fantasies of twenty-first century artists like Carrie Underwood, Miranda Lambert, and Taylor Swift. In this course, we will confront audiences' often violent responses to non-white and non-male artists (from Beyoncé and Lil Nas X to Chappell Roan and Orville Peck), examining how this discrimination shapes the genre and industry. On the other hand, how do media narratives surrounding country music's audience demographics impact how it is perceived, even for women and non-white artists? We will also discuss how artists emphasize themes of gendered violence in music videos and deploy humor as a means to make such messages more palatable. Students will consider how country music's depictions of gendered violence have influenced and reflected real-world issues.

Course Note: No prior knowledge or experience is required for this course.

This course satisfies the "Critical" requirement for TDM concentrators and Secondary Field students.

Ukrainian Studies: Seminar

No meeting time listed

Instructor Permission Required

Serhii Plokhii

Interdisciplinary seminar in Ukrainian studies with broad regional and comparative perspective. Faculty and invited scholars discuss a variety of topics in the humanities and social sciences. Background readings and follow-up discussions help students put the specific lectures in broader context. Students also conduct an individually tailored reading and research project under the guidance of a faculty advisor and in consultation with other resident specialists. Part one of a two part series.

Tutorial - Sophomore Year

TR 1030 AM - 1145 AM

Michael Bronski

Course ID: 120677
2025 Fall (4 Credits)

Instructor Permission Required

An introduction to foundational concepts, key texts, and skills in the interdisciplinary study of gender and sexuality. Required for all WGS concentrators, this course encourages students to think and work collaboratively, engage in productive conversations, and apply theoretical tools in concrete, problem-solving efforts. Course culminates in an original research project conducted in the Schlesinger Archives.

Course Note: Required of Women, Gender, and Sexuality concentrators in their first year in the concentration. Recommended for undergraduates pursuing a secondary field in WGS.

Tutorial - Junior Year: Research and Methods

W 1200 PM - 0245 PM

Caroline Light

Course ID: 122980
2026 Spring (4 Credits)

Instructor Permission Required

In Junior Tutorial, students develop key research and writing skills necessary to write a junior research paper. We will read a range of texts that engage diverse methods in the fields of women's, gender, and sexuality studies. Together, we will learn about methods and questions that form feminist engagements with archival research, literary and cultural studies, ethnography, quantitative and survey-based social science, and the sciences. Students will learn and engage with key methods across the humanities and social sciences through readings and engage practice in the classroom. Students will meet in small groups with their designated tutor who will guide them through research and writing on the particular topic of their interest. Over the course the semester, students will develop a research project in a focused area based in a clear and concise research question. Students will develop research projects, produce an annotated bibliography with primary and secondary sources, and will produce a final polished research paper by the end of the semester. This course is required of all Honors concentrators in WGS in their junior year.

Course Note: Required of all Honors concentrators in their junior year.

Making and Unmaking Women in African History

2026 Spring (4 Credits)

T 0300 PM - 0545 PM

Instructor Permission Required

Marius Kothor

From matriarchs to monarchs, spiritual mediums to anti-colonial activists, African women have always been central figures in the histories of their societies. But who is defined as a woman in African societies and when and where does this matter? In this course we will explore the idea of womanhood across various African communities and think through the ways that the category "woman" changes overtime and functions differently in relation to other social categories like class, age, and religion.

Gender and Sexuality in Korean Pop Culture

2025 Fall (4 Credits)

W 0900 AM - 1145 AM

Instructor Permission Required

Jung Choi

What can the songs of BTS and Blackpink, the TV-show "Squid Game," and the films Parasite and Kim Chi-yŏng: Born 1982 teach us about gender roles in contemporary Korea? What roles do writers, musicians, and filmmakers play in shaping our thinking about sex and gender? How do competing ideas about sex shape the current system of cinematic, television, and popular music genres? These questions will be explored through case studies of Korean popular media, while the course will simultaneously provide a broad introduction to the field of women, gender, and sexuality studies. Topics will include privilege, class, inequality, masculinity, femininity, eating disorders, beauty ideals, marriage, family relationships, reproductive rights, housework, intimacy, and violence against women.

Dangerous Words: Feminist Debates on Speech, Harm, and Representation

2025 Fall (4 Credits)

M 0300 PM - 0545 PM

Instructor Permission Required

Clarisse Wells

What does it mean to strike a balance between the democratic foundations of the freedom of speech on the one hand and the need for historically marginalized groups to resist exclusionary or derogatory language on the other? This course approaches this topic by examining key debates in feminism, speech, and representation. Topics include critiques of pornography, cancel culture, trigger warnings, hate speech, slurs, and cultural appropriation. We will begin by orienting ourselves to the legal frameworks of the freedom of speech in the North American and European contexts before turning to philosophical and critical theories analyzing the possible impacts of incendiary language on our democratic ideals. Our goal is to unpack the civic foundations of our democracy and interrogate the societal and ethical questions around subordinating speech. No philosophical or legal background is assumed prior to enrollment.

RuPaulitics: Drag, Race, and Power

2026 Spring (4 Credits)

M 0300 PM - 0545 PM

Instructor Permission Required

Kareem Khubchandani

Since the launch of RuPaul's Drag Race in 2009, the show has grown to include more than 20 franchise shows

worldwide, has amassed the host a net worth to \$60 Million, and has launched the careers of over 600 artists. There is a veritable global drag boom. What characterizes the popularization of this genre and what is lost and gained by marginalized communities in these mediated, political, and economic changes? Through the examination of contemporary and historical drag archives, as well as critical readings on race and gender, this course will provide students with robust tools to analyze drag, live performance, and queer and trans cultures more broadly. We will explore how performers both participate in and respond to the commercialization of this artform. The course will also include performance-based exercises, attendance at local drag shows, and visits from various artists to immerse students in the embodied politics of drag.

Psychology of the Gendered Body

R 1200 PM - 0245 PM

Nicole Noll

Course ID: 205489

2025 Fall (4 Credits)

Instructor Permission Required

Our perceptions of gender—our own and others'— shape our embodied experiences and behaviors. This course examines the embodiment of gender via the lens of psychological science. We will begin by exploring recent research related to gender and the body, and then study the underlying psychological mechanisms that influence our self-perceptions about gender. Our disciplinary foundation in psychological science will allow us to complicate current understandings of gender and embodiment by considering factors such as sex, race, sexuality, experience, intention, and awareness.

Course Note: Synchronous attendance required. Class meetings will not be recorded.

WOMGEN 1274

Gender, Race, and Poverty in the United States

TR 0600 PM - 0715 PM

Marya Mtshali

Course ID: 207786

2026 Spring (4 Credits)

Instructor Permission Required

This course investigates the realities of poverty through an intersectional lens, meaning that we will consider the simultaneous impact of race, gender, sexuality (and other identities) on economic insecurity. In what ways are conversations about poverty and its causes infused with assumptions and stereotypes related to gender, race, and sexuality? We hear so much in the media about what causes poverty – what is reality and what is myth? How do these myths operate to reinforce and sustain economic inequality? Who and what gets left out of the conversation about poverty? Topics in the course include historical understandings of poverty; intergenerational class mobility; depictions of poverty in pop culture; and bringing attention to populations that often get left out of mainstream conversations about poverty.

Course Note: Weekly lecture plus an additional one hour section to be arranged.

Synchronous attendance required. Class meetings will not be recorded.

Love's Labors Found: Uncovering Histories of Emotional Labor

T 0900 AM - 1145 AM

Caroline Light

Course ID: 207804
2026 Spring (4 Credits)

Instructor Permission Required

How do love, care, and desire influence the value of work, and why is emotional labor – which is vital to child or elder care, domestic labor, nursing, teaching, and sex work – often considered to be something other than work? How and why do the racial and gender identities of workers affect the economic, social, and emotional value of their labor? How do political and social arrangements of labor help produce and reinforce racial categories while solidifying the boundaries separating masculinity and femininity? Through a mix of primary and secondary sources, this seminar explores histories of emotional labor and the power structures that give meaning to often taken-for-granted categories of work. These sometimes hidden histories are key to untangling the gender, sexual, and racial implications of the "intimate industries" that populate today's transnational labor economies.

Course Note: This course, when taken for a letter grade, counts as a portal course for the secondary field in Ethnicity, Migration, Rights (EMR).

Synchronous attendance required. Class meetings will not be recorded.

Global Health and Gender Politics

M 1200 PM - 0245 PM

Roberto Sirvent

Course ID: 226217
2025 Fall (4 Credits)

Instructor Permission Required

Drawing on interdisciplinary and transnational approaches to reproductive health, feminist bioethics, and trans liberation movements, this seminar centers on four key topics of discussion. The first explores reproductive justice in a global context. The second introduces students to key conversations in trans philosophy and how these theories draw from and inform trans health activism – both in its demands for gender-affirming care and its struggle against anti-trans moral panics around the world. The third considers worker exploitation as a crucial issue in global public health, paying special attention to the treatment of women and migrants employed in hospitality and service sectors, unpaid and underpaid care work, and other low wage jobs. The fourth examines the intersection of global health and the world of sports, particularly the ways sport governing bodies rely on colonial logics of ability and disability to reinforce racialized ideals of sexual difference and how modern sport's "culture of risk" leads to various forms of harm, injury, and abuse. The seminar is especially relevant for students interested in the fields of medical anthropology, public health, Black studies, moral philosophy, philosophy of medicine, and science, technology, and society studies (STS).

WOMGEN 1400E (1)

Queer Ethnography

T 0300 PM - 0545 PM

Kareem Khubchandani

Course ID: 226482
2025 Fall (4 Credits)

Instructor Permission Required

Ethnography is a potent research method for understanding how structures of power function at the level of the everyday. Through participant observation, interview, and co-performance, ethnographers and their interlocutors reveal the capacity for culture to secure, undo, and invent forms of social and political structure. This research method is not fixed in its protocols but flexes and shifts in response to the specificities of the field. Ethnographic studies of gender and sexual dissidents—gay neighborhoods, trans raves, sex work, lesbian parties, BDSM dungeons, AIDS activism—require careful (re)considerations of anonymity, sensationalization, reciprocity, space, identity, and labor. Also, queer ethnographers have reflected on the urgent need to consider the researcher's own body, comportment, and desire in order to generate more responsible analyses of fieldwork. This class introduces students in Women, Gender, and Sexuality Studies to ethnographic research methods as they pertain to exploring questions of bodies, pleasure, power, and desire. The curriculum will include experiential opportunities to try on various ethnographic tools, as well as studies of queer ethnographies from a variety of disciplines.

The Politics of Personal Writing

T 1200 PM - 0245 PM

Instructor Permission Required

Linda Schlossberg

A long tradition of feminist writing asserts that the personal is political. In this creative writing class, we will critically examine the work of feminist and queer authors such as Dorothy Allison, Roxane Gay, Cathy Park Hong, Audre Lorde, Imani Perry, and Margaret Talusan who use personal experience as a starting point for arguments about class, race, ethnicity, gender, and sexuality. Examining how these authors draw on traditions crafted by earlier authors such as James Baldwin and Virginia Woolf, we'll ask what this tradition has accomplished in different historical moments and how genres such as the "personal essay" and the "op-ed" have been implicitly gendered. We will think about our own cultural moment, in which we are collectively encouraged to "tell our story" via an endless proliferation of self-revelatory texts (blogs, TikTok, Twitter). Why has the genre of "the personal" become so popular in the 21st century and what does this signal for the future of feminist/queer thought and inquiry? Students will share their own creative writing and provide extensive feedback on their peers' work.

The Sexual Life of Colonialism

M 1200 PM - 0245 PM

Instructor Permission Required

Sexuality has long shaped racial and civilizational assessments of what it means to be modern. In this course, we will investigate the role of colonialism and neocolonialism in racial imaginations of gender and sexuality and how these histories shape contemporary understandings of LGBTQ politics, reproductive and sexual rights, and anti-colonial resistance around the world. We will explore histories of sexual control, colonial and racial difference, and marginalized, queer, and trans sexualities in colonial and postcolonial spaces, including parts of West Asia, South Asia, and Sub-Saharan Africa. The course will cover many forms of sexuality, including interracial relationships between colonizer and colonized peoples, questions of sexual violence, queer desires, sexual outcasts like "prostitutes," transgender rights, and the politics of gender difference and LGBTQ rights in the postcolonial world.

Politics and Poetics of Black Internationalism

W 0300 PM - 0545 PM

Instructor Permission Required

Marius Kothor

Black people around the world often express links between their struggles and the struggles of other groups of people around the globe. These expressions of solidarity are performed for a variety of political and cultural reasons. This course examines the how Africans, Afro-Caribbeans, and African Americans have articulated and formed solidarities between themselves and other groups of people around the globe for a variety of political purposes. These transnational engagements have produced rich cultural exchanges that are reflected in the visual arts, fashion, music, dance and a variety of writing genres. This course engages with the histories and ideas that have formed the foundations of these movements.

Live Theory (and Practice): A Graduate Proseminar in WGS Studies

T 0900 AM - 1145 AM

Instructor Permission Required

Sarah Richardson

This seminar supports graduate students in becoming feminist scholars. The focus is twofold: research methodology and professional development. Readings, discussions, and assignments are designed to help students identify research strategies suited to the questions they wish to pursue in their dissertation research and develop a scholarly, teaching, and public intellectual profile in WGS studies. Topics and central themes include: feminist epistemologies; qualitative, quantitative, and humanistic research methods; research ethics; disciplinarity and interdisciplinarity; feminist scholarship in policy and public discourse; critical perspectives on

the institutionalization of WGS studies; feminist pedagogy; and, journals and publishing.

Course Note: Open to PhD students only. Is required for the WGS graduate secondary field. Synchronous attendance is required. This course will not be recorded.
